Ms. Kirsten Walli  
Board Secretary  
Ontario Energy Board  
PO Box 2319  
2300 Yonge Street, 27th floor  
Toronto, ON M4P 1E4

Dear Ms. Walli:

**Re: Toronto Hydro-Electric System Limited (“Toronto Hydro”)  
Custom Incentive Rate-setting Application for 2015-2019 Electricity Distribution Rates  
and Charges – Undertaking Responses  
OEB File No. EB-2014-0116**

---

Toronto Hydro writes to the Ontario Energy Board (“OEB”) in respect of the above-noted matter.

Further to my letter dated March 3, 2015, please find enclosed the responses to Oral Hearing Undertakings J9.1 and J9.3 to J9.6. Responses for J8.11 and J9.2 will be submitted tomorrow.

Toronto Hydro’s response to the Letters of Comments received in this Application is also enclosed.

Please contact me if you have any questions.

Yours truly,

*[original signed by]*

## **ORAL HEARING UNDERTAKING RESPONSE TO SCHOOL ENERGY COALITION**

1 **UNDERTAKING NO. J9.1:**

2 **Reference(s):**

3

4 To advise whether or not Toronto Hydro used municipal accounting in any period prior to  
5 the benchmark.

6

7 **RESPONSE:**

8 Based on available records, Toronto Hydro can confirm that Generally Accepted  
9 Accounting Principles (“GAAP”) accounting was used from 1998 onward. Toronto  
10 Hydro’s best available information indicates that GAAP was also in use in the period  
11 from 1988 to 1998.

## ORAL HEARING UNDERTAKING RESPONSE TO SCHOOL ENERGY COALITION

1 **UNDERTAKING NO. J9.3:**

2 **Reference(s):**

3

4 To confirm whether there is any model showing what happens to Rates if capital  
5 spending is less than what is proposed.

6

7 **RESPONSE:**

8 This undertaking relates to an exchange between Mr. Shepherd and Ms. Klein regarding  
9 Toronto Hydro's position, articulated in various places in evidence, that deferring system  
10 renewal spending would be more costly for ratepayers in the long-term.<sup>1</sup>

11

12 Ms. Klein confirmed that Toronto Hydro has not modeled long-term rate impacts.<sup>2</sup>

13 However, Mr. Shepherd then asked a more general question about the utility's  
14 evidentiary basis for the statement that rates would be higher if the capital spend was  
15 reduced.<sup>3</sup>

16

17 In response to this broader question, the following paragraphs summarize the evidentiary  
18 basis for the position that deferring system renewal investments will result in higher costs  
19 (i.e., lower value-for-money) for ratepayers over the long-term. The response also  
20 discusses how the costs and benefits of deferral are quantified in the DSP business cases.

21

22 Toronto Hydro's approach to asset renewal avoids the extra costs incurred when an asset  
23 is replaced reactively as opposed to a planned replacement.<sup>4</sup> Mr. Walker described these

<sup>1</sup> Exhibit 2B, Section E2

<sup>2</sup> EB-2014-0116, Transcript Volume 9 (March 3, 2015), page 79, lines 22-23.

<sup>3</sup> EB-2014-0116, Transcript Volume 9 (March 3, 2015), page 82, lines 14-17.

<sup>4</sup> Exhibit 2B, Section E2.1.

## **ORAL HEARING UNDERTAKING RESPONSE TO SCHOOL ENERGY COALITION**

1 extra costs during the Oral Hearing by providing an example of an underground cable  
2 failure that Toronto Hydro had to address reactively.<sup>5</sup> In this scenario, the following  
3 reactive activities would generally occur:

- 4 • Emergency response to isolate the failure and restore as much power as possible
- 5 • Reactive response to locate the fault, isolate it and further restore power
- 6 • Civil crews to excavate around the failed portion of the cable
- 7 • Repair crews to splice out the failed portion of the cable
- 8 • Civil crews to back-fill the excavation
- 9 • Switching crew to re-energize the repaired portion of cable and return service to  
10 normal

11  
12 This example confirms Toronto Hydro's view that operating assets beyond their expected  
13 useful lives and replacing them reactively when they fail will increase the cost of  
14 operating the distribution system.<sup>7</sup> Of course, each time a cable fails, the customers also  
15 bear the costs and impacts of the power interruption until repairs are completed.

16  
17 The majority of the assets targeted for replacement under the System Renewal category  
18 in the 2015-2019 period are currently operating beyond their expected Useful Life, as  
19 well as their Economic End-of-Life.<sup>8</sup> Replacing these assets proactively rather than  
20 waiting for them to fail reduces reactive replacement costs and the associated customer  
21 outages. Consequently, addressing Toronto Hydro's large and growing backlog of end-  
22 of-life assets in a planned and proactive manner will reduce the overall cost of operating  
23 the distribution system in the long-term relative to a reactive approach.

