## **BOARD STAFF INTERROGATORY #1**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 2 of 22, para 6

Issue Number: 1.1

Issue: What are the implications associated with a revenue cap, a price cap and other alternative multi-year incentive ratemaking frameworks?

Enbridge states in evidence that it is proposing a revenue cap, calculated on a per customer basis, adjusted annually.

- a) Please outline Enbridge's proposed methodology for applying the revenue per customer cap at the rate class level.
- b) Is Enbridge proposing that a fully allocated Cost-of-Service study be used to support its rate design proposals? Please explain.
- c) Will this methodology be fixed during the IR plan?
- d) Please confirm that Enbridge will seek Board approval for its proposed methodology in this proceeding.

# **RESPONSE**

- a) The Company is proposing to determine a revenue cap, calculated on a per customer basis, based on the revenue requirement of the entire system. The Company is not proposing to apply its proposed formula at a rate class level.
- b) The Company is proposing to continue using cost allocation and rate design principles and conventions to determine rates under the revenue cap per customer incentive regulation model. However, Enbridge Gas Distribution is not proposing to use a cost of service study to support its rate design proposals. The Company is of the view that cost of service studies are inconsistent with the principles and intentions of an incentive regulation regime. The Company will seek Board approval for its rates each year of the IR plan period as part of the rate filing process.

Witnesses: P. Hoey

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 1 Schedule 1 Page 2 of 2

- During the IR plan term the Company is planning to monitor its cost allocation and rate design principles and conventions and to bring forward any changes if warranted.
- d) The Company's understanding of the principles and intentions of incentive regulation is to de-link the rates charged to customers from traditional cost-of-service studies. Therefore, the relationship between rates and costs under a cost-of-service regime may not carry on during the IR plan term. Enbridge Gas Distribution's revenue cap per customer incentive regulation model does provide an opportunity to assign the total distribution revenue requirement to the customer classes based upon key drivers such as peak day demand and customer numbers. The Company will seek the Board approval for its rates each year of the IR plan period as part of the rate filing process.

## **BOARD STAFF INTERROGATORY #2**

## **INTERROGATORY**

Ref: Enbridge Ex. D, Tab 3, Sch 1, pages 15-16

Issue Number: 1.1

Issue: What are the implications associated with a revenue cap, price cap and other alternative multi-year incentive ratemaking frameworks?

PEG indicated that a revenue cap index is commonly paired with a balancing account that ensures that the revenue requirement is ultimately recovered.

- a) Please indicate if Enbridge is proposing to establish a balancing account for the IR plan term.
- b) Please provide the basis for the calculations of each entry in the balancing account. For example, is Enbridge proposing that the balancing account capture the difference between actual revenue (i.e., not normalized for weather) and the approved revenue requirement? Please explain.
- c) What is the frequency, timing and process for disposing the amount accumulated in Enbridge's balancing account? Please explain
  - i. How will the amount be allocated across customer classes for recovery in rates? Please explain.

#### RESPONSE

A balancing account is not proposed and is not required in the Company's proposal. The function of a balancing account in the PEG index proposal is replaced by the annual volume and customer numbers forecast in the Company's revenue cap per customer proposal.

## **BOARD STAFF INTERROGATORY #3**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, page 1 of 22, para 2

Issue Number: 1.1

Issue: What are the implications associated with a revenue cap, price cap and other alternative multi-year incentive ratemaking frameworks?

Enbridge states in evidence that it is proposing a revenue cap, calculated on a per customer basis for the five year period 2008 to 2012.

a) If the Board decided on a price cap for Enbridge, would Enbridge's IR parameter proposals change (e.g., plan term, marketing flexibility, inflation factor, off-ramps, etc.)?

## <u>RESPONSE</u>

Yes, the IR parameters for a price cap appropriate to EGD's business circumstances would be expected to be significantly different than those in this revenue cap proposal.

## **BOARD STAFF INTERROGATORY #5**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 2 of 22, para 6

ssue Number: 1.3

Issue: Should weather risk continue to be borne by the shareholders, and if so what

other adjustments should be made?

Enbridge states in evidence that it is proposing a revenue cap, calculated on a per customer basis, adjusted annually.

- a) Does Enbridge believe that its shareholders should continue to bear weather risk? Please explain.
- b) If the weather risk was removed from the shareholder, would Enbridge need to change its proposed IR plan? Please explain.

# **RESPONSE**

- a) Weather risk is symmetrical provided the Company is able to utilize an appropriate weather forecasting methodology. From the perspective of the ratepayer and the shareholder, an appropriate weather forecasting methodology is one that is accurate on average and is as likely to under forecast as it is to over forecast while at the same time providing relatively stable weather forecasts over the long run.
  - The Board's Decision with Reasons for 2007 rates approved the use of appropriate weather forecasting methodologies for the Company relative to the weather forecasting method in place prior to 2007. The Company is confident that these new methodologies, over the long run, will balance the risk associated with weather variances and is thus prepared to continue to bear weather risk.
- b) If weather risk was removed from the shareholder, via, for example, a weather variance account, the Company would not need to change its proposed IR plan. The removal of weather risk would only serve to balance the risks associated with forecasting weather.

## **BOARD STAFF INTERROGATORY #6**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 17 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Enbridge states in evidence that this is the manner that Statistics Canada calculates TFP growth for the overall economy and various sub-sectors and industries.

a) Please provide the latest Statistics Canada information that outlines the Canadian TFP growth for the overall economy and various sub-sectors and industries for the years 1994 - 2005.

## **RESPONSE**

a) Dr. Bernstein notes that the Statistics Canada information is available from this agency's CANSIM database by subscription.

## **BOARD STAFF INTERROGATORY #7**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 14 of 22, para 32

Issue Number: 3.1

Issue: How should the X factor be determined?

Enbridge states that in the past five years, the Board approved distribution margin has increased on average by 3.83%.

 Please confirm that this average increase includes the impact of declining average use, the cast iron replacement main program and other safety and integrity programs.

## **RESPONSE**

The approved distribution margin included the impacts of costs/revenues approved by the Board.

Witnesses: R. Campbell

P. Hoey

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 8 Page 1 of 1

## **BOARD STAFF INTERROGATORY #8**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 12 of 64

Issue Number: 3.3

Issue: What are the expected cost and revenue changes during the IR plan that should

be taken into account in determining the appropriate X factor?

Enbridge states in evidence that replacing and upgrading infrastructure facilities is an additional structural change confronting EGDI during the forthcoming IR period, and thus must be accounted for in its X factor.....Omitting an X factor component designed to measure future changes in infrastructure expenditures that differ from the past trends will lead to an incorrect X factor.

- a) Please provide Enbridge's estimate, with supporting documentation, of the adjustment that would be required to the price cap formula to mitigate the risk of these significant changes beyond the amount provided in PEG's recommendation.
- b) Please provide Enbridge's estimate, with supporting documentation, of the adjustment that would be required to the revenue cap formula to mitigate the risk of these significant changes beyond the amount provided in PEG's recommendation.

## **RESPONSE**

- a) When structural changes are known or suspected to occur in the future, then analysis based on past trends should be adjusted to account for this. The evidence at Exhibit B, Tab 3, Schedule 1, considers the prospects for future inputs and outputs only at a surveillance level, which doesn't make its observations or conclusions any less real. There are clear signals of future input pressures, due to the continued aging of infrastructure, and the prospects for outputs are not any better than they have been in the past. It is on this basis that the Company concludes Exhibit B, Tab 3, Schedule 1 by stating that to adequately address 'just and reasonable' rates going forward requires an X factor at least no greater than past experience would reveal.
- b) Please see response to part a) above.

Also see response to SEC Interrogatories #1 and 2 at Exhibit I, Tab 11, Schedules 1 and 2.

## **BOARD STAFF INTERROGATORY #10**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 6 of 22, para 17

Issue Number: 3.3

Issue: What are the expected cost and revenue changes during the IR plan that should be taken into account in determining the appropriate X factor?

Enbridge states in evidence that its customer base continues to grow at about 2.5% per year (45,000 to 50,000 new customers are attached annually).

- a) Does Enbridge expect this current growth rate to continue over the IR plan term?
  - i. Please provide Enbridge's forecast, with supporting documentation, of new customer attachments during the IR plan.

#### <u>RESPONSE</u>

The current customer growth rate is expected to continue if current economic and regulatory conditions remain unchanged, which does not seem likely at this time. The Board in this proceeding is considering a major change in the regulatory model that may significantly affect the customer additions incentive for gas distribution utilities. The economic conditions in the Company's franchise area are changing and the new construction housing market appears to be slowing down as explained in Exhibit C3, Tab 1, Schedule 1. Enbridge Gas Distribution expects to add 44,534 customers in 2008 as shown in Exhibit C3, Tab 1, Schedule 1. This forecast is based on the continuation of the existing Cost of Service method of regulation or the approval by the Board of the Company' proposed Revenue Cap per Customer proposal since both have a similar level of incentive for customer additions. The Price Cap model that is under consideration by the Board in this proceeding has a built-in disincentive for customer additions and may cause Enbridge Gas Distribution to add fewer customers in 2008 and for the duration of the IR Plan, should it be adopted by the Board. The Company does not have a forecast of customer additions for 2009 to 2012 since the type of model to be selected by the Board is unknown at this time and the economic conditions are uncertain.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 11 Page 1 of 1

## **BOARD STAFF INTERROGATORY #11**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 13 of 22, para 30

Issue Number: 3.3

Issue: What are the expected cost and revenue changes during the IR plan that should

be taken into account in determining the appropriate X factor?

Enbridge states in evidence that it believes that the business conditions it faces: ....the potential for industrial volume loss.....

a) Please describe, with supporting documentation, the expected revenue changes during the IR plan attributed to the forecasted (potential) industrial volume loss.

## **RESPONSE**

As filed at Exhibit C, Tab 2, Schedule 1, Appendix A, page 6, the 2008 Budget industrial customer volume is expected to be lower than the 2007 Bridge Year Estimate by another 84 10<sup>6</sup>m<sup>3</sup>. This underage is due to a loss in load relating to plant closures and relocation outside franchise area of transportation equipment, primary metal and food & beverage customers as discussed in Exhibit C, Tab 2, Schedule 1. Coupled with customer losses and volume reduction as mentioned in Exhibit C, Tab 2, Schedule 1, Appendix A, pages 11 and 18, as well as ongoing unexpected customer losses, rate switching as a result of not meeting the annual volume threshold, and unfavourable volumetric variances in consequence of unexpected strengthening Canadian dollar, volatile and high gas prices and global cost pressure as filed at Exhibit C, Tab 2, Schedule 1, pages 20-21; the risk of incurring larger industrial volume loss than budgeted is weighted heavily to the downside.

For instance, one of the Company's large industrial customers has just announced a reduction in one shift of production that was not known at the time of the development of budget back in March. This is one example which occurred in recent years that the Company's local customers have forecast their volumetric needs on their best projections for their own company: They may not, however, be able to forecast their continued operation within the overall plan of their parent organization as decisions on their viabilities are being made from corporate headquarters.

## **BOARD STAFF INTERROGATORY #12**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 12 of 64

Issue Number: 4.2

Issue: How should the impact of changes in average use be calculated?

Enbridge states in evidence that in the context of Ontario's natural gas demand conditions shaping the average use of facilities is a significant element which causes future conditions facing the regulated firm to differ from historic conditions. In this case the X factor formula must account for future or prospective declines in average use that differs from past trends.

- a) Please outline, with supporting documentation, the expected revenue changes during the IR plan attributed to forecasted declining average use.
- b) Please provide Enbridge's estimate, with supporting documentation, of the adjustment that would be required to the price cap formula to mitigate the risk of these significant changes beyond the amount provided in PEG's recommendation.
- c) Please provide Enbridge's estimate, with supporting documentation, of the adjustment that would be required to the revenue cap formula to mitigate the risk of these significant changes beyond the amount provided in PEG's recommendation.

# <u>RESPONSE</u>

- a) Please see response to Board Staff Interrogatory #8, part a), found at Exhibit I, Tab 1, Schedule 8.
- b) Please see response to Board Staff Interrogatory #8, part a), found at Exhibit I, Tab 1, Schedule 8.
- c) Please see response to Board Staff Interrogatory #8, part a), found at Exhibit I, Tab 1. Schedule 8.

## **BOARD STAFF INTERROGATORY #13**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 8 of 22, para 21

Issue Number: 4.2

Issue: How should the impact of changes in average use be calculated?

Enbridge states in evidence that given the new 2006 Ontario Building Code has improved energy efficiency standards, residential average use during the next five years will decline more than the historical trend, all else being equal.

a) Please provide a projection for each year of the proposed plan term of the impact of the new 2006 Ontario Building Code on average use.

## **RESPONSE**

Please refer to the volume budget evidence filed at Exhibit C, Tab 2, Schedule 1, pages 7-9.

Witness: I. Chan

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 1 Schedule 14 Page 1 of 2

## **BOARD STAFF INTERROGATORY #14**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 8 of 21, para 23

Issue Number: 4.2

Issue: How should the impact of changes in average use be calculated?

Enbridge states in evidence that the volumes and customers for the years 2002-2006 in Table 1 are the following:

Years	EGD Volumes <sup>1</sup> MN M <sup>3</sup>	PEG calculations of EGD's volumes <sup>2</sup> MN M <sup>3</sup>	EGD Customers <sup>1</sup> Mn	PEG Calculations of Customers <sup>2</sup> Mn
2002	11,776	11,275	1.565	1.567
2003	11,775	12,646	1.615	1.622
2004	11,775	12,257	1.676	1.676
2005	12,298	12,166	1.719	1.725
2006	12,290	NA	1.793	NA
2007	11,776	NA	1.823	NA

- a) Please confirm that Enbridge's annual volumes and number of customers outlined in Table 1 are based on Board approved forecasts.
- b) Please confirm that the difference between Enbridge's annual volumes (Enbridge Ex. B, Tab 1, Sch 1, p 8 of 22, para 23) and PEG's annual volumes (Enbridge Ex. D, Tab 2, Sch 1, p 54 of 106) is due to the different weather normalization methodologies. Please explain.

Witnesses: R. Campbell

I. Chan

T. Ladanyi

<sup>&</sup>lt;sup>1</sup> Enbridge Ex. B, Tab 1, Sch 1, p 8 of 22, para 23, Table 1

<sup>&</sup>lt;sup>2</sup> Enbridge Ex. D, Tab 2, Sch 1, p 54 of 106, Table 11a

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 1 Schedule 14 Page 2 of 2

c) Please explain the difference between Enbridge's annual number of customers (Enbridge Ex. B, Tab 1, Sch 1, p 8 of 22, para 23) and PEG's annual number of customers (Enbridge Ex. D, Tab 2, Sch 1, p 54 of 106).

## **RESPONSE**

- a) Not confirmed. Not all of the numbers reported in Table 1 are Board approved forecasts. There was no 2004 Board approved volume budget and customer numbers due to the nature of the 2004 Rate Application. Please see RP-2003-0048, Exhibit A, Tab 3, Schedule 1 for the rationale for implementing this new approach. The correct 2006 Board approved volume budget should be 12 320.7 10<sup>6</sup>m<sup>3</sup> instead of the currently reported 12 290 10<sup>6</sup>m<sup>3</sup> as filed at Exhibit C, Tab 2, Schedule 1, Table 1.
- b) Not confirmed. The difference between Enbridge Gas Distribution's annual volumes, at Exhibit B, Tab 1, Schedule 1, Table 1 and PEG's volumes, at Exhibit D, Tab 3, Schedule 1, page 60, Table 11a, Column C is not only because different weather normalization methodologies utilized under two columns, but it is also due to PEG reporting weather normalized actual volumes as mentioned at Exhibit D, Tab 3, Schedule 1, page 59, second line, whereas Board approved forecasts are reported at Exhibit. B, Tab 1, Schedule 1, Table 1.
- c) Similar to the explanation above, PEG is reporting actual customer numbers at Exhibit D, Tab 3, Schedule 1, page 60 whereas at Exhibit. B, Tab 1, Schedule 1, Table 1 presents Board approved forecast customer numbers.

Witnesses: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 15 Page 1 of 2

## **BOARD STAFF INTERROGATORY #15**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 6, Sch 1, page 1 of 4, para 1

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

Enbridge states that the clearance of deferral and variance accounts will occur each year in conjunction with the April 1<sup>st</sup> QRAM and that it intends to clear the prior years December 31st year end actual balances.

- a) Is Enbridge proposing to derive the unit rates for disposition (and effect the onetime adjustment on the customers' bill) based on actual consumption for the corresponding period?
- b) Please explain why Enbridge is proposing to clear actual year-end balances as part of the April 1<sup>st</sup> QRAM instead of clearing forecast year-end balances in the January 1<sup>st</sup> QRAM?
- c) Enbridge proposes to file, as part of the rate filing process, a forecast (eight months of actual and four months of forecast) of its deferral/variance account year-end balances. However, Enbridge is proposing that the actual year-end balances be cleared as part of the April 1<sup>st</sup> QRAM and not its January 1<sup>st</sup> QRAM. Is Enbridge proposing that an additional prudence review (i.e., an additional process) be conducted as part of the April 1<sup>st</sup> QRAM process to deal with the difference between forecast year-end balances and the actual year-end balances?

# <u>RESPONSE</u>

- a) Confirmed.
- b) The proposed mechanism to clear actual year-end balances would minimize the potential impact of the clearance of incorrect forecast amounts and preclude the need for a subsequent round of clearings related to the variances between actual and forecast balances. The need to review forecast amounts, followed by a review of actual versus forecast variance amounts would be reduced to the

Witnesses: R. Bourke

K. Culbert

A. Kacicnik

D. Small

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 15 Page 2 of 2

review of actual balances in the account and would help to minimize the efforts required by all involved in such review processes. There would also be a benefit related to the ratepayers understanding of their bill with one round of clearing actual account balances.

c) Enbridge Gas Distribution is proposing the filing of (8+4) forecast balances of deferral and variance accounts as a means of indicating to parties where balances are forecast to be by year end for information purposes only. The only detailed review will be a review of actual balances within the filing timelines of an April 1, QRAM annually. This streamlining and minimizing of review time and costs will assist all stakeholders in contributing to the objective of efficiency gains in an incentive regulation model.

Witnesses: R. Bourke

K. Culbert A. Kacicnik D. Small

## **BOARD STAFF INTERROGATORY #17**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 4, Sch 1, page 5 of 15, para 15

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

Enbridge in its evidence states that a customer attachment will take approximately 12 years to observe the cross-over from revenue deficiency to revenue sufficiency

- a) Please provide detailed calculations, including all the assumptions, supporting the 12 year cross-over period.
- b) Do Enbridge's 2007 base rates (i.e., approved revenue requirement) provide for the recovery of the aforementioned deficiency for customer projects that have been completed within the last 10 years?
- c) Please confirm that, on average, subsequent to year 12, the revenue stream from the customers attached in the last 10 years exceeds costs to provide the service.

## **RESPONSE**

- a) Please see attached appendix. It needs to be understood that "cross-over" in this context does not mean that the investor has recouped the investments. It is only an indication of the first year when the investor begins to make comparable cost of service return on equity or greater. The payback period on cash-flow basis is closer to 30 years. This can be seen by following the "net present value" or "profitability index" in the appendix.
- b) 2007 base rates provide for recovery of the deficiency for customer projects that have been completed prior to 2007. The projects in 2007, depending on the month that these projects are added to rate-base, will not be fully effective and hence 2007 projects would create a deficiency for the following year. Further the deficiencies created in 2008 and beyond are cumulative.
- c) Please refer to CCC Interrogatory #22 at Exhibit I, Tab 3, Schedule 22 regarding the challenges for offsetting the deficiency during an IR period by projects undertaken in prior years that would cross-over during the plan period.

## **BOARD STAFF INTERROGATORY #19**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 4, Sch 1, pages 13-15 of 15, para 2-8

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

Enbridge states in evidence that projects proposed for Y factor treatment are:

- Leave to construct (LTC) projects
- Power generation customers
- System reinforcement and community expansion
- Safety and reliability
- a) Please provide a forecast over the IR plan term of the capital expenses (annual and total over the plan term) that Enbridge expects to pass-through to customers.
- b) Please provide the details on how the annual capital expenses would be converted into a Y factor (or cost of service amount)?
- c) Please quantify the financial impact on a typical residential and commercial customer. In particular, please quantify the financial impacts of capital expenses associated with system reinforcement and safety and reliability projects.
- d) Please provide a forecast over the IR plan term of the reductions in O&M expenses (annual and total over the plan term) attributable to system reinforcement, cast iron replacement and safety & integrity programs.
  - i. Does Enbridge propose these reductions in O&M be included in the amount to be passed through to customers? Please explain.
  - ii. Please quantify the financial impact for a typical residential and commercial customer.

## **RESPONSE**

a) The Company does not have a forecast of the total IR plan term capital expenses it is requesting to treat as Y factors and pass through to customers.

Witnesses: K. Culbert

A. Kacicnik

S. Kancharla

T. Ladanyi

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 19 Page 2 of 2

The Company will be filing a summary of 2008 Y factor capital expenditures in its evidence at Exhibit C, Tab 7, Schedule 1.

- b) The Company will convert these capital expenditures into a Y factor by performing a revenue requirement type of calculation which will include, a return on the average cost of service rate base, depreciation, and associated tax determinations. The Company is currently in the process of completing these requested Y factor capital related cost of service rate adjustments. The calculations and amounts being requested will be included in its evidence to be filed by September 25<sup>th</sup> along with rate schedule related material. An example of this calculation will be provided in evidence at Exhibit C, Tab 7, Schedule 2.
- c) As stated in part b) the rate impact calculations for these Y factors are currently in process. As a result we cannot currently quantify the typical financial impacts as requested but could, if required, provide such information after the filing of rate schedule related material on September 25<sup>th</sup>.
- d) The Company does not anticipate or have a forecast of any significant reductions in O&M expenses over the term of the IR plan as a result of the proposed incremental system reinforcement, cast iron mains replacement and safety & integrity programs.

Witnesses: K. Culbert

## **BOARD STAFF INTERROGATORY #20**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, page 17 of 22, para 40

Issue Number: 6.1

Issue: What are the criteria for establishing Z factors that should be included in the IR

plan?

Enbridge states in evidence that Z factors be related to:

- Changes in statutes
- Changes in regulations
- · Changes in financial accounting reporting requirement guidelines
- Regulatory orders
- Uninsured losses
- Litigation costs
- a) Please give examples of each of the listed Z factor events. For example, do changes in statues include changes to provincial and municipal tax laws?
- b) Please confirm that the Z factor amounts would be symmetrical (i.e., positive or negative amounts)?

## **RESPONSE**

a)

- Changes in statutes: new taxes are included. Changes to existing tax rates are not included.
- Changes in regulations: changes in TSSA requirements
- Changes in financial accounting reporting requirement guidelines: GAAP instead of GARP principles.
- Regulatory orders: amendments to GDAR:
- Uninsured losses: please see response to CCC Interrogatory #29 at Exhibit I, Tab 3, Schedule 29
- Litigation costs: please see response to CCC Interrogatory #29 at Exhibit I,
   Tab 3, Schedule 29
- b) Confirmed.

## **BOARD STAFF INTERROGATORY #22**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 1, page 1 of 22, para 2

Issue Number: 10.1

Issue: Should an ESM be included in the IR plan?

In this exhibit, the Company provides the rationale for and details of the revenue cap, calculated on a per customer basis, for the five year period 2008 to 2012.

- a) Please confirm that Enbridge is not proposing an ESM in the IR plan.
- b) Please outline the rationale for Enbridge's position. For example, does Enbridge believe that an ESM dilutes the incentive to achieve efficiencies?

## **RESPONSE**

Enbridge Gas Distribution is generally opposed to earning sharing because it dilutes the incentive power of the plan. This position was recognized by the Ontario Energy Board in the Natural Gas Forum Report which states that "the Board views the retention of earnings by a utility within the term of an IR plan to be a strong incentive for the utility to achieve sustainable efficiencies"; and "the Board does not intend for earnings sharing mechanisms to form part of the IR plans" (pg 28). Consequently, earning sharing is not a feature of the Company's IR proposal. (Also see response to CCC Interrogatory # 34 at Exhibit I. Tab 3. Schedule 34.)

# **BOARD STAFF INTERROGATORY #23**

# **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 6, Sch 1, page 4 of 4, para 12

Issue Number: 11.1

Issue: What information should the Board and stakeholders be provided with during the

IR plan?

In its evidence on Reporting Requirements, Enbridge states that any further reporting requirements would be onerous and counterproductive.

a) Would filing the following additional information on an annual basis be onerous and counter-productive – Standard ROE calculation schedules and Capital expenditures (annual actual capital expenditures by USoA accounts)?

## <u>RESPONSE</u>

The Company stated in evidence that it would provide year end actual utility results in the same form and at the same time as it is required to report such results as per the Board's record keeping and reporting requirements. The Company can also provide an annual actual capital expenditure schedule similar to that provided in its 2007 rate proceeding, EB-2006-0034, Exhibit B5, Tab 2, Schedule 1, page 1, Column 1.

Witnesses: K. Culbert

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 1 Schedule 24 Page 1 of 1

## **BOARD STAFF INTERROGATORY #24**

## **INTERROGATORY**

Ref: Enbridge Ex. D, Tab 3, Sch 1, pages 15-16

Issue Number: 12.1.1

Issue: What should be the information requirements?

In its application, Enbridge states that in the event that a final rate Order is not in place on January 1, 2008, the Company requests that interim rates be set and implemented as of January 1, 2008.

a) Please clarify if: 1) Enbridge is requesting that its 2007 base rates (once approved by the OEB) be declared interim as of January 1, 2008 or (2) the Company is intending to come forward with a proposal for an Interim Rate Order that would supersede, on an interim basis, the 2007 Board approved rates until such time that a final Rate Order is issued and effected in rates. If the latter is applicable, please indicate when Enbridge will be filing its proposal.

## **RESPONSE**

In the event that a final rate order in this proceeding is not in place on January 1, 2008, at the very least the Company would be requesting that its January 1, 2008 QRAM rates, which will reflect the 2007 base rates and January 1, 2008 gas costs, be declared interim as of January 1, 2008.

The Company would consider an adjustment to its 2007 base rates prior to a final rate order. This adjustment could reflect a portion of the rate change that would result from the application of the incentive rate making formula. The Company could file such an adjustment to its 2007 base rates together with the January 1, 2008 QRAM filing.

Witnesses: P. Hoey

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 1 Schedule 25 Page 1 of 2

# **BOARD STAFF INTERROGATORY #25**

## INTERROGATORY

Ref: Enbridge Ex. B, Tab 6, Sch 1, page 2 of 4, para 4

Issue Number: 12.3.2

Issue: How should the changes in the rate design be implemented?

Enbridge states in evidence that it supports the Board staff's recommendation which allows the Company to apply for rate-related changes (i.e., rate re-design proposals) during the IR plan period.

- a) Is Enbridge planning to adjust the fixed monthly charge and the variable charge on a revenue neutral basis during the IR plan?
  - i. If yes, please explain.
- b) Please provide Enbridge's target(s) and associated timelines for moving the fixed monthly charge towards full customer-related cost recovery. For example, is Enbridge planning to implement 100% of full customer-related cost recovery in the next 5 years?
- c) Does Enbridge agree that an increase in the fixed monthly charge mitigates the impact of declining average use?
  - i. If no, please explain?
- d) If Enbridge applies to increase the fixed monthly charge during the IR plan term, is it Enbridge's view that a corresponding adjustment to the X factor should be performed?
  - i. If no, please explain.
  - ii. If yes, please describe the process in which the X factor would be adjusted.

Witnesses: P. Hoey

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 1 Schedule 25 Page 2 of 2

# **RESPONSE**

- (a) and (b) Under the Company's revenue cap per customer incentive regulation model, the Company is planning to adjust fixed and variable components of rates to at least maintain the level of fixed cost recovery from fixed charges that is embedded in the 2007 rates. The Company may make additional changes to the fixed monthly charges during the IR plan term. At this time, however, the Company has not developed any specific plans.
- (c) and (d) Enbridge Gas Distribution agrees that, all else the same, an increase in the fixed monthly charge which would increase the percentage of revenues recovered through fixed charges would mitigate the impact of declining average use. Under the Company's revenue cap per customer incentive regulation model, an increase in the percentage of revenues recovered through fixed charges would not impact the X factor. Any impacts on average use decline will be captured in the annual volume forecast, which is part of the annual rate filing process.

## **BOARD STAFF INTERROGATORY #26**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 7, Sch 1, page 2 of 4, para 4

Issue Number: 13.1

Issue: What information should the Board consider and stakeholders be provided with at

the time of re-basing.

a) Please provide a mock-up of Drivers of Deficiency exhibit which would, albeit in a re-basing context at the end of an IR term, provide parties, with as much as practically possible, the same usefulness as in past proceedings.

## **RESPONSE**

The Company's evidence at Exhibit B, Tab 7, Schedule 1 in para. 4, part b, states in the last sentence that "This exhibit could not be produced in the same manner as it has been in past proceedings". This statement remains true in that the Drivers exhibit is based upon a cost of service, Board Approved base revenue requirement. As this base piece of information will not be available for the 2012 Test Year, it will not be possible for the Drivers exhibit to be created or mocked-up for the 2013 Test Year (the proposed rebasing year).

The result is that it would not be possible to create or mock-up any reasonable Drivers exhibit, in its current form or any other form, for any Test Year in which the transition is from cost of service to incentive rate making or vice versa.

It should also be pointed out that any Drivers style exhibit designed to compare an incentive based year to a subsequent incentive based Test Year would be limited to an analysis of the individual impact of each component of the incentive model, i.e. the inflation factor, as opposed to the analysis that we have come to expect from the cost of service Drivers exhibit which analyzed cost components, such as, O&M, depreciation expense, rate base, volume growth impacts, etc.

# **BOARD STAFF INTERROGATORY #27**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 7, Sch 1, page 1 of 4, para 3

Issue Number: 13.1

Issue: What information should the Board consider and stakeholders be provided with at

the time of re-basing.

Enbridge proposes that at the time of re-basing, it would provide historical year actuals (2011), bridge year (2012) and test year (2013).

- a) Please confirm whether Enbridge will be including in its historical year evidence "continuity of rate base by plant type" schedules (that would track the actuals for 2007, 2008, 2009, 2010 and 2011)?
  - If no, please explain.

## **RESPONSE**

- a) As stated in the Company's re-basing requirement evidence, the Company does not intend to file historical evidence other than that for a 2011 historical year, or for the year which precedes the test year by two years depending on the term of the plan approved by the Board in this proceeding.
  - information beyond the Company's proposal, the Company believes the level of detail required by the Board's RRR reporting requirements throughout the term of an IR plan are more than sufficient. The Company is becoming growingly concerned over the level of cost of service related detailed information which stakeholders seem to be suggesting, within their interrogatories, should be accumulated and or provided by the Company throughout the duration of and at the end of an incentive plan. If one of the intents of an IR plan is to reduce regulatory costs and burden and incent a regulated Company and all of its stakeholders to achieve efficiencies or alternate ways of doing things, then the continued accumulation of detailed cost of service type information and a detailed review of such information throughout the IR period and or at the end of the plan is contradictory to that intent.

## **BOARD STAFF INTERROGATORY #28**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 1, Sch 1, page 21 of 22, para 52

Issue Number: 14.1

Issue: Are there adjustments that should be made to base year revenue requirements?

a) Is Enbridge aware of any specific costs or amounts, in excess of \$1.5 million, that are being recovered or are reflected in 2007 rates and will not recur in 2008?

# <u>RESPONSE</u>

a) The Company has not conducted a comprehensive analysis of costs that may begin or cease, increase or decrease, etc. in 2008 as compared to 2007. Neither has the Company developed a cost-of-service revenue requirement for 2008 and/or compared it to its 2007 cost-of-service revenue requirement. In Company's view, this type of analysis would be inconsistent with the principles and intention of an incentive regulation regime.

## **BOARD STAFF INTERROGATORY #29**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 4 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "X factor measures must account for the effects of lower rates of capacity utilization coupled with a simultaneous upgrading of infrastructure capital".

a) Enbridge has proposed to recover the cost of its capital expenditures during the IR period via a Y factor. Should the X factor reflect this fact and be higher than it would be in the absence of the Y factoring? Please explain.

## **RESPONSE**

a) In circumstances where the X factor is solely based on historical information, then modifications to the IR plan, which account for significant future deviations from past performance, are reflected in other (or non-X factor) components of the plan. For example, in situations justifying a stretch factor, this component would then be considered distinct from the X factor. In addition, other elements of the IR plan that reflect significant future deviations as related to productivity and input price growth rates could also enter as a distinct component. Enbridge Gas Distribution has termed this component the Y factor.

In the current proceeding PEG included its recommendation for a stretch factor as part of the X factor. To be consistent with this concept, Dr. Bernstein addressed all of the necessary adjustments to the historically-based X factor that would constitute an appropriately "modified" X factor.

If one desires to retain the X factor as solely based on historical information then the appropriate adjustments recommended by Dr. Bernstein to this historically-based X factor would constitute an additional component to the IR plan. Indeed these adjustments form the basis for Enbridge Gas Distribution's Y factor. Both approaches to formulating an IR plan are acceptable (that is an historically-based X factor with additional components, or an all inclusive X factor), as long as the context is unambiguous.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 30 Page 1 of 2

## **BOARD STAFF INTERROGATORY #30**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 5 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "Since the IR plan under the OEB involves price rebasing at the end of the forthcoming IR period, it is redundant to include a positive stretch factor...Rebasing ensures that consumers benefit from productivity improvements, since the new prices they face encompass the firm's superior productivity performance".

- a) Does Dr. Bernstein believe that rebasing ensures that customers benefit from all productivity improvements, or just those that result in sustained productivity increases? Please explain.
  - i) For example, if a company has an opportunity in year 1 of a five year plan to reduce costs for three years, will rebasing ensure that consumers benefit from this initiative?
- b) Of the numerous instances in which explicit stretch factors have been approved in IR plans for energy and telecom utilities, please identify those instances in which price rebasing was not anticipated.
- c) Do companies have an incentive under some PBR plans to defer certain kinds of expenditures until the end of the plan and then to try to recover them in the next rate case? Please explain.
  - i) Is it possible, because of this problem, that customers sometimes do not experience any net benefits from PBR at the time of rebasing? Please explain.

## **RESPONSE**

 a) The new prices resulting from rebasing must reflect both the additional input costs incurred by the regulated firm, as well as, productivity improvements. The rising costs increase prices, while the productivity gains reduce prices. All

Witness: J. Bernstein

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 30 Page 2 of 2

productivity improvements are considered in rebasing, as are all cost increases. It is important however, to include the long term effects from capital expenditure initiatives. For example, suppose a regulated firm incurred significant cost increases due to capital improvements in the last year of an IR plan. If these improvements are expected to last ten years, and the next IR period is five years in length then prices should not be ratcheted upwards in the forthcoming IR period to reflect all cost increases. Nor for that matter should prices be ratcheted downwards to reflect all productivity improvements in the next five years.

b) In IR plans where rebasing is not explicitly part of the regulatory regime, Dr. Bernstein cannot judge whether or not rebasing was anticipated. However, IR plans that hope to embody the incentives for superior performance on the part of regulatory firms should not indulge in unanticipated rebasing. In this context price rebasing acts like an ex post earnings review, which serve to undermine the superior incentives of IR plans.

With respect to explicit stretch factors, Dr. Bernstein notes that in the U.S. telecommunications industry, stretch factors were imposed in the transition from rate of return to price cap regulation. Once this transition period ended, stretch factors were abandoned (or set to zero), although explicit X factors were recalibrated for each price cap period (or deemed to remain unchanged). In the Canadian telecommunications industry, stretch factors were imposed in the first price cap proceeding. The Canadian regulator explicitly rejected their inclusion from that point onwards, while still recalibrating the X factor faced by the industry.

c) The inclusion of Y factors in the IR plan, or modifications to the historically-based X factor, which can account for future changes in costs (and in particular capital expenditures), preclude any incentive on the part of the regulated firm to defer these capital expenditures.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 31 Page 1 of 2

#### **BOARD STAFF INTERROGATORY #31**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 6 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "PEG's model contains severe restrictions prohibiting parameters to differ among firms, not just for a single year but for all years of a sample. This feature is particularly troubling since the model is purported to be used for benchmarking purposes (for example to set TFP targets)".

- a) Econometric cost models that are estimated using panel data sometimes allow the intercept (constant) term of the model to vary between companies. Since PEG did not use the intercept term in his TFP trend benchmarks, is it Dr. Bernstein's view that intercept terms are germane to the calculation of a TFP trend benchmark?
  - i) If yes, please provide the rationale, including the supporting mathematical theory.
- b) With regard to the slope parameters (e.g., those for the output variables) that PEG uses to construct TFP trend benchmarks, does Dr. Bernstein believe that it is conventional in econometric cost studies, and more particularly those used in benchmarking, for these parameters to vary between companies?
  - i) Please provide examples where this has been done in benchmarking.

## **RESPONSE**

a) The simplest way to introduce differences in an econometric model is through differences in the intercept parameter of the cost function. In PEG's case with 36 firms and 11 years of data there are sufficient degrees of freedom to incorporate firm differences in many more sophisticated ways. With respect to TFP benchmarks, Dr. Bernstein notes that measures of industry output growth rates used in the calculation of industry TFP trends should be calculated using revenue share

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 31 Page 2 of 2

weights. As a consequence, econometric cost models, in general, and PEG's model in particular, are not required to calculate industry TFP growth rates.

Dr. Bernstein claims that it is conventional in econometric studies to allow for variability among firms in a panel dataset. In such studies the econometrician proceeds to conduct statistical tests so as to investigate whether or not firm differences are accepted (or not rejected) by the data. This is standard practice in econometric work. After all, suppose statistical testing reveals that firm differences do indeed exist such that rates of technological change differ among firms. Therefore all results emanating from a model based on a common rate of technological change must be rejected.

b) Dr. Bernstein notes that there is not one set of best-practice procedures for scholarly work and another set for bench-marking analysis. Indeed PEG correctly recognizes that their work should be held to the same standard as scholarly research on the subject. For example, on page ii of its report, PEG claims that, "Established methods and publicly available data from respected sources were employed in the research." In particular, PEG also notes on page ii that the capital input price employed in its econometric model "has been extensively used in both scholarly cost research and in index research undertaken in support of rate and revenue cap indexes". Lastly on pages ii and iii, PEG claims that "We believe that these recommendations are just and reasonable, and can place incentive regulation of Ontario's gas utilities on a solid foundation of economic reasoning and empirical research." (italics added)

# **BOARD STAFF INTERROGATORY #32**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 6 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "PEG also imposed parameter restrictions associated with the variables determining the degree of returns to scale and the rate of technological change. These are critical constraints".

- a) Please identify the critical constraints that PEG has made.
- b) Does Dr. Bernstein believe that this the constraints that PEG imposed on the functional form impart an upward bias to the resultant TFP trend target?
  - i) If yes, please provide rationale.

## **RESPONSE**

- a) The various critical constraints are outlined in Dr. Bernstein's evidence from pages 30-43. Some examples that outline these constraints are the following. First, PEG's econometric model involves the specification of a constrained or truncated translog cost function, as opposed to a complete translog cost function. PEG did not provide any statistical tests to justify whether or not the imposed (parameter) constraints are justified. In addition, PEG did not examine the technical conditions of its estimated cost function that any typical cost function must satisfy. For example, a cost function must be concave in the prices of the factors of production. Failure of this condition to hold implies that the estimated cost function is consistent with cost maximization and not cost minimizing behavior. Cost minimization is an assumption which forms the foundation of the model.
- b) Essentially the answer is an empirical question, but since PEG assumes there are no capital adjustment costs for the highly capital-intensive gas utility industry, Dr. Bernstein believes there could be a significant upward bias to PEG's industry TFP trend. Ignoring the trend in capital adjustment costs broadly considered leads to an underestimation of an input quantity growth rate and subsequently an overestimation of TFP growth.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 33 Page 1 of 1

#### **BOARD STAFF INTERROGATORY #33**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 6 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "Since the data are not provided in PEG's study, it is impossible to discern how sensitive estimates of the degree of returns of scale and rate of technical change are to various parameter restrictions. This is unacceptable."

- a) Did Enbridge request the data used by PEG in its econometric cost research?
- b) Is Dr. Bernstein aware that data similar to those used by PEG can be purchased in the GasDat data package?
- c) Has Enbridge attempted to develop econometric cost models independently using U.S. data?
  - i) What were the results?

#### RESPONSE

- a) The request referenced in part b) below is on behalf of Enbridge Gas Distribution.
- b) Dr. Bernstein has requested the data, programming code and all worksheets with respect to PEG's econometric model. This request is made in order to be able to reproduce PEG's results. The data alone are insufficient.
- c) No, the Company has not attempted to develop econometric cost models independently using U.S. data.

Witness: J. Bernstein

M. Lister

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 34 Page 1 of 1

# **BOARD STAFF INTERROGATORY #34**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 7 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "PEG also erroneously assumes that the capital input in a capital intensive industry like Ontario's gas utility industry can be readily and freely adjusted".

- a) Does Dr. Bernstein believe that there is some alternative to a long run cost function that is more suitable for the development of TFP targets?
  - i) If yes, please provide a thorough description.

## **RESPONSE**

- a) Yes. Dr. Bernstein suggests that index number methods, as opposed to econometric models, be employed to measure industry TFP growth rates. With an index number approach, long run cost minimization is not a required assumption. For further details see Jeffrey I. Bernstein, and David Sappington, "Setting the X Factor in Price Cap Regulation Plans", *Journal of Regulatory Economics*, 16, 1999, 5-25.
  - i) However, if econometric models are to be used to measure industry TFP growth rates, then the cost function should include the possibility that inputs are costly to adjust and may be irreversible. Examples of cost of adjustment models are the following. M. I. Nadiri and Mark Schankerman, "A Test of static Equilibrium Models and Rates of Return to Quasi-Fixed Factors, with an Application to the Bell System", *Journal of Econometrics*, Oct./Nov. 1986, p. 97-118. Jeffrey I. Bernstein, "An Examination of the Equilibrium Specification and Structure of Production for Canadian Telecommunications", *Journal of Applied Econometrics*, 4, 1989, p. 265-282. I. R. Prucha and M. I. Nadiri "Dynamic Factor Demand Models, Productivity Measurement, and Rates of Return: Theory and an Empirical Application to the U.S. Bell System," *Structural Change and Economic Dynamics*, 2, 1990, 263-289.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 35 Page 1 of 2

#### **BOARD STAFF INTERROGATORY #35**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 19 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "a cost elasticity share-weighted industry TFP growth rate differs from the revenue share-weighted TFP growth rate and the former rate generally provides no guidance as to the appropriate PD component, and resulting X factor under IR".

- a) Does Dr. Bernstein acknowledge that, given the current rate design of Enbridge and its slow volume/customer growth, its X factor will be substantially lower using a revenue weighted output index than using an elasticity weighted output index?
- b) In Exhibit B, Tab 1, Sch 1, page 2 of 22, Enbridge states, "The costs of a distribution utility are closely aligned with the number of customers it serves. Each new customer represents new capital costs associated with attachment to the system (mains, service lines, meters) and new operations and maintenance costs (customer care, meter reading, billing and collection). It is appropriate therefore that a revenue adjustment mechanism recognize the increase in the number of customers as the measure of system growth." What is the rationale behind using a TFP index in the calculation of Enbridge's proposed X-factor that does not match the assertion that customer growth is "closely aligned" with cost growth but instead uses the much slower growing revenue-weighted TFP index?
- c) In the proceeding that lead to the establishment of the "TPBR" plan, which involved the indexation of the revenue requirement for the O&M expenses of Enbridge, the Company's witness Dr. Melvyn Fuss of the University of Toronto used the number of customers as the measure of output for the productivity index. The Board also agreed to this approach. Please justify Dr. Bernstein's approach.
- d) Does Dr. Bernstein believe that TFP indexes used in an IR plan to cap growth in revenue per customer should use a revenue-weighted output index?
  - i) If yes, please provide the rationale, including the mathematical reasoning.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 35 Page 2 of 2

## **RESPONSE**

- a) Dr. Bernstein has not examined Enbridge Gas Distribution's data to form a conclusion on this matter.
- b) Dr. Bernstein cannot comment on the quotation since he has not examined Enbridge Gas Distribution's data. However, with respect to the issue of using revenue share weights as opposed to cost elasticity share weights in the measurement of output quantity trends in TFP indices, Dr. Bernstein's evidence (pp.15-18) provides the rationale that revenue share weights should be used. Indeed if revenue share weights are not employed, after initializing prices, the X factor may not be consistent with the principle of emulating a competitive outcome.
- c) Dr. Bernstein has not read Dr. Fuss' study or his evidence. However, in certain circumstances, the number of customers could be used to measure one of the outputs in a multiple output context.
- d) Dr. Bernstein describes the formula for a revenue cap index in Section 3.7 of his evidence (pp. 26-28). TFP indexes used in an IR plan to cap growth in revenue should use a revenue share-weighted output index when the revenue cap index equals I X + Q, where I is the inflation rate, X is the X factor, which is based on revenue share-weights for the output trend, and Q is the output quantity trend, which is also based on revenue share weights. There are a number of ways to modify the revenue cap index to transform it to be measured on a per customer basis. One way is to divide the revenue cap index by the number of customers.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 36 Page 1 of 1

#### **BOARD STAFF INTERROGATORY #36**

# **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 24 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "Next in line with PEG assign the AU term...of the pricing formula to R&C customers".

a) Please indicate where in PEG's study it takes this step.

#### **RESPONSE**

a) Dr. Bernstein's evidence (Section 3.6, pp. 23-26) demonstrates the following. Service-specific pricing rules involve arbitrary assignments of TFP growth rates in IR plans applicable to multiple service producing regulated firms with common costs. It is generally not possible to measure TFP and input price growth rates for specific services, and therefore not possible to formulate price or revenue cap indices for specific services or groups of services.

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 1 Schedule 37 Page 1 of 1

# **BOARD STAFF INTERROGATORY #37**

# **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 28 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "structural changes related to changing demand conditions...are not accounted for in the X factor associated with PEG's RCI".

a) Please explain why demand conditions are relevant in the design of an X factor for a revenue cap index when a balancing account ensures full recovery of losses from slow volume growth.

# **RESPONSE**

The Company is not advocating the use of a balancing account.

Witnesses: R. Campbell

M. Lister

#### **BOARD STAFF INTERROGATORY #38**

#### <u>INTERROGATORY</u>

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 29 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "The sample period for the IPD component differs from the PD component...This is inconsistent and could lead to sample cherry picking."

- a) Suppose that the only sample period available for the calculation of the PD is quite unsuitable for the calculation of the IPD. Does Dr. Bernstein believe that the same period should be used for both even in this instance?
- b) Does Dr. Bernstein believe that PEG has in fact engaged in cherry picking?

# **RESPONSE**

- a) As stated in Dr. Bernstein's evidence, it is important to align the sample periods for all components of the X factor. Indeed, the same data (namely price and quantity data for inputs and outputs) are used to calculate the PD and IPD components of the X factor. The vagueness of the phrase "unsuitable for the calculation of the IPD factor" precludes a more specific response.
- b) Once the data, programming code and worksheets regarding PEG's research are provided, a complete analysis could be undertaken by all parties.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 39 Page 1 of 1

#### **BOARD STAFF INTERROGATORY #39**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 29 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "The reason that PEG's IPD is more volatile than the PD term is that PEG uses inconsistent input prices. Industry TFP growth is based on PEG's econometric model, and so the input price index should be based on this model".

a) Please explain how PEG's econometric model, which was estimated using U.S. data, should be used to calculate the IPD for a Canadian utility.

# <u>RESPONSE</u>

a) Industry input price growth rates must be measured on a consistent basis with industry TFP growth rates. Dr. Bernstein does not claim that industry TFP growth should be based on U.S. data, nor for that matter on PEG's econometric cost model.

Nevertheless, under the supposition that estimates of industry TFP growth are based on U.S. data, then as a matter of consistency, U.S. industry input price growth should be used to calculate the IPD term. Indeed, U.S. input prices cannot be ignored. They are presumably used in the calculation of the cost share weights to measure the input quantity trend, and then subsequently industry TFP growth. Therefore if one questions the use of the U.S. industry input price trend, the same reasoning serves to question the legitimacy of U.S. industry TFP growth rates, which embodies U.S. input prices.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 40 Page 1 of 1

#### **BOARD STAFF INTERROGATORY #40**

#### <u>INTERROGATORY</u>

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 36 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that "under the COS approach the assumption that revenue equals cost influences econometric estimates of the degree of returns to scale. In fact, the bias may result in inadvertently overestimating the degree of returns to scale."

Please indicate where, in PEG's explanation of the COS approach to capital costing, PEG assumes that revenue equals cost.

## <u>RESPONSE</u>

a) Dr. Bernstein's evidence points out that the discussion of PEG's COS approach to the measurement of the capital input is vague, and therefore he has requested the appropriate details (data, program code and worksheets) to discern the specific assumptions involved. Furthermore, Dr. Bernstein states on page 35 that "typically under the COS method a utility's total cost is constrained to equal its total revenue". Dr. Bernstein's evidence provides many of the significant implications arising from this assumption, if it has been invoked.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 41 Page 1 of 2

# **BOARD STAFF INTERROGATORY #41**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 3, page 38 of 64

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Bernstein states that the fact that PEG's econometric model yields a TFP target that differs markedly from the company's actual TFP growth "indicates that PEG's model does not actually describe EGDI's cost determinants."

- a) Does Dr. Bernstein believe that the actual TFP trend of a company will always be similar to the trend of a properly specified econometric projection?
- b) PEG states in Enbridge Ex. D, Tab 3, Sch 1, page 44 of 113 that "In marked contrast with the US trend, the partial factor productivity index for the use of O&M inputs by Enbridge fell at a 0.70% average annual pace. PFP fell by more than 11% in 2003 and did not subsequently regain much of the lost ground". Does Dr. Bernstein agree with PEG's findings? Please explain.
- c) Dr. Bernstein states on p. 9 of his evidence that the strong incentives under IR "derive from the fact that IR operates much like a fixed price contract...Conversely, traditional earnings regulation operates much like a cost plus contract. As a result, the prices consumers pay tend to vary continually with the reported cost of the firm". Since Enbridge has operated mainly under COS regulation after the end of its TPBR plan, does this suggest that this could have materially slowed its TFP growth?

## <u>RESPONSE</u>

- a) No. In addition the trend from a properly specified econometric projection could have no useful guidance in the setting of an X factor.
- b) Dr. Bernstein does not have the data, program code and worksheets that form the basis for PEG's conclusion and therefore is unable to judge the accuracy of PEG's findings.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 41 Page 2 of 2

c) On a conceptual basis, the transition from rate of return to IR could result in improved productivity performance on the part of a regulated firm. Similarly, firms transitioning from a less competitive operating environment to a relatively more competitive one can exhibit higher productivity. However, as a practical matter, in actual regulatory and market settings, there are a number of factors that act as countervailing forces that in fact may offset the factors leading to potential productivity gains. Two such examples follow. First, regulated firms operating under rate of return regulation could anticipate the transition to an IR plan and thereby undertake productivity improvements in advance of the shift to IR. Thus, a calculation of the firm's productivity growth from the inception point of an IR regime may not indicate productivity improvement, since these improvements had already occurred. Second, the firm's operating and capital program may preclude short term measured productivity gains, and even indicate a reduction in productivity growth. Adjustment costs associated with capital improvements (such as the costs of removing old distribution capital and installing new capacity) may result in cost increases and therefore productivity losses in advance of potential future benefits. There are other countervailing forces but these two examples suffice to illustrate the line of reasoning.

#### **BOARD STAFF INTERROGATORY #42**

#### <u>INTERROGATORY</u>

Ref: Enbridge Ex. B, Tab 3, Sch 2, pages 2-3 of 24

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Carpenter states that "At the moment, the model and the underlying data with which it is estimated have not been provided to parties in this proceeding, and thus PEG's results cannot be reproduced, tested, or validated at this time...Without full disclosure of the model and its underlying data it cannot provide a transparent basis for establishing future prices for EGDI."

- a) Has Enbridge at any time been refused access to PEG's data or to details of his econometric work?
- b) Does Dr. Carpenter acknowledge that similar data are available in the GasDat data package?

# **RESPONSE**

- a) It is Dr. Carpenter's understanding that access to PEG's model and data will be provided as part of PEG's interrogatory responses.
- b) Reproducing, testing and validating PEG's results requires access to the data used by PEG; PEG's results cannot be accurately reproduced, tested or validated with data that is "similar" to the data used by PEG. Moreover, prior to obtaining PEG's data, it is not possible to determine whether data similar to that used by PEG is available through GasDat or any other source.

Dr. Carpenter does not have access to GasDat, a database package licensed by Platt's. It is Dr. Carpenter's understanding that Platt's no longer offers GasDat, but that a similar product called Energy Advantage Gas Modules is available from Platt's for an annual license fee of \$9,000. Enbridge Gas Distribution has not asked Dr. Carpenter to attempt to replicate PEG's results using data from GasDat or Energy Advantage Gas Modules.

## **BOARD STAFF INTERROGATORY #43**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 2, page 5 of 24

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Carpenter states that "PEG does not include a variable that reflects changes in customer density despite the fact that PEG and others have recognized this to be a critical component of gas distribution costs and necessary to correctly capture scale economies." .

- a) Please identify all econometric studies of gas distribution cost that Dr. Carpenter has seen in which customer density has been found to be a statistically significant cost driver.
- b) Is it Dr. Carpenter's view that gas distributor cost is higher or lower with higher density?
- c) Would the "correct" treatment of customer density raise or lower the TFP index trend of EGDI or its econometric target?

#### <u>RESPONSE</u>

a) PEG's work in the New Zealand proceeding ("New Zealand Gas Distribution Cost Performance: Results from International Benchmarking," June 2004, which is Attachment C to Dr. Carpenter's August 2, 2007 report) found that customer density (as measured by total number of miles of distribution main) was a statistically significant cost driver. See pages 15, 20 and Table 2 of Attachment C. See also the discussion by PEG at pages 5-8 of Attachment D to Dr. Carpenter's August 2, 2007 report, which is an additional report submitted by PEG in New Zealand.

In addition, Dr. Carpenter has seen the paper Farsi, M. *et. al.* (2007), "Cost Efficiency in the Swiss Gas Distribution Sector," *Energy Economics*, 29 pp. 64-78. On pages 66-67, this paper surveys several studies that found density to be an important cost driver.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 43 Page 2 of 2

- b) Dr. Carpenter expects that gas distributor cost per customer is lower with higher density, all else equal.
- c) This is an empirical question that Dr. Carpenter cannot answer until PEG's interrogatory responses, model and data has been provided.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 44 Page 1 of 4

#### **BOARD STAFF INTERROGATORY #44**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 2, page 8 of 24

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Carpenter states that "the companies that make up the peer group that PEG has chosen for EGDI do not have business characteristics that are similar to EGDI".

- a) PEG discusses the drivers of productivity. Does Dr. Carpenter have issues with PEG's discussion of TFP growth drivers or the mathematical theory on which it is based?
- b) Please explain why the static business conditions (e.g., throughput per customer, density, and cast iron mains) that Dr. Carpenter emphasizes in recommending a northeast peer group are especially important drivers of TFP growth.
  - i) Please provide empirical evidence to substantiate this claim.
- c) Does a finding that utilities in the northeast have a higher cost level have any necessary bearing on the pace of TFP growth?
- d) Dr. Carpenter states on p. 7 that "EGDI [presumably meaning PEG] calculates a TFP for EGDI by taking a simple average of the TFP estimates that PEG calculates for each of the utilities in EGDI's peer group using the econometric model". Does the fact that the average TFP index trend of companies realizing large scale economies differs greatly from the sample mean, support PEG's contention that this is a critically important consideration in the selection of a TFP target for Enbridge?
- e) The output growth and TFP growth of the sampled northeast distributors are both well below the sample norm. Does this finding support the hypothesis that the realization of incremental scale economies is an important TFP driver?
- f) The companies in PEG's northeast sample do not appear to have realized substantial scale economies due, in part, to output growth that is much slower than that in the service territories of Union Gas and EGDI. Is this a disadvantage

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 44 Page 2 of 4

of limiting the peer group to utilities in the northeastern U.S., as Dr. Carpenter recommends?

- g) Union Gas had a productivity trend much higher than that of EGDI during the sample period. Does Dr. Carpenter's recommended approach to peer group selection not suggest that Union would be a good peer?
- h) What are the annual customer growth rates for each utility in Dr. Carpenter's proposed peer group for the 2000-2005 period?
- i) What are the annual customer levels for each utility in Dr. Carpenter's proposed peer group for the 2000-2005 period?

## **RESPONSE**

- a) In Dr. Carpenter's opinion, external business and market environment conditions that affect gas distributors' cost are potentially important sources of TFP growth. Recognizing and appropriately incorporating these conditions into an econometric cost model is not a matter of mathematical theory. In his August 2, 2007 report, Dr. Carpenter raises concerns about whether PEG appropriately incorporated business and market environment conditions such as customer density, and whether PEG appropriately accounted for differences among the business and market environment conditions of gas distributors, in its econometric cost model. Dr. Bernstein's August 2, 2007 report contains further evidence regarding the mathematical theory relevant for the measure of TFP growth.
- b) The referenced business conditions (e.g., throughput per customer, density and cast iron main usage) are not static; Dr. Carpenter would expect them to change during the sample period for companies included in the sample. PEG found that density was an important driver of TFP growth in its New Zealand work. PEG found that northeast utilities were subject to different cost and demand pressures, which would affect their input and output growth and therefore their TFP, in its work for Boston Gas. This caused PEG to use only northeast utilities in estimating a TFP target for Boston Gas (and to include a northeast dummy variable when benchmarking Boston Gas' cost efficiency). DRA also found that TFP growth rates were different for northeast utilities.
  - i) See b). Dr. Carpenter will not be able to respond further until PEG's interrogatory responses, model and data are provided.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 44 Page 3 of 4

- c) Not necessarily. But, PEG found in its work for Boston Gas that northeast utilities were subject to different cost and demand pressures, which would affect their input and output growth and therefore their TFP. DRA also found that TFP growth rates were different for northeast utilities.
- d) This interrogatory is predicated on the assumption that PEG's econometric cost model is correct. Dr. Carpenter cannot accept this assumption prior to having access to PEG's model and data.
- e) This interrogatory is predicated on the assumption that PEG's econometric cost model is correct. Dr. Carpenter cannot accept this assumption prior to having access to PEG's model and data.
- f) This interrogatory is predicated on the assumption that PEG's econometric cost model is correct. Dr. Carpenter cannot accept this assumption prior to having access to PEG's model and data.
- g) This interrogatory is predicated on the assumption that PEG's econometric cost model is correct. Dr. Carpenter cannot accept this assumption prior to having access to PEG's model and data.
- h) See the table below.
- i) See the table below.

P. Carpenter Witness:

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 45 Page 1 of 1

#### **BOARD STAFF INTERROGATORY #45**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 2, page 18 of 24

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Carpenter states that "PEG's model provides no support for an empirical finding that EGDI has a greater prospect for the realization of scale economies than smaller firms in the U.S. sample".

- a) Is it Dr. Carpenter's view that the addition of a density variable to the cost model would overturn the result that Enbridge is positioned to realize greater incremental scale economies?
- b) Does the rapid customer growth of Enbridge have no bearing on the company's potential to earn scale economies?

#### **RESPONSE**

- a) This is an empirical question that Dr. Carpenter cannot answer until PEG's interrogatory responses, model and data have been provided.
- b) Dr. Carpenter does not contend that Enbridge Gas Distribution's customer growth has no bearing on the company's potential to earn scale economies. Dr. Carpenter explains in his August 2, 2007 report that PEG has not provided support for its claim that incremental scale economies from output growth are essentially inexhaustible for larger companies such as Enbridge Gas Distribution and Union. Dr. Carpenter points out that PEG's conclusion in Ontario regarding incremental scale economies is different from the conclusion PEG reached in California, where PEG concluded that larger companies may have exhausted scale economies, and may even operate at a scale where output growth causes diseconomies of scale. Specifically, PEG concluded in California (at page 4 of Attachment B):

The smaller companies in an industry can typically realize scale economies when output grows. Larger companies may have exhausted potential economies of scale, and some may even operate at a scale where output growth causes diseconomies of scale that slow TFP growth.

