Dear Ms. Kirsten Walli

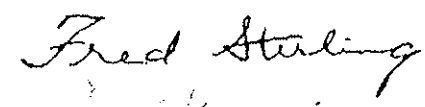

Re: Board File No. EB-2007-0661

We are writing in response to the letter sent out by Union Gas dated June 10, 2009 seeking approval from the Energy Board to increase the operating pressures in the three pools in our area. We have land that is covered in the Oil City Pool.

Our concern is the safety, whether the equipment, piping and the existing cavern is capable of sustaining the new pressure which Union Gas is intending to induce on the present system.

We feel that before this is passed by the Energy Board that this proposal be brought to the land owners in the three pools in question in a public format meeting in our area. The purpose of this meeting would be to verify the concerns of safety that the pressure ratings on all equipment are within the safety standards, due to the fact that some of the equipment is in close proximity to existing buildings. It would also be an advantage that someone from the Energy Board be in attendance at this meeting to answer any concerns that the land owners may have.

Sincerely yours,

Fred & Pat Sterling
