LETTER OF COMMENT

Comments:
Dear Registrar and Members of the Panel: I am a residential electricity customer in East Gwillimbury, Ontario. I am writing to object to Hydro One Networks' 2028–2032 joint rate application as filed. My objection is based on the following: Cumulative impact on residential customers. Under the application as filed, the transmission portion alone would raise a typical residential customer's bill by $0.50 per month in 2028, with further increases each year reaching a cumulative increase of about $5.69 per month by 2032. These increases come on top of the delivery charges customers already pay, and they fall on every electricity consumer in Ontario. The distribution increases reach me as well. I am therefore affected by both parts of this application, not only the transmission portion. The scale of the plan. Hydro One is seeking approval of an investment plan of approximately $37 billion over five years. A plan of this size deserves rigorous scrutiny. I ask the Board to satisfy itself that each major component is needed, prudently costed and appropriately paced, and not to approve the application as filed without that testing. Affordability and pacing. Five consecutive years of increases, with the largest single steps in 2030 and 2032, place a growing burden on household budgets. I ask the Board to consider whether the increases can be reduced, smoothed or phased so that the burden on residential customers is smaller, and to hold Hydro One to the efficiency the custom incentive framework is meant to deliver. For these reasons, I respectfully ask the Board not to approve the application as filed, and to reduce the proposed increases or require Hydro One to justify its plan more fully before any approval. Thank you for considering my comments. Sincerely, Peter Yoon