# **BOARD STAFF INTERROGATORY #46**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 2, page 18 of 24

Issue Number: 3.1

Issue: How should the X factor be determined?

Dr. Carpenter states that "PEG's reasoning that the prospects for the realization of scale economies by a gas distribution company is inversely related to initial operating scale is faulty. At some point scale economies will plateau or be exhausted."

- a) Is it Dr. Carpenter's opinion that a company the size of Enbridge has exhausted its potential to realize incremental scale economies?
  - i) If yes, please provide empirical substantiation for this claim.

## **RESPONSE**

- a) This is an empirical question that Dr. Carpenter cannot answer until PEG's interrogatory responses, model and data have been provided. It is Dr. Carpenter's opinion, as expressed in his August 2, 2007 report, that PEG has not provided adequate support for its contention that Enbridge Gas Distribution has an essentially inexhaustible potential to realize incremental scale economies. As Dr. Carpenter points out in his response to Board Staff Interrogatory #45 b) at Exhibit I, Tab 1, Schedule 45 and in his August 2, 2007 report, this contention by PEG is inconsistent with statements made almost contemporaneously by PEG in California, where PEG recognized that "[I]arger companies may have exhausted potential economies of scale, and some may even operate at a scale where output growth causes diseconomies of scale that slow TFP growth."
  - i) See a).

# **BOARD STAFF INTERROGATORY #47**

#### INTERROGATORY

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 9 of 37, para 20-21

Issue Number: 3.1

Issue: How should the X factor be determined?

The input quantity subindexes displayed in the table on this page differ modestly from those reported in PEG's study.

a) Please discuss possible sources of the discrepancies.

# **RESPONSE**

The Company believes the discrepancies have been removed with the corrected evidence. Please see the response to VECC Interrogatory #8, part f) at Exhibit I, Tab 13, Schedule 8 for more details.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 48 Page 1 of 2

#### **BOARD STAFF INTERROGATORY #48**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 10 of 37, para 22

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister states that "the Company has experienced some of the highest customer growth rates across Canada, which results in high upfront costs to support a long payback period, which would put downward pressure on the Company's measured TFP relative to other distributors".

- a) Does Mr. Lister have issues with PEG's discussion of sources of TFP growth on pages 6 and 7 of his evidence?
  - i) If yes, please explain.
- b) In that discussion, PEG identifies economies of scale as a potentially important source of TFP growth. If a company is in a position to realize incremental scale economies, doesn't rapid customer growth produce greater incremental economies than slow growth?
  - i) If yes, how then can Mr. Lister be sure that rapid customer growth slows TFP growth on balance?

# **RESPONSE**

- a) The Company agrees with Dr. Carpenter's response at Board Staff Interrogatory #44, part a), which can be found at Exhibit I, Tab 1, Schedule 44.
- b) The definition of an economy of scale is the reduction in per unit costs as a result of producing more of a good or service. Rapid customer growth may or may not produce greater incremental scale economies, all else equal. When a distribution system meets a certain capacity, rapid customer growth may strain the system to a point that requires any or all of gate station rebuilds, reinforcements, relocations, or replacements. The burden of these expenses is likely to cause diseconomies of

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 48 Page 2 of 2

scale in the short term. In the Board Staff Interrogatory #45 response at Exhibit I, Tab 1, Schedule 45, Dr. Carpenter highlights a recent submission by PEG in California that, "Larger companies may have exhausted potential economies of scale, and some may even operate at a scale where output growth causes diseconomies of scale that slow TFP growth."

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 49 Page 1 of 2

#### **BOARD STAFF INTERROGATORY #49**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 12 of 37, para 26

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister states concerning PEG's econometric projections that "it is not clear if other important variables, which are included in the U.S. model, are applied to the Company specific estimates. These parameters include the number of electric customers, the percentage of non-cast iron miles of main, and dummies to represent region and urban service providers".

- a) Since Enbridge has no electric customers, would Mr. Lister agree that no adjustment for electric customers is appropriate?
- b) Since Enbridge's status as a company serving an urban core is unchanged, would Mr. Lister agree that no adjustment for this variable is appropriate.
- c) Since the company's reliance on cast iron is declining, and the % non-iron variable has a negative sign, would Mr. Lister agree that an adjustment for this variable using the econometric results would raise the company's econometric TFP target?

#### RESPONSE

The statement referred to in the interrogatory was made due to the fact that there was no indication as to how the U.S. model was applied to the Company, nor how reasonable the results fared. Since the estimated elasticities that result from the cost estimates are so crucial to the remainder of PEG's analysis, the Company is keen to observe the results of the estimations in order to ascertain their effectiveness at predicting the Company's costs and elasticities.

a) Yes, it is logical that since Enbridge Gas Distribution has no electric customers, no adjustment for electric customers is appropriate. What is of greater interest are the results of the application of the overall model, which is used to estimate the Company's costs to develop elasticity estimates.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 49 Page 2 of 2

b) Yes, it is logical that since Enbridge Gas Distribution's status as a company serving an urban core is unchanged no adjustment for this variable is reasonable. What is of greater interest are the results of the application of the overall model, which is used to estimate the Company's costs to develop elasticity estimates.

c) It is reasonable to think that since the Company's reliance on cast iron is declining then, all else equal the long term O&M costs related to servicing these pipelines should decline. In the short term, the significant cost required to implement the cast iron replacement program, however, would reduce the ability to invest in productivity enhancements. Again, what is of greater interest are the results of the application of the overall model, which is used to estimate the Company's costs to develop the elasticity estimates.

## **BOARD STAFF INTERROGATORY #50**

# **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 15 of 37, para 34

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister states that "creating a relevant peer group on the basis of similar operating characteristics should be the ultimate goal".

- a) PEG's econometric projections and peer group are both based on mathematical and empirical research on the drivers of TFP growth. Does Mr. Lister agree with this general approach?
  - i) Does Mr. Lister believe that substantial weight should be paid in peer group selection to drivers of cost levels even if they have no bearing on growth?
  - ii) If yes, please provide a full substantiation for this view.
- b) PEG's research suggests that large gas utilities with rapid customer growth have opportunities to earn substantial scale economies. Please indicate which companies in the northeastern U.S. have these twin characteristics?

#### **RESPONSE**

a) Using mathematical and empirical research to understand and benchmark TFP growth is a valid approach if the results it produces are stable (over time and jurisdiction), independent and objective. However, as noted in the evidence, the Company has concerns with respect to the econometric cost model that underpins the peer group selection process.

Regarding the econometric cost model, significantly different results have been produced over a short period of time and across jurisdictions. For example, in PEG's recent California testimony, the average cost-weighted TFP for the U.S. was reported as 0.63%, yet in the current case the same result is 1.18%. Each iteration of the model, apparently using the same universe of data and sample period, requires a re-estimation for each sample firm's costs and elasticities, which leads to a re-designing of the peer group

Filed: 2007-09-04 EB-2007-0701 Exhibit I Tab 1 Schedule 50 Page 2 of 4

sample. This eventually leads to different peer groups based on different model estimations.

Between March and June in Ontario, different peer groups were selected since the econometric model changed. A comparison to the earlier report shows a wide range of differences in historical growth rates, from -1.21% (Connecticut Energy) to +1.90% (Orange & Rockland), for a total range of difference of 3.11%. Similarly, the new report detailed scale economies that were -1.05% lower on average. The range of differences in historical scale economies is from -4.26% (Southwest Gas) to +2.07% (Connecticut Natural Gas), for a total range of difference of 6.33%.

- i. The Company believes that the peer group selection process should be stable, objective, and independent of the modeling effort if it is to be used as a tool for validation. The peer group selection process should consider relevant operating characteristics, whether they be cost characteristics and/or growth characteristics.
- ii. Please see response to part i. above.
- b) Customer growth is but one source that may contribute to scale economies. Other factors that may contribute to scale economies from one firm relative to another may include such factors as service region, which acts as a proxy for elements such as regional pricing, weather intensity, market penetration, and terrain characteristics, as well as characteristics such as miles of distribution main, customer density, total number of customers, percentage of residential customers served, customer growth and use per residential customer. The following table examines PEG's June 2007 peer group relative to the sample universe PEG chose and defines the operating characteristics listed above. A sensible peer group is represented in the bottom of the table, which consists of firms that are similar on the basis of at least 3 of the operating characteristics.

#### **BOARD STAFF INTERROGATORY #51**

# **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, pages 22-23 of 37, para 49-52

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister presents some numerical results to show that a stretch factor reduces performance incentives. In this analysis, the NPV of a cost containment initiative is linked to the external trend in the company's prices during the plan period.

- a) Would a Hamilton steel producer cut back on cost cutting initiatives because it expected prices in the North American market to decline over the next five years?
  - i) If yes, why would a PCI that contains a stretch factor that is insensitive to decisions concerning cost cutting initiatives have a different effect?

## **RESPONSE**

- a) It does stand to reason that a firm with constrained capital capacity would only undertake to purse a cost-cutting initiative if it provided benefits to that firm. In the wake of declining prices, all else equal, the capacity to undertake such initiatives is reduced. In addition, the investment profile of such projects are subject further to the constraint that they provide benefits within a relatively short period of time, say five years, else the firm never sees the benefits.
  - i) Cost cutting initiatives are not insensitive to the RCI. The growth in the Company's revenues directly impacts the Company's capacity to undertake capital spending. Capital spending is constrained by requirements to maintain safety and reliability, manage an aging infrastructure, ensure system integrity as well as to manage and reinforce the system to accommodate growth. Investment in productivity enhancement projects, if they exist, and if they are profitable for the Company on a risk-adjusted basis, can only be considered at the margin. A stretch factor may threaten that margin, and thus it may threaten the ability to undertake those productivity enhancing initiatives.

#### **BOARD STAFF INTERROGATORY #52**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 25 of 37, para 58

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister proposes to use EGDI's own productivity trend as the productivity target.

a) Why wouldn't the TFP trend of Union provide a more appropriate TFP target?

#### **RESPONSE**

As the evidence stated at paragraph 95, the Company has done it's best to respond to PEG's June 2007 report that was so fundamentally different from the March 2007 report. Given the inability for the Company's experts to assess to PEG's report, the Company proposed using historical data to establish the TFP benchmark. Once the Company's experts have had a chance to assess PEG's results, the Company may be required to change its X factor proposal.

Other factors that should be considered when creating the peer group consist of miles of distribution main, customer density, total number of customers, percentage of residential customers served, customer growth and use per residential customer. If Union were sufficiently similar across a number of these and perhaps other dimensions, then it could be considered for the peer group.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 1 Schedule 53 Page 1 of 1

#### **BOARD STAFF INTERROGATORY #53**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 27 of 37, para 63

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister notes that PEG partner Larry Kaufmann once testified in support of a negative productivity differential for Boston Gas.

a) Please explain why this would validate a negative productivity trend for Enbridge.

# **RESPONSE**

The quote from Dr. Kaufman indicates that a negative productivity differential is not unusual; that it is simply a mathematical indication of a comparison to general economic productivity. It is worthy of note, however, that PEG derived a (presumably costweighted) -0.45% productivity differential for Boston gas, which is strikingly similar to the -0.50% cost-weighted productivity differential that would result using the Company's calculations (0.22 - 0.72).

In that Massachusetts rate case, PEG further testified that having a Northeast location resulted in a statistically significant increase in costs. It remains unclear why this would not be a suitable peer group for a company that operates, just steps away, is subject to similar terrain, whose customers see similar prices, whose weather intensity is similar, and whose customer density and market penetration rates are likely very similar as well.

## **BOARD STAFF INTERROGATORY #54**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 28 of 37, para 67

Issue Number: 3.1

Issue: How should the X factor be determined?

The input price subindexes displayed in the table on this page differ modestly from those reported in PEG's study.

a) Please discuss possible sources of the discrepancies.

## **RESPONSE**

The corrected evidence indicates a growth in input prices of 1.83% over the period 2000-2005, as indicated in the updated Table 10 of the evidence. The corrected evidence has removed the discrepancy from PEG's calculations.

## **BOARD STAFF INTERROGATORY #56**

## **INTERROGATORY**

Ref: Enbridge Ex. B, Tab 3, Sch 1, page 33 of 37, para 80-82

Issue Number: 3.1

Issue: How should the X factor be determined?

Mr. Lister discusses the investment challenges facing Enbridge.

- a) Please discuss in more detail the new investment requirements posed by the TSSA.
- b) Please provide the data and descriptions of the planned future replacement and modernization of infrastructure capital, specifically the planned replacement of cast iron pipes.
  - i) Please show how this significantly differs from the past trends and trends of the U.S. sample at large. Please include historical (for years 2000-2005) and projected data concerning Enbridge's total line miles and the percentages of same that are made of cast iron and bare steel.
  - ii) Should expenses like these not be excluded from calculations to establish a TFP target for Enbridge?

## **RESPONSE**

- a) Please see response to SEC Interrogatory #'s 1 & 2, at Exhibit I, Tab 10, Schedules 1&2.
- b) Please see response to SEC Interrogatory #'s 1 & 2, at Exhibit I, Tab 10, Schedules 1&2.
  - i) Please see response to SEC Interrogatory #'s 1 & 2, at Exhibit I, Tab 10, Schedules 1&2.
  - ii) All relevant inputs and outputs should be included in the TFP calculation.

Witness: M. Lister

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 2 Schedule 1 Page 1 of 2

## APPrO INTERROGATORY #1

## INTERROGATORY

## 1. New Services

## References:

- EB-2007-0615, Exhibit B, Tab 1, Schedule 1 Page 18, Paragraph 43
- EB-2005-0551, Exhibit S, Tab 1, Schedule 1 Page 13, Paragraph 1.1(L)
- EB-2007-0630
- Ontario Power Authority (OPA) Clean Energy Standard Offer Program (CESOP)

## Question:

- Enbridge is requesting an Incentive Regulation (IR) period of 5 years.
- a. Please indicate what new services for gas fired generation Enbridge is contemplating making available during the IR period?
- b. Is Enbridge open to offering new services for generators during this IR period, and if so what process does Enbridge expect to follow to obtain input from existing and prospective generators in order to offer these services on a timely basis?
- c. Certain Non Utility Generator (NUG) contracts are likely to come due during the IR period.
  - i. Will NUGs have access to the same new services offered by Enbridge in the NGEIR proceeding?
  - ii. If not why not?
- d. Enbridge has noted that Enbridge will meet no later than March 31, 2009 with interested parties to discuss the experience with Rate 125 (and Rates 300, 315, and 316) and receive requests for further modifications of the service. Would Enbridge be open to expanding the scope of this consultation process to include other potential services for generators?
- e. The Board has initiated a process to look at certain aspects of electricity rates and other matters relating to Distributed Generation (DG). The OPA has also initiated a CESOP program for generation up to 10 MW. Some DG and CESOP initiatives will use natural gas to generate electricity at peak times of the day. These programs may require additional gas related services or features from the LDC to accommodate the new programs. Has Enbridge developed any services to accommodate these generation programs? If so please describe them, if not please indicate if Enbridge is prepared to work with generators to identify and implement new services

Witnesses: P. Hoey

A. Kacicnik

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 2 Schedule 1 Page 2 of 2

that have similar features (such as access to high deliverability storage, pooling of nominations, and more frequent nomination windows) to the services that were implemented in the NGEIR process.

## **RESPONSE**

- a) At the present time, the Company does not have any plans for new rates and services.
- b) Enbridge Gas Distribution is going to monitor, throughout the IR plan period, if there is a need for new rates and services. As it is the case today, the input from existing and potential customers may be obtained through customer and stakeholder meetings, annual large volume meetings, or a consultative process.
- c) Just like any other large volume customer, Non Utility Generators (NUG) will have access to both bundled and unbundled services by Enbridge Gas Distribution. The Company's unbundled services were developed as part of the NGEIR generic proceeding.
- d) Yes.
- e) At the present time, the Company does not have any plans for new rates and services. If the needs of such customers cannot be met through existing bundled or unbundled services, then the Company would work with this group of customers to develop solutions.

Witnesses: P. Hoey
A. Kacicnik

## **APPrO INTERROGATORY #2**

## INTERROGATORY

- 2. Impact on NGEIR Services References:
  - EB-2007-0615, Exhibit B, Tab 4, Schedule 1, Paragraph 16 Natural Gas Fired Generation Challenges
  - EB-2006-0551, Exhibit C, Tab 2, Schedule 4, Page 1, Paragraph 2 -Derivation of Rate 125 Charges – Delivery Charges
  - EB-2006-0551, Exhibit C, Tab 3, Schedule 3, Rate 316
  - EB-2005-0551 Enbridge Settlement Agreement

## Question:

- a. Given Enbridge's proposal to implement a revenue cap for its customers, and the limited experience with Rate 125 to date, please describe how Rate 125 contract demand rate will be affected by the IR proposal over the Incentive Regulation period.
- b. Will this contract demand rate change if additional Rate 125 contracts are signed, and if so how?
- c. How will Rate 300 contract demand charges change under Enbridge's IR program?
- d. Rate 125 and Rate 300 also incorporate certain balancing fees. Please indicate how each of these fees is affected by Enbridge's IR proposal through time.
- e. Similarly please indicate how the contract demand rates may change for the cost based components of Rate 315 and the proposed Rate 316 service under Enbridge's IR proposal.
- f. On page 13 of the NGEIR Settlement Agreement, Enbridge indicates that the estimated cost of providing the additional nomination windows was between \$250,000 and \$750,000. Please indicate:
  - i. If these costs have been more accurately determined?
  - ii. How these costs might change based on Enbridge's IR plan over the term?
- g. In EB-2005-0551 Exhibit C, Tab 2 Schedule 4, paragraph 2, Enbridge notes the cost required to implement certain changes to its EnTrac system were expected to range from \$2.4 to \$4.0 million. These costs impact the Monthly Customer Charge.

Witnesses: P. Hoey

A. Kacicnik

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 2 Schedule 2 Page 2 of 2 Plus Attachment

- i. Please indicate if these costs have been determined with more accuracy.
- ii. Please indicate the impact on the Monthly Customer Charge.
- iii. Also indicate how these costs may change as a result of the proposed IR plan.
- h. Enbridge notes in section 4 of the NGEIR Settlement Agreement that its new unbundled transportation and balancing services, Rates 300 and 315, will be limited due to having to implement a manual solution.
  - i. Please provide information as to the level of uptake for the service.
  - ii. Please indicate the overall status of conversion to an automated solution.
  - iii. Please indicate Enbridge's plan to accommodate new generators or existing generators use of these services during the IR period.

## **RESPONSE**

- a) to e) The Company is proposing to continue using cost allocation and rate design principles and conventions to determine rates under the Revenue Cap per Customer incentive regulation model. The Company will seek the Board's approval for its rates each year of the IR plan period as part of the annual rate filing process.
- f) i. No.
  - ii. The estimate reflects annual administrative and staffing costs Enbridge Gas Distribution would incur to provide additional nomination windows as described in the NGEIR Settlement Proposal (EB-2005-0551, Exhibit S, Tab 1, Schedule 1). Should additional nomination windows be requested by customers, the Company plans to record such costs in the Unbundled Rates Implementation Cost Deferral Account (URICDA) and, then, recover them from the large volume customers using the additional nomination windows.
- g) i. and ii. and iii. Please see Enbridge Gas Distribution 2007 Settlement Proposal (EB-2006-0034, Exhibit N1, Tab 1, Schedule 1, pages 44 and 45 attached) for the settlement details on this topic. The parties reached this settlement as part of the Company's 2007 Rate Case proceeding.
- h) i. As of August 31, 2007, eight (8) large volume customers have migrated to Rate 300.
  - ii. and iii. Please see response to part g) above.

## 8 OTHER ISSUES

8.1 What are the actions or decisions necessary for the Board to be assured that the Board's decisions, including settlements, in the NGEIR (EB-2005-0551) proceeding will be appropriately captured and reflected in this proceeding?

(Complete Settlement)

There is an agreement to settle this issue as follows:

All parties agree that the implications of the Board's decisions in the NGEIR (EB-2005-0551) proceeding have been captured in the Company's filing in this proceeding. This agreement is subject to the stipulation that certain parties have initiated Motions for Review of the Board's decisions in the NGEIR proceeding which, if successful, could require the Company to make consequential adjustments to its rates, including (without limitation) Rate 316.

The Company's obligations under the NGEIR Settlement Proposal pertaining to whether and when an automated solution should be developed and put in place remain in full force and effect.

Every three months the Company will provide to stakeholders a report on the number of customers that have committed to migrate and have migrated to the new unbundled Rates 300 and 315. If, at any time during the Test Year, 20 customers have committed to take EGD's unbundled rates, the Company will undertake a survey, using the least cost approach, to evaluate demand for unbundled Rates 300 and 315, and assess and report on the timing for development of an automated solution and accommodating additional customers through the manual solution within 90 days after the Company's 20th customer has committed to migrate to the new unbundled rates. If, at that time, the Company decides to proceed with a manual solution, it will continue to provide customers with a quarterly report on the status of migration including feedback from customers on the potential for future migration. The parties agree that the Company's costs associated with preparing and administering the survey will be recorded in the 2007 Unbundled Rate Implementation Cost Deferral Account. The parties further agree they will support recovery by the Company of the reasonably incurred survey costs in the 2007 Unbundled Rate Implementation Cost Deferral

Filed; 2007-09-07 EB-2007-0615 Exhibit I Tab 2 Schedule 2 Attachment Page 2 of 2

Filed: January 24, 2007 EB-2006-0034 Exhibit N1 Tab 1 Schedule 1 Page 45 of 47

Account on the understanding that the Company will seek to have all reasonably incurred costs recovered from large volume customers.

In order to allow customers to take advantage of the new Rate 300 and Rate 315, customers will have the opportunity to migrate to Rate 300 and 315 at all times during the Test Year until the point in time when 20 customers have migrated to the rate 300 series rates. Subject to the conditions of the Company's Early Termination Policy, the Company will permit migrating customers to terminate their bundled rate contracts early, on the understanding that customers will true up any imbalances in their existing contracts as per the provisions of the Company's Early Termination Policy.

If the survey results indicate that significantly more than 20 customers are prepared to commit to migrate, then the Company will undertake to develop an automated solution. If a smaller number of customers are prepared to commit to migrate, then the Company will conduct an analysis comparing the incremental cost of supporting incremental customers' activities and transactions using the manual solution versus the costs of an automated solution. The goal of the analysis will be to determine if it is feasible to expand the manual solution (and at what cost) versus the cost of an automated solution. Should an automated solution be required, the parties agree that the Company record associated costs in the Unbundled Rate Implementation Cost Deferral Account as per the NGEIR Settlement Proposal EB-2005-0551, Ex. S-1-1, p. 33.

If a manual solution permits more than 20 customers to migrate during the Test Year, any such additional spots will be implemented in a manner that is consistent with section 4(g) of the Settlement Agreement in EB-2005-0551 whereby 50% of the additional spots will be allocated to interested customers who will benefit the most from the service from a distribution rate perspective, and 50% of the additional spots will be allocated to interested customers entitled to subscribe for the service on the basis of a lottery system.

Participating Parties: All parties participated in the negotiation and settlement of this issue except Direct Energy, GEC, HVAC, OESLP, Pollution Probe, Superior, TransCanada, Union Gas, Union Energy.

**Approval**: All participating parties accept and agree with the proposed settlement of this issue except VECC which takes no position and did not participate in discussion on the issues discussed after the second paragraph above.

## **CCC INTERROGATORY #2**

## **INTERROGATORY**

- 1. Multi-Year Incentive Ratemaking Framework
- 1.1 What are the implications associated with a revenue cap, a price cap and other alternative multi-year incentive ratemaking frameworks?

## B/T1/S1

Under what circumstances would EGD accept the use of a price cap model for the determination of its rates?

## **RESPONSE**

It is the Company's view that a price cap model will not work for EGD given that the Company faces the compounding pressures of continued new customer attachments and the phenomena of declining average use. A price cap relies upon volume growth to compensate the utility for the costs related to expansion of the system and other cost pressures beyond inflation, yet volume growth has been non existent over the past 5 years. A price cap index, such as that proposed by PEG, which attempts to adjust for declining average use over a multi-year plan, is inadequate and risks significant unintended consequences.

The Company believes that its IR proposal, a revenue cap calculated on a per customer basis, coupled with an annual stakeholder review of volume and customer forecasts provides the best model for all stakeholders and satisfies the Board's objective, as stated in the Natural Gas Forum Report, that incentive regulation adopt the best aspects of both Cost of Service regulation and performance based regulation (NGF Report page 21).

## **INTERROGATORY**

- 1. Multi-Year Incentive Ratemaking Framework
- 1.2 What is the method for incentive regulation that the Board should approve for each utility?

## B/T1/S1/p. 2

For the period 1996-2006 please provide the cost per customer breaking out both capital costs and O&M costs for each year. Please provide the forecast numbers and actuals.

## RESPONSE

With respect to the capital cost per customer addition please see item numbers 5 and 6 (where applicable) on Table 1: Comparison of Gross Customer Additions and Average Cost per Customer Addition, which follows on pages 2 to 4. For O&M cost per customer, please see Table 2: Historical O&M Cost per Customer, on page 5. There was no Board approved budget forecast for 2004. The numbers shown for that year are the Company's budget numbers that were not reviewed or approved by the Board.

## **CCC INTERROGATORY #5**

## **INTERROGATORY**

- 1. Multi-Year Incentive Ratemaking Framework
- 1.2 What is the method for incentive regulation that the Board should approve for each utility?

B/T1/S1/p. 5

Did EGD originally plan to seek approval of a price cap incentive regulation framework? If so, when did it reject that framework? And if so, please provide copies of all records, whether internal or external, related to the decision to switch from a price cap to a revenue cap framework.

## **RESPONSE**

Based on the Board Staff Discussion Paper of January 5, 2007 and the PEG Report of March 30, 2007, *Price Cap Index Design for Ontario's Natural Gas Utilities*, EGD was considering how it might modify the Board Staff and PEG proposals to provide a price cap model that would accommodate the compound pressures of growth expectations and declining average use that the Company faces.

Upon the Company's review of the letter from the OEB dated May 3, 2007 and the PEG Report of June 8, 2007, *Rate Adjustment Indexes for Ontario's Natural Gas Utilities*, a decision was taken by management to cease further consideration of a price cap and to make application for a revenue per customer cap.

The documents related to this decision are attached:

A. June 11, 2007 Presentation to the EGD Executive Management Team: Revised X Factor Calibration

B. June 17, 2007 Memorandum to the EGD Executive Management Team: Incentive Regulation – Recommended Plan

Management accepted the recommendation of the IR Planning Team and the plan was endorsed by the Board of Directors of Enbridge Gas Distribution Inc. on July 31, 2007.

Witnesses: R. Campbell

Re: Incentive Regulation - Recommended Plan

The IR Planning Team (see Attachment A) recommends that Enbridge Gas Distribution make application for a revenue cap, calculated on a per customer basis, in the style of the recently approved Gazifere plan. That is,

$$RR_{t} = \left(\frac{RR_{t-1}}{C_{t-1}}\right) * (1 + d(CPI_{o})) * C_{t} + Y + Z$$

where:

RR = revenue requirement

C = average number of customers

d = is a discount coefficient which serves as a productivity challenge

CPI = forecast rate of inflation, Ontario CPIY = pass throughs, at cost of service

Z = exogenous factors

This memo summarizes the results of the financial modeling of alternative plans, and provides the rationale for the recommendation. The recommendation has been reviewed and endorsed by Patrick Hoey, Director, Regulatory Affairs.

## **Background**

The Ontario Energy Board (OEB) experimented with performance based regulation (PBR) for natural gas utilities with a comprehensive rate cap plan for Union Gas 2001-03 and partial revenue cap focused on O&M costs for Enbridge Gas Distribution 2000-02. Both plans caused controversy and disappointment for the utilities, stakeholders and the regulator. The OEB used a "policy initiative" process called the *Natural Gas* 

2007-08-30 Page 2

**Forum** (NGF) to examine issues regarding PBR design and to state its expectations for the next generation of plans. In the NGF Report (March 30, 2005) the OEB stated that it would adopt the best aspects of cost of service regulation and the PBR approach to develop a form of "incentive regulation" for the Ontario natural gas utilities. The NGF Report and subsequent communications signaled a preference for a price cap mechanism, plan term of from 3 to 5 years, mandated service quality requirements, "robust" rebasing to cost of service at the end of the plan, and earnings retention within the plan (i.e., no imposed earnings sharing mechanism).

OEB Staff initiated a consultation in the fall of 2006 which led to the publishing of three documents:

- Staff Discussion Paper on an Incentive Regulation Framework for Natural Gas Utilities, Ontario Energy Board, January 5 2007;
- Price Cap Index Design for Ontario's Natural Gas Utilities, Pacific Economics Group, Madison, Wisconsin, March 30 2007; and
- Rate Adjustment Indexes for Ontario's Natural Gas Utilities, Pacific Economics Group, Madison, Wisconsin, June 8 2007.

The Board Staff Discussion Paper recommended a price cap framework consistent with the NGF Report; that is, for a term of 4-5 years, with no earnings sharing, a limited list of exceptions for specified treatment (Y factors), little flexibility with respect to offering new services and with cost of service rebasing at the end of the term.

The Pacific Economics Group's first report, "Price Cap Index Design..." of March 30 2007, made a number of recommendations which resulted in a rate cap index yielding annual rate changes in the range 2.09% to 2.29%, slightly better than the anticipated rate of inflation.

The Pacific Economics Group second report, "Rate Adjustment Indexes..." of June 8 2007, is characterized as an update to the first report and provides "the latest results of our expanded research agenda". The result is a significantly different rate cap index yielding annual rate changes at 1.01%, approximately one half of the anticipated rate of inflation. The report also commented on the features of a revenue cap and recommended revenue cap index growth for EGD of 3.03%.

A primer on the significant differences between Cost of Service regulation, price cap and revenue cap is provided in Attachment B.

## Risks of a New Regulatory Model

The Company expects to move into an IR environment for a 5 year period beginning January 1 2008. As compared to the cost of service process by which the Company has been regulated for most of the past 52 years, the IR model offers the opportunity to improve rates of return through efficiency improvement, the potential for less regulatory burden associated with rate setting, and fewer regulatory disallowances.

2007-08-30 Page 3 Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 5 Attachment B Page 3 of 20

The transition has risks associated with the regulator's design of the plan, the de-linking of costs and rates, and the longer rate-setting horizon of a multi-year plan. Principle among the risks are the volume risk associated with the economy, weather and declining average use; an imposed rate escalation factor that may not adequately compensate for the pressures of inflation and system growth; and the embedding in rates of the current level of allowed ROE for the duration of the plan.

Within the context of a sustainable, long term IR plan that allows the Company to meet customer commitments and to maintain a safe and reliable distribution system, EGD's objective is to reduce earnings volatility, earn higher than the allowed ROE, and grow the business. In spite of the frustrations of cost of service regulation, the annual process has yielded annual rate increases which are, on average, higher than the rate of inflation and earnings, on a normalized basis, at or above the allowed ROE.

## Plan Design Challenges

- **getting the base right** the Decision of the Ontario Energy Board regarding 2007 rates is expected by June 19 2007. The findings of the Board with respect to degree day forecasting/weather normalization may have impact on the IR application.
- meeting stakeholder expectations the plan needs to encourage the utility to seek
  the outcomes that are expected by the regulator and intervenors, and the
  shareholder.
- **declining average use** is our built-in productivity challenge in a price cap environment. Calibration of the "x" factor in a price cap needs to fully account for the expected annual decline in average use per customer over the next 5 years.
- narrowing envelope of O&M controllable costs CIS Settlement and DSM 3 year plan determines the cost escalation for about 1/3 of our O&M budget.
- drag on earnings from non revenue generating capital investments Investments during the plan which are required to maintain a safe and reliable
  distribution system (e.g. cast iron replacement) do not directly generate new revenue
  and are a drag on earnings.
- **optimizing capital investment** to avoid a shrinking rate base through the IR period, annual capex at about \$250 million (plus annual escalation) is viewed as guideline, down from existing level in excess of \$300 plus million.
- embedded ROE at 8.39%
- exposure to weather risk for 5 years
- attaching new customers that offer the highest return will be required in a capital rationing environment
- rebasing at cost of service at the end of the plan will transfer productivity gains to ratepayers

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 5 Attachment B Page 4 of 20

## **Alternative Plans**

Based on the recommendations of the Pacific Economics Group ("PEG") final report, the team has tested the PEG designed rate cap, revenue cap, and a third plan, of the team's design, a revenue per customer cap, similar to that recently approved for Gazifere.

1. Rate Cap: X factor of 0.85%

2. Revenue Cap: X factor of 1.66% plus growth factor of 2.83%

3. Revenue/Customer Cap: X factor of 0.50% (Gazifere approved X factor is 0.40%)

For purposes of plan evaluation, the Y factors are assumed to be costs related to DSM and the CIS Settlement. If a Y factor for capital is approved, it would improve the results equally for all plans.

## **Financial Model**

Regulatory Affairs constructed a financial analysis model in order to compare the features and earnings potential of alternative regulation plans under a consistent set of assumptions. The model was constructed by Iftikhar Abbasi, Manager, Rate Design, supervised by Anton Kacicnik, Manager, Rate Research and Design. The model was thoroughly tested with historic data and proved to be a good predictor. The model and the analysis have been reviewed by the IR team.

## **Analysis**

**Assumptions** 

All scenarios are based on utility operations with 2007 as the base year. Non-utility income and expense are not considered. Capital and O&M expense and other variables are consistent with the LRP. No significant change in operating and investment behavior is assumed under the IR plan.

## Market Assessment

Per the commentary below, the team believes that the potential for growth opportunities by way of new customer attachments will continue through the IR period. However, residential and commercial volumes are declining, on average, and volume growth through new customer additions may be offset by declines in industrial load.

## Situational & Marketplace Assessment

## System Growth

- population expansion and housing starts will remain strong in the EGD's franchise area
- continued opportunity for EGD to extend its system and add new customers

## Volume Growth

- new volumes realized predominantly through new customer additions, but
- declining average use in residential (~1.8%/year) and commercial (~ 0.9%/year) sectors
- EGD could experience considerable erosion in industrial load during IR term (due to strong Canadian \$, high natural gas prices, plant relocation / consolidation, global competition)

## Commentary

In terms of earnings potential, the EGD Revenue Cap yields the best results, with \$80 million more in earnings over the five years than the PEG Price Cap plan, representing a 200 basis point premium on ROE by year five. The PEG Revenue Cap is near mid point between the two. The order of this result; EGD Revenue Cap preferred, then PEG Revenue Cap, then PEG Rate Cap is consistent across all scenarios analyzed.

The sensitivity analysis presented in Attachment C shows that the EGD Revenue Cap effectively insulates earnings from a decline in volumes <u>and</u> that it takes considerable volume growth (above forecast) for the PEG Rate Cap to out perform the EGD Revenue Cap. It would take annual volume growth that is 1.7% greater than forecast before the Rate Cap results cross over the results of the EGD Revenue Cap.

The team finds the results of the modeling and sensitivity analysis to be consistent with its expectations.

## Ranking

In addition to the quantitative results above, the team conducted a qualitative evaluation of the alternatives. Using a three point scale, the team assessed the characteristics of each alternative and ranked them against eight criteria within the categories of earnings, growth and regulatory risk. For instance, the plan judged by a team member to offer the best potential for earnings stability was given a "1", the next a "2" and the least potential a "3". The lowest total score, therefore, indicates the preferred plan. The results, shown below, reflect the collective judgment of the team that a revenue cap per customer is distinctly better than the alternatives.

IR	Planning Team	PEG	PEG	EGD
Co	onsolidated Ranking Scores	Rate	Revenue	Revenue
E٧	aluation Criteria	Cap	Cap	Cap
1	Earnings - stability	15	20	13
2	<ul> <li>upside potential</li> </ul>	15	19	14
3	- downside risk	18	19	11
4	Growth - volume	16	18	14
5	- customers	16	16	16
6	- net income	17	16	15
7	Regulatory Risk - potential for approval	19	18	11
8	<ul> <li>potential for exit</li> </ul>	20	18	10
	TOTAL	136	144	104

## Recommendation

The team unanimously supports the recommendation of a revenue cap, calculated on a per customer basis. The revenue cap per customer provides the best earnings potential and is the plan which is most responsive to EGD's concerns with respect to:

- volume risk, including
  - declining average use
  - o declining industrial load
  - weather
- customer migration between various rates and service offerings
- · growth through customer attachment, and
- stakeholder issues
  - annual process transparency
  - o potential for earnings sharing
  - encourages customer attachment

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 5 Attachment B Page 8 of 20

## **Regulatory Risk**

Possible negative outcomes:

- OEB denies application risk of rates remaining at approved 07 levels until a new application is approved
- OEB imposes a rate cap which has not been fully examined for EGD circumstances in the hearing - likely close to that approved for Union Gas
- OEB approves application, but with more challenging parameters
- OEB approval of a revenue cap may cause adjustments to CIS Settlement (which was premised on rate cap approval).

## Mitigation

Work with stakeholders to gain support for our application...simple, more regulatory transparency, obtains desired outcomes...and seek a settlement. This can begin well in advance of ADR. As pressures build for a higher X factor, earnings sharing may be offered in order to demonstrate our interest in a win/win solution.

Expose the flaws in the PEG analysis through interrogatories (and potentially, cross examination). Please see an initial assessment of the PEG methodology, prepared by Irene Chan, in Attachment D. Additional analysis is being prepared by Michael Lister, who will be our expert witness on economic matters and he will coordinate the evidence prepared by external experts, the Brattle Group.

Argue that our application best recognizes the circumstances of the utility and better satisfies the expectations of all stakeholders:

- revenue cap is better than rate cap...given issue of declining average use and prospect of declining industrial load
- revenue/customer cap is better than Lowry's revenue cap...revenue index is directly related to customer growth...encourages desired behavior.

## Attachment B - Rate Regulation Primer

## **Cost of Service Regulation (COS)**

The Revenue Requirement (RR) is the sum of expected utility costs required to provide service in the rate year. It is reviewed in an annual public hearing and approved by the regulator. It is the sum of O&M, ROE, Interest, Depreciation and Taxes. The RR is recovered by forecasting gas volumes for the rate year and calculating the cost per unit of volume (Rate).

In **COS**, with the **RR** and the **Rate** established by the regulator, the utility manages the risk associated with the forecast of costs and volumes during the rate year. It is a one year risk horizon: costs and volume forecasts are reset with the next year's rate application.

## Incentive Regulation (IR)

In **IR**, the annual public hearing review of costs and volume forecast is replaced with a formula that escalates either revenues (**revenue cap**) or rates (**rate cap**). As compared to **COS**, a primary distinction is the lengthening of the risk horizon to the term of the IR plan. Some cost elements may be locked-in for up to 5 years. In comparing a revenue cap and a rate cap, a primary distinction is **which** variables are fixed.

**Revenue Cap:** In a revenue cap, the **RR** is adjusted by the formula, and in order for the **RR** to be recovered from customers, a volume forecast is required to calculate the price per unit of volume (**Rate**). In this way, a revenue cap is similar to **COS** and the volume forecast can be adjusted annually for economic activity, degree days and declining average use. In addition, since an annual regulatory review is required in order to establish the volume forecast, a revenue cap is a more transparent regulatory regime than a price cap, a characteristic desired by stakeholders.

Rate Cap: In a Rate Cap, it is the end point of the rate setting process, Rates, which are adjusted by the formula. A volume forecast is not required for the rate setting process and a RR is not determined. Consequently, as compared to a revenue cap, all elements of the volume risk; economic cycle, weather and average use are transferred to the utility for the duration of the plan. (In EGD's circumstances, with significant declining average use, we have argued that a Rate Cap cannot work unless there is adequate compensation for declining average use.)

While volume risk is a significant element to be managed in a rate cap, there is greater earnings potential with a rate cap. In **COS** or revenue cap regulation, increased volumes lead to reduced rates (the objective being to recover a <u>fixed **RR**</u>). In a rate cap, with rates fixed by formula, increased volumes lead to <u>increased total revenues</u>.

Re: Attachment D – Initial assessment of the PEG methodology

This attachment presents an initial assessment of the PEG methodology. In sum, the major shortcomings of the PEG methodology are presented below. A comprehensive description of the technical assessment of the PEG methodology follows the summary.

- 1. Use of volatile and less accurate measure of inflation rate, i.e. Gross Domestic Product Implicit Price Index (GDPIPI)
- Inconsistent sample periods were used throughout the study without supporting explanation
- Incorrect statements regarding the determinants of revenues and average use risk
- 4. Arbitrary and inconsistent selection of Enbridge's TFP peer groups without supporting documentation of methodology
- 5. Incorrect and understated elasticity weights which helps explain the abstract high productivity differential level of 0.89%
- Low explanatory power (i.e. R-square) of PEG's Econometric Models for Weather Normalization as well as inappropriate driver variables, sample periods and data chosen which contribute to an understated average use factor

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 5 Attachment B Page 15 of 20

- 7. Un-normalized volume instead of weather-adjusted volume should be used in the PEG's Econometric cost model in explaining the cost drivers of the Utility
- Overstates and double counts the price or revenue impact on the output quantity index which also helps explain the abstract high productivity differential level of 0.89%

# Technical assessment of the PEG methodology

- 1. Page I GDPIPI vs CPI
  - What is the rationale of using Gross Domestic Product Implicit Price Index (GDPIPI) to measure inflation rate?
  - Why not use Consumer Price Index (CPI) which is the official Canadian inflation target embraced by the Bank of Canada and is more accurate and more stable than the GDPIPI?
  - GDPIPI is conventionally known as a volatile indicator associated with a large measurement error.
  - Most of the operating and maintenance expenses are correlated with CPI instead of GDPIPI.
  - If the Board insists on using GDPIPI, the more appropriate one to embrace is the Ontario one that is specific to the energy industry.
- 2. Inconsistent sample periods throughout the study
  - Page ii sample period for the U.S. work 1994-2004 (2<sup>nd</sup> paragraph)
  - Sample period for EGD and Union 2000-2005, given there was a Y2K issue that year, should recommend the use of 2001-2005 as the sample period
  - Page v 1998-2005 for input price trends
  - Apple vs orange comparisons by comparing U.S. data over 1994-2004 with EGD's 2000-2005 when gas prices were increasing dramatically since 2001. This will lead to an incorrect comparison between U.S.'s revenue weights (1994-2004) with EGD's (2000-2005). Please see the #8 explanation below for reasons.
  - Page 71 weather parameters were estimated over years 1994-2005 based upon the data from US gas utilities but the normal heating degree days are calculated by taking an average of U.S. degree days data over the <u>six</u> year sample period. For consistency, the sample period should be 12 year period, i.e. 1994-2005.
- 3. Page vi Use of Multi-factor productivity for Canada's private business sector?
  - Given that EGD is a regulated public utility, would recommend the multi-factor productivity for Canada's public utilities which is a more comparable measure.
     One of the distinctive features of public utilities is the incurrence of large initial capital expenditures which acts as a large barrier to entry.

2007-08-30 Page 16

- 4. Pages vi-vii, 14, Need to show LRAM calculation
  - Need to show how LRAM is excluded from the average use factor.
- 5. Page 8 Need to clarify the definition of competitive rate of return
  - Zero average (trend) profit (trend revenue = trend cost, i.e. p\*y = c\*y where p = price, y = output, c = cost, i.e. p = c) only applies to the perfect competition or perfect competitive industry, such as computer industry with low entry cost and initial investment. This is not appropriate for the natural monopoly or public utility like EGD which requires a large investment in infrastructure to ensure public safety and offer natural gas service to almost everyone. Natural monopoly should be allowed to earn a competitive rate of return to attract investment which is not clearly defined in the PEG's report.
- 6. Page 15 Need to specify the definition of revenue
  - The revenue weights used in the output growth should have commodity charges removed as utilities cannot control them and do not earn a profit on them.
  - As each utility has different price and timing of capital expenditures, such as cast iron replacement program, CIS, etc, it can be misleading when comparing the peer group's revenue weights with EGD's.
- 7. Page 15 Incorrect statement about determinants of revenues
  - Incorrect statement by saying base rate revenues of distributors typically depends chiefly on the growth in delivery volumes. Customer mix (sales/Tservice migration) and commodity charges are also large drivers of revenues.
  - Take the Table below as an example, there was a significant decrease in first quarter revenues between year 2007 and 2006 even though there was a 6% growth in volume as a result of colder weather. This is due to a significant reduction in the commodity prices between these two years. System gas supply commodity rate for residential customers was 43 cents per m³ during Q1, 2006 compared to 32 cents per m³ during Q1, 2007.

Revenues \$000	YTD Mar 3 months Period 2007	YTD Mar 3 months Period 2006	Change	% Change
Gas Sales - Billed				
Residential	657,615	753,266	(95,651)	-12.7%
Commercial	348,505	415,539	(67,034)	-16.1%
Industrial	53,249	69,354	(16,105)	-23.2%
Wholesale	21,123	25,285	(4,162)	-16.5%
	1,080,491	1,263,443	(182,952)	-14.5%
Volumes (103m3) - Billed				
Sales	2,395,193	2,268,987	126,206	5.6%
T-service	3,020,205	2,829,133	191,072	6.8%
Total	5.415.398	5.098.120	317.278	6.2%

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 5 Attachment B Page 17 of 20

- 8. Page 15 PEG's average use factor does not reflect the true declining average use trend
  - The PEG's average use factor does not reflect the true declining average use trend as the calculation also captures the nominal dollar differences because it is measured as difference between the trends in <u>revenue</u> and <u>elasticity weighted</u> output quantity indexes.
  - Since revenue = price \* volume, the average use factor that is measured by the revenue weighted output quantity index also includes customer growth. Holding other things constant, PEG's methodology underestimates the impact of declining average use trend.
- 9. Page 15 False statement in last sentence of the page
  - Both rate payer and the utility together always absorb the risk of any <u>forecast</u> <u>error</u> in predicting the average use trends. The key to PCI is to ensure the average use forecast is accurate and unbiased to both rate payers and the utility.
- 10. Page 16 Need to specify the definition of price in the revenue cap formula
  - PEG's formula is different from the Gazifere's revenue requirement one. Need to specify the definition of the price in PEG's revenue cap formula. According to PEG's formula, Revenue growth = delta customer + delta average use + delta price. Need to ensure the gas supply commodity portion is removed from this price variable as it will be properly dealt with QRAM.
- 11. Page 19 (last two paragraphs) Incorrect peer group chosen
  - Contradictory statements. As PEG mentioned, Pacific Gas & Electric and Southern California Gas are, like Union involved in gas storage and transmission activities. Since Enbridge is not involved in these activities, both Pacific Gas & Electric and Southern California Gas should not be included in the TFP peers good for Enbridge (page 40-41). For instance, these revenue and elasticity weights for residential and commercial distribution rates will be largely lower than EGD's as a result of PG&E's involvement in other non-gas distribution activities.
- 12. Page 26 Abstract and understated elasticity weights
  - Significantly understated elasticity weights for residential and commercial volumes, other volumes, and the number of customers, 15%, 11%, and 74%. Not sure how volume and number of customers can be grouped together as elasticity weights for an index. PEG needs to illustrate the calculation.
  - These weights are significantly different from EGD's 2006 actual data shown below. In fact, the weights for residential volumes and revenues shown below are on the low side as 2006 actual weather was the 2<sup>nd</sup> warmest weather during the last ten years.

# 2007-08-30 Page 18

	<u>Revenues</u>	<u>Volumes</u>	<u>Customers</u>
Residential	57%	37.7%	91.4%
Commercial	41%	40.0%	8.2%
Industrial	<u>2%</u>	<u>22.3%</u>	0.4%
Total	100%	100%	100%

# 13. Page 28 – Inappropriate labor deflator to use

 Why use Ontario construction worker salaries and wages as labour price deflator? As most of EGD employees are not construction workers, one should use managerial or other administrative occupations.

# 14. Page 39 - Contradictory statement about scale economies and Peer groups

- As mentioned in PEG's report, the pace of its output growth and on the
  incremental scale economies that can result from output growth determine the
  realization of scale economies. How could Nstar Gas with 0.3 million customers,
  Pacific Gas & Electric with 4 million customers and Southern California Gas
  Customers with 5.3 million customers (pages 20, 40) have similar output growth
  and scale economies opportunities to Enbridge with 1.8 million customers?
- Need to describe the methodology used in the selection of TFP peers for Enbridge.
- Missing number of customers information for Northern Illinois Gas and Mountain Fuel Supply which are listed as TFP peers for Enbridge on page 20.

# 15. Page 49 – PEG over-normalizes Enbridge average use data

- It is inappropriate to use United States calendar year volume and degree days data to normalize Enbridge's fiscal year volume data. Table below illustrates the dramatic difference between fiscal and calendar actual degree days.
- Misleading statement by comparing high-level annualized regression model results using U.S. data with Enbridge's monthly building block methodology.
- PEG over-normalizes Enbridge average use data by including non-heating load whereas Enbridge only normalizes heat sensitive portion of consumption

# Gas Supply Degree Days - Fiscal vs Calendar Year

Test	Fiscal Actual	Calendar Actual	Calendar vs Fiscal
Year	Degree Days	Degree Days	Degree Days
2000	3,569	3,784	215
2001	3,743	3,400	(343)
2002	3,322	3,597	275
2003	4,058	3,949	(109)
2004	3,754	3,766	12
2005	3,719	3,750	31
Cumulative	e Sum		81

- 16. Pages 70 and 72 Low R-square in Econometric Models for Weather Normalization
  - Low R-square results for residential model imply only 45% of residential throughput can be explained by the models' driver variables and others are unexplained. In other words, residential volumes are not effectively weather normalized by the regression models.
  - These low R-square results can be due to the fact that the monthly distribution of degree days is ignored by these annual regression models. For instance, the impact of 100 degree days colder than normal weather on heating load during heating season will not be completely offset by 100 degree days warmer than normal during shoulder months, such as June.
  - The other contributing factor to the low R-square can be due to the possibility that the regression model is a first differenced regression model which ignores the valuable information over the long-term. Engle and Granger's (Nobel Prize winners) error-correction model approach is preferred to this first-differenced regression model.
- 17. Page 71 Need to specify the level of normal heating degree days
  - Need to specify the level of normal heating degree days used in the regression models
  - Inappropriate to apply Midwest, Southeast and Southwest heating degree days dummy variables to normalize Enbridge's data.
- 18. Page 73 Incorrect coefficients used for rate class data
  - It is incorrect to use coefficients from the residential and commercial regression models to normalize Enbridge's rate 6 data when Enbridge's rate 6 customers are mainly comprised of apartment or condominium buildings, office towers, retail shopping malls and plazas, universities and schools, etc. For example, Union gas's commercial regression model's coefficient should not be used to normalize Enbridge's data as Union's franchise has significantly fewer condominium buildings, office towers, shopping malls than Enbridge's.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 5 Attachment B Page 20 of 20

- 19. Pages 85-86 Inappropriate driver variable used in the Econometric cost model
  - Why is the weather-adjusted volume used in the Econometric cost model?
  - Other than commodity cost, weather also impacts EGD's costs of serving customers, such as carrying cost, transportation fuel, higher number of calls, etc.
- 20. Page 88 Overstates the price or revenue impact on the output quantity index
  - Formula A28 implies delta revenue = delta <u>price</u> + delta <u>revenue weighted</u> index of growth. That means, the formula reflects two nominal price impact and double counts the price impact of revenue impact on the output quantity index
  - The correct formula should be stated as follows: Revenue = price \* volume, taking this in natural logarithms, In revenue = In price + In volume, and taking the first differential of the natural logarithms, dln revenue = dln price + dln volume, i.e. delta revenue = delta price + delta volume

# **INTERROGATORY**

- 1. Multi-Year Incentive Ratemaking Framework
- 1.2 What is the method for incentive regulation that the Board should approve for each utility?

#### B/T1/S1/p. 5

EGD states that customer attachments have been at a pace of 45,000 to 50,000 per year. For the period 2008-2012 please provide EGD's current forecast of attachments for each of those years. Please include all assumptions used in arriving at that forecast.

# RESPONSE

The Company's forecast of customer attachments for 2008 is 44,534 customers based on a Cost of Service model. That number may be affected by the nature of the IR model and the timing of its implementation following the release of the EB-2007-0615 Decision. The model adopted by the Board may have incentives or disincentives for customer additions which may affect the Company's ability to add customers. For example, the number of customer additions may be 40,000 per year or less if the IR model does not provide incentive for customer additions or it may be more than 40,000 per year if it does. The Company does not have a forecast of customer additions for years 2009 – 2012.

#### CCC INTERROGATORY #8

#### INTERROGATORY

- 1. Multi-Year Incentive Ratemaking Framework
- 1.2 What is the method for incentive regulation that the Board should approve for each utility?

B/T1/S1/p. 22

EGD refers to it cast iron replacement program in terms of differentiating itself from Union. Please provide a schedule which sets out the expected expenditures for the program through to the completion of the program. For each year of the program since its inception please provide forecast and actual expenditure levels.

# RESPONSE

The proposed annual spending for the Cast Iron Replacement Program has been revised a number of times. Prior to EGD's 2006 Test Year rate application, EB-2005-0001, the continuation of the "status quo" level of cast iron replacement would have resulted in the cast iron mains being replaced over an eight year time frame (2006 to 2013) at an average replacement rate of 68 km per year. In EB-2005-0001, the Company proposed an accelerated three year time frame for the completion of the program (2006 to 2008) at an average replacement rate of 181 km per year.

Subsequent to the Board's decision for EB- 2005-0001, EGD elected to undertake the accelerated program on a four year time frame (2006 to 2009) at an average replacement rate of 136 km per year.

The Settlement Agreement reached in EB-2006-0034, necessitated the scaling back of the cast iron replacement to a six year time frame (2006 to 2011) at an average replacement rate of 91 km per year. This was required in order to allow the Cast Iron Replacement Program to be accommodated along with other capital expenditures within the constraints imposed by the base year budget established for incentive regulation.

The budget proposed in EB-2007-0615 for the Cast Iron Replacement Program is approximately the same as that in the previous year.

Witnesses: T. Ladanyi

R. Milne

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 8 Page 2 of 2

The schedule below sets out the budget and actual expenditures for the accelerated Cast Iron Replacement Program since its inception in 2006, and the expected expenditures until its current expected completion.

<u>Year</u>	Budget / Forecast	<u>Actuals</u>
2006	\$46.3 Million	\$40.0 Million
2007	\$30.8 Million	\$18.2 Million (July YTD)
2008	\$27.3 Million	n/a
2009	\$27.3 Million	n/a
2010	\$27.3 Million	n/a
2011	\$8.6 Million	n/a

Please note these costs are direct costs only. For the 2009 to 2011 period, no adjustments have been made for inflationary increases or other cost pressures.

# CCC INTERROGATORY #9

# **INTERROGATORY**

- 1. Multi-Year Incentive Ratemaking Framework
- 1.2 What is the method for incentive regulation that the Board should approve for each utility?

#### B/T1/S1

Why does EGD prefer an incentive regulation model for rate-making rather than a cost of service approach? Why is EGD's revenue cap proposal better for ratepayers than the current rate-setting approach? Why is it better for EGD's shareholders?

#### **RESPONSE**

The Company's IR proposal responds to the request of the Board, directed to the Company by letter dated May 3, 2007, which states:

As you are aware, it is the Board's intention to implement rates for Enbridge Gas Distribution Inc. and Union Gas Limited under a multi-year incentive ratemaking framework for 2008. The Board therefore requests that you file an application for rates that will commence January 1, 2008.

The Company believes that its IR proposal provides, in the words of the *Natural Gas Forum Report*, "the best aspects of both cost of service regulation and performance based regulation." (p. 21) The Company's proposal benefits ratepayers and shareholders by encouraging the utility to pursue sustainable efficiency improvements and by attempting to avoid unintended consequences.

# CCC INTERROGATORY #12

# INTERROGATORY

- 2. Inflation Factor
- 2.4 Should the gas utilities ROE be adjusted in each year of the incentive regulation (IR) plan using the Board's approved ROE guidelines?

#### B/T2/S1

Please provide- EGD's position as to how the ROE level should be determined in the context of its plan.

# RESPONSE

The Company's proposal does not provide for an annual update to ROE to reflect the Board's *Draft Guidelines*. In effect, ROE would be locked into rates at the Board approved level for 2007 of 8.39%.

However, the Company does request a one time adjustment to ROE should the Board adopt revised *Draft Guidelines on a Formula - Based Return on Common Equity for Regulated Utilities* within the term of the IR plan. That would be accomplished by means of a Z factor, as described in evidence at Exhibit B, Tab 1, Schedule 1, page 18.

# **CCC INTERROGATORY #13**

# INTERROGATORY

- 2. Inflation Factor
- 2.4 Should the gas utilities ROE be adjusted in each year of the incentive regulation (IR) plan using the Board's approved ROE guidelines?

#### B/T1/S1 p. 5

Does EGD have a target ROE which it plans to achieve during the proposed period of incentive regulation? If so, what is the target? Please provide all reports and analysis, whether internal or external, on which that target is based?

# **RESPONSE**

In evidence at Exhibit B, Tab 1, Schedule 1, page 5, the Company indicates that it will not plan to earn less than the ROE embedded in rates (8.39%) during the IR plan. The Company hopes that earned ROE within the IR plan will exceed the embedded level and the Company will pursue productivity improvements towards that end.

Management has established a target of achieving a 50-100 basis point increase (on average) over the allowed ROE over the term of the plan. This is an amount that seems reasonable over a five year plan, given the challenges of the transition to Incentive Regulation.

Declining Average Use and Regulated Utility Rate Setting

# Research Concept:

As energy use efficiency improves and more and varied energy forms are developed and become part of the energy services supply, use of the traditional energy sources will decline.

This declining average use poses a problem for regulated natural gas distribution utilities in that their revenue generation is based on the volume of natural gas they distribute, hence declining average use of natural gas, absent increases in their customer base, results in lower revenue generation.

In a growing natural gas market (e.g. NB, NS, and Vancouver Island), increasing the number of natural gas customers is likely to offset this problem in the short and perhaps medium term. In a mature market (e.g. Ontario, BC mainland), increasing the number of customers may not be an adequate offset as the number of new customers that can be connected economically tends to be quite limited; these customers tend to be located to a large extent in remote or low density populated areas.

Gas utilities can also attempt to address this declining use problem by aggressive campaigns to encourage the use of gas appliances. Despite previous efforts, this type of approach has not worked very successfully in Canada; there are institutional barriers that hamper fuel-switching to gas even where the economics are favourable and that hamper the installation of gas appliances in newly constructed homes.

Moreover significant portion of the utilities' costs are not volume sensitive and so the required response to lower revenue generation is to raise the rates charged to existing customers. Customers then see increased rates for essentially the same service.

What are the options? Larger fixed portions in rates, entirely non-volume based rates? Or some other form of revenue generation for utilities?

# **Project Description:**

The consultant is asked to prepare an "Executive Analysis" paper of 25-30 pages in length, targeted at exploring the issues and policy options surrounding declining average use, volume based rate design, and in general energy policy in the natural gas distribution business. The focus should be on the Canadian experience with reference to other jurisdictions efforts where useful.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 16 Page 3 of 4

Research will be conducted over the spring/summer of 2006; the final paper will be delivered by end of September/mid October 2006.

# **Project Tasks:**

- 1) Brief literature/internet research on the historical fact context for declining use/customer:
  - historical natural gas use/customer in Canada and in the US
  - identification of factors that have led to declining average use in Canada over the last 10-15 years such as increases in appliance efficiency and building envelope efficiency due to natural market forces and regulated DSM activities
  - historical efforts by Canadian utilities (e.g. Union, Enbridge, Terasen) in mature markets to increase gas usage (e.g. increase number of customers and number of natural gas uses) and the relative success of these efforts
  - treatment of gas utility lost revenues due to conservation and due to market forces outside the control of gas utilities in Canada (e.g. incentives, lost revenue recovery mechanisms)
  - forecast of future gas consumption (e.g. based on the AGA forecast for 2001-2020)
- 2) Brief literature/internet research on regulatory options in Canada and the US:
  - larger fixed portions in rates, entirely non-volume based rates
  - lost revenue recovery mechanisms
- 3) Telephone interviews (in Toronto interviews may be face- to-face interviews) with regulators, non-governmental organizations and utilities:
  - 2- 3 interviews with staff and Board members, where possible, of the Ontario Energy Board and British Columbia Utilities Commission to discuss issues associated with declining average use/customer and options to address them
  - 3 5 interviews with Canadian utilities (e.g. Enbridge, Union, Terasen, Manitoba Hydro, Gaz Metro) to discuss historical efforts, current issues, options, and steps they are taking to address the declining average use/customer issues
  - interview with 2-4 NGO's knowledgeable on the issues of declining average use/customer in the gas industry and options to address the issues (NRDC, Consumers' Council, GEC, Pollution Probe)
  - 3-5 US gas utilities that have either larger fixed portions in rates, entirely nonvolume based rates or a lost revenue adjustment mechanism
  - 4) Identification of issues regarding declining average use/customer in Canada

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 16 Page 4 of 4

Based on the research and interviews described above, a determination will be made regarding the seriousness of the declining average use/customer issues facing regulated gas utilities in Canada now and in the future. Distinctions may be drawn based on whether the utility is investor-owned, publicly owned or vertically integrated.

