I have two properties one is just a warehouse where I store things but I still have hydro hooked up for lighting. I don't beleive they should be intitled to an increase becasue they are already gouging us as it is. Like I mention the one property we have is a warehouse where we use very little hydro what so ever yet our bill is always around 30 -32 dollars a month for .04 to 1.50 worth of hydro used and the rest is hydro delivery fees and retirement fees etc. It's a major rip off. As for our home we are not home all day long and only use a little hydro at night as most nights we don't get home until late and our hydro bill is still roughly 135 to 165 per month with the actual hydro used being only about 65.00 dollars and the rest is all their various fees. I even try to hand dry most of my laundry outside and I only do it on weekends and holidays and still my bill is high. Like I said there are only two of us and we aren't home most of the time. This needs to stop as we don't have a choice in who we get our hydro from and its getting out of hand. I don't even want to get started on all the power outages we have and power surges or blink outs where to goes off for no reason for a mintue or 2 then comes back on just enough to mess up the digital clocks in the house. I hope you will seriously consider not letting them raise rates and instead make them lower them as we as Canadians can only afford so much before it becomes to much to handle esepically the older we get and the less money we get. Please think of us when making your decison and not the money hunger power company.
