ONTARIO ENERGY BOARD

FILE NO.: EB-2010-0131

~~UNREDACTED CONFIDENTIAL~~

VOLUME: Technical Conference

DATE: February 25, 2011

EB-2010-0131

THE ONTARIO ENERGY BOARD

IN THE MATTER OF the *Ontario Energy Board Act*,
1998, S.O. 1998, c. 15, (Schedule B);

AND IN THE MATTER OF an application by Horizon
Utilities Corporation for an order approving
just and reasonable rates and other charges for
electricity distribution to be effective May 1,
2011.

Hearing held at 2300 Yonge Street,
25th Floor, Toronto, Ontario,
on Friday, February 25th, 2011,
commencing at 9:02 a.m.

<u>Description</u>	<u>Page No.</u>
UNDERTAKING NO. JT1.1: TO PROVIDE AMOUNT OF CAPITAL EXPENDITURE FOR CLASS 52 FOR JANUARY 2011.	11
UNDERTAKING NO. JT1.2: TO CONFIRM WHAT ASSUMPTIONS USED FOR CFL CALCULATIONS AND WHAT WAS USED AS PART OF 2006 LRAM.	15
UNDERTAKING NO. JT1.3: TO PROVIDE SIMILAR TABLE TO 3-9 REFLECTING HISTORICAL YEARS, EXCLUDING LARGE USERS.	27
UNDERTAKING NO. JT1.4: TO PROVIDE ACTUAL CALCULATION FOR ENERGY PROBE TECHNICAL CONFERENCE QUESTION NO. 14	31
UNDERTAKING NO. JT1.5: TO PROVIDE DATABASE.	50
UNDERTAKING NO. JT1.6: TO PROVIDE ALL PURCHASES FROM NON-AFFILIATES PROPOSED FOR THE TEST YEAR IN EXCESS OF \$250,000	64
UNDERTAKING NO. JT1.7: TO PROVIDE UPDATED FORECAST FOR CALL VOLUME FOR 2011	66
UNDERTAKING NO. JT1.8: TO CONFIRM THAT TABLES 4-30, 4-31 AND 4-32 ARE CORRECT, OR UPDATE THEM TO INCLUDE ALL NON-AFFILIATE PURCHASES ABOVE \$250,000.	74

1 Friday, February 25, 2011

2 --- On commencing at 9:02 a.m.

3 MS. HELT: Good morning, everyone. I see that
4 everyone is here, so we may as well get started.

5 We are here today for the purpose of a technical
6 conference on Board File No. EB-2010-0131, Horizon
7 Utilities' cost-of-service application.

8 My name is Maureen Helt. I am Board Counsel, and I am
9 seated here with Mr. Keith Ritchie, who is case manager for
10 the Board, and Mark Abramovitz, who is also Board Staff.

11 I would like to deal with a few procedural matters
12 first, and then we will go into appearances, and then we
13 can start with the technical conference.

14 The first thing I would like to note for everyone's
15 benefit is that when you are either asking a question or
16 answering a question, there is a green button in front of
17 you which you should push, and then when you see the light
18 on, you will know that your microphone is on.

19 Quite often when two people are seated together, if
20 one person pushes and turns it on, and then the next person
21 thinks they need to push it to turn it on, they actually
22 turn it off. So we will let you know or the court
23 transcriber will let you know if it is not activated.

24 The second thing I would like to raise is that in
25 Procedural Order No. 6 there are certain dates set for the
26 settlement conference, those being March 8th and March
27 11th. I understand from Mr. Ritchie that March 9th is also
28 an available date, and if all parties are available on that

1 date, we would propose to include March 9th as a date for
2 the settlement conference. So then we would have three
3 days, if required.

4 So perhaps parties can think about that and let us
5 know what your availability is, and then we can go back to
6 the Board, and then it can be set out in a procedural order
7 if it is possible.

8 MR. SHEPHERD: I can tell you that yesterday the IFRS
9 working group scheduled an all-day session for that day,
10 March 9th, because it was actually the only day available
11 that week.

12 MS. HELT: Okay. Well, we will take that into account
13 and if there is something further that we can do with other
14 dates, we will let you know. But thank you for that.

15 The other matter is that there is certain information
16 that has been filed in confidence and that there has been a
17 request for confidentiality made by Horizon. The Board has
18 not yet released a decision with respect to the
19 confidential information, and as such, we would propose
20 that that -- any questions with respect to that information
21 be dealt with at the end of today's technical conference
22 and we will go in camera, meaning that it will not be
23 broadcast on air. And anyone here who has not signed a
24 declaration and undertaking with respect to confidentiality
25 will be asked to leave the room for the purpose of the
26 questions on the confidential material. So we will remind
27 all parties of that at that time.

28 All right. Then unless there are any other initial

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 administrative matters, we can go around the room and enter
2 appearances, please.

3 **APPEARANCES:**

4 MR. SHEPHERD: Jay Shepherd, counsel for School Energy
5 Coalition.

6 MR. BUONAGURO: Michael Buonaguro, counsel for VECC.

7 MR. AIKEN: Randy Aiken, consultant for Energy Probe,
8 and with me is David MacIntosh.

9 MR. SIDLOFSKY: I'm sorry, Ms. Helt. James Sidlofsky,
10 counsel to Horizon Utilities. Mr. Basilio, Horizon's chief
11 financial officer and senior vice president, will be
12 introducing the Horizon people who are here.

13 And he has a few introductory comments, as well, but
14 perhaps we can deal with that after introductions.

15 MS. HELT: Certainly.

16 MR. SIDLOFSKY: I believe Ms. Grice is here from
17 AMPCO, as well.

18 MS. GRICE: Good morning. Yes, Shelley Grice,
19 consultant for AMPCO.

20 MR. SIDLOFSKY: That is all, Ms. Helt. I would turn
21 it over to Mr. Basilio for his comments and introductions.

22 **OPENING REMARKS BY MR. BASILIO:**

23 MR. BASILIO: The light is on. Good morning. I am
24 John Basilio, the senior vice president and chief financial
25 officer for Horizon Utilities.

26 I understand the purpose of this conference to be to
27 allow parties to seek clarification of items in our
28 evidence. I believe that our body of evidence now includes

1 our comprehensive application, evidence filed through the
2 proceeding on the preliminary issue of advancing our
3 application, responses to approximately 600 interrogatories
4 and, most recently, responses to approximately 150
5 technical questions.

6 We look forward to clarifying any further matters on
7 our evidence in person with you today.

8 I have a number of colleagues here with me this
9 morning to assist with further questions that you may have.

10 My role in this proceeding will be, on behalf of
11 Horizon, to field your questions to my colleagues and to
12 answer many directly, specifically with respect to finance-
13 related topics, such as cost of capital and PILs.

14 In addition to me, our panel consists of many Horizon
15 staff members, including Indy Butany-DeSouza to my right,
16 Horizon's vice president regulatory and government affairs,
17 who will be dealing with regulatory matters addressed in
18 the application.

19 Kathy Lerette, two to my left, Horizon's vice
20 president operations, will be dealing with operational
21 matters, including capital expenditures.

22 Sarah Hughes to my left, Horizon's vice president
23 finance, will be dealing with OM&A and general financial
24 matters.

25 Eileen Campbell, two to my right, Horizon's vice
26 president customer services, who will deal with customer
27 service-related issues; Mario Cangemi, who -- Mario,
28 perhaps you could just raise your hand for the group.

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 Mario is Horizon's director of information systems
2 technology and will be dealing with IT-related issues.

3 Lise Galli is sitting to the left of Mario, who is our
4 director of human resources and will be dealing with
5 employee- and compensation-related issues.

6 Grant Brooker, to the left of Lise, is Horizon's
7 manager of regulatory compliance and will support dealing
8 with other regulatory issues.

9 We also have, from Borden Ladner Gervais, Bruce Bacon,
10 who will be available to assist with questions related to
11 load forecasting, cost allocation and rate design.

12 And also present from Horizon in a consultative role
13 to the panel, starting at the second row and I guess to the
14 right-most facing Board Staff, is Shelly Parker from
15 customer service, Jim Patterson from customer service, Hani
16 Taki from operations, Daniel Roberge from operations and
17 Richard Bassindale from operations.

3 **Daniel Roberge**

4 **Richard Bassindale**

5 MR. BASILIO: As a very brief introduction, Horizon
6 Utilities is one of the largest municipally-owned
7 electricity distribution companies in Ontario. We serve
8 more than 235 (sic) residential and commercial electricity
9 distribution customers in Hamilton and St. Catharines, two
10 of Ontario's most heavily industrial cities.

11 The company is owned by Horizon Holdings Inc., which
12 is further jointly owned by Hamilton Utilities Corporation
13 and St. Catharines Hydro Inc. These latter two companies
14 are respectively owned by the City of Hamilton and the City
15 of St. Catharines.

16 Horizon faces a number of challenges, many of which
17 are outlined in the application, which underlie its
18 requests in this application, and, among them, Horizon has
19 considerable revenue and concentration risk related to its
20 larger commercial customer classes.

21 Horizon Utilities has 12 large-use customers, more
22 than all but two other LDCs in the province, and Horizon
23 has the largest average large-use-customer consumption of
24 any LDC.

25 The average consumption of Horizon Utilities' large
26 users is three times greater than the provincial average,
27 and this creates significant exposure to adverse economic
28 conditions.

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 Horizon has experienced losses of industrial load in
2 recent years and related revenue shortfall relative to its
3 previous cost-of-service application.

4 Additionally, Horizon serves older communities with
5 low growth rates. Its requirements for renewal capital are
6 increasing at a material rate. The result is significant
7 infrastructure renewal needs that must be funded from
8 existing customers.

9 This is Horizon's second forward test year cost-of-
10 service rate application. The current application reflects
11 a great deal of work since its last application on
12 determining the condition of distribution infrastructure
13 and the need for significant increases in renewal
14 expenditures.

15 The application also supports the need for additional
16 OM&A expenditures and for moving forward with expenditures
17 related to the connection of renewable generation,
18 necessitating the approval of Horizon's Green Energy Act
19 plan.

20 Our application provides for needed increases in
21 capital and OM&A expenditures and addresses a revenue
22 deficiency of approximately \$19.6 million, while
23 maintaining Horizon's status as a comparatively low cost
24 utility among its peers.

25 The application provides for a total bill impact for
26 our residential customers with a monthly consumption of 800
27 kilowatt-hours of \$3.77, or 3.52 percent.

28 I will close my introduction here and turn it back to

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 our counsel, Jamie Sidlofsky.

2 MR. SIDLOFSKY: Ms. Helt, I think Mr. Basilio was --
3 when he was talking about the customer number would have
4 meant 235,000 customers in Hamilton and St. Catharines.

5 And with those introductions, I think Horizon is ready
6 and willing to take questions.

7 MS. HELT: Thank you. I believe Mr. Aiken is going to
8 commence with his questions first.

9 MR. SHEPHERD: Can I ask whether you want follow-up
10 questions while the person is asking them? Or should we
11 wait till our turn to ask a follow-up? Like, if Randy asks
12 a question and I need to follow that question up, should I
13 do it when he is asking questions, or later? It is done
14 both ways in technical conferences.

15 MS. HELT: Yes. I am really open to either way. I
16 think in some ways it is easier just to have one party go
17 at a time, and I understand that there aren't that many
18 questions for each particular party. Certainly not -- Mr.
19 Aiken has indicated he does not have that many questions,
20 and I don't think VECC has that many questions either.

21 MR. SHEPHERD: Okay.

22 MS. HELT: So we will just proceed with one party at a
23 time. If there is something that just makes much more
24 sense to follow up with, if it is a complicated, involved
25 question and we are all referring to the same interrogatory
26 response or exhibit, then by all means, just use your
27 judgment. Thank you.

28 **QUESTIONS BY MR. AIKEN:**

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 MR. AIKEN: Yes. My name is Randy Aiken, and I will
2 be brief; I have a total of three questions.

3 Following me, Mr. MacIntosh may have some further
4 questions later on today on other specific responses.

5 My first question is on Energy Probe Question No. 3,
6 part (b). This is a table that is provided with a
7 recalculated 2011 cost-of-power calculation.

8 My question here is the large-volume user kilowatt-
9 hours and kilowatts have been increased in the forecast.
10 And I understand that is based on the response to AMPCO
11 No. 6, which basically reflects the 2010 actuals as a
12 forecast for 2011.

13 Are there any other changes in the cost-of-power
14 calculation, aside from the large user change and the
15 corrections noted in some of the billing determinants?

16 MR. BASILIO: Grant, do you want to...

17 MR. BROOKER: Certainly. We noted four changes in
18 response to the technical question. One of them was to
19 change the RPP ratios. Non-RPP and RPP ratios were changed
20 to the actual numbers at the end of the year.

21 As you mentioned, we updated the large-use kilowatt-
22 hours in kilowatts.

23 We also made corrections, as you had noted, to the
24 wholesale and -- rural rate assistance and wholesale market
25 service, to make sure that the determinants were correct.

26 And also, we also employed the most recent OEB cost-
27 of-power prices, dated October 18th, 2010.

28 Those are the four changes made to that table.

1 MR. AIKEN: Thank you. My next two questions, my last
2 two questions, are on taxes.

3 The first one is Energy Probe No. 8, part (b). It is
4 specifically on page 2 of 3 of that response, at -- sorry,
5 it is not page 2. I am just trying to find it here.

6 Yes, page 2 of 10 at line 21. So it is Energy Probe
7 No. 8, part (b). At line 21, there is a bullet point,
8 number 2. It says: "Eligibility of 15 power line
9 technician apprentices."

10 Am I correct that "15" is a typo and it should be 19?
11 That would seem to match up with the explanation provided
12 at lines 9 and 10 of the same page.

13 MR. BASILIO: It is a typo; it should be 19.

14 MR. AIKEN: Okay. Thank you.

15 Then further on in that response, the revised table 4-
16 40, this is the capital cost allowance continuity schedule
17 for 2011. And this has been changed to reflect your
18 corrections related to computer equipment.

19 Specifically, you moved the \$1.6 million expenditure
20 from class 52 to 50. My question is: Did you spend any
21 money in January of this year that properly should be in a
22 class 52?

23 MR. BASILIO: Just a sec.

24 [Witness panel confers]

25 MR. BASILIO: We believe we would have spent some
26 capital on computer equipment in the month of January. I
27 don't have that number with me. We would be prepared to
28 modify the schedule to reflect that.