- 5) Identification and analysis of options for addressing the declining average use per customer issues faced by regulated Canadian gas utilities
  Based on the research and interviews, a set of options to address the matter will be identified. Pros and cons associated with each option will be described.
- 6) Development of general recommendations on how to address declining average use/customer issues faced by regulated Canadian gas utilities. This will be based on a critique of the various rate design options identified above.
- 7) Preparation of a final to the CGA that documents the above. A draft paper will be prepared for review by the CGA, and will be revised and finalized based on the comments received. The final report to the CGA will be submitted in pdf format and in Word, if required. The CGA will provide guidance to the consultant on the style and format of the final report. The consultant may be asked by the CGA to deliver presentations on this paper. Such requests will be handled under a separate contract.

# **CCC INTERROGATORY #19**

# **INTERROGATORY**

- 4. Average Use Factor
- 4.2 How should the impact of changes in average use be calculated?

B/T1/S1/p. 10

Please explain how recognizing the impact of declining average use is "a built-in proxy for the productivity challenge."

# **RESPONSE**

In a Cost of Service environment, for a test year in which the revenue requirement per customer is exactly the same as the bridge year; and the volume per customer forecast for the test year declines relative to the bridge year, then rates must increase in order to recover the same revenue requirement. That is, in spite of no change to costs, unit rates go up due to lower average volume per customer.

In Incentive Regulation, rates are set by formula, and the link between cost recovery and rates is broken. In that environment, if declining average use is a factor that is not explicitly accounted for in rate setting, then revenues per customer will decline. This decline in revenues will require management to reduce costs just to hold income levels constant. In this example, with X=0, management will need to seek annual productivity improvement equal to the impact of declining average use on revenues just to stand still in terms of income levels. In this way, declining average use itself presents a significant productivity challenge.

# CCC INTERROGATORY #29

# **INTERROGATORY**

6. Z Factor

6.1 What are the criteria for establishing Z factors that should be included in the IR plan?

B/T1/S1, p. 18

EGD has cited "uninsured losses" and "litigation costs" as potential Z-factors. Please explain specifically what types of uninsured losses and litigation costs are contemplated.

#### RESPONSE

The very nature of Z factors limits our ability to provide a specific response to this question. EGD proposes that the following criteria be applied to determine whether a cost item qualifies as a Z factor. The cost must be:

- 1) related to normal business operations;
- 2) unexpected:
- 3) beyond management's control, acting reasonably; and
- 4) exceeding \$1.5 million, per event.

While EGD would naturally budget for a certain level of costs in the categories of "uninsured losses" and "litigation", it would neither be cost effective nor possible to insure for, and otherwise guard against, every potential significant cost that EGD may encounter in the normal course of business. Events may arise that are "acts of God", or the acts of others that EGD does not and cannot control. While EGD insures itself to a reasonable level for such events, there may be costs exceeding EGD's insured levels that result. The very nature of Z factors are for costs that are unforeseen, therefore they cannot be specified, or measured.

# CCC INTERROGATORY #32

# **INTERROGATORY**

6. Z Factor

6.1 What are the criteria for establishing Z factors that should be included in the IR plan?

B/T5/S1/p. 15

EGD is proposing a new account, the 2008 Municipal Permit Fees Deferral Account. Please provide an estimate of the costs expected to be captured in that account in 2008. Please provide all assumptions used to arrive at that forecast.

# **RESPONSE**

As a result of recent legislative changes in Ontario, municipalities now have the right to establish fees to charge natural gas LDC's for permits related to activities for which the LDC's were not previously charged.

The Company has requested a 2008 Municipal Permit Fee Deferral Account to capture such permit fees. The Company had no means of forecasting an amount to be incorporated into base rates on a prospective basis, nor does it have the means to reliably forecast how much it will incur in 2008 for such fees.

Witnesses: R. Bourke

K. Culbert

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 33 Page 1 of 1

# **CCC INTERROGATORY #33**

# **INTERROGATORY**

- 8. Term of the Plan
- 8.1 What is the appropriate plan term for each utility?

B/T1/S1/p. 18

EGD proposes a term of five years for its IR plan period. Specifically, the evidence states that "a longer term is desirable to provide sufficient horizon for the recovery of investments and to identify and capture capital program efficiency improvements." Please provide examples of the capital program efficiency improvements EGD is referring to that would be restrained within the context of a shorter term plan.

# RESPONSE

EGD considers a term of at least 5 years to be essential for this IR plan. A shorter term does not encourage sustainable efficiency gains. A shorter term does not provide sufficient time to plan and implement productivity improvements. Shorter terms may be appropriate for targeted O&M plans but not for comprehensive plans which include long term/long payback capital investment decisions. This is especially true in an IR framework which includes a "robust rebasing" at the end of the IR term.

Witnesses: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 3 Schedule 34 Page 1 of 1

# CCC INTERROGATORY #34

# **INTERROGATORY**

- 10. Earning Sharing Mechanism (ESM)
- 10.1 Should an ESM be included in the IR plan?

#### B1/T1/S1

Please explain, in detail, why EGD is opposed to an Earnings Sharing Mechanism. Please explain, under what circumstances, EGD would support an ESM for its IR plan.

#### RESPONSE

Enbridge Gas Distribution is generally opposed to earning sharing because it dilutes the incentive power of the plan. This position was recognized by the Board in the *Natural Gas Forum Report* which states that "the Board views the retention of earnings by a utility within the term of an IR plan to be a strong incentive for the utility to achieve sustainable efficiencies"; and "the Board does not intend for earnings sharing mechanisms to form part of the IR plans." (pg 28) Consequently, earning sharing is not a feature of the Company's IR proposal.

Nevertheless, the Company recognizes that so called "over-earning" is a key sensitivity for stakeholders and the Company is prepared to consider an earning sharing mechanism in the context of negotiations for a complete settlement of the issues of this application.

Witnesses: R. Campbell

# **DIRECT ENERGY INTERROGATORY #1**

# INTERROGATORY

Please describe how the Generic QRAM Review and the System Gas Cost Allocation Review contemplated by the Board for 2007/2008 and any potential changes to processes, commodity risk or costs arising from those proceedings will be dealt with within the context of the Incentive Regulation plan proposed by your company.

# **RESPONSE**

While it is too early to speculate regarding the outcomes of the noted review proceedings, the Company can state that it will participate in these (and any other related) proceeding(s), as required, and will comply fully with any Board Decision(s) or directive(s) that result.

The current QRAM process, that was predicated on the ongoing Cost of Service regulation that prevailed during its development, presumes that the Company's year over year incremental gas costs associated with upstream transportation, storage and supply mix costs relative to the Company's test year volumetric forecast have been included in its forecast of gas cost charged to operations and thereafter, included in the test year's base rates. It is the Company's intent to establish a forecast supply and transportation portfolio for the upcoming year which would form the basis of the determination of the January Utility Price. The three subsequent quarterly price changes would be based upon that initial supply and transportation portfolio and the price change would be treated in accordance with the QRAM methodology. In order to maintain this established procedure, the Company has proposed in its evidence at Exhibit B, Tab 1, Schedule 1, page 17, that these costs be incorporated into its 2008 base rates as a Y factor.

There are other components of the current QRAM process for which the Company cannot speculate as to the resolution of the mechanics for their inclusion in the filing of its January 1, 2008 QRAM, and subsequent QRAM filings' evidence. For example, the current QRAM process utilizes a capital structure and rate base (under a given set of rules in a forward test year, with or without a Board Decision)<sup>1</sup>, however, the Revenue per Customer Cap model as proposed by the Company, or the Price Cap model

Witnesses: R. Bourke

<sup>&</sup>lt;sup>1</sup> Please refer to the "Quarterly Rate Adjustment Mechanism" evidence filed in the Company's QRAM filings. For example, Exhibit Q2-1, Tab 2, Schedule 1, Appendix A (para. #9) filed 02-Mar-2007 in EB-2007-0049.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 4 Schedule 1 Page 2 of 2

proposed by Union Gas, does not provide for a forecast of either of these Cost of Service related components. As well, the mechanics of the working cash allowance, gross return component, forecast inventory balance and other items inherent in the QRAM filing may need to be revisited as the QRAM process evolves during the incentive rate making period.

#### **ENERGY PROBE INTERROGATORY #4**

## **INTERROGATORY**

Ref: EB 2005-0001, Decision With Reasons

Issue 14.1 Are there adjustments that should be made to base year revenue requirements and/or rates?

In the Decision With Reasons in EB 2005-0001, the Board provided the following direction on page 13:

- 2.2.17 Accordingly, the Board will approve a capital budget which is equivalent to the average for the five years 2001 to 2005 with an additional amount of \$50 million to provide for the contingencies suggested by Enbridge in its evidence and general inflationary pressures. The total approved capital budget will therefore be \$300 million.
- 2.2.18 In approving this budget amount, the Board leaves it to Enbridge's management to determine which projects it will pursue in the Test Year and at what pace it will pursue them. If the Company decides to accelerate the bare steel and cast iron mains replacement program, the Board would anticipate that claims for subsequent years would be reduced commensurately.
- a) Please indicate annual spending on bare steel and cast iron replacement program addition for each of the last 5 years.
- b) Please provide the forecasted annual cost over the PBR period.

## **RESPONSE**

#### **ENERGY PROBE INTERROGATORY #5**

## **INTERROGATORY**

Ref: EB-2006-0034, Decision With Reasons

Issue 14.1 Are there adjustments that should be made to base year revenue requirements and/or rates?

In the previous rates case of the Applicant, EB-2006-0034, Gas Supply Risk Management was Issue 3.10, posed to the Board as "Is the continuation of the Risk Management Program appropriate in the context of the Board's 2006 Decision Directives?"

In the Board's Decision With Reasons – Phase I, issued on July 5, 2007, in the penultimate paragraph on Page 46, the Board ordered the Applicant to end the program with the following directive:

For all of the above reasons, The Board directs the Company to cease its risk management program as soon as practical.

Given that the Decision With Reasons was issued half way through 2007, and the direction of the Board ordered the program to end "as soon as practical":

- a) Please provide the OM&A cost of the Risk Management Program for 2007, including any wind down costs.
- b) Please provide the amount included in the 2007 revenue requirement to recover commodity Risk Management Program costs.
- c) Is it anticipated by the Applicant that there will be any Risk Management Program OM&A costs which will be incurred in 2008 and beyond as part of the wind down of the program? If so, please detail this cost outlook.

## **RESPONSE**

a) As per Board Staff Interrogatory # 36 in EB-2006-0034 (Exhibit I, Tab 1, Schedule 36, page 1) the incremental O&M costs for Risk Management in 2007 is \$170,000 which was based upon one analyst FTE and an allocation of the O&M costs of others including members of the Risk Management Committee and is based upon one meeting per month. There are no anticipated wind down costs. In the 2007 Rate Case, the Company and Intervenors agreed to an overall O&M spending limit as part

Witnesses: P. Hoey

D. Small

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 5 Schedule 5 Page 2 of 2

of the settlement in EB-2006-0034 which allowed the Company to manage its entire operation in 2007. A specific adjustment to an O&M established as an overall envelope, for use inside of an incentive mechanism on a go forward basis, is therefore, unwarranted.

- b) The approximate 2007 revenue requirement is \$170,000 as mentioned in part a).
- c) There are no anticipated O&M costs for the Risk Management Program for 2008 and beyond.

The Company's view is that a specific adjustment for any O&M item established as part of an overall envelope, to form the baseline for incentive regulation would be inappropriate. The Company is not requesting any changes to 2007 rates which will form the base for incentive regulation in 2008 and beyond.

Witnesses: P. Hoey

D. Small

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 6 Schedule 2 Page 1 of 1

#### **GEC INTERROGATORY #2**

## **INTERROGATORY**

Issue Number: 4.2

Issue: Declining Average Use Calculation

We understand that the company proposes to continue to rely upon the LRAM that is part of the current 2007-2009 DSM framework. If so, how does the company propose to reflect declining average use in the I.R. formula in a manner that is consistent with the maintenance of an LRAM (i.e. that does not double count the volume reduction and revenue impact of DSM)?

## **RESPONSE**

Consistent with previous rate case filings, the Test Year DSM Volume Budget is included into the Test Year Volume Budget for setting test year rates. On the other hand, the LRAM account is a variance account in the current actual year by recording the amount of distribution margin gained or lost when the Company's actual DSM programs are less or more successful than the test year budgeted. Consequently, with the maintenance of the LRAM account the test year budget does not double count the volume reduction and revenue impact of DSM either during Cost of Service or the proposed IR framework. This is one of the reasons why the Company does not propose any new balancing account as the Company already proposes to maintain certain deferral and variance accounts during the IR plan as filed at Exhibit B, Tab 5, Schedule 1.

Witnesses: I. Chan T. Ladanvi

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 6 Schedule 3 Page 1 of 1

#### **GEC INTERROGATORY #3**

## <u>INTERROGATORY</u>

Issue Number: 5.1 & 5.2

Issue: Y factors and criteria for disposition

- a) Does the company agree that an LRAM is not needed under a revenue cap I.R. framework?
- b) Does the company agree that if an LRAM is maintained under a revenue cap I.R. framework any balancing account that seeks to maintain revenue levels within the level allowed must adjust for LRAM revenue? If so how will the time lag in finalizing the LRAM amount be handled?

## RESPONSE

- a) Disagree. Please see the response to Green Energy Interrogatory #2, at Exhibit I, Tab 6, Schedule 2.
- b) Agree. The time lag in finalizing the LRAM will be handled exactly same as the current mechanism under the Cost of Service framework.

Witnesses: I. Chan T. Ladanyi

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 6 Schedule 5 Page 1 of 1

#### **GEC INTERROGATORY #5**

## **INTERROGATORY**

Issue Number: 12.3.1

Issue: What should be the criteria for changes in rate design?

- a) Does EGDI propose to increase the fixed component of rates during the I..R. term?
- b) What limits is the company proposing on its flexibility to adjust the split between the fixed and variable components of rates?
- c) Does the company agree that decreasing the variable component of rates reduces the customers' incentive to conserve gas?
- d) Does the company agree with the Board Staff proposal that "Demand Side Management activities should be encouraged" by an I.R. Plan?

## **RESPONSE**

- a) and b) Please refer to the Company's response to Board Staff's Interrogatory #25, at Exhibit I, Tab 1, Schedule 25.
- c) Energy conservation is a function of several factors such as economic conditions, the Company's DSM activities, and total energy cost (commodity, load balancing, and distribution charges) paid by a customer. Based on current commodity prices, customer charge, and delivery rates, for a typical system gas residential customer, the total annual gas bill is approximately \$1,564.00. Out of this amount, the annual customer charge is \$142.60. Hence, fixed distribution charges are less than 10% of a customer's total annual gas bill. Over 90% of customer's gas bill is variable; the customer still has strong incentive for energy conservation. In the Company's view, a change in fixed distribution charges will not materially impact ratepayer's conservation efforts. Moreover, by opting for Revenue per Customer Cap, the Company has attempted to ensure that there is no disincentive for the utility to continue to focus on energy conservation.
- d) The Company agrees with the Board Staff that "Demand Side Management" should be encouraged. Enbridge Gas Distribution's application for Revenue per Customer cap is compatible with this objective.

Witnesses: J. Collier

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 7 Schedule 3 Page 1 of 1

## BOMA, LPMA, AND WGSPG INTERROGATORY #3

## **INTERROGATORY**

Ref: Exhibit B, Tab 2, Schedule 1, page 3

Issue Number: 2.3

Issue: How often should the Board update the inflation factor?

- a) Please explain why the final factor in the formula is AG<sup>Q3</sup><sub>TestYear-1</sub> when the footnote on page 2 indicates that the Q2 value of the index would be available at the time of filing.
- b) Given that the Q3 value of the index would not be available until late November, is Enbridge proposing that the filing be updated to reflect the Q3 values, or should the final factor in the equation read  $AG^{Q3}_{TestYear-2}$ ?

## **RESPONSE**

a) Please refer to the corrected evidence filed with the Board on August 9, 2007. For ease of reference the corrected formula is presented below:

$$I_{\textit{TestYear}} = \frac{1}{4} \Big( AG_{\textit{TestYear}-1}^{\textit{Q2}} + AG_{\textit{TestYear}-1}^{\textit{Q1}} + AG_{\textit{TestYear}-2}^{\textit{Q4}} + AG_{\textit{TestYear}-2}^{\textit{Q3}} \Big)$$

b) Please refer to response a) above.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 7 Schedule 5 Page 1 of 2

#### BOMA, LPMA, AND WGSPG INTERROGATORY #5

#### INTERROGATORY

Ref: Exhibit B, Tab 3, Schedule 1, Table 8

Issue Number: 3.2

Issue: What are the appropriate components of an X factor?

- a) Please replicate Table 8 using a discount rate equal to Enbridge's weighted average cost of capital that resulted from the EB-2006-0034 Decision.
- b) Assuming a discount rate of 10%, what is the projected benefit per year (in place of the \$265,000 used in the example) that would result in a NPV of \$0 in Scenario B for the Company?
- c) Does the example provided take into account the potential tax impact such as a reduction in income to reflect the original \$1 million expense, or the CCA on such an expense if it is capital in nature, in the analysis?

#### RESPONSE

- a) Please see the response to SEC Interrogatory #33, at Exhibit I, Tab 11, Schedule 33.
- b) For the illustration presented in Table 8, the benefit that would result in a NPV of \$0 in Scenario B for the Company is \$276,517.28 per year. This is shown in the table below. It can be seen that without the stretch factor, the NPV for the Company is positive, however, with the stretch factor, there is no benefit for the Company. Here again, as in all cases where a stretch factor is considered, the result is an increase in the customer share of benefits at the expense of the Company share of benefits.

However in this case there would be no benefits to either customer or shareholder since the investment would not take place.

c) No, the example does not take into account potential tax impacts. The illustration provided at Table 8 was merely that: an illustration. The specific inputs chosen were chosen for simplicity's sake. Of course choosing different input numbers will change the results, however, this doesn't change the fact that, all else equal, a stretch factor limits the Company's ability to invest in productivity-enhancing projects. This is especially true for the Company whose capital budget is constrained by large special projects and significant capital requirements for safety and integrity projects, reinforcements and customer attachments.

Witnesses: S. Kancharla

M. Lister

#### BOMA, LPMA, AND WGSPG INTERROGATORY #7

#### INTERROGATORY

Ref: Exhibit B, Tab 3, Schedule 1, page 37

Issue Number: 8.1

Issue: What is the appropriate plan term for each utility?

- a) If the company is concerned about the potential compounding of the risks associated with reduced output and increased input requirements going forward, why is Enbridge proposing a five year term?
- b) If the term plan was three years, would the compounding problem be as severe as with a five year plan?

## **RESPONSE**

The Company considers a 5 year term to be essential as productivity improvements take time to plan, to implement, and for their impacts to be realized. This is particularly the case for capital expenditure programs. The impacts of increased input/reduced output can be accommodated by the other features of the plan, including X factor calibration, volume forecast and customer addition forecast etc.

Witnesses: R. Campbell

P. Hoev

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 7 Schedule 8 Page 1 of 1

#### BOMA, LPMA, AND WGSPG INTERROGATORY #8

#### INTERROGATORY

Ref: Exhibit B, Tab 4, Schedule 1, page 3 - 4

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

The evidence indicates that an IR model provides shareholders with no incentive to invest any capital in the business than the minimum amount to maintain total rate base at the approved 2007 levels.

- a) What is the incentive to the shareholder to maintain rate base at 2007 levels as compared to letting rate base decline, thereby earning a higher return on equity?
- b) Does Enbridge believe that it would increase capital spending near the end of the IR term in order to increase rate base in time for the COS rebasing? If not, why not?

#### **RESPONSE**

- a) The incentive is to maintain rate base at 2007 levels to avoid the prospect of lower earnings, at the time of rate rebasing due to overall lower rate base.
- b) A regulatory regime that has an IR plan coupled with robust rebasing at the end of the plan has the effect of discouraging capital investment early in the plan and encouraging capital investment towards the end of the plan. However, the Board in the *Natural Gas Forum Report* indicated it would be interested in "the timing of capital expenditures and the associated impacts on shareholders and customers". (p. 26) The Company will respond to the incentives provided by the regulatory regime.

## BOMA, LPMA, AND WGSPG INTERROGATORY #9

#### INTERROGATORY

Ref: Exhibit B, Tab 4, Schedule 1, page 5

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

The evidence states that currently a residential customer attachment will take approximately 12 years to observe the cross-over from revenue deficiency to revenue sufficiency.

Based the average cost of approximately \$2,500 of capital expenditure per attachment, please provide the associated total cost of service associated with this attachment, including the O&M expenditures of \$70 per year, depreciation, return on capital, capital taxes, income taxes and any other component of the cost of service. Please show the above costs separately and identify all assumptions used in their calculation.

## **RESPONSE**

Please refer to the response to Board Staff Interrogatory #17, at Exhibit I, Tab 1, Schedule 17.

Witnesses: S. Kancharla

## BOMA, LPMA, AND WGSPG INTERROGATORY #10

#### INTERROGATORY

Ref: Exhibit B, Tab 4, Schedule 1, page 5

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

The evidence states that during the first 12 years the investor is earning less than the allowed COS equivalent ROE.

- a) Given that rates are set in COS to earn the ROE, does this mean that after the first 12 years in the example provided, the investor is earning more than the allowed COS equivalent ROE? If not, why not?
- b) What portion of Enbridge's current residential customers have been customers for more than 12 years?
- c) Are the customers that were added more than 12 years ago providing the shareholder with a return above the COS ROE determined in the 2007 rates proceeding? Please explain.

#### RESPONSE

- a) For the illustration provided and according to the DCF analysis as per EBO 188 guidelines, the investor notionally earns more than allowed COS equivalent ROE after the first 12 years. In typical project analysis this is expected to recover the lower ROE in previous years and have an overall project profitability index close to 1.0.
- b) During the past 12 years, between 1995 and 2006, an average of 91% of the Company's total customers are residential customers. See also the response to SEC Interrogatory #10, at Exhibit I, Tab 11. Schedule 10.
- c) Please refer to CCC Interrogatory #22, at Exhibit I, Tab 3, Schedule 22.

Witnesses: S. Kancharla

T. Ladanyi

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 7 Schedule 12 Page 1 of 1

## BOMA, LPMA, AND WGSPG INTERROGATORY #12

#### INTERROGATORY

Ref: Exhibit B, Tab 4, Schedule 1, page 9

Issue Number: 5.1

Issue: What are the Y factors that should be included in the IR plan?

The evidence states that for any incremental non-revenue generating capital investment during IR the Company earns zero ROE during the IR period.

- a) Please confirm that some non-revenue generating capital investments will reduce O&M costs and/or increase productivity.
- b) Please confirm that non-revenue generating capital investments qualify for capital cost allowance that results in reductions in come tax.
- c) Please provide all the assumptions used to conclude that the company earns zero ROE during the IR period on any incremental non-revenue generating capital investment.

## <u>RESPONSE</u>

- a) The illustration of \$100 million capital additions is to demonstrate the impact of non-revenue generating capital investment during IR. It is possible that nonrevenue generating capital investments may not reduce O&M costs and may only prevent increased O&M costs. This is true for many safety and reliability investments. In the financial analysis "avoided costs" are difficult to incorporate. Even if there are O&M reductions, these could be marginal over the IR plan period and this is expected as utility investments are made on long term horizon basis.
- b) Confirmed. Please refer to the response to BOMA, LPMA, and WGSPG Interrogatory #11 c, at Exhibit I, Tab 7, Schedule 11.
- c) The assumptions are that these capital investments are non-revenue generating and have no change in O&M costs.

Witnesses: S. Kancharla

## BOMA, LPMA, AND WGSPG INTERROGATORY #16

#### INTERROGATORY

Ref: Exhibit B, Tab 4, Schedule 2

Issue Number: 5.2

Issue: What are the criteria for disposition?

Is Enbridge proposing how the proposed Y factors for DSM program costs and CIS/Customer Care costs should be allocated among rate classes or would this be proposed as part of the annual filings? Please explain how this process would work.

## **RESPONSE**

The Company is going to determine revenue requirement for DSM and Customer Care costs based on respective settlement agreements as shown within Exhibit C, Tab 4, Schedule 1, filed on September 4, 2007. Once revenue requirement is established, the Company is proposing to use existing cost allocation and rate design principles and conventions to recover these costs from customer classes. As outlined in the pre-field evidence at Exhibit B, Tab 6, Schedule 1, the Company is proposing to file such information for Board approval as part of the annual rate filing process.

Witnesses: R. Bourke

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 7 Schedule 17 Page 1 of 1

#### BOMA, LPMA, AND WGSPG INTERROGATORY #17

## **INTERROGATORY**

Ref: Exhibit B, Tab 5, Schedule 1, page 15

Issue Number: 6.1

Issue: What are the criteria for establishing Z factors that should be included in the IR

plan?

a) Is the 2008 Municipal Permit Fees Deferral Account a Y factor or Z factor adjustment in the Enbridge proposal?

b) Union Gas has proposed that permit fees be a Z factor. If Enbridge is proposing that permit fees be a Y factor, please explain why Enbridge it has been classified as a Y factor instead of a Z factor.

## **RESPONSE**

Z factors may or may not occur within the term of the plan. If a Z factor event occurs, provision will be made to account for the Z factor costs so that it can be determined if the Z factor cost threshold is reached. Y factors are known events and their costs are reviewed on an annual basis.

The new municipal permit fees fall within the definition of a Z factor. Since the Company was aware of the event at the time of making this application, it has provided for the tracking of costs in the proposed 2008 Municipal Permit Fees Deferral Account ("MPFDA"). The MPFDA is an account related to a Z factor event.

## BOMA, LPMA, AND WGSPG INTERROGATORY #18

#### INTERROGATORY

Ref: Exhibit B, Tab 6, Schedule 1, page 1

Issue Number: 12.1.1

Issue: What should be the information requirements?

In the absence of cost allocation information, what type of supporting documentation will Enbridge file to support how rates would be adjusted to reflect the overall distribution revenue requirement?

#### RESPONSE

Enbridge Gas Distribution is proposing to file rate setting information annually by October 1<sup>st</sup> for each year of the IR plan term as outlined in the pre-filed evidence at Exhibit B, Tab 6, Schedule 1.

Witness: A. Kacicnik

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 7 Schedule 19 Page 1 of 1

## BOMA, LPMA, AND WGSPG INTERROGATORY #19

## **INTERROGATORY**

Ref: Exhibit B, Tab 6, Schedule 1, page 3

Issue Number: 2.4.2

Issue: If not, what should be the criteria for adjusting these charges?

- a) Please explain why the company believes there would be no requirement for a formal hearing?
- b) Please confirm that the distribution revenue requirement is net of any revenues generated from miscellaneous and non-energy service charges.
- c) is the revenue requirement that is included in the revenue per cap formula based on the total revenue requirement of the company or the revenue requirement net of all costs associated with miscellaneous and non-energy service related costs?

#### RESPONSE

- a) The Company is proposing to seek approval for the changes and will provide the Board with supporting evidence. However, given these are miscellaneous and non-energy services and outside the IR plan, the Company expects that there would be no requirement for an extensive review or a formal hearing. In the Company's view, resource requirements, a long timeline associated with and the cost of a formal hearing would be incompatible with the size / nature of the approvals required. The Company expects the Board would be able to review and approve any proposed changes or new non-energy services in a timely manner.
- b) The distribution revenue requirement, as determined under the Cost of Service regime, is net of costs and revenues associated with miscellaneous and non-energy services.
- c) The derivation of the test year (i.e. 2008) distribution revenue requirement is based on the previous year (i.e. Board-approved 2007) distribution revenue requirement, which is net of costs and revenues associated with miscellaneous and non-energy services.

Witness: A. Kacicnik

## BOMA, LPMA, AND WGSPG INTERROGATORY #20

#### INTERROGATORY

Ref: Exhibit B, Tab 7, Schedule 1

Issue Number: 13.1

Issue: What information should the Board consider and stakeholders be provided with at

the time of rebasing?

Enbridge proposes that the only cost of service information provided to the Board and other stakeholders at the time of rebasing be the historical year (2011), the bridge year (2012) and the test year (2013). In order to evaluate the trends, efficiencies, failures and successes associated with the IR plan, stakeholders may need to see historical data at the same level of detail as currently required under the Board's Minimum Filing Requirements for 2007 through 2011.

- a) Is there any reason why this information could not be assembled each year when the results for the previous year are available and made available to parties?
- b) Would this not ensure to the Board and to all stakeholders that this information would be available to them at the time of rebasing?
- c) Would this not have the potential to substantially reduce the number of interrogatories requesting historical information and trends over the IR plan term?

## <u>RESPONSE</u>

EGD believes its proposal for the provision of information upon rebasing and annual information reporting required by the Board during an incentive term is sufficient.

As stated in response to interrogatories from, Board Staff Interrogatory #27 and IGUA Interrogatory #28, the Company believes that the accumulation of detailed Cost of Service type information and the review, analysis, and questioning of such information throughout the IR term or at the end of the term is counter to a premise of incentive regulation.

If a key principle and expectation of an incentive regulation plan is to incent the regulated Company to find ways to improve efficiencies by doing things differently than

Witnesses: K. Culbert

P. Hoey A. Kacicnik

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 7 Schedule 20 Page 2 of 2

within a Cost of Service model, then the Company's position is that all stakeholders should expect a reduced reliance on costly, detailed, time consuming scrutiny of cost of service type information.

EGD believes that a certain level of information reporting to stakeholders is necessary within and at the end of an incentive plan. However, a continued mindset that Cost of Service type results and information reviews are expected to be an appropriate measurement tool is contradictory to the principles and a decision to set rates through an incentive mechanism.

Witnesses: K. Culbert

#### OAPPA INTERROGATORY #1

## **INTERROGATORY**

1. Ref: EGDI Exhibit B, Tab1, Schedule 1, pages 4-5, para. 11-12

Issue No.1.1

Issue: What are the implications associated with a revenue cap, a price cap and other alternative multi-year incentive ratemaking frameworks?

EGDI states it accepts the principles of rate predictability and stability and a clear rate adjustment mechanism for a multi-year incentive ratemaking plan.

- a. Please explain how EGDI's revenue cap proposal satisfies these two principles.
- b. In EGDI's view, with respect to satisfying these two principles what are the advantages and disadvantages of a revenue cap versus a price cap?
- c. Please explain how the concept of rate re-design during the term of a revenue cap plan is consistent with the principle of rate predictability and stability?

#### RESPONSE

With the Company's proposal, rates can be expected to increase as they have under Cost of Service regulation as a function of the growth in the number of customers, inflation, and the impact of declining average use. These are the major forces that will affect rates over the next five years. The Company's proposal includes an annual process to review volume and customer addition forecasts. This improves transparency, as compared to a rate cap.

The annual adjustment to reflect volumes, customer growth, and rate redesign also assists customers by helping to ensure that rates are just and reasonable, on a rate class basis, throughout the term of the plan. Because these annual adjustments are not features of a price cap, the rate adjustments on rebasing can be expected to be more significant in a price cap model than a revenue cap.

Witnesses: R. Campbell

P. Hoey

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 8 Schedule 2 Page 1 of 1

## OAPPA INTERROGATORY #2

## **INTERROGATORY**

2. Ref: EGDI Exhibit B, Tab 1, Schedule 1, page 13, para. 31

Issue No. 1.1

Issue: What are the implications associated with a revenue cap, a price cap and other alternative multi-year incentive ratemaking frameworks?

EGDI indicates that with its revenue cap proposal there is "more regulatory process than a five year index". Please explain.

#### RESPONSE

The Company's proposal provides for an annual review of volumes and customer additions. As compared to the rate or revenue indexes proposed by PEG, the Company's proposal improves transparency.

Witnesses: R. Campbell

P. Hoey

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 8 Schedule 3 Page 1 of 1

#### **OAPPA INTERROGATORY #3**

## **INTERROGATORY**

3. Ref: EGDI Exhibit B, Tab 1, Schedule 1, page 17, para. 39

Issue No. 5.1

Issue: What are the Y factors that should be included in the IR plan?

- a. Please explain how EGDI's proposal for a revenue cap will affect the EB-2006-0034 settlement of Issue 6.4 with respect to the treatment of the Tservice credit (Exhibit N1, Tab 1, Schedule 1, page 40)?
- b. What is the current estimate of the period of time over which the treatment of the T-service credit referenced in (a) will be required?

## **RESPONSE**

a and b) As outlined in the EB-2006-0034, Settlement Proposal at Issue 6.4, the Company will continue to charge and rebate the T-service credit to Ontario T-Service customers until such time as the new CIS billing system is in place. The proposed revenue cap per customer incentive regulation model has no impact on the Company's proposed treatment of the T-service credit. The Company is forecasting the new billing system will be in place by the middle of 2009.

#### **OAPPA INTERROGATORY #4**

#### **INTERROGATORY**

4. Ref: EGDI Exhibit B, Tab 6, Schedule 1, pages 2-3, para. 4-6

Issue No. 12.2.1

Issue: What should be the criteria to implement a new energy service?

EGDI explains it supports having the flexibility during the term of its revenue cap plan to develop new services.

- a. Please list and describe all new energy services that EGDI anticipates may be required over the term of the incentive ratemaking plan.
- b. What specific criteria will EGDI use to decide whether or not a new energy service should be implemented?

## **RESPONSE**

a) and b) Please see Enbridge Gas Distribution's response to Coral Energy Interrogatory #1 (Exhibit I, Tab 15, Schedule 1).

Witnesses: J. Collier
A. Kacicnik

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 8 Schedule 5 Page 1 of 1

#### **OAPPA INTERROGATORY #5**

#### **INTERROGATORY**

5. Ref: EGDI Exhibit B, Tab 6, Schedule 1, pages 2-3, para. 4-6

Issue No. 12.3.1

Issue: What should be the criteria for changes in rate design?

EGDI explains it supports having the flexibility during the term of its revenue cap plan to make any necessary changes to existing services when required.

- a. Please list and describe all specific changes or areas of change to existing rate schedules, including rate design and terms and conditions of service, that EGDI anticipates it may be required to make during the term of the incentive ratemaking plan. Provide the rationale for each.
- b. What specific criteria will EGDI use to decide whether or not the changes are necessary?

## **RESPONSE**

a) and b) As outlined in response to Coral Energy Interrogatory #1 (Exhibit I, Tab 15, Schedule 1), the Company is proposing to modify its existing Rate 135 rate schedule as part of the 2008 rate case. This change is not the result of the proposed revenue cap per customer regulation model but rather is being done to address Rate 135 customers' preferences for gas supply arrangements.

If rate-related changes are minor in nature and customer impacts are minimal, the Company is proposing that the Board's approval process be included as part of the annual rate setting filing. However, if the rate-related changes are significant and warrant a longer review period, the Company is proposing to file a separate rate change application. This approach reflects the Board Staff's recommendation in its Discussion Paper (p. 20).

Witnesses: P. Hoey

A. Kacicnik

Filed: 2007-09-07 EB-2007-0615 Exhibit I Tab 8 Schedule 6 Page 1 of 1

#### **OAPPA INTERROGATORY #6**

#### **INTERROGATORY**

6. Ref: EGDI Exhibit B, Tab 6, Schedule 1, pages 2-3, para. 7

Issue No. 12.3.2

Issue: How should the change in the rate design be implemented?

EGDI proposes that if rate-related changes are minor and customer impacts minimal, then the changes could be included in the annual rate-setting filing. If they are more significant in nature and require a longer review period, then a separate application may be required.

- a. Please provide examples of what EGDI considers to be minor changes and those that would be more significant.
- b. What criteria does EGDI propose to use to determine if a change could be included in the annual rate-setting filing or if it requires a separate application? Please explain how each criterion will contribute to determining the appropriate filing.

### **RESPONSE**

a) and b) As outlined in the Company's evidence, if the rate related changes have a minimal impact on customers within a rate class or among customer rate classes then Enbridge would propose to file the proposed change within its annual ratesetting filing. Examples may include changes to the terms and conditions of service or rate schedules to enhance clarity or presentation.

The Company would anticipate a separate application for the rate changes such as the introduction of a new rate class or service for bundled or unbundled rates, or a change to the blocked rate structures.

## POLLUTION PROBE INTERROGATORY #1

#### INTERROGATORY

Reference: Enbridge Exhibit B, Tab 4, Schedule 1 & 2

Issue Number: 5

Issue: Y Factors (re: System Expansion)

Please state Enbridge's number of in-franchise new customer additions during each of the last five years.

## RESPONSE

Please see <u>Table 1: Comparison of Gross Customer Additions and Average Cost per Customer Addition</u> presented in the response to CCC Interrogatory #3 at Exhibit I, Tab 3, Schedule 3.

Witnesses: I. Chan

T. Ladanyi

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 9 Schedule 2 Page 1 of 1

## POLLUTION PROBE INTERROGATORY #2

#### INTERROGATORY

Reference: Enbridge Exhibit B, Tab 4, Schedule 1 & 2

Issue Number: 5

Issue: Y Factors (re: System Expansion)

Please state Enbridge's number of in-franchise new customer additions in 2006 for whom the net present value of their discounted cash flows is forecast to be positive in:

a) year 1;

b) year 2;

c) year 3;

d) year 4; and

e) year 5

#### **RESPONSE**

In-franchise customer additions are evaluated using Personal Computer Capital Requisition ("PCCR") model. This model evaluates these projects based on their long-term feasibility using Net Present Value ("NPV") and Profitability Index ("PI"). The time horizon used for such evaluation is 40 years for residential and commercial and 20 years for industrial customers. For the projects approved in 2006, the Company has a record of their long-term NPV and not year over year NPV. Therefore, the information regarding the numbers of customers with positive NPV in each of the first five years is not available.

Witnesses: T. Ladanyi

S. Kancharla

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 9 Schedule 3 Page 1 of 2

#### POLLUTION PROBE INTERROGATORY #3

#### **INTERROGATORY**

Reference: Enbridge Ex. B, Tab 4, Schedule 1, p. 12

Issue Number: 5

Issue: Y Factors (re: System Expansion)

- a) Please state Enbridge's forecast number of new customer additions in 2008 assuming a continuation of the status quo cost of service regulatory framework.
- b) Assuming a continuation of the status quo cost of service regulatory framework, please state Enbridge's forecast number of new customer additions in 2008 for whom the net present value of their discounted cash flows is forecast to be positive in:
  - i. year 1;
  - ii. year 2;
  - iii. year 3;
  - iv. year 4; and
  - v. year 5.
- c) Assuming the OEB approves Enbridge's proposed incentive regulation framework and assuming the same number of customer additions as provided in your response to part (a) of this question, please state Enbridge's forecast number of new customer additions in 2008 for whom the net present value of their discounted cash flows is forecast to be positive in:
  - i. year 1;
  - ii. year 2;
  - iii. year 3;
  - iv. year 4; and
  - v. year 5.

#### **RESPONSE**

a) New customer additions forecast for 2008 is 44,534

Witnesses: T. Ladanyi

S. Kancharla

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 9 Schedule 3 Page 2 of 2

b) The Company does not develop a Net Present Value ("NPV") forecast related to the new customer additions. Most of the new customer additions are part of big projects comprising of a mix of residential, commercial, and industrial customers. The Company evaluates these projects as a whole and not by individual customers. Therefore, the Company can not provide a forecast of the number of customers with positive NPV in each of the first five years.

c) Please refer to the response to b) above.

Witnesses: T. Ladanyi

S. Kancharla

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 1 Page 1 of 1

#### SEC INTERROGATORY #1

#### **INTERROGATORY**

Issue 1.1 What are the implications associated with a revenue cap, a price cap, and other alternative multi-year incentive ratemaking frameworks?

[B/1/1/1] Please confirm that, in Enbridge's view, a revenue cap plan will provide greater incentives for the utility to implement productivity improvements than a revenue cap plan. If that is not the case, please describe differences in the level of productivity incentives between price cap and revenue cap methods.

#### **RESPONSE**

Whatever the intent of this question, it is the Company's view that the relative incentive power of a rate cap plan or a revenue cap plan can only be judged when the specific parameters of each plan are considered.

Witnesses: R. Campbell

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 11 Schedule 2 Page 1 of 1

#### **SEC INTERROGATORY #2**

#### INTERROGATORY

Issue 1.1 What are the implications associated with a revenue cap, a price cap, and other alternative multi-year incentive ratemaking frameworks?

Union notes that revenue cap plans have more volatile rates as compared to price cap plans. Does Enbridge agree? Please describe, and if possible quantify, the impact of Y factors and Z factors on the stability and predictability of rates during a revenue cap per customer plan.

#### **RESPONSE**

Y factors and Z factors may be features of both a revenue cap or a price cap. A price cap without Y or Z factors and without an adjustment for declining average use would tend to have more predictable rates than a revenue cap without since volume impacts are not taken into account in the price cap.

Witnesses: R. Campbell

P. Hoev

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 3 Page 1 of 1

## **SEC INTERROGATORY #3**

#### INTERROGATORY

Issue 1.1 What are the implications associated with a revenue cap, a price cap, and other alternative multi-year incentive ratemaking frameworks?

[B/1/1/4] Please describe the impact of giving the principles set forth in the Discussion Paper "equal weighting". Please confirm that, for example, this implies that "encouraging investment in infrastructure required to maintain safety and reliability" has the same importance as "facilitating system expansion into new communities".

#### **RESPONSE**

Please refer to the response to IGUA Interrogatory #8 at Exhibit I, Tab 17, Schedule 8.

Witnesses: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 4 Page 1 of 1

#### **SEC INTERROGATORY #4**

#### INTERROGATORY

Issue 1.1 What are the implications associated with a revenue cap, a price cap, and other alternative multi-year incentive ratemaking frameworks?

[B/1/1/5] Please confirm that Enbridge will assess the ultimate incentive regulation rules determined by the Board and make its operating decisions within those rules to maximize the benefit to Enbridge's shareholder.

#### **RESPONSE**

Enbridge Gas Distribution will assess the incentive regulation plan approved by the Board and make its operating decisions in order to optimize the benefit to the shareholder and all other stakeholders. That is, the Company will seek to make sustainable productivity improvements in order to improve ROE. Management has set an ROE target of 50 to100 basis points over the allowed level, on average over the term of the plan.

Witnesses: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 5 Page 1 of 1

## **SEC INTERROGATORY #5**

#### **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

Please describe how the nature of the incentive regulation formula relates, if at all, to Enbridge's willingness to continue to be an active community participant. Please describe what aspects of a IR formula would, if implemented, cause Enbridge to stop its community activities.

#### **RESPONSE**

The parameters of the approved IR plan and the business conditions experienced by the Company during the plan will determine the revenues that will be available for annual budgets for all projects and programs.

Witnesses: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 6 Page 1 of 1

## **SEC INTERROGATORY #6**

#### INTERROGATORY

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/3] Please confirm that Enbridge's proposed revenue cap model would adjust annual revenue requirement by five factors, as follows:

- a. Inflation
- b. Number of customers
- c. Y factors and other flow-through items
- d. Z factors
- e. Changes in normalized average use per customer

## **RESPONSE**

Yes, revenue requirement would be adjusted as a function of the following terms:

- a. inflation x
- b. total number of customers
- c. Y factors and other flow-through items
- d. Z factors, if they occur

No, revenue requirement would not be adjusted to reflect average use:

e. Volume impacts, including average use, would be considered in determining rates.

Witness: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 8 Page 1 of 1

#### **SEC INTERROGATORY #8**

#### **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/6] Please confirm that, in the event that, as a result of the form of incentive regulation ordered by the Board for Enbridge, Enbridge believes it will be unable, in any year, to achieve its target ROE of 8.39%, it will reduce its system expansion activities sufficiently to achieve that target ROE.

#### **RESPONSE**

The Company will not plan to earn less than the allowed ROE of 8.39%. Its target is to earn an additional 50 to100 basis points on average, over the term of the plan. If the features of the Board approved plan and the circumstances of the Company's operations in any given year within the plan dictate, the Company may plan to reduce new customer attachments, among other actions, in order to achieve the planned ROE.

Witnesses: R. Campbell

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 9 Page 1 of 1 Plus Appendix

# **SEC INTERROGATORY #9**

#### INTERROGATORY

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/6] Please provide a detailed calculation showing the incremental annual costs (including capital, operating, tax, return, and other costs) and incremental revenues associated with each customer attachment on a lifecyle basis, ie. from the year of attachment for a minimum of 40 years. If possible, please disaggregate this calculation by type of attachment (e.g. residential, small commercial, etc.) on whatever basis is most useful for the Board.

## RESPONSE

Refer to Board Staff Interrogatory #17 at Exhibit I, Tab 1, Schedule 17 for residential customer calculation. Refer to appendix for small commercial customer calculation.

Witness: S. Kancharla

## **SEC INTERROGATORY #10**

#### **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/6] Please provide a breakdown by vintage of current customers, ie. the number of years since each customer was initially attached, broken down by rate class.

## **RESPONSE**

Please see the table below for vintage data related of the Company's Rate 1, Revenue Class 20 customer class. Revenue Class 20 refers to those customers that use natural gas for space heating and water heating. This particular revenue class makes up the largest percentage of the Company's customer base. Vintage data for all other Rate classes is not available.

#### **SEC INTERROGATORY #11**

#### **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/6] Please provide a comparison of the age of Enbridge's network assets, by category, with the age of network assets of Union Gas, and with the age of network assets of other gas utilities in North America.

# **RESPONSE**

The type of comparison requested by the interrogatory would require a major study which could not be completed in time to provide the response to this interrogatory.

With respect to cast iron mains, Enbridge Gas Distribution is the only utility in the Canadian Gas Association with cast iron mains still remaining in its distribution system. Enbridge stopped installing cast iron mains in the mid 1950's. A quick assessment of the cast iron mains scheduled for replacement in 2007 indicates a range of installation dates for these mains ranging from 1911 to 1934.

EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 2 of 88 Appendix A

Enbridge is an energy delivery company: as such, we provide an essential service for our customers. We deliver crude oil and natural gas to heat homes, power transportation systems, and provide fuel and feedstock for industries. Our vision is to be North America's leading energy delivery company while adding long-term value for our shareholders. In 2003, we expanded our continental footprint in North America by acquiring additional energy delivery assets, and announcing a number of new projects for future growth and expansion.

- Patrick D. Daniel, President & Chief Executive Officer

The cover of this year's annual report, and the other illustrations in the book, are the work of artist Pascal Milelli, an internationally-recognized illustrator based in Western Canada and a graduate of The Alberta College of Art & Design. Pascal's paintings capture and combine the vitality of the people of Enbridge with the Company's diverse portfolio of energy delivery assets.

The photographs used in this report also reflect that successful combination of people and assets, and represent all of the Company's business segments, throughout North America and internationally. Quality people and quality assets, coming together "where energy meets people" — that's Enbridge.

Energy Distribution volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas supply arrangements.

<sup>3</sup> Degree day deficiency is a measure of coldness. It is calculated by accumulating for each day in the period the total number of degrees each day by which the daily mean temperature falls below 18 degrees Celsius. The figures given are those accumulated in the Toronto area.

Letter to Shareholders

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 4 of 88 Appendix A

Enbridge is well positioned to capitalize on future growth opportunities as a result of another very strong year in 2003.

**Donald J. Taylor,** Chair (*left*) and **Patrick D. Daniel,** President & Chief Executive Officer

Earnings grew to a record \$667.2 million in 2003, or \$4.03 per common share, including gains on sale of assets. Removing gains and other unusual items, earnings were \$2.84 per common share, up another 6.4% from one year ago. All five operating segments — crude oil pipelines, natural gas distribution systems, natural gas pipelines, international operations, and our two sponsored investments (Enbridge Energy Partners in the U.S. and Enbridge Income Fund in Canada) — reported increased earnings. This growth was accomplished while debt to total capitalization was reduced and A-level credit ratings were confirmed with stable outlooks.

During the year, the Company also celebrated its 50<sup>th</sup> anniversary as a publicly traded entity, having provided a 13.1% compound annual shareholder return over that period of time. This sustained, consistent performance in providing the "energy bridge" between energy suppliers and energy consumers is what best defines your Company.

As a result of the Company's past performance, Enbridge started 2004 in the strongest relative position in its history. The balance sheet is strong, the business model is proven and stable, and the Company is geographically well located to expand and extend its role in delivering energy to customers in North America and internationally.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 5 of 88 Appendix A

#### **Achievements in 2003**

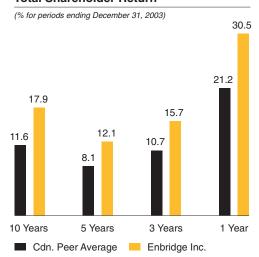

Our crude oil pipeline system grew significantly in 2003, as we completed the Phase III Terrace expansion on our crude oil mainline. We put into service Canada's first underground crude oil storage facility at Hardisty, Alberta. We also acquired a pipeline that currently runs from Cushing, Oklahoma to Chicago and plan on reversing it to transport Western Canadian crude further south into the strong U.S. Midcontinent market. This "Spearhead" project, coupled with Enbridge Energy Partners' new proposal for the Southern Access line from Superior, Wisconsin, to Wood River, Illinois, will broaden markets for Canadian producers and improve access by American consumers to the huge oil sands reserves of Western Canada. Enbridge intends to further expand that access with future pipelines to the U.S. Gulf Coast, eastern PADD II region of the U.S. Midwest, and the Canadian West Coast (our Gateway Project).

In 2003, we set a record by adding more than 60,000 new customers to our gas distribution network in Ontario, which is one of the most cost-efficient gas distribution systems in North America. Enbridge has proven in its liquids transportation business that it can provide additional benefits to its customers and shareholders through implementation of incentive rate-setting mechanisms. In Ontario, however, a common understanding and cooperation among regulators, distribution customers and Enbridge will be required to achieve this. In 2004, we will work with these parties to advance this understanding.

Five years ago Enbridge marked its entry into the natural gas pipelining business. In a short period of time we have built a very strong position in the corridor serving the U.S. Midwest and Eastern Canadian markets with Western Canada gas supply. In 2003, we increased our interest in the Alliance Pipeline to 50% and in the Vector Pipeline to 60%. In addition, Enbridge Energy Partners acquired gas gathering and processing assets in North Texas, which complement the Partnership's existing East Texas assets and growing presence in the U.S. Gulf Coast states and Midwest; and announced plans to acquire crude oil and liquids pipeline and storage systems in the Midcontinent region, including the Ozark Pipeline which transports crude oil from Cushing to Wood River.

In the U.S., our growth continues to be led by Enbridge Energy Partners, which has grown into a large master limited partnership with geographic and commodity diversity. In Canada, we successfully launched Enbridge Income Fund, already

a premier Canadian income fund with a low-risk profile focused on pipeline transportation assets. Both entities are self-financing vehicles with proven low-cost capital, and we expect them to play major roles in the future acquisition of mature energy delivery assets in their respective countries.

#### **Future growth opportunities**

Enbridge is focused on delivering energy to meet the needs of consumers and society in general. As a large, successful corporation we have a responsibility to conduct our business to very

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13

Page 6 of 88 Appendix A

high standards of integrity, transparency, safety and environmental protection. We consider it our responsibility to continue

to earn the right to do business in the countries and communities in which we operate.

With our strong financial position and growing portfolio of assets in key markets, Enbridge is uniquely positioned to deliver

new supplies of oil and gas to meet growing market demand. Enbridge is specifically committed to:

■ Broadening markets for Canadian oil (particularly crude oil from Alberta's oil sands) and helping ensure security of supply

for U.S. and other consumers. We have many excellent projects ahead of us, and we are working with our customers to

identify continental opportunities and propose new delivery solutions.

■ Increasing security of supply and ensuring an effective price mechanism for natural gas consumers in Ontario, at the

same time as we operate one of the most cost-efficient distribution businesses in the world.

■ Ensuring North American natural gas markets continue to have sufficient supplies to meet their needs. This could include

participation in Liquefied Natural Gas (LNG) projects and pipeline projects to connect frontier supply basins.

■ Helping producers receive fair netbacks for their natural gas production by debottlenecking areas such as the U.S. Rockies,

and the Barnett Shale and Bossier gas play areas of Texas.

■ Building and operating international pipelines like those in Colombia and Spain that generate attractive rates of return and

complement our North American base of operations.

In conclusion

We thank Enbridge's Board of Directors for their ongoing support and counsel. And we thank Michel Gourdeau, one of our

Directors who left the Board in 2003, for his contributions.

We also thank all of our employees for their continued hard work and commitment to excellence. At Enbridge we pride

ourselves on being superior asset managers, recognizing that it is truly the combination of quality assets and quality people

that has made Enbridge successful.

On behalf of the Board of Directors:

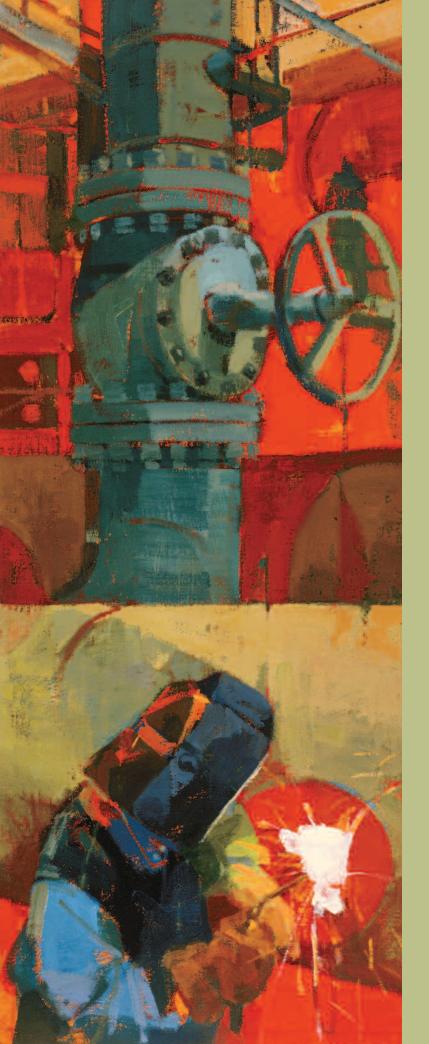

Donald J. Taylor

Chair of the Board of Directors

March 3, 2004

Patrick D. Daniel

President & Chief Executive Officer

## **Enbridge** — A Profile

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 7 of 88 Appendix A

The Enbridge group of companies includes the world's longest crude oil pipeline system, Canada's largest natural gas distribution company, and a variety of investments in natural gas pipelines.

Enbridge is an experienced and knowledgeable asset manager with a reputation for steady growth and a low-risk profile. It is also a values-based organization with a commitment to corporate responsibility in all of its business activities.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 8 of 88 Appendix A

natural gas pipeline assets, and in positioning the companies to

Enbridge, having increased its interest in the Alliance Pipeline from 21.4% at year-end 2001 to 37.1% at year-end 2002, announced it was acquiring additional interests in the pipeline. In 2003, the Company increased its interest in both the Canadian and U.S. segments of the pipeline to 50%. In June, Enbridge Inc. sold its 50% interest in the Canadian segment of the Alliance Pipeline to the Enbridge Income Fund.

The Terrace Phase III expansion of Enbridge's crude oil mainline was officially completed and placed into service on April 1, 2003. Phase III increased delivery capacity by 140,000 barrels per day on the Enbridge and Lakehead Systems.

Enbridge announced the creation of Enbridge Income Fund. The Fund is a premier income fund in Canada with a low-risk profile focused on pipeline transportation assets. The successful initial public offering closed on June 30, and the Fund began trading on the Toronto Stock Exchange under the trading symbol ENF.UN. At that time, the Fund acquired from Enbridge Inc. a 50% interest in the Canadian portion of the Alliance Pipeline and a 100% interest in Enbridge Pipelines (Saskatchewan) Inc. for gross proceeds of \$905 million. Enbridge Inc. owns a 72.3% overall interest in the Fund.

Enbridge announced it was acquiring BP's Cushing-to-Chicago Pipeline, to open new markets for Canadian crude oil producers. The Company acquired a 90% interest in September for US\$122 million. Subject to acceptance of proposed tolling arrangements by Canadian producers and regulatory approval, Enbridge plans to reverse the flow to transport Canadian crude oil south from Chicago to Cushing. The reversed-flow pipeline will be renamed the Spearhead Pipeline.

Enbridge announced it was acquiring an additional 15% interest in the Vector Pipeline for US\$72.5 million. Enbridge now has a 60% interest in Vector, a natural gas transmission pipeline with capacity of 1 billion cubic feet per day that delivers gas from the Chicago-area market hub in Illinois to the hub at Dawn, Ontario.

September

As of its fiscal year-end September 30, Enbridge Gas Distribution had added more than 60,000 new customers during the 12-month period. The Company now delivers natural gas to approximately 1.7 million customers.

October

Enbridge and Enbridge Energy Partners jointly announced plans to develop a new crude oil pipeline from the terminal at Superior, Wisconsin, south to the Wood River hub in southern Illinois. The proposed US\$600-million pipeline, to be owned by the Partnership and called Southern Access, would have an initial capacity of 250,000 barrels per day and could be in service in 2007. It would provide increased capacity on the Lakehead System to accommodate growing production from the Alberta oil sands.

November

Enbridge and CCS Inc. officially opened their jointly owned underground crude oil storage facility at Hardisty, Alberta. The \$70-million Hardisty Caverns facility has four existing salt caverns, ranging in size from 600,000 to 900,000 barrels, and there are plans for expansion. Crude oil from a number of sources in Western Canada will be stored at the facility for eventual delivery to market through the Enbridge terminal at Hardisty, and will provide customers with flexible operating and marketing options for the long-term development of oil sands production.

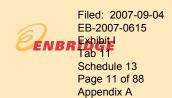

Decembei

Enbridge Energy Partners announced plans to acquire crude oil and liquids pipeline and storage systems located at, or originating from, Cushing, Oklahoma. The main assets are the Ozark Pipeline, which currently transports 170,000 barrels per day of crude oil from Cushing to Wood River, and a storage terminal at Cushing.

Also in December, Enbridge Energy Partners closed its US\$247 million acquisition of the North Texas System, which primarily serves the Fort Worth Basin, including growing natural gas production from the Barnett Shale zone. The system includes more than 3200 kilometres (2,000 miles) of gas gathering pipeline and five active processing plants.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 10 of 88 Appendix A

Enbridge's operations are focused on three energy delivery businesses: crude oil pipelines, natural gas pipelines, and natural gas distribution. The business of the Company is carried out by a variety of affiliates owned in whole or in part by Enbridge Inc.

## Filed: 2007-09-04 EB-2007-0615 Exhibit I Opportunities for Growth Tab 11 Schedule 13 Page 12 of 88 Appendix A **LNG** Potential Liquids Projects Potential Natural Gas Projects LNG

Accessing new markets to bring new supplies of crude oil and natural gas on stream is a crucial strategy for growth for Enbridge.

The Company plans to do this by extending its continental reach.

As the primary transporter of Western Canadian crude oil, Enbridge is well positioned to develop additional infrastructure to deliver the growing volumes that are coming from Alberta's oil sands. With an estimated \$50 billion in active or planned projects in the oil sands, new production is expected to come on stream steadily during the next 10 to 15 years, with an additional 800,000 barrels per day likely available by 2010.

Enbridge has been working with its customers to develop market solutions that will enable crude oil shippers to have access to new markets in a timely, cost-effective manner. Our transportation development strategy is to provide Canadian producers with continued access to the premier markets Enbridge currently serves, and to gain access to southwestern and eastern PADD II markets, the Gulf Coast, California, and the Far East.

