Subject: Re Ontario Power Generation application EB-2014-0370

Not a "fan" of the devolution of Ontario's power and generation system. So says an old timer. And in light of negative press re cheap power to customers outside the Ontario borders, am asking:

1. Re year end accruals... how much and who (suppliers) gets shafted. Will there be penalties against OPG for this action.
2. Don't understand how can reduce liabilities and yet still want to increase hydro for consumers, but of course "maybe for businesses."
3. Paper ad refers you to one of lines in hydro billing statement. Which one?
(And while I have your attention, bills have charge a debt retirement fee. Was that charge ever and consistently applied to the debt, I recall railways had long-standing debt in Cda. Ditto the United States, which discarded this old, old obligation in terms of current currency value. But, Cda's railways didn't. How so the Ontario hydro scenario.
(One more: will the Ontario Clean Energy Benefit (10%) be terminated and if so when and what will offset this loss, particularly for seniors and others on limited income.)

With thanks, Michael Shelley, [REDACTED] and [REDACTED]