1 MR. AIKEN: Would you undertake to provide the actual
2 capital expenditures in January in that class?

3 MR. BASILIO: We would.

4 MR. AIKEN: Okay. Thank you.

5 MS. HELT: We will note that as Undertaking JT1.1.

6 **UNDERTAKING NO. JT1.1: TO PROVIDE AMOUNT OF CAPITAL**
7 **EXPENDITURE FOR CLASS 52 FOR JANUARY 2011.**

8 MR. AIKEN: Thank you. Those are my questions.

9 MS. HELT: All right.

10 **QUESTIONS BY MR. BUONAGURO:**

11 MR. BUONAGURO: Good morning. Michael Buonaguro for
12 VECC. My questions are based on the VECC technical
13 conference questions, just some follow-up from the answers
14 that were provided, I guess, a day or two ago.

15 And I am going to be starting with VECC Technical
16 Question No. 1, and in particular, I am looking at the
17 responses at parts (d) and (e).

18 First of all, perhaps I could ask the company to
19 confirm that for -- I am looking at table 3 at part (d).
20 It appears that for the 2006 OPA results, the CFL
21 assumptions with respect to gross annual energy savings and
22 effective useful life for the purposes of the CDM programs
23 were 104 kilowatt-hours and four years respectively?

24 MR. BACON: Michael, do you just want to direct me to
25 where you are looking, again?

26 MR. BUONAGURO: Sure. It's page 7 of 7 of the
27 Technical Conference Question 1 response to VECC, table 3,
28 the first line of the table: "Every kilowatt counts."

1 Energy Star compact fluorescent light bulbs," and then the
2 second column of numbers is 104 kilowatt-hours and the
3 third column --

4 MR. BACON: I see it, yes.

5 MR. BUONAGURO: Effective useful life, four years.

6 So my understanding is that those are the 2006 OPA
7 results, and that is what has been used by the company; is
8 that correct?

9 MR. BACON: That is what the answer says, so I am
10 assuming that is the case, yes.

11 MR. BUONAGURO: Okay. So the confusion comes from
12 part (e), which -- the information in part (d) seems to
13 have come about in the answer even though that wasn't
14 specifically requested in the question. So we had asked
15 the second question, part (e), which asked about the useful
16 life assumption.

17 And at part (e), the answer is:

18 "The OPA's 2006 assumptions regarding the
19 equipment life of CFLs is eight years. This
20 figure can be found in the 2009 OPA measure and
21 assumptions list."

22 So what we have here is table 3, which is showing 104
23 kilowatt-hours savings assumption, coupled with a four-year
24 lifespan, but then the suggestion at (e) that what is being
25 used is an eight-year lifespan.

26 So we are trying to track down to make sure the proper
27 numbers are being paired and used in conjunction with one
28 another.

1 [Witness panel confers]

2 MR. BACON: We are going to have to take that as an
3 undertaking, Michael. We don't have the answer to that
4 right now. We will -- it was done by another consultant
5 that is not here with us today, so we will have to check
6 with that person.

7 MR. BUONAGURO: I picked the one person who is not
8 here today?

9 MR. BACON: Yes.

10 [Laughter]

11 MR. BACON: Amazing. It is amazing.

12 MS. HELT: Michael, if you could just articulate,
13 then, what you would like for the undertaking?

14 MR. BUONAGURO: Okay. So it appears, from the
15 combination of the answers, that for the 2006 programs the
16 company may be using an assumption of 104 kilowatt-hours
17 savings for CFLs at the same time they're using an 8-year
18 lifespan, when it is clear, at least to us, that the 2006
19 assumptions were 104 kilowatt-hours paired with a 4-year
20 lifespan, which then has an effect on how the CDM is input
21 into the future years.

22 So we want to confirm that that is not the case, or,
23 if it is, why the company thinks that is appropriate, and
24 then I guess we will have to follow up presumably later on.

25 As part of that, perhaps the company can confirm
26 whether they have made an LRAM application with respect to
27 2006. I don't know offhand.

28 MR. BASILIO: We had made an LRAM application in

1 respect of 2006.

2 MR. BUONAGURO: So perhaps in looking at this
3 undertaking, perhaps you can confirm the assumptions that
4 were used in the 2006 LRAM application so we can see how
5 the numbers have changed or not changed, depending on how
6 they have been used.

7 MR. BASILIO: Just for clarity, is that the
8 undertaking, then, to confirm our 2006 LRAM application?

9 MR. BUONAGURO: No. You have used 2006 results to
10 impact your 2011, I think, forecast. Things that happened
11 in 2006, depending on how the lifespans persist, may affect
12 your forecast.

13 For CFLs, it appears you may be using an 8-year
14 lifespan, which then would affect your forecast at the same
15 time that you are using the 104 kilowatt-hour savings which
16 is only associated with the 4-year lifespan, because I
17 think if you look further in the information, you will see
18 that the 8-year lifespan is associated with only 43
19 kilowatt-hours' annual life savings.

20 So the long and short of it is you can't have both.
21 You can't use the longer lifespan and the higher kilowatt-
22 hour savings. You have to use one set or the other. So we
23 want to confirm which set you are using, and we want to
24 compare that to what happened in 2006, because you would
25 have had to use a set of assumptions in 2006.

26 MS. BUTANY-DESOUZA: So to be clear, then, the second
27 part, though, of your undertaking, the undertaking that we
28 are accepting, is also to confirm what we used as part of

1 the 2006 LRAM?

2 MR. BUONAGURO: Right.

3 MS. BUTANY-DESOUZA: Okay, thank you.

4 MR. BUONAGURO: Thank you. I think that is enough for
5 you to work on to help us out.

6 MS. HELT: That will be undertaking JT1.2.

7 **UNDERTAKING NO. JT1.2: TO CONFIRM WHAT ASSUMPTIONS**
8 **USED FOR CFL CALCULATIONS AND WHAT WAS USED AS PART OF**
9 **2006 LRAM.**

10 MR. BUONAGURO: Thank you. Now, I am going to move
11 ahead to VECC No. 5. Here we asked about the allocation
12 factors used for account number 1508 and the sub-accounts
13 in number 1508.

14 My understanding is that the company's position is
15 that the allocation factor that is required to be used is
16 distribution revenue, and that that is based on the EDDVAR
17 report.

18 And the specific question we asked was:

19 "Please confirm that the Board's EDDVAR report
20 only directed that distribution revenues be used
21 to allocate certain specific HONI #1508
22 accounts."

23 And the response was:

24 "Horizon Utilities confirms that the Board's
25 EDDVAR report, dated July 31, 2009, directs that
26 the allocation factor to be used for 'specific
27 Hydro One Networks Inc. ('HONI') accounts'
28 included in account 1508 balances is Distribution

1 Revenue."

2 My question is: Can you confirm that the, quote,
3 "specific Hydro One Networks accounts" that we are talking
4 about here are the OEB costs and pension accounts that HONI
5 had?

6 MS. BUTANY-DESOUZA: Grant, can you... Sorry, if we
7 can just have a moment?

8 [Witness panel confers]

9 MR. BROOKER: We followed the EDDVAR report on page 21
10 where, under the revised group 2 1508 account, the
11 allocation factor says distribution revenues for specific
12 Hydro One Networks accounts, and that is what we followed.

13 MR. BUONAGURO: Right. What I am suggesting to you is
14 that the specific Hydro One Networks accounts that is being
15 referred to there are the OEB costs and pension accounts
16 that HONI has because of the historical precedent for those
17 two accounts, and specifically EB-2005-0378.

18 I am asking if you have that same understanding. I
19 think you are telling me you don't, that you are relying
20 purely on the words from the EDDVAR and extrapolating from
21 that that it applies to all Hydro One Networks-related
22 accounts. Is that correct?

23 MR. BROOKER: That's correct.

24 MR. BUONAGURO: All right. So I think I have
25 identified the issue. I am going to leave it there for
26 now.

27 MS. BUTANY-DESOUZA: May I add to that?

28 MR. BUONAGURO: Sure.

1 MS. BUTANY-DESOUZA: We were tracking in account 1508
2 also based on our 2008 EDR decision.

3 So from page 31 of the decision, if I can read from
4 that, it says:

5 "Horizon may track the expenses..."

6 And these were related to CDM versus OPA funding:

7 "Horizon may track the expenses in account 1508
8 for potential future disposition, at which time
9 the Board will examine whether the expenditures
10 have been or could have been recovered through
11 OPA funding."

12 MR. BUONAGURO: Okay.

13 MS. BUTANY-DESOUZA: So in combination...

14 MR. BUONAGURO: Thank you for that. I think my
15 specific concern in raising this question had to do with
16 the allocation factor. I think you would agree that
17 particular line doesn't speak to that issue, but thank you
18 for that.

19 My next questions have to do with VECC Technical
20 Conference Question No. 7.

21 Perhaps while they are pulling it up, is there an
22 exhibit number for each of the sets of technical conference
23 questions, or is this simply how we should be referring to
24 them? I have just been referring to them as VECC No. 7 or
25 technical conference number 7.

26 MS. HELT: There is no exhibit number and I don't
27 think there needs to be, as long as you refer to them as
28 VECC technical conference questions.

1 MR. BUONAGURO: That's fine. I just wanted to check.
2 Thank you.

3 So VECC Technical Conference Question No. 7, we asked
4 for a regression analysis to be redone, which has been
5 done, and I wanted to just go through and confirm some of
6 how the steps were done to make sure we are on the same
7 page.

8 So, first of all, in terms of adding back to the
9 purchases as CDM values, we wanted to make sure that what
10 were used were the same CDM values that were used as
11 explanatory variables in the regression analysis,
12 presumably with an adjustment for losses.

13 MR. BACON: That's correct. And they're the
14 cumulative CDM values.

15 MR. BUONAGURO: Okay. Thank you. And then for the
16 CDM values that were subtracted out for 2010 and 2011 from
17 the projection, we would like to confirm that those are the
18 same as those that were used by Horizon as the forecast
19 input CDM values in its load forecast for 2010 and 2011,
20 presumably, again, with an adjustment for losses.

21 MR. BACON: There are adjustments for losses. But the
22 question was to reflect VECC 2(c), and they reflect VECC
23 2(c), as opposed to the application.

24 MR. BUONAGURO: Okay. So you are saying that you
25 can't confirm that it was done this different way --

26 MR. BACON: I can confirm it reflects VECC 2(c). It
27 doesn't reflect the application.

28 MR. BUONAGURO: Okay. So can we have you rerun it on

1 that basis, the one I just asked for?

2 MR. BACON: On the application - using the
3 application?

4 MR. BUONAGURO: Yeah, using the same ones from the
5 application.

6 MR. BACON: Sure.

7 MR. BUONAGURO: Okay.

8 MR. BACON: Now, I apologize for the details, but do
9 you want --

10 MR. BUONAGURO: Don't ask me something that I need to
11 give you an undertaking on.

12 [Laughter]

13 MR. BACON: I know, but I want to be clear what you
14 want. So you want the regression analysis run again, which
15 is fine.

16 But you want us to add back to the purchases the
17 amount that we assumed in the application, as opposed to
18 VECC 2(c)?

19 MR. BUONAGURO: Well -- so I asked the first question.
20 You confirmed that our understanding was correct in terms
21 of what you did to add back the purchases, and that is
22 fine.

23 The second part we wanted to confirm was that when you
24 subtracted values out for 2010 and 2011 from the
25 projection, that what you were subtracting are the same as
26 those that were used for the forecast input CDM values in
27 the application.

28 And you are saying that is not correct; we made an

1 incorrect assumption. So I have asked you to redo that
2 part of it, using the application numbers, not the VECC
3 2(c) numbers. Is that sufficient?

4 MR. BACON: Okay. What I hear you saying is you want
5 me to subtract off the amounts -- the CDM adjustments. You
6 want those to be specifically the amounts that are in the
7 application?

8 MR. BUONAGURO: Yeah, as part of the load forecast for
9 2010 and 2011.

10 MR. BACON: Right.

11 MR. BUONAGURO: So you have values that are included
12 in your load forecast.

13 MR. BACON: Right.

14 MR. BUONAGURO: Those are the values that we want you
15 to subtract out of the...

16 MR. BACON: I understand that.

17 MR. BUONAGURO: Right.

18 MR. BACON: But what I am trying to -- I know this is
19 a technical detail.

20 MR. BUONAGURO: Mm-hmm.

21 MR. BACON: The amounts that are subtracted off, the
22 CDM adjustments that are shown here in the answer, are
23 connected to the amount we add on --

24 MR. BUONAGURO: Mm-hmm.

25 MR. BACON: -- as per the instructions to do the
26 regression analysis.

27 MR. BUONAGURO: Okay.

28 MR. BACON: So what I am trying to make clear is if

1 you want me to have the CDM adjustment reflect the
2 application, then I should run a regression analysis with
3 the application CDM activity values in the regression, to
4 be consistent.

5 MR. BUONAGURO: Okay. So what you are telling me is
6 that the regression analysis uses CDM values X.

7 MR. BACON: Right.

8 MR. BUONAGURO: And the load forecast for 2010 and
9 2011 uses CDM values Y.

10 MR. BACON: Right.

11 MR. BUONAGURO: And they are not necessarily
12 compatible with one another?

13 MR. BACON: Well, they are different because of what
14 happened in VECC 2(c).

15 MR. BUONAGURO: Sorry. When I asked the first
16 question, which was about the CDM values, I asked you are
17 you using the same ones as the explanatory variables in its
18 regression analysis.

19 That regression analysis isn't the regression analysis
20 that is part of your application? It is something that is
21 produced from VECC 2(c)?

22 MR. BACON: The regression analysis that is in
23 response to TC No. 7 reflects VECC 2(c).

24 MR. BUONAGURO: Okay. Maybe I can do this. Let me
25 move on to the next part of it.

26 MR. BACON: Okay.

27 MR. BUONAGURO: While I am trying to confirm what you
28 have done. I think you can tell that there is a brain

1 outside the room that understands what you are talking
2 about.

3 MR. BACON: I understand that, yes.

4 [Laughter]

5 MR. BUONAGURO: So I will go back to the confirming
6 part, and then maybe we can leave it as an undertaking to
7 redo the regression with new variables, and then we can
8 confirm what those variables are with my other brain.

9 MR. BACON: That's fine. I just want to make sure I
10 get the right numbers to you.

11 MR. BUONAGURO: No, that's -- I appreciate that.
12 Thank you.

13 MS. HELT: Just to be clear, then, Mr. Buonaguro, you
14 are not asking for an undertaking at this point in time?
15 You would first like to proceed to the next --

16 MR. BUONAGURO: I will finish with the confirmation
17 questions, and then what I will do is ask for an
18 undertaking to redo with new variables based on the
19 confirmation or not, and then work out the details, and
20 then what the details are will be reflected in the
21 undertaking.