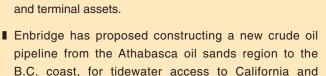

Key components of the Enbridge strategy include the following:

■ Subject to acceptance of proposed tolling arrangements by Canadian producers and regulatory approvals, Enbridge plans to reverse the Cushing-to-Chicago Pipeline that it acquired in 2003 to flow from north to south. The pipeline will be renamed the Spearhead Pipeline and will transport Western Canadian production and incremental oil sands volumes to new markets in the Central and Midwestern U.S. The Company is also pursuing delivery options for Canadian crude extending beyond Cushing to U.S. Gulf Coast markets.

- Enbridge Energy Partners has proposed building a new crude oil pipeline to provide access from its existing terminal at Superior, Wisconsin, south to the Wood
  - River hub in southern Illinois. This Southern Access Pipeline, to be part of the Lakehead System, will interconnect with the Spearhead Pipeline. In December 2003, EEP also announced plans to acquire the Ozark Pipeline that transports crude oil from Cushing to Wood River, and a number of complementary pipeline and terminal assets.

The growing requirement to provide North American natural gas markets with new sources of supply is also presenting Enbridge with opportunities for growth.

Asia-Pacific markets.

In 2003 Enbridge increased its interests in the Alliance and Vector natural gas pipeline systems to 50% and 60%, respectively, strengthening its position in gas transmission. The Company is looking at opportunities to deliver gas production from the Wyoming area to U.S. Midwest markets, and to move gas volumes further east. It is pursuing opportunities to invest in Liquefied Natural Gas projects: increased imports of LNG are expected to become an important source of supply for North America, and Enbridge is interested in participating as a provider of regasification and take-away infrastructure. Enbridge also remains interested in northern gas and liquids development.

Corporate Governance

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 14 of 88 Appendix A

At Enbridge, corporate governance means ensuring that a comprehensive system of stewardship and accountability is in place and functioning among Directors, management and employees of the Company.

Enbridge is committed to the principles of good governance, and the Company employs a variety of policies, programs and practices to manage corporate governance and ensure compliance.

The Board of Directors of Enbridge functions independent of management and is accountable to shareholders. The Board has delegated to the Governance Committee the role of overseeing corporate governance generally, and Enbridge has demonstrated vision and a comprehensive approach to governance through the integration of empowerment and accountability involving all employees up to the Board of Directors and ultimately to shareholders. This commitment has resulted in Enbridge being recognized as a leader in corporate governance.

In 2003, Enbridge was listed in the top 5 in the Globe & Mail Report on Business Corporate Governance/Best Boards rankings and the Clarkson Centre for Business Ethics & Board Effectiveness at the Rotman School of Management, in its Board Shareholder Confidence Index, ranked Enbridge AAA+, which is the highest ranking possible.

Corporate Responsibility

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 16 of 88 Appendix A

# Enbridge has always considered the safety of employees and the public, a clean and healthy environment, and strong, vibrant communities to be priorities. That's why the adoption in December 2003 of a full corporate responsibility platform was a logical step for the Company.

Corporate responsibility defines how we will relate to others in terms of our performance in areas such as the environment, health, safety, governance, human rights, community investment and stakeholder engagement.

Enbridge had already taken many of the steps to move in that direction. At the same time, stakeholders key to our success were asking for a commitment to sustainable business practices in a visible and permanent way. A corporate responsibility platform will document the commitments we have already made and will make our sustainable approach replicable by helping us define and measure our performance.

The cornerstone of corporate responsibility is sustainability, and simply put, a sustainable enterprise is one that is built for the long-term. Business

decisions combine economic realities with the social and environmental considerations that ensure longevity.

In 2003, Enbridge had a number of notable achievements in areas that fall under the corporate responsibility banner.

■ Enbridge employees, senior management and Board of Directors are all guided by the Company's basic code of business conduct — the Statement on Business Conduct. Adherence to this code of conduct, which incorporates the internationally recognized Voluntary Principles on Security and Human Rights, is a condition of employment. In an effort to share Company experiences and 'lessons learned' in these fields, in 2003 Enbridge became a signatory to the United Nations Global Compact.

#### **Where Energy Meets People**

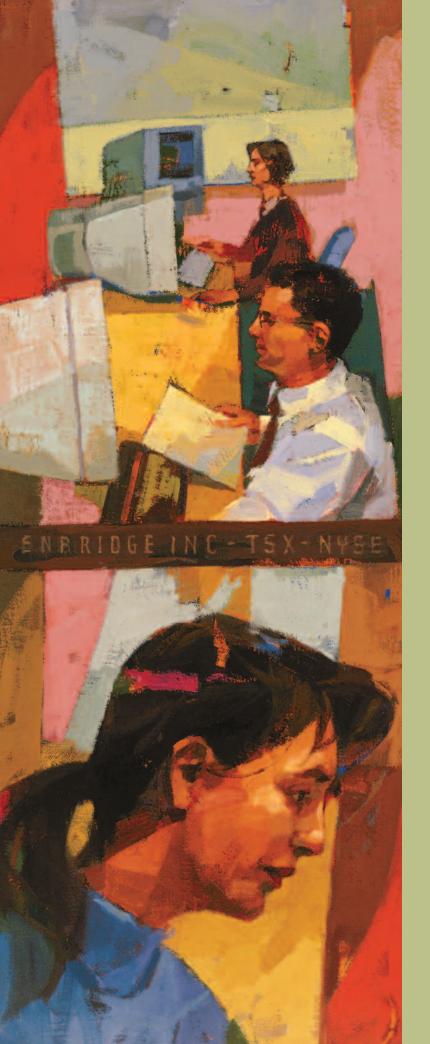

In 2003, Enbridge launched a corporate reputation campaign to advance the company's brand image and profile the valuable relationships we foster with stakeholder communities. The campaign profiles the leadership attributes of key community investment partners from the various regions where Enbridge operates.

This initiative, under the direction of UN Secretary-General Kofi Annan, brings companies together with UN agencies, labour organizations and civil society to support nine principles in the areas of human rights, labour and the environment.

- In 2003, Enbridge again invested \$3 million in communities where the Company operates, primarily in health, the environment, arts and culture, social services, education, and civic leadership. And for the fifth consecutive year, Enbridge employees across Canada and the United States raised more than \$1 million for United Way campaigns.
- In Colombia, where Enbridge operates and has a 24.7% investment in the OCENSA crude oil pipeline, OCENSA celebrated the first anniversary of its formalized human rights policy, which was developed and implemented using

the *Voluntary Principles on Security and Human Rights* as a guideline. The policy commits OCENSA to respect human rights and obligates employees and contractors to reject violence and avoid associating with any of the illegal armed groups in Colombia. OCENSA conducted human rights training for 100% of its employees and its major contractors, and for nearly 1,000 military personnel stationed near the pipeline. OCENSA has also hired a designated Human Rights Coordinator who, along with the company's Auditor, has the authority to review and audit the conduct of all contractors and employees as their actions pertain to human rights and to ensure compliance with OCENSA's human rights policy.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 19 of 88 Appendix A

Earnings for the year ended December 31, 2003 were \$667.2 million, or \$4.03 per share, compared with \$576.5 million, or \$3.60 per share, in 2002. Growth in earnings from all core business segments were noted, further buoyed by the positive effect of colder than normal weather in the Enbridge Gas Distribution franchise area in 2003. Significant incremental earnings were also noted in both Liquids and Gas Pipelines primarily due to the Company's increased ownership interest in both Alliance Pipeline and Vector Pipeline. 2003 also marked the completion of the Terrace Phase III project and the storage cavern project, both providing a positive contribution to net earnings.

Significant factors and variances affecting consolidated earnings are as follows:

- Sponsored Investments includes a \$169.1 million after-tax gain on the sale of assets to Enbridge Income Fund (EIF) in 2003.
- Sponsored Investments included an \$82.2 million after-tax writedown recorded in 2002, relating to the Enbridge Midcoast Energy (Midcoast) assets.
- Sponsored Investments includes a \$20.3 million dilution gain in 2003 relating to two unit issuances by Enbridge Energy Partners (EEP). The prior year included only one dilution gain from EEP of \$6.1 million.
- Gas Distribution and Services includes the positive effect of colder than normal weather of \$46.1 million in 2003. In 2002, warm weather negatively affected earnings by \$29.3 million. The positive weather effect in 2003 is partially offset by several regulatory disallowances in 2003, including a \$4.6 million outsourcing disallowance, a \$7.1 million gas cost disallowance, and a \$26.0 million regulatory receivable writedown.
- The results of Noverco, included in Gas Distribution and Services, reflect a \$6.0 million dilution gain relating to a unit issuance by Gaz Metro Limited Partnership.
- Corporate included a \$17.8 million after-tax gain on a sale of marketable securities in 2002.
- Each year includes the effect of the Alberta 0.5% tax rate reductions. The 2003 results also include the effect of a higher federal future tax rate since federal surtax will apply when large corporations tax is eliminated. These tax rate changes result in a \$7.1 million net charge to earnings in 2003 compared with a net recovery of \$1.4 million in the prior year.
- Discontinued operations included a \$240.0 million after-tax gain on the sale of the retail Energy Services business in 2002. Enbridge made several strategic achievements during the year.
- The creation of the Enbridge Income Fund, on June 30, 2003, seeded with assets from the Company.
- Growth in core businesses through the acquisition of additional interests in the Alliance Pipeline, the Aux Sable NGL facility, and the Vector Pipeline. The Company also acquired a 90% interest in the Cushing-to-Chicago Pipeline System during 2003. Upon reversal, this pipeline will provide crude oil shippers with access to new markets.
- EEP has also actively pursued growth through a number of strategic acquisitions, which will support earnings growth in the future.
- The completion and placement into service of the Terrace Phase III expansion on April 1, 2003. This increased delivery capacity by 140,000 barrels per day on the Enbridge and Lakehead Systems.

For the year ended December 31, 2002, earnings from continuing operations were \$334.2 million, or \$2.09 per share, compared with \$413.2 million, or \$2.63 per share, in 2001. Growth in earnings from the Liquids Pipelines and International operations, as well as higher earnings from EEP, were more than offset by the loss on sale of the United States assets of Enbridge Midcoast Energy, warmer weather than 2001, and the positive impact on earnings of income tax rate reductions in 2001.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 20 of 88 Appendix A

Dividends paid on common shares increased in each of the last four years from growth in the dividend per share and a higher number of outstanding common shares. The quarterly dividend per share increased to \$0.415 in the first quarter of 2003 from \$0.38 per share established in the first quarter of 2002. In the first quarter of 2001, the quarterly dividend was raised to \$0.35. This represents annual increases of 9.2%, 8.6% and 8.5%, respectively, and reflects the sustained growth in earnings over the period.

In 2003, the Company changed its financial reporting segments to better reflect the business operations and management structure of the Company. All financial information has been restated to reflect the new segments.

#### CORPORATE STRATEGY

Enbridge's resources are focused on three broad strategic thrusts and three areas of increased emphasis. The major strategies are to:

- continue to expand the Company's core platforms, increase its asset base through a variety of means including organic growth and acquisition of strategic assets. The four core platforms are Liquids Pipelines, Gas Pipelines, Gas Distribution and Services and International;
- capitalize on the Enbridge Energy Partners and Enbridge Income Fund vehicles through acquisition of assets from third parties and transfers of mature assets from Enbridge; and,
- focus on operational excellence, including the application of incentive regulatory structures.

Strategic emphasis is placed on increasing the Company's North American footprint, increasing the scale of operations, and developing and applying new technologies. Enbridge's proposed actions with respect to these strategies are described in the "Outlook" for each business unit.

The achievement of the Company's major strategies is dependent on successful mitigation of business risks, discussed in each of the business segments. Enbridge believes it has identified and mitigated the risks, to the extent practical.

Enbridge remained on track with this strategy in 2003 and is committed to identifying and implementing the actions required to create value and sustainable growth.

#### LIQUIDS PIPELINES

#### **Financial Results**

(millions of Canadian dollars)	2003	2002	2001
Enbridge System	162.0	123.7	111.1
Athabasca System	44.8	41.2	29.9
NW System	8.3	9.5	9.5
Saskatchewan System	3.1	6.4	5.9
Feeder Pipelines and Other	(4.7)	8.8	8.0
	213.5	189.6	164.4

#### **Business Activities**

Liquids Pipelines activities consist of the operation of the Company's pipelines that transport crude oil, natural gas liquids and refined products.

The mainline pipeline, comprised of the Enbridge System and the Lakehead System (the portion of the mainline pipeline in the United States is operated by Enbridge and owned by EEP), is the world's longest crude oil pipeline system and is the primary transporter of crude oil from Western Canada to the United States. It is the only pipeline that transports crude oil from Western to Eastern Canada and serves all of the major refining centres in the Province of Ontario, as well as the Midwest region of the United States.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 21 of 88 Appendix A

Enbridge also owns the Athabasca System and the NW System. The Athabasca System is a 545-kilometre (339-mile) pipeline that transports synthetic and heavy oil from north of Fort McMurray in Northern Alberta to the pipeline hub at Hardisty, Alberta. The Athabasca System also includes the MacKay River and Christina Lake lateral feeder lines and tankage facilities, as well as the Company's interest in the Hardisty Cavern Storage Partnership. The NW System is an 864-kilometre (540-mile) pipeline that transports crude oil from Norman Wells, in the Northwest Territories to Zama, Alberta.

During the third quarter of 2003, the Company acquired a 90% interest in the Cushing-to-Chicago Pipeline System. This is a 1,050-kilometre (650-mile) pipeline that transports crude oil from Cushing, Oklahoma to Chicago, Illinois, with a service capacity of 300,000 barrels per day, including 4.3 million barrels of tankage. The pipeline is currently inactive except for an approximately 145-kilometre (90-mile) portion of the pipeline from Cushing to Caney, Kansas. Subject to acceptance of proposed tolling arrangements by Canadian producers and regulatory approval, Enbridge intends to reverse the flow of this pipeline by the end of 2004. The reversed line would be renamed the Spearhead Pipeline and would provide pipeline service from the Chicago area to the Cushing market.

Feeder Pipelines and Other primarily includes a number of liquids pipelines in the United States (Frontier, Toledo, Mustang and Chicap), as well as business development costs related to Liquids Pipelines activities.

#### **Results of Operations**

Earnings from Liquids Pipelines were \$213.5 million for the year ended December 31, 2003, an increase of \$23.9 million from 2002. The results reflect higher earnings from the Enbridge and Athabasca Systems, which include incremental earnings from Terrace Phase III and the cavern storage partnership. Offsetting these positive factors is a provision for costs associated with toll complaints on the Frontier pipeline and higher business development costs as the Company evaluates growth opportunities. In addition, the Saskatchewan System was sold to Enbridge Income Fund effective June 30, 2003; however, the Company continues to have an interest in this pipeline through its 41.9% ownership of Enbridge Income Fund, included in the Sponsored Investments segment.

Liquids Pipelines Earnings

(millions of dollars)

99	146.0
00	152.5
01	164.4
02	189.6
03	213.5

Earnings were \$189.6 million for the year ended December 31, 2002, compared with \$164.4 million for 2001. The higher earnings resulted from expansions of the Enbridge and Athabasca Systems. Higher earnings from the Enbridge System were due to the request from shippers in mid-2001 to construct Phase III of the Terrace expansion, which resulted in incremental earnings and to Phase II of the Terrace expansion, which was placed into service in early 2002. These increases were partially offset by an adjustment to the power allowance credit due to shippers as a result of Terrace operating at less than capacity. The Athabasca System generated higher earnings due to the construction of new laterals and tankage, which commenced operations in the second half of 2002.

#### **Enbridge System**

In 2003, Enbridge System earnings were \$38.3 million higher than last year primarily due to full year earnings from the Terrace Phase II expansion, incremental earnings from Terrace Phase III, which commenced operations ahead of schedule on April 1, 2003, lower depreciation rates as approved by the National Energy Board (NEB), as well as recognized power cost savings. Also contributing to the year-over-year variance is the negative effect of an adjustment to the power allowance credit due to shippers in 2002 as a result of Terrace operating at less than capacity.

Earnings from the Enbridge System increased to \$123.7 million in 2002 from \$111.1 million in 2001. The increase was mainly due to higher earnings from the Terrace expansion as Phase II was placed into service in early 2002 and Phase III was triggered in mid-2001. The increase in Terrace earnings was partially offset by an adjustment to the power allowance credit due to shippers as a result of Terrace operating at less than capacity.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 22 of 88 Appendix A

Tolls on the Enbridge System are governed by the provisions of the Incentive Tolling Settlement (ITS). The ITS, which has been approved by the NEB, is in its second five-year term which expires on December 31, 2004. Under the ITS, tolls are determined based on a starting revenue requirement, which is adjusted each year for 75% of the change in the Gross Domestic Product Implicit Price Index. The ITS allows the Company and its customers to share in cost savings, protects Enbridge from fluctuations in volumes, and incorporates additional incentive mechanisms for electric power cost savings. Since electricity is used to power the pumping stations, power costs are a significant expense. The Company is allowed to earn a separate return on facilities expansions or additions that qualify as non-routine adjustments.

Since the inception of incentive tolling arrangements in 1995, through the cost performance sharing mechanism of the ITS, after-tax benefits by Enbridge and its customers of \$96.8 million have been shared approximately 53% and 47%, respectively. Customers also have realized an additional after-tax benefit of \$7.9 million through the power guarantee mechanism of the ITS.

#### Athabasca System

In 2003, earnings on the Athabasca System were \$3.6 million higher than 2002, primarily due to a full year of earnings from the addition of the MacKay River lateral lines in late 2002. This was further enhanced by the development and commencement of operations, in November 2003, of cavern facilities to provide crude oil storage services. These facilities are located near Enbridge's main pipeline terminal at Hardisty, Alberta, and are jointly owned by Enbridge and an industry partner. The facilities have storage capacity approximating 3.1 million barrels, all of which have been fully subscribed to under a long-term fee-for-service agreement with a major energy producer.

In 2002, the construction of additional tankage and terminal facilities at the Athabasca terminal in Fort McMurray increased the investment base resulting in higher earnings than in 2001.

The Company has a long-term contract with the major shipper on the Athabasca System. Earnings are recognized based on the contract terms negotiated with the major shipper. Differences between actual cash tolls and toll revenue as determined under the contract is recognized in the period. The deferred amounts will be collected over the term of the contract.

#### **NW System**

Earnings in the last three years from the NW System have been consistent and reflect the effect of a declining rate base. The declining rate base was offset by cost savings that generated incentive earnings in 2002 and 2001. 2003 does not include an incentive component as 2003 was a rebasing year. Earnings are based on an agreement with the primary shipper and are a product of a deemed common equity ratio of 55% and the NEB multi-pipeline rate of return on common equity, plus any incentive cost savings.

#### Saskatchewan System

The earnings decrease noted in the Saskatchewan System of \$3.3 million from 2002 is due to the Company's sale of this asset to EIF effective June 30, 2003.

#### Feeder Pipelines and Other

The earnings decrease in Feeder Pipelines and Other primarily reflects a provision for costs associated with toll complaints on Frontier. Business development costs were also higher in 2003 due to the continuing review of a number of liquids pipelines opportunities. Other factors contributing to the earnings variance include lower tolls on the Frontier Pipeline while the prior year included a positive revenue adjustment on the Toledo Pipeline.

#### Deliveries<sup>1</sup>

(thousands of barrels per day)

99	1,942
00	2,072
01	2,109
02	2,088
03	2,189

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 23 of 88 Appendix A

#### Outlook

#### **Enbridge System**

The NEB approved the facilities application for construction of Phase III of the Terrace Expansion Project in Canada in April 2002. Phase III involved construction of 176 kilometres (110 miles) of 914-millimetre (36-inch) pipeline on the Lakehead System between Clearbrook, Minnesota and Superior, Wisconsin and pumping additions in both Canada and the United States. Phase III increased capacity by approximately 140,000 barrels per day when it was placed into service on April 1, 2003 and was requested by shippers to handle anticipated increases in oil sands volumes in the next few years.

Volumes transported are expected to increase in 2004 due to continuing increases in production from the oil sands region of Alberta. Oil sands production growth is more than offsetting declines in the Western Canadian Sedimentary Basin (WCSB) conventional production. Fluctuations in volumes do not impact the majority of net earnings from the Enbridge System due to provisions in the ITS.

The ITS allows Enbridge and its customers to share in cost savings achieved. The Company will continue to focus on operational excellence in order to ensure continued savings for customers and increased returns for shareholders.

#### Enbridge Athabasca System

The Enbridge Athabasca System is the only liquids pipeline directly linking both the Athabasca and Cold Lake oil sands deposits with the pipeline transportation hub at Hardisty, Alberta. With a design capacity of 570,000 barrels per day, the pipeline is well positioned to carry more of the region's oil sands and heavy oil production in the future.

Earnings from the Athabasca System are expected to increase in 2004 as a result of a full year of operations from underground storage and other facilities placed into service in 2003.

#### Supply

Liquids supply growth from the WCSB is expected to continue to increase over the next 10 years. The NEB's latest estimates for 2003 project WCSB production growth of oil sands and heavy oil volumes of 120,000 barrels per day over 2002 volumes, offset by a decline in conventional production of 35,000 barrels per day. The net increase in WCSB production of 85,000 barrels per day over 2002 levels translates into the highest level of production ever achieved by the WCSB and reflects the growth in bitumen and upgraded synthetic production.

Remaining established conventional oil reserves in Western Canada were estimated to be five billion barrels in 2002. During 2002, approximately 65% of volumes produced were replaced with reserve additions. Remaining established reserves from oil sands currently stand at 174 billion barrels, with nearly four billion barrels having been produced to date. According to the Oil and Gas Journal's Worldwide Look at Reserves and Production, Canada's reserves represent 14% of world oil reserves, second only to Saudi Arabia in size. <sup>1</sup>

#### Capital Expenditures

Liquids Pipelines expects to spend approximately \$80 million in 2004 for ongoing capital improvements and core maintenance capital projects relating to the main pipeline system. Additional expenditures of US\$20 million are also expected in 2004 to reverse the flow of the Cushing-to-Chicago Pipeline System, which was acquired in 2003. At that time, the final payment of US\$65 million will be paid to the vendor.

#### **Business Risks**

#### Supply and Demand

The operation of the Company's liquids pipelines are dependent upon the supply of and demand for crude oil and other liquid hydrocarbons from Western Canada. Supply, in turn, is dependent upon a number of variables, including the availability and cost of capital for oil sands projects, the price of natural gas used for steam production, and the price of crude oil. Oil targeted drilling licenses in Western Canada increased 25% in 2003 from 2002. This strong drilling activity, along with the start-up of Shell's Athabasca oil sands project, resulted in significant production growth over 2002. For 2004, growth is expected to continue with full year production from Shell's Athabasca oil sands project and expansions at Cold Lake, and the completion of expansions at Syncrude and Suncor.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 24 of 88 Appendix A

Historically, refiners in the U.S. Midwest have utilized large volumes of Western Canadian light crude versus other imported crude. Line 9 transports offshore crude to Ontario and is owned by Enbridge. Volumes on Line 9 have displaced some Canadian and U.S. domestic deliveries in the Ontario market, requiring an increase in deliveries to the U.S. Midwest, which has limits on the volume of Canadian crude which can be readily absorbed.

Following Canada's ratification of the Kyoto Protocol, Enbridge has continued to assess the potential impact on oil sands investment. Moody's Investors Service recently surveyed oil sands operators and concluded that Kyoto is expected to have a minimal effect on the development of Alberta's oil sands resource. Enbridge is encouraged by this conclusion as it supports the sustainability of supply for liquids pipelines.

#### Regulation

Earnings from the Enbridge System and other liquids pipelines are subject to the actions of various regulators, including the NEB. Actions of the regulators related to tariffs, tolls and facilities impact earnings from these operations. The NEB prescribes a benchmark multi-pipeline rate of return on common equity. To the extent the NEB rate of return fluctuates, a portion of the earnings of the Enbridge System changes. The Company believes that regulatory risk has been reduced through the negotiation of long-term agreements, such as the ITS, with its customers.

#### Competition

The Enbridge System transported approximately 67% of total Western Canadian crude oil production in 2003 and provides approximately 77% of the capacity for the transportation of Western Canadian crude oil out of Canada. Competition among common carrier pipelines is based primarily upon the cost of transportation, access to supply, and proximity to markets. TransMountain Pipeline and Express Pipeline, as well as other common carriers, can be used by producers to ship Western Canadian crude oil to refineries in either Canada or the United States. Although the Company does not compete directly in the regions served by these other pipelines, producers can elect to have their crude oil refined elsewhere than delivery points on the Enbridge System. The Company believes that its liquids pipelines are serving larger markets and provide attractive options to producers in the WCSB due to their competitive tolls.

Increased competition could arise from new feeder systems servicing the same geographic regions as the Company's feeder pipelines. Unused capacity on the Athabasca System should be more competitive than a new pipeline. Due to the size of the oil sands reserves, competitive pressures to provide economical transportation service continue.

#### **Environment and Safety**

Enbridge is committed to protecting the health and safety of employees, contractors and the general public, and to sound environmental stewardship. The Company believes that prevention of accidents and injuries, and protection of the environment benefits everyone and delivers increased value to shareholders, customers and employees. Enbridge has health and safety, and environmental management systems and has established policies, programs and practices for conducting safe and environmentally sound operations. These systems reflect industry best practices and are aligned with the ISO 14001 standard and the BSI-OHSAS 18001 specification for environmental, health and safety management systems. Regular reviews and audits are conducted to assess compliance with legislation and company policy.

Pipeline leaks are an inherent risk of operations. The Company has an extensive program to manage system integrity, which includes the development and use of predictive and detective in-line inspection tools. Maintenance, excavation and repair programs are directed to the areas of greatest benefit and pipe is replaced or repaired as required. The company also maintains comprehensive insurance coverage for significant pipeline leaks.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 25 of 88 Appendix A

#### GAS PIPELINES

#### **Financial Results**

(millions of Canadian dollars)	2003	2002	2001
Alliance Pipeline (US)	40.3	19.6	19.0
Alliance Pipeline (Canada)	19.6	21.1	18.6
Vector Pipeline	10.2	7.1	3.9
	70.1	47.8	41.5

#### **Business Activities**

Gas Pipelines activities consist of investments in the Alliance and Vector pipelines, accounted for under proportionate consolidation.

Enbridge owns a 50.0% interest in Alliance Pipeline (US), the U.S. portion of a 3,000-kilometre (1,800-mile) pipeline that transports liquids-rich natural gas from Fort St. John, British Columbia to Chicago, Illinois. The Company provides operating services to and holds a 60% investment in Vector, which transports natural gas from Chicago to Dawn, Ontario. Both Alliance and Vector commenced operations in December 2000. Alliance and Vector have the capacity to deliver 1.55 billion cubic feet per day (bcfd) and 1.0 bcfd, respectively.

Alliance Pipeline (Canada) was sold to the Enbridge Income Fund effective June 30, 2003. Prior to this disposition, the Company had increased its ownership interest from 21.4% in 2001 to 37.1% in late 2002 and up to 50% in 2003.

#### **Results of Operations**

Earnings from Gas Pipelines were \$70.1 million for the year ended December 31, 2003, an increase of \$22.3 million from 2002. The higher earnings were primarily due to additional interests acquired in Alliance and Vector in 2003, partially offset by the sale of the Company's interest in the Canadian portion of Alliance Pipeline in the second quarter.

Earnings were relatively constant between 2002 and 2001 with the exception of higher earnings from the Vector Pipeline.

#### Alliance Pipeline (US)

The increase in earnings of \$20.7 million from Alliance Pipeline (US) in 2003, compared with 2002, reflects the acquisition of additional ownership interests of 1.1% in March 2003, 10.7% in April 2003, and 1.1% in October 2003. The Company's current ownership is 50.0%.

In late 2002, the Company acquired an additional ownership interest of 15.7%. However, due to the timing of the transaction, there was no significant effect on 2002 earnings in comparison to 2001.

#### Alliance Pipeline (Canada)

Alliance Pipeline (Canada) is included in the results of EIF, in the Sponsored Investments segment, effective June 30, 2003. Prior to its sale to EIF, the Company's ownership interest in Alliance Pipeline (Canada) had increased from 21.4% to 50.0%.

#### Vector Pipeline

The contribution from Vector is \$3.1 million higher in 2003, compared with 2002, as a result of increased volumes and transportation margins, due to both colder than normal weather in Eastern Canada and higher storage injections. This is further enhanced by additional ownership interests of 15.0% acquired in the fourth quarter of 2003. The Company's current ownership is 60.0%.

Earnings in 2002 were \$3.2 million higher than in 2001 as a result of a one-time adjustment to depreciation expense, reflecting a revision to depreciation rates to be consistent with the rates approved by the Federal Energy Regulatory Commission (FERC). In addition, an adjustment was booked in 2001 to reverse earnings that were over accrued in 2000.

#### Gas Pipelines Earnings

(millions of dollars)

99	33.2
00	39.6
01	41.5
02	47.8
03	70.1

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 26 of 88 Appendix A

#### **Outlook**

Earnings from Alliance Pipeline (US) and Vector should increase in 2004 as a result of Enbridge's higher ownership interest. There is no near-term requirement for further partner investment in either pipeline.

#### Supply and Demand for Natural Gas

North American natural gas demand is expected to grow at a modest rate for the next three to five years primarily driven by growth in power generation, which more than offsets declines in industrial demand. Demand growth is expected to be constrained by recent strong prices and increased volatility due to supply concerns from traditional sources. Over time, the entry of new supplies from the U.S. Rockies, Liquefied Natural Gas, and the Alaska North Slope/Mackenzie Delta are expected to alleviate supply concerns. This is expected to improve the stability of natural gas prices and provide a more favourable pricing structure that will facilitate further growth in the power generation market.

#### **Business Risks**

Alliance and Vector are regulated federally and are subject to regulatory risk. The Company believes that this risk has been mitigated through the execution of long-term contracts with customers. Currently, pipeline capacity out of the WCSB exceeds supply. Alliance has been unaffected but Vector has not fully contracted its capacity and, as a result, is negatively impacted by the basis (location) differential between Chicago and Dawn, Ontario.

#### **Exposure to Shippers**

Alliance is highly dependent upon the shippers for revenues from contracted capacity on the Alliance system. The failure of the shippers to perform their contractual obligations under the transportation contracts could have an adverse effect on the cash flows and financial condition of Alliance and could impair the ability of Alliance to meet its debt obligations and make distributions to its limited partners. A prolonged economic downturn in the energy industry, among other things, could impact the ability of some or all of the shippers to fulfill their obligations under the transportation contracts. To reduce this risk, Alliance has put certain controls in place to monitor the creditworthiness of each shipper.

#### Pipeline Operating Risk

As with any comprehensive pipeline system, the operation of Alliance and Vector involves many risks, including: the breakdown or failure of equipment, information systems or processes; the performance of equipment at levels below those originally intended (whether due to misuse, unexpected degradation or design, construction or manufacturing defects); failure to keep on hand adequate supplies of spare parts; operator error; labour disputes; disputes with interconnected facilities and carriers; and catastrophic events such as natural disasters, fires, explosions, fractures, acts of terrorists and saboteurs, and other similar events, many of which are beyond the control of the respective systems. The occurrence or continuance of any of these events could increase the cost of operating Alliance or Vector and reduce transportation capacity, thereby impacting earnings. Risks of substantial costs and liabilities, including those from leaks and explosions, are inherent in pipeline operations and there can be no assurance that significant costs and liabilities will not be incurred, including those relating to claims for damages to property and persons.

#### **Business Activities**

Sponsored Investments includes the Company's ownership interests in the operations of EEP and EIF. Enbridge operates the assets of both investments.

Enbridge has an effective 12.2% ownership interest (2002 – 14.1%, 2001 – 13.6%) in EEP. This ownership interest represents the Company's direct investment in EEP of 9.1% and an indirect investment of 3.1% through the Company's 17.2% ownership interest in Enbridge Energy Management (EEM). Enbridge, as the general partner of EEP, receives incentive income based on the level of quarterly cash distributions. EEP owns the Lakehead System, a feeder pipeline in North Dakota, the Enbridge Midcoast Energy (Midcoast) assets, and natural gas gathering and processing assets in East Texas (East Texas System).

Effective June 30, 2003, Enbridge sold its 50% interest in the Canadian portion of Alliance Pipeline and 100% ownership of Enbridge Pipelines (Saskatchewan) Inc. to EIF. For the period prior to this sale, the operating results of Alliance Canada are included in Gas Pipelines, and the operating results of Enbridge Pipelines (Saskatchewan) Inc. are included in Liquids Pipelines. Thereafter, the operating results of these assets are included in EIF, which is a component of this segment.

In October 2002, Enbridge sold the United States assets of Midcoast to EEP. From May 2001 until October 2002, Enbridge owned 100% of Midcoast. The results of operations of Midcoast, in the preceding table, relate to the period when the assets were wholly-owned.

#### **Results of Operations**

For the year ended December 31, 2003, earnings were \$234.3 million compared with a loss of \$51.1 million for 2002. The current year results include an after-tax gain of \$169.1 million on the sale of the Company's interests in Alliance Pipeline (Canada) and Enbridge Pipelines (Saskatchewan) Inc. to EIF. The 2003 results also include dilution gains of \$20.3 million, compared with \$6.1 million in 2002. This reflects two unit issuances by EEP in 2003, compared with only one in the prior year.

Excluding the impact of these gains, earnings in this segment increased \$102.1 million from 2002. A significant portion of this year-over-year change is due to an \$82.2 million writedown recorded in 2002 on the sale of the

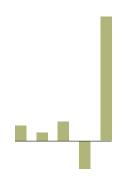

Midcoast assets. The remainder of the \$19.9 million increase is attributed to the creation of EIF, effective June 30, 2003, and incremental earnings in EEP from increased throughput on the Lakehead and North Dakota systems.

For the year ended December 31, 2002, earnings from Sponsored Investments decreased by \$88.3 million from \$37.2 million from 2001. The 2002 results included an \$82.2 million writedown on the sale of the Midcoast assets. Excluding this writedown, earnings for 2002 were \$6.1 million lower than 2001. Increased earnings from EEP resulted from the acquisitions of the North Dakota and East Texas Systems, and the Midcoast assets. These additional earnings were more than offset by lower earnings from Midcoast prior to its sale and higher dilution gains in 2001.

In October 2002, the Company closed the sale of the United States assets of Midcoast to EEP for consideration of US\$820.0 million, including cash and the assumption of affiliate debt. Concurrent with the sale transaction, EEM, a subsidiary of Enbridge, completed an initial public offering of 9,000,000 shares representing limited liability company interests with limited voting rights. The net proceeds from the offering were used to purchase i-units, a new class of limited partnership interests, from EEP. The proceeds from the i-units were used to finance a portion of the acquisition cost of the assets. In connection with the offering, Enbridge purchased 17.2% of the EEM shares, increasing its effective ownership in EEP to 14.1% from 12.9%. EEM has no assets or operations other than those related to the interest in EEP and, by agreement, will manage the business and affairs of EEP.

## Sponsored Investments Earnings

(millions of dollars)

03	234.3

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 28 of 88 Appendix A

#### **Enbridge Energy Partners**

Equity earnings in EEP improved in 2003, compared with 2002, due to higher incentive earnings earned by Enbridge as the general partner and improved results from the Lakehead System. The increased earnings also reflect incremental earnings from EEP's acquisition of the Company's Midcoast assets in October 2002, and increased throughput on the Lakehead and North Dakota systems.

The increased contribution from EEP in 2002 compared with 2001 resulted from the acquisitions of the North Dakota and East Texas Systems in 2001, which contributed a full year's earnings in 2002. The acquisition of the Enbridge Midcoast Energy assets also increased earnings in the fourth guarter of 2002.

#### **Enbridge Midcoast Energy**

Midcoast was sold to EEP in October 2002. Enbridge purchased Midcoast in May 2001 for cash consideration of \$561.8 million and the assumption of long-term debt. Earnings from Midcoast in 2002 were \$5.5 million, a decrease of \$4.0 million from the prior year. While 2002 results reflected improved operating performance, earnings were more than offset by adjustments related to 2001 that were recorded in 2002 and working capital and other closing adjustments identified prior to the disposition. Earnings for 2002 are for the period prior to the October 2002 disposition. Earnings for 2001 represent earnings from the May 2001 date of acquisition.

In March 2002, the Company acquired natural gas gathering and processing facilities in northeast Texas for approximately \$290 million. These assets were included with Midcoast and were part of the October 2002 sale to EEP.

#### Enbridge Income Fund

In June 2003, the Company formed EIF. On formation, EIF acquired the Company's 50% interest in the Canadian segment of Alliance Pipeline together with its 100% interest in the Saskatchewan System. EIF has positively contributed to the Company's earnings in the year.

#### Outlook

#### **Enbridge Energy Partners**

Earnings from the Lakehead System and certain of the gas gathering assets are volume-sensitive and expected increases in volumes should have a positive impact on EEP's earnings.

EEP is also expected to experience growth as it reaches new markets through assets acquired in 2003. Effective December 31, 2003, EEP closed its acquisition of the North Texas System, a collection of natural gas gathering and processing assets in North Texas. The system primarily serves the Fort Worth Basin, including growing production from the Barnett Shale zone.

Also in the fourth quarter of 2003, EEP announced that it had signed an agreement to acquire crude oil pipeline and storage systems in the U.S. Midcontinent. The assets being acquired serve refineries in the Midcontinent from the Cushing, Oklahoma hub and consist of approximately 615 miles (990 kilometres) of active crude oil pipelines and 9.5 million barrels of storage capacity. Included in these assets are the 433-mile (697-kilometre) Ozark Pipeline, which currently transports 170,000 barrels of crude oil per day from Cushing to Wood River, Illinois; the 47-mile (76-kilometre) West Tulsa Pipeline, which currently transports 55,000 barrels per day to two refineries in Oklahoma; and the Shell storage terminal at Cushing, which is one of the largest terminal facilities in North America with 8.3 million barrels of storage capacity. Most notably, though, this acquisition diversifies the Company's sources of income from crude oil transportation and storage services, reducing its dependence on production from the WCSB.

#### **Enbridge Income Fund**

Enbridge Income Fund will continue to focus its efforts in 2004 on managing system assets and infrastructure, and further developing its operational procedures and processes with a view to maximizing available transportation capacity and the competitiveness of its tolls. The Fund remains confident that it will generate built-in, predictable growth in cash flow from its assets in order to provide modest but regular on-going distribution increases, supplemented with some acquisition-based growth.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 29 of 88 Appendix A

#### **Business Risks**

All of the Company's operations in Sponsored Investments are carried out through EEP and EIF and therefore the risks are limited to the percentage investment that the Company has in each entity.

#### Enbridge Energy Partners

#### Supply and Demand

The operation of the Lakehead System depends to a large extent on the volume of products transported on its pipeline systems. Decreases in the volume of products transported by the Partnership's systems, whether caused by supply or demand factors, can directly affect EEP's revenues and results of operations. The volume of shipments on the Lakehead System depends primarily on the supply of Western Canadian crude oil and the demand for crude oil in the Great Lakes and Midwest regions of the United States. EEP expects future increased supplies to come from the oil sands projects in Alberta. In addition, future plans to expand into the southern United States will increase demand for Western Canadian crude.

Supply is dependent upon a number of variables including the level of exploration, drilling, reserves and production of natural gas, crude oil and other liquid hydrocarbons. It is also impacted by the accessibility, price and quality of commodities available from alternate Canadian and U.S. sources, and the regulatory environments in Canada and the U.S., including the continued willingness of the governments of both countries to permit the export of natural gas, crude oil, and other liquid hydrocarbons from Canada to the United States on a commercially acceptable basis.

Certain of EEP's natural gas gathering assets are also subject to changes in supply and demand for natural gas, natural gas liquids and related products. Commodity prices impact the willingness of natural gas producers to invest in additional infrastructure to produce natural gas.

#### Regulation

In the U.S., the interstate and intrastate gas pipelines owned and operated by EEP are subject to regulation by FERC or state regulators. Gas gathering currently is not subject to active regulation. Several of EEP's assets are regulated by FERC and their revenues could decrease if tariff rates were protested.

#### Market Price Risk

EEP's business is subject to commodity price risk for natural gas costs and natural gas liquids. Historically, these risks have been managed by using derivative financial instruments, fixing the prices of natural gas and natural gas liquids.

#### Enbridge Income Fund

Risks within EIF relate to Alliance Canada and the Saskatchewan System. Risks for Alliance Canada are similar to those identified under the Gas Pipelines segment, which includes the U.S. portion of the Alliance System. Below are risks identified within EIF directly related to the Saskatchewan System.

#### Supply and Demand

The majority of the volumes shipped on the Saskatchewan and Westspur pipeline systems are transported on terms similar to a common carrier basis with no specific on-going volume commitments. There is no assurance that shippers will continue to utilize these systems in the future or transport volumes on similar terms or at similar tolls.

#### Competition

The Saskatchewan System faces competition in pipeline transportation from other pipelines, as well as other forms of transportation, most notably trucking. For the Weyburn and Virden pipeline systems, which use market based tolls, the cost of alternative transportation options affects the rates that can be charged for transportation service on these pipelines. The cost of alternative transportation options also provides a competitive force on the Saskatchewan System's cost of service based pipelines, the Saskatchewan and Westspur pipeline systems. These alternative transportation options could charge rates or provide service to locations that result in greater net profit for shippers with the effect of forcing the Saskatchewan System, for commercial reasons, to lower the transportation rates to avoid losing shippers, thereby reducing the Saskatchewan System's cash flow from transportation services.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 30 of 88 Appendix A

#### GAS DISTRIBUTION AND SERVICES

#### **Financial Results**

(millions of Canadian dollars)	2003	2002	2001
Enbridge Gas Distribution	103.0	85.3	156.1
CustomerWorks/ECS	16.9	10.7	14.3
Noverco	24.2	20.6	16.3
Other Gas Distribution	6.6	6.2	5.5
Enbridge Gas New Brunswick	4.4	3.6	2.3
Gas Services	(5.9)	(7.8)	(5.3)
Aux Sable	(6.9)	(3.1)	(6.2)
Other	11.3	8.8	6.6
	153.6	124.3	189.6

#### **Business Activities**

Gas Distribution and Services primarily includes the gas distribution operations of Enbridge Gas Distribution (EGD), CustomerWorks/ECS, the Company's investment in Noverco, and other gas distribution activities in smaller franchise areas. This segment also includes the gas services business, which manages the Company's merchant capacity commitments on Alliance and Vector; the Company's investment in Aux Sable, which is accounted for through proportionate consolidation; as well as the equity investment in AltaGas Services.

EGD is Canada's largest natural gas distribution company and has been in operation for more than 150 years. It serves over 1.7 million customers in Central and Eastern Ontario, Southwestern Quebec and parts of Northern New York State. Its operations in Ontario are regulated by the Ontario Energy Board (OEB).

CustomerWorks/ECS includes the operations of CustomerWorks LP, whose operations commenced on January 1, 2002, and provides services covering the entire meter-to-cash process, including many of the services which, until then, were provided by Enbridge Commercial Services (ECS). The results of ECS in 2002 and 2001 also include information technology and fleet services, which were rebundled into EGD in the fourth quarter of 2002. CustomerWorks was formed by Enbridge and Terasen and serves over 3.5 million customers including those of Terasen's and Enbridge's gas distribution operations. In August 2002, CustomerWorks outsourced the provision of its customer care services to a new entity owned and operated by Accenture Inc.

Enbridge owns an equity interest in Noverco through ownership of common shares and a cost investment through ownership of preference shares. Noverco is a holding company that owns an approximate 75% interest in Gaz Metro Limited Partnership, a gas distribution company operating in the province of Quebec and the state of Vermont, which has a 50% interest in TQM Pipeline, a pipeline transporting natural gas in Quebec.

The Company owns 63% of and operates Enbridge Gas New Brunswick (EGNB), the natural gas distribution franchise in the province of New Brunswick. EGNB is constructing a new distribution system and has approximately 2,300 customers. Over 200 kilometres (124 miles) of distribution main has been installed with the capability of attaching 6,000 customers. EGNB is regulated by the New Brunswick Board of Commissioners of Public Utilities.

#### **Results of Operations**

Earnings were \$153.6 million for the year ended December 31, 2003, compared with \$124.3 million in 2002. Higher earnings were attributable to colder than normal weather experienced in the EGD franchise area in 2003, further aided by a decrease in losses from Gas Services and an increased contribution from CustomerWorks/ECS.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 31 of 88 Appendix A

Earnings from Gas Distribution and Services were \$124.3 million for the year ended December 31, 2002, compared with \$189.6 million in 2001. The results reflect strong operating performance from EGD, more than offset by a smaller positive impact of tax rate reductions in 2002 than in 2001. Earnings from Noverco were also lower in 2002 due to the positive effect of tax rate reductions on earnings in 2001.

#### **Enbridge Gas Distribution**

Earnings from EGD increased by \$17.7 million in 2003 from 2002. The increase was due to higher gas distribution margins caused by increased distribution volume resulting from colder weather. This is partially offset by a \$26.0 million regulatory receivable writedown related to a prior year, a \$7.1 million OEB gas cost disallowance related to long-term transportation contracts and a \$4.6 million OEB outsourcing disallowance. Had EGD experienced normal weather in its franchise area, reported net earnings would have decreased by approximately \$46.1 million after tax. Normal weather is the weather forecast by EGD, in the Toronto area, including the impacts of both the long run and short run actual historical weather experience, more heavily weighted on the short run experience. The effect of weather is measured by degree-day deficiency and is calculated by accumulating, from October 1, the total number of degrees each day by which the daily mean temperature falls below 18 degrees Celsius. This financial measure is unique to EGD and, due to differing franchise areas, is unlikely to be directly comparable to the impact of weather-normalized factors that may be identified by other companies. Moreover, normal weather may not be comparable year-to-year given that the forecasting model uses the degree-days from the most recent years to determine the estimate. This weather-normalized adjustment is consistent with the manner in which EGD calculates degree-days for regulatory purposes.

The results for 2002 decreased by \$70.8 million from 2001 due to the effect of the significantly warmer than normal weather in 2002. On a weather-normalized basis, earnings would have been higher by \$29.3 million after tax while, for 2001, earnings would have decreased \$5.0 million. In addition, 2001 included the positive impact of tax rate reductions of \$45.0 million.

#### Gas Distribution and Services Earnings

(millions of dollars)

99	97.7
00	211.7
01	189.6
02	124.3
03	153.6

Prior to 2000, EGD's rates were typically determined using a cost-of-service methodology that allowed the revenues to be set to recover EGD's forecast costs. Forecast costs included gas commodity and transportation, operation and maintenance, depreciation, income taxes and the debt and equity costs of financing the rate base. The rate base is the investment in all assets used in gas distribution, storage and transmission, as well as an allowance for working capital. A requested increase in rates to recover forecast costs reflects a revenue deficiency, while a reduction in rates reflects a revenue sufficiency. Under cost of service, it is the responsibility of EGD to demonstrate to the OEB the prudence of the costs it is forecasting to incur over the year. EGD does not profit from the sale of the natural gas commodity.

During the fiscal periods 2000 to 2002, EGD operated under a targeted Performance-Based Regulation plan (PBR plan). The PBR plan used a formula to calculate the level of operation and maintenance costs recoverable in rates. During the PBR period, the Company was allowed to retain any savings realized if it achieved lower operation and maintenance expenses than those calculated under the formula.

EGD's 2003 rates were established pursuant to the cost-of-service methodology.

The allowed rate of return on common equity for EGD is based on the yield on Canadian government long-term bonds. For 2003, the allowed rate of return was 9.69% (2002 - 9.66%, 2001 - 9.54%) on a deemed common equity ratio of 35.0%.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 32 of 88 Appendix A

Over the last four years, EGD added 209,000 customers, including over 50,000 customers (net) in 2003. EGD services approximately 95% of residential space heating in its franchise area. This growth was attributable to the continued preference for natural gas among homeowners, builders and business operators, primarily because of the ongoing price advantage of natural gas and environmental benefits over other forms of energy. The residential construction market showed continued strength in 2003, which fueled demand for natural gas used in space and water heating. In addition, builders are increasingly using portable natural gas-fired heaters during cold weather construction.

#### CustomerWorks/ECS

The contribution from CustomerWorks/ECS was \$16.9 million for the year ended December 31, 2003, an increase of \$6.2 million compared with the prior year. The main component of these earnings in 2003 is the contribution from CustomerWorks as the primary operations of ECS were rebundled into EGD at the end of 2002. In 2002, earnings from CustomerWorks were affected by activity levels, including customer service calls, which were lower due to warmer weather. In 2003, earnings reflect higher weather-related customer service call volumes and growth in the CustomerWorks customer base.

Lower earnings from CustomerWorks/ECS in 2002, compared with 2001, reflect the positive impact of tax rate reductions in 2001 and the transfer of a vast majority of the remaining ECS operations into Enbridge Gas Distribution in the fourth quarter of 2002.

#### Noverco

The contribution from Noverco was \$24.2 million in 2003, compared with \$20.6 million in 2002. The increase is due to the 2003 results including a \$6.0 million dilution gain, resulting from a Gaz Metro Limited Partnership unit issuance that Noverco did not participate in. Equity earnings from Noverco in 2002 were higher than 2001, mainly due to lower financing costs and higher incentive earnings.

Variations from normal weather do not affect Noverco's earnings as Gaz Metro is not exposed to weather risk. A significant portion of the Company's earnings from Noverco is in the form of dividends on its preference share investment, which is based on the yield of 10-year Government of Canada bonds plus 4.34%. The weighted average dividend yield on the preference shares, which is reset annually, was approximately 10% for each of the last three years.

Energy

#### Enbridge Gas New Brunswick

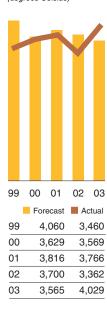

Earnings from Enbridge Gas New Brunswick improved in 2003 due to increased customer connections. Earnings were better in 2002 than 2001 due to a full year of operations.

#### **Gas Services**

Gas Services experienced a loss of \$5.9 million for the year ended December 31, 2003, compared with a loss of \$7.8 million in 2002. The improvement is due primarily to the commencement of fee-based gas service management contracts with certain U.S.-based companies in late 2002 and increased demand for natural gas and associated transmission services, reducing merchant capacity losses on Alliance and Vector. Losses in 2002 were \$2.5 million higher than those in 2001 due to the reduced basis differentials between Alberta and Chicago, and between Chicago and Dawn, Ontario, which increased the losses on the Company's Alliance and Vector merchant capacity. The basis differential is the cost of transportation between natural gas hubs and determines the revenue that can be obtained from merchant transportation capacity.

Energy Distribution Degree Day Deficiency

(dearees Celsius)

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 33 of 88 Appendix A

#### Aux Sable

Enbridge owns a 42.7% interest in the Aux Sable facilities, which process natural gas delivered through Alliance. As the gas transported by Alliance is liquids-rich, it must be processed prior to delivery to other systems. Aux Sable commenced operations in December 2000 and has the capacity to process up to 1.6 bcfd of natural gas. In 2003, the loss from Aux Sable was \$6.9 million, a weakening of \$3.8 million from the 2002 loss of \$3.1 million. The additional loss reflects the combined effect of higher natural gas prices and lower ethane prices relative to 2002, most significantly during the second quarter of 2003. The results from Aux Sable in 2003 also reflect the increase in ownership interest from 30.9% to 42.7% offset by lower depreciation as the acquisition of the additional interest was at a discount to the book value.

Losses in 2002 were lower than those in 2001 by \$3.1 million due to better margins between natural gas liquids and natural gas throughout 2002. The Company's ownership interest in Aux Sable increased from 21.4% to 30.9% in the fourth quarter of 2002.

#### **Outlook**

#### **Enbridge Gas Distribution**

#### 2004 Rate Application

EGD filed its fiscal 2004 rate application with the OEB in April 2003. EGD's objective was to return to an appropriate regulatory schedule whereby rates would be set prospectively. EGD's 2004 rate application requested that rates for 2004 be set by increasing 2003 rates by 90% of the forecast Ontario consumer price index, that being an increase of 1.8%. EGD reached a partial settlement with certain intervenors to accept this innovative approach to rate setting.

The OEB accepted the negotiated settlement proposal for the 2004 rates on September 4, 2003, thus allowing rates to be in place for the start of the 2004 fiscal year. The OEB also added a sharing mechanism to fiscal 2004, whereby if earnings on a weather normalized basis exceed the benchmark return on equity (ROE), these excess earnings would be shared on a 50/50 basis between the ratepayers and Enbridge.

Acceptance by the OEB of EGD's 2004 Rate Application was successful in returning the rate-making schedule to a prospective basis by setting 2004 rates as a function of the forecast consumer price index for the fiscal 2004 year. EGD filed the 2005 Rate Application with the OEB in December 2003. The hearing is expected to be held in June 2004.

#### Review of OEB Formula for Setting ROE

In September 2003, the OEB completed a hearing to review and consider possible revisions to the current ROE formula that is adjusted by any change in the long-term Canadian bond yield. EGD filed evidence to propose a ROE for 2004 of 11.2%. The increase in the requested ROE reflects EGD's belief that this is more representative of a risk-adjusted return within the North American equity markets. A decision was issued on January 16, 2004, which dismissed the application and confirmed the use of the existing formula. A ROE of 9.69% is embedded in the 2004 rates.

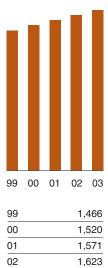

#### Legislative Change and Future Regulatory Direction

On August 1, 2003, the Ontario Energy Board Consumer Protection and Governance Act, 2003 was proclaimed, providing a new mandate for the OEB. The legislation provides for improved regulatory processes, performance measurement and reporting by the OEB, as well as the establishment of the OEB as a self-financing Crown Agency.

#### Gas Distribution Access Rule

The OEB, pursuant to the Energy Competition Act, has undertaken the development of a Gas Distribution Access Rule (GDAR). The stated purpose of the GDAR is to establish rules governing natural gas distributors' conduct in relation to gas marketers and to establish conditions of access to distribution services. The OEB issued the final version of the GDAR in December 2002. Despite EGD's arguments with respect to the GDAR's position on customer mobility and billing options, the GDAR mandates that distributors, including EGD, provide gas marketers with the option to consolidate the gas distribution charges to consumers on the marketers' own bill, forcing the distributor to appoint the marketer as its billing agent. EGD would have to undertake extensive system changes and negotiate new contractual arrangements in order to effect the GDAR directives. Accordingly, EGD and Union Gas Limited both appealed the so-called vendor consolidated billing aspects of the GDAR to the Ontario Divisional Court. The Ontario Divisional Court heard the appeals in August 2003 and in September 2003, the Court issued a decision dismissing the appeals and upholding the OEB's jurisdiction to enact the vendor consolidated billing portions of the GDAR. Both EGD and Union Gas Limited, Ontario's other principal gas distributor, have been granted leave from the Ontario Court of Appeals to hear an appeal of the Ontario Divisional Court's decision.

In the interim, the Company is working closely with the OEB and gas marketers to resolve other outstanding GDAR implementation issues.

#### **Enbridge Gas New Brunswick**

Customer attachment to the EGNB system has been slower than expected. EGNB plans to increase the attachment rate by becoming actively involved in the sale of the natural gas commodity and the sale, installation and service of natural gas equipment to the residential and small commercial markets. This "bundled" approach was approved by the provincial legislation during 2003.

#### **Capital Expenditures**

Capital expenditures in 2004 for the Gas Distribution and Services business are expected to be approximately \$287 million. The majority of the expenditures relate to expansion of and core maintenance on the EGD system. It is anticipated that these additions will be financed through internal funds as well as short and medium-term borrowings.

#### **Business Risks**

#### **Enbridge Gas Distribution**

The business risks inherent in the natural gas distribution industry impact the ability of EGD to realize the revenue level required to generate the allowed return on equity. These business risks include timely and adequate rate relief, accuracy in forecasting distribution volume, and, most importantly, achieving the forecast natural gas distribution volume. The new Ontario government's intentions with respect to the current freeze in electricity prices, which expires in 2006, and the direction of natural gas prices in the medium to long term will impact EGD's competitiveness in the energy market.

#### Volume Risks

Since customers are billed on a volumetric basis, the ability to collect the total revenue requirement (the cost of providing service) depends upon achieving the forecast distribution volume established in the rate-making process. The probability of realizing such volume is contingent upon four key forecast variables: weather; economic conditions; pricing of competitive energy sources; and the number of customers.

Sales and transportation of gas for customers in the residential and commercial sectors account for approximately 77% (2002 - 74%) of total distribution volume. Weather during the year, measured in degree-days, has a significant impact on distribution volume as a major portion of the gas distributed to these two markets is used ultimately for space heating.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 35 of 88 Appendix A

Distribution volume may also be impacted by the increased adoption of energy efficient technologies along with more efficient building construction that continues to place downward pressure on annual average consumption. In addition, technology issues combined with increased costs of residential natural gas water heaters may pressure EGD's market share for natural gas water heaters.

Sales and transportation service to large volume commercial and industrial customers is more susceptible to prevailing economic conditions. As well, the pricing of competitive energy sources affects volume distributed to these sectors as some customers have the ability to switch to an alternate fuel. Customer additions are important to all market sectors as continued expansion adds to the total consumption of natural gas.

Even in those circumstances where EGD attains its total forecast distribution volume, it may not earn the approved return on equity due to other forecast variables such as mix of sales and transportation of gas for customers, the mix between the higher margin residential and commercial sectors, and lower margin industrial sector. The timing of gas sales is also a factor, as higher rates are charged during the winter season than during the summer season.

#### Rate Relief

Through the regulatory process, the OEB approves the return on equity that EGD is allowed to earn, in addition to various other aspects of utility operations.

Rate relief could also be sought for significant unforecasted amounts allowing EGD to recover the costs of providing and maintaining the quality of its service while achieving the allowed rate of return on rate base.

EGD does not profit from the sale of the natural gas commodity nor is it at risk for the difference between the actual cost of gas purchased and the price approved by the OEB. This difference is deferred as a receivable from or payable to ratepayers until the OEB approves its disposition. EGD monitors the balance and its potential impact on ratepayers and requests, on a quarterly basis, interim rate relief that will allow EGD to recover or refund the gas commodity cost differential.

#### Forecasting Accuracy

Forecasting accuracy is a risk since rate applications are made or rates are established in advance based on anticipated distribution volume by class of customer. Forecasts are also made for the future cost of capital including the forecast yield rate for long-term Government of Canada Bonds used in the determination of the return on equity. Consequently, the forecasting process ensures that any changes in cost of service, regardless of whether they are caused by inflation or by level of business activity, would be recovered in new rates approved for that fiscal year based on the anticipated distribution volume.

#### **Gas Services**

Earnings from Gas Services are dependent upon the basis (location) differentials between Alberta and Chicago and between Chicago and Dawn. To the extent that the difference in the price of natural gas in the various locations is not greater than the cost of transportation between Alberta and Chicago or Dawn, earnings will be negatively affected.

#### Aux Sable

Earnings from Aux Sable will continue to be exposed to the effect of unfavorable spreads between the sale prices of natural gas liquids and the purchase price of replacement natural gas. Earnings would be negatively impacted by a decrease in the spread and positively impacted by an increase in the spread. Aux Sable has initiated a hedging program which will mitigate its earnings volatility.

Energy Distribution Volume of Gas Distributed

(billions of cubic feet)

#### INTERNATIONAL

#### **Financial Results**

(millions of Canadian dollars)	2003	2002	2001
OCENSA/CITCol	32.3	35.3	35.1
CLH	46.3	33.3	_
Jose Terminal and Other	(6.3)	(0.6)	0.5
	72.3	68.0	35.6

#### **Business Activities**

International includes earnings from the investments in OCENSA, a crude oil pipeline in Colombia, and CLH, Spain's largest refined products transportation and storage business. Earnings also include fees earned from technology and consulting services provided by Enbridge Technology Inc.

OCENSA is a cost investment on which the Company earns a stated return and which contributes a significant portion of the earnings. The Company also has responsibility for the operations of the pipeline, through CITCol, and earns a fee for this service, which includes incentive earnings for operating performance.

The Company owns a 25% interest in CLH of Spain. The primary activity of CLH is the storage and shipment of refined products through a comprehensive distribution network throughout Spain. Earnings are based on a fee for service and are dependent on throughput volumes and storage levels.

