I would like to offer feedback on the proposed increase in delivery costs.
The government offers incentives to get us more energy efficient.

Smart thermostats, replace furnaces over 20 years old, upgrade water heaters, better insulation, wrap ducts and water pipes. This is supposed to reduce our energy consumption and our bills.

Instead the gas company decides the reduction in gas used is hurting their profits and they need to increase delivery costs. The delivery costs are already higher than the amount of gas I use.

They already charge me a fee even during the months I use no gas at all.
What is the point of encouraging consumers to reduce their energy usage if you are just going to approve new ways to keep their bills high?