22 MR. BACON: Could I potentially suggest what somebody
23 might be looking for?

24 MR. BUONAGURO: Sure.

25 MR. BACON: Is that a possibility?

26 MR. BUONAGURO: Absolutely.

27 MR. BACON: This is all based on 2(c).

28 MR. BUONAGURO: Right.

1 MR. BACON: I could run the whole thing based on the
2 application.

3 MR. BUONAGURO: Right.

4 MR. BACON: Is that what you are looking for?

5 MR. BUONAGURO: I'm not sure.

6 MR. BACON: Okay.

7 [Laughter]

8 MR. BUONAGURO: To tell you the truth. Let me go
9 through the rest of the confirmation questions first.

10 MR. BACON: All right.

11 MR. BUONAGURO: So on page 3 of 3, there is a 5133.2
12 gigawatt-hour forecast for 2011.

13 MR. BACON: Yes.

14 MR. BUONAGURO: Can you confirm that that is the sum
15 of the monthly projections for 2011?

16 MR. BACON: Yes.

17 MR. BUONAGURO: Okay.

18 MR. BACON: Weather-normalized, yes.

19 MR. BUONAGURO: Okay. And then there is 174.1
20 gigawatt-hour adjustment for CDM.

21 MR. BACON: Mm-hmm.

22 MR. BUONAGURO: Can you tell us how that was
23 calculated, based on the CDM savings shown in Exhibit 3,
24 tab 2, schedule 2, appendix 3-1, page 3?

25 MR. BACON: I will have to look all of that up.

26 MR. BUONAGURO: Sure. I can probably shorten it by
27 putting it on the record, and then you can do it by way of
28 undertaking, if you like. I don't know how complicated it

1 is to do that calculation.

2 MR. BACON: Well, let me try and answer the question
3 without having looked at the references.

4 MR. BUONAGURO: Sure.

5 MR. BACON: What it exactly is is the accumulation of
6 CDM savings up to the end of 2011, assuming the annual --
7 assuming the annual savings from CDM programs in the year.

8 MR. BUONAGURO: Okay. My understanding is that what I
9 have asked you in the second part is a different way of
10 asking the first question.

11 Is it the same thing? It is the sum of the monthly
12 projections for 2011? Or no?

13 MR. BACON: No. It is different.

14 MR. BUONAGURO: Okay.

15 MR. BACON: It basically -- it is the accumulation --
16 it's the amount -- at the end of 2011, it is the amount
17 that Horizon Utilities has saved from the time CDM started
18 until the end of 2011.

19 MR. BUONAGURO: Okay. Thank you.

20 On page 3, lines 15 to 20 of the response --

21 MR. BACON: Yes.

22 MR. BUONAGURO: -- there is the comment that the
23 approach of adding back in cumulative CDM, which involves
24 estimating purchases before losses and then making a
25 specific CDM adjustment, appears to Horizon to be counter-
26 intuitive.

27 Could you explain what statement, what is it about it
28 that is perceived to be counter-intuitive?

1 MR. BACON: The CDM activity variable that is in the
2 regression analysis is an accumulation of CDM activity,
3 month over month.

4 What I mean by that is there is an estimate of how
5 much CDM has been saved for each month, and then that
6 amount is accumulated each month, so that the CDM activity
7 variable that is in the regression analysis is actually a
8 year-to-date amount by month.

9 It is not the amount we actually saved in the month,
10 it is a year-to-date number.

11 So that is where I had -- we have a bit of a challenge
12 with it. We are actually adding to purchases a year-to-
13 date amount, as opposed to the actual amount saved in the
14 month.

15 MR. BUONAGURO: Could you maybe tell me why that is
16 counter-intuitive? I am not quite understanding.

17 MR. BACON: Well, in my view, if we are going to add
18 back the CDM savings, it would be the amount that we saved
19 in the month, not the year-to-date amount.

20 MR. BUONAGURO: Okay. And can you explain why, then,
21 the approach that I guess Horizon is proposing is better?

22 MR. BACON: Well, in my view, it is better.

23 MR. BUONAGURO: I took that to be assumed.

24 [Laughter]

25 MR. BACON: Because what we are trying to do is we are
26 trying to simulate -- we are trying to put into the
27 forecast a variable that reflects CDM activity over a
28 number -- over a period of a month at Horizon Utilities.

1 And the concept was that we would take the amount that
2 we actually save each month and accumulate it, because the
3 accumulation is more reflective of the additional activity
4 you have to incur to actually save, but also maintain. It
5 is an activity variable. It is to show how much activity
6 were actually involved in the CDM programs.

7 And just to add on to that, it actually came out of
8 the 2010 forecast where VECC suggested that a number should
9 be added in for CDM activity, which was a number from 1
10 to -- it was an increasing number to show that activity in
11 CDM was increasing over time.

12 This was an attempt to do a better job at that.

13 MR. BUONAGURO: All right. Thank you for that.

14 Lastly on this topic, if you look at table 3-9 in the
15 initial application, we would like to see a similar table
16 for the historical years, excluding large users, which
17 would set out the actual purchases, the actual purchases
18 plus CDM, and the predicted purchases plus CDM.

19 MR. BACON: I'm sorry, can you just say that again? I
20 was distracted.

21 MR. BUONAGURO: Looking at table 3-9 in the initial
22 application, we want the similar presentation for
23 historical years, excluding large users. So we are looking
24 at actual purchases, actual purchases plus CDM, and
25 predicted purchases plus CDM.

26 MR. BACON: Okay. So is this to reflect VECC 2(c), or
27 to reflect the application?

28 MR. BUONAGURO: We are looking for historical, so it

1 shouldn't matter, I would think.

2 MR. BACON: Oh, I see, okay.

3 MR. BUONAGURO: Yes.

4 MR. BACON: Yes. That is written down somewhere;
5 right? I can go back and see what you are actually looking
6 for?

7 MR. BUONAGURO: You can give Bill a call.

8 MR. BACON: Yes, okay.

9 MR. BUONAGURO: Okay?

10 MS. HELT: So we will note that as an undertaking,
11 JT1.3.

12 **UNDERTAKING NO. JT1.3: TO PROVIDE SIMILAR TABLE TO 3-**
13 **9 REFLECTING HISTORICAL YEARS, EXCLUDING LARGE USERS.**

14 MR. BACON: Now, okay. Sorry, is that the cumulative?
15 Do you want the variable that we used? Do you want the
16 variable that we used in the regression analysis, or do you
17 want the actual CDM savings that occurred in the year?

18 MR. BUONAGURO: Well, we are asking for historical.
19 So I am assuming that to the extent you have actuals, you
20 are going to be using actuals.

21 MR. BACON: Okay. All right.

22 MR. BUONAGURO: If there is a problem with that, we
23 can discuss that.

24 MR. BACON: All right. Okay.

25 MR. BUONAGURO: Okay, thank you. Lastly, on a
26 question that has nothing to do with load forecasting.

27 MR. BACON: Thank you.

28 [Laughter]

1 MR. BUONAGURO: No, thank you. VECC Technical
2 Conference Question No. 14(c), we asked about vehicles.
3 What I wanted to just ask, quickly, if I may, if you look
4 on the table, this sets out the additions and subtractions
5 of vehicles between 2008 and the forecast test year.

6 Along the side, the right side of the table where it
7 says "reason for increase or decrease", and there is a
8 particular line -- I think it applies to I think five of
9 the vehicles or so. It says, "vehicle availability to
10 support demand".

11 So I can understand, in relation to the other
12 categories, that this isn't a case where you are replacing
13 an end-of-life vehicle, and it is not the case where you
14 have a specific person who is now requiring an additional
15 vehicle. It has some other purpose. So I wanted to get an
16 explanation for what that means, "vehicle availability to
17 support demand".

18 MS. LERETTE: Okay. I will give you an example. In
19 the capital group, we've gone from seven vehicles to nine
20 to support demand. So we've got more than 20 people,
21 sometimes 25 people, using nine vehicles.

22 So it becomes a point where the utilization is such
23 that you need to add another vehicle to that group.

24 MR. BUONAGURO: Sorry, just to be more specific, are
25 you saying demands related to increased pool of people
26 using it, or the same pool of people using it for more
27 things? Are you using those vehicles for more things, or
28 both?

1 MS. LERETTE: It is both. In the capital example, I
2 believe we added an engineering tech to the pool who uses
3 that vehicle, but because our work is increasing, their
4 ability to go out in the field has increased, and so they
5 need more vehicles.

6 MR. BUONAGURO: Okay, thank you for that.

7 Those are my questions. Thank you.

8 MS. HELT: Mr. Buonaguro, was there an undertaking
9 that you required with respect to the regression analysis,
10 or there was one that was being discussed at that time?

11 MR. BUONAGURO: I can get back to them after the
12 break. Let me put it this way. I mean, if it is
13 important, we are going to have to ask the question at the
14 hearing and have it done then. So if there is one, I will
15 talk to my consultant and see if he needs a redo of the
16 regression analysis. If so, I will put it to the company
17 in a letter, and I am assuming there wouldn't be a big
18 problem doing it, unless there is some huge technical
19 problem.

20 MR. BACON: We need a definition of what you need and
21 we will give it to you.

22 MR. BUONAGURO: I think we are okay for now. I think
23 we can work it out if we need it. Thank you.

24 MS. HELT: That's fine.

25 Mr. Shepherd?

26 MR. SHEPHERD: I would prefer to go last, if it is
27 possible.

28 MS. HELT: All right. I understand Ms. Grice does not

1 have any questions.

2 MR. SHEPHERD: Okay, David, do you have anything?

3 MS. HELT: Mr. MacIntosh?

4 **QUESTIONS BY MR. MACINTOSH:**

5 MR. MACINTOSH: David MacIntosh for Energy Probe. I
6 do have questions on one other Energy Probe Technical
7 Conference Question No. 14.

8 This technical conference question refers back to
9 Energy Probe's Interrogatory No. 50 and asks Horizon
10 Utilities to provide a calculation. The response discusses
11 how the calculation was undertaken.

12 So, once again, we are requesting that you provide the
13 actual calculation, not just the answer, but the actual
14 calculation done by Horizon.

15 [Witness panel confers]

16 MS. GALLI: In the response to Energy Probe 50, we
17 provided a table outlining for the years 2004 to 2010 all
18 employees that were eligible for an undiscounted
19 retirement, the number of employees that actually retired
20 in each of those years, and then calculated, on an annual
21 basis, the percentage that -- what was representative of
22 those that retired versus those that were eligible.

23 So in terms of the technical question 14, what we are
24 saying is that between 2004 and 2010, we simply took the
25 average of the percent retirement in each year to come up
26 with the 97 percent.

27 MR. MACINTOSH: I understand that, and what we are
28 asking for is you provide the actual calculation, not an

1 explanation of how it was done. Very simple, but that is
2 all we are asking.

3 MR. BROOKER: If I may, if you take the table that is
4 provided at the bottom, the response for 2004 says
5 31 percent, 2005 says 400 percent, et cetera, et cetera.

6 Take the total of the 31 percent, the 400 percent, the
7 33 percent, et cetera, et cetera, divide by seven years.
8 That provides the 97 percent.

9 MR. MACINTOSH: Thank you. So if you would provide
10 that calculation to us, that would end my question.

11 MS. BUTANY-DESOUZA: We will take that as an
12 undertaking.

13 MR. MACINTOSH: Thank you.

14 MS. HELT: That will be marked as Undertaking JT1.4.

15 **UNDERTAKING NO. JT1.4: TO PROVIDE ACTUAL CALCULATION**
16 **FOR ENERGY PROBE TECHNICAL CONFERENCE QUESTION NO. 14**

17 MR. MACINTOSH: That is the only question I had.

18 MS. HELT: Thank you. Mr. Shepherd, Board staff can
19 go next, if you would prefer.

20 MR. SHEPHERD: Yes.

21 **QUESTIONS BY MR. RITCHIE:**

22 MR. RITCHIE: Thank you. I guess I will just have a
23 few questions related to the responses to the technical
24 conference questions to Board Staff.

25 I would like to start with Technical Conference
26 Question No. 2, and this is asking about the documentation
27 on the 37 cents per meter read and referencing back to
28 AMPCO IR No. 20.

1 I guess I am still trying to look at this, because
2 maybe I just need some explanation of the response to AMPCO
3 No. 20, and bringing that one up, on page 2 of that
4 interrogatory there is a table that basically is showing
5 how the -- basically, 109.82 weighting factor for the
6 interval reading meter data for 2004 was derived.

7 Basically, for the larger users, it is showing MV90
8 cost to read retail meters of \$123,176.77, and basically an
9 interval meter cost per retail meter per month of \$40.73.

10 Now, that has been contrasted against this residential
11 meter read cost of 37 cents per month.

12 I guess I am trying to understand the MV90 cost for
13 meter reads, is that just pure OM&A expense for the -- to
14 read the retail meter?

15 MR. BROOKER: So you're referring to the 37 cents?

16 MR. RITCHIE: Let's start with the MV90 cost to read
17 the retail meters, which, again -- it is the total amount,
18 like this 67.925 percent of the 181,000, in other words the
19 \$123,000 cost for reading the retail, the MV90 cost is
20 about \$123,000.

21 Is that just a pure OM&A expense cost, or...

22 [Witness panel confers.]

23 MS. HUGHES: If I may, subject to check, I believe
24 that includes the OM&A costs of the MV90 department,
25 including wages as well as costs to run the MV90 system.

26 MR. RITCHIE: So it is just an expense item?

27 MS. HUGHES: Correct, an OM&A expense.

28 MR. RITCHIE: Okay. And the 37 cents for the retail

1 meter, that is just an expense for -- again, a monthly
2 expense item?

3 MR. BROOKER: It is not a monthly expense; it is the
4 cost for each meter read.

5 MR. RITCHIE: Okay. But on a per-monthly basis, so in
6 other words -- the way I guess I am thinking of it is this
7 is really the cost for the old human meter reader to sort
8 of go around to your side door, basically take the meter
9 read, log it into, I guess, their hand-held terminal or
10 however they did it?

11 MR. BROOKER: Yes, that's correct. That is where the
12 37 cents comes from.

13 MR. RITCHIE: Okay. So I guess I am still -- okay.
14 So there are no capital costs in either of these items, and
15 I guess it is -- where I am trying to understand this is,
16 again, like, say, 37 cents per meter read, if I was to sort
17 of say: Okay. If a meter reader did 100 meter reads in an
18 hour, that is basically a \$37 expense item.