As a result of a breach of the Jose Terminal operating agreement by PDVSA, the Venezuelan state oil company, the SWEC Partnership, in which the company holds a 45% ownership, has filed a notice of contract termination and has filed for international arbitration, as provided for in the operating agreement. The company ceased recognition of earnings commencing February 1, 2003. Other is primarily administration and business development costs and the results of the Technology business.

#### **Results of Operations**

Earnings increased by \$4.3 million to \$72.3 million in 2003 primarily as a result of higher earnings from CLH, which was due to increased volumes and the impact of a stronger Euro, partially offset by a reduction in marine fleet revenues due to the scheduled retirement of certain ships. These increased earnings were partly offset by the termination of the Jose Terminal operating agreement and lower incentive earnings from CITCol.

Earnings in 2002 increased by \$32.4 million to \$68.0 million. The increase was primarily due to the acquisition of a 25% interest in CLH during the first quarter of 2002.

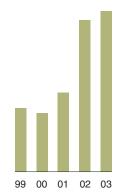

#### **Outlook**

The International business will continue to focus on select countries in key regions based on global trends in supply and demand. In addition, opportunistic acquisitions will be assessed based on risk and reward. The technology and consulting business provides support in connection with identification and development of equity participation projects.

Increased international asset rationalization, the changing corporate strategies of multinationals, and the privatization of energy transportation activities in focus regions should continue to present grassroots investment and acquisition opportunities. Opportunities will be evaluated against the Company's strict investment criteria. Latin America and Western Europe are key regions of interest. Enbridge plans for the International segment to contribute approximately 15% of the Company's earnings over the long term.

## International Earnings

(millions of dollars)

99	28.7
00	26.4
01	35.6
02	68.0
03	72.3

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 37 of 88 Appendix A

#### **Business Risks**

The International business is subject to risks related to political and economic instability, currency volatility, market volatility, government regulations, foreign investment rules, security of assets, and environmental considerations. The Company assesses and monitors international regions and specific countries on an ongoing basis for changes in these risks. Risks are mitigated by a combination of Enbridge's governance involvement, contractual arrangements, operation of the assets, regular analysis of country risk, as well as foreign currency hedging and insurance programs.

#### CORPORATE

(millions of Canadian dollars)	2003	2002	2001
Corporate	(76.6)	(44.4)	(55.1)

The Corporate segment includes business development activities not attributable to a specific business segment, corporate financing costs and other corporate activities.

Corporate costs amounted to \$76.6 million in 2003, an increase of \$32.2 million from 2002. During 2003, the Company incurred slightly lower financing costs more than offset by various negative factors in the fourth quarter including increased business development costs, an expense for stock-based compensation, and other corporate costs primarily relating to prior year business dispositions and final settlements. The Company adopted the fair-value based method of accounting for stock-based compensation effective January 1, 2003.

Corporate costs totalled \$44.4 million in 2002, compared with \$55.1 million in 2001. In 2002, Corporate included an after-tax gain on the sale of securities of \$17.8 million and lower financing costs. Preferred securities distributions increased in 2002 due to the new issue in February 2002.

#### DISCONTINUED OPERATIONS

In January 2002, the Company announced the sale of the retail and commercial Energy Services business, including the water heater rental program, to focus on its core activities of energy transportation and distribution. The sale, for proceeds of \$1 billion, was completed in the second quarter of 2002. This business included: the water heater rental program; retail appliance, fireplace and water heater sales and service; and mass market commercial plumbing, heating, ventilation and air conditioning, appliance repair and electrician contractor services in Canada and the United States.

Earnings from discontinued operations for the year ended December 31, 2002 were \$242.3 million, compared with \$45.3 million for 2001. The 2002 results included a gain on sale of \$240.0 million. Earnings in 2001 included a full year's results of operations and \$14.3 million related to the positive effect of income tax rate reductions.

#### CRITICAL ACCOUNTING POLICIES

#### **Rate Regulation**

The Company follows generally accepted accounting principles, which may differ for regulated operations from those otherwise expected in non-regulated businesses. These differences occur when the regulatory agencies render their decisions on rate applications and generally involve the timing of revenue and expense recognition to ensure that the actions of the regulator, which create assets and liabilities, have been reflected in the financial statements.

The accounting for these items is based on an expectation of the future actions of the regulator. For example, the Company does not record future income taxes related to its regulated operations as the taxes payable method is prescribed by the regulator for rate-making purposes and there is reasonable expectation that all such future income taxes will be recovered in rates when they become payable. Similarly, the deferral of differences between amounts included in rates and actual experience for specified expenses is based on the expectation that the regulator will approve the refund to or recovery from ratepayers of the deferred balance, normally in the following year.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 38 of 88 Appendix A

If the regulator's future actions are different from the Company's expectations, the timing and amount of the recovery of liabilities or refund of assets, recorded or unrecorded, could be significantly different from that reflected in the financial statements.

#### LIQUIDITY AND CAPITAL RESOURCES

The Company's cash generated from operations, commercial paper issuances, available capacity under credit facilities, and access to capital markets in Canada and the United States for the issuance of long-term debt, equity, or other securities is expected to be sufficient to satisfy liquidity requirements.

The Company continues to manage its debt-to-equity ratio to maintain a strong balance sheet. The debt-to-equity ratio at December 31, 2003, including short term borrowings, but excluding non-recourse short and long-term debt of its joint ventures, was 61.4%, compared with 64.4% at the end of 2002. The reduced leverage was primarily a result of the proceeds received on the sale of assets to EIF.

#### **Operating Activities**

Cash provided by operating activities, before changes in operating assets and liabilities and cash from discontinued operations, was \$965.0 million for the year ended December 31, 2003, compared with \$732.7 million and \$735.7 million for 2002 and 2001, respectively.

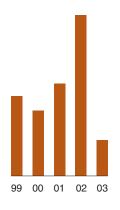

Cash from operations in 2003 reflects fluctuations due to the higher gas prices and distribution volumes of the Enbridge Gas Distribution business. Temporary differences between accounting and taxable income, driven by changes in gas costs to be settled with ratepayers, have increased the amount of future income taxes in 2003. The significant variance in operating assets and liabilities is due to an increase in accounts receivable and gas in storage resulting from higher gas costs pending recovery from ratepayers, as well as higher equal billing plan balances.

In 2002, cash from operations before changes in operating assets and liabilities was consistent with the prior year. Earnings from continuing operations were lower but include higher non-cash charges, which increased cash from operations. The non-cash charges include the writedown on the sale of the Midcoast assets and higher future income tax expense. The

decreased funding requirements for operating assets and liabilities in 2002 was due to lower gas in storage and decreased accounts receivable, commensurate with the lower cost of gas in 2002.

Capital Expenditures, Investments and Acquisitions

(millions of dollars)

99	1,141.2
00	935.7
01	1,324.2
02	2,301.9
03	520.1

Since the Company's pension plans are adequately funded, no additional funding above usual levels is anticipated for 2004.

#### **Investing Activities**

Cash provided from investing activities for the year ended December 31, 2003 was \$259.5 million compared with cash used in investing activities of \$251.7 million in 2002 and \$1,621.7 million in 2001. Investing activities in 2003 represented a source of cash primarily as a result of the proceeds received on the sale of assets to EIF. Both 2003 and 2002 reflect the repayment by EEP of short-term loans required to finance acquisitions with additional amounts received in 2003 as a majority of these loans have now been repaid.

Additions to property, plant and equipment primarily related to the gas distribution utility and are consistent with prior years. Other capital additions include the construction of the Hardisty caverns and the core maintenance on the other systems. In 2002 and 2001, capital additions were higher as a result of the Terrace expansion, new facilities on the Athabasca System, and those related to Enbridge Midcoast Energy while owned by the Company.

Other investing activity in 2003 was limited to the acquisition of the Cushing-to-Chicago Pipeline and additional investments in the Alliance and Vector pipelines net of cash acquired.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 39 of 88 Appendix A

Other investing in 2002 and 2001 was significantly higher as a result of some significant transactions. During 2002, the Company completed the acquisition of the Northeast Texas assets, included in the asset sale to EEP; acquired a 25% equity investment in CLH; and increased its equity ownership of Alliance. These items represent the majority of cash used for investing purposes and more than offset the cash inflows from the sale of the Enbridge Midcoast Energy assets and Energy Services business.

#### **Financing Activities**

Over the three-year period, the Company's financing requirements have reflected its growth and investment strategies. The decision to finance with debt or equity is based on the capital structure for each business and the overall capitalization of the consolidated enterprise. Certain of the regulated pipeline and gas distribution businesses issue long-term debt to finance capital expenditures. This external financing may be supplemented by debt or equity injections from the parent company. Debt, and equity when required, has been issued to finance business acquisitions, investments in subsidiaries, and long-term investments. Funds for debt retirements are generated through cash provided from operating activities, as well as through the issue of replacement debt.

Financing activity in 2003 includes the payment of dividends and a net reduction in debt through utilization of the cash proceeds from the sale of assets to EIF. Dividends have remained consistent with the prior year with the exception of those on the common shares, which reflects a higher number of common shares as well as an increase in the dividend rate consistent with the companies' earnings growth.

In 2002, cash used for financing activities to reduce short-term debt was partially offset by cash received from the issue of additional common shares and preferred securities. These activities were consistent with the goal of improving the Company's debt-to-equity ratio and financing the growth in the business. Proceeds from the issuance of shares by EEM were used to invest in i-units of EEP, as described above.

Payments due for contractual obligations over the next five years and thereafter are as follows:

		Less than			After
(millions of Canadian dollars)	Total	1 year	1-3 years	3-5 years	5 years
Long-term debt	4,693.1	450.0	968.6	589.3	2,685.2
Non-recourse long-term debt	725.4	32.5	84.4	72.0	536.5
Non-recourse capital leases	61.2	1.7	3.6	3.6	52.3

#### RISK MANAGEMENT

#### **Operating Risk**

As Enbridge continues to diversify its energy transportation and distribution businesses in North America and internationally, the risk profile of the Company will change. Entry into non-regulated businesses imposes greater economic exposure and requires more "at risk" capital. The Company's expectation of higher returns from these businesses justifies the level of risk. In addition, these operating risks are actively managed through insurance and other programs.

#### **Market Risk**

Earnings and cash flows are subject to volatility stemming from movements in interest rates, certain commodity prices, and the Canadian dollar exchange rate relative to other currencies. The Company has adopted an earnings-at-risk methodology to measure its exposure to market risk. To manage market risk, Enbridge uses derivative financial instruments to create offsetting positions to specific exposures. The Company has established risk management policies, approved by the Board of Directors, covering the use of derivative financial instruments for hedging purposes. Ongoing monitoring and senior management reporting procedures are in place. Derivative financial instruments are not used to create speculative positions. The financial instruments used and outstanding are described in Note 15 to the consolidated financial statements.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 40 of 88 Appendix A

#### Foreign Exchange Risk

The Company has a hedging program to eliminate 80% to 100% of the long-term exposure related to its foreign currency denominated cash flows. The Company also hedges certain of its foreign currency denominated net equity investments. The redemption of the investment in OCENSA also is hedged.

#### Interest Rate Risk

Enbridge is exposed to interest rate fluctuations on variable rate debt and floating to fixed swaps are used to manage this exposure. The Company monitors its levels of fixed and variable rate debt instruments and, from time to time, fixed to floating swaps are used to help maintain balances of each commensurate with the Company's financing strategies. The Company also enters into interest rate derivatives to hedge a portion of the interest cost of future debt issues related to specific capital projects.

#### Commodity Price Risk

The Company uses over-the-counter natural gas price swaps and options to manage physical exposures that arise from the merchant capacity commitments on the Alliance and Vector pipelines. The Company also uses these derivative instruments to manage any exposures that may arise from physical asset optimization and natural gas supply agreements.

As a result of the Company's ownership interest in Aux Sable Liquid Products L.P., it is exposed to the price differential between natural gas and natural gas liquids ("NGL"). This risk is hedged through the use of over-the-counter derivatives whereby the forward prices of gas and NGLs are fixed with swaps, or capped, or collared with options.

For the period that the Enbridge Midcoast Energy assets were owned, the Company was exposed to the margin between the price of natural gas and natural gas liquids. Enbridge used over-the-counter commodity derivatives to fix the selling price of the natural gas liquids and the cost of purchasing natural gas to establish the margins. The derivative financial instruments used to manage this exposure were transferred to EEP as part of the sale transaction.

#### Natural Gas Supply Management

Customers of EGD are exposed to changes in the price of the natural gas commodity. A portion of the future natural gas supply requirements is hedged using natural gas swaps and options that manage the price of natural gas, as allowed by the OEB. Since the cost of the natural gas commodity is paid by customers, this risk mitigation strategy is for the account of the customers. The OEB monitors the policies, procedures and results of this hedging program.

#### Derivative Financial Instruments Used for Risk Management

(millions of dollars unless otherwise noted)

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 41 of 88 Appendix A

In addition, the Company has forward foreign exchange contracts with a notional principal of Canadian \$214.0 million (2002 – \$448.6 million), to exchange Canadian for U.S. dollars. The outstanding instruments expire in 2005 and 2007. The contracts are not effective hedges for accounting purposes but offset an exposure related to income taxes on foreign currency gains or losses on Canadian dollar debt of a U.S. subsidiary. These instruments are recorded at fair value and have a fair value payable of \$10.5 million as at December 31, 2003 (2002 – \$36.9 million receivable).

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

#### Fair Values of Other Financial Instruments

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties, calculated at the reporting date, to settle these instruments. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The estimated fair values of all other financial instruments are based on quoted market prices or, in the absence of specific market prices, on quoted market prices for similar instruments and other valuation techniques.

The carrying amounts of all financial instruments, except for debt, approximate fair value. The fair value of debt does not include the effects of hedging.

#### **Total Debt**

(millions of dollars)

December 31,	200	03	2002		
	Carrying Amount	Fair Value	Carrying Amount	Fair Value

<sup>1</sup> Quarterly Financial Information has been prepared in accordance with Canadian Generally Accepted Accounting Principles.

Operating revenue from continuing operations fluctuates primarily due to the seasonality of the Company's gas distribution business. This business has a September 30 year end, which results in consolidation by the Company on a quarter lag basis. Therefore, peak revenues are recorded in the Company's second quarter, which represents Enbridge Gas Distribution's winter months. The positive effect of colder than normal weather contributed to an increase in revenues and earnings during the second and fourth quarters of 2003, as well as the third quarter of 2002. Significant items which impacted 2003 and 2002 quarterly earnings are as follows:

- First quarter earnings in 2003 include a \$7.1 million regulatory disallowance in the Company's gas distribution business.
- First quarter earnings in 2002 include a \$17.8 million after-tax gain on a sale of marketable securities and a \$6.1 million dilution gain on an EEP unit issuance.
- Second quarter earnings in 2003 include a \$169.1 million after-tax gain on the sale of assets to the Enbridge Income Fund in June 2003 and a \$9.2 million dilution gain on an EEP unit issuance.
- Second quarter earnings in 2002 include a \$240.0 million after-tax gain on the sale of the Company's Energy Services business in May 2002.
- Third quarter earnings in 2002 include a \$76.3 million after-tax writedown of the Enbridge Midcoast Energy assets, which were subsequently sold to Enbridge Energy Partnership.
- Fourth quarter earnings in 2003 include a \$11.1 million dilution gain on an EEP unit issuance, and a \$6.0 million dilution gain related to Noverco. Offsetting the gain is a \$26.0 million write-down of a regulatory receivable and a \$4.6 million regulatory decision on outsourcing, both in the Company's gas distribution business.
- Fourth quarter earnings in 2002 include a further \$5.9 million after-tax writedown of the Enbridge Midcoast Energy assets from that recorded in the fourth quarter of 2002.

#### FOURTH QUARTER 2003 HIGHLIGHTS

Fourth quarter earnings of \$27.3 million in 2003 were \$6.7 million lower than earnings for the fourth quarter of 2002. Earnings growth was noted in the quarter from additional facilities put into service at the Enbridge and Athabasca Systems in early 2003, and from equity earnings from Enbridge Income Fund. In addition, the fourth quarter of 2003 also included a dilution gain from EEP of \$11.1 million. These additional sources of earnings were more than offset by additional corporate expenses relating to business development, an expense for stock-based compensation, and other corporate costs primarily relating to prior year business dispositions and final settlements. Fourth quarter earnings were further reduced as a result of a \$26.0 million writedown of a regulatory receivable, and a \$4.6 million affiliate outsourcing disallowance in the Gas Distribution and Services segment.

Outstanding share data information is provided as at January 23, 2004.

## **Related Party Transactions**

Neither EEP nor EIF have employees and accordingly they use the services of the Company for managing and operating their businesses. These services, which are charged at cost in accordance with service agreements, amount to \$128.9 million (2002 – \$97.2 million; 2001 – \$56.2 million) for EEP and \$4.7 million for EIF, which began operation on June 30, 2003.

Vector Pipeline uses the services of Enbridge, a 60% interest owner, to operationally manage its business. These services, which are charged at cost in accordance with service agreements, amounted to \$3.3 million for 2003 (2002 – \$4.1 million; 2001 – \$3.4 million).

EGD acquires its customer care services from CustomerWorks Limited Partnership under an agreement having a five-year term starting January 2002. EGD is charged market prices for these services, which amounted to \$95.5 million in 2003 (2002 – \$71.8 million).

EGD has contracted for gas transportation services from Alliance Pipeline Limited Partnership and Vector Pipeline Limited Partnership. EGD is charged market prices for these services, which amounted to \$40.7 million in 2003 (2002 – \$41.3 million; 2001 – \$34.8 million) for Alliance Pipeline, and \$23.2 million in 2003 (2002 – \$25.2 million; 2001 – \$20.7 million) for Vector Pipeline.

A subsidiary of the company earns rental revenue from CustomerWorks Limited Partnership for the use of an automated billing system. In 2003, this revenue amounted to \$25.5 million (2002 – \$35.1 million). CustomerWorks Limited Partnership began operations on January 1, 2002.

In 2003, Enbridge Gas Services Inc. purchased \$33.6 million (2002 – \$6.3 million; 2001 – nil) of gas from Enbridge Marketing (US) Inc.

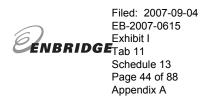

The Company also provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable; where no market price exists, a cost-based price is determined and charged. The Company may also purchase consulting and other services from affiliates. Prices are determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

Additional information relating to Enbridge is available on www.sedar.com.

Dated February 24, 2004

When used in this document, the words "anticipate", "expect", "project", "believe", "estimate", "forecast" and similar expressions are intended to identify forward-looking statements, which include statements relating to pending and proposed projects. Such statements are subject to certain risks, uncertainties and assumptions pertaining to operating performance, regulatory parameters, weather and economic conditions and, in the case of pending and proposed projects, risks relating to design and construction, regulatory processes, obtaining financing and performance of other parties, including partners, contractors and suppliers.

## To the Shareholders of Enbridge Inc.

Management is responsible for the accompanying consolidated financial statements and all other information in this Annual Report. The consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles and necessarily include amounts that reflect management's judgment and best estimates. Financial information contained elsewhere in this Annual Report is consistent with the consolidated financial statements.

Management has established systems of internal control that provide reasonable assurance that assets are safeguarded from loss or unauthorized use and produce reliable accounting records for the preparation of financial information. The internal control system includes an internal audit function and an established code of business conduct.

The Board of Directors and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee of the Board, composed of directors who are not officers or employees of the Company, has a specific responsibility for ensuring that management fulfills its responsibilities for financial reporting and internal controls related thereto. The Committee meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The Audit, Finance & Risk Committee reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

PricewaterhouseCoopers LLP, appointed by the shareholders as the Company's independent auditors, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

## To the Shareholders of Enbridge Inc.

We have audited the consolidated statements of financial position of Enbridge Inc. as at December 31, 2003 and 2002 and the consolidated statements of earnings, retained earnings and cash flows for each of the years in the three year period ended December 31, 2003. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2003 and 2002 and the results of its operations and cash flows for each of the years in the three year period ended December 31, 2003 in accordance with Canadian generally accepted accounting principles.

Calgary, Alberta, Canada January 23, 2004 Chartered Accountants

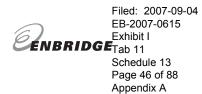

## Comments by Auditors for U.S. Readers on Canada-U.S. Reporting Difference

In the United States, reporting standards for auditors require the addition of an explanatory paragraph (following the opinion paragraph) when there is a change in accounting principles that has a material effect on the comparability of the Corporation's financial statements, such as the changes in stock-based compensation and accounting for goodwill described in Note 1 to the consolidated financial statements. Our report to the shareholders dated January 23, 2004 is expressed in accordance with Canadian reporting standards which do not require a reference to such a change in accounting principles in the auditors' report when the change is properly accounted for and adequately disclosed in the financial statements.

#### Notes to the Consolidated Financial Statements

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 49 of 88 Appendix A

Enbridge Inc. (Enbridge or the Company) is a leader in the transportation and distribution of energy. Enbridge conducts its business through five operating segments: Liquids Pipelines, Gas Pipelines, Sponsored Investments, Gas Distribution and Services, and International. These operating segments are strategic business units established by senior management to facilitate the achievement of the Company's long-term objectives, to aid in resource allocation decisions and to assess operational performance.

## **Liquids Pipelines**

Liquids Pipelines includes the operation of common carrier and feeder pipelines that transport crude oil and other liquid hydrocarbons.

## **Gas Pipelines**

Gas Pipelines includes proportionately consolidated investments in transmission pipelines that transport natural gas.

## **Sponsored Investments**

Sponsored Investments consists of the Company's investments in Enbridge Energy Partners, L.P. (EEP), Enbridge Energy Management, L.L.C. (EEM), (collectively, the Partnership) and Enbridge Income Fund (EIF). The Partnership transports crude oil and other liquid hydrocarbons through common carrier and feeder pipelines and transports, gathers, processes and markets natural gas and natural gas liquids. From May 2001 to October 2002, the Company, through its subsidiary, Enbridge Pipelines Inc., owned 100% of Enbridge Midcoast Energy Inc., which is now a wholly owned subsidiary of EEP. Enbridge Income Fund is a publicly traded income fund whose primary operations include a 50% interest in a gas transmission pipeline and a 100% interest in a crude oil and liquids pipeline and gathering system.

#### **Gas Distribution and Services**

Gas Distribution and Services consists of gas utility operations which serve residential, commercial, industrial and transportation customers, primarily in central and eastern Ontario. It also includes natural gas distribution activities in Quebec, New Brunswick and New York State, as well as gas service operations, including the Company's proportionately consolidated investment in Aux Sable and natural gas gathering and processing operations through an equity investment in AltaGas Services Inc.

#### International

The Company's International business invests in energy transportation and related energy projects outside of Canada and the United States. This business also provides consulting and training services related to proprietary pipeline operating technologies and natural gas distribution.

## 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The consolidated financial statements of the Company are prepared in accordance with Canadian generally accepted accounting principles (Canadian GAAP). These accounting principles are different in some respects from United States generally accepted accounting principles (U.S. GAAP) and the significant differences that impact the Company's financial statements are described in Note 22. Amounts are stated in Canadian dollars unless otherwise noted.

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the financial statements. Actual results could differ from these estimates.

#### **Basis of Presentation**

The consolidated financial statements include the accounts of Enbridge Inc., its subsidiaries and its proportionate share of the accounts of joint ventures. Investments in entities which are not subsidiaries or joint ventures, but over which the Company exercises significant influence, are accounted for using the equity method. Other investments are accounted for at cost.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 50 of 88 Appendix A

The Company's gas distribution activities within the Gas Distribution and Services segment are conducted primarily through a wholly-owned subsidiary, Enbridge Gas Distribution Inc. (Enbridge Gas). The fiscal year-end of Enbridge Gas is September 30 and its results are consolidated on a one quarter lag basis, which reflects the results of Enbridge Gas operations in accordance with its regulatory, tax and operating cycles. Accordingly, references to "December 31" mean the financial position of Enbridge Gas as at September 30 and references to the "year ended December 31" mean the results of Enbridge Gas for the year ended September 30. Events subsequent to September 30 may provide additional information relating to items included in the financial statements of Enbridge Gas and may reveal conditions existing at the financial statement date that affect the estimates involved in the preparation of the financial statements. All such information that becomes available prior to completion of the Enbridge Inc. consolidated financial statements would be used in evaluating the estimates made and the financial statements would be adjusted where necessary.

#### Regulation

The Company's Liquids Pipelines, Gas Pipelines, and gas distribution activities within the Gas Distribution and Services segment are subject to regulation by various authorities, including the National Energy Board (NEB), the Federal Energy Regulatory Commission (FERC), and the Ontario Energy Board (OEB). Regulatory bodies exercise statutory authority over matters such as construction, rates and underlying accounting practices, and ratemaking agreements with customers. In order to recognize the economic effects of the actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles.

#### **Revenue Recognition**

Revenues are recorded when products have been delivered or services have been performed. Certain of the Liquids Pipelines, Gas Pipelines, and gas distribution operations within the Gas Distribution and Services segment are subject to regulation and, accordingly, there are circumstances where revenues recognized do not match the cash tolls or the billed amounts. For rate-regulated operations, revenue is recognized in a manner that is consistent with the underlying rate design as mandated by the regulatory authority. Certain other operations recognize revenue under the terms of enforceable, committed long-term delivery contracts.

#### **Income Taxes**

The regulated activities of the Company recover income tax expense based on the taxes payable method when prescribed by regulators for ratemaking purposes or when stipulated in ratemaking agreements. Therefore, rates do not include the recovery of future income taxes related to temporary differences. Consequently, the taxes payable method is followed for accounting purposes as there is reasonable expectation that all future income taxes will be recovered in rates when they become payable.

For all other operations, the liability method of accounting for income taxes is followed. Future income tax assets and liabilities are determined based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Future income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse.

#### **Foreign Currency Translation**

The functional currency of the Company's foreign operations, except for certain financing and investing operations, is the U.S. dollar. The Company also holds a Euro dollar equity investment in a foreign operation in Spain. These operations, which include those of proportionately consolidated U.S. dollar investments and the Euro dollar equity investment, are self-sustaining and are translated into Canadian dollars using the current rate method. Under this method, assets and liabilities are translated using period-end exchange rates, with revenues and expenses translated using average rates for the period. Gains and losses arising on translation of these operations are included as a separate component of shareholders' equity.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 51 of 88 Appendix A

The remaining foreign operations of the Company, including certain financing and investing operations, are integrated with those of the parent company and are translated into Canadian dollars using the temporal method. Under this method, monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect at the balance sheet date. Non-monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect on the dates the assets were acquired or liabilities were assumed. Revenues and expenses are translated at rates of exchange prevailing on the transaction dates. Under this method, gains and losses on translation are reflected in income when incurred.

#### Cash

Cash includes short-term and demand deposits with a term to maturity of three months or less when purchased and are recorded at cost.

## Gas in Storage

Natural gas in storage is recorded in inventory at prices approved by the OEB in the determination of customer sales rates. The actual price of gas purchased may differ from the OEB-approved price and includes the effect of natural gas price risk management activities. The difference between the approved price and the actual cost of the gas purchased is deferred for future disposition by the OEB.

## **Property, Plant and Equipment**

Expenditures for system expansion and major renewals and betterments are capitalized; maintenance and repair costs are expensed as incurred. Interest during the construction period is capitalized. Regulated operations capitalize an allowance for interest during construction and, if approved, an allowance for equity funds used during construction, at rates authorized by the regulatory authorities.

## **Depreciation**

Depreciation of property, plant and equipment generally is provided on a straight-line basis over the estimated service lives of the assets.

#### **Future Removal and Site Restoration Costs**

Future removal and site restoration costs are not determinable due to the indeterminable life of certain assets. Accordingly, no provision has been made for these costs. There is also reasonable expectation that any costs incurred will be recovered through future tolls when they become payable.

Depreciation expense for Gas Distribution and Services operations includes a provision for future removal and site restoration costs at rates approved by the regulator. Actual costs incurred are charged to accumulated depreciation.

## **Deferred Amounts**

The Company defers certain charges which the regulatory authorities permit to be recovered through future rates. These charges are recognized when regulatory approval for these recoveries has been received. Other deferred charges are amortized straight-line over various periods depending on the nature of the charges and include long-term financing and hedging costs which are amortized over the terms of the related debt or hedge agreements.

### Goodwill

Goodwill represents the excess of the purchase price over the fair value of net identifiable assets upon acquisition of a business. Effective January 1, 2002, the Company adopted the standard of the Canadian Institute of Chartered Accountants (CICA) related to goodwill and other intangible assets. Under the standard, goodwill is not amortized but is tested for impairment at least annually and written down to fair value if the criteria for impairment are met. The standard has been applied prospectively.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 52 of 88 Appendix A

Goodwill arising from the acquisition of Midcoast Energy Resources, Inc. in May 2001 (sold to EEP in October 2002) was amortized on a straight-line basis over 30 years prior to the adoption of the new standard. Results of operations for the year ended December 31, 2001 included goodwill amortization of \$7.2 million. This amortization reduced both earnings per common share and diluted earnings per common share by \$0.05 for the year ended December 31, 2001.

#### **Derivative Financial Instruments**

Gains and losses on financial instruments used to hedge the Company's net investment in foreign operations are included in the foreign currency translation adjustment in shareholders' equity. Amounts received or paid related to derivative financial instruments used to hedge the currency risk of cash flows from foreign currency denominated transactions are recognized concurrently with the hedged cash flows. Amounts received or paid related to derivative financial instruments used to hedge the price of energy commodities are recognized as part of the cost of the underlying physical purchases. For other derivative financial instruments used for hedging purposes, amounts received or paid, including any gains and losses realized upon settlement, are recognized over the term of the hedged item.

The Company applies settlement accounting to derivative financial instruments. Under this method, gains and losses on derivative instruments that qualify for hedge accounting are not recorded until they are realized. The notional amounts are not recorded in the financial statements as they do not represent amounts exchanged by the counterparties.

## **Post-Employment Benefits**

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits. Pension costs and obligations for the defined benefit pension plans are determined using the projected benefit method and are charged to earnings as services are rendered, except for the regulated operations of the Gas Distribution and Service segment where contributions made to the plan are expensed as paid, consistent with the recovery of such costs in rates. For the defined contribution plans, contributions made by the Company are expensed.

The Company also provides post-employment benefits other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependants. The cost of such benefits is accrued during the years employees render service, except for the regulated operations of the Gas Distribution and Services segment where the cost of providing these benefits is expensed as paid, consistent with the recovery of such costs in rates.

## **Stock-Based Compensation**

Effective January 1, 2002, the Company adopted the CICA standard for stock-based compensation. The standard required retroactive application for certain stock compensation awards as a charge to opening retained earnings without restatement of prior periods. Upon adoption, a charge to opening retained earnings of \$5.4 million was recorded relating to outstanding stock appreciation rights, which expire in 2004.

Effective January 1, 2003, the Company early adopted new requirements in the CICA standard for stock-based compensation. The standard now requires the Company to apply the fair value based method of accounting for all awards granted. This method has been applied on a prospective basis and has resulted in a charge to income, in the year of adoption, of \$1.9 million.

## **Comparative Amounts**

Certain comparative amounts have been restated to conform with the current year's financial statement presentation.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 53 of 88 Appendix A

## **New Accounting Standards**

### Impairment of Long-lived Assets

A new standard is in effect, for fiscal years beginning on or after April 1, 2003, for recognizing, measuring and disclosing impairment of long-lived assets held for use. The standard requires that an impairment loss be recognized in an amount equal to the difference between carrying value and fair value when the carrying value of a long-lived asset exceeds the expected undiscounted future cash flows. A recoverability test will be performed on asset groups as events or circumstances change in order to determine whether or not the assets are impaired. The Company is currently assessing the impact of the standard, if any, on its financial statements, and will adopt the standard for the fiscal year commencing January 1, 2004.

## **Hedging Relationships**

A new guideline is in effect, for fiscal years beginning on or after July 1, 2003, for identifying, designating and documenting hedge relationships, and assessing their effectiveness. The guideline provides parameters on the conditions necessary for hedge accounting to be applied, but does not specify the methods to be used in its application. The guideline, however, does require that the Company adopt an accounting policy for assessing the effectiveness of its hedge relationships. Any ineffectiveness is to be recognized in income for the period. The Company is currently assessing the impact of the guideline, if any, on its financial statements, and will adopt the guideline for the fiscal year commencing January 1, 2004.

### Generally Accepted Accounting Principles

A new standard is in effect, for all fiscal years beginning on or after October 1, 2003, for identifying appropriate sources of generally accepted accounting principles, and the doctrines that constitute generally accepted accounting principles. Any changes to accounting policies resulting from the adoption of this standard are to be applied prospectively. At present, the standard has an exemption for rate-regulated operations. The Company is currently assessing the impact of this standard and its related exemption, if any, on the financial statements.

## **Asset Retirement Obligations**

A new standard is in effect, for fiscal years beginning on or after January 1, 2004, for recognizing, measuring and disclosing liabilities for asset retirement obligations and the associated asset retirement costs. A similar standard has been adopted by the Financial Accounting Standards Board in the United States, effective for fiscal years beginning after June 15, 2002. This new standard is not expected to have a material impact on the Company's financial statements.

## Consolidation of Variable Interest Entities

A new guideline is in effect, for all annual and interim periods beginning on or after November 1, 2004, for applying consolidation principles to entities subject to control on a basis other than through ownership of voting interests. A similar standard has been adopted by the Financial Accounting Standards Board in the United States (FIN 46), effective for interim periods commencing after July 15, 2003. If the interpretation of the Canadian standard is consistent with FIN 46, it would result in the consolidation of Enbridge Income Fund as described in Note 22.

Other	7.0	9.2
	8,530.9	6,947.6

## 3. DISPOSITIONS

## Alliance Pipeline Canada and Enbridge Pipelines (Saskatchewan) Inc.

On June 30, 2003, the Company formed EIF, an unincorporated open-ended trust established under the laws of Alberta. On formation, the Company sold its 50% interest in the Canadian segment of the Alliance Pipeline together with its 100% interest in Enbridge Pipelines (Saskatchewan) Inc. to EIF for total proceeds of \$905.0 million before working capital adjustments of \$20.6 million and transaction costs of \$0.2 million. The Company recorded an after-tax gain on the sale of \$169.1 million. Enbridge's net investment in Alliance Canada was \$333.6 million at December 31, 2002 and was classified as a long-term investment. The net assets of Enbridge Pipelines (Saskatchewan) Inc. consist primarily of property, plant and equipment and comprised \$86.5 million of Enbridge Inc.'s total property, plant and equipment balance at December 31, 2002.

## **Enbridge Midcoast Energy**

In October 2002, the Company closed the sale of the United States assets of Enbridge Midcoast Energy to EEP, including the Northeast Texas assets described in Note 4. The book value of the assets was written down by \$82.2 million, after tax, to reflect fair value based on the proceeds of \$1,289.3 million. The Company received cash proceeds of approximately \$529.3 million with the remaining consideration in the form of assumed affiliate debt.

## 4. ACQUISITIONS

#### **Cushing to Chicago Pipeline System**

In September 2003, the Company acquired 90% of the outstanding shares of CCPS Transportation L.L.C., owner of the Cushing to Chicago Pipeline System. Of the total purchase price, \$78.3 million was paid on the date of acquisition. Payment of the remaining US\$65.0 million depends upon completion of reversal of the flow of the pipeline and must be paid no later than December 31, 2004 to allow reversal to proceed. The acquisition was accounted for using the purchase method and the results of operations have been included in the consolidated statement of earnings from the date of acquisition. The amount paid was allocated to property, plant and equipment.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 57 of 88 Appendix A

### **Northeast Texas**

In March 2002, the Company acquired natural gas gathering and processing facilities in Northeast Texas for cash consideration of \$289.3 million. These assets are included in the sale described in Note 3. The results of operations have been included in the consolidated statement of earnings for the period of ownership.

(millions of dollars)	
Fair Value of Assets Acquired	
Property, plant and equipment	242.3
Goodwill	56.2
Working capital deficiency	(9.2
	289.3
Purchase Price	
Cash	288.2
Transaction costs	1.1
	289.3

## Midcoast Energy Resources, Inc.

On May 11, 2001, the Company acquired all the outstanding shares of Midcoast Energy Resources, Inc., a Houston-based energy company, for cash consideration of \$561.8 million and the assumption of long-term debt. This business is included in the sale described in Note 3. The acquisition was accounted for using the purchase method and the results of operations have been included in the consolidated statements of earnings from the date of acquisition until they were sold in October 2002.

(millions of dollars)	
Fair Value of Assets Acquired	
Property, plant and equipment	677.3
Working capital deficiency	(37.2)
Goodwill	328.9
Future income taxes	(39.0)
Other non-current assets	37.8
	967.8
Purchase Price	
Cash	554.5
Long-term debt assumed	406.0
Transaction costs	7.3
	967.8

# **Frontier Pipeline Company**

The Company acquired an additional 34.0% interest in Frontier Pipeline Company for \$46.0 million in December 2001, increasing the Company's ownership to 77.8%. The purchase price was allocated primarily to property, plant and equipment.

# 5. DISCONTINUED OPERATIONS

The sale of the Company's operations that provide energy products and services to retail and commercial customers, including the water heater rental program, closed in May 2002.

Selected financial information related to discontinued operations is as follows.

## **Earnings**

# 7. JOINT VENTURE

Alliance Pipeline Canada, Alliance Pipeline U.S., Aux Sable, and Alliance Canada Marketing, have been jointly controlled since April 1, 2003. Vector Pipeline Canada, and Vector Pipeline U.S. have been jointly controlled since October 1, 2003. The Company's proportionate share of earnings, cash flows and financial position related to these entities is summarized below, with the exception of Alliance Pipeline Canada for the period subsequent to June 30, 2003 as the Company's 50% interest in Alliance Pipeline Canada was sold effective June 30, 2003 to EIF.

	April 1, 2003
(millions of dollars)	to December 31, 2003
Earnings	
Revenues	421.7
Gas sales	(168.1)
Operating and administrative	(81.5)
Depreciation	(59.7)
Interest expense	(59.7)
Investment and other income	5.1
Income taxes	0.3
Proportionate share of net earnings	58.1
Cash Flows	
Cash provided by operations	99.4
Cash provided by investing activities	(1.4)
Cash used in financing activities	(197.7)
Proportionate share of decrease in cash	(99.7)

## 7. JOINT VENTURE (continued)

(millions of dollars)	December 31, 2003
Financial Position	
Current assets	118.7
Property, plant and equipment, net	1,562.2
Other long-term assets	102.9
Current liabilities	(122.6)
Long-term debt	(752.4)
Other long-term liabilities	(17.8)
Proportionate share of net assets	891.0

Included in the Company's proportionate share of cash from joint ventures is \$18.7 million held in trust, pursuant to finance agreements of the joint venture. Under these finance agreements, funds received from shippers, in settlement of transportation rates, as well as interest earned on trust account balances, are segregated in trust accounts and first applied to meet debt service and operating requirements. Amounts in excess of these requirements are transferred to a non-trust account for partnership distributions on a quarterly basis.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 61 of 88 Appendix A

Equity investments include \$536.4 million (2002 – \$551.9 million) representing the unamortized excess of the purchase price over the underlying net book value of the investee's assets at the date of purchase. The excess has been allocated to property, plant and equipment on the basis of estimated fair values and is amortized over the economic life of the assets.

## Alliance Pipeline, Aux Sable and Vector Pipeline

In 2003, the Company invested \$223.2 million (2002 – \$315.3 million) in Alliance and Aux Sable, increasing the Company's interest from 37.1% to 50.0% in Alliance Pipeline Canada, 37.1% to 50% in Alliance Pipeline U.S. and 30.9% to 42.7% in Aux Sable. The purchase price was \$36.9 million (2002 – (\$7.1) million) less than the underlying net book value of the assets. This amount has been allocated to property, plant and equipment and is being amortized over the economic life of the assets.

On October 1, 2003 the Company invested \$97.7 million in Vector, including the assumption of \$61.5 million in debt, increasing the Company's ownership interest from 45% to 60%. The purchase price was \$36.3 million less than the underlying net book value of the assets. This amount has been allocated to property plant and equipment and is being amortized over the economic life of the assets.

As a result of these additional investments, the Company established joint control (see Note 7). Therefore, the Company's interest in Alliance Pipeline Canada, Alliance Pipeline U.S., Aux Sable and Alliance Canada Marketing are accounted for as joint ventures effective April 1, 2003 and the Company's interest in Vector Pipeline Canada and Vector Pipeline U.S. are accounted for as joint ventures effective October 1, 2003. On June 30, 2003, the Company sold its 50% interest in Alliance Pipeline Canada to Enbridge Income Fund.

## The Partnership

In October 2002, EEM, a partially-owned subsidiary, completed an initial public offering of 9,000,000 limited liability shares. The proceeds from the offering were used to purchase I-units, a new class of limited partnership interest from EEP. The Company purchased 17.2% of the EEM shares, increasing its total net investment in the Partnership to 14.1% from 12.9%. Although 82.8% of EEM is widely held, the Company has voting control of EEM. The Company's statement of financial position includes 100% of EEM's investment in EEP which totals \$478.8 million (2002 – \$529.9 million). The Company's net investment in the Partnership, after deducting the non-controlling interest of \$396.4 million (2002 – \$438.8 million), is \$347.7 million (2002 – \$376.7 million).

In 2003, EEP completed two public issuances of partnership units. As the Company elected not to participate in either of these offerings, its effective interest in EEP was reduced to 12.2% from 14.1%. This resulted in recognition of a total dilution gain of \$20.3 million (2002 – \$6.1 million), net of tax and minority interest.

#### **Noverco**

Noverco holds an approximate 10% reciprocal shareholding in the Company. As a result, the Company has a pro-rata interest of 3.2% (2002 – 3.2%) in its own shares. Both the equity investment in Noverco Inc. and shareholders' equity have been reduced by the reciprocal shareholding of \$135.7 million (2002 – \$135.7 million).

The Company owns a cost investment in Noverco of \$181.4 million (2002 – \$181.4 million), which is entitled to a cumulative dividend based on the average yield of Government of Canada bonds maturing in more than 10 years plus 4.34%.

### **CLH**

In 2002, the Company invested \$430.8 million in CLH, a refined products transportation and storage company in Spain. The Company's 25% interest is accounted for by the equity method. Contingent consideration of up to 84.3 million Euros (\$137.2 million) will become payable over the next three years if certain minimum annual and cumulative volume targets are met. The purchase price included \$340.9 million representing the excess of purchase price over the underlying net book value of the assets. The excess has been allocated to property, plant and equipment and is being amortized over the economic life of the assets.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 62 of 88 Appendix A

## 8. LONG-TERM INVESTMENTS (continued)

## **Enbridge Income Fund**

On June 30, 2003, the Company formed EIF, an unincorporated open-ended trust established under the laws of Alberta. On formation, EIF acquired the Company's 50% interest in the Canadian segment of the Alliance Pipeline together with its 100% interest in Enbridge Pipelines (Saskatchewan) Inc. The Company has 14,500,000 subordinated trust units of EIF and 38,023,750 preferred units of Enbridge Commercial Trust (ECT), a direct subsidiary of EIF, at December 31, 2003. The subordinated trust units result in a 41.9% common equity interest in EIF.

The Company's \$145.0 million initial investment in subordinated units of EIF was offset by a \$145.0 million unrecognized gain resulting in a book value of nil. The unrecognized gain is being amortized into income over the life of the underlying assets of EIF and is included as a component of equity earnings.

The Company's 38 million preferred units are accounted for as a \$380.2 million cost investment at December 31, 2003. At the request of the Company, the ECT preferred units will be repurchased for cancellation in certain specified circumstances by ECT with a repurchase price per ECT preferred unit based on the net issue price realized from the sale (or that could be realized from the sale) of an ordinary trust unit to the public. The ECT preferred units have no voting rights and mature on June 30, 2033 at which time ECT is obligated to redeem all of the outstanding ECT preferred units for a price of ten dollars per unit. The economic terms of these units are comparable to those of ordinary common units. As such, the approximate fair value of these preferred units, valued at the December 31, 2003 closing price of \$12.89 per ordinary common unit, is \$490.1 million.

## **OCENSA Pipeline**

The Company owns a cost investment in the OCENSA Pipeline of \$223.3 million (2002 – \$223.3 million) which earns a fixed rate of return. The fair value of this investment is approximately \$270.0 million, estimated using year-end market information and various assumptions. As no market exists for an instrument of this nature, the actual fair value in an open market may vary significantly.

## **Income from Equity Investments**

Year ended December 31,	2003	2002	2001
Liquids Pipelines	1.1	1.0	8.5
Gas Pipelines	31.6	67.1	57.6

<sup>3 2002</sup> included US\$160.0 million.

<sup>4</sup> Primarily commercial paper borrowings. Includes US\$306.0 million (2002 – US\$582.5 million).

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 64 of 88 Appendix A

## 10. DEBT (continued)

The weighted average effective rate reflects the interest rate of debt instruments after giving effect to interest swap agreements.

## **Interest Expense**

(millions of dollars) 2001 December 31, 2003 2002 431.7 345.0 Long-term debt 392.9 Commercial paper and other short-term debt 20.2 29.0 85.8 Short-term borrowings 9.6 9.6 12.2 Capitalized (9.5)(5.9)(10.2)451.3 422.0 437.1

In 2003, total interest paid was \$467.1 million (2002 – \$429.3 million; 2001 – \$452.2 million).

### **Credit Facilities**

(millions of dollars)

December 31, 2003	Committed	Uncommitted	Drawdowns
Liquids Pipelines	150.0	_	_
Gas Distribution and Services	659.0	6.5	14.5
Corporate	1,887.7	_	_
	2,696.7	6.5	14.5

Committed facilities carry a weighted average standby fee of 0.10% per annum on the unutilized portion. The committed facilities for Liquids Pipelines expire in 2004 and are extendible annually thereafter subject to the approval of lenders. The committed facilities for Gas Distribution and Services expire in 2004 and 2006 and are extendible annually thereafter subject to the approval of the lenders. The committed facilities for Corporate expire in 2004 and 2008 and are extendible annually thereafter subject to the approval of the lenders. Drawdowns under all of these facilities bear interest at prevailing market rates.

## 11. NON-RECOURSE DEBT OF JOINT VENTURES

(millions of dollars)

December 31,	2003
Credit Facilities (US\$21.7 million)	28.0
Senior Notes:	
7.770% due 2015 (US\$140.0 million)	180.9
6.996% due 2019 (US\$153.4 million)	198.3
7.877% due 2025 (US\$100.0 million)	129.2
4.591% due 2025 (US\$146.2 million)	189.0
Obligations under capital leases (US\$47.4 million)	61.2
	786.6
Less current portion of long-term debt (US\$26.5 million)	(34.2)
	752.4

The debt of joint ventures is non-recourse to Enbridge. Security provided by the joint ventures is limited to all of the rights and assets of the individual joint venture and does not extend to the rights and assets of Enbridge, except to the extent of Enbridge's investment.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 65 of 88 Appendix A

The Senior Notes may be redeemed by Alliance Pipeline U.S. at any time, at a price equal to the outstanding principal plus accrued but unpaid interest and a make-whole premium. Alliance Pipeline U.S. may be required to redeem the Senior Notes, in whole or in part, from proceeds received under insurance claims for damages if the proceeds are not applied to repair or rebuild the Alliance pipeline system.

Interest on the Senior Notes is payable semi-annually. Principal repayments commenced June 30, 2001 on the 6.996% Senior Notes, December 31, 2001 on the 7.770% Senior Notes, June 30, 2003 on the 4.591% Senior Notes and commences June 30, 2019 on the 7.877% Senior Notes. Principal repayments are due semi-annually thereafter in each instance and are closely tied to the recovery rates for capital depreciation and deferred income taxes contained in the transportation agreements.

Long-term debt maturities on joint venture borrowings for the years ending December 31, 2004 through 2008 are \$34.2 million, \$32.0 million, \$56.0 million, \$37.6 million and \$38.0 million, respectively.

## 12. PREFERRED SECURITIES

The Company has \$175.0 million of 7.6%, \$200 million of 7.8%, and \$175.0 million of 8.0% Preferred Securities outstanding. The Preferred Securities may be redeemed at the Company's option, in whole or in part, after the fifth anniversary of each issue and have no stated maturity date. The Company has the right to defer, subject to certain conditions, payments of distributions on the securities for up to 20 consecutive quarterly periods. Deferred and regular distribution amounts are payable in cash or, at the option of the Company, in common shares of the Company. As a result, the Preferred Securities are classified into their respective debt and equity components. The equity component of the Preferred Securities is \$532.4 million at December 31, 2003 (2002 – \$533.7 million).

#### 13. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and an unlimited number of preferred shares.

## **Common Shares**

(millions of dollars; number of common shares in millions)

December 31,	200	03	200	)2	2001	
	Number of Shares	Amount	Number of Shares	Amount	Number of Shares	Amount

Balance at end of year	171.9	2,239.9	169.7	2,169.0	162.9	1,875.9

#### **Preferred Shares**

The 5,000,000 5.5% Cumulative Redeemable Preferred Shares, Series A are entitled to fixed, cumulative, preferential dividends of \$1.375 per share per year, payable quarterly. Subsequent to December 31, 2003, the Company may, at its option, redeem all or a portion of the outstanding preferred shares for \$26.00 per share if redeemed on or prior to December 1, 2004; \$25.75 if redeemed on or prior to December 1, 2005; \$25.50 if redeemed on or prior to December 1, 2006; \$25.25 if redeemed on or prior to December 1, 2007; and \$25.00 if redeemed thereafter, in each case with all accrued and unpaid dividends to the redemption date.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 66 of 88 Appendix A

## 13. SHARE CAPITAL (continued)

## **Earnings Per Common Share**

Earnings per common share is calculated by dividing earnings applicable to common shareholders by the weighted average number of common shares outstanding. The weighted average number of shares outstanding has been reduced by the Company's pro-rata weighted average interest in its own common shares of 5.3 million shares (2002 – 5.3 million shares), resulting from the investment in Noverco.

The treasury stock method, used for calculating diluted earnings per share, uses an adjusted weighted average number of common shares outstanding, which reflects the effect of exercising all dilutive securities.

(number of common shares in millions)

December 31,	2003	2002	2001
Weighted average shares outstanding	165.5	160.3	157.3
Effect of dilutive securities	1.4	1.7	1.5
Diluted weighted average shares outstanding	166.9	162.0	158.8

## **Dividend Reinvestment and Share Purchase Plan**

Under the plan, registered shareholders may reinvest dividends in common shares of the Company or make optional cash payments to purchase additional common shares, in either case, free of brokerage or other charges.

## **Shareholder Rights Plan**

The Shareholder Rights Plan is designed to encourage the fair treatment of shareholders in connection with any takeover offer for the Company. Rights issued under the plan become exercisable when a person, and any related parties, acquires or announces the intention to acquire 20% or more of the Company's outstanding common shares without complying with certain provisions set out in the plan or without approval of the Board of Directors of the Company. Should such an acquisition or announcement occur, each rights holder, other than the acquiring person and related parties, will have the right to purchase common shares of the Company at a 50% discount to the market price at that time.

### 14. STOCK OPTION PLAN

The Company's Incentive Stock Option Plan (2002) includes fixed stock options and performance-based stock options. A maximum of 15 million common shares is reserved for issuance under the plan.

## **Fixed Stock Options**

Full-time, key employees are granted options to purchase common shares that are exercisable at the market price of common shares at the date the options are granted. Generally, options vest in equal annual installments over a four-year period and expire ten years after the issue date. Outstanding stock options expire over a period ending no later than February 6, 2013.

### **Outstanding Fixed Stock Options**

(options in thousands; exercise price in dollars)

December 31,	20	03	200	)2	20	01
		Weighted Average		Weighted Average		Weighted Average

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 67 of 88 Appendix A

## **Fixed Stock Option Characteristics**

(options in thousands; exercise price in dollars)

### **December 31, 2003**

	Options Outstanding				s Vested
Exercise Price Range	Number	Weighted Average Remaining Life (years)	Weighted Average Exercise Price	Number	Weighted Average Exercise Price
10.30-19.99	117	1.72	14.70	117	14.70
20.00-29.99	1,078	5.44	26.02	796	25.77
30.00-39.99	1,564	5.76	35.95	1,165	35.22
40.00-47.71	1,982	8.29	42.64	241	43.63
	4,741			2,319	

## **Performance-based Options**

The Plan provides for the grant of performance-based stock options to executive officers that become exercisable based on the performance of the Company's common share price. Of the outstanding performance-based stock options as at December 31, 2003, 810,000 remain unexercisable and were granted September 16, 2002 at \$46.30 per share. These performance-based stock options vest in equal annual installments over their five-year term and become exercisable, as to 50% of the grant, if the price on an Enbridge common share exceeds \$61.00 for 20 consecutive trading days during the period September 16, 2002 to September 16, 2007 and, as to 100% of the grant, if the price of an Enbridge common share exceeds \$71.00 for 20 consecutive trading days during the same aforementioned period. The term will extend to eight years if any of these options become exercisable before the end of the five-year term.

## **Outstanding Performance-based Options**

(options in thousands; exercise price in dollars)

December 31,	20	03	2002		20	01
	Number	Weighted Average Exercise Price	Number	Weighted Average Exercise Price	Number	Weighted Average Exercise Price
Options at beginning of year	2,045	37.73	1,479	32.03	1,480	31.60
Options granted	_	_	810	46.30	65	41.13
Options exercised	(549)	31.39	(244)	31.66	_	_
Options cancelled	_	_	_	_	(66)	31.35
Options at end of year	1,496	40.05	2,045	37.73	1,479	32.03
Options vested	686	32.67	1,235	32.10	740	31.31

At December 31, 2003, the exercise prices of outstanding performance-based options ranged from \$31.35 to \$46.30 (2002 – \$31.35 to \$46.30; 2001 – \$31.35 to \$41.13). Outstanding performance-based options will expire over a period ending no later than September 16, 2010.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 68 of 88 Appendix A

## 14. STOCK OPTION PLAN (continued)

## **Pro forma Compensation Expense**

If the Company had used the fair-value based method to account for fixed stock options and performance-based options granted in fiscal 2002, earnings and earnings per share would have been as follows.

Year ended December 31,	2003	2002
Earnings applicable to common shareholders from continuing operations		
As reported	667.2	334.2
Total stock-based compensation expense <sup>1</sup>	(5.9)	(2.9)
Included as an expense in the statement of earnings <sup>2</sup>	1.9	_
Pro forma	663.2	331.3
Earnings applicable to common shareholders		
As reported	667.2	576.5
Total stock-based compensation expense <sup>1</sup>	(5.9)	(2.9)
Included as an expense in the statement of earnings <sup>2</sup>	1.9	_
Pro forma	663.2	573.6
Earnings per common share from continuing operations		
As reported	4.03	2.09
Pro forma	4.01	2.07
Earnings per common share		
As reported	4.03	3.60
Pro forma	4.01	3.58

<sup>1</sup> Total stock-based compensation expense if the fair value based method to expense stock options had been applied since January 1, 2002.

The Black-Scholes model was used to calculate the fair value of fixed stock options and the barrier valuation model was used to calculate the fair value of performance-based options. Significant assumptions used in these models are as follows:

Year ended December 31,	2003	2002	2003	2002
	Fixed Stock Performance Options Options			
Fair value per option	\$ 8.46	\$ 11.42	_	\$ 7.65
Valuation assumptions				
Expected option term (years)	8	10	_	8
Expected volatility	22%	25%	_	24%
Expected dividend yield	3.95%	3.51%	_	3.46%
Risk-free interest rate	5.24%	5.33%	_	4.20%

<sup>2</sup> Stock-based compensation recognized as an expense in the statement of earnings for options granted in 2003 as a result of the adoption of the fair valued based method January 1, 2003.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 69 of 88 Appendix A

### 15. FINANCIAL INSTRUMENTS

## **Derivative Financial Instruments Used for Risk Management**

The Company is exposed to movements in foreign currency exchange rates, interest rates and the price of energy commodities, primarily natural gas. In order to manage these exposures for both shareholders and ratepayers, the Company utilizes derivative financial instruments to create offsetting positions to specific exposures. These instruments are not used for speculative purposes.

Derivative financial instruments involve credit and market risks. Credit risk arises from the possibility that a counterparty will default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the instrument. The Company minimizes credit risk by entering into risk management transactions only with institutions that possess investment grade credit ratings or with approved forms of collateral. For transactions with terms greater than five years, the Company may also retain the right to require a counterparty, that would otherwise meet the Company's credit criteria, to provide collateral.

## Foreign Exchange

The Company has an exposure to foreign currency exchange rates, primarily because of its U.S. dollar denominated investments and its Euro investment in CLH where both carrying values and earnings are subject to foreign exchange risk. The Company utilizes par forward contracts and cross currency swaps to manage a portion of the foreign exchange exposure. In addition, cross currency swaps have been entered into to hedge the Company's exposure on its U.S. dollar denominated senior term notes.

#### **Interest Costs**

The Company enters into forward interest rate agreements, swaps and collars to swap floating rate debt to fixed and hedge against the effect of future interest rate movements on its variable rate debt. The Company monitors its debt portfolio mix of fixed and variable rate instruments and has entered into fixed to floating interest rate swaps, with notional amounts of \$300.0 million, to manage the balance of fixed and floating rate debt.

### **Energy Commodity Costs**

The Company uses over-the-counter natural gas price swaps, futures, options and collars to manage physical exposures that arise in the management of merchant capacity commitments to the Alliance and Vector pipelines. The Company also uses these derivative instruments to manage any exposures that may arise from physical asset optimization and natural gas supply agreements.

As a result of the Company's ownership interest in Aux Sable Liquid Products L.P., it is exposed to the price differential between natural gas and natural gas liquids ("NGL"). This risk is hedged through the use of over-the-counter derivatives whereby the forward prices of natural gas and NGLs are fixed with swaps, or capped or collared with options.

## Natural Gas Supply Management

The Company hedges a portion of the cost of future natural gas supply requirements of Enbridge Gas, as allowed by the regulator. Amounts paid or received under the hedge agreements are recognized as part of the cost of the natural gas purchases and are recovered through the ratemaking process. At December 31, 2003, the Company had entered into natural gas price swaps and options to manage the price for approximately 8.9%, or 13.1 billion cubic feet, of its forecast fiscal 2004 system gas supply.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 70 of 88 Appendix A

## 15. FINANCIAL INSTRUMENTS (continued)

### Fair Values

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

(millions of dollars unless otherwise noted)

December 31,		2003			2002	
	Notional Principal	Fair Value Receivable/		Notional Principal	Fair Value Receivable/	
	or Quantity	(Payable)	Maturity	or Quantity	(Payable)	Maturity
Foreign exchange						
U.S. cross currency swaps	535.8	(30.6)	2005-2022	535.8	24.9	2005-2022
Euro cross currency swaps	434.7	(46.1)	2004-2019	371.1	(54.4)	2003
Forwards (cumulative						
exchange amounts)	1,889.5	67.9	2004-2022	1,993.0	(244.6)	2003-2022
Energy commodities						
Natural gas (bcf)	63.6	12.4	2004-2008	35.3	(1.5)	2003-2004
Natural gas supply management (bcf)	13.1	(3.4)	2004	5.9	(0.2)	2003
Interest rates						
Interest rate swaps	561.0	1.9	2005-2029	934.1	0.6	2003-2029
Forward interest rate swaps	532.0	(1.0)	2004-2005	_	_	_

In addition, the Company has forward foreign exchange contracts with a notional principal of Canadian \$214.0 million (2002 – \$448.6 million), to exchange Canadian for U.S. dollars. The outstanding instruments expire in 2005 and 2007. The contracts are not effective hedges for accounting purposes but offset an exposure related to income taxes on foreign currency gains or losses on Canadian dollar debt of a U.S. subsidiary. These instruments are recorded at fair value and have a fair value payable of \$10.5 million as at December 31, 2003 (2002 – \$36.9 million receivable).

As the Company has not settled any hedging instruments in advance of the hedged transactions, there were no deferred gains or losses for any of the Company's hedges of anticipated transactions at December 31, 2003 and 2002. A credit risk on derivative financial instruments amounted to \$94.8 million at December 31, 2003 with no significant concentration with any single counterparty.

## **Fair Values of Other Financial Instruments**

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties, calculated at the reporting date, to settle these instruments. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The estimated fair values of all other financial instruments are based on quoted market prices or, in the absence of specific market prices, on quoted market prices for similar instruments and other valuation techniques.