---

<sup>5</sup> EB-2014-0116, Transcript Volume 6 (February 25, 2015), pages 67-68

<sup>7</sup> Toronto Hydro accounts for the extra costs in the risk cost curves that are used to determine the optimal intervention times (i.e., the Economic End-of-Life) for individual assets.

<sup>8</sup> Undertaking Response TCJ1.7.

## ORAL HEARING UNDERTAKING RESPONSE TO SCHOOL ENERGY COALITION

### 1 **Business Case Evaluations**

2 The Avoided Risk Cost approach which underlies the Business Case Evaluation (BCE)<sup>9</sup>  
3 of the System Renewal and System Service programs<sup>10</sup> supports Toronto Hydro's value-  
4 for-money proposition. It does so empirically by establishing risk cost curves for  
5 individual assets based on population-based failure rates (and asset health indices where  
6 available) and by assessing the present value of the investments' costs and benefits.

7  
8 By way of illustration, the Underground Circuit Renewal program (E6.1), which  
9 addresses Mr. Walker's cable fault example above, includes BCE results (Table 7) that  
10 show an Avoided Risk Cost for the first year of the program of \$102.93 million. The  
11 positive result means that the Net Cost<sup>11</sup> of doing the work is lowest in 2015, making it  
12 the optimal year to execute the projects in terms of mitigating the extra costs that would  
13 otherwise be associated with reactive replacement and customer outages.

14  
15 The consistently positive BCE results in the DSP demonstrate that deferring the planned  
16 investments that form the proposed capital expenditure plan will likely result in greater  
17 costs for Toronto Hydro customers over the long-term. While Toronto Hydro believes it  
18 is ideal to clear the backlog of end-of-life assets – and thus maximize value-for-money –  
19 as fast as possible, the utility has proposed a “paced” approach that balances these system  
20 renewal objectives with considerations for bill impacts and execution constraints.

---

<sup>9</sup> Exhibit 2B, D3.3

<sup>10</sup> With the exception of those investment that target system capacity issues.

<sup>11</sup> The Net Cost includes as costs both the sacrificed value of replacing any assets before they reach their expected useful lives, and the risk costs, which include reactive costs and customer outage costs, associated with allowing any assets to operate beyond useful life. The Net Cost also includes, as benefits, the operational savings realized by replacing the assets identified for replacement in an area as a group. A negative Avoided Risk Cost indicates that a project should be deferred or modified, while a positive Avoided Risk Cost indicates that proceeding with the project as planned will maximize value-for-money.

## **ORAL HEARING UNDERTAKING RESPONSE TO SCHOOL ENERGY COALITION**

1 **UNDERTAKING NO. J9.4:**

2 **Reference(s):**

3

4 To provide the date when the Board of Directors approved the filing.

5

6 **RESPONSE:**

7 While Toronto Hydro's management discussed this application with the Toronto Hydro  
8 Board of Directors, the filing of the application was approved by management, not by the  
9 Board of Directors. Specifically, the requirements of the RRF, the decision to file a  
10 custom IR application, the capital plan and anticipated rate impacts were all discussed  
11 with the Board of Directors prior to July 31, 2014 when the application was filed. The  
12 Board of Directors has approved the business plan that uses the same forecasts and  
13 assumptions as the application.

## **ORAL HEARING UNDERTAKING RESPONSE TO ENERGY PROBE RESEARCH FOUNDATION**

1 **UNDERTAKING NO. J9.5:**

2 **Reference(s):**

3

4 To update Exhibit K3.3 and to identify any issues found.

5

6 **RESPONSE:**

7 Toronto Hydro's updates to Exhibit K3.3 are embedded in Appendix to this undertaking  
8 response. Red text indicates cells that have been updated by Toronto Hydro in relation  
9 this undertaking and blue text indicates cells that have changed as a result of the formulas  
10 Energy Probe has coded into its spreadsheets.

11

12 For Tab 1, "J1.2 EP-49 02032015", Toronto Hydro undertook to estimate the adjustments  
13 to Operating Revenues (Row 4) and Total Revenue (Row 6) that are necessary to make  
14 those values for 2012 to 2014 roughly comparable to the values for 2015 to 2019. Those  
15 changes are carried through to Rows 19 and 21 as well.

16

17 In Tab 2, "CIR Formula Comparisons", Toronto Hydro undertook to identify any  
18 discrepancies between Dr. Kaufmann's proposal at page 57 of the Pacific Economics  
19 Group (PEG) report and Energy Probe's replication of Dr. Kaufmann's proposal, aside  
20 from the proposal to spread Toronto Hydro's proposed capital expenditure plan over  
21 eight years as opposed to five years.

22

23 The discrepancy Toronto Hydro has identified is due to Energy Probe's implementation  
24 of PEG's proposal to extend the stretch factor to capital costs. The corrected formula and  
25 values now appear in rows 18, 44 and 71.