19 Now, I would think that probably 100 meter reads in an
20 hour would probably be pretty aggressive?

21 MS. CAMPBELL: Depending on the route optimization,
22 the way that the routes are laid out, they're actually --
23 this would be the typical cost for a residential read, and
24 a meter reader would typically read 6- to 700 of these a
25 day.

26 MR. RITCHIE: Well, okay. And I guess at this time,
27 were you doing monthly or sort of bimonthly reading?

28 MS. CAMPBELL: We actually have both schedules. We

1 have a monthly cycle and a bimonthly cycle, as well. So
2 this would be cost per read, regardless if it was a monthly
3 or a bimonthly.

4 MR. RITCHIE: Okay. Thank you. I would like to next
5 move on to Technical Conference Question No. 5. This is
6 dealing with the meter reading expenses, really, in -- and
7 I guess I will now deal with really from 2008 to 2011, and
8 really how your smart meter deployment has played out and
9 what impact this has had on sort of the manual meter reads
10 versus the AMI.

11 Again, I am sort of familiar with some of the material
12 from your -- the separate smart meter funding adder
13 application.

14 You had basically deployed 95 percent of your smart
15 meters by the end of 2009, and for those, were -- had you
16 converted over to sort of a remote meter read, or were you
17 still using manual meter reads? And if so, can you give
18 sort of like a distribution of that?

19 MS. CAMPBELL: So -- yes, correct. In 2009 we had
20 converted just approximately 95 percent of our meters to
21 smart meters.

22 Depending on when the meter was installed and when it
23 started communicating with the AMI, once we had
24 confirmation that we were getting accurate data and it had
25 been verified, we commenced using the read from the AMI to
26 build the account.

27 So by the end of 2009, we reached a typical baseline
28 for conventional meter reading. So we had -- the meters

1 that were in, we were using the AMI system for them. There
2 may have been a few that we had communication issues with,
3 but not a large amount.

4 So the meter reading costs are, of course, still the
5 large commercial, the greater-than-50 classification, the
6 under-50 classification that we're still reading as well,
7 particularly the three-phase meters, because we didn't have
8 a meter solution for those, and we had quite a number of
9 hard-to-reach meters in the residential side that we hadn't
10 changed out yet that made up that difference of the
11 5 percent.

12 MR. RITCHIE: Okay. So -- and again, I know you will
13 have higher costs for reading the large commercial and some
14 of these others.

15 I guess it is a matter of trying to sort of trying to
16 understand why the meter reading expenses really are still
17 only going down by about 50 percent, really, from when you
18 converted from the manual meter read to going over to the
19 AMI.

20 MS. CAMPBELL: One of the other contributing factors
21 is the fact -- and what I spoke about a few minutes ago
22 about route optimization.

23 Once the smart meters were installed and a meter
24 reader is now walking five houses in between to read a
25 meter, the costs to read that meter is no longer in the 37
26 cent range or the range just above that.

27 On average, in 2009, subject to check, I believe we
28 were paying about \$1.14 for a residential read, around

1 \$1.25 for a small commercial, and about \$1.74 -- somewhere
2 in that range -- for a large commercial. So the cost of
3 meter reading itself has increased with the routes being
4 changed with the installation of the smart meters.

5 MR. RITCHIE: Okay. And also in both, I think, this
6 application and in your smart meter funding adder
7 application, you have also provided evidence that you are,
8 I guess, as meter seals expire, replacing a number of the,
9 I guess, larger commercial meters with meters that actually
10 will communicate with the AMI infrastructure.

11 And so I guess there could be potentially some more
12 savings, at least in terms of the number of meter readers.

13 Now, I agree that as you reduce the number, of course
14 there is probably going to be losses in the economies of
15 scale type of --

16 MS. CAMPBELL: That is correct. There will be a loss
17 of economies of scale, but, as these new meters come online
18 and we are able to read them through the technology, we
19 will be using those reads to bill on.

20 MR. RITCHIE: Okay, thank you.

21 I would like to move on to the Board Staff Technical
22 Conference Question No. 9. This is having to deal, I
23 think, with a new proposal from Horizon regarding the
24 amortization of the costs related to actually this current
25 proceeding, where, in your original application, you had
26 proposed to amortize the costs over three years, but now,
27 basically, recognizing that the Board is normally having a
28 four-year cycle between rebasings, that a four-year

1 amortization of these costs recovery would be more in line
2 with the IRM.

3 However, you do then say that Horizon -- quote:

4 "Horizon Utilities submits that, if the
5 amortization is changed to four years, it should
6 be able to recover any unamortized portion of
7 such if it were to file, and the Board were to
8 accept, its next cost-of-service rate application
9 in advance of the 2015 rate year."

10 Now, I guess right now, in the original application,
11 you had proposed an amortization of three years. If you
12 were to continue with the three-year amortization but, in
13 fact, you were on the more normal four-year rebasing cycle,
14 what would be -- you know, how would you propose to deal
15 with what potentially would be an over-recovery in the
16 fourth year?

17 MR. BASILIO: We recognize that the four-year is more
18 in line with the four-year IRM period and don't have any
19 issue with changing the application to reflect that, if
20 that is the Board's decision.

21 The issue we didn't want to lose sight of, being in
22 this position now, is that -- is to the extent -- an
23 application costs a certain amount of money to prepare.
24 Here it would be recovered over four years. If the Board
25 were to accept -- and I don't know that this will be the
26 case. It certainly is now. But if we were to advance an
27 application again, we could lose whatever unamortized costs
28 were undertaken to prepare this application.

1 So we just don't want to lose sight of that in the
2 event that we were to advance again. That is really, I
3 think, the issue we want to identify it here. It is not so
4 much the three- or four-year am. As a matter of fact, I
5 think the three-year am. recommended in the original
6 application was a mistake, in terms of understanding the
7 length of the IRM period. We understand it is four years
8 and changing -- again, changing the am. to four is not an
9 issue for us.

10 MR. RITCHIE: Okay, thank you. I guess I will next
11 move on to Technical Conference Question No. 10. This is
12 dealing with the idea of increased call volumes expected in
13 2011 due to the switch-over to time-of-use rates.

14 I guess I will specifically -- sorry, I am just trying
15 to see where I had that.

16 In the part (c) of the question, basically you are
17 noting that you have contracted incremental staff in 2011
18 to manage sort of this -- the call volumes in this, I guess
19 what you are terming a time-of-use transitional period for
20 this year.

21 What I am trying to understand, these costs -- now are
22 these in your OM&A -- in this application, or are they
23 recorded in the smart meter OM&A costs?

24 MS. CAMPBELL: The costs for the incremental staff to
25 handle the call volumes are part of our smart meter adder.
26 They are not included in this application.

27 MR. RITCHIE: Okay, because, yes, I just couldn't -- I
28 was trying to look through the evidence in that application

1 and this one, and I couldn't specifically identify where
2 those costs were. Like, they weren't specifically broken
3 out.

4 So, again, basically they're part of the smart meter,
5 so really it will be dealt with more or less as a one-time
6 cost when you apply for disposition of your smart meter
7 deferral and variance account balances?

8 MS. CAMPBELL: That is correct.

9 MR. RITCHIE: Okay. So there is nothing in this
10 application relating to that.

11 So I guess in reality, yes, you've got the increased
12 call volumes, but, in reality, all you are budgeting for in
13 your costs in this application is really a normal level of
14 call volumes, and that the incremental amount is really
15 being captured in the smart meter funding adder account
16 balances?

17 MS. CAMPBELL: That is correct.

18 MR. RITCHIE: Thank you.

19 **QUESTIONS BY MR. ABRAMOVITZ:**

20 MR. ABRAMOVITZ: Good morning. If I could take you to
21 CCC Technical Conference No. 4, Horizon has identified
22 about \$130,000 in incremental costs for the new director in
23 the project management office.

24 I would just like if you could elaborate on the
25 incremental costs for this position.

26 MS. GALLI: The incremental costs for that position
27 would reflect base salary and incentive.

28 MR. ABRAMOVITZ: So it includes salary and incentive?

1 That is the incremental cost?

2 MS. GALLI: Yes.

3 MR. ABRAMOVITZ: Okay, thank you.

4 MS. HELT: Mr. Shepherd, how long do you think you
5 will be? I am just wondering, perhaps it would be an
6 appropriate time to take a short break, and then come back
7 with your questions, unless...

8 MR. SHEPHERD: Well, I have two sets of questions. I
9 have a set of questions that is not confidential relating
10 to the questions asked by others that are follow-ups. And
11 those, I expect that won't take more than an hour.

12 The confidential stuff I didn't get until late last
13 night, so I am actually going to have to walk through each
14 answer one by one, because I haven't had a chance to read
15 all of it. I am trying to read it now, but it is hard to
16 do both, you know?

17 MS. HELT: Right.

18 MR. SHEPHERD: I think that will take at least another
19 hour, hour and a half. So I would guess that is probably a
20 good time to take a break, yes.

21 MS. HELT: All right. We will take a ten-minute break
22 and we will come back at -- well, let's make it a few more
23 minutes. Twenty-five after 10:00 we will come back. Thank
24 you.

25 --- Recess taken at 10:12 a.m.

26 --- On resuming at 10:25 a.m.

27 MS. HELT: All right. Now that everyone is here,
28 perhaps we can get started again.

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 I believe we left off just before Mr. Shepherd was
2 about to start his questions, so Mr. Shepherd?

3 **QUESTIONS BY MR. SHEPHERD:**

4 MR. SHEPHERD: Thanks very much. I am going to start
5 with a bunch of follow-up questions on the responses to
6 technical conference questions for the other intervenors
7 and Board Staff.

8 I am looking, first, at VECC. You have already been
9 asked about the lives of CFLs in VECC Technical Conference
10 Question No. 1.

11 What I am going to ask you about is the assumption of
12 100 percent persistence for all program results, which you
13 will find on page 2.

14 Do I understand that to mean that, for example, if we
15 look at this table for your 2005 third tranche program
16 spendings, that you assumed that all of these savings from
17 2005 continue in 2011? Is that right?

18 MR. BACON: Yes, that's correct.

19 MR. SHEPHERD: So -- and I will pick on the CFLs
20 because they're there.

21 That means that if you got somebody to install a CFL
22 in 2005, you are assuming that CFL is still saving energy
23 in 2011?

24 MR. BACON: For the purposes of defining the variable,
25 yes, in a regression analysis.

26 MR. SHEPHERD: All right. You haven't made any
27 attempt to figure out whether any of these actually last
28 that long?

1 MR. BACON: No.

2 MR. SHEPHERD: Okay. Thanks. Then in VECC Technical
3 Conference Question No. 2, I am looking at page 2 of that -
4 - and this also may be for you, Mr. Bacon -- This is the
5 degree-days, heating and cooling degree-days.

6 And I understand correctly -- do I understand
7 correctly that the weather-normal heating degree-days are a
8 given? They're part of your inputs? These are not
9 calculated numbers; these are the numbers from your
10 historical data?

11 That is why they're the same every year?

12 MR. BACON: Yes. They're the average of -- I can't
13 remember the number of years of averaging of the heating
14 degree-days, but that is exact -- it is the average heating
15 degree-day over a number of years. I think it -- yes.

16 MR. SHEPHERD: Now, isn't it normally true that that
17 average is actually adjusted every year?

18 Like, I didn't understand how you would have the same
19 heating and cooling degree-days for 2003 and 2010, when
20 your time series data would be different for each.

21 MR. BACON: I understand where you are coming from,
22 but for the purposes of doing weather-normalization in our
23 load forecast models, we take the average of the heating
24 degree-days in a particular month for the number of months
25 of historical data that we have.

26 So by definition, in the way that we do weather-
27 normalization, the number is the same for each year.

28 MR. SHEPHERD: Wouldn't you have more months available

1 when you are doing the 2010 normalization than when you are
2 doing the 2003 because you have everything up to 2009
3 available?

4 I am not saying you are doing it wrong; I am just
5 trying to understand it. That's all.

6 MR. BACON: Well, the way -- there is a weather-
7 normalization number that we have for each month. That
8 weather-normalization number that we have for each month is
9 the average -- for instance, let's take January.

10 For January 2010, we have a weather-normalization
11 number, and that reflects the heating degree-days from 2003
12 to 2009 for all of the Januarys, divided by the number of
13 years that is. I think that is seven.

14 So we use that as the heating degree-day weather-
15 normalization number for January for each year.

16 And when you add them all up, it is always the same
17 number.

18 MR. SHEPHERD: Oh, so...

19 [Cell phone ringing.]

20 MR. SHEPHERD: That's -- so that means that for 2003,
21 you are actually assuming that weather-normal is calculated
22 using the months up to 2009?

23 MR. BACON: That's right.

24 MR. SHEPHERD: It is basically retroactive?

25 MR. BACON: Right.

26 MR. SHEPHERD: Okay. I get it. Thank you.

27 VECC No. 9 asks you about the business development
28 department -- or business development group, sorry.

1 Do I understand correctly that what happened was you
2 created this group -- this is probably you, I guess, Mr.
3 Basilio -- you created this group largely to do M&A work,
4 but then M&A sort of dried up and it is now doing other
5 things? Am I right?

6 MR. BASILIO: I am just turning to the response.

7 As noted in the response, it was always the intention
8 of that group to enhance the strategic planning and
9 corporate development capacity of Horizon Utilities as a
10 group.

11 When we created the group, its principal focus at that
12 time was going to be M&A.

13 Since that time, M&A activity hasn't been as robust as
14 we had thought. However, this position has now been able
15 to focus on other elements of strategic planning that do --
16 and -- such as sustainability that do directly affect the
17 regulated utility, as was contemplated for the position.

18 MR. SHEPHERD: So prior to this group, you were still
19 doing strategic planning, for example, right?

20 MR. BASILIO: Yes.

21 MR. SHEPHERD: But whoever was doing it before, it was
22 moved to this department?

23 MR. BASILIO: Not entirely, but the principal focus of
24 the group is to do that. I think what we were finding as
25 an executive management team at the time is that the burden
26 of strategic planning was becoming a lot, and it needed a
27 more focussed resource or department to help support the
28 team with those functions.

1 MR. SHEPHERD: Is this in part because of the merger
2 with St. Catharines and the sort of expanded size of the
3 enterprise?

4 MR. BASILIO: I wouldn't say that is a principal
5 contributor, but certainly -- at the time, of course, M&A
6 was the principal focus, and off of the St. Catharines'
7 merger, we were certainly hoping for a more robust M&A
8 environment, which would have resulted in most of the time
9 of this department being focussed on M&A activity.

10 MR. SHEPHERD: Well, and it was until last year,
11 right? Because you were doing the Guelph deal, right? So
12 this department was mostly doing M&A until last year; true?

