

I strongly oppose the new rate hikes Hydro One is proposing!

We live in Waterloo and have a cottage near Haliburton. Please note that we are not wealthy by any means, we got lucky. Anyway, I am attaching 2 bills - one from Enova (Waterloo) and one from Hydro One (near Haliburton).

Reasons for my opposing the rate hike:

1) Delivery rates are already insane. You will note that Hydron One charged us $84.36 to deliver $2.28 of electricity. Enova's delivery rate is LESS THAN my electricity.

2) Hydro One charges us about $100/month in the winter when we don't use the cottage and have next to nothing running. That is so wrong.

3) The hydro goes down a lot at the cottage all year long. We have a generator which is handy if we are there. When we are not there ... well, we've lost hundreds of dollars throwing out food.

4) The CEO of Hydro One makes between $1.92 and $2.41 million a year. For the services we get, I'd say they are highly overpaid. They should not earn more than $500K in my opinion.

I hope this helps. They need to look internally to save money, not keep siphoning it off of their customers.