26

## **ORAL HEARING UNDERTAKING RESPONSE TO ENERGY PROBE RESEARCH FOUNDATION**

1 For the benefit of all parties, Toronto Hydro has identified a further source of discrepancy  
2 that relates to corrections Toronto Hydro had previously proposed, and that were  
3 subsequently accepted, to Energy Probe's implementation of Toronto Hydro's proposed  
4 rate framework also contained in Tab 2. These correction were not carried through to the  
5 implementation of the PEG proposal. Specifically, those corrections relate to:

- 6 • The estimated capital-related revenue requirement in Energy Probe's Scenarios A  
7 and B;
- 8 • The formula used to calculate  $S_{cap}$  in all three cases; and
- 9 • The formula used to calculate revenue requirement, which had incorrectly added  
10 \$1 million incrementally in each of the years 2016 to 2019, in all three cases.

11

12 Finally, Toronto Hydro notes that it disagrees with other elements of PEG's and Energy  
13 Probe's proposals/scenarios, but has made no modifications in respect of these  
14 disagreements because they do not constitute a discrepancy as noted in this response.

**Energy Probe TCQ 49 REVISED March 2, 2015**

## **ORAL HEARING UNDERTAKING RESPONSE TO BUILDING OWNERS AND MANAGERS OF THE GREATER TORONTO AREA**

1 **UNDERTAKING NO. J9.6:**

2 **Reference(s):**

3

4 To confirm whether reliability issues noted by Redpath will be addressed.

5

6 **RESPONSE:**

7 Redpath's reliability issues between January 2012 and December 2013 were primarily  
8 due to defective primary cable. Toronto Hydro is working to address these issues  
9 through a number of projects that target renewal of aging cable fed from Esplanade TS.  
10 Toronto Hydro is also planning load transfer work to reduce the overall exposure of the  
11 station bus to power quality events and to reduce the load on the station.

12

13 The proposed work is planned within the following Distribution System Plan ("DSP")  
14 programs (Exhibit 2B):

- 15 • Underground Circuit Renewal (Section E6.1)
- 16 • Load Demand (Section E5.4)

17

18 Mr. Brett also asked about the reliability issues noted by Wrigley. The issues between  
19 January 2012 and December 2013 were flagged to various cause codes, including:

- 20 • Adverse Weather
- 21 • Defective Equipment – Cable – Primary
- 22 • Foreign Interference
- 23 • Tree Contacts
- 24 • Unknown

25

## **ORAL HEARING UNDERTAKING RESPONSE TO BUILDING OWNERS AND MANAGERS OF THE GREATER TORONTO AREA**

1 Toronto Hydro is working to address these issues through various projects that target  
2 aging assets and that reconfigure existing assets out of high risk areas such as ravines.  
3 These projects are generally related to feeders supplied by Leaside TS. There is also  
4 work planned to replace assets such as R1 SCADA-Mate switches and defective SMD-20  
5 switches, which will provide Toronto Hydro with improved system flexibility during  
6 outages.

7

8 The proposed work is planned within the following DSP programs (Exhibit 2B):

- 9 • Load Demand (Section E5.4)
- 10 • Underground Circuit Renewal (Section E6.1)
- 11 • Overhead Infrastructure Relocation (Section E6.5)
- 12 • SCADAMATE R1 Renewal (Section E6.8)
- 13 • Polymer SMD-20 Renewal (Section E7.6)

14

15 These programs are intended to improve the overall reliability of the feeder serving this  
16 customer and may also reduce momentary events and voltage sags.

1     **RESPONSE TO THE LETTERS OF COMMENT**

2  
3     In the course of Toronto Hydro’s 2015-2019 Custom IR application, the Ontario Energy  
4     Board (“OEB”) received three letters of comment from Toronto Hydro’s customers,  
5     namely from Messrs. Norm Hann, Ron Dabor Sr., and Richard Cassel. Toronto Hydro  
6     appreciates its customers sharing their observations and provides the following response.

7  
8     While each author raised a number of points, the above-noted letters generally addressed  
9     three major areas, including Toronto Hydro’s variable compensation structure,  
10    efficiencies/savings available within Toronto Hydro’s budget and the electricity sector  
11    more generally, as well as Toronto Hydro’s system planning and response procedures  
12    associated with major storms. Toronto Hydro will address each of these topics in order.

13  
14    **Incentive/Variable Compensation**

15    In his commentary, Mr. Cassel requests that the OEB give consideration to mandating  
16    that Management employee’s variable compensation structures be based on multiple  
17    criteria (including maintenance standards, safety record, profit and customer satisfaction  
18    and be determined by an independent third party).