13 MR. BASILIO: No. The Guelph deal was being -- we
14 hired this position -- let me just confer. I just want
15 to -- just hang on a sec.

16 [Witness panel confers]

17 MR. BASILIO: The department came into being partway
18 through the Guelph merger.

19 I can tell you that the fellow responsible for this
20 department was not directly involved in that Guelph deal.
21 He was -- at that time, our discussions with Guelph were
22 fairly -- were advancing, and the focus of this individual
23 was on the next deals, cultivating relationships, those
24 sorts of things.

25 MR. SHEPHERD: Okay. You have said on page 2 of this
26 response that one of the things this department does is
27 manage a database of LDC comparisons.

28 And you have referred to that in an SEC interrogatory

1 response, as well, I know.

2 Is this something you share with other LDCs?

3 MR. BASILIO: I don't know if we have shared it with
4 all of LDCs, but in particular, when the Board was
5 undertaking its benchmarking of LDCs, this department had
6 been and was continuing to be in the process of developing
7 this database, which was shared -- I can't say if it was
8 all LDCs, but a number of LDCs, and Board Staff were
9 engaged. The vice president of business development - some
10 will be familiar with Mr. Neil Freeman - he was very active
11 in the benchmarking, both working -- both trying to -- you
12 know, with respect to Horizon Utilities, but as well with
13 other LDCs.

14 So certainly a number of LDCs would have been engaged
15 in that work. I am not sure if it is all. I don't know if
16 they all have had access to that data.

17 MR. SHEPHERD: Sorry, that is back in 2008. I get
18 that, but I am asking about now, because you are still
19 doing this; right?

20 MR. BASILIO: Yes.

21 MR. SHEPHERD: And this is information that is
22 incremental to the information that the Board publishes
23 benchmarking utilities; right?

24 MR. BASILIO: Yes.

25 MR. SHEPHERD: And do you make it public or do you
26 share it with other LDCs?

27 MR. BASILIO: I don't know that we have made it public
28 or have shared with other -- I believe we are sharing with

1 certain other LDCs, but I don't know that we have made the
2 data public. I can't answer that at this point in time.

3 MR. SHEPHERD: Well, I wonder if you could provide us
4 with the current database, the current status of that
5 database, the current set of comparisons, most up to date,
6 whatever you've got most up to date.

7 MR. SIDLOFSKY: I'm sorry, if that hasn't been made
8 public, if that is simply being prepared for Horizon's own
9 purposes, I am not sure that Horizon would be prepared to
10 provide it publicly.

11 MR. SHEPHERD: What is the basis?

12 MR. SIDLOFSKY: It is an internal document. It
13 shouldn't be relied on, I wouldn't think, for any certainty
14 in terms of reliability or other characteristics of other
15 LDCs in the province.

16 MR. SHEPHERD: This is being paid for with ratepayer
17 money, yes?

18 MR. BASILIO: It is not being -- Neil Freeman's costs,
19 the costs of that business development group, were not
20 provided for in 2008 rates. They were excluded from our
21 2008 rates.

22 We are seeking here to have -- recognizing that he is
23 enhancing the utility for the reasons noted in our
24 evidence, we are seeking to have his costs included in
25 rates going forward or an allocation thereof.

26 But in the 2008 decision, his costs were entirely
27 excluded, and I will just have my colleague confirm, but I
28 don't believe that there were any allocations of his costs

1 to Horizon Utilities in 2009 or 2010.

2 MS. HUGHES: That's correct. If you look at our
3 response to VECC No. 19 in response to part (a), you will
4 see that the business development costs, they were not
5 allocated in 2009 or 2010.

6 MR. SHEPHERD: No, I understand that. But as of right
7 now, you are proposing that Mr. Freeman's salary be borne
8 by the ratepayers; correct? One of your justifications is
9 this database; correct?

10 MR. BASILIO: I think what we are asserting here is
11 that much of the work that he has done over the past few
12 years has supported the utility, and that value has been
13 created and paid for by the shareholder. We are showing
14 examples of things that he has done or will be doing going
15 forward that would benefit the utility, and, should his
16 costs be approved in the application, ratepayers would
17 commence paying for the value of those things.

18 MR. SHEPHERD: Well, actually, as you proposed, they
19 would be paying for them now; right? If the Board accepts
20 what you are proposing, then today we are paying for his
21 salary; right?

22 MR. BASILIO: As of January 1, should the rates be
23 effective as of that date, I would confirm that is correct.

24 MR. SHEPHERD: So, therefore, I am asking for the
25 database and I am asking Mr. Sidlofsky to advise: Is your
26 objection to delivering it materiality or relevance?
27 Because those are your only two choices.

28 MR. BASILIO: I think I would like to consult with --

1 I don't think I can answer that today. Again, I know that
2 we have made some of this data available to other LDCs.
3 What I can't answer today is if we have made it public,
4 meaning I don't know if we have or have not.

5 But before agreeing to an undertaking, I would need to
6 consult with Mr. Freeman.

7 MR. SHEPHERD: Then I am going to ask that we give it
8 an undertaking number on the understanding that it may end
9 up being a refusal, but at least we need to record it.

10 MS. HELT: Let's note that as a confidential
11 undertaking at this time. We will give it just a number to
12 reflect that it could be a confidential document.

13 MR. SHEPHERD: Well, okay, but I would have thought
14 that anything could be a confidential document.

15 As I understand it, so far nothing -- no
16 confidentiality has been claimed on this, because they're
17 refusing to give it to us. So if they do claim
18 confidentiality, then at that point it would have a
19 confidential number.

20 I wouldn't have thought it would yet, unless you are
21 saying you will give it to us, but it -- you want to claim
22 confidentiality, in which case that is fine.

23 MR. SIDLOFSKY: I don't think I am saying either of
24 those things right now. I think I am saying that Horizon
25 will need to consider it and advise.

26 MS. HELT: All right. Then in that case, there is no
27 need to give it a confidentiality number.

28 So we will mark this as JT1.5.

1 **UNDERTAKING NO. JT1.5: TO PROVIDE DATABASE.**

2 MR. SHEPHERD: Thank you. The other thing I am
3 wondering about in this response number 9 - remember
4 response number 9 we were talking about - you talk about
5 this coalition of 22 LDCs that was advocating changes to
6 the third generation IRM.

7 This is something you're talking about, after third
8 generation IRM was implemented, you proposed changes to the
9 Board; is that right?

10 MR. BASILIO: I can't recall the specific timing,
11 whether it was during the proceeding or after. I believe
12 it was after the proceeding. That is what I am confirming,
13 I guess.

14 I can't recall the timing. I think it was after the
15 proceeding. It could have been during the proceeding.

16 MR. SHEPHERD: Was this public or was this behind the
17 scenes?

18 MR. BASILIO: Again, I can't recall. I believe it was
19 public. We could certainly verify that. I just don't
20 recall.

21 MR. SHEPHERD: If it was a public document - that is,
22 this proposal - could you provide it?

23 If it was not a public document, could you determine
24 whether you are willing to provide it anyway, or not?

25 MR. BASILIO: Yes.

26 MR. SHEPHERD: Thank you.

27 MS. HELT: That will be noted as undertaking JT1.6.

28 MR. BASILIO: Sorry, if I could beg the indulgence for

1 a second, I note my colleague here has provided, in the
2 response to SEC 9 --

3 MR. SHEPHERD: Yes.

4 MR. BASILIO: -- there is a paragraph:

5 "The Horizon-led coalition submission arrived at
6 nine recommendations for improvements in the
7 benchmarking underlying the third generation IRM
8 through 48 pages of analysis of LDC benchmarking
9 issues in Ontario. See EB-2007-0673 submission
10 filed December 16th, 2008 as the coalition for an
11 effective incentive rate mechanism."

12 MR. SHEPHERD: Oh, okay. So it was within that
13 proceeding?

14 MR. BASILIO: Yes.

15 MR. SHEPHERD: Oh, okay. Well, then I withdraw the
16 undertaking response. I didn't realize that.

17 MR. SHEPHERD: Then the last is on page 4 of that
18 interrogatory -- the last on this question. This is -- on
19 page 4, you are breaking down the expense of the business
20 development group, and I have to confess I had some
21 difficulty following it, and I just wonder whether you can
22 take us through that table on page 4 and help me to
23 understand what it means.

24 Which are the things that the ratepayers were bearing
25 and which are the things that the shareholder was bearing,
26 or is proposed to bear?

27 MS. HUGHES: So if I could respond, in 2007 and 2008,
28 100 percent of the business development costs went through

1 Horizon Utilities. Following our 2008 EDR --

2 MR. SHEPHERD: Sorry, let me just stop you.

3 But they went through Horizon Utilities, which is the
4 regulated entity, right?

5 MS. HUGHES: Yes.

6 MR. SHEPHERD: But the ratepayers didn't bear them?
7 Because they were not part of --

8 MS. HUGHES: They were not in rates.

9 MR. SHEPHERD: Okay. So they were in HUC, but they
10 were not in rates?

11 MS. HUGHES: Correct.

12 MR. SHEPHERD: Thank you.

13 MS. HUGHES: In 2009, following the 2008 EDR decision,
14 the -- 100 percent of the business development costs were
15 allocated to Horizon Holdings Inc.

16 Make reference in 2009 that we did, in fact, put
17 100 percent of the sustainability, as well as the
18 development costs, into Horizon Holdings Inc.

19 In 2010, we've recognized that the sustainability
20 costs really are around the development of Horizon
21 Utilities' data with respect to sustainability.

22 And so the costs associated with sustainability are in
23 the utility at 100 percent, but the costs of the business
24 development costs, particularly around the salaries and
25 benefits, are 100 percent in Horizon Holdings Inc.

26 MR. SHEPHERD: Okay. Let me just stop you. So
27 sustainability is your CSR report, right? You do an annual
28 CSR report?

1 MR. BASILIO: That's correct.

2 MR. SHEPHERD: And so when you talk about
3 sustainability costs, that is the cost of the -- what is
4 it -- two people that work on that?

5 MR. BASILIO: That cost would include -- it is the
6 costs of the development of the report.

7 MS. HUGHES: Correct. Third-party costs of developing
8 the report.

9 MR. SHEPHERD: Right. But the point is there is only
10 that report? That --

11 MS. HUGHES: Yes.

12 MR. SHEPHERD: -- that group doesn't do anything else,
13 just that?

14 MS. HUGHES: There is not a particular department in
15 2010. Hang on a sec.

16 MR. SHEPHERD: Let me ask this a different way. Is it
17 a lot of money?

18 MS. HUGHES: Oh, sorry. I believe in VECC -- I am
19 trying to -- I believe it is VECC. If I take you back to
20 VECC No. 9 again, I believe there was a table that
21 identified the percentage.

22 Let me just check the reference. Hang on one sec.

23 MR. SHEPHERD: This is VECC IR No. 9? Or Technical
24 Conference No. 9?

25 MS. HUGHES: I have to think about that. Just one
26 sec.

27 My apologies. The reference is VECC No. 19 in the
28 original IRs.

1 MR. SHEPHERD: Okay.

2 MS. HUGHES: Page 2 of 7 in response to VECC 19(a), we
3 provide the breakout of the sustainability costs versus the
4 business development costs.

5 MR. SHEPHERD: Fine. That is what I need, the
6 \$143,000.

7 MS. HUGHES: Correct.

8 MR. SHEPHERD: Thank you. Go on. 2011?

9 MS. HUGHES: So in 2011, the -- 100 percent of the
10 sustainability costs would be within the utility, and
11 80 percent of the business development salaries and
12 benefits would be in the utility, with 20 percent in the
13 holding company.

14 MR. SHEPHERD: Okay. Well, looking back at VECC
15 No. 19, it looks like it is actually about 50/50 on
16 business development. That is to say that it is 80 percent
17 of the salaries, but it is -- but none of the other costs,
18 the external costs.

19 In VECC 19, you've got 344 for HUC and you've got 351
20 for Holdings; is that right?

21 MS. HUGHES: That is what has been described on the
22 table, yes.

23 MR. SHEPHERD: Okay.

24 MS. HUGHES: I -- so 80 -- so just to clarify with
25 respect to that table for 2011, the 344 is 80 percent of
26 the wages. So that means in Horizon Holdings Inc. is 20
27 persons of the wages, plus other costs related to non-
28 regulated business development.

1 MR. SHEPHERD: All right. Thanks. I am moving on to
2 VECC Technical Conference Question No. 10. And this is
3 your response with respect to corporate metrics.

4 This is your incentives, right, your incentive
5 compensation?

6 MR. BASILIO: That's correct.

7 MR. SHEPHERD: I had two questions. First of all, do
8 we have somewhere what the dollar result is of this
9 107 percent? Like, we have all of these percentages, but
10 what does this mean in terms of total dollars?

11 This is now up-to-date, right? This is real? So I
12 don't think we have it.

13 [Witness panel confers]

14 MR. BASILIO: So the dollars, excluding the executive
15 team -- I will clarify that in a second -- on page 2 of 4
16 are in the table.

17 MR. SHEPHERD: Oh, I'm sorry.

18 MR. BASILIO: The results of that. Now, it excludes
19 the executive team because those payments have not yet been
20 approved. Well, they have been approved. We just don't
21 know what they are yet.

22 MR. SHEPHERD: I'm sorry, I don't know why I didn't
23 see that. My apologies.

24 My second question on this is you have under
25 "Financial Return on Equity" that your result was
26 150 percent of target. I am trying to understand that,
27 because one of the reasons for this application and one of
28 the reasons for your Z-factor application last year was a

1 sort of a "We are not going to earn any money, we are all
2 going to die" argument.

3 And so I don't know how you made 150 percent of your
4 equity target when things were so bad.

5 Can you help me understand that?

6 [Witness panel confers]

7 MR. BASILIO: Part of this answer might be provided
8 when we get to the questions that are going to be asked
9 under confidentiality, with respect to specific analysis.

10 What I could say here, I think non-confidentially, is
11 that we set the target based on the budget for the year.

12 And as you can see, the budget -- and the budget for --
13 -- rather, the budget is set -- the budget that was set, you
14 can see, is still well below the regulated return on
15 equity. We did do better than that. It was a very
16 difficult year, and recognizing that was the discretion of
17 the board that that paid out.

18 MR. SHEPHERD: I understand. I mean, basically you
19 knew it was going to be a difficult year, so your board
20 said: Let's set a target that is realistic, not ask for
21 the moon when we know it is not possible. Right?

22 MR. BASILIO: Well, I think what the board asks for
23 is, in any given year, that a target be realistic but
24 challenging.