The carrying amounts of all financial instruments, except for debt, approximate fair value. The fair value of debt does not include the effects of hedging.

### **Total Debt**

(millions of dollars)

December 31,	2003		4	2002	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value	
Liquids Pipelines	881.4	990.6	981.3	1,084.5	
Gas Distribution and Services	1,674.5	1,972.1	1,749.0	1,989.2	
Corporate	3,362.1	3,540.1	3,962.3	4,081.3	
	5,918.0	6,502.8	6,692.6	7,155.0	

Non-recourse debt of joint ventures has a carrying value of \$786.6 million and a fair value of \$845.7 million.

### **Trade Credit Risk**

Trade receivables related to Liquids Pipelines consist primarily of amounts due from companies operating in the oil and gas industry and are collateralized by the crude oil and other products contained in the Company's pipelines and storage facilities. Credit risk in the Gas Distribution and Services segment is reduced by the large and diversified customer base and the ability to recover an estimate for doubtful accounts through the ratemaking process. Included in accounts receivable is an allowance for doubtful accounts of \$35.1 million at December 31, 2003 (2002 – \$31.1 million).

## 16. INCOME TAXES

### **Income Tax Rate Reconciliation**

(millions of dollars)

1			
Year ended December 31,	2003	2002	2001
Earnings before income taxes	888.2	746.8	552.1
Combined statutory income tax rate	35.6%	38.0%	41.0%
Income taxes at statutory rate	316.2	283.8	226.3
Increase/(decrease) resulting from:			
Tax rate changes on future income tax balances	6.2	8.1	(67.5)
Future income taxes related to regulated operations	(34.5)	(36.7)	(35.7)
Non-taxable items, net	(70.5)	(99.5)	(28.2)
Lower foreign tax rates	(44.4)	(42.2)	(36.8)
Large Corporations Tax	18.1	16.9	18.8
Other	(3.7)	6.3	(7.7)
Income Taxes	187.4	136.7	69.2
Continuing operations	187.4	102.1	66.7
Discontinued operations	_	34.6	2.5
	187.4	136.7	69.2
Effective income tax rate	21.1%	18.3%	12.5%
Ellocavo inocino tax rato	211170	10.070	12.0 /

In 2003, income taxes paid amounted to \$202.9 million (2002 - \$105.2 million; 2001 - \$110.5 million).

## 16. INCOME TAXES (continued)

## **Components of Future Income Taxes**

(millions of dollars)

December 31,	2003	2002
Future Income Tax Liabilities		
Differences in accounting and tax bases of property, plant and equipment	368.0	313.8
Differences in accounting and tax bases of investments	368.2	525.7
Other	187.2	110.1
	923.4	949.6
Future Income Tax Assets		
Loss carryforwards	241.7	283.0
Other	45.2	38.2
	286.9	321.2
Total Net Future Income Tax Liability	636.5	628.4

Accumulated future income taxes related to rate-regulated operations which have not been recorded in the accounts amounted to \$551.2 million at December 31, 2003 (2002 – \$511.2 million). Had the liability method been prescribed by the regulatory authorities for ratemaking purposes, such amounts would have been recorded and recovered in revenues.

At December 31, 2003, the Company has recognized the benefit of unused tax loss carryforwards of \$708.8 million. Unused tax loss carryforwards expire as follows: 2004 – \$0.1 million; 2005 – \$3.4 million; 2006 – \$26.1 million; 2007 – \$71.9 million; 2008 – \$56.8 million, 2009 – \$17.4 million and 2010 and beyond – \$533.1 million.

## **Geographic Components of Pretax Earnings and Income Taxes**

(millions of dollars)

Year ended December 31,	2003	2002	2001

### 17. POST-EMPLOYMENT BENEFITS

## **Pension Plans**

The Company has three pension plans which provide either defined benefit or defined contribution pension benefits or both for employees of the Company. The Liquids Pipelines and Gas Distribution and Services pension plans provide non-contributory defined pension and/or defined contribution benefits to Canadian employees of Enbridge. The Enbridge U.S. pension plan provides either non-contributory defined benefit pension benefits or contributory defined contribution pension benefits to U.S. employees of Enbridge.

#### **Defined Benefit Plans**

Retirement benefits under defined benefit plans are based on employees' years of service and remuneration. Contributions made by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The measurement date used to determine the plan assets and the accrued benefit obligation was September 30, 2003. The effective dates of the most recent actuarial valuations and the next required actuarial valuations are as follows:

	Effective Date of Most Recently	Effective Date of Next Required
	Filed Actuarial Valuation	Actuarial Valuation
Liquids Pipelines	January 1, 2002	January 1, 2005
Enbridge U.S.	January 1, 2003	January 1, 2004
Gas Distribution and Services	January 1, 2002	January 1, 2005

Pension costs under the defined benefit pension plans reflect management's best estimates of the rate of return on pension plan assets, rate of salary increases and various other factors including mortality rates, terminations and retirement ages. Adjustments arising from plan amendments, actuarial gains and losses, and changes to assumptions are amortized over the expected average remaining service lives of the employees.

#### **Defined Contribution Plans**

Contributions are generally based on the employee's age and/or years of service. For the Enbridge U.S. pension plan, contributions to the defined contribution plans are also based on employee contributions. For defined contribution pension benefits, pension cost equals amounts required to be contributed by the Company.

## **Post-employment Benefits Other than Pensions**

Post-employment benefits other than pensions (OPEB) include primarily supplemental health, dental and life insurance coverage for qualifying retired employees.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 74 of 88 Appendix A

# 17. POST-EMPLOYMENT BENEFITS (continued)

The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability using the accrual method.

(millions of dollars)

Equity securities	_	_	_	60.0%	8.75%	9.25%
Fixed income securities	100.0%	4.50%	4.50%	40.0%	5.00%	6.00%
					7.25%	8.00%

The Pension Funds exist to ensure that pension benefits will be paid. The Company manages the investment risk of its Pension Funds by setting a long term, asset mix policy for each Pension Fund after consideration of: (i) the nature of Pension Plan liabilities; (ii) the investment horizon of the Plan; (iii) the going concern and solvency funded status and cash flow requirements of the Plans; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The above table reflects both the target allocation percentage for each of the categories presented at the end of the period, as well as, the expected long-term rate of return on assets, both on a weighted-average basis. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long term expectations.

## **Plan Contributions by the Company**

(millions of dollars)

Year ended December 31,	2003	2002	2003	2002
		OPEB	Per	nsion Benefit
Minimum contributions required	_	_	_	_
Additional contributions	11.2	8.5	11.2	19.7
Total contributions	11.2	8.5	11.2	19.7
Contributions expected to be paid in 2004	10.6		14.8	

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 76 of 88 Appendix A

## 17. POST-EMPLOYMENT BENEFITS (continued)

## **Net Pension Plan and OPEB Costs Incurred**

(millions of dollars)

Year ended December 31,	2003	2002	2001
Benefits earned during the year	27.7	25.2	26.3
Interest cost on projected benefit obligations	57.4	54.5	55.2
Actual return on plan assets	(110.5)	16.7	(125.1)
Actuarial gain in the year	69.6	38.0	45.0
Amount credited/(charged) to the EEP	(10.2)	(1.7)	5.5
Pension and OPEB costs incurred	34.0	132.7	6.9

## **Net Pension Plan and OPEB Costs Recognized**

(millions of dollars)

(			
Year ended December 31,	2003	2002	2001
Benefits earned during the year	27.7	25.2	26.3
Interest cost on projected benefit obligations	57.4	54.5	55.2
Expected return on plan assets	(64.8)	(75.3)	(93.7)
Amortization and deferral of unrecognized amounts	15.3	6.9	(6.8)
Amount credited/(charged) to EEP	(10.2)	(1.7)	5.5
Pension and OPEB cost/(credit) recognized	25.4	9.6	(13.5)

The above tables reflect the funded status, recorded pension and OPEB assets and liabilities and pension and OPEB cost for all of the Company's benefit plans on an accrual basis. However, in accordance with its ability to recover employee benefit costs on a pay-as-you-go basis for the regulated operations of Gas Distribution and Services, the Company records the cost of such benefits on a cash basis. Using the cash basis for the Gas Distribution and Services plans and the accrual method for other plans, the Company's pension cost was \$9.4 million (2002 – \$3.6 million credit; 2001 – \$4.0 million cost). The pension asset was \$71.4 million (2002 – \$73.1 million). The Company's OPEB cost totaled \$7.0 million (2002 – \$6.8 million; 2001 – \$5.9 million). The OPEB liability was \$10.0 million (2002 – \$8.4 million). These net benefits or liabilities are recorded on the balance sheet in Deferred Amounts and Other Assets. The pension and OPEB assets and obligations for discontinued operations were included in the sale transaction.

## **Economic Assumptions**

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

Year ended December 31,	2003	2002	2001	2003	2002	2001
		OPEB			Pension Benefit	
Discount rate	6.79%	6.95%	7.15%	6.75%	6.81%	7.06%
Average rate of salary increases				4.00%	4.00%	4.00%
Average rate of return on						
pension plan assets	4.50%	4.50%	4.50%	7.25%	7.79%	7.79%

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

Year ended December 31,	2003	2002	2001	2003	2002	2001
		OPEB			Pension Benefit	
Discount rate	6.31%	6.79%	6.95%	6.29%	6.75%	6.81%
Average rate of salary increases				4.00%	4.00%	4.00%

### **Medical Cost Trend Rates**

The assumed medical cost trend rates for the next year used to measure the expected cost of benefits and the ultimate trend rate and the year in which the ultimate trend rate is assumed to be achieved are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in which Ultimate Medical Cost Trend Rate Assumption is Achieved
Canadian Plans			
Drugs	10%	4.5%	2011
Other Medical	4.5%	4.5%	2004
Enbridge U.S.	14%	5.5%	2011

A 1% increase in the assumed medical and dental care trend rate would result in a change of \$26.2 million in the accumulated post-employment benefit obligations and a change of \$2.8 million in OPEB cost. A 1% decrease in the assumed medical and dental care trend rate would result in a change of \$20.7 million in the accumulated post-employment benefit obligations and a change of \$2.1 million in OPEB cost.

## 18. INVESTMENT AND OTHER INCOME

(mil	lions	ot	dol	llars	)

Year ended December 31,	2003	2002	2001

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 78 of 88 Appendix A

## 20. RELATED PARTY TRANSACTIONS

Neither, EEP nor EIF have employees and use the services of the Company for managing and operating their businesses. These services, which are charged at cost in accordance with service agreements, amount to \$128.9 million (2002 – \$97.2 million; 2001 – \$56.2 million) for EEP and \$4.7 million for EIF, which began operation on June 30, 2003.

Vector uses the services of Enbridge, a 60% interest owner, to operationally manage its business. These services, which are charged at cost in accordance with service agreements, amounted to \$3.3 million for 2003 (2002 – \$4.1 million; 2001 – \$3.4 million).

EGD acquires its customer care services from CustomerWorks Limited Partnership under an agreement having a five-year term starting January 2002. EGD is charged market prices for these services, which amounted to \$95.5 million in 2003 (2002 – \$71.8 million).

EGD has contracted for gas transportation services from Alliance Pipeline Limited Partnership and Vector Pipeline Limited Partnership. EGD is charged market prices for these services, which amounted to \$40.7 million in 2003 (2002 – \$41.3 million; 2001 – \$34.8 million) for Alliance Pipeline, and \$23.2 million in 2003 (2002 – \$25.2 million; 2001 – \$20.7 million) for Vector Pipeline.

A subsidiary of the Company earns rental revenue from CustomerWorks Limited Partnership for the use of an automated billing system. In 2003, this revenue amounted to \$25.5 million (2002 – \$35.1 million). CustomerWorks Limited Partnership began operations on January 1, 2002.

In 2003, Enbridge Gas Services Inc. purchased \$33.6 million (2002 – \$6.3 million; 2001 – nil) of gas from Enbridge Marketing (US) Inc.

The Company also provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable; where no market price exists, a cost-based price is determined and charged. The Company may also purchase consulting and other services from affiliates. Prices are determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a guarterly basis.

## 21. COMMITMENTS AND CONTINGENCIES

## **Enbridge Gas Distribution Inc.**

The remediation of discontinued manufactured gas plant sites may result in future costs to Enbridge Gas. In October 2002, a claim was filed for \$55 million in damages relating to a certain manufactured gas plant site. Enbridge Gas filed a statement of defence in June 2003 denying liability. Although management believes that it has a valid defence to this claim, certain risks exist. The probable overall cost cannot be determined at this time due to uncertainty about the presence and extent of damage in addition to the potential alternative remediation approaches which vary in cost. Enbridge Gas expects that costs, if any, not recovered through insurance would be recovered through rates. As such, management does not believe that the outcome will have a material impact on the financial statements.

In October 2002, the Supreme Court of Canada granted an Application for Leave to Appeal to a customer who commenced an action against Enbridge Gas claiming that the OEB-approved late payment penalties charged to customers were contrary to Canadian federal law. The Court heard the plaintiff's appeal of the Ontario Court of Appeal's decision on October 9, 2003 and reserved issuing judgment.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 79 of 88 Appendix A

## **CAPLA Claim**

The Canadian Alliance of Pipeline Landowners' Associations and two individual landowners have commenced an action, which they will be applying for certification as a class action, against the Company and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. The Company believes it has a sound defence and intends to vigorously defend the claim. Since the outcome is indeterminable, the Company has made no provision for any potential liability.

# **Enbridge Energy Partners**

Enbridge Energy Company, Inc. (EEC), which holds a portion of the Company's equity interest in EEP, has agreed to indemnify EEP from and against substantially all liabilities, including liabilities relating to environmental matters, arising from operations prior to the transfer of its pipeline operations to EEP in 1991. This indemnification does not apply to amounts that EEP would be able to recover in its tariff rates if not recovered through insurance, or to any liabilities relating to a change in laws after December 27, 1991. In addition, in the event of default, EEC, as the General Partner, is subject to recourse with respect to a portion of EEP's long-term debt, which amounts to US\$248 million at December 31, 2003.

## 22. UNITED STATES ACCOUNTING PRINCIPLES

These consolidated financial statements have been prepared in accordance with Canadian GAAP. The effects of significant differences between Canadian GAAP and U.S. GAAP for the Company are described below.

## **Earnings and Comprehensive Income**

(millions of dollars except per share amounts)

Year ended December 31,	2003	2002	2001

# 1 Preferred Securities

Under U.S. GAAP, the full amount of the Company's Preferred Securities and related distributions would be recognized as debt and interest expense, respectively. The Preferred Securities have a fair market value of \$625.5 million at December 31, 2003 (2002 – \$565.0 million).

## 2 Stock-based Compensation

Effective January 1, 2003, the Company adopted FAS 123, Accounting for Stock-Based Compensation, on a prospective basis for U.S. GAAP, and elected to use the fair value-based method to measure compensation expense. The adoption of the fair value method for U.S. GAAP eliminates all differences between Canadian and U.S. GAAP for options granted subsequent to the date of adoption. Disclosure differences in pro forma earnings between Canadian and U.S. GAAP for options will remain only for those options granted prior to adoption, January 1, 2002, of the Canadian accounting standard for stock-based compensation

Prior to the adoption of FAS 123, the Company accounted for stock-based compensation for U.S. GAAP in accordance with APB 25, Accounting for Stock Issued to Employees, which required the use of the intrinsic value-based method to measure compensation expense. Under Canadian GAAP, the Company's performance-based options did not give rise to compensation expense. Under U.S. GAAP, the Company's performance-based options, which vested during 2002 and 2001, gave rise to pre-tax compensation expense of \$12.1 million and \$6.9 million respectively. No performance-based options vested in 2003. In addition, under U.S. GAAP in 2001, the Company's Stock Appreciation Rights (SARs) were accounted for using the intrinsic value method, which resulted in pre-tax compensation expense of \$8.3 million, whereas, under Canadian GAAP, SARs did not give rise to compensation expense.

# 3 Future Income Taxes

Canadian GAAP requires that the effects of tax rate reductions be recognized when they are substantively enacted. Under U.S. GAAP, the effect of tax rate reductions cannot be recognized until enacted. In 2000, the Company recognized \$92.8 million of earnings related to substantively enacted tax rate reductions that are recognized in 2001 under U.S. GAAP.

Under U.S. GAAP, deferred income tax liabilities are recorded for rate-regulated operations, which follow the taxes payable method for ratemaking purposes. As these deferred income taxes are expected to be recoverable in future revenues, a corresponding regulatory asset is also recorded. These assets and liabilities are adjusted to reflect changes in enacted income tax rates. The additional deferred income taxes under U.S. GAAP include the difference between capital cost allowance and depreciation of property, plant and equipment of \$551.2 million (2002 – \$549.3 million) and the incremental revenue required for the recovery of unrecorded taxes of \$286.6 million (2002 – \$316.0 million).

## 4 Accounting for Joint Ventures

U.S. GAAP requires the Company's investments in joint ventures be accounted for using the equity method. However, under an accommodation of the U.S. Securities and Exchange Commission, accounting for joint ventures need not be reconciled from Canadian to U.S. GAAP. The different accounting treatment affects only display and classification and not earnings or shareholders' equity. See Note 7 for summarized financial information of joint ventures.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 81 of 88 Appendix A

#### 5 Financial Instruments

For U.S. GAAP purposes, FAS 133, Accounting for Derivative Instruments and Hedging Activities, requires that all derivatives be recorded on the balance sheet as either assets or liabilities at their fair value. Changes in the derivative's fair value are recognized in current period earnings unless specific hedge accounting criteria are met.

The accounting for changes in the fair value of derivatives held for hedging purposes depends upon their intended use. For fair value hedges, the effective portion of changes in fair value of derivative instruments is offset in income against the change in fair value, attributed to the risk being hedged, of the underlying hedged asset, liability or firm commitment. For cash flow hedges, the effective portion of changes in fair value of derivative instruments is offset through other comprehensive income, until the variability in cash flows being hedged is recognized in earnings in future accounting periods.

In order to qualify for hedge accounting, FAS 133 requires that extensive documentation be maintained and that hedge effectiveness tests prescribed by that standard be met at both the inception of a hedge relationship and on a periodic, ongoing basis. Management maintains the necessary level of documentation required to qualify for hedge accounting under FAS 133. However, in one instance during 2003, certain instruments were classified as ineffective hedges resulting in a loss after tax of \$32.3 million under U.S. GAAP.

#### 6 Accumulated Other Comprehensive Loss

At December 31, 2003, Accumulated Other Comprehensive Loss consists of an accumulated foreign currency translation adjustment of \$(131.5) million (2002 – \$28.1 million) and net unrealized gains of \$14.9 million (2002 – \$(131.3) million) both for derivative financial instruments due to cash flow hedges, including a reclassification adjustment in 2003. The reclassification adjustment of \$80.6 million relates to the change in classification of hedging instruments between periods.

Of the Accumulated Other Comprehensive Loss of \$116.6 million, the Company estimates that approximately \$5.6 million, representing unrecognized net losses on derivative activities at December 31, 2003, is expected to be reclassified into earnings during the next twelve months.

#### 7 Consolidation of Variable Interest Entities

On December 24, 2003, the Financial Accounting Standards Board issued a revision to FASB Interpretation (FIN) 46, which replaces the interpretation released in January 2003.

FIN 46 requires the primary beneficiary of a variable interest entity's activities to consolidate the variable interest entity. FIN 46 defines a variable interest entity as an entity which has one or more of the following characteristics:

- 1) The equity investment at risk is not sufficient to permit the entity to finance its activities without additional subordinated financial support provided by any parties, including the equity holders.
- 2) The equity investors as a group lack one or more of the following essential characteristics of a controlling financial interest:
- a. The direct or indirect ability to make decisions about the entity's activities through voting rights or similar rights that have a significant effect on the success of the entity.
- b. The obligation to absorb the expected losses of the entity.
- c. The right to receive the expected residual returns of the entity. The equity investors do not have that right if their return is capped by the entity's governing documents or arrangements with other variable interest holders or the entity.
- 3) The equity investors have voting rights that are not proportionate to their economic interests, and the activities of the entity involve or are conducted on behalf of an investor with a disproportionately small voting interest.

The primary beneficiary is the party that absorbs a majority of the expected losses and/or receives a majority of the expected residual returns of the variable interest entity's activities.

FIN 46 is immediately applicable to variable interest entities created, or interests in variable interest entities obtained, after January 31, 2003. For variable interest entities created, or interests in variable interest entities obtained, on or before January 31, 2003, FIN 46 is required to be applied by the first fiscal year or interim period ending after December 15, 2003. The Company has not identified any material variable interest entities created, or interests in variable entities obtained, before January 31, 2003, which would require consolidation or disclosure under FIN 46.

On June 30, 2003, the Company formed Enbridge Income Fund (EIF), a publicly traded entity with assets purchased from the Company. The Company has a 41.9% equity interest in EIF, as well as a preferred unit investment that has no voting rights, a stated par value and a 30-year maturity. The preferred units earn a return that is equivalent to the cash distributions per unit to the equity unit holders and are classified as a liability in EIF's financial statements.

EIF is considered a variable interest entity as the equity investors lack the right to receive the expected residual returns of the entity. FIN 46 defines expected residual returns as the expected positive variability in the fair value of EIF's net assets exclusive of variable interests. The preferred units participate in the positive variability as they receive a coupon rate that floats with changes in the cash distributions made to the equity holders of EIF. Consequently, the equity investors lack the right to receive the expected residual returns of the entity.

The Company is the primary beneficiary of EIF through a combination of the 41.9% equity interest and the preferred unit interest. Under U.S. GAAP, the results of EIF are consolidated with a 27.7% minority interest. The assets and liabilities of EIF have been measured at the same amounts as they were prior to the transfer to EIF and the gain is recorded based on the equity issued to external third parties.

The U.S. GAAP adjustment reflecting the consolidation of EIF includes a \$380.2 million reduction to long-term investments, a \$76.7 million increase in non-controlling interests, a reduction in the pre-tax gain on sale from \$239.9 million to \$66.9 million, and net income is reduced by \$2.3 million.

The following accounts of EIF are consolidated for the purposes of the U.S. GAAP financial statements as at December 31, 2003.

Cash	\$ 27.6 million
Accounts receivable and other	\$ 34.2 million
Property, plant and equipment	\$ 1,273.1 million
Deferred amounts	\$ 31.5 million
Accounts payable and other	\$ 31.0 million
Current portion of long-term debt	\$ 40.0 million
Long-term debt	\$ 1,022.6 million
Future income taxes	\$ 2.8 million

The consolidation of EIF increases cash by \$27.6 million and the statement of cash flows would reflect an increase in cash from operations of \$30.4 million, cash from investing activities would decrease by \$384.3 million, and cash used in financing activities would increase by \$381.5 million.

# **Supplemental Disclosure — Pro Forma Compensation Expense**

U.S. GAAP requires that, where the fair value based method is not used to measure compensation expense, pro forma earnings and earnings per share, calculated as if the fair value based method had been used, must be disclosed. In Canada, these requirements apply to options granted on or after January 1, 2002 and therefore, the Company's Canadian GAAP disclosure does not include any options granted prior to that date.

(millions of dollars except per share amounts)

Year ended December 31,	2003	2002	2001
Earnings under U.S. GAAP			
As reported	496.5	576.2	549.1
Stock-based compensation expense	(7.9)	(7.3)	(4.6)
Included as an expense in the statement of earnings	1.9	_	_
Pro forma	490.5	568.9	544.5
Earnings per common share			
As reported	3.00	3.55	3.45
Stock-based compensation expense	0.04	0.05	0.03
Pro forma	2.96	3.50	3.42
Diluted earnings per common share			
As reported	2.98	3.51	3.41
Stock-based compensation expense	0.04	0.04	0.03
Pro forma	2.94	3.47	3.38

The fair value of stock options was calculated in the same manner, using the same assumptions, as disclosed in Note 14 except that for Canadian GAAP, only awards granted since the adoption of the CICA standard for stock-based compensation on January 1, 2002 are included. Assumptions used for U.S. GAAP comparatives in 2001 are as follows.

Year ended December 31,	2001
Risk-free interest rate	5.38%
Expected life (years)	10
Expected volatility	25%
Expected quarterly dividends	\$0.38

The weighted average grant-date fair value of options granted during 2001 under the fixed option plan was \$10.09.

# Corporate Responsibility and Environment, Health and Safety

Prevention of accidents and injuries, and protection of the environment benefits everyone. That's why environmental, health and safety performance is an integral part of Enbridge's businesses, and objectives and performance targets are established, implemented and monitored. For the past three years the results have been published in the Company's Environment, Health and Safety Annual Report. You can obtain a copy of the most recent report by e-mailing webmaster@enbridge.com, or visiting the Enbridge website at www.enbridge.com.

In 2004, the Company's Environment, Health and Safety report will be incorporated into Enbridge's first annual Corporate Responsibility report. The document, expected to be available by mid-year, will take the "triple bottom line" approach to CR reporting and discuss Enbridge's environmental, social and economic performance. It will still provide detailed information about the Company's Environment, Health and Safety performance, but it will also discuss community investment, community consultation, stakeholder relations, human rights and other CR topics.

#### 50-Year Annual Dividend

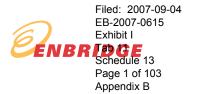

50 Years of Delivering Value to Shareholders. In 2003, Enbridge marked the completion of its 50th year as a publicly traded company — the stock of its predecessor company, Interprovincial Pipe Line Company, Inc., was listed on the Toronto and Montreal stock exchanges on February 13, 1953. The accompanying graphs, showing annual dividends and share price for the 50-year period since the listings, reflect some of the major events in the Company's history — events such as the 1991 spinoff of Home Oil and the creation that same year of Enbridge Energy Partners to own and operate the Lakehead System, and the 1994 acquisition of what is now Enbridge Gas Distribution. The graphs also illustrate the steady, sustained growth that has characterized Enbridge for half a century.

Since 1953, the calculated annual total shareholder return, including dividends, has averaged just over 13%. That's a very positive story for Enbridge shareholders, and an achievement that we at Enbridge are justifiably proud of.

<sup>1</sup> Liquids Pipelines operating highlights include the statistics of the 11.2% owned Lakehead System and wholly owned liquids pipelines operations. Enbridge's interest in the Lakehead System was 11.6% as of December 31, 2004, but was reduced to 11.2% in February 2005.

<sup>2</sup> In 2004, Enbridge Gas Distribution (EGD) changed its fiscal year end from September 30 to December 31 to be consistent with Enbridge. Consequently, highlights of Gas Distribution and Services for 2004 include the 15-month period ended December 31 for EGD and other gas distribution operations. Gas Distribution and Services volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas supply arrangements.

<sup>3</sup> Degree day deficiency is a measure of coldness. It is calculated by accumulating for each day in the period the total number of degrees each day by which the daily mean temperature falls below 18 degrees Celsius. The figures given are those accumulated in the Toronto area.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 3 of 103 Appendix B

"As a leader in energy delivery, Enbridge Inc. is an essential link between the energy producer and the consumer – between supply and demand. Our pipeline systems safely and efficiently deliver oil and natural gas throughout North America, to heat homes, power vehicles, fuel industries and sustain the standard of living for millions of people. As energy demand continues to grow and new sources of supply are developed, Enbridge will be there to continue to provide that essential link."

Enbridge has clearly defined strategies for growth – expand existing core asset platforms, develop new growth platforms, capitalize on our Partnership/Trust model, and continue to focus on operational excellence. These strategies, combined with the Company's excellent asset base, strong financial position and proven business model, position us well for the future.

Energy supplies are rarely in close proximity to where they are needed. North America, therefore, relies heavily on its existing energy infrastructure network, and on additional infrastructure capacity being built to address growing demand and depleting supplies.

# Enbridge's growth opportunities are built around North America's energy supply/demand fundamentals:

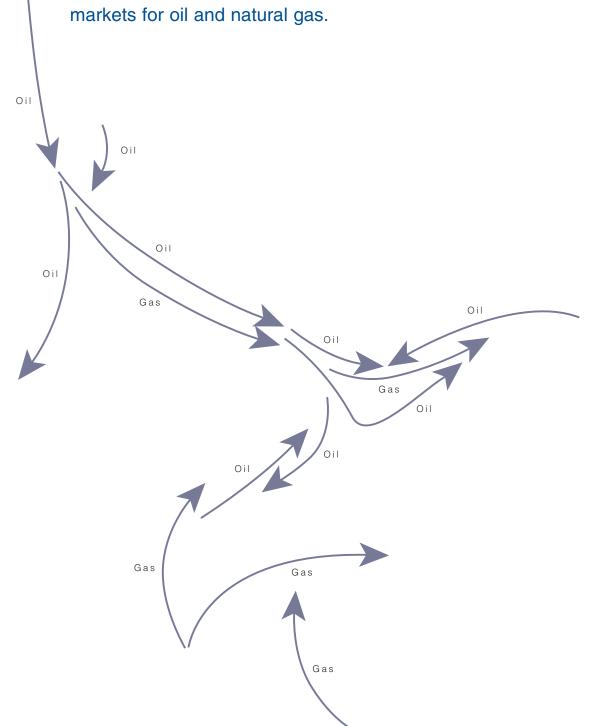

- We're ideally positioned to transport crude oil and natural gas from conventional producing areas in Western Canada and from the continent's largest hydrocarbon play – Alberta's oil sands.
- We're also well positioned to tap some of North America's energy growth hotspots: the Gulf of Mexico, emerging Texas gas plays and the North.
- With the existing integration of markets between Canada and the United States; growing energy demand, particularly in the United States; Canada's history of being a secure source of energy supply; and Enbridge's extensive continental pipeline systems, we are ideally positioned to be a major contributor to meeting continental energy needs.

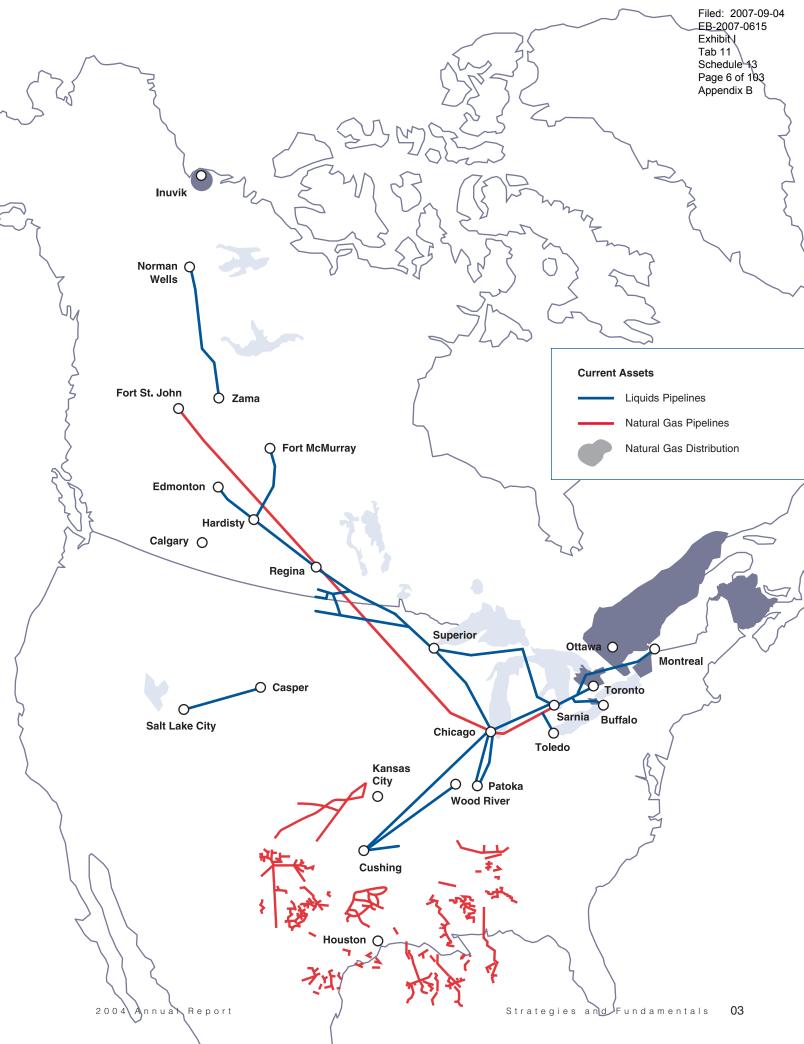

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 5 of 103 Appendix B

With a continental energy delivery system of almost

# 80 000 kilometres of pipeline and 4,000 knowledgeable and skilled employees, Enbridge is

well positioned to serve many parts of the growing Canadian and United States

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 7 of 103 Appendix B

Donald J. Taylor Chair

Patrick D. Daniel
President & Chief Executive Officer

Enbridge had a very successful year in 2004, not only in terms of financial and operational results, but also in terms of developing and executing our longer-term strategies.

Earnings were \$645.3 million, or \$3.86 per common share, including gains on the sale of assets. Removing significant non-operating factors and variances such as the gains, adjusted operating earnings were \$508.4 million, 8% higher than a year ago, or \$3.04 per common share.

In combination with our growing dividend, the total return to shareholders on the Toronto Stock Exchange was 15.1%, above our 51-year average of 13.1%.

During the year we made good progress in broadening the access to markets for customers of our crude oil pipelines; expanding the North American footprint of our gas pipelines business; expanding our Ontario gas distribution network; growing our sponsored investments (Enbridge Income Fund and Enbridge Energy Partners); and evaluating further opportunities for growth in our International division.

We entered 2005 with the strongest balance sheet, strongest share price and strongest geographic positioning in our history.

# 2004 accomplishments

04

We already provide the key link between the rapidly developing oil sands and major U.S. and Canadian markets. Our strategy is to broaden that market, and we made excellent progress in 2004:

- As a result of a successful open season and support from the Canadian Association of Petroleum Producers, we announced that we were proceeding with our Spearhead Pipeline project to transport crude oil from Chicago, Illinois, to Cushing, Oklahoma. We filed applications for the project before year-end.
- We signed preliminary agreements with two more oil sands projects the sponsors of the Long Lake and Surmont projects in northern Alberta to build and operate facilities to ship production from those two facilities beginning in 2006. The agreements also supported continued development of our Waupisoo Pipeline project that would transport oil sands production to Edmonton.

Letter to Shareholders Enbridge Inc.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 8 of 103 Appendix B

- Discussions with Canadian producers and potential customers in Asia for oil sands production were extremely encouraging, as we continued to advance our Gateway project for a crude oil pipeline from Edmonton to the West Coast. We are optimistic about obtaining the contractual agreements we need this year to enable us to file a project application by early 2006 to supply U.S. West Coast and Asian markets.
- We modified our Southern Access pipeline expansion proposal, which will be built and owned by Enbridge Energy Partners, to develop it in a phased manner. We are currently seeking industry support for phased capacity expansion south of Superior, Wisconsin, as early as 2007. Future expansions would involve new market access.

We strengthened our natural gas pipeline presence in 2004, throughout North America:

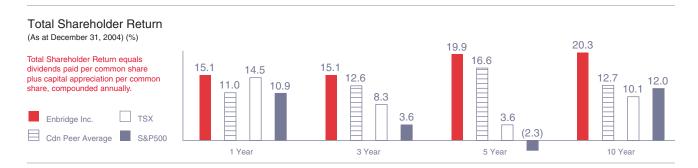

- At year-end we completed the acquisition of gas gathering and transmission systems in the Gulf of Mexico. The assets, now operated by Enbridge Offshore Pipelines, transport half of all the deepwater production from the Gulf. They provide us with participation in another growing supply basin, and significantly expand our U.S. gas pipeline presence.
- During the year, Vector Pipeline operated at capacity, as did Alliance Pipeline, and we continued to pursue an equity position in an Alaskan natural gas pipeline and an LNG project in Quebec.

Our natural gas franchise continued to grow, with Enbridge Gas Distribution once again adding approximately 60,000 new customers in 2004. We also worked with the Ontario regulator and distribution customers to achieve a number of win/win decisions that benefited all stakeholders.

We continued to capitalize on the success of our two sponsored investments:

- In the U.S., Enbridge Energy Partners (EEP) had an excellent year, with a number of notable acquisitions the Palo Duro gas pipeline system in Texas and North Texas gas assets from Devon. EEP began construction in the fall for the East Texas gas expansion pipeline, and also acquired the Mid-Continent liquids system of pipelines and storage terminals, adding a new geographic region to our pipeline system. The Cushing Terminal is currently being expanded to 12.3 million barrels of capacity and will be the largest above-ground crude oil storage facility in North America.
- In Canada, Enbridge Income Fund's increased cash flows from Alliance Canada and the Saskatchewan System led to three increases in the Fund's monthly cash distributions to unitholders. Since inception in mid-2003, cash distributions have increased 10.3%.

Our International investments continued to perform well. Liquids volumes from our CLH investment in Spain were strong, and we continued to evaluate numerous opportunities for further international investment.

2004 Annual Report Letter to Shareholders 05

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 9 of 103 Appendix B

## **Our future**

Enbridge is uniquely well positioned for growth. The Company is focused on moving energy from areas where we foresee growing supply to areas of growing demand. For example:

- Our crude oil system is strategically positioned between the oil sands and the U.S. Midwest and Eastern Canadian markets, and our positioning has also led to the initiative to move Canadian crude oil into the growing China and Southeast Asian markets.
- The Alliance and Vector gas pipelines are in a direct line between Alaskan gas and the best gas markets in the U.S.
- Our new U.S. Gulf Coast assets are strategically positioned to transport growing offshore supply and to access key infrastructure into the U.S. northeast.
- Our gas distribution infrastructure serves Canada's fastest growing metropolitan area.
- The investment we have made in Spain is located in one of the fastest growing economies in Europe, with growing need for refined products.
- Our interest in an LNG project in Quebec is intended to provide a new source of supply for that market.
- The investments we have made and our interest in renewable energy and wind power will position Enbridge to meet society's longer term needs for secure supplies of environmentally friendly energy.

## In conclusion

Throughout 2004, Enbridge's Board of Directors continued to provide strong guidance and counsel. We thank them for that and for all of their efforts on behalf of shareholders. We would like to thank Richard (Rick) George, who became a Director in 1996 and retired from the Board last year, and to welcome Charles (Chuck) Shultz who joined the Board in 2004.

We also wish to express our deepest thanks to all Enbridge employees who have made this Company one of the world's top 100 sustainable enterprises, as announced earlier this year at the World Economic Forum in Davos, Switzerland. It's an honour all employees can be proud of, and one that all of us will strive to maintain.

On behalf of the Board of Directors,

Donald J. Taylor

Chair of the Board of Directors

March 1, 2005

06

Patrick D. Daniel

President & Chief Executive Officer

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 10 of 103 Appendix B

Enbridge's success is built upon the performance of its three strong core businesses:

Liquids Pipelines systems that deliver crude oil and products to customers in Canada, the United States, Colombia and Spain;

Natural Gas Distribution systems serving customers primarily in Central and Eastern Canada;

**Natural Gas Pipelines** systems that gather and transport gas across Canada and in various parts of the United States.

004 Annual Report Operations Review 07

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 11 of 103 Appendix B

# Enbridge delivers more than 2 million barrels of liquids per day and transports approximately 60% of the crude oil

**production** from Western Canada.

Enbridge has interests in **21 000 kilometres** of liquids pipelines in North America.

Enbridge's liquids pipelines business includes the world's longest crude oil and products pipeline system – Enbridge Pipelines in Canada and the Lakehead Pipeline in the United States. The mainline system has been supplying Western Canadian crude oil to Central Canada and the United States Midwest for more than 55 years – in an efficient, low-cost, safe and environmentally responsible manner. Enbridge also has interests in 4000 kilometres of liquids pipelines in Colombia and Spain.

Crude oil from the Northwest Territories, oil sands plants and conventional producing fields in Alberta is delivered to Enbridge's mainline system at points such as Hardisty, Alberta, and Edmonton, Alberta where Enbridge Pipelines employee Jim McCormick works as a Gauger at the Company's Edmonton Terminal (at right).

From points such as these, crude oil is transported to refineries in Central Canada and the Midwest where it is processed into products for consumers – products such as gasoline, heating oil, and aviation fuel. Through its liquids pipelines systems, Enbridge delivers more than 75 unique liquids products for more than 60 different shippers.

As production from the oil sands increases, Enbridge will continue to service current markets, as well as add infrastructure to provide its customers with access to additional markets in eastern and southern states, California and Asia-Pacific countries.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 13 of 103 Appendix B

Enbridge delivers natural gas to 1.7 million customers.

In 2004, Enbridge added approximately 60,000 new customers

and is well positioned in one of the fastest growing gas markets in North America.

Enbridge distributes approximately 450 billion cubic feet

of natural gas per year.

Enbridge owns and operates Canada's largest natural gas distribution company, and delivers gas to customers in Ontario, Quebec, New Brunswick and part of New York State. The Company is one of the lowest cost gas distribution operators in North America, and is based in Toronto – where it has provided reliable service to customers for more than 155 years.

Enbridge is focused on being "best in class" in terms of safe and reliable operation of its distribution system. For Enbridge Gas Distribution employees such as Paul Yee (at right), a Technical Expert in the Engineering Materials Evaluation Centre Department in Toronto, ensuring safe and reliable delivery of natural gas to the Company's many residential, commercial and industrial customers is the number one priority.

The Company is also committed to helping its customers use energy wisely. More than 30 demand-side management programs encourage customers to adopt energy-saving equipment and to reduce consumption. Demand-side management programs saved approximately 2.6 billion cubic feet of natural gas in 2004, enough to supply more than 25,000 homes with natural gas for a year.

Natural gas is a clean-burning, environmentally friendly fuel, one that is in demand for electric power generation and which can be used in emerging technologies such as fuel cells. As such, Enbridge is well positioned to continue to deliver this "fuel of choice" to a growing customer base.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 15 of 103 Appendix B

Enbridge has interests in more than **25 000 kilometres** of gas pipelines.

Alliance Pipeline transports approximately 9% of all

# Western Canada gas production.

The recently acquired Enbridge Offshore Pipelines transports approximately

50% of all deepwater gas production in the Gulf of Mexico.

Natural gas pipelines have become a strong core business for Enbridge in the last few years, and will continue to be a focus for growth and expansion. The Company is involved in west-to-east transmission through its interests in the Alliance and Vector pipelines, which went into service in December 2000.

Enbridge transports natural gas to a variety of North American markets, including the Enbridge Gas Distribution franchise area.

The Alliance and Vector pipelines transport gas from the Western Canadian Sedimentary Basin, and are well positioned to transport future gas volumes from the North. The Enbridge Energy Partners (EEP) pipelines draw from a variety of gas basins in the Gulf Coast and Mid-Continent regions of the United States. And Enbridge Offshore Pipelines (EOP) transports offshore gas from the Gulf of Mexico, a key region for continental supply growth.

EOP is operated, along with Enbridge Energy Partners' gas pipeline businesses, from Enbridge's facilities in Houston, Texas, by U.S. employees such as Angie Morales (at right).

As natural gas demand continues to grow in North America, Enbridge will continue to expand its existing systems, and to pursue other gas pipeline opportunities such as a pipeline from the Rockies region of the United States, and Liquefied Natural Gas regasification and pipeline infrastructure.

# Corporate Social Responsibility

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 17 of 103 Appendix B

Consideration of social and environmental issues is becoming part of mainstream investment analysis and decision-making. That's why, in 2004, Enbridge adopted a Corporate Social Responsibility policy and changed the terms of reference of its Environment, Health & Safety Committee of the Board to that of a Corporate Social Responsibility Committee.

## **Corporate Social Responsibility Policy**

At Enbridge, we define Corporate Social Responsibility as follows:

- Conducting business in a socially responsible and ethical manner;
- Protecting the environment and the safety of people;
- Supporting human rights; and
- Engaging, learning from, respecting and supporting the communities and cultures with which we work.

In alignment with our Statement on Business Conduct, Enbridge will ensure that all matters of Corporate Social Responsibility are considered and supported in our operations and administration and are consistent with Enbridge stakeholders' best interests. Enbridge is committed to being recognized as a leader in the field of Corporate Social Responsibility and recognizes that in doing so, we will add significant value for our shareholders.

This Policy applies to activities undertaken by or on behalf of Enbridge Inc. and its controlled subsidiaries anywhere in the world.

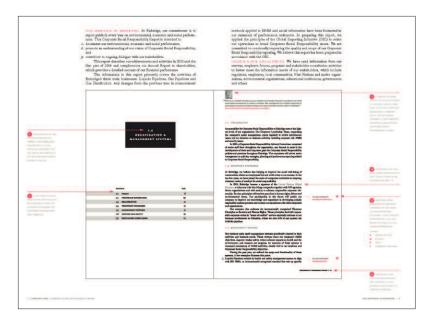

All Enbridge employees and contractors will adopt the Corporate Social Responsibility considerations described in this policy into their day-to-day work activities. Enbridge leaders will act as role models by incorporating those considerations into decision-making in all business activities. Enbridge's leaders will ensure that appropriate organizational structures are in place to effectively identify, monitor, and manage Corporate Social Responsibility issues and performance relevant to our businesses.

Excerpt from the Enbridge Inc. Corporate Social Responsibilty Policy

# Enbridge contributed \$3.8 million in community

# investments in Canada in 2004. The Company also

# produced its first Corporate Social Responsibility annual report.

A copy of the CSR annual report, which contains additional information about Enbridge's environment, health, safety, community investment and other CSR activities, is available in the CSR section of Enbridge's website, at www.enbridge.com/corporate/.

Enbridge's first Corporate Social Responsibility (CSR) annual report was published in August 2004 in direct response to the seriousness with which we view the growing demand from stakeholders for corporations to demonstrate greater transparency, environmental and social awareness, and to maintain a more open dialogue with them.

The Enbridge CSR annual report does just that. It's a business-like document that was created in accordance with the internationally recognized standards for CSR reporting – the Global Reporting Initiative's 2002 Sustainability Reporting Guidelines. Enbridge is one of only three Canadian companies whose report is written "in accordance with" these guidelines.

# Corporate Governance

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 19 of 103 Appendix B

# **Board of Directors**

Standing (left to right)

**Louis D. Hyndman**, Edmonton, Alberta Senior Partner, Field Law LLP

**Robert W. Martin,** Toronto, Ontario Corporate Director

**J. Lorne Braithwaite,** Toronto, Ontario Corporate Director

James J. Blanchard, Beverly Hills, Michigan Senior Partner, DLA Piper Rudnick Gray Cary U.S., LLP

**George K. Petty,** San Luis Obispo, California Corporate Director

Seated (left to right)

**Charles E. Shultz,** Calgary, Alberta Chair & Chief Executive Officer, Dauntless Energy Inc.

**E. Susan Evans,** Calgary, Alberta Corporate Director

Patrick D. Daniel, Calgary, Alberta
President & Chief Executive Officer, Enbridge Inc.

**Donald J. Taylor,** Jacksons Point, Ontario Chair, Enbridge Inc.

William R. Fatt, Toronto, Ontario Chief Executive Officer, Fairmont Hotels & Resorts Inc.

**David A. Arledge,** Naples, Florida Corporate Director

The Board of Directors is responsible for the overall stewardship of Enbridge and, in discharging that responsibility, reviews, approves and provides guidance in respect of the strategic plan of the Company and monitors implementation.

The Board also oversees identification of the principal risks to the Company on an annual basis, monitors the Company's risk management programs, reviews succession planning, and seeks assurance that internal control systems and management information systems are in place and operating effectively.

The Board approves all significant decisions that affect the Company and reviews the results.

16 Corporate Governance Enbridge Inc.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 20 of 103 Appendix B

Enbridge has a strong corporate governance culture built on integrity, accountability and transparency. It extends from the Board of Directors to management and to all employees of the Company.

Additional information and details about Enbridge's corporate governance policies and practices are available in the Company's annual Management Information Circular, and in the corporate governance section of the Company's website, at www.enbridge.com/investor/corporateGovernance.

2004 Annual Report Corporate Governance 17

# Corporate Governance

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 21 of 103 Appendix B

A key part of good Corporate Governance is timely, accurate and transparent communication. Enbridge is committed to that, and to making sure that the appropriate internal controls exist to ensure compliance.

# **Awards and Recognition**

Enbridge's financial and operating success is fully documented throughout this annual report. The Company's ability to achieve this success while adhering to its commitments to Corporate Social Responsibility and good Corporate Governance is recognized, in part, by some of the awards and other recognition received from third parties. For example:

# 2004

- Enbridge was rated 4th best in the Canadian Business Magazine annual listing of Canadian Boards of Directors in terms of Corporate Governance and 5th best in the Globe and Mail annual rankings.
- Enbridge won the Award of Excellence for Corporate Reporting in the Diversified Industries, Industrials and Energy sector in the Canadian Institute of Chartered Accountants' annual awards program for having the highest average scores for four aspects of communications: the annual report, corporate governance disclosure, electronic disclosure, and sustainable reporting.
- Enbridge Inc. was recognized by Corporate Knights Magazine as one of Canada's Best 50 Corporate Citizens: Enbridge was ranked 11th overall and 1st in the gas utility industry.

## 2005

At the World Economic Forum at Davos, Switzerland, Enbridge was one of six Canadian companies named to the Global 100 Most Sustainable Corporations in the World listing.

A more complete list of Enbridge awards and recognition is available on the Company's website, at www.enbridge.com/about/awards-recognition.php.

As a foreign private issuer in the U.S., Enbridge is subject to the Sarbanes-Oxley Act being administered the Securities and Exchange Commission. The Company is also subject to companion initiatives by the Canadian Securities Administrators in Canada.

In ensuring that compliance, Enbridge's Chief Executive Officer and Chief Financial Officer sign certificates attesting to the fair presentation of the Company's financial position. Under current rules, the CEO and CFO will also certify as to the effectiveness of internal control over financial reporting under Sarbanes-Oxley for 2005, and for 2006 under the proposed Canadian rules. Enbridge's U.S. affiliates, Enbridge Energy Partners and Enbridge Energy Management, were subject to the Sarbanes-Oxley Act internal certification for 2004 and also received the external auditor's attestation of that certification.

The Enbridge group of companies have expended significant management (24,000 internal audit hours in 2004) and financial resources (\$6 million in 2004) to verify compliance, and will sustain these initiatives in future to provide investors with assurance that the Company's financial reporting is accurate and complete.

# Financial Review

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 22 of 103 Appendix B

In 2004, strong earnings contributions from all of Enbridge's core businesses and a strong financial position enabled Enbridge to continue to add value for shareholders.

Dividends Per Common Share	1.83	1.66	1.52
Common Share Dividends	315.8	283.9	251.1

Financial Highlights have been extracted from financial statements prepared in accordance with Canadian Generally Accepted Accounting Principles.
 The year ended December 31, 2004 includes earnings for the 15 months ended December 31, 2004 for Enbridge Gas Distribution (EGD), Noverco and other gas distribution entities. This results from the elimination of the quarter lag basis of consolidation noted below.

Earnings applicable to common shareholders for the year ended December 31, 2004 are \$645.3 million, or \$3.86 per share, compared with \$667.2 million, or \$4.03 per share, in 2003. Significant positive operating factors affecting 2004 earnings include a full year of incremental earnings from Terrace Phase III, rate increases and positive variances from forecast costs in Enbridge Gas Distribution, and improved fractionation margins in Aux Sable. These positive factors are offset by the requirement for Enbridge Gas Distribution to share earnings in excess of a certain threshold and the sale of Alliance Pipeline (Canada) and Enbridge Saskatchewan in 2003 to Enbridge Income Fund.

Earnings for 2004 also include 15 months of earnings for gas distribution utilities, reflecting Enbridge's elimination of the quarter lag basis of consolidation for those entities, and a \$97.8 million gain on the sale of the Company's investment in AltaGas Income Trust. Earnings for 2003 included a \$169.1 million gain on the sale of assets to Enbridge Income Fund.

Earnings Applicable to Common Shareholders

Earnings for 2004 include a full year of incremental earnings from Terrace Phase III, rate increases and positive variances from forecast costs in Enbridge Gas Distribution, and improved fractionation margins at Aux Sable. These positive factors are offset by the requirement of EGD to share earnings in excess of a certain threshold and the sale of assets in 2003 to Enbridge Income Fund.

Significant non-operating factors and variances affecting consolidated earnings are as follows:

(millions of Canadian dollars)	2004	2003	2002
Sponsored Investments			
Dilution gains on the issue of Enbridge Energy Partners (EEP) units	7.6	20.3	6.1
Gain on sale of assets to Enbridge Income Fund (EIF)	_	169.1	_
Writedown of Enbridge Midcoast assets	_	_	(82.2)
Other	_	_	(5.7)
	7.6	189.4	(81.8)
Gas Distribution and Services			
Gain on sale of investment in Altagas Income Trust	97.8	_	_
Elimination of quarter lag basis of consolidation <sup>1</sup>	57.2	_	_
Colder/(warmer) than normal weather	23.4	46.1	(29.3)
Impairment loss on Calmar gas plant	(8.2)	_	_
Regulatory disallowances	(4.6)	(37.7)	_
Dilution gain in Noverco (Gaz Metro unit issuance)	1.1	6.0	_
Dilution gain – AltaGas Income Trust	8.0	_	_
Revalue future income taxes due to tax rate changes	(45.4)	(6.1)	1.4
	129.3	8.3	(27.9)
Corporate			
Revalue future income taxes due to tax rate changes	_	(1.0)	_
Gain on sale of marketable securities	_	_	17.8
	_	(1.0)	17.8
Discontinued Operations			
Gain on sale of discontinued operations	_	_	240.0
Total significant non-operating factors and variances increasing earnings	136.9	196.7	148.1

<sup>1</sup> Effective December 31, 2004, EGD changed its fiscal year-end for financial reporting purposes from September 30 to December 31 and will be filing financial statements for the 15 months ended December 31, 2004. Consistent with that change, Enbridge will no longer be consolidating gas distribution operations on a quarter lag basis. The quarter lag basis entailed consolidating EGD results for the year ended September 30, the fiscal year-end end prior to the change, with the Enbridge results for the year ended December 31. This caused a quarter lag in the reporting of EGD's results. As an example, when the first quarter of EGD was consolidated with the first quarter of Enbridge, the EGD results were for the three months ended December 31 whereas Enbridge's results were for the three months ended March 31. To eliminate the quarter lag difference it is necessary to record the EGD results for the 15 months ended December 31, 2004 with the Enbridge results for the twelve months ended December 31, 2004. Going forward, management is of the view that this change will provide additional clarity when discussing the gas distribution operations, as the fiscal periods will be consistent.

Enbridge made several strategic acquisitions and divestments during the year.

- Acquired natural gas pipeline systems in the Gulf of Mexico (Enbridge Offshore System) from Shell for approximately \$754 million, which closed December 31, 2004, including 11 transmission and gathering pipelines in five major corridors that transport about 3 bcf/d of natural gas, which is approximately half of all deepwater production in the Gulf of Mexico.
- Secured 10-year commitments from shippers on the Spearhead Pipeline (formerly the Cushing to Chicago Pipeline) for initial capacity of 60,000 barrels per day (bpd). In December 2004, Enbridge paid the final installment of US\$55.0 million,

Earnings for 2004 also include 15 months of earnings for gas distribution utilities, reflecting Enbridge's elimination of the quarter lag basis of consolidation for those entities, plus a gain on the sale of Enbridge's investment in AltaGas Income Trust. Earnings for 2003 also included some one-time gains.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 25 of 103 Appendix B

plus interest of US\$4.5 million, on the purchase of a 90% interest in the pipeline. The Company will commence work to reverse the flow of the pipeline and expects it to be in service during the first quarter of 2006.

- Entered into an interim pipeline agreement for a major oil sands project. The Company has signed an interim pipeline agreement for the construction of a pipeline and related facilities required by the Surmont project. The facilities would accommodate an initial contract volume of 50,000 bpd with a planned in-service date of mid-2006.
- Entered into an interim agreement with Nexen Inc. and OPTI Canada Inc. (the Long Lake Shippers) to provide pipeline transportation services for the Long Lake oil sands project. This contract will require capacity expansion on the Athabasca System and has a planned availability for service in late 2006.
- Sold the investment in AltaGas realizing a \$97.8 million gain and generating cash proceeds of \$346.7 million.

EEP has actively pursued growth through a number of strategic acquisitions, including the acquisition of the Mid-Continent system on March 1, 2004. This system consists of over 480 miles of crude oil pipelines and 9.5 million barrels of storage capacity, primarily located in Cushing, Oklahoma. On January 6, 2005, EEP closed the acquisition of the North Texas Natural Gas System, which consists of approximately 2,200 miles of gas gathering pipelines and three processing plants.

Earnings for the year ended December 31, 2003 were \$667.2 million, or \$4.03 per share, compared with \$572.3 million, or \$3.57 per share, in 2002. Growth in earnings was achieved in all core business segments and was further buoyed by the positive effect of colder than normal weather in the Enbridge Gas Distribution franchise area in 2003. Significant incremental earnings were also realized in Gas Pipelines, primarily due to the Company's increased ownership interest in both Alliance Pipeline and Vector Pipeline, and in Liquids Pipelines as a result of the completion of the Terrace Phase III project and the storage cavern project in 2003.

Dividends paid on common shares increased in each of the last five years from growth in the dividend per share and a higher number of outstanding common shares. The quarterly dividend per share increased to \$0.4575 in the first quarter of 2004 from \$0.415 established in the first quarter of 2003. In the first quarter of 2002, the quarterly dividend was increased to \$0.38 per share from \$0.35 per share established in the first quarter of 2001. This represents annual increases over the last four years of 10.2%, 9.2%, 8.6% and 8.5%, respectively, and reflects the sustained growth in earnings over the period.

# CORPORATE STRATEGY

# **Corporate Vision and Objective**

Enbridge is an energy delivery company that delivers crude oil and natural gas to heat homes; power transportation systems; and provide fuel and feedstock for industries. The Company's vision is to be North America's leading energy delivery company and its objective is to generate long-term value for investors. The key elements of this vision are to:

- deliver superior returns (dividends and capital appreciation) to shareholders;
- generate above industry-average annual earnings per share growth; and
- $\blacksquare$  maintain a stable, low risk investment profile and strong financial position.

# Dividends per Common Share

The annual growth in dividends per common share in recent years reflects the sustained growth in earnings over the same period, as well as the Company's continued positive outlook.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 26 of 103 Appendix B

# Strategy

Enbridge has four over-arching corporate strategies to achieve the overall objective of generating long-term value for investors.

## 1. Expand Existing Core Asset Platforms

The Company will increase its core asset base through organic growth and asset acquisitions with a particular focus on increasing its U.S. presence. The four platforms will be expanded as follows:

- Liquids Pipelines Organic growth will come from expanding existing infrastructure and developing new markets to meet the needs of Western Canadian shippers. These opportunities include expansion of the Enbridge System and Athabasca System, as well as the potential construction of pipelines to access new markets.
- Gas Pipelines The key elements of this strategy centre on significantly increasing the Company's presence in eastern markets and the Gulf Coast area. A continued emphasis will be placed on developing Rockies natural gas. The Company will pursue a phased approach to deliver Alaskan natural gas.
- Gas Distribution & Services The Company will continue to expand the customer base and Enbridge Gas Distribution (EGD) will seek to implement an alternative rate setting mechanism.
- International International will focus on the European Union and Latin America while considering opportunistic investments in other regions. Affiliations with key global energy players will be pursued to broaden investment opportunities.

# 2. Develop New Growth Platforms

Enbridge will develop several new growth platforms that could include:

- liquefied natural gas (LNG) regasification;
- a larger and broader crude oil marketing and storage business;
- gas-fired power generation projects in Eastern Canada that complement existing gas distribution franchises;
- wind power projects in Manitoba, Ontario and Quebec; and
- new technologies including support for a regional bitumen upgrader and development of stationary fuel cells.

# 3. Capitalize on the Partnership/Trust Model

Enbridge will utilize EIF and EEP to consolidate mature energy infrastructure assets in North America. EIF intends to maximize the efficiency, and pursue expansions of its existing assets and undertake acquisitions to increase the scale of its operations. EEP will continue to acquire assets that diversify current sources of revenue and will seek to maximize the contribution of its existing assets by acquiring complementary systems.

## 4. Focus on Operational Excellence

Enbridge will continue its focus on operational excellence, to reinforce its position as a leader in asset management. This will include cost efficiency, safety and reliability, environmental integrity, innovation and effective stakeholder relations.

To successfully pursue these strategies, the Company must mitigate certain business risks. These risks, and the Company's strategies for managing them, are described under "Risk Management".