19  
20    As discussed in Exhibit 4A, Tab 4 Schedule 5 of Toronto Hydro’s application the utility’s  
21    “variable performance pay rewards employees for their contribution to the achievement  
22    of business goals and objectives tied to the utility’s pillars in combination with the  
23    successfully demonstrated corporate competencies”.<sup>1</sup> In other words, each eligible  
24    employee’s variable compensation pay depends on their performance relative to specific  
25    objectives outlined in their annual performance contracts, and their contribution to a set  
26    of departmental and corporate measures, known as the Key Performance Indicators,  
27    relating to customer service, operating activities, financial performance and employee

---

<sup>1</sup> Exhibit 4A, Tab 4 Schedule 5, p.7

1 health and safety. More information regarding Toronto Hydro's corporate Key  
2 Performance Indicators can be found in Toronto Hydro's response to interrogatory 1B-  
3 SIA-2.

4  
5 With respect to Mr. Cassel's suggestions regarding the third-party evaluation of variable  
6 compensation amounts for Toronto Hydro's management, the utility notes that it has filed  
7 in this proceeding an independent third-party study which benchmarks its compensation  
8 and benefits program relative to other energy sector entities, as well as general industry  
9 organizations. This study, prepared by Towers Watson, can be found at Exhibit 4A, Tab  
10 4, Schedule 6.

11  
12 To summarize, Toronto Hydro's variable pay structure is based in part on the individuals'  
13 contribution to a broad range of corporate objectives, and is subject to a third-party  
14 assessment as part of an overall compensation and benefits benchmarking exercise.

15  
16 **Available Savings and Efficiencies**

17 Toronto Hydro is not in a position to comment on Mr. Dabor's observations regarding  
18 Ontario Power Generation (OPG) and its operations. However, the utility notes that in the  
19 current application, it has provided a significant amount of evidence regarding efficiency  
20 and productivity. This evidence is located at Exhibit 1B, Tab 2, Schedule 5 and includes:

- 21
- 22 • an econometric total cost benchmarking study prepared by Power System  
23 Engineering Inc. that evaluates Toronto Hydro's historical and projected total  
24 cost levels against the model-derived efficient cost levels for a utility with  
25 Toronto Hydro's business characteristics,
  - 26 • a past productivity study that details the significant productivity/efficiency  
27 efforts undertaken by the utility from the time of Toronto's municipal  
amalgamation to 2011, and

- 1           • evidence discussing Toronto Hydro’s corporate approach to productivity and  
2           performance measurement which contains multiple examples of current and  
3           planned initiatives underlying the utility’s culture of continuous improvement.  
4

5       Finally, Toronto Hydro notes that its application is underlined by a custom Price Cap  
6       Index formula, which is designed to incent the utility to continuously seek operating  
7       efficiencies throughout the remainder of its 2015-2019 plan.  
8

9       To summarize, Toronto Hydro has advanced a substantive and comprehensive account of  
10      its productivity and efficiency accomplishments to date, the reasonableness of its cost  
11      forecasts and the key tenets of the utility’s productivity and continuous improvement  
12      culture.  
13

#### 14      **Storm-Related Investments**

15

16      In his letter, Mr. Hann raises a number of technical issues pertaining to Toronto Hydro’s  
17      storm-related system design parameters and operating practices, as well as the specific  
18      circumstances surrounding the utility’s response to the December 2013 Ice Storm.  
19

20      Toronto Hydro notes that the issues surrounding major event preparedness and response  
21      have been thoroughly canvassed in the Report of the Independent Review Panel filed at  
22      Exhibit 4A, Tab 2, Schedule 4, Appendix A.  
23

24      As stated in the Executive Summary [Exhibit 1A, Tab 2, Schedule 1], over the 2015-2019  
25      timeframe, Toronto Hydro’s plans supporting its funding requests include taking a  
26      number of steps to enhance its storm-related operational practices and capabilities,  
27      including an upgrade of its Outage Management System, enhancements to the damage

1 assessment activities, outage restoration time estimation practices, and other  
2 improvements recommended by the Panel's Report.<sup>2</sup>

3

4 In addition, Toronto Hydro's application contains a number of proposed capital  
5 investments and maintenance activities that can be expected to improve system  
6 performance against extreme weather, as well as to address their respective primary  
7 drivers. Among these programs are:

- 8 • Overhead Infrastructure Relocation;
- 9 • Rear Lot Conversion;
- 10 • Box Construction Conversion;
- 11 • Feeder Automation;
- 12 • Contingency Enhancement;
- 13 • Downtown Contingency;
- 14 • Design Enhancement; and
- 15 • Vegetation Management.

16

17 Toronto Hydro assesses that undertaking the above-referenced investments, activities and  
18 operating enhancements, and leveraging the practical experience and insights gained  
19 from the 2013 December Ice Storm will enable the utility to increase its service levels in  
20 future emergency situations.