25 So in any given year, that target, with respect to the
26 regulated entity, may not be the regulated rate-of-return,
27 recognizing that that is a maximum return and something
28 very difficult to achieve.

1 MR. SHEPHERD: I understand that. So the target that
2 was set was 7.13 percent. And if you got 150 percent of
3 the target, I take it that means that you got something
4 over eight percent.

5 MR. BASILIO: We will be happy to respond to that in
6 the confidential portion of your questions.

7 MR. SHEPHERD: Well, okay. I don't understand why
8 that would be confidential. We know what the target is.
9 We know you -- you have said publicly the target was 7.13
10 and you said publicly that the -- that you got 150 percent
11 of it.

12 What is 150 percent of the target?

13 [Witness panel confers]

14 MR. BASILIO: Sorry, there may be elements that are
15 already on the public record here, so we just want to
16 confirm that before responding.

17 [Witness panel confers]

18 MR. BASILIO: In response to VECC 19(c), we have
19 provided our 2010 metrics. They're marked "draft", but I
20 believe these to be the final metrics. I am not sure why
21 the word "draft" is still on them.

22 In that document, you will note that the target ROE
23 was set at 6.46 percent for the year. So that would have
24 been the target.

25 You will also note a threshold of 5.46 percent, which
26 is exactly 1 percent below the target. Historically, we
27 used to set targets -- or we used to set goalpost results
28 symmetrically around the target. We have not followed that

1 practice for a few years, and so the outstanding result is
2 at the CEO's discretion.

3 The actual result for the year, I believe, is the
4 subject of the confidential.

5 MS. HUGHES: We have filed the actual in SEC 8.

6 MR. BASILIO: We have filed the actual in SEC 8, the
7 actual calculation. So you will note what the actual
8 result was there.

9 MR. SHEPHERD: TC 8?

10 MS. HUGHES: SEC TC, sorry.

11 MR. BASILIO: TC 8, SEC. I am happy to discuss it
12 when we --

13 MR. SHEPHERD: I still don't understand why it is
14 confidential. It is just a fact.

15 MR. BASILIO: It is a fact that it is an outstanding
16 result. Sorry, I thought we were delineating our
17 discussion between those answers that we had filed in
18 confidence and those ones that had been filed in open
19 forum.

20 Perhaps someone could clarify the process as to how we
21 should respond to information filed in response to the
22 technical questions versus...

23 MR. SIDLOFSKY: We have taken the position that all of
24 the answers in respect of the -- excuse me, all of the
25 responses to the SEC technical conference questions should
26 be kept in confidence. There is an outstanding
27 confidentiality request in respect of CCC question 8.

28 That answer was given -- the answer that Mr. Basilio

1 is referring to was given in response to one of the SEC
2 questions that follow on CCC question 8.

3 I think Mr. Basilio is happy to elaborate on that
4 during the in camera session, and I think that is
5 reasonable given that -- given where the confidentiality
6 request stands at this moment.

7 MR. SHEPHERD: We don't agree that that piece of
8 information is confidential if it is clearly the result of
9 this calculation from a public document.

10 However, I will deal with it then. I am not going to
11 push it now. We have other things to worry about.

12 So I understand correctly, then, that despite the
13 large increase in your rates that you are proposing, you
14 are only proposing to increase your target ROE from
15 6.46 percent to 7.13 percent. Can you tell me what that is
16 all about?

17 MR. BASILIO: Yes, I can. The ROE is determined on a
18 fiscal year basis within -- and I am happy to provide this.
19 This information may be on the public record. You would
20 note, in the financial plans that were submitted in
21 confidence, that the assumption in those plans with respect
22 to the effective date of the 2011 application is May 1.

23 So the benefits of this step in revenue requirement
24 aren't realized in the plan until after May 1, and that is
25 the reason for the lower ROE target.

26 MR. SHEPHERD: Okay. But I guess then the reason why
27 I am asking that is because I am looking at what you expect
28 to have paid in 2010 on page 2 of this VECC Technical

1 Conference Question No. 10, which is a total of about
2 \$380,000.

3 Then I am looking at page 4 of that, where you are
4 saying that you are only expecting to make target - not
5 150 percent, just target - in 2011, but you are expecting
6 to spend \$678 million on incentives. So why are the
7 incentives doubling? I don't get that. Sorry, thousand.

8 MR. BASILIO: Just give me a second to clarify the
9 response.

10 [Witness panel confers]

11 MR. BASILIO: As noted in the question, the 2010
12 results don't include the executive team bonuses, whereas
13 the table on page 4 of 4 includes the executive team. So
14 it would be the budget for all bonuses at target payout in
15 2011, and based, again, on the employee complement
16 anticipated for 2011 and provided in the application.

17 MR. SHEPHERD: So that difference of a couple of
18 hundred thousand dollars, that is the incentives for the
19 senior management group; right?

20 MR. BASILIO: Senior management plus the vacant
21 positions, vacant positions in 2010, and the incremental
22 positions provided in 2011.

23 MR. SHEPHERD: You are not paying incentives to vacant
24 positions?

25 MR. BASILIO: No, we're not. That is the reason for
26 the increase. Sorry if I didn't clarify that properly.

27 We would be assuming in 2011 that any open positions
28 in 2010 have been filled, and, additionally, there are

1 incremental positions in the 2011 application that would
2 contribute to the increase, as well.

3 MR. SHEPHERD: Wonderful. Thank you.

4 The next follow-up question I had was on VECC
5 Technical Conference Question No. 15, and this is asking
6 about shared assets.

7 What you appear to be saying is that if you have a
8 non-rate-regulated activity -- and this says "entity", but
9 I take it "entity" here in (a) actually means activity. So
10 even if it is within Horizon Utilities, if it is non-rate-
11 regulated and there are assets that are used for that,
12 they're kept completely separate; is that right?

13 MS. HUGHES: Yes, that is correct.

14 MR. SHEPHERD: Okay. But the main assets that these
15 non-rate-regulated activities use - tell me whether this is
16 right - is things like these computer hardware and software
17 and that sort of stuff; right?

18 MS. HUGHES: Yes, that's correct.

19 MR. SHEPHERD: And how is that charged to the non-
20 rate-regulated activities?

21 MS. HUGHES: So the cost driver around the computer
22 technology, if we look at the OM&A, is based on the
23 number --

24 MR. SHEPHERD: That is not what this is asking about.

25 MS. HUGHES: But this is on capital, so there is no
26 specific allocation.

27 MR. SHEPHERD: So they get to use the assets for free;
28 is that right?

1 [Witness panel confers]

2 MS. HUGHES: As we responded to the question, we are
3 not currently charging a rate-of-return to the non-rate-
4 regulated entities, given --

5 MR. SHEPHERD: Okay. So is it true that your biggest
6 IT asset is your ERP, right?

7 MS. HUGHES: I would say yes, that is one of the --

8 MR. SHEPHERD: That is used for all aspects of your
9 business, including your non-rate-regulated activities,
10 right?

11 MS. HUGHES: Yes. Yes, that's correct.

12 MR. SHEPHERD: But the non-rate-regulated costs don't
13 bear any of that cost?

14 MS. HUGHES: From a capital perspective, no, as noted
15 in the response, with respect to how the ERP was
16 specifically carved out in our 2008 EDR.

17 On the OM&A basis, the non-regulated entities share in
18 the license fees and ongoing operating costs of the ERP.

19 MR. SHEPHERD: All right. Thanks. I have a couple of
20 follow-up questions on Board Staff technical conference
21 answers. The first is on No. 8, and in particular, the
22 table here of purchase forecasts from non-affiliates in
23 excess of \$250,000.

24 I didn't see anything here related to this rate
25 application. Is that because it is not going to be more
26 than \$250,000 in total, or because the individual
27 components are less? Because I thought this rate
28 application was budgeted at, like, I don't know, some big

1 number.

2 [Witness panel confers]

3 MR. BASILIO: Sorry for taking a bit of time here, but
4 there is a bit of a chain of responses getting back to the
5 original intention of the references upwards. I just want
6 to make sure.

7 [Witness panel confers]

8 MS. BUTANY-DESOUZA: Sorry. In response to your
9 question, that table we provided for the 2011 test year
10 references back to the Board Staff Question 27, and that
11 question makes reference to Exhibit 4, tab 2, schedule 12,
12 pages 1 through 3, purchases from non-affiliates.

13 If I draw you to that, the purchases from non-
14 affiliates that we're offering there are schedules related
15 to distribution projects.

16 So therefore, the schedule provided in response to
17 Board -- the Board Staff technical question for the 2011
18 purchases from non-affiliates is also related to that.

19 MR. SHEPHERD: Sorry. I am not understanding this.

20 The filing requirements don't say: Only give us
21 information on some of the purchases for non-affiliates.
22 The filing requirements require you to give information on
23 all purchases from non-affiliates over a particular
24 materiality level, right?

25 I am looking at the Board Staff's Technical Question
26 No. 8, Technical Conference Question No. 8, and it doesn't
27 say: Give us only a subset. It says: Give us all of
28 them. So I don't understand why -- so that is not the only

1 thing that is missing, right?

2 MS. BUTANY-DESOUZA: No, it's not. But we followed
3 principally back to the reference question. So we went
4 back to the interrogatory, which asked for purchases from
5 non-affiliates. That was Board Staff 27.

6 Then, as I just noted, when we looked at the reference
7 for Board Staff 27, the evidence that we offered was the
8 total costs, the amount purchased in each year related to
9 distribution projects.

10 MR. SHEPHERD: Okay. Well, I wonder if you could,
11 then, take this table at page 2 of Technical Conference
12 Question No. 8 and expand it to include all purchases from
13 non-affiliates proposed for the test year in excess of
14 \$250,000. Could you do that?

15 MR. BASILIO: One sec.

16 [Witness panel confers]

17 MR. BASILIO: Just to clarify, we are asking for --
18 you are asking for an undertaking of any non-affiliate
19 service over 250 or --

20 MR. SHEPHERD: Yes, that's right. The same thing, but
21 not limited to distribution projects.

22 MR. BASILIO: We are happy to provide that.

23 MR. SHEPHERD: Thank you very much.

24 MS. HELT: We will just note that as Undertaking
25 JT1.6.

26 **UNDERTAKING NO. JT1.6: TO PROVIDE ALL PURCHASES FROM**
27 **NON-AFFILIATES PROPOSED FOR THE TEST YEAR IN EXCESS OF**
28 **\$250,000**

1 MR. SHEPHERD: Then my next question is on Staff
2 Technical Conference Question No. 10.

3 You are expecting that your call volumes are going to
4 go up in 2011 as a result of time-of-use rates, right?

5 MS. CAMPBELL: Yes, that's correct.

6 MR. SHEPHERD: I guess I wasn't sure I understood why
7 they haven't started to go up already in 2010. Have you
8 not...

9 MS. CAMPBELL: In the answer to Board Staff Technical
10 Question No. 10, on page 2, there is a chart that does show
11 an increase of call volumes between 2009 and 2010.

12 MR. SHEPHERD: You have estimated a 25 percent
13 increase. This is a one-and-a-half percent increase, so
14 that is what I am trying to understand.

15 MS. CAMPBELL: We estimated the 25 percent increase
16 based on some previous experiences we have had with changes
17 in rate structures or significant changes to customers'
18 bills.

19 We have also estimated that based on some discussions
20 with industry -- other industry -- from other service
21 territories within our service industry based on their
22 experience.

23 So the 25 percent was an estimate, based on what sort
24 of we needed to prepare so that we could answer customer's
25 questions.

26 MR. SHEPHERD: I understand that. And you can only
27 estimate based on the information you've got, but I guess
28 now you have better information and you are seeing that in

1 2010 the increase is nominal. So I am wondering whether
2 the 25 percent is still applicable.

3 MS. CAMPBELL: The reason why we included the
4 incremental cost for the increase in call volumes or to
5 handle the increase in call volumes in our smart meter
6 rider is because we do expect them to be a one-time. We
7 are experiencing an increase in calls. We don't expect it
8 to be sustained.

9 We haven't reached a 25 percent increase as
10 forecasted.

11 MR. SHEPHERD: So how much of an increase do you
12 currently expect will happen in 2011?

13 MS. CAMPBELL: Based on current experience from
14 January, I would have to look that information up. I'm
15 sorry, I don't have that at my fingertips right now.

16 MR. SHEPHERD: Okay. Could you undertake to update
17 your forecast for call volume for 2011?

18 MS. CAMPBELL: Yes, I can.

19 MS. HELT: That will be undertaking JT1.7.

20 **UNDERTAKING NO. JT1.7: TO PROVIDE UPDATED FORECAST**
21 **FOR CALL VOLUME FOR 2011**

22 MR. SHEPHERD: Thank you. I am going to ask you a
23 follow-up question with respect to AMPCO Technical
24 Conference Question No. 7. Here you have got -- in the
25 response, in pages 2 and 3, are some examples of increases,
26 distribution increases, for large users that look to be
27 like -- each one is well over \$200,000 a year.

28 Do I understand that you have met with your large

1 users to talk about this? Did I understand that right?

2 MS. BUTANY-DESOUZA: In our response to AMPCO 5, yes,
3 we noted that we have met with our large-use customers in
4 relation to the application.

5 MR. SHEPHERD: So they're aware that they're getting
6 these 200- or \$250,000 a year increases in their bill from
7 you?

8 MS. BUTANY-DESOUZA: I wouldn't quote that same
9 figure. However, we have discussed with them their
10 particular circumstance.

11 MR. SHEPHERD: These are big numbers. They could
12 affect the customers; right? They could have to make
13 operational decisions based on these changes; right?

14 MR. BASILIO: We wouldn't presume to offer what our
15 customers would undertake with respect to these costs.

16 MR. SHEPHERD: I am wondering whether you are
17 anticipating that as a result of these increases, and all
18 of the various other increases in electricity costs, that
19 you may experience any additional closures or cutbacks of
20 large users in 2011 or 2012.

21 MR. BASILIO: I really can't respond to that question.
22 I don't know what -- how this will affect our customers.

23 [Witness panel confers]

24 MR. BASILIO: We don't have any information with
25 respect to that question.

26 MR. SHEPHERD: Well, have you done any planning around
27 this? I mean, what I am concerned with is, if you tip some
28 customers over, you know, if you charge too much for

1 something that is essential and you tip some customers
2 over, I don't want to see you back next year saying, Well,
3 we have to come in -- we have to come in again for cost of
4 service, because now we've only got six large-use
5 customers, and so we want the schools to pay more and we
6 want the small businesses to pay more.

7 MR. BASILIO: Is there a question?

8 MR. SHEPHERD: Have you planned on that? Have you
9 looked at whether possible result could be occurring if you
10 increase your rates this much?