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 27 of 103 Appendix B

#### **Core Businesses**

The Company's activities are carried out through five businesses:

- Liquids Pipelines, which owns and operates the Canadian portion of the world's longest crude oil pipeline system and also includes other common carrier and feeder liquids pipelines including the Athabasca System;
- Gas Pipelines, which includes the Company's interests in the Alliance and Vector gas transmission pipelines as well as the recently acquired Enbridge Gulf Offshore System;
- Sponsored Investments, which includes the investments in Enbridge Income Fund (EIF) and Enbridge Energy Partners, L.P. (EEP), both operated by Enbridge;
- Gas Distribution and Services, which includes Enbridge Gas Distribution (EGD), the largest gas distribution utility operation in Canada, as well as other gas distribution businesses and gas service businesses; and
- International, which includes the Company's energy-related investments outside of Canada and the United States.

#### LIQUIDS PIPELINES

### **Earnings**

(millions of Canadian dollars)	2004	2003	2002
Enbridge System	171.6	162.0	123.7
Athabasca System	42.8	44.8	41.2
NW System	7.8	8.3	9.5
Saskatchewan System	_	3.1	6.4
Feeder Pipelines and Other	(2.3)	(4.7)	8.8
	219.9	213.5	189.6

### **Business Activities**

Liquids Pipelines consists of the Company's pipelines that transport crude oil, natural gas liquids and refined products.

The mainline system, comprised of the Enbridge System and the Lakehead System (the portion of the mainline in the United States that is operated by Enbridge and owned by EEP), is the world's longest crude oil pipeline system and is the primary transporter of crude oil from Western Canada to the United States. It is the only pipeline that transports crude oil from Western to Eastern Canada and serves all of the major refining centers in the Province of Ontario, as well as the Midwest region of the United States.

Enbridge also owns the Athabasca System, a 545-kilometre (339-mile) pipeline that transports synthetic and heavy oil from north of Fort McMurray, in Northern Alberta, to the pipeline hub at Hardisty, Alberta. It is the only liquids pipeline directly linking both the Athabasca and Cold Lake oil sands deposits with the pipeline transportation hub at Hardisty, Alberta. The Athabasca System also includes the MacKay River and Christina Lake feeder lines and tankage facilities, as well as the Company's interest in the Hardisty Caverns Limited Partnership, which provides crude oil storage services.

Enbridge's NW System is an 864-kilometre (540-mile) pipeline that transports crude oil from Norman Wells, in the Northwest Territories to Zama, Alberta. Feeder Pipelines and Other primarily includes a number of liquids pipelines in the United States (Frontier, Toledo, Mustang, Chicap and Spearhead), as well as business development costs related to Liquids Pipelines activities.

In October and November 2004, the Company conducted an Open Season for the Spearhead Pipeline, which is currently primarily idle, acquired in 2003, resulting in 10-year shipping commitments for an initial 60,000 bpd, increasing to 75,000 bpd by 2009. Enbridge expects to have the line in service in the first quarter of 2006. In December 2004, Enbridge made a final payment of \$67.5 million (US\$55.0 million) plus accrued interest on its 90% interest in the pipeline. The final payment was originally US\$65 million, however the Company negotiated a US\$10 million reduction in the price. This reduction reflects lower than anticipated shipper support for the project, which has delayed the reversal. The Spearhead Pipeline project is currently estimated to result in a total investment of \$230 million, of which, approximately \$150 million has been spent.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 28 of 103 Appendix B

#### **Results of Operations**

Liquids Pipelines earnings are \$219.9 million in 2004 compared with \$213.5 million in 2003. The increase is primarily the result of higher Enbridge System earnings, which include incremental earnings from the Terrace Phase III expansion placed into service on April 1, 2003, and the earnings contribution from the Hardisty storage caverns completed in the fourth quarter of 2003. These increases are partially offset by higher tax expense in Athabasca due to the utilization of loss carryforwards in 2003 and the sale of the Saskatchewan System to Enbridge Income Fund (EIF) effective June 30, 2003. The Company continues to have an interest in this pipeline through its 41.9% ownership of EIF, included in Sponsored Investments.

Earnings from Liquids Pipelines were \$213.5 million for the year ended December 31, 2003, an increase of \$23.9 million from 2002. The results reflected higher earnings from the Enbridge and Athabasca Systems, which included incremental earnings from Terrace Phase III, partially offset by a provision for costs associated with toll complaints on the Frontier pipeline. In addition, the Saskatchewan System was sold to Enbridge Income Fund effective June 30, 2003.

#### **Enbridge System**

Enbridge System earnings are higher in 2004 as they include incremental earnings from the Terrace Phase III expansion placed into service on April 1, 2003, as well as the increase in Enbridge's share of the Terrace surcharge. This increase is partially offset by a higher oil loss expense and a higher power allowance credit.

In 2003, Enbridge System earnings were higher than 2002 primarily due to full year earnings from the Terrace Phase II expansion, incremental earnings from Terrace Phase III, lower depreciation rates as approved by the National Energy Board (NEB) as well as recognized power cost savings. Also contributing to the year-over-year variance was the negative effect of an adjustment to the power allowance credit due to shippers in 2002 as a result of Terrace operating at less than capacity.

Enbridge System's incentive tolling agreement expired on December 31, 2004. Negotiations on a new incentive tolling agreement are currently underway. In the interim, tolls in effect on December 31, 2004 are continuing to be charged on an interim basis.

### Athabasca System

The Athabasca System 2004 earnings include the contribution from the Hardisty storage caverns completed in the fourth quarter of 2003. This is more than offset by higher tax expense as the prior year included the utilization of loss carryforwards.

In 2003, earnings on the Athabasca System were higher than 2002, primarily due to a full year of earnings from the addition of the MacKay River lateral lines in late 2002. This was further enhanced by the development and commencement of operations, in November 2003, of the Hardisty storage cavern facilities.

The Company has a long-term (30 year) take or pay contract with the major shipper on the Athabasca System. Earnings are recorded based on the contract terms negotiated with the major shipper rather than the cash tolls collected. The contract provides for volumes and tolls that will permit a specified return on equity, based on an assumed debt/equity ratio and level of operating costs of providing service to the shipper on the pipeline. The committed volumes on the pipeline and the tolls specified in the contract do not generate sufficient cash revenues in the early years to compensate Enbridge for the debt and equity returns, as well as the cost of providing service. Therefore, Enbridge is recording a receivable in these years. This ensures that the revenue recognized each period is in accordance with the specified return. This receivable is contractually guaranteed by the shipper and will be collected in the later years of the contract.

### **NW System**

Earnings in the last three years from the NW System have been consistent and reflect the effect of a declining rate base. The declining rate base was offset by cost savings that generated incentive earnings in 2002. There was no incentive component in 2003 as this was a rebasing year. Earnings are based on an agreement with the primary shipper and are a product of a deemed common equity ratio of 55% and the NEB multi-pipeline rate of return on common equity, plus any incentive cost savings.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 29 of 103 Appendix B

#### Saskatchewan System

This asset was sold to EIF effective June 30, 2003 and is subsequently reflected in the results of EIF, a component of the Sponsored Investments segment.

#### Feeder Pipelines and Other

The earnings variance in Feeder Pipelines and Other is the result of Federal Energy Regulatory Commission mandated reparations on the Frontier Pipeline.

The earnings decrease in Feeder Pipelines and Other from 2002 to 2003 primarily reflected a provision for costs associated with toll complaints on the Frontier Pipeline. Business development costs were also higher in 2003 due to the continuing review of a number of liquids pipelines opportunities.

#### Strategy

The Company's strategy for the Liquids Pipelines segment is based on the Company's forecast of supply and demand for crude oil.

### Supply and Reserves

Supply of crude oil from the Western Canadian Sedimentary Basin (WCSB) has grown consistently since 1999 particularly in the last two years where production has grown by 170,000 bpd.¹ At the same time, production from Canada's conventional resources declined by 66,000 bpd. Development of Canada's world scale oil sands resource has more than replaced the declining conventional production, growing by 235,000 bpd over the last two years. The NEB estimates 2004 production from the WCSB to exceed 2.2 million bpd. This places the WCSB on a comparable level with production from OPEC members Kuwait and Nigeria.

Remaining established conventional oil reserves in Western Canada were estimated to be 4.7 billion barrels at the end of 2003. Remaining established reserves from oil sands currently stand at 174 billion barrels. Combined conventional and oil sands reserves of 178.7 billion barrels puts Canada second only to Saudi Arabia with 14% of the worldwide estimated proved reserves.<sup>2</sup>

### Demand for WCSB Crude

The Company's liquids pipelines are dependent upon the demand for crude oil and other liquid hydrocarbons produced from Western Canada. Historically, the pipeline system has delivered crude oil to two main markets: Ontario/Quebec, and the Midwest portion of the United States with some volume delivered to Western Canada. Western Canada demand is served by local supply and has increased by 36,000 bpd over the last two years. With the reversal of the Company's Line 9, competition from Atlantic Basin crude oil has decreased deliveries of Canadian crude into the Ontario/Quebec market. During 2004, an equal mix of western Canadian and Atlantic Basin crude satisfied Ontario's demand for crude with demand for WCSB crude down slightly over the last two years. Deliveries of WCSB crude into PADD II (the U.S. Midwest) have increased significantly over the last two years, growing by 80,000 bpd. At the same time, deliveries into PADD IV (the U.S. Rocky Mountains) have increased by 25,000 bpd and PADD V (the Western U.S.) deliveries have increased by 45,000 bpd.

### Longer Term Outlook for Supply and Demand for WCSB

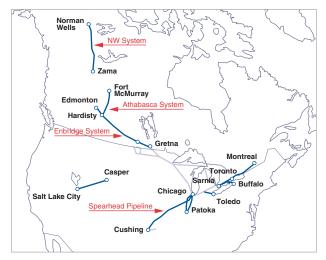

The Company has recently completed its annual survey of crude production and demand for WCSB crude. Producers, refiners and provincial/state agencies are surveyed to assist the Company in assessing the future outlook for crude oil supply and demand. Responses indicate a strong supply response to the latest pricing environment. The Company applies judgmental adjustments to the survey results to reflect past experience with the implementation of oil sands projects. The resulting forecast is that by 2010, production could grow to 2.8 to 3.0 million bpd, an increase of up to 800,000 bpd from 2004, consisting of roughly equal parts of upgraded synthetic crude and raw bitumen.

Along with projected growth in supply is growth in demand for oil sands production both at existing connected refineries as well as new market demand. The survey identified a number of existing refineries interested in processing a significantly higher

<sup>1</sup> National Energy Board 2004 Estimate Production of Canadian Crude Oil and Equivalent Table 1

<sup>2</sup> Oil and Gas Journal's Worldwide Look at Reserves and Production, December 20, 2004

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 30 of 103 Appendix B

Liquids Pipelines

volume of heavy crude from Canada than currently received. At the same time, US and foreign refineries not currently receiving Canadian crude have indicated a desire to run significant quantities of oil sands production. The Company continues to develop opportunities to address the transportation needs of producers and refiners, and anticipates that sufficient pipeline capacity and new markets will be available to absorb the growth in supply.

The abundance of established reserves from oil sands will provide opportunities for expansion of Enbridge's Athabasca System and the Enbridge System. During 2004, Enbridge entered into two interim pipeline agreements with shippers for expansion of the Athabasca System and construction of new laterals and tankage facilities. While the Athabasca System,

which has a current capacity of 345,000 bpd, has low cost expansion potential to a capacity ultimately of 570,000 bpd, there is insufficient expansion capacity to accommodate all of the planned oil sands developments such that new pipeline capacity is expected to be required by about 2008. Enbridge's Waupisoo Pipeline concept would address this need and would also provide producers with access to Edmonton for a portion of their output.

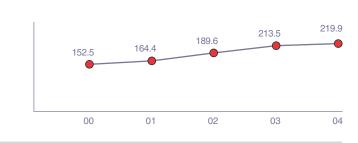

Enbridge has entered into an interim agreement with ConocoPhillips Surmont Partnership, Total E&P Canada Ltd. and Devon ARL Corporation (the Surmont Shippers) under which Enbridge will undertake preliminary work for the construction of a pipeline and related facilities required by the Surmont Project. Those facilities, which would accommodate an initial contract volume of 50,000 bpd of blended crude, could include one or more diluent lateral pipelines, a blended crude lateral pipeline, as well as blending and tank facilities at Enbridge's proposed Cheecham Terminal on the Athabasca Pipeline. The preliminary agreement will facilitate a planned in-service date of mid-2006.

Enbridge has also entered into an interim agreement with Nexen Inc. and OPTI Canada Inc. (the Long Lake Shippers) to provide pipeline transportation services on the Athabasca System for the Long Lake oil sands project. The initial contract volume is for up to 60,000 bpd of crude oil for a 50-month term. This contract will require capacity expansion on the Athabasca System in addition to a new crude oil lateral, one or more diluent laterals, as well as blending and tankage facilities, all with a planned availability for service in late 2006.

Enbridge intends to take advantage of opportunities created by the increasing development of oil sands through securing additional shipper commitments for the Athabasca Pipeline and securing shipping commitments for, constructing, and placing into service the 390-kilometre (245-mile) Waupisoo Pipeline from Fort McMurray to Edmonton. The Waupisoo Pipeline will likely have an initial capacity of 210,000 bpd, expandable to over 300,000 bpd and will provide approximately one million bpd of capacity in total on the Athabasca and Waupisoo System.

Liquids Pipelines earnings increased primarily due to higher earnings from the Enbridge System, which include incremental earnings for the Terrace Phase III expansion and the earnings contribution from the Hardisty storage caverns.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 31 of 103 Appendix B

Enbridge is also planning capacity expansions on the mainline system in both Canada and the U.S., and expansion of storage facilities, to respond to expected increases in supply.

The Company also sees opportunities in enabling Western Canadian shippers to provide cost-competitive crude oil supplies to key U.S. refinery markets. The Company plans to develop new business initiatives to respond to these opportunities. Major new business initiatives include the reversal of the Spearhead Pipeline to provide access to Cushing, Oklahoma refiners from Chicago. Also under active development is the Gateway Pipeline from Edmonton to the west coast of British Columbia, which would provide crude oil for delivery to Asia Pacific and California markets and multiple alternatives under consideration to provide enhanced access to refineries to the east of Chicago.

### **Capital Expenditures**

Liquids Pipelines expects to spend approximately \$83.0 million in 2005 for ongoing capital improvements and core maintenance capital projects. Capital expenditures for 2004 were \$83.7 million.

### **Enbridge System - Tolling Agreements**

Negotiations with the Canadian Association of Petroleum Producers (CAPP) towards a new incentive tolling agreement are currently underway. Until a new agreement is signed, tolls in effect on December 31, 2004 are continuing to be charged on an interim basis.

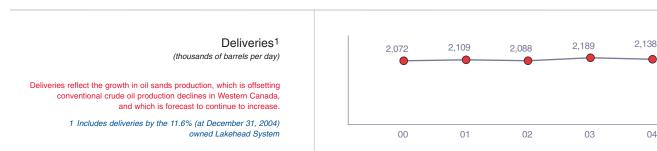

Tolls on the Enbridge System were governed by the provisions of the Incentive Tolling Settlement (ITS), which expired on December 31, 2004. Under the ITS, tolls were determined based on a starting revenue requirement, adjusted each year for 75% of the change in the Gross Domestic Product Implicit Price Index. The ITS allowed the Company and its customers to share in cost savings, protected Enbridge from fluctuations in volumes, and incorporated additional incentive mechanisms for electric power cost savings. Since electricity is used to power the pumping stations, power costs are a significant expense. The Company was allowed to earn a separate return on facilities expansions or additions that qualified as nonroutine adjustments.

Since the inception of incentive tolling arrangements in 1995, through the cost performance sharing mechanism of the ITS, after-tax benefits of \$107.0 million have been shared by Enbridge and its customers, approximately 53% and 47%, respectively. Customers also realized an additional after-tax benefit of \$10.7 million through the power quarantee mechanism of the ITS.

The NEB approved the facilities application for construction of Phase III of the Terrace Expansion Project in Canada in April 2002. Phase III involved construction of 176 kilometres (110 miles) of 36-inch pipeline on the Lakehead System between Clearbrook, Minnesota and Superior, Wisconsin and pumping additions in both Canada and the United States. Phase III increased capacity by approximately 140,000 bpd when it was placed into service on April 1, 2003 and was requested by shippers to handle anticipated increases in oil sands volumes.

### Legal Proceeding - CAPLA Claim

The Canadian Alliance of Pipeline Landowners' Associations and two individual landowners have commenced an action, which they will be applying for certification as a class action, against the Company and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. The Company believes it has a sound defence and intends to vigorously defend the claim. Since the outcome is indeterminable, the Company has made no provision for any potential liability.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 32 of 103 Appendix B

#### **Business Risks**

The risks identified below are specific to the Liquids Pipelines business. General risks that affect the Company as a whole are described under Risk Management.

#### Supply and Demand

The operation of the Company's liquids pipelines are dependent upon the supply of, and demand for, crude oil and other liquid hydrocarbons from Western Canada. Supply, in turn, is dependent upon a number of variables, including the availability and cost of capital for oil sands projects, the price of natural gas used for steam production, and the price of crude oil.

### Regulation

Earnings from the Enbridge System and other liquids pipelines are subject to the actions of various regulators, including the NEB. Actions of the regulators related to tariffs, tolls and facilities impact earnings from these operations. The NEB prescribes a benchmark multi-pipeline rate of return on common equity. To the extent the NEB rate of return fluctuates, a portion of the earnings of the Enbridge System and other liquids pipelines changes. The Company believes that regulatory risk can be reduced through the negotiation of long-term agreements, such as the incentive tolling agreement, with its customers.

#### Competition

Competition among common carrier pipelines is based primarily upon the cost of transportation, access to supply, and proximity to markets. TransMountain Pipeline and Express Pipeline, as well as other common carriers, can be used by producers to ship Western Canadian crude oil to refineries in either Canada or the United States. Although the Company does not compete directly in the regions served by these other pipelines, producers can elect to have their crude oil refined elsewhere than delivery points on the Enbridge System. The Company believes that its liquids pipelines are serving larger markets and provide attractive options to producers in the WCSB due to their competitive tolls.

Increased competition could arise from new feeder systems servicing the same geographic regions as the Company's feeder pipelines. Unused capacity on the Athabasca System should be more competitive than a new pipeline.

### GAS PIPELINES

#### **Earnings**

(millions of Canadian dollars)	2004	2003	2002
Alliance Pipeline (US)	37.4	40.3	19.6
Alliance Pipeline (Canada)	_	19.6	21.1
Vector Pipeline	16.4	10.2	7.1
	53.8	70.1	47.8

### **Business Activities**

Gas Pipelines activities consist of investments in the Alliance and Vector pipelines and the recently acquired Enbridge Offshore System. Enbridge has joint control over these investments with one or more other owners. Enbridge owns a 50.0% interest in Alliance Pipeline (US), the U.S. portion of the Alliance System, a 60% interest in Vector Pipeline and interests ranging from 22% to 80% in the pipelines comprising the Enbridge Offshore System.

The Alliance System (Alliance), which includes both the Canadian and U.S. portions of the pipeline system, consists of an approximately 3000-kilometre (1,875-mile) integrated, high-pressure natural gas transmission pipeline system and an approximately 700-kilometre (440-mile) lateral pipeline system and related infrastructure. The Alliance System, which commenced operation in December 2000, transports liquids-rich natural gas from Fort St. John, British Columbia to Chicago, Illinois and has the capacity to deliver 1.55 billion cubic feet per day (bcfd).

Alliance has firm-service transportation services contracts ending in 2015 to transport 1.325 bcfd of natural gas, on a firm transportation basis, from supply areas in the northwestern Alberta and northeastern British Columbia portions of the WCSB to delivery points near Chicago, Illinois. The transportation service contracts obligate each shipper to pay monthly demand charges

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 33 of 103 Appendix B

based on that shipper's contracted volume, regardless of volumes actually transported on the Alliance System. Each transportation contract may be renewed upon five years notice for successive one-year terms beyond the original 15-year primary term, at the option of the shipper. There is no limitation on the number of times a shipper may renew its transportation contract.

The rates and tariff for Alliance Pipeline (US) are regulated by the Federal Energy Regulatory Commission (FERC) in the United States. All shippers have accepted toll principles negotiated with Alliance and signed transportation contracts incorporating the same toll principles and tariff. The shippers are charged a monthly amount that permits Alliance to recover the cost of service, which includes operating and maintenance costs, cost of financing, an allowance for income tax, an annual allowance for depreciation, and an allowed return on equity (currently, approximately 10.8% after tax).

The Alliance System connects in the Chicago area with two local natural gas distribution systems and five interstate natural gas pipelines, which provide shippers with access to natural gas markets in the midwestern and northeastern United States and eastern Canada. The Alliance System also connects with a natural gas liquids (NGL) extraction facility (Aux Sable) in Channahon, Illinois near the terminus of the Alliance System, which extracts NGL from the natural gas transported on the Alliance System. It also interconnects with a pipeline in North Dakota.

The Company provides operating services to, and holds a 60% investment in, Vector, which transports natural gas from Chicago to Dawn, Ontario. Vector commenced operations in December 2000. Vector has the capacity to deliver 1.0 bcfd. Vector's primary sources of supply are through interconnections with the Alliance System and the Northern Border Pipeline in Joliet, Illinois. The rates and tariff for Vector are regulated by the FERC in the United States. Approximately 70% of the long haul capacity of Vector is committed to long-term firm transportation contracts at rates negotiated with the shippers and approved by the FERC. The remaining capacity is sold at market rates. Transportation service is provided through a number of different forms of service agreements such as Firm Transportation Service and Interruptible Transportation Service. Vector is currently operating at or near capacity.

Alliance Pipeline (Canada) was sold to the Enbridge Income Fund effective June 30, 2003. Prior to this disposition, the Company had increased its ownership interest from 21.4% in 2001 to 37.1% in late 2002 and up to 50% in 2003.

On December 31, 2004, Enbridge acquired the Enbridge Offshore System, which is comprised of natural gas gathering and transmission pipelines in the Gulf of Mexico. The assets are held primarily through joint ventures with ownership interests ranging from 22% to 80%. The assets were acquired from Shell US Gas & Power LLC for \$754.0 million.

### **Results of Operations**

Earnings from Gas Pipelines are \$16.3 million lower in 2004 due to the impact of a stronger Canadian dollar and the sale of Alliance Pipeline (Canada) to Enbridge Income Fund on June 30, 2003. The decrease is partially offset by increased ownership interests in both Alliance Pipeline (US) and Vector acquired during 2003 and stronger operating results from Vector in 2004.

Earnings from Gas Pipelines were \$70.1 million for the year ended December 31, 2003, an increase of \$22.3 million from 2002. The higher earnings were primarily due to additional interests acquired in Alliance and Vector in 2003, partially offset by the sale of the Company's interest in the Canadian portion of Alliance Pipeline in the second guarter of 2003.

### Alliance Pipeline (US)

Alliance Pipeline (US) earnings for 2004 reflect the additional ownership interests of 1.1% in March 2003, 10.7% in April 2003 and 1.1% in October 2003, more than offset by the impact of the stronger Canadian dollar in 2004 and the favourable impact, in 2003, of the adjustment recorded in Alliance to reflect a higher rate base.

The increase in earnings of \$20.7 million from Alliance Pipeline (US) in 2003, compared with 2002, reflected the acquisition of additional ownership interests and an adjustment to reflect a higher rate base.

#### Alliance Pipeline (Canada)

Alliance Pipeline (Canada) is included in the results of EIF, in the Sponsored Investments segment, effective June 30, 2003. Prior to its sale to EIF, the Company's ownership interest in Alliance Pipeline (Canada) had increased from 21.4% to 50.0%.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 34 of 103 Appendix B

#### **Vector Pipeline**

Vector Pipeline earnings in 2004 reflect increased firm transportation commitments and corresponding higher rates as a result of increased demand for service on the pipeline due to new interconnect facilities and customer storage developments, as well as lower interest costs. This is further enhanced by an additional ownership interest of 15% acquired in the fourth quarter of 2003. Vector earnings have also been negatively impacted by the stronger Canadian dollar.

Earnings from Vector were \$3.1 million higher in 2003, compared with 2002, as a result of increased volumes and transportation margins, due to both colder than normal weather in Eastern Canada and higher storage injections. This was further enhanced by the additional ownership interest of 15.0% acquired in the fourth guarter of 2003.

### Strategy

### Supply and Demand for Natural Gas

North American natural gas demand is expected to grow at a modest rate for the next three to five years primarily driven by growth in power generation, which more than offsets declines in industrial demand. The development of oil sands projects in Alberta also impacts the demand for natural gas, as various extraction and upgrading processes require the use of natural gas. Demand growth is expected to be constrained by recent strong prices and increased volatility due to supply concerns from traditional sources. Over time, the entry of new supplies from the U.S. Rockies, Liquefied Natural Gas and the Alaska North Slope/Mackenzie Delta are expected to alleviate supply concerns and provide opportunities for Enbridge to deliver this natural gas to markets.

To respond to this expected growth in demand, Enbridge will further develop its existing gas pipelines investments and pursue new growth platforms including an increased presence in the Gulf Coast. Alliance's growth strategy will focus on small-scale investments in expansion, efficiency, receipt and delivery facilities and laterals. Alliance is well positioned to participate in the delivery of Alaska/Mackenzie Delta gas to markets in the United States. Vector's growth strategy is to continue to improve margins on capacity not subject to long-term contracts and to firm up long-term contracts at favourable margins. New growth platforms could include significant ownership in a pipeline transporting gas from the Rockies; ownership in a pipeline connecting Dawn, Ontario, to New York State; storage facilities in Ontario and a significant ownership position in other storage facilities; as well as the pursuit of a phased approach to deliver Alaska natural gas.

### **Business Risks**

The risks identified below are specific to the Gas Pipelines business. General risks that affect the Company as a whole are described under Risk Management.

#### Supply and Demand

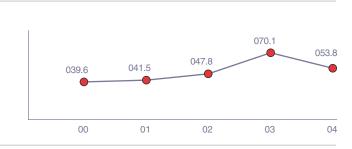

Currently, pipeline capacity out of the WCSB exceeds supply. Alliance has been unaffected by this excess supply environment mainly because of long-term capacity contracts going to 2015. Vector could be negatively impacted by the basis (location) differential in the price of natural gas between Chicago and Dawn, Ontario relative to the transportation toll.

#### **Exposure to Shippers**

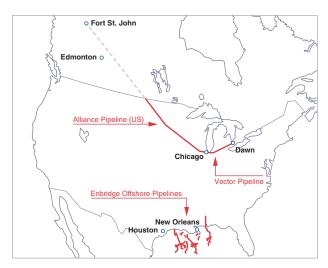

Alliance and Vector are highly dependent on shippers for revenues from contracted transportation capacity. The failure of the shippers to perform their contractual obligations under the transportation contracts could have an adverse effect on the cash flows and financial condition of Alliance and Vector. To reduce this risk, Alliance and Vector monitor the creditworthiness of each shipper and receive collateral for future shipping tolls should a shipper's credit position not meet

Gas Pipelines earnings reflect strong operating results from the Alliance
Pipeline (US) and Vector Pipeline: the decline in 2004 earnings
compared with 2003 reflects the sale in 2003 of
Alliance Pipeline (Canada) to Enbridge Income Fund.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 35 of 103 Appendix B

Gas Pipelines

agreed thresholds. Vector also has a diverse group of long-term transportation shippers, which include various gas and energy distribution companies, producers and marketing companies, further reducing the exposure.

#### Competition

Alliance faces competition for pipeline transportation services to the Chicago area from both existing and proposed pipeline projects. Existing pipelines, other than Alliance, with a combined transportation capacity of approximately 3.8 bcfd provide natural gas transportation services from the WCSB to distribution systems in the midwestern United States. In addition, there are several proposals to upgrade existing pipelines serving such areas and markets. Any new or upgraded pipelines could either allow shippers and competing pipelines to have greater access to natural gas markets

in addition to the markets served by the Alliance System and the pipelines to which it is connected, or offer natural gas transportation services that are more desirable to shippers than those provided by the Alliance System because of location, facilities or other factors. Alliance has the ability to deliver volume in excess of its contracted capacity. Existing shippers on Alliance have access to this additional delivery capacity at no additional cost, other than fuel requirements. This serves to enhance Alliance's competitive position.

Vector faces competition for pipeline transportation services to its delivery points from new or upgraded pipelines, which could allow shippers to have greater access to the markets served by Vector or offer transportation that is more desirable to shippers because of location, facilities or other factors. In addition, these pipelines could charge rates or provide service to locations that result in greater net profit to shippers, forcing Vector to lower its rates and reducing Vector's cash flows. Vector has mitigated this risk by entering into long-term firm transportation contracts for approximately 70% of its capacity. These long-term contracts are not conducive to early termination and provide shippers with financial disincentives if they do not extend their contracts beyond the initial term. The effectiveness of these mitigation factors is evidenced by the increase in the utilization of the pipeline since its construction, despite the presence of transportation alternatives.

### Regulation

Both Vector and Alliance Pipeline (US) are regulated by the FERC which has the responsibility to ensure that rates charged are not greater than those necessary to enable the pipelines to recover costs prudently incurred and to earn a reasonable return. Under FERC regulations, the FERC, shippers and others have the opportunity to contest rates and the tariff structure.

#### **Business Activities**

Sponsored Investments includes the Company's ownership interests in EEP and EIF. Enbridge manages the assets of both investments. Enbridge receives management fees for providing day-to-day operation and management services to EEP and EIF including developing acquisition strategies and investigating potential acquisitions. Enbridge also receives incentive fees when cash distributions to unitholders exceed specified levels.

### Enbridge Energy Partners (EEP)

Enbridge has an effective 11.6% ownership interest (2003 – 12.2%, 2002 – 14.1%) in EEP. This ownership interest represents the Company's direct investment in EEP of 8.5% and an indirect investment of 3.1% through the Company's 17.2% ownership interest in Enbridge Energy Management (EEM). EEM's business activities are limited to managing the business and affairs of EEP and holding an approximate 18% interest in EEP.

EEP owns and operates crude oil and liquid petroleum transmission pipeline systems, natural gas gathering and related facilities and marketing assets in the United States. Significant assets include the Lakehead System, which is the extension of the Enbridge System in the U.S., natural gas gathering and processing assets in east Texas (East Texas System), the mid-continent crude oil system (Mid-Continent System), which was acquired in 2004, a natural gas system in north Texas (North Texas System), which was also acquired in 2004, and a feeder pipeline in North Dakota.

Enbridge, as the general partner of EEP, receives incentive income based on the level of quarterly cash distributions. EEP makes quarterly cash distributions of all of its available cash to the holders of its common units, including Enbridge. Under the Partnership Agreement, Enbridge receives incremental incentive cash distributions, which represent incentive income, on the portion of cash distributions, on a per unit basis, that exceed certain target thresholds as follows:

	Unitholders	Enbridge
Quarterly Cash Distributions per Unit:		
Up to \$0.59 per unit	98%	2%
First Target – \$0.59 per unit up to \$0.70 per unit	85%	15%
Second Target – \$0.70 per unit up to \$0.99 per unit	75%	25%
Over Second Target – Cash distributions greater than \$0.99 per unit	50%	50%

During 2004, EEP paid quarterly distributions of \$0.925 per unit (2003 - \$0.925 per unit; 2002 - \$0.90 per unit). Of the \$28.6 million Enbridge recognized as earnings from EEP during 2004, 50% (2003 - 49%; 2002 - 48%) were incentive earnings while 50% (2003 - 51%; 2002 - 52%) were Enbridge's share of EEP's earnings.

In January 2005, EEP closed the purchase of the North Texas Natural Gas System from Devon Energy Corporation for approximately US\$165 million. This system includes approximately 3500 kilometres (2,200 miles) of gas gathering pipelines and three processing plants with aggregate processing capacity of 81 million cubic feet of natural gas per day (mmcfd). The acquired assets serve areas of the Fort Worth Basin, primarily in Jack, Palo Pinto and Parker counties.

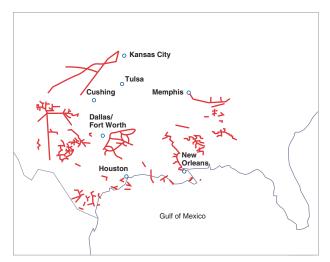

EEP acquired the Mid-Continent System in March 2004. This System, which consists of crude oil pipeline and storage systems, was purchased for US\$117.0 million. The assets serve refineries in the U.S. mid-continent from Cushing, Oklahoma, and consist of over 768 kilometres (480 miles) of crude oil pipelines and 9.5 million barrels of storage capacity.

Effective December 31, 2003, EEP acquired the North Texas System, a collection of natural gas gathering and processing assets in North Texas. The system primarily serves the Fort Worth Basin, including growing production from the Barnett Shale zone.

### **Enbridge Midcoast Energy**

In October 2002, Enbridge sold the United States assets of Enbridge Midcoast Energy (Midcoast) to EEP. The results of operations of Midcoast, in the preceding Earnings table, relate to the period when the assets were wholly owned.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 37 of 103 Appendix B

Enbridge Energy Partners - Gas Pipelines

### Enbridge Income Fund (EIF)

Enbridge has a 41.9% voting interest in EIF through the ownership of 14.5 million subordinated units. This interest is accounted for as an equity investment. Enbridge also owns 38 million preferred units of Enbridge Commercial Trust (ECT), a subsidiary of EIF. The preferred units do not have voting rights and are redeemable at the Company's option at a per unit value equal to the price of the publicly traded EIF ordinary units. The preferred units mature on June 30, 2033 at a value of \$10 per unit. This interest is accounted for as a cost investment.

Under new accounting rules in effect in Canada on January 1, 2005, EIF is considered a variable interest entity. Enbridge, as the primary beneficiary, will account for EIF as a subsidiary, consolidating the accounts of EIF in Enbridge's financial statements. The impact on

Enbridge's 2004 and 2003 financial results is presented in Enbridge's financial statements in Note 22, United States Accounting Principles. Similar accounting rules were adopted in the United States in 2003 and Enbridge has reported the impact of consolidating EIF in the reconciliation to U.S. generally accepted accounting principles in that note. The adoption of the new accounting rules will have no impact on earnings.

Enbridge receives a base annual management fee of \$0.1 million for management services provided to EIF plus incentive fees equal to 25% of annual cash distributions over \$0.825 per trust unit. In 2004, the Company received incentive fees of \$0.8 million (2003 – nil).

Effective June 30, 2003, Enbridge sold its 50% interest in the Canadian portion of Alliance Pipeline and 100% ownership of Enbridge Pipelines (Saskatchewan) Inc. to EIF. For the period prior to this sale, the operating results of Alliance Canada are included in Gas Pipelines and the operating results of Enbridge Pipelines (Saskatchewan) Inc. are included in Liquids Pipelines. Thereafter, the operating results of these assets are included in EIF, which is a component of this segment.

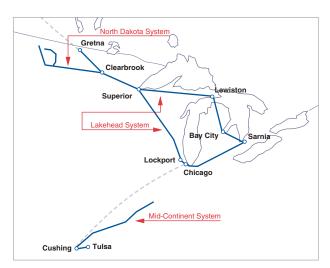

### **Results of Operations**

Earnings from Sponsored Investments are \$66.2 million in 2004 compared with \$234.3 million in 2003. The decrease results primarily from the gain of \$169.1 million on the sale of the Company's interests in Alliance Pipeline (Canada) and Enbridge Pipelines (Saskatchewan) to EIF in 2003. Earnings in 2003 also included dilution gains of \$20.3 million, which resulted from two unit issuances by EEP. In 2004, earnings include only one dilution gain of \$7.6 million.

For the year ended December 31, 2003, earnings were \$234.3 million compared with a loss of \$51.1 million for 2002. The 2003 results included the after-tax gain of \$169.1 million, as well as, dilution gains of \$20.3 million, compared with \$6.1 million in 2002. This reflected two unit issuances by EEP in 2003, compared with only one in the prior year.

Excluding the impact of these gains, earnings in this segment in 2003 increased \$102.1 million from 2002. A significant portion of this year-over-year change is due to an \$82.2 million write down, recorded in 2002, on the sale of the Midcoast assets. The remainder of the \$19.9 million increase is attributed to the creation of EIF, effective June 30, 2003, and incremental earnings in EEP from increased throughput on the Lakehead and North Dakota systems.

In October 2002, the Company closed the sale of the United States assets of Midcoast to EEP for consideration of US\$820.0 million. Concurrent with the sale transaction, EEM, a subsidiary of Enbridge, completed an initial public offering of common shares and used the net proceeds from the offering to purchase i-units, a new class of limited partnership interests, from EEP. Enbridge purchased 17.2% of the EEM shares.

Enbridge Energy Partners - Liquids Pipelines

### **Enbridge Energy Partners**

EEP's 2004 results reflect higher operating earnings partially offset by the stronger Canadian dollar, a lower ownership interest and the negative effect of a Federal Energy Regulatory Commission decision requiring a refund to shippers on one of EEP's regulated natural gas pipelines. The higher operating earnings are from increased volumes on the main crude oil liquids pipeline system, as well as increased throughput and higher processing margins on various natural gas assets. EEP realized incremental earnings from the acquisition of the North Texas assets, for US\$249.6 million, which closed on December 31, 2003, and the Mid-Continent assets, for US\$117.0 million, which closed on March 1, 2004.

In 2003 EEP issued partnership units twice whereas in 2004 there was only one such issuance. As Enbridge did not participate in these offerings, dilution gains resulted.

Equity earnings in EEP improved in 2003, compared with 2002, due to higher incentive income earned by Enbridge as the general partner and improved results from the Lakehead System. The increased earnings also reflected incremental earnings from EEP's acquisition of the Company's Midcoast assets in October 2002, as well as increased throughput on the Lakehead and North Dakota systems.

### Enbridge Income Fund

In June 2003, the Company formed EIF. On formation, EIF acquired the Company's 50% interest in the Canadian segment of Alliance Pipeline together with its 100% interest in the Saskatchewan System.

Earnings for 2004 include a full year of operations whereas earnings for 2003 include only the six months from inception of EIF on June 30, 2003.

#### **Enbridge Midcoast Energy**

Midcoast was sold to EEP in October 2002.

### Strategy - EEP

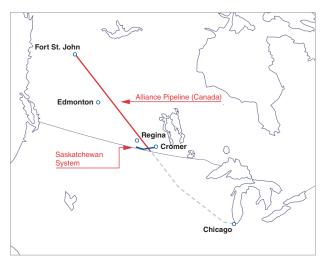

EEP is Enbridge's primary vehicle to own and acquire mature energy infrastructure assets in the United States. In this regard, EEP will continue to grow its geographic footprint through accretive acquisitions and diversification of the revenue stream through a focus on natural gas assets. This strategy will emphasize acquisitions complementary to existing regional assets. EEP will also seek to optimize existing assets through operational efficiency and increased throughput.

### Strategy - EIF

Enbridge Income Fund will continue to position itself as a premier income fund in Canada with a value proposition characterized by a low risk profile with dependable but modest growth, long-life assets and potential for further growth through energy infrastructure acquisitions.

### **Business Risks**

All of the Company's operations in Sponsored Investments are carried out through EEP and EIF and therefore, the risks are limited to the percentage investment that the Company has in each entity. The risks identified below are specific to the Sponsored Investments business. General risks that affect the Company as a whole are described under Risk Management.

Enbridge Income Fund

# Enbridge Energy Partners Supply and Demand

The profitability of the Lakehead System depends to a large extent on the volume of products transported on its pipeline systems. Decreases in the volume of products transported by the Partnership's systems, whether caused by supply or demand factors, can directly affect EEP's revenues and results of operations. The volume of shipments on the Lakehead System depends primarily on the supply of Western Canadian crude oil and the demand for crude oil in the Great Lakes and Midwest regions of the United States. EEP expects future increased supplies to come from the oil sands projects in Alberta. In addition, Enbridge's future plans to provide access to new markets in the southern United States would increase demand for Western Canadian crude.

Certain of EEP's natural gas gathering assets are also subject to changes in supply and demand for natural gas, natural gas liquids and related products. Commodity prices impact the willingness of natural gas producers to invest in additional infrastructure to produce natural gas.

#### Regulation

In the U.S., the interstate and intrastate gas pipelines owned and operated by EEP are subject to regulation by FERC or state regulators. Gas gathering currently is not subject to active regulation. Several of EEP's assets are regulated by FERC and their revenues could decrease if tariff rates were protested.

#### Market Price Risk

EEP's gas processing business is subject to commodity price risk for natural gas costs and natural gas liquids. Historically, these risks have been managed by using derivative financial instruments, fixing the prices of natural gas and natural gas liquids.

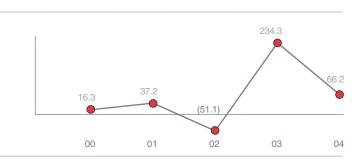

### Enbridge Income Fund

Risks within EIF relate to Alliance Canada and the Saskatchewan System. Risks for Alliance Canada are similar to those identified under Gas Pipelines, which includes the U.S. portion of the Alliance System. Below are risks identified within EIF directly related to the Saskatchewan System.

#### Supply and Demand

The majority of the volumes shipped on the Saskatchewan and Westspur pipeline systems are transported on terms similar to a common carrier basis with no specific on-going volume commitments. There is no assurance that shippers will continue to utilize these systems in the future or transport volumes on similar terms or at similar tolls.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 40 of 103 Appendix B

#### GAS DISTRIBUTION AND SERVICES

#### **Earnings**

(millions of Canadian dollars)	2004	2003	2002
Enbridge Gas Distribution <sup>1</sup>	133.1	103.0	85.3
Noverco <sup>1</sup>	32.3	24.2	20.6

Impairment loss on Calmar gas plant	(8.2)	_	_
Other	(0.2)	(1.2)	(0.6)
	313.1	153.6	124.3

<sup>1</sup> The year ended December 31, 2004 includes earnings for the 15 months ended December 31, 2004.

#### **Business Activities**

Gas Distribution and Services primarily includes the gas distribution operations of Enbridge Gas Distribution (EGD), CustomerWorks/ECS, the Company's investment in Noverco and other gas distribution activities in smaller franchise areas. This segment also includes the gas services business, which manages the Company's merchant capacity commitments on Alliance and Vector, and the Company's investment in Aux Sable, which the Company jointly controls with other owners.

EGD is Canada's largest natural gas distribution company and has been in operation for more than 150 years. It serves over 1.7 million customers in Central and Eastern Ontario, Southwestern Quebec, and parts of Northern New York State. EGD's operations in Ontario are regulated by the Ontario Energy Board (OEB).

CustomerWorks/ECS includes the operations of CustomerWorks and Enbridge Commercial Services (ECS). CustomerWorks is 70% owned by Enbridge and provides customer care services, including billing, collections, and operation of call centers primarily for EGD and Terasen. In August 2002, CustomerWorks outsourced the provision of its customer care services to a subsidiary of Accenture Inc. ECS owns the customer information services system that CustomerWorks uses under license to provide services to EGD.

Enbridge owns an equity interest in Noverco through ownership of 32% of the common shares and a cost investment through ownership of preference shares. Noverco is a holding company that owns an approximate 75% interest in Gaz Metro Limited Partnership, a gas distribution company operating in the province of Quebec and the state of Vermont, which has a 50% interest in TQM Pipeline, a pipeline transporting natural gas in Quebec.

The Company owns 63% of, and operates, Enbridge Gas New Brunswick (EGNB), which owns the natural gas distribution franchise in the province of New Brunswick. EGNB is constructing a new distribution system and has approximately 3,150 customers. Approximately 380 kilometres (238 miles) of distribution main has been installed with the capability of attaching between 14,000 and 15,000 customers. EGNB is regulated by the New Brunswick Board of Commissioners of Public Utilities.

Enbridge owns 42.7% of Aux Sable, a natural gas liquids (NGL) extraction and fractionation business. Aux Sable owns and operates a plant, attached to the terminus of the Alliance System. The plant extracts NGL from the energy-rich natural gas transported on the Alliance System, as necessary, to meet the heat content requirements of local distribution companies which require natural gas with less NGL, or lower heat content, and to take advantage of positive commodity price spreads. The NGL, which include ethane, propane, normal butane, iso-butane and natural gasoline, is resold. Aux Sable's ability to generate earnings is dependent on the difference between the prices of the NGL and natural gas, which Aux Sable must buy to replace the NGL it extracts from the Alliance System. When the price of NGL is higher relative to natural gas, there is greater potential

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 41 of 103 Appendix B

for earnings in Aux Sable. Demand for NGL is influenced by overall economic activity and weather because NGL are used to make energy products for home and industrial heating and as feedstock for the petrochemical industry, among other things. Because Aux Sable's earnings are dependent, to a large degree, on commodity prices, earnings can be volatile. To reduce this volatility, Aux Sable has entered into hedge transactions to fix the spread between natural gas and NGL prices. Starting in 2004, downstream heat content requirements were reduced providing improved operating flexibility.

During 2004, Enbridge sold its investment in AltaGas Income Trust (AltaGas) for total cash proceeds of \$346.7 million, net of underwriting fees. Enbridge realized a gain on the sale of \$97.8 million after tax. Earnings from AltaGas include a dilution gain of \$8.0 million (2003 and 2002 – nil).

### **Results of Operations**

Earnings are \$313.1 million in 2004 compared with \$153.6 million in 2003. The increase is due to the inclusion of a fifth quarter of results for EGD, Noverco and other gas distribution businesses (described below) and a gain on the sale of AltaGas in 2004.

Earnings were \$153.6 million for the year ended December 31, 2003, compared with \$124.3 million in 2002. Higher earnings were attributable to colder than normal weather experienced in the EGD franchise area in 2003, further aided by a decrease in losses from Gas Services and an increased contribution from CustomerWorks/ECS.

### **Enbridge Gas Distribution**

(millions of Canadian dollars)	2004	2003	2002
Enbridge Gas Distribution – as reported	133.1	103.0	85.3
Significant non-operating factors and variances:			
Fifth quarter of earnings	(48.0)	_	_
Regulatory disallowances	4.6	37.7	_
Colder than normal weather	(23.4)	(46.1)	29.3
Tax rate adjustments	47.6	3.8	_
	113.9	98.4	114.6

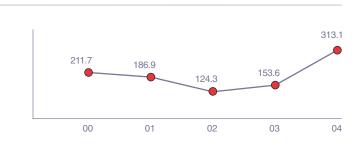

The regulatory disallowance in 2004 relates to outsourcing costs. The 2003 disallowances relate to a \$7.1 million gas costs disallowance related to a long-term transportation contract, an outsourcing disallowance, as well as a \$26.0 million write-down of a regulatory receivable. The remaining EGD variance, after considering those listed in the above table, is the result of the 2004 rate increase, new customer additions and other positive variances from the forecast cost of service, partially offset by an accrual to share excess earnings, consistent with the 2004 rate filing.

Earnings from EGD for 2003 decreased by \$16.2 million to \$98.4 million after considering the adjustments listed in the above table. The decrease was primarily due to increased operating and maintenance expenditures in 2003.

Normal weather is the weather forecast by EGD, in the Toronto area, including the impacts of both the long run and short run actual historical weather experience, more heavily weighted on the short run experience. This financial measure is unique to EGD and, due to differing franchise areas, is unlikely to be directly comparable to the impact of weather-normalized factors that may be identified by other companies. Moreover, normal weather may not be comparable year-to-year given that the forecasting model weights the degree-days from the most recent years more heavily to determine the estimate. This weather-normalized adjustment is the same as the manner in which EGD calculates degree-days for regulatory purposes.

Gas Distribution and Services Earnings
(millions of dollars)

Increased Gas Distribution and Services earnings in 2004 include a fifth quarter of results for gas distribution businesses and a gain on the sale of Enbridge's investment in AltaGas: they also reflect a 2004 rate increase, new customer additions and other positive variances from the forecast cost of service for Enbridge Gas Distribution.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 42 of 103 Appendix B

Earnings from EGD will be impacted to the extent that volumes sold differ from the forecast distribution volume established in the ratemaking process. There are four key factors that affect the probability that EGD will distribute the forecast volumes. These are weather, economic conditions, pricing of competitive energy sources, and the number of customers. To the extent that these factors vary unfavourably as compared with forecasts, earnings will be less than the total revenue requirements established in the ratemaking process.

Even in those circumstances where EGD attains its total forecast distribution volume, it may not earn the approved return on equity due to other forecast variables such as mix of sales and transportation of gas for customers, the mix between the higher margin residential and commercial sectors, and lower margin industrial sector.

Over the last three years, EGD added approximately 180,600 customers, including approximately 74,500 customers in the fifteen months ended December 31, 2004. The increased number of customers is due primarily to the strong housing market in EGD's franchise area. EGD expects to continue to add 45,000 to 55,000 customers per year in the foreseeable future.

#### Noverco

(millions of Canadian dollars)	2004	2003	2002
Noverco – as reported	32.3	24.2	20.6
Significant non-operating factors and variances:			
Fifth quarter of earnings	(7.5)	_	_
Dilution gains on Gaz Metro issuances	(1.1)	(6.0)	_
Tax rate adjustments	(1.6)	2.3	(2.1)
	22.1	20.5	18.5

Noverco earnings in 2004 and 2003, after considering the items in the above table, reflect growth at Gaz Metro, as well as lower interest expense.

Variations from normal weather do not affect Noverco's earnings as Gaz Metro is not exposed to weather risk. A significant portion of the Company's earnings from Noverco is in the form of dividends on its preference share investment, which is based on the yield of 10-year Government of Canada bonds plus 4.34%. The weighted average dividend yield on the preference shares, which is reset annually, was approximately 10% for each of the last three years.

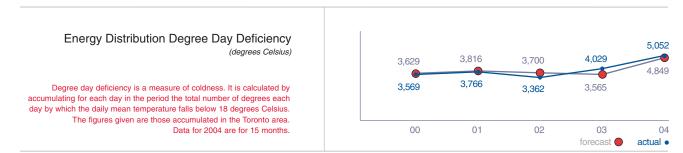

### CustomerWorks/ECS

Earnings from CustomerWorks/ECS are \$3.6 million higher in 2004 due primarily to lower depreciation expense.

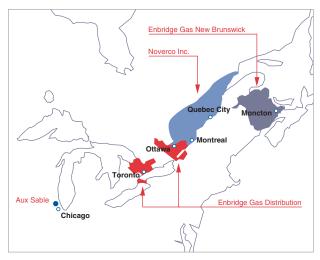

The contribution from CustomerWorks/ECS was \$16.9 million for the year ended December 31, 2003, an increase of \$6.2 million compared with the prior year. The main component of these earnings in 2003 was the contribution from CustomerWorks as the primary operations of ECS were rebundled into EGD at the end of 2002. In 2002, earnings from CustomerWorks were affected by activity levels, including customer service calls, which were lower due to warmer weather. In 2003, earnings reflected higher weather-related customer service call volumes and growth in the customer base of the utilities served by CustomerWorks.

### Gas Services

Gas Services recorded a loss of \$2.8 million for 2004, an improvement of \$3.1 million from 2003. The improvement reflects a continuing increase in the demand for natural gas and associated transmission services, reducing merchant capacity losses on Alliance and Vector.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 43 of 103 Appendix B

Gas Distribution and Services

Gas Services experienced a loss of \$5.9 million for the year ended December 31, 2003, compared with a loss of \$7.8 million in 2002. The improvement was due primarily to the commencement of fee-based gas service management contracts with certain U.S.-based companies in late 2002 and increased demand for natural gas transmission services.

#### Aux Sable

The higher earnings from Aux Sable in 2004 are the result of positive fractionation margins. Enbridge's ownership interest in Aux Sable was also higher in 2004, as an additional 11.8% was acquired in April 2003 resulting in the current ownership of 42.7%. As the acquisition of the additional interest was at a discount to the book value, depreciation expense is lower on that additional interest.

In 2003, the loss from Aux Sable was \$6.9 million, a weakening of \$3.8 million from the 2002 loss of \$3.1 million. The additional loss reflected the combined effect of higher natural gas prices and lower ethane prices relative to 2002, most significantly during the second quarter of 2003. The results from Aux Sable in 2003 also reflected the increase in ownership interest from 30.9% to 42.7% offset by lower depreciation as the acquisition of the additional interest was at a discount to the book value.

#### **AltaGas**

The earnings contribution from AltaGas in 2004 reflects a number of factors including an \$8.0 million after-tax dilution gain when AltaGas issued additional trust units and Enbridge did not participate. The revaluation of the future income tax liability related to this investment, primarily as a result of the first quarter Alberta tax rate reductions, also increased earnings. In early August, Enbridge reduced its ownership interest to approximately 10% and cost accounted for this investment thereafter until the ownership position was reduced to nil in September.

### **Gas Distribution Rates**

### 2005 Rate Application

EGD filed its fiscal 2005 rate application with the OEB in December 2003. Although EGD's long-term objective is to implement an alternative ratemaking model as described below, this rate application was based on the traditional cost of service. The key elements are summarized below:

	Approved	Approved
Year ended September 30,	2005	2003
Rate base (millions)	\$3,422.8	\$3,155.8
Rate of return on rate base	8.14%	8.32%
Deemed common equity for regulatory purposes	35.00%	35.00%
Rate of return on common equity	9.57%	9.69%

The fiscal 2004 rate application was not a traditional cost of service application, accordingly no rate base information is provided in the table above.

In May 2004, as a result of settlement negotiations with intervenors, an agreement was reached on the majority of the financial aspects affecting 2005 rates. These primarily included EGD's capital budget, operating and maintenance budget, financing arrangements, and return on common equity. EGD also applied to the OEB for approval to change the regulatory rate-setting cycle to run on a calendar year basis instead of the existing October to September cycle. This was approved by the OEB on November 1, 2004 as part of its final decision on the 2005 rate application.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 44 of 103 Appendix B

#### Discontinuation of Seasonal Rates

Effective October 1, 2004, seasonal rates for delivery charges have been replaced with a uniform rate throughout the year. The impact of this change will result in lower earnings in the winter months, offset by higher earnings in the summer months, causing a shift in earnings between quarters with no earnings impact over 12 consecutive months, mitigating weather risk to some degree. This change did not have a material impact on earnings during the 15 months ended December 31, 2004.

#### 2004 Rates

EGD's 2004 rate application requested that rates for 2004 be set by increasing 2003 rates by 90 percent of the forecast Ontario consumer price index, that being an increase of 1.8 percent. The OEB accepted the proposal for EGD's fiscal 2004 rates on September 4, 2003, thus allowing rates to be in place for the start of the 2004 fiscal year.

The OEB also added a sharing mechanism to fiscal 2004, whereby if earnings on a weather-normalized basis exceed the benchmark ROE, these excess earnings would be shared on a 50/50 basis between ratepayers and the Company's shareholders. The financial results include a charge of \$6.3 million after tax for the earnings sharing.

#### 2003 Rates

EGD's 2003 rates were established pursuant to a cost-of-service methodology that allowed revenues to be set to recover EGD's forecast costs. Forecast costs included gas commodity and transportation, operation and maintenance, depreciation, income taxes, and the debt and equity costs of financing the rate base. The rate base is EGD's investment in all assets used in gas distribution, storage and transmission, as well as an allowance for working capital. Under cost-of-service, it is EGD's responsibility to demonstrate to the OEB the prudence of the forecast costs. EGD does not profit from the sale of the natural gas commodity.

The rate base is financed by EGD through a combination of debt and equity. The proportion of debt and equity is approved by the OEB. For the debt portion, interest expense incurred by the Company is recovered in rates. For the equity portion, the OEB sets the rate of return that EGD may recover in rates. The allowed rate of return on equity for EGD is based on the yield on Canadian government long-term bonds. For 2003, the allowed rate of return was 9.69% (2002 - 9.66%) on a deemed common equity ratio of 35.0%.

#### 2002 Rates

During the fiscal periods 2000 to 2002, EGD operated under a targeted Performance-Based Regulation (PBR) plan. The PBR plan used a formula to calculate the level of operation and maintenance costs recoverable in rates. During the PBR period, EGD was allowed to retain any savings realized if it achieved lower operation and maintenance expenses than those calculated under the formula.

### Legislative Change and Future Regulatory Direction

On August 1, 2003, the Ontario Energy Board Consumer Protection and Governance Act, 2003 was proclaimed, providing a new mandate for the OEB. The legislation provides for improved regulatory processes, performance measurement and reporting by the OEB, as well as the establishment of the OEB as a self-financing Crown Agency.

### Gas Distribution Access Rule

The Ontario Energy Board (OEB), pursuant to the Energy Competition Act, has undertaken the development of a Gas Distribution Access Rule (GDAR). The stated purpose of the GDAR is to establish rules governing natural gas distributors' conduct in relation to gas marketers and to establish conditions of access to distribution services. The OEB issued the final version of the GDAR in December 2002. Despite EGD's arguments with respect to the GDAR's position on customer mobility and billing options, the GDAR mandates that distributors, including EGD, provide gas marketers with the option to consolidate the gas distribution charges to consumers on the marketers' own bill, forcing the distributor to appoint the marketer as its billing agent. EGD would have to undertake extensive system changes and negotiate new contractual arrangements in order to effect the GDAR directives. Despite appeal by both Union Gas Limited and EGD, on January 11, 2005 the Ontario Court of Appeal dismissed the appeal and upheld the OEB's authority to enact the vendor consolidated billing aspects of the GDAR. EGD is reviewing the decision and considering its options.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 45 of 103 Appendix B

#### Strategy

While EGD will again be under a cost of service regime in 2005 and earnings will be exposed to variances from the components included in the forecast cost of service, it continues to believe that an incentive based regulatory model is advantageous for customers and shareholders. To this end, EGD will be advancing alternate ratemaking models to the OEB through the Natural Gas Forum, which has been initiated for the purpose of exploring options for better regulation of the evolving gas market. EGD will pursue an alternative regulatory model for implementation by 2007 with a focus on growth and customer service and continue to seek improvements in the regulatory process through negotiation with stakeholders and the Ontario Energy Board.

Enbridge Gas New Brunswick plans to increase the customer attachment rate by becoming actively involved in the sale of the natural gas commodity as well as the sale, installation and service of natural gas equipment to the residential and small commercial markets.

The Company's strategies for other gas services businesses are to develop markets downstream of Dawn, Ontario, including support of Enbridge's involvement in power generation in Ontario and position Gas Services to provide marketing, optimization, and other agency services to the proposed LNG regasification facility in Quebec (the proposed LNG facility is described below).

Enbridge intends to pursue gas business development opportunities outside of the existing gas distribution and services businesses through a significant ownership interest in gas-powered co-generation and dedicated electricity generation in Eastern Canada and through significant ownership in at least one LNG project in Canada. To achieve this, Enbridge plans to create a strategic partnership with a large, established company experienced in electricity generation and conclude a partnership with Gaz Metro and Gaz de France to develop a Quebec-based LNG facility.

### LNG Facility Update

Enbridge, Gaz Metro and Gaz de France previously announced their intention to build a liquefied natural gas (LNG) terminal in the Levis-Beaumont area of Quebec City. Project "Rabaska" would cost approximately \$700 million and is forecast to be put into service in 2008. The Levis municipal council is not in support of the proposed location at this time as evidenced by a majority vote against the proposal. The partners are currently reviewing their options in response to this decision. The terminal would supply regasified LNG primarily to Quebec and Ontario markets and provide diversity of natural gas sources, as well as meet the growing demand for natural gas.

### **Capital Expenditures**

Capital expenditures in 2005, for the Gas Distribution and Services business are expected to be approximately \$248 million. The majority of the expenditures relate to expansion of and core maintenance on the EGD system. It is anticipated that these additions will be financed through internal funds, as well as short and medium-term borrowings. Capital expenditures for 2004 were \$353 million compared with expected expenditures of \$287 million. The difference is due to the inclusion of five quarters of expenditures for EGD. The change in year end from September 30 to December 31 resulted in the consolidation of 15 months of expenditures in the Company's financial results.

