

ONTARIO ENERGY BOARD

INDUSTRIAL GAS USERS ASSOCIATION (IGUA)

**Interrogatories on
Green Energy Coalition (GEC) Evidence
Exhibit L.GEC.2**

1. **Reference:** Pages 1-2, *et seq.*

Preamble: IGUA understands that the Resource Insight, Inc. evidence attempts to quantify the costs to Ontario gas consumers (DSM program participants and non-participants) avoidable through load reductions from ratepayer funded utility demand-side management.

- (a) Recognizing the limitations in the record as articulated by Mr. Chernick in his evidence, please list all of the categories of costs avoidable by non-participant large volume, non-heating load (i.e. process gas consumption) gas customers under each of the following scenarios:
 - (i) The customer obtains their own gas supplies.
 - (ii) The customer obtains their own gas supplies and transportation.
 - (iii) The customer obtains their own gas supplies, transportation and storage services.
- (b) For each of the categories of costs identified in response to part (a), please provide the best available information for the per cubic meter cost avoided as a result of the utilities' proposed 2015-20 DSM plans.
- (c) Please list any other "benefits" to large volume customer non-participants of the utilities' proposed 2015-20 DSM plans which are not already listed in response to part (a), and to the extent possible quantify the value of those benefits on a dollar per cubic meter basis.