11 [Witness panel confers]

12 MR. BASILIO: We don't have any of that information
13 now.

14 MR. SHEPHERD: Okay, thanks. The next one I have a
15 question about is CCC Technical Conference Question No. 5.
16 This talks about your FTE increases from 2008 to 2011.

17 What was striking - and this is what I want to get
18 some clarification on - is that the three areas, regulatory
19 affairs, finance and IST, that are often considered to be
20 the sort of soft areas - that is, they're not part of the
21 core business activities, they're support activities - are
22 the ones with the biggest increase, an 85 percent increase
23 over three years.

24 Is this something that you have analyzed specifically
25 to figure out whether it is appropriate? Have you talked
26 with your board of directors about it, or anything like
27 that?

28 MR. BASILIO: Our board of directors is aware of our

1 staffing levels and the needs for staff, and those sorts of
2 things. They're discussed regularly at human resource and
3 governance committee meetings.

4 They're discussed as part of the 2011 -- as part of
5 regular budgets and business planning. So the board is --
6 our board is aware.

7 MR. SHEPHERD: So I guess what I am trying to find out
8 is: What is the reason why these areas would be the areas
9 of big growth, and the other areas, the sort of line
10 operation areas, are not growing?

11 Do you have sort of a general explanation for that? I
12 mean, I know the detailed line-by-line explanations. I am
13 looking for whether there is a general trend here.

14 [Witness panel confers]

15 MR. BASILIO: The first question, I think, was about
16 growth in three specific departments, regulatory affairs,
17 finance and information systems and technology?

18 MR. SHEPHERD: Yes.

19 MR. BASILIO: With respect to regulatory affairs, we
20 have recognized that we require more capacity in that
21 department to support regulatory process, and I think some
22 of that is articulated in the application.

23 With respect to finance, I believe in 2008 and 2009 --
24 and just let me clarify. Lise, these are actual FTEs in
25 those years?

26 MS. GALLI: Yes.

27 MR. BASILIO: These are actual FTEs. We had a number
28 of open positions in those departments as a result of our

1 discussions with Guelph and in contemplation of a merger, a
2 merger that we would have expected to provide cost benefits
3 to customers. We would have -- we held a number of
4 positions open to give employees in both organizations the
5 greatest opportunity to be part of the new organization.
6 So, additionally, these actual numbers represent some open
7 positions.

8 The 2011 number represents full capacity in 2011. So
9 I think that is an important point, that 2008, 2009 and
10 2010 includes some open positions.

11 With respect to information systems and technology, I
12 can't recall specifically, but I believe we described the
13 infrastructure deficit in IT as part of that application
14 that would have included capacity in that department. And
15 certainly with the addition of things like smart meters and
16 more complicated systems' processes, data requirements, we
17 have had to add to the capacity of that department.

18 For example, the application provides for a cyber
19 security department, which we commenced adding to in the
20 prior year. We have augmented our ability to support the
21 operating groups with their projects, many of which are
22 discussed in the application. And so there has been a
23 requirement to add staff there, as well.

24 With respect to the operating groups, perhaps -- I
25 don't know.

26 MR. SHEPHERD: I wasn't asking about them.

27 MR. BASILIO: Okay.

28 MR. SHEPHERD: Okay. Thanks. I was looking for

1 whether there is a general trend in your business planning
2 towards -- towards a different way of managing the business
3 that requires more support staff, but you are saying that
4 is not the case. This is just happening because of the
5 individual components?

6 MR. BASILIO: I would say with respect to information
7 technology, there is a more distributed approach to
8 supporting the organization with its process and technology
9 requirements.

10 So we have had to add capacity to address those
11 projects, as well as cyber-security.

12 With respect to finance, I don't know that we are
13 necessarily operating much -- I don't know, Sarah, if you
14 would like to offer anything to that.

15 MS. HUGHES: There's some -- I would say that there is
16 obviously an increase in the number of transactions, given
17 the growth in our capital program and our OM&A
18 expenditures. So there is more transactional support in
19 the finance area required.

20 MR. SHEPHERD: Okay. Thanks. Then my last question
21 in this series of questions is on Energy Probe Technical
22 Conference Question No. 6. This is at page 3 of that.

23 You give an illustration, an allocation illustration,
24 and in it, you assume that the cost driver for allocation
25 of general plant assets is the same as the cost driver to
26 allocate human resources OM&A costs.

27 I just want to know whether you have a basis for that,
28 of using that cost driver, or -- was it just randomly

1 picked, or is that the one you think is appropriate? And
2 if so, why?

3 MS. HUGHES: So in terms of this illustration, in
4 terms of how human resource costs are -- the OM&A costs are
5 allocated, those are based on headcount.

6 So the human resources department provides human
7 resource support to the organization and its non-regulated
8 entities based on number of people.

9 So in looking how the assets might also be allocated,
10 you know, the assumption is the shared service is providing
11 support, and each of those persons in that department are
12 taking -- are, you know, based on people, as well.

13 MR. SHEPHERD: So it is because you are talking about
14 essentially an office building. So an office building
15 houses people, so headcount makes sense?

16 MS. HUGHES: Correct.

17 MR. SHEPHERD: Okay. I get it. That is all of my
18 questions on the other parties' questions. I do have some
19 on our questions, and our questions were confidential. So
20 I think we do -- we should go in camera for that.

21 MS. HELT: Certainly. Prior to doing that, I
22 understand that Board Staff just wanted to follow up on one
23 of the undertakings given to one of Mr. Shepherd's
24 questions. Mr. Ritchie?

25 **FURTHER QUESTIONS BY MR. RITCHIE:**

26 MR. RITCHIE: Thank you. I am actually wanting to
27 follow up on the discussion about the tables on the
28 purchases above \$250,000 for non-affiliates.

1 I think from the discussion it was sort of clear that
2 even in the tables in the evidence -- I think it is tables
3 4-30, 4-31 and 4-32 -- that you only provided it related to
4 distribution projects.

5 MS. BUTANY-DESOUZA: Capital projects.

6 MR. RITCHIE: Okay. I guess, again, in terms of
7 looking really at the filing requirements of the Board,
8 again, it's -- I know it talks about the distribution
9 expenses incurred through the purchases of services must be
10 documented and justified.

11 We really are, I guess, looking at all purchases from
12 non-affiliates above sort of the threshold, the 250,000,
13 you know, that really are part of the regulated
14 distribution entity.

15 We would ask if you can actually undertake to update
16 those tables for all of the such services. And also, in
17 your evidence you included 2007 through 2009; if you could
18 also add 2010 to that undertaking.

19 MR. BASILIO: I think there is a little bit of
20 confusion behind the scenes here, as to whether those
21 tables did, in fact, include all non-affiliate purchases
22 above \$250,000.

23 We will clarify that, and certainly we would provide
24 you with the information -- we would either confirm those
25 tables are correct, or provide the correct information, if
26 not. With respect to the other questions in 2010 that you
27 referred to, we will provide that information in an
28 undertaking.

1 MR. RITCHIE: Thank you.

2 MS. HELT: All right. That will be then noted as
3 JT1.8.

4 **UNDERTAKING NO. JT1.8: TO CONFIRM THAT TABLES 4-30,**
5 **4-31 AND 4-32 ARE CORRECT, OR UPDATE THEM TO INCLUDE**
6 **ALL NON-AFFILIATE PURCHASES ABOVE \$250,000.**

7 MS. HELT: Mr. Buonaguro.

8 **FURTHER QUESTIONS BY MR. BUONAGURO:**

9 MR. BUONAGURO: While we're in the technical
10 conference, I have one very technical question I wanted to
11 ask, as I was looking through some other stuff, if I might.
12 Is that okay?

13 MS. HELT: Yes.

14 MR. BUONAGURO: I am looking at the application,
15 Exhibit 5, tab 1, schedule 2, and this has to do with the
16 different tables showing the capital structures throughout
17 the years.

18 So I am looking -- I am starting at page 2, so again,
19 that's Exhibit 5, tab 1, schedule 2, page 2.

20 MR. BASILIO: Yes.

21 MR. BUONAGURO: So you have here a table called
22 "Board-Approved Deemed Capital Structure for 2008" and I
23 understand what that is. That is essentially the Board's
24 decision on capital structure and the various rates; is
25 that correct?

26 MR. BASILIO: That's correct.

27 MR. BUONAGURO: But then you have -- following that,
28 on page 3 you have "Deemed Capital Structure for 2008,"

1 which doesn't break out short-term debt, includes a return-
2 on-equity of 9 percent as opposed to the Board-approved
3 8.57 percent, and gives you a blended cost of capital of
4 7.26 percent.

5 Just looking at this presentation, I didn't understand
6 why this was here, for what purpose was this table
7 included. I think it continues on in the next couple of
8 tables.

9 [Witness panel confers]

10 MR. BASILIO: The tables were updated in Interrogatory
11 44 from Board Staff.

12 MR. BUONAGURO: On what basis were they updated?

13 MR. BASILIO: The correct basis.

14 MR. BUONAGURO: Yeah, okay.

15 [Laughter]

16 MR. BUONAGURO: Well, I mean... sorry. This is sort
17 of on the fly, so I am just looking at this and I was
18 confused. Maybe whoever updated could explain to me why,
19 once you have a Board-approved deemed capital structure for
20 2008 table in the evidence, why was there a second table
21 in. Is it just it was accidentally put in, and it was
22 taken out? Is it that simple?

23 [Witness panel confers]

24 MS. BUTANY-DESOUZA: In response to Board Staff
25 Interrogatory 44, the question in part (a) had asked us to
26 confirm the Board-approved deemed capital structure and we
27 updated the tables to the 56, four and 40.

28 MR. BUONAGURO: Okay. So now the two tables are

1 identical? Or is the -- I don't have that interrogatory
2 response in front of me, so...

3 MS. BUTANY-DESOUZA: Can I provide it to you?

4 MR. BUONAGURO: Sorry, no, I have it here now.
5 Thanks.

6 MS. BUTANY-DESOUZA: Okay.

7 MR. BUONAGURO: So now they're identical, it looks
8 like. Does that mean that the second one is simply
9 superfluous?

10 I am just trying to understand what the reason was for
11 having to put that table in when you already had the
12 previous table. It may just be duplication and that is
13 fine.

14 MR. BROOKER: Yes, you are right. It was duplication.

15 MR. BUONAGURO: Okay. Thank you very much.

16 MS. HELT: Are there any other follow-up questions?

17 Mr. Sidlofsky?

18 MR. SIDLOFSKY: Sorry, not a follow-up question, but I
19 just wanted to make sure that I am clear on undertakings
20 JT1.6 and the new JT1.8. My understanding was that JT1.6
21 had also sought a table that showed any non-affiliated
22 purchases at \$250,000 or more. I am just trying to -- I am
23 trying to clarify in my own mind what the difference
24 between JT1.6 is and JT1.8.

25 MR. RITCHIE: JT1.6, the way I understood it, referred
26 to the interrogatory -- or to the follow-up, and it was
27 only for 2011; whereas JT1.8 we are now saying is that we
28 actually want, also, the historical evidence to be either

1 confirmed or updated.

2 MR. SIDLOFSKY: That is fine. Thank you.

3 MS. HELT: Okay. I can propose that we either proceed
4 now with the questions concerning the confidential
5 documents, or we could break for an early lunch. It
6 depends on what the parties' preferences are.

7 I have spoken with a couple of the intervenors and
8 they are prepared to go ahead. If Horizon is prepared to
9 go ahead, we can probably finish, then, before one o'clock,
10 in any event.

11 MR. SIDLOFSKY: It looks like it may be best to go
12 ahead at least for a while. We may get to the point where
13 we need a short lunch, but it wouldn't hurt to start.

14 MS. HELT: All right. Then I would ask, as we are
15 going to go in camera and questions are going to be asked
16 of documents that are currently confidential until the
17 Board makes a determination with respect to those
18 documents, that anyone here who has not signed a
19 declaration and undertaking with respect to confidentiality
20 leave the room.

21 I think all parties have signed the declaration and
22 undertaking, and the remainder of the individuals in the
23 room are with Horizon. So it looks as if everyone then can
24 stay.

25 We are going to go off air at this time, and we will
26 proceed, then, with Mr. Shepherd's questions.

27 --- On commencing in camera at 11:38 a.m.

21 MR. BASILIO: With the exception of a couple of items,
22 this largely corresponds to the costs in our application,
23 very largely corresponds.

24 So for example, I think there are -- again, this was
25 done very quickly. There may be elements of this that are
26 missing.

27 So for example, the distribution revenue, the
28  would have included MDMR costs. I -- Sarah, I

1 don't see here where MDMR would have been included --

2 MS. HUGHES: It would have been in this [REDACTED].

3 MR. BASILIO: In [REDACTED]. Okay.

4 So they would have been in [REDACTED] so they were
5 pulled out on both sides in the application.

6 MS. HUGHES: Yes, yes.

7 MR. BASILIO: Yes. This largely corresponds to what
8 is in the application, with the exception of a couple of
9 items such as MDMR... just one sec.

10 [Witness panel confers]

11 MR. BASILIO: There are certain other elements that
12 are different than the application as well, I believe, such
13 as -- I believe the rates that we had assumed in the budget
14 for cost of capital are different. So for example, I think
15 our budget assumed 9.85 percent for the return-on-equity.
16 The current return is --

17 MS. BUTANY-DESOUZA: 9.66.

18 MR. BASILIO: 966, which has been reflected in the
19 application.

20 And again, so there are some elements, but for the
21 most part the application reflects -- the application
22 reflects [REDACTED]

23 MR. SHEPHERD: Wonderful. Thanks. [REDACTED]

24 [REDACTED]

25 [REDACTED]

26 [REDACTED]

27 [REDACTED]

28 [REDACTED]

1
2
3
4
5
6
7
8

9 MR. SHEPHERD: That's right. So your incremental
10 projects, only [REDACTED] is to -- for
11 productivity and efficiency.

12 That doesn't seem very high. [REDACTED]

13 [REDACTED]

14 MR. BASILIO: I think you have characterized that. I
15 would not characterize that in that fashion.

16 The only ones that provide new productivity -- there
17 is productivity in many of these investments. We are --
18 our plans with respect to planning and scheduling -- and
19 perhaps I will defer to Kathy to describe that in more
20 detail -- are new processes, or perhaps not new processes,
21 but very much enhanced processes relative to what we have
22 today.

23 Additionally -- and I think it is described as well --
24 what is the other project?

25 In the mobile computing, the deployment of field
26 devices are new to Horizon, so this is new capability for
27 the organization that is providing new benefits to the
28 organization. The other projects are valuable insofar as

1 they sustain productivity and they also protect the
2 utility, the risk management, compliance oriented projects.

3 So I would not characterize \$2 million of investment
4 as the only investment that is providing value or
5 productivity to the organization.

6 MR. SHEPHERD: Then the other question on that is -
7 and this is only dealing with [REDACTED]
8 [REDACTED] you
9 talk about the pilot and deployment of field devices and
10 the mobile computing, which are linked; right? They're
11 linked programs?

12 MS. CAMPBELL: Yes, that's correct.

13 MR. SHEPHERD: So that is [REDACTED].
14 You see that [REDACTED] you have a quantitative benefit,
15 [REDACTED], over time and presumably in the future, too?

16 MS. CAMPBELL: Yes, correct.

17 MR. SHEPHERD: [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]

21 Can you help me understand that? [REDACTED]
22 [REDACTED]

23 MR. BASILIO: What it says is the project is not
24 justified on a pure ROI basis, which, in writing this, I
25 would describe as simply a mathematical exercise using
26 discounted cash flows.

27 This project is also justified on qualitative benefits
28 to the organization [REDACTED]

1 MR. SHEPHERD: In fact, you didn't even do a
2 quantitative calculation; right?

3 Unlike the mobile stuff, in which you did a
4 calculation and showed the benefit, you didn't even do one
5 for ERP; right?

6 MR. BASILIO: We didn't do a calculation, no.

7 MR. SHEPHERD: No.

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

26

27  you are not actually

28 borrowing as much as the OEB's deemed debt amount?

ASAP Reporting Services Inc.

(613) 564-2727

(416) 861-8720

1 MR. BASILIO: That's correct.

2 MR. SHEPHERD: And is that because you are under-
3 leveraged?

4 MR. BASILIO: That's correct.

5 MR. SHEPHERD: So that would mean that your return on
6 equity is generally lower than the Board approved, because
7 you have a higher equity than the Board allows; right?

8 MR. BASILIO: We have a higher equity than the Board
9 allows; correct.

10 MR. SHEPHERD: Okay. So that would drive your ROE
11 down?

12 MR. BASILIO: It tends to.

13 MR. SHEPHERD: Your actual?

14 MR. BASILIO: Yeah.

15

16

27
28

MR. SHEPHERD:

1 [REDACTED] So this is your
2 target dividends for the year, right? If everything goes
3 according to plan, this is the dividend you would like to
4 pay?

5 MR. BASILIO: Well, if everything goes according to
6 plan -- let me just make sure -- I will express it another
7 way. I think we are saying the same thing.

8 This is what I would expect if we were earning the
9 regulated rate-of-return on the rate base [REDACTED]
10 [REDACTED], as adjusted for differences in capital structure
11 and the fact that we have some disallowed interest between
12 what the Board's allowed us to recover on a promissory note
13 to our parent company and what our actual obligation is to
14 our parent.

15 So I think we are saying the same thing, but I thought
16 I would articulate it.

17
18
19
20
21
22
23

15
16
17
18
19
20
21
22
23
24
25
26
27
28

1

2

3

4 MR. BASILIO: But this is really -- again, it is
5 conceptual, assuming the shareholder earns the regulated
6 return, subject to adjustments between, you know, how we
7 actually -- how the business is actually presently financed
8 and what is underlying rates, and recognizing that we have
9 some disallowance of interest on an obligation to our
10 shareholder.

11 So I think in a nutshell, this is -- in an ideal
12 world, if we hit the Board's maximum allowable return-on-
13 equity -- this is what shareholders might expect.

14

15

16

17

18

19

20

21

22

23

24

25 MR. SHEPHERD: Can you tell me what that is, what that
26 means?

27 MR. BASILIO: That is the promissory note. It was the
28 subject of a lot of discussion in our 2008 rate

1 application.

2 MR. SHEPHERD: Okay. Okay.

3 MR. BASILIO: You might recall.

4 MR. SHEPHERD: Oh, yeah, yeah, yeah. Okay. No, I do
5 remember. Vaguely.

6 [Laughter]

9 MR. SHEPHERD: At Standard & Poor's, when they asked
10 you -- when they did their credit rating on you, commented
11 on the size of your unregulated business activities.

12 Your current expectation is that you are not going to
13 go past their 10 percent limit; right?

14

15 That is a very important
16 statistic for us, our S&P credit rating. We are very
17 mindful of that with respect to any investments we would
18 make.

19

20

21

22 you had been able to
23 earn a lot more than your borrowed allowed rate of return
24 in 2008, because you used cost reduction and mitigation
25 measures.

26 I am just reading this now for the first time. Your
27 actual regulated net income was \$14.4 million; right?

28 MS. HUGHES: That's correct.

22

23 Am I right in understanding this to be that if you have a
24 January 1st implementation date, as opposed to a May 1st,
25 that your pre-tax income increases by 4.7 million? Is that
26 what I am reading this -- am I reading this correctly?
27 This is at the bottom of the second page.

28 MR. BASILIO: Essentially, 6-1/2 million times one,

1 minus the tax rate, 4.7; that's correct.

2 MR. SHEPHERD: This is an increase to pre-tax income.

3 MR. BASILIO: Oh, sorry. Sorry, that should be an
4 after-tax. Sarah has just pointed out that if we could
5 correct line 24: Results in an increase to after-tax
6 income.

7 MR. SHEPHERD: You just corrected it.

8 MR. BASILIO: 4.7.

9 MR. SHEPHERD: So the incremental revenue from those
10 four months is \$6.5 million?

11 MR. BASILIO: Right. It is the revenue sufficiency
12 requested in our application, times four divided by 12,
13 rounded.

14
15
16
17
18
19
20

21 We also have a return on equity assumption in our
22 financial plan of 9.85 versus what is in the application
23 of -- sorry, it is 9.6.

24 MS. HUGHES: 9.66.

25 MR. BASILIO: 9.66. I think there is a debt cost of
26 capital difference, as well. And there might be a couple
27 of other minor adjustments. I think that largely takes
28 care of the difference.

1 MR. SHEPHERD: I understand.

2 In our [REDACTED] -- and
3 just for anybody who is looking at the clock, I am not
4 going to be more than another ten minutes, at maximum,
5 maybe more like five.

6 [REDACTED] you were asked
7 what your inflation assumption was. You said your
8 inflation assumption is [REDACTED].

9 And I didn't understand what the basis of that was.

10 MS. HUGHES: So at the time we were preparing the 2011
11 budget and three-year plan, we were looking at forecasted
12 information that was available with respect to the gross
13 domestic product for 2012. So the inflation assumption is
14 2012.

15 MR. SHEPHERD: Okay. So this is not an inflation
16 assumption for 2011?

17 MS. HUGHES: No, it is not.

18 MR. SHEPHERD: So did you have an inflation assumption
19 for 2011?

20 [Witness panel confers]

21 MS. HUGHES: So our 2011 budget would have been based
22 on a bottom-up budget based on activities and current
23 costs. There were obviously assumptions with respect to
24 labour.

25 MR. SHEPHERD: Sorry, say that again?

26 MS. HUGHES: We would have made labour assumptions for
27 2011.

28 MR. SHEPHERD: But not -- not all other expenses?

1 MS. HUGHES: Not specifically, no. We wouldn't have -
2 - so we would have done a bottom-up budget based on the
3 activities in each department, based on current costs, or
4 estimates of current costs.

5 MR. SHEPHERD: [REDACTED]
6 [REDACTED]
7 [REDACTED]
8 [REDACTED] you are going to implement
9 productivity and process improvements.

10 And we asked: Tell us what you implemented in 2008
11 through 2010, and what their impacts are.

12 And you didn't answer that. So can you help us with
13 that? What did you do in 2008 through 2010 by way of
14 productivity and process improvements that are affecting
15 the current budget?

16 MS. LERETTE: Well, just to start with, this quotation
17 that you are referring to is a forward-looking statement
18 for the years 2011 to 2013.

19 MR. SHEPHERD: Sure.

20 MS. LERETTE: So it is a forward-looking statement.
21 Although we do work on productivity improvements throughout
22 the years, and in 2010 we did productivity improvements,
23 but I can't quantify it as far as capital or operating
24 expenditures, the savings of those productivity
25 improvements.

26 MR. SHEPHERD: When you implement productivity
27 programs, projects that are intended to make your
28 operations more efficient, don't you do some sort of plan

1 to monitor, to make sure they're working?

2 MS. LERETTE: Yes, we do.

3 MR. SHEPHERD: And so wouldn't you, then, have numbers
4 for what you implemented and how they worked out?

5 MS. LERETTE: Well...

6 [Witness panel confers]

7 MS. LERETTE: So in 2010, just to walk you through an
8 example, we do a lot of work on our new customer connection
9 process, and we measured -- we developed some KPIs to
10 measure performance of this process; so the time to close a
11 work order, provide an invoice to a customer, and a time
12 for the customer to pay. Also the time to -- at the
13 beginning of the process, where the customer asks us for an
14 estimate to do work, we provide it in 10 days, and we
15 measure that performance.

16 So it is more about measuring the process and the
17 experience to the customer, rather than internal savings.

18 MR. SHEPHERD: Well, okay. But what I was asking
19 about was not projects to improve the customer experience.

20 I was asking about projects to make you more
21 productive and efficient, which presumably there are some,
22 right?

23 MS. LERETTE: Yes. And this particular statement was
24 with regard to our distribution system planning.

25 So -- and we have laid some foundations to do that
26 through our asset management strategy. We look at work
27 management processes to improve the way we plan and execute
28 work.

1 Hence the planning and scheduling program that is
2 scheduled for 2011 is part of that asset management
3 strategy to improve that process, as well.

4 We implemented things like technology in our SCADA
5 system that enhances visibility to things in the field.
6 That may save our crews from visiting a substation, for
7 example.

8 MR. SHEPHERD: What I am trying to get at here -- and
9 it is actually not a trick question. It is actually very
10 straightforward -- you are doing lots of things to make
11 your business a better business.

12 MS. LERETTE: Mm-hmm.

13 MR. SHEPHERD: They should be resulting in reductions
14 in costs, or increased revenue, I suppose, but generally in
15 your business, it is reduction in costs.

16 So I am trying to figure out how do we identify those
17 reductions in costs in the test year from the stuff that
18 you have been doing in the past.

19 [Witness panel confers]

20 MS. CAMPBELL: Probably one of the best examples to
21 share is the E-mobile or the mobile computing, so the work
22 that was done in 2010 to the pilot to lay the foundation as
23 to what we would be doing and to realize on savings [REDACTED]

24

25 So though there wasn't any savings from the project or
26 quantifiable benefits in that, in 2010, there was a
27 considerable amount of work done on that project at that
28 time to be able to track forward to it.

1 Some of the other --

2 MR. SHEPHERD: Let me just stop you on that, because

3

4 in 2011, that program is costing you money.

5 You are spending more than you are getting?

6 MS. CAMPBELL: That's correct.

7 MR. SHEPHERD: So there is no benefit to the
8 ratepayers of that spending in 2010? Not yet; maybe in the
9 future, but not yet?

10 MS. CAMPBELL: Correct.

11 MR. SHEPHERD: I am looking for stuff that we are
12 getting a benefit now, this year.

13 MS. LERETTE: One of the things I wanted to add, too,
14 was, we do look at -- we do regularly look at process
15 improvement, and a lot of times it creates organizational
16 capacity, rather than, you know, smoother processes and
17 taking less time and less cycle time to do things allows
18 our employees to have time to take on additional tasks.

19 MR. SHEPHERD: So you don't have to add as many
20 people?

21 MS. LERETTE: Yes.

22 MR. SHEPHERD: Good. I am done.

23 MS. HELT: I understand Board Staff has one question.
24 Do any of the other parties have any further questions?

25 Then I would suggest we proceed with Board Staff, and
26 then we can conclude.

27 **FURTHER QUESTIONS BY MR. RITCHIE:**

28 MR. RITCHIE: Okay. Thank you. I just actually want

1 to follow up on the discussion that was involving [REDACTED]
2 [REDACTED]. This is dealing with
3 the inflation assumption. Again, the discussion was about,
4 I guess, the inflation almost sort of basing on sort of
5 2012 gross domestic product growth.

6 I would like a bit of clarification as to how you are
7 using, like, the GDP growth, as opposed -- or how that
8 translated into your assumption of an inflation estimate.

9 MS. HUGHES: Well, I think we took the approach that
10 that would be a benchmark for 2012. That was, you know, an
11 assumption at the time for 2012. So we used that as the
12 basis for the inflation rate.

13 MR. RITCHIE: So that is a growth rate on the gross
14 domestic product in an aggregate -- in aggregate?

15 MS. HUGHES: Yes.

16 MR. RITCHIE: From a number of sources?

17 MS. HUGHES: Yes.

18 MR. RITCHIE: So that would include, again, sort of
19 like -- also, like, population or, you know, again, like,
20 economy growth in output, as opposed to just inflation-
21 driven measures?

22 [Witness panel confers]

23 MR. BASILIO: As I look at the statistic for 2012, my
24 recollection -- and I think we need to confirm this -- was
25 that this was, in fact, CPI. But with respect to an
26 assumption for inflation for '12 and '013, the reality for
27 us is that with respect to wage growth -- which represents
28 40, 50 percent of our cost base -- wages are increasing at,

1 on average, [REDACTED] a year.

2 With respect to other costs, they're going up, as
3 well. Material costs have been going up at quite an
4 accelerated pace.

5 I think there isn't a lot of sophistication in how we
6 are choosing an inflationary assumption for years beyond
7 the test year, but [REDACTED], all things considered, was a
8 reasonable assumption for us, given our experience with our
9 own cost structure. But as I look at that now, I am
10 thinking that should be a CPI.

11 MR. RITCHIE: Okay. So, in other words, this
12 assumption is not equivalent to the GDP IPI, the implicit
13 price index for GDP, which the Board has commonly used as
14 being, say, the price escalator for under IRM plans?

15 MR. BASILIO: That's correct. It is not the GDP IPI.

16 MR. RITCHIE: Okay, thank you.

17 MS. HELT: I take it there is nothing further with
18 respect to any further questions or any other issues that
19 any of the parties need to address at this time?

20 All right, I am going to attempt to go on air simply
21 to conclude the technical conference on the record, but if
22 it doesn't work, that's fine.

23 --- Public session resuming at 1:14 p.m.

24 MS. HELT: All right. This technical conference is
25 now concluded. I would like to thank all of the parties
26 and the court reporter for your attendance today. Thank
27 you.

28 --- Whereupon the conference concluded at 1:14 p.m.