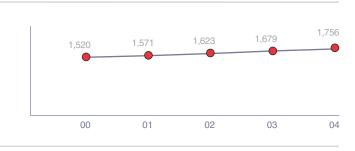

### **Enbridge Gas Distribution Legal Proceedings**

### Class Action Lawsuit - late payment penalties

On April 22, 2004, the Supreme Court of Canada released its decision in a case commenced against Enbridge Gas Distribution (EGD) by a customer with respect to late payment penalties. The Supreme Court of Canada determined that EGD would be required to repay a portion of amounts paid to it as late payment penalties from April 1994. The total amount of late payment

Gas Distribution Number of Active Customers

Enbridge Gas Distribution continues to add between 50,000 and 60,000 new customers per year: the 2004 number reflects the 15-month period reported as part of Enbridge's change in financial reporting to eliminate the consolidation of gas distribution operations on a quarter lag basis.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 46 of 103 Appendix B

penalties billed between April 1994 and February 2002 (when EGD's late payment penalty was revised), was approximately \$74 million, of which, a portion may be eligible for repayment. The amount payable is not determinable at this time. The Supreme Court has directed that a lower court determine the amount payable. Case conferences were held before a judge of the Ontario Supreme Court in August and December 2004 to discuss the remaining outstanding issues following the Supreme Court's decision. Further court proceedings to determine the amount payable and other related issues are likely to be held in 2005.

Late payment penalty revenues are included in EGD's estimate of revenues for the year and therefore offset rates charged to customers. Revenues from late payment penalties accrue to the benefit of all customers, thereby reducing the cost of providing distribution services. The Ontario Energy Board (OEB) approved these estimates and the resulting rates each year, including the years 1994 through 2002. EGD intends to apply to the OEB for recovery of any amount payable that results from this action.

#### Bloor Street Incident

EGD has been charged under both the Ontario Technical Standards and Safety Act (the TSSA) and the Ontario Occupational Health and Safety Act (the OHSA) in connection with an explosion that occurred on Bloor Street West in Toronto on April 24, 2003. The maximum possible fine upon conviction on all charges would be approximately \$5.0 million in the aggregate. EGD has also been named as a defendant in a number of civil actions related to the explosion. A Coroner's Inquest in connection with the explosion is also possible. The courts have not yet dealt with any of the charges laid under the TSSA or the OHSA, and thus it is not possible at this time to predict or comment upon the potential outcome. EGD does not expect the civil actions to result in any material financial impact.

### Remediation of Discontinued Manufactured Gas Plant Sites

The remediation of discontinued manufactured gas plant sites may result in future costs to EGD. In October 2002, a claim was filed for \$55 million in damages relating to a certain manufactured gas plant site. EGD filed a statement of defence in June 2003 denying liability. EGD expects that trial scheduling will take place in the summer of 2005 and that a trial date will be fixed for early 2006. Although management believes that it has a valid defence to this claim, certain risks exist. The probable overall cost cannot be determined at this time due to uncertainty about the presence and extent of damage in addition to the potential alternative remediation approaches which vary in cost. EGD expects that costs, if any, not recovered through insurance would be recovered through rates. As such, management does not believe that the outcome will have any material financial impact.

#### **Business Risks**

The risks identified below are specific to the Gas Distribution and Services business. General risks that affect the Company as a whole are described under Risk Management.

#### **Enbridge Gas Distribution**

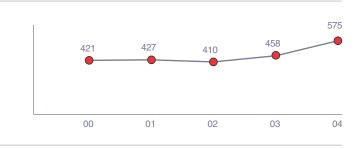

The business risks inherent in the natural gas distribution industry impact the ability of EGD to realize the revenue level required to generate the allowed return on equity. These business risks include timely and adequate rate relief, accuracy in forecasting distribution volume, and most importantly, achieving the forecast natural gas distribution volume.

### Volume Risks

Since customers are billed on a volumetric basis, the ability to collect the total revenue requirement (the cost of providing service) depends upon achieving the forecast distribution volume established in the annual ratemaking process. The probability of realizing such volume is contingent upon four key forecast variables: weather; economic conditions; pricing of competitive energy sources; and the number of customers.

Gas Distribution Volume of Gas Distributed
(billions of cubic feet)

Gas volumes distributed reflect the growing number of active customers and the impact each year of warmer than normal or colder than normal weather: the 2004 number reflects the 15-month period.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 47 of 103 Appendix B

Sales and transportation of gas for customers in the residential and commercial sectors account for approximately 77% (2003 – 77%) of total distribution volume. Weather during the year, measured in degree-days, has a significant impact on distribution volume as a major portion of the gas distributed to these two markets is used ultimately for space heating.

Distribution volume may also be impacted by the increased adoption of energy efficient technologies along with more efficient building construction that continues to place downward pressure on annual average consumption.

Sales and transportation service to large volume commercial and industrial customers is more susceptible to prevailing economic conditions. As well, the pricing of competitive energy sources affects volumes distributed to these sectors as some customers have the ability to switch to an alternate fuel. Customer additions are important to all market sectors as continued expansion adds to the total consumption of natural gas.

Even in those circumstances where EGD attains its total forecast distribution volume, it may not earn the approved return on equity due to other forecast variables such as, mix of sales and transportation of gas for customers, the mix between the higher margin residential and commercial sectors, and lower margin industrial sector.

#### Rate Relief

Through the regulatory process, the OEB approves the return on equity, which EGD is allowed to earn, in addition to various other aspects of utility operations. Rate relief could also be sought for significant unforecasted amounts allowing EGD to recover the costs of providing and maintaining the quality of its service while achieving the allowed rate of return on rate base. EGD does not profit from the price of the natural gas commodity nor is it at risk for the difference between the actual cost of gas purchased and the price approved by the OEB. This difference is deferred as a receivable from or payable to ratepayers until the OEB approves its disposition.

#### Forecasting Accuracy

Forecasting accuracy is a risk since rate applications are made or rates are established in advance, based on anticipated distribution volume by class of customer. Forecasts are also made for the future cost of capital including the forecast yield rate for long-term Government of Canada Bonds used in the determination of the return on equity. Consequently, through the forecasting process, it is intended that any changes in cost of service, regardless of whether they are caused by inflation or by level of business activity, would be recovered in new rates approved for that fiscal year based on the anticipated distribution volume.

### **Gas Services**

Earnings from Gas Services are dependent upon the basis (location) differentials between Alberta and Chicago and between Chicago and Dawn. To the extent that the difference in the price of natural gas in the various locations is not greater than the cost of transportation between Alberta and Chicago or Dawn, earnings will be negatively affected.

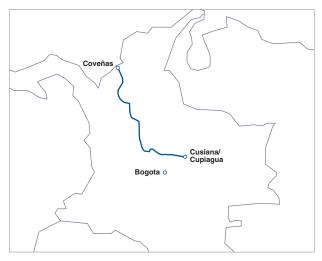

### Aux Sable

Earnings from Aux Sable will continue to be exposed to the effect of spreads between the sale prices of natural gas liquids and the purchase price of replacement natural gas. Earnings would be negatively impacted by a decrease in the spread and positively impacted by an increase in the spread. This risk is mitigated by lower heat content requirements on downstream pipelines, which commenced in 2004, and the use of commodity hedges, which opportunistically lock in positive margins when forward markets allow.

#### INTERNATIONAL

### **Earnings**

(millions of Canadian dollars)	2004	2003	2002
CLH	48.6	46.3	33.3
OCENSA/CITCol	33.0	32.3	35.3
Other	(8.0)	(6.3)	(0.6)
	73.6	72.3	68.0

Colombia - OCENSA

#### **Business Activities**

International includes earnings from the investments in Compañia Logistica de Hidrocarburos (CLH), Spain's largest refined products transportation and storage business, and OCENSA, a crude oil pipeline in Colombia. Earnings also include fees earned from technology and consulting services provided by Enbridge Technology Inc.

The Company owns a 25% interest in CLH of Spain. The primary activity of CLH is the storage and shipment of refined products through a comprehensive distribution network located throughout Spain. Earnings are based on a fee for service and are dependent on throughput volumes and storage levels.

CLH is the primary basic logistics distribution network for refined products in Spain and provides services on

an open access non-discriminatory basis. The system consists of over 3,400 kilometers of pipelines and 40 storage facilities located throughout the country. CLH provides product distribution to locations not connected to the pipeline system through its own fleet of tanker trucks and chartered tanker ships. CLH's core business is the provision of basic logistics and the company also offers secondary distribution services, the most significant being the services provided through CLH Aviation, which handles aviation fuel at airport locations throughout Spain. This business includes the storage of aviation fuel, loading of aircraft refueling units and the refueling of aircraft. New policies issued by the Spanish airport authority (AENA) to promote competition, allow for new non-CLH operators to enter the aircraft-refueling segment of this business. While CLH's share of this segment of the market may reduce over time, the aviation fuel business will continue. CLH's pipeline facilities are connected to the country's eight crude oil refineries and to major coastal port locations where crude oil and refined products are imported.

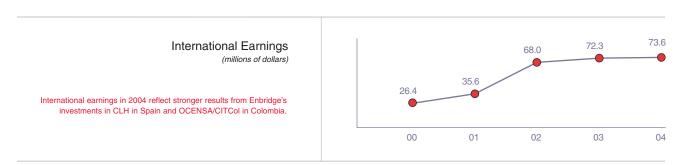

The Company owns a 24.7% interest in OCENSA, a cost investment on which the Company earns a stated return. The Company also has responsibility for the operations of the pipeline, through a 100% owned entity, CITCol, and earns a fee for this service, which includes incentive earnings for operating performance.

Other is primarily administration and business development costs, as well as the results of Enbridge Technology Inc.

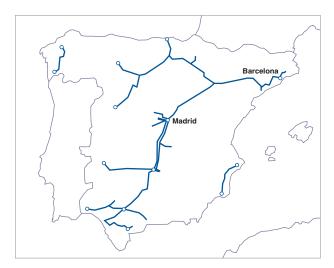

### **Results of Operations**

In 2004, increased earnings of \$1.3 million from 2003 are due to stronger results from CLH and from CITCol, operator of the OCENSA pipeline, exceeding certain operational performance targets resulting in additional incentive income. Operating results from CLH continue to reflect increased volumes due to greater demand for refined products throughout Spain, lower operating costs and the translation impact of the stronger Euro. Other costs include higher business development costs.

In 2003, earnings increased by \$4.3 million from 2002 primarily as a result of higher earnings from CLH, due to increased volumes and the impact of a stronger Euro, partially offset by a reduction in marine fleet revenues due to the scheduled

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 49 of 103 Appendix B

Spain - CLH

retirement of certain ships. The increased earnings were partly offset by the termination of the Jose Terminal operating agreement in Venezuela and lower incentive earnings from CITCol.

#### **Business Risks**

The International business is subject to risks related to political and economic instability, currency volatility, market and supply volatility, government regulations, foreign investment rules, security of assets and environmental considerations. The Company assesses and monitors international regions and specific countries on an ongoing basis for changes in these risks. Risks are mitigated by a combination of Enbridge's governance involvement, contractual arrangements, influence in operation of the assets, regular analysis of country risk, as well as foreign currency hedging and insurance programs.

### CORPORATE

(millions of Canadian dollars)	2004	2003	2002
Corporate	(81.3)	(76.6)	(48.6)

The Corporate segment includes corporate financing costs, business development activities not attributable to a specific business segment and other corporate activities.

The 2004 corporate costs include a higher expense for stock-based compensation and increased business development activity, partially offset with lower interest expense.

Corporate costs amounted to \$76.6 million in 2003, an increase of \$28.0 million from 2002. During 2003, lower financing costs were more than offset by various negative factors including increased business development costs, an expense for stock-based compensation and other corporate costs primarily relating to prior year business dispositions and final settlements. The Company adopted the fair-value based method of accounting for stock-based compensation effective January 1, 2003.

#### DISCONTINUED OPERATIONS

In the second quarter of 2002, the Company sold its retail and commercial energy services business for proceeds of \$1 billion. Earnings from discontinued operations for the year ended December 31, 2002 were \$242.3 million and included a \$240.0 million after-tax gain on the sale.

### CRITICAL ACCOUNTING POLICIES AND ESTIMATES

### **Rate Regulation**

The Company follows generally accepted accounting principles, which may differ for regulated operations from those otherwise expected in non-regulated businesses. In general, these differences occur when the regulatory agencies render their decisions, or grant approval, and involve the timing of revenue and expense recognition to ensure that the actions of the regulatory authorities have been reflected in the financial statements. Assets or liabilities may be created by decisions of regulatory authorities.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 50 of 103 Appendix B

The way that these items are reflected in the Company's financial results depends on its expectation of the future actions of the regulatory authorities. For example, the Company's rate-regulated businesses do not record future income taxes because the regulatory authorities prescribe the use of the taxes payable method for rate-making purposes and there is reasonable expectation that future income taxes will be recovered as they become payable.

If regulatory agencies' future actions are different from the Company's expectations, the timing and amount of the recovery of liabilities or refund of assets, recorded or unrecorded, could be significantly different from that reflected in the financial statements.

The Company's operations are regulated under three main regulatory regimes. Enbridge System negotiates tolls with its shippers under either the ITS or for specific expansions and these agreements are approved by the NEB. EGD files a rate application with the OEB, for its approval. Alliance System has negotiated transportation services contracts with shippers that incorporate a FERC-approved toll and tariff structure. Descriptions of each of these regulatory regimes, including how tolls and rates are set, how costs are recovered, and how returns are calculated are included in the sections describing each of these businesses.

### **Revenue Recognition**

Revenues are recorded when products have been delivered or services have been performed. Certain of the Liquids Pipelines, Gas Pipelines and gas distribution operations within Gas Distribution and Services are subject to regulation and, accordingly, there are circumstances where revenues recognized do not match the cash tolls or the billed amounts. For rate-regulated operations, revenue is recognized in a manner that is consistent with the underlying rate agreements as approved by the regulatory authority.

The Company has entered into a long-term (30 year) take or pay contract with a shipper on the Athabasca System and revenues are recorded based on the contractual terms rather than the cash tolls collected. The contract provides for volumes and tolls that will permit a specific return on equity, based on an assumed debt/equity ratio and level of operating costs of providing service to the shipper on the pipeline. The committed volumes on the pipeline and the tolls specified in the contract do not generate sufficient cash revenues in the early years to compensate the Company for the debt and equity returns, as well as the cost of providing service. The Company is recording a receivable in these years. This ensures that the revenue recognized each period is in accordance with the specified return. This receivable is contractually guaranteed from the shipper and will be collected in the later years of the contract.

The recording of revenues under the terms of approved regulatory agreements of the Enbridge System may also not necessarily match the cash tolls. The agreements, and all their terms and conditions, are subject to the review and approval by the pipeline's regulator, the NEB. During their terms, the agreements govern both current and future shippers on the pipeline. The NEB's jurisdiction over the Enbridge System includes statutory authority over matters such as construction, rates and underlying accounting practices, and ratemaking agreements and other contractual arrangements with customers.

Revenues are recognized in a manner that is based on these agreements' definitions of an allowed revenue requirement and are generally not impacted by the level of cash tolls collected. This basis may affect the timing of recognition of revenues from that otherwise expected under generally accepted accounting principles for companies that are not rate-regulated.

Tolls are calculated in accordance with the agreements which stipulate that tolls are to be established each year based on capacity as per the various agreements and the allowed revenue requirement. Where actual volumes on the pipeline fall short of agreed capacity and Enbridge is unable to collect its annual revenue requirement, such deficiency is rolled into subsequent year's tolls for collection from toll payers at that time and a receivable is recognized.

A significant portion of Gas Distribution and Services operations are subject to rate-regulation and accordingly there are circumstances where the revenues recognized do not match the amounts billed. Certain amounts are deferred for recovery with the approval of the regulator and are not included in revenues or expenses. These amounts are expenses or income that would be recognized in the income statement, absent the actions of the regulator. The regulator, through the hearing process, allows certain variances between approved and actual expenses or income to be recovered from customers in

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 51 of 103 Appendix B

future periods. The deferred amounts are not included in the calculation of rates to be billed to customers. While there are numerous deferral accounts approved by the regulator, the largest of these typically is the difference between the approved and actual cost of gas. The difference between the regulatory approved cost of gas and the actual cost of gas is not included in the cost of service used to determine rates, and therefore not included in revenues. The recovery of this difference is recognized through the statement of financial position, at the formal direction of the regulator, with no impact on revenues or expenses in the income statement. Enbridge Gas Distribution (EGD) has no exposure to the cost of gas, as it is a flow through cost that is borne directly by the ratepayer.

#### LIQUIDITY AND CAPITAL RESOURCES

The Company's cash generated from operations, commercial paper issuances, available capacity under credit facilities, and access to capital markets in Canada and the United States for the issuance of long-term debt, equity, or other securities are expected to be sufficient to satisfy liquidity requirements.

The Company continues to manage its debt to capitalization ratio to maintain a strong balance sheet. The debt to capitalization ratio at December 31, 2004, including short-term borrowings, but excluding non-recourse short and long-term debt of its joint ventures, was 65.1%, compared with 67.9% at the end of 2003 (restated for the reclassification of preferred securities from equity to debt).

The Company's cash balance at the end of the year includes \$6.0 million (2003 – \$18.7 million) held in trust in joint ventures, pursuant to finance agreements within the joint ventures.

### **Operating Activities**

Cash provided by operating activities before changes in operating assets and liabilities, and cash from discontinued operations, was \$1,027.8 million for the year ended December 31, 2004, compared with \$938.3 million and \$699.5 million for 2003 and 2002, respectively.

Although earnings were slightly lower in 2004, non-cash gains included in earnings were lower in 2004, resulting in higher cash from operations. Cash from operations is affected by increased contributions from the Enbridge System, due to the Terrace Phase III expansion placed into service on April 1, 2003, from EGD, due to increased rates in 2004, and from Aux Sable, due to improved fractionation margins in 2004. The variance in changes in operating assets and liabilities is due to the draw down of gas in storage in EGD from September 30, 2003 (the prior year end) to December 31, 2004 (the new year end). Gas in storage is typically lower at the end of December as winter demand has drawn down some of the supply.

Cash from operations in 2003 reflected fluctuations due to the higher gas prices and distribution volumes of the Enbridge Gas Distribution business. Temporary differences between accounting and taxable income, driven by changes in gas costs to be settled with ratepayers, have increased the amount of future income taxes in 2003. The significant variance in operating assets and liabilities is due to an increase in accounts receivable and gas in storage resulting from higher gas costs pending recovery from ratepayers, as well as higher equal billing plan balances.

Since the Company's pension plans are adequately funded, no additional funding above usual levels is anticipated for 2005.

### **Investing Activities**

Cash used for investing activities for the year ended December 31, 2004 was \$999.7 million. In 2003, investing activities provided \$259.5 million and in 2002, investing activities used \$251.7 million. In 2004, \$833.9 million was used for acquisitions including the \$743.4 million Enbridge Offshore System acquisition (net of cash acquired) and the final payment of \$73.0 million (including interest) on the 90% interest in the Spearhead Pipeline. Cash proceeds from the sale of the investment in AltaGas partially offset the use of cash for acquisitions.

Investing activities in 2003 represented a source of cash primarily as a result of the proceeds received on the sale of assets to EIF. Both 2003 and 2002 reflected the repayment by EEP of short-term loans required to finance acquisitions with additional amounts received in 2003. The majority of these loans have now been repaid.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 52 of 103 Appendix B

Additions to property, plant and equipment are primarily related to the gas distribution utility and are consistent with prior years.

Other investing activity in 2003 was limited to the acquisition of Cushing-to-Chicago Pipeline and additional investments in Alliance and Vector Pipelines, net of cash acquired.

Other investing in 2002 was significantly higher as a result of significant transactions. During 2002, the Company completed the acquisition of the North East Texas assets included in the asset sale to EEP; acquired a 25% equity investment in CLH; and increased its equity ownership of Alliance. These items represent the majority of cash used for investing purposes and more than offset the cash inflows from the sale of the Enbridge Midcoast Energy assets and Energy Services business.

### **Financing Activities**

Over the three-year period, the Company's financing requirements have reflected its growth and investment strategies. The decision to finance with debt or equity is based on the capital structure for each business and the overall capitalization of the consolidated enterprise. Certain of the regulated pipeline and gas distribution businesses issue long-term debt to finance capital expenditures. This external financing may be supplemented by debt or equity injections from the parent company. Debt, and equity when required, has been issued to finance business acquisitions, investments in subsidiaries, and long-term investments. Funds for debt retirements are generated through cash provided from operating activities, as well as through the issue of replacement debt.

In 2004, financing activities provided cash of \$114.4 million. Cash was generated through a net issuance of debt of \$438.0 million, partially offset by the payment of dividends. Dividends on common shares have increased again in 2004, due to an increased number of common shares outstanding and a higher dividend rate.

Financing activity in 2003 included the payment of dividends and a net reduction in debt through utilization of the cash proceeds from the sale of assets to EIF. Dividends have remained consistent with the prior year with the exception of those on the common shares, which reflects a higher number of common shares, as well as an increase in the dividend rate consistent with the Company's earnings growth.

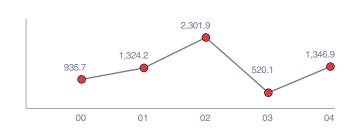

In 2002, cash used for financing activities to reduce short-term debt was partially offset by cash received from the issue of additional common shares and preferred securities. These activities were consistent with the goal of improving the Company's debt to equity ratio and financing the growth in the business. Proceeds from the issuance of shares by EEM were used to invest in i-units of EEP.

Payments due for contractual obligations over the next five years and thereafter are as follows:

			Afte		
(millions of Canadian dollars)	Total	1 year	1-3 years	3-5 years	5 years

### CHANGES IN ACCOUNTING POLICIES

### Impairment of Long-Lived Assets

A new standard is in effect, for fiscal years beginning on or after April 1, 2003, for recognizing, measuring and disclosing impairment of long-lived assets held for use. The Company adopted this standard effective January 1, 2004 and it has not had a significant impact on the Company's financial statements.

### **Hedging Relationships**

A new guideline is in effect, for fiscal years beginning on or after July 1, 2003, for identifying, designating and documenting hedge relationships, and assessing their effectiveness. The Company adopted the new guideline on January 1, 2004. The new guideline has not had a significant impact on the Company's financial statements.

#### Generally Accepted Accounting Principles

A new standard is in effect, for all fiscal years beginning on or after October 1, 2003, for identifying appropriate sources of generally accepted accounting principles, and the doctrines that constitute generally accepted accounting principles. At present, the standard has an exemption for rate-regulated operations. As a significant portion of the Company's operations are rate-regulated, this new standard did not have a material impact on the Company's financial statements.

#### **Asset Retirement Obligations**

A new standard is in effect, for fiscal years beginning on or after January 1, 2004, for recognizing, measuring and disclosing liabilities for asset retirement obligations and the associated asset retirement costs. The Company adopted the new standard, retroactively, on January 1, 2004. This new standard did not have a material effect on the Company's financial statements.

#### Consolidation of Variable Interest Entities

A new guideline is in effect, for all annual and interim periods beginning on or after November 1, 2004, for applying consolidation principles to entities subject to control on a basis other than through ownership of voting interests. The new standard must be applied retroactively. This standard will result in the consolidation of the Company's investment in EIF, effective January 1, 2005. A similar standard has been adopted by the Financial Accounting Standards Board in the United States, effective for interim periods commencing after July 15, 2003. As such, the impact of adopting this standard in the current period is disclosed as part of the financial statements in Note 22, United States Accounting Principles.

### **Preferred Securities**

The accounting standard that describes the presentation and disclosure of financial instruments has been amended for fiscal years beginning on or after November 1, 2004. The amendments require that principal or interest payments on preferred securities that may be settled by issuing a variable number of the Company's own shares should be classified as liabilities in the financial statements. The amendments were adopted retroactively and have resulted in a \$532.4 million reclassification from equity to long-term debt in the 2003 statements of financial position and the reclassification of preferred security distributions of \$26.7 million in 2003 (2002 – \$26.7 million), after-tax, to interest expense, for the pre-tax distributions of \$41.5 million in 2003 (2002 – \$41.9 million), and to income taxes for the related tax expense of \$14.8 million in 2003 (2002 – \$15.2 million) in the statements of earnings. Preferred security issue costs of \$4.2 million net of tax, incurred in 2002, have been reclassified as a \$6.6 million increase in interest expense and a \$2.4 million decrease in income tax expense. In December 2004, the Company redeemed \$350.0 million preferred securities leaving \$200.0 million outstanding.

### RISK MANAGEMENT

As Enbridge continues to diversify its energy transportation and distribution businesses in North America and internationally, the risk profile of the Company may change. Entry into non-regulated businesses imposes greater economic exposure and requires more "at risk" capital. The Company's expectation of higher returns from these businesses justifies the level of risk. In addition, these operating risks are actively managed through insurance and other programs.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 54 of 103 Appendix B

#### **Market Risk**

Earnings and cash flows are subject to volatility stemming from movements in interest rates, certain commodity prices and the Canadian dollar exchange rate relative to other currencies. The Company has adopted an earnings at risk methodology to measure its exposure to market risk.

To manage market risk, Enbridge uses derivative financial instruments to create offsetting positions to specific exposures. The Company has established risk management policies, approved by the Board of Directors, covering the use of derivative financial instruments for hedging purposes. Ongoing monitoring and senior management reporting procedures are in place. Derivative financial instruments are not used to create speculative positions. The financial instruments used and outstanding are described below under Derivative Financial Instruments.

#### Foreign Exchange Risk

The Company has a hedging program to eliminate 80% to 100% of the long-term exposure related to its foreign currency denominated cash flows. The Company also hedges certain of its foreign currency denominated net equity investments. The redemption of the investment in OCENSA also is hedged.

#### Interest Rate Risk

Enbridge is exposed to interest rate fluctuations on variable rate debt. Floating to fixed interest rate swaps and forward rate agreements are used to manage this exposure. The Company monitors its levels of fixed and variable rate debt instruments and, from time to time, fixed to floating swaps are used to help maintain balances of each commensurate with the Company's financing strategies. The Company also enters into interest rate derivatives to hedge a portion of the interest cost of future debt issues related to specific capital projects.

#### Commodity Price Risk

The Company uses over-the-counter natural gas price swaps and options to manage physical exposures that arise from the merchant capacity commitments on the Alliance and Vector pipelines. The Company also uses these derivative instruments to manage any exposures that may arise from physical asset optimization and natural gas supply agreements.

As a result of the Company's ownership interest in Aux Sable Liquid Products L.P., it is exposed to the price differential between natural gas and NGL. This risk is hedged through the use of over-the-counter derivatives whereby the forward prices of gas and NGL are fixed with swaps, or capped, or collared with options.

For the period that the Enbridge Midcoast Energy assets were owned, the Company was exposed to the margin between the price of natural gas and NGL. Enbridge used over-the-counter commodity derivatives to fix the selling price of the NGL and the cost of purchasing natural gas to establish the margins. The derivative financial instruments used to manage this exposure were transferred to EEP as part of the sale transaction.

### Natural Gas Supply Management

Customers of EGD are exposed to changes in the price of the natural gas commodity. A portion of the future natural gas supply requirements is hedged using natural gas swaps and options that manage the price of natural gas, as allowed by the OEB. Since the cost of the natural gas commodity is paid by customers, this risk mitigation strategy is for the account of the customers. The OEB monitors the policies, procedures, and results of this hedging program.

#### Derivative Financial Instruments Used for Risk Management

The Company uses the following financial instruments to mitigate risks, as described above. Amounts shown in the table below under Fair Value Receivable/(Payable) represent unrecognized gains/(losses) associated with these instruments.

(millions of Canadian dollars unless otherwise noted)

December 31,		2004			2003	
	Notional Principal Quantity	Fair Value Receivable/ (Payable)	Maturity	Notional Principal Quantity	Fair Value Receivable/ (Payable)	Maturity
Foreign exchange						
U.S. cross currency swaps	535.8	(51.1)	2005-2022	535.8	(30.6)	2005-2022
Euro cross currency swaps	493.5	(51.3)	2005-2019	434.7	(46.1)	2004-2019
Forwards (cumulative						
exchange amounts)	1,740.3	181.0	2005-2022	1,889.5	67.9	2004-2022
Energy commodities						
Natural gas (bcf)	107.8	(1.0)	2005-2010	63.6	12.4	2004-2008
Natural gas supply management (bcf)	34.9	(28.1)	2005	13.1	(3.4)	2004
Interest rates						
Interest rate swaps	1,069.0	1.5	2005-2029	561.0	1.9	2005-2029
Forward interest rate swaps	200.0	_	2006	532.0	(1.0)	2004-2005

In addition, the Company has forward foreign exchange contracts with a notional principal of Canadian \$214.0 million (2003 – \$214.0 million), to exchange Canadian for U.S. dollars. The outstanding instruments expire in 2005 and 2007. The contracts are not effective hedges for accounting purposes but offset an exposure related to income taxes on foreign currency gains or losses on Canadian dollar debt of a U.S. subsidiary. These instruments are recorded at fair value and have a fair value payable of \$28.8 million as at December 31, 2004 (2003 – \$10.5 million payable).

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

### Fair Values of Other Financial Instruments

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties, calculated at the reporting date, to settle these instruments. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The estimated fair values of all other financial instruments are based on quoted market prices or, in the absence of specific market prices, on quoted market prices for similar instruments and other valuation techniques.

#### **Total Debt**

(millions of Canadian dollars)

December 31,	2004		2003	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Liquids Pipelines	913.4	1,037.8	881.4	990.6
Gas Distribution and Services	1,823.4	2,168.9	1,674.5	1,972.1
Corporate	4,020.4	4,275.6	3,855.5	4,089.6
	6,757.2	7,482.3	6,411.4	7,052.3

The fair value of debt does not include the effects of hedging. Non-recourse debt of joint ventures has a carrying value of \$695.4 million (2003 – \$786.6 million) and fair value of \$796.4 million (2003 – \$845.7 million).

### **Operating Risks**

#### Environmental, Health and Safety Risk

Enbridge is committed to protecting the health and safety of employees, contractors and the general public, and to sound environmental stewardship. The Company believes that prevention of accidents and injuries, and protection of the environment benefits everyone and delivers increased value to shareholders, customers and employees. Enbridge has health and safety, and

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 56 of 103 Appendix B

environmental management systems and has established policies, programs and practices for conducting safe and environmentally sound operations. Regular reviews and audits are conducted to assess compliance with legislation and company policy.

### Pipeline Operating Risk

Pipeline leaks are an inherent risk of operations. Other risks involved in operating a comprehensive pipeline system include: the breakdown or failure of equipment, information systems or processes; the performance of equipment at levels below those originally intended (whether due to misuse, unexpected degradation or design, construction or manufacturing defects); failure to keep on hand adequate supplies of spare parts; operator error; labour disputes; disputes with interconnected facilities and carriers; and catastrophic events such as natural disasters, fires, explosions, fractures, acts of terrorists and saboteurs, and other similar events, many of which are beyond the control of the pipeline systems. The occurrence or continuance of any of these events could increase the cost of operating the Company's pipelines, thereby impacting earnings. The Company has an extensive program to manage system integrity, which includes the development and use of predictive and detective in-line inspection tools. Maintenance, excavation and repair programs are directed to the areas of greatest benefit and pipe is replaced or repaired as required. The Company also maintains comprehensive insurance coverage for significant pipeline leaks.

#### Regulation

Many of the Company's pipeline operations are regulated federally and are subject to regulatory risk. The nature and degree of regulation and legislation affecting energy companies in Canada and the United States has changed significantly in past years, and there is no assurance that further substantial changes will not occur. These changes may adversely affect toll structures or other aspects of pipeline operations or the operations of shippers.

<sup>1</sup> Financial Highlights have been extracted from financial statements prepared in accordance with Canadian Generally Accepted Accounting Principles.

Operating revenue from continuing operations fluctuates primarily due to the seasonality of the Company's gas distribution business. Prior to October 1, 2004, this business had a September 30 year end, which resulted in consolidation by the Company on a quarter lag basis. Therefore, peak revenues were recorded in the Company's second quarter, which represented Enbridge Gas Distribution's winter months. Starting in October 2004, EGD has changed to a December 31 year end and, as a result, the Company's consolidated fourth quarter results for 2004 include the results of EGD for the six months ended December 31, 2004.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 57 of 103 Appendix B

The positive effect of colder than normal weather contributed to an increase in revenues and earnings during the second quarter of 2004 and the second and fourth quarters of 2003. Significant items that impacted 2004 and 2003 quarterly earnings are as follows:

- Fourth quarter earnings in 2004 include the additional "fifth quarter" for EGD and other gas distribution businesses that account for an increase of \$57.2 million. This was partially offset by an impairment loss of \$8.2 million on the Calmar gas plant.
- Third quarter earnings in 2004 include a \$97.8 million gain on the sale of the Company's investment in AltaGas offset by the remaining reversal of \$25.6 million related to unbilled revenue.
- Second quarter earnings in 2004 reflect the \$9.4 million partial reversal of the \$35.0 million of unbilled revenue recorded in the first quarter of 2004 and a dilution gain of \$8.0 million related to AltaGas.
- First quarter earnings in 2004 reflect a \$47.6 million charge to earnings resulting from an increase in the Ontario tax rate and corresponding revaluation of future income taxes, as well as unbilled revenue of \$35.0 million consistent with a change in the estimation process in 2004, both within EGD.
- Fourth quarter earnings in 2003 include an \$11.1 million dilution gain on an EEP unit issuance, and a \$6.0 million dilution gain related to Noverco. Offsetting the gain is a \$26.0 million write-down of a regulatory receivable and a \$4.6 million regulatory disallowance on outsourcing, both in the Company's gas distribution business.
- Second quarter earnings in 2003 include a \$169.1 million after-tax gain on the sale of assets to the Enbridge Income Fund in June 2003 and a \$9.2 million dilution gain on an EEP unit issuance.
- First quarter earnings in 2003 include a \$7.1 million regulatory disallowance in the Company's gas distribution business.

### FOURTH QUARTER 2004 HIGHLIGHTS

Fourth quarter earnings for 2004 are \$104.8 million, an increase of \$77.5 million from 2003. Included in the 2004 earnings are the extra "fifth quarter" earnings from EGD which are included because of the change in year end. These additional earnings total \$57.2 million. Also, in the fourth quarter of 2004, an impairment loss of \$8.2 million was recognized on the Calmar gas plant. The fourth quarter of 2003 included a \$26.0 million write down of a regulatory receivable related to a prior year.

On December 31, 2004, the Company acquired natural gas pipeline systems in the Gulf of Mexico (Enbridge Offshore System) from Shell for \$754 million. Also in December 2004, the Company redeemed \$350.0 million of preferred securities.

### SUPPLEMENTARY INFORMATION

Outstanding Share Data	Number of units outstanding
Preferred Shares, Series A (non-voting equity shares)	5,000,000
Common shares – issued and outstanding (voting equity shares)	173,309,559
Total issued and outstanding stock options	5,947,212

Outstanding share data information is provided as at January 17, 2005.

### **Related Party Transactions**

Neither EEP nor EIF have employees and use the services of the Company for managing and operating their businesses. These services, which are charged at cost in accordance with service agreements, amount to \$173.0 million (2003 – \$128.9 million; 2002 – \$97.2 million) for EEP and \$9.4 million (2003 – \$4.7 million) for EIF, which began operation on June 30, 2003.

The receivable from affiliate of \$171.7 million (2003 – \$169.8 million) resulted from the sale of Enbridge Midcoast Energy to EEP and the assumption of affiliate debt. The weighted average interest rate is 6.60% for 2004 and 2003. The receivable, which matures in 2007, is denominated in U.S. dollars. The balance on December 31, 2004 was

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 58 of 103 Appendix B

US\$142.1 million (2003 – US\$133.1 million). Interest income related to the affiliate receivable was \$11.8 million (US\$9.0 million), \$21.7 million (US\$15.5 million), and \$7.6 million (US\$4.9 million), in 2004, 2003 and 2002, respectively.

The Company provides operation and management services to Vector Pipeline, which is owned 60% by the Company. These services, which are charged at cost in accordance with service agreements, amounted to \$4.4 million for 2004 (2003 – \$3.3 million; 2002 – \$4.1 million).

EGD obtains its customer care services from CustomerWorks Limited Partnership, an affiliate, under an agreement having a five-year term starting January 2002. EGD is charged market prices for these services, which amounted to \$127.0 million in 2004 (2003 – \$95.5 million; 2002 – \$71.8 million).

EGD has contracted for gas transportation services from Alliance Pipeline Limited Partnership and Vector Pipeline Limited Partnership. EGD is charged market prices for these services, which amounted to \$50.6 million in 2004 (2003 – \$40.7 million; 2002 – \$41.3 million) for Alliance Pipeline, and \$39.1 million in 2004 (2003 – \$23.2 million; 2002 – \$25.2 million) for Vector Pipeline.

A subsidiary of the company earns rental revenue from CustomerWorks Limited Partnership for the use of an automated billing system. In 2004, this revenue amounted to \$22.5 million (2003 – \$25.5 million; 2002 – \$35.1 million).

In 2004, Enbridge Gas Services Inc., a subsidiary of the Company, purchased \$30.7 million (2003 – \$33.6 million; 2002 – \$6.3 million) of gas from Enbridge Marketing (US) Inc., a subsidiary of EEP.

The Company also provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable; where no market price exists, a cost-based price is determined and charged. The Company may also purchase consulting and other services from affiliates. Prices are determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

Additional information relating to Enbridge, including the Annual Information Form, is available on www.sedar.com.

Dated January 25, 2005

When used in this document, the words "anticipate", "expect", "project", "believe", "estimate", "forecast" and similar expressions are intended to identify forward-looking statements, which include statements relating to pending and proposed projects. Such statements are subject to certain risks, uncertainties and assumptions pertaining to operating performance, regulatory parameters, weather and economic conditions and, in the case of pending and proposed projects, risks relating to design and construction, regulatory processes, obtaining financing and performance of other parties, including partners, contractors and suppliers.

## Management's Report

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 59 of 103 Appendix B

### To the Shareholders of Enbridge Inc.

Management is responsible for the accompanying consolidated financial statements and all other information in this Annual Report. The consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles and necessarily include amounts that reflect management's judgment and best estimates. Financial information contained elsewhere in this Annual Report is consistent with the consolidated financial statements.

Management has established systems of internal control that provide reasonable assurance that assets are safeguarded from loss or unauthorized use and produce reliable accounting records for the preparation of financial information. The internal control system includes an internal audit function and an established code of business conduct.

The Board of Directors and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee of the Board, composed of directors who are unrelated and independent, has a specific responsibility to oversee management's efforts to fulfil its responsibilities for financial reporting and internal controls related thereto. The Committee meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The Audit, Finance & Risk Committee reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

PricewaterhouseCoopers LLP, appointed by the shareholders as the Company's independent auditors, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

Auditors' Report

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 60 of 103 Appendix B

### To the Shareholders of Enbridge Inc.

We have audited the consolidated statements of financial position of Enbridge Inc. as at December 31, 2004 and 2003 and the consolidated statements of earnings, retained earnings and cash flows for each of the years in the three year period ended December 31, 2004. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2004 and 2003 and the results of its operations and cash flows for each of the years in the three year period ended December 31, 2004 in accordance with Canadian generally accepted accounting principles.

Pricewaterhouse Coopers LLP

#### Comments by Auditors for U.S. Readers on Canada-U.S. Reporting Difference

In the United States, reporting standards for auditors require the addition of an explanatory paragraph (following the opinion paragraph) when there is a change in accounting principles that has a material effect on the comparability of the Corporation's financial statements, such as the changes in stock-based compensation and preferred securities described in Note 2 to the consolidated financial statements. Our report to the shareholders dated January 25, 2005 is expressed in accordance with Canadian reporting standards which do not require a reference to such a change in accounting principles in the auditors' report when the change is properly accounted for and adequately disclosed in the financial statements.

# Notes to the Consolidated Financial Statements

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 64 of 103 Appendix B

Enbridge Inc. (Enbridge or the Company) is a leader in the transportation and distribution of energy. Enbridge conducts its business through five operating segments: Liquids Pipelines, Gas Pipelines, Sponsored Investments, Gas Distribution and Services, and International. These operating segments are strategic business units established by senior management to facilitate the achievement of the Company's long-term objectives, to aid in resource allocation decisions and to assess operational performance.

## **Liquids Pipelines**

Liquids Pipelines includes the operation of common carrier and feeder pipelines that transport crude oil and other liquid hydrocarbons.

## **Gas Pipelines**

Gas Pipelines includes proportionately consolidated investments in transmission pipelines that transport natural gas including the U.S. portion of the Alliance Pipeline, Vector Pipeline and a system of transmission and gathering pipelines in the Gulf of Mexico.

## **Sponsored Investments**

Sponsored Investments consists of the Company's investments in Enbridge Energy Partners, L.P. (EEP), Enbridge Energy Management, L.L.C. (EEM) (collectively, the Partnership) and Enbridge Income Fund (EIF). The Partnership transports crude oil and other liquid hydrocarbons through common carrier and feeder pipelines and transports, gathers, processes and markets natural gas and natural gas liquids. Enbridge Income Fund is a publicly traded income fund whose primary operations include a 50% interest in a gas transmission pipeline and a 100% interest in a crude oil and liquids pipeline and gathering system.

## **Gas Distribution and Services**

Gas Distribution and Services consists of gas utility operations which serve residential, commercial, industrial and transportation customers, primarily in central and eastern Ontario. It also includes natural gas distribution activities in Quebec, New Brunswick and New York State, and the Company's proportionately consolidated investment in Aux Sable, a natural gas fractionation and extraction business.

#### International

The Company's International business consists of investments in energy transportation and related energy projects outside of Canada and the United States. This business also provides consulting and training services related to proprietary pipeline operating technologies and natural gas distribution.

## 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The consolidated financial statements of the Company are prepared in accordance with Canadian generally accepted accounting principles (Canadian GAAP). These accounting principles are different in some respects from United States generally accepted accounting principles (U.S. GAAP) and the significant differences that impact the Company's financial statements are described in Note 22. Amounts are stated in Canadian dollars unless otherwise noted.

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the financial statements. Actual results could differ from these estimates.

#### **Basis of Presentation**

The consolidated financial statements include the accounts of Enbridge Inc., its subsidiaries and its proportionate share of the accounts of joint ventures. Investments in entities which are not subsidiaries or joint ventures, but over which the Company exercises significant influence, are accounted for using the equity method. Other investments are accounted for at cost.

The Company's gas distribution activities within Gas Distribution and Services are conducted primarily through a wholly-owned subsidiary, Enbridge Gas Distribution Inc. (EGD). Prior to 2004, the fiscal year-end of EGD and certain smaller gas distribution subsidiaries was September 30 and their results were consolidated on a one quarter lag basis. In respect of 2003 and 2002, references to "December 31" mean the financial position of EGD as at September 30 and references to the "year ended December 31" mean the results of EGD for the year ended September 30. Starting in 2004, EGD changed its fiscal year end to December 31. Accordingly, the Company's financial statements for the year ended December 31, 2004 include 15 months of results for EGD and other gas distribution subsidiaries.

# 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

## Regulation

The Company's Liquids Pipelines, Gas Pipelines, and certain Gas Distribution and Services businesses are subject to regulation by various authorities, including the National Energy Board (NEB), the Federal Energy Regulatory Commission (FERC), and the Ontario Energy Board (OEB). Regulatory bodies exercise statutory authority over matters such as construction, rates and underlying accounting practices, and ratemaking agreements with customers. In order to recognize the economic effects of the actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non rate-regulated entities.

## **Revenue Recognition**

Generally, revenues are recorded when products have been delivered or services have been performed. However, certain of the Liquids Pipelines, Gas Pipelines and gas distribution operations within Gas Distribution and Services are subject to regulation and, accordingly, there are circumstances where revenues recognized do not match the cash tolls or the billed amounts.

Certain Liquids Pipelines revenues are recognized under the terms of a committed long-term delivery contract. The Company records revenues based on the terms of the 30-year contract rather than the cash tolls received. On the Company's main Canadian crude oil pipeline system, for rate-regulated operations, revenue is recognized in a manner that is consistent with the underlying agreements as approved by the regulatory authority.

For rate-regulated operations in Gas Pipelines, transportation revenues include amounts related to expenses in the financial statements that are expected to be recovered from shippers in future tolls. No revenue is recognized in a given period for tolls received that do not relate to current period expenses. Differences between the recorded transportation revenue and actual toll receipts give rise to receivable or payable balances.

A significant portion of Gas Distribution and Services operations are subject to rate-regulation and accordingly there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as mandated by the regulators. This may give rise to regulatory assets and liabilities on the consolidated statement of financial position pending disposition by a decision of the regulators. Gas distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading to the end of the reporting period.

## **Income Taxes**

The regulated activities of the Company recover income tax expense based on the taxes payable method when prescribed by regulators for ratemaking purposes or when stipulated in ratemaking agreements. Therefore, rates do not include the recovery of future income taxes related to temporary differences. Consequently, the taxes payable method is followed for accounting purposes as the Company expects that all future income taxes will be recovered in rates when they become payable.

For all other operations, the liability method of accounting for income taxes is followed. Future income tax assets and liabilities are determined based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Future income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse.

## **Foreign Currency Translation**

The Company has U.S. dollar operations which are all self-sustaining except for certain financing and investing operations. The Company also holds a Euro equity investment in a foreign operation in Spain. These operations, which include those of proportionately consolidated U.S. dollar investments and the Euro equity investment, are self-sustaining and are translated into Canadian dollars using the current rate method. Under this method, assets and liabilities are translated using period-end exchange rates, with revenues and expenses translated using average rates for the period. Gains and losses arising on translation of these operations are included as a separate component of shareholders' equity.

The remaining foreign operations of the Company, including certain financing and investing operations, are integrated with those of the parent company and are translated into Canadian dollars using the temporal method. Under this method,

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 66 of 103 Appendix B

monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect at the balance sheet date. Non-monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect on the dates the assets were acquired or liabilities were incurred. Revenues and expenses are translated at rates of exchange prevailing on the transaction dates. Under this method, gains and losses on translation are reflected in income when incurred.

#### Cash

Cash is recorded at cost and includes short-term and demand deposits with a term to maturity of three months or less when purchased.

## Inventory

Inventory is primarily comprised of natural gas in storage held in EGD. Natural gas in storage is recorded in inventory at the prevailing prices approved by the OEB in the determination of customer sales rates. The actual price of gas purchased may differ from the OEB-approved price and includes the effect of natural gas price risk management activities. The difference between the approved price and the actual cost of the gas purchased is deferred for future disposition by the OEB.

# **Property, Plant and Equipment**

Expenditures for system expansion and major renewals and betterments are capitalized; maintenance and repair costs are expensed as incurred. Interest during the construction period is capitalized. Regulated operations capitalize an allowance for interest during construction and, if approved, an allowance for equity funds used during construction, at rates authorized by the regulatory authorities.

## **Depreciation**

Depreciation of property, plant and equipment generally is provided on a straight-line basis over the estimated service lives of the assets

#### **Intangibles and Goodwill**

Goodwill is not subject to amortization but is tested for impairment at least annually and written down to fair value if the criteria for impairment are met. Goodwill represents the excess of the purchase price over the fair value of net identifiable assets upon acquisition of a business. Intangible assets consist of long-term transportation contracts and are amortized on a straight-line basis over the expected life of the contracts. The depreciation rate for intangibles is 4%.

## **Asset Retirement Obligations**

No material amount has been recorded for asset retirement obligations relating to the Company's assets as it is not possible to make a reasonable estimate of the fair value of the liability due to the indeterminate timing and scope of the asset retirements. Management also believes it is reasonable to assume that all retirement costs associated with the regulated pipelines will be recovered through tolls in future periods.

Depreciation expense for Gas Distribution and Services operations includes a provision for asset retirement obligations at rates approved by the regulator. Actual costs incurred are charged to accumulated depreciation.

## **Deferred Amounts and Other Assets**

The Company defers certain charges, which the regulatory authorities permit to be recovered through future rates. Assets are realized and liabilities are settled based on the terms of the regulatory approval once received. Other deferred charges are amortized straight-line over various periods depending on the nature of the charges and include long-term financing and hedging costs, which are amortized over the terms of the related debt or hedged items. Deferred financing charges are amortized on a straight-line basis, which approximates the effective interest method, over the life of the related debt and classified as interest expense. The Company recognizes revenues under the terms of an enforceable, committed long-term delivery contract, which result in a long-term receivable.

# **Derivative Financial Instruments**

Gains and losses on financial instruments used to hedge the Company's net investment in foreign operations are included in the foreign currency translation adjustment in shareholders' equity. Amounts received or paid related to derivative financial

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 67 of 103 Appendix B

# 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

instruments used to hedge the currency risk of cash flows from foreign currency denominated transactions are recognized concurrently with the hedged cash flows. Amounts received or paid related to derivative financial instruments used to hedge the price of energy commodities are recognized as part of the cost of the underlying physical purchases. For other derivative financial instruments used for hedging purposes, amounts received or paid, including any gains and losses realized upon settlement, are recognized over the term of the hedged item.

The Company applies settlement accounting to derivative financial instruments. Under this method, gains and losses on derivative instruments that qualify for hedge accounting are not recorded until they are realized. The notional amounts are not recorded in the financial statements as they do not represent amounts exchanged by the counterparties.

#### **Post-Employment Benefits**

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits. Pension costs and obligations for the defined benefit pension plans are determined using the projected benefit method and are charged to earnings as services are rendered, except for the regulated operations of Gas Distribution and Services where contributions made to the plan are expensed as paid, consistent with the recovery of such costs in rates. For the defined contribution plans, contributions made by the Company are expensed.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market-related values. Market related values have been calculated using the fair value method. Adjustments arising from plan amendments and the transitional amounts recognized upon adoption of the accounting standard are amortized on a straight-line basis over the average remaining service period of the employees active at the date of amendment. The excess of the net actuarial gain or loss over ten per cent of the greater of the benefit obligation and the fair value of plan assets is amortized over the average remaining service period of the active employees.

The Company also provides post-employment benefits other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependants. The cost of such benefits is accrued during the years employees render service, except for the regulated operations of Gas Distribution and Services where the cost of providing these benefits is expensed as paid, consistent with the recovery of such costs in rates.

The measurement date used to determine the plan assets and the accrued benefit obligation was September 30, 2004.

## **Stock-Based Compensation**

Stock options granted after January 1, 2003 are accounted for under the fair value method. Under this method, compensation expense is measured at fair value at the grant date using the Black-Scholes option pricing model and recognized over the vesting period with a corresponding credit to contributed surplus. Stock options granted prior to January 1, 2003 continue to be accounted for as capital transactions when the options are exercised, which does not give rise to compensation expense.

Performance stock units (PSUs) are accounted for over the three-year term on a mark-to-market basis whereby a liability and expense are recorded based on the number of PSUs outstanding, the current market price of the Company's shares and the Company's current performance relative to the specified peer group.

# **Comparative Amounts**

Certain comparative amounts have been restated to conform to the current year's financial statement presentation.

# 2. CHANGES IN ACCOUNTING POLICIES

## **Recently Adopted Accounting Standards**

## **Asset Retirement Obligations**

Effective January 1, 2004, the Company adopted the new CICA standard for asset retirement obligations. This new standard requires that the fair value of asset retirement obligations associated with the retirement of long-lived assets is recognized in the period incurred. The fair value, which approximates the cost a third party would incur in performing the tasks necessary to retire such assets, is recognized at the present value of expected future cash flows and is added to the carrying value of the associated asset and depreciated over the asset's useful life. The liability is accreted over time through periodic charges to earnings and is reduced by actual costs of decommissioning and reclamation.

No material amount has been recorded for asset retirement obligations relating to the Company's assets as it is not possible to make a reasonable estimate of the fair value of the liability due to the indeterminate timing and scope of the asset retirements. Management also believes it is reasonable to assume that all retirement costs associated with the regulated pipelines will be recovered through tolls in future periods.

## Stock-Based Compensation

Effective January 1, 2002, the Company adopted the CICA standard for stock-based compensation. The standard required retroactive application for certain stock compensation awards as a charge to opening retained earnings without restatement of prior periods. Upon adoption, a charge to opening retained earnings of \$5.4 million was recorded relating to outstanding stock appreciation rights, which expired in 2004.

Effective January 1, 2003, the Company early adopted revised requirements in the CICA standard for stock-based compensation. The standard requires the Company to apply the fair value based method of accounting for all awards granted. This method has been applied on a prospective basis and resulted in a charge to income, in the year of adoption, of \$1.9 million.

#### **Preferred Securities**

Effective December 31, 2004, the Company early adopted amendments to the CICA standard on the disclosure and presentation of financial instruments. The amendments require the Company's preferred securities to be classified wholly as debt rather than splitting the principal and payments components of the securities into debt and equity. The amendments were adopted retroactively and have resulted in financial statement impacts summarized in the table below. In December 2004, \$350 million of preferred securities were redeemed.

## Impairment of Long-lived Assets

Effective January 1, 2004, the Company adopted the new CICA standard for recognizing, measuring and disclosing impairment of long-lived assets held for use. The new standard has not had a significant impact on the Company's financial results.

#### **Hedging Relationships**

Effective January 1, 2004, the Company adopted the new guideline for identifying, designating and documenting hedge relationships, and assessing their effectiveness. The guideline provides parameters on the conditions necessary for hedge accounting to be applied, but does not specify the methods to be used in its application. The guideline, however, does require that the Company adopt an accounting policy for assessing the effectiveness of its hedge relationships. Any ineffectiveness related to instruments recorded in the statement of financial position is to be recognized in income for the period. The new guideline has not had a significant impact on the Company's financial results.

## **Generally Accepted Accounting Principles**

A new standard is in effect, for all fiscal years beginning on or after October 1, 2003, for identifying appropriate sources of generally accepted accounting principles. At present, the standard has an exemption for rate-regulated operations and, as a result, has not had a significant impact on the Company's financial results.

Change due to retroactive adoption of amendments to the standard on the disclosure and presentation of financial instruments.

## **New Accounting Standards**

## Consolidation of Variable Interest Entities

A new guideline is in effect, for all annual and interim periods beginning on or after November 1, 2004, for applying consolidation principles to entities subject to control on a basis other than through ownership of voting interests. As a result, the Company will consolidate EIF, starting January 1, 2005. A similar standard has been adopted by the Financial Accounting Standards Board in the United States (FIN 46R), effective for interim periods commencing after July 15, 2003. The impact on the Company's financial results of consolidating EIF is presented in Note 22, United States Accounting Principles.

## 4. DISPOSITIONS

## Alliance Pipeline Canada and Enbridge Pipelines (Saskatchewan) Inc.

On June 30, 2003, the Company formed EIF, an unincorporated open-ended trust established under the laws of Alberta. On formation, the Company sold its 50% interest in the Canadian segment of the Alliance Pipeline together with its 100% interest in Enbridge Pipelines (Saskatchewan) Inc. to EIF for total proceeds of \$905.0 million before working capital adjustments of \$20.6 million and transaction costs of \$0.2 million. The Company recorded an after-tax gain on the sale of \$169.1 million. Enbridge's net investment in Alliance Canada was \$333.6 million at December 31, 2002 and was classified as a long-term investment. The net assets of Enbridge Pipelines (Saskatchewan) Inc. consist primarily of property, plant and equipment and comprised \$86.5 million of Enbridge Inc.'s total property, plant and equipment balance at December 31, 2002.

## **Enbridge Midcoast Energy**

In October 2002, the Company closed the sale of the United States assets of Enbridge Midcoast Energy to EEP, including the Northeast Texas assets described in Note 4. The book value of the assets was written down by \$82.2 million, after-tax, to reflect fair value based on the proceeds of \$1,289.3 million. The Company received cash proceeds of approximately \$529.3 million with the remaining consideration in the form of assumed affiliate debt.

#### **Discontinued Operations**

In the second quarter of 2002, the Company sold its retail and commercial energy services business. Earnings from discontinued operations for the year ended December 31, 2002 were \$242.3 million, which included a \$240.0 million gain on the sale. During the year ended December 31, 2002, the discontinued operations earned revenues of \$181.9 million, incurred tax expense of \$34.6 million and were allocated interest expense of \$12.1 million.

#### 5. ACQUISITIONS

## **Enbridge Offshore System**

On December 31, 2004, the Company acquired offshore natural gas pipeline assets located in the Gulf of Mexico, from Shell US Gas & Power LLC for cash consideration of \$754.0 million. The assets are held primarily through joint ventures with ownership interests ranging from 22% to 80%. This acquisition expands the Company's natural gas operations. The acquisition has been accounted for using the purchase method with the results of operations included in the consolidated financial statements from December 31, 2004. The value allocated to the assets was determined by an independent appraisal.

(millions of dollars)	
Fair Value of Assets Acquired:	
Property, plant and equipment	591.8
Intangible assets	133.9
Goodwill	31.5
Other assets	22.5
Other liabilities	(25.7)
	754.0
Purchase Price:	
Cash (includes cash acquired of \$9.5 million)	752.9
Transaction costs	1.1
	754.0

The intangible assets, which are comprised of transportation contracts, will be amortized on the straight-line basis over their estimated useful life of 20 - 25 years. Factors that contributed to a purchase price that includes goodwill include the retention of key employees, which adds to the Company's industry knowledge, and the potential to use these assets to accommodate the transportation needs of several proposed LNG re-gasification projects.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 73 of 103 Appendix B

## 5. ACQUISITIONS (continued)

# **Cushing to Chicago Pipeline System**

In September 2003, the Company acquired 90% of the outstanding shares of CCPS Transportation L.L.C., owner of the Cushing to Chicago Pipeline System. Of the total purchase price of \$145.8 million, \$78.3 million was paid on the date of acquisition and \$67.5 million, plus interest of \$5.5 million, was paid in December 2004. This final payment triggered the vendor's right to sell the remaining 10% to the Company at a cost of US\$12.4 million. This right expires on December 31, 2005 and, if exercised, obligates the Company to buy the remaining interest.

The acquisition was accounted for using the purchase method and the results of operations have been included in the consolidated statement of earnings from the date of acquisition. The amount paid was allocated to property, plant and equipment.

#### Other

In 2004, the Company acquired interests in other businesses for a total of \$17.5 million.

#### **Northeast Texas**

In March 2002, the Company acquired natural gas gathering and processing facilities in Northeast Texas for cash consideration of \$289.3 million. These assets are included in the Enbridge Midcoast Energy sale described in Note 4. The results of operations have been included in the consolidated statement of earnings for the period of ownership.

# 7. JOINT VENTURES

Enbridge has a joint venture interest in the following entities.

(millions of dollars)	Ownership Interest		Net Assets	
December 31,	2004	2003	2004	2003
Joint Ventures				
Liquids Pipelines				
Mustang Pipeline	30.0%	30.0%	18.8	19.0
Hardisty Caverns	50.0%	50.0%	35.5	33.6
Gas Pipelines				
Alliance Pipeline U.S.	50.0%	50.0%	391.3	385.1
Vector Pipeline	60.0%	60.0%	441.0	421.6
Enbridge Offshore Pipelines – various joint ventures	22%-80%	_	651.5	_
Gas Distribution and Services				
Aux Sable	42.7%	42.7%	125.7	122.6
Alliance Canada Marketing	42.7%	42.7%	0.1	0.1
CustomerWorks Limited Partnership	70.0%	70.0%	59.9	51.5
Wind Power Assets	50.0%	50.0%	25.6	11.2
			1,749.4	1,044.7

In 2003, the Company invested \$223.2 million in Alliance Pipeline Canada, Alliance Pipeline U.S., and Aux Sable, increasing the Company's interest from 37.1% to 50.0% in Alliance Pipeline Canada, 37.1% to 50% in Alliance Pipeline U.S. and 30.9% to 42.7% in Aux Sable. The purchase price was \$36.9 million less than the underlying net book value of the assets. This amount was allocated to property, plant and equipment and is being amortized over the economic life of the assets.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 75 of 103 Appendix B

# 7. JOINT VENTURES (continued)

On October 1, 2003, the Company invested \$97.7 million in Vector, including the assumption of \$61.5 million in debt, increasing the Company's ownership interest from 45% to 60%. The purchase price was \$36.3 million less than the underlying net book value of the assets. This amount was allocated to property, plant and equipment and is being amortized over the economic life of the assets.

Following is a summary of the Joint Venture impact on the consolidated financial statements of Enbridge Inc.

(millions of dollars)		
Year ended December 31	2004	2003

OCENSA Pipeline		223.3	223.3
		2,278.3	2,390.9

Equity investments include \$543.1 million (2003 – \$536.4 million) representing the unamortized excess of the purchase price over the underlying net book value of the investee's assets at the date of purchase. The excess is attributable to the value of property, plant and equipment within the investees based on estimated fair values and is amortized over the economic life of the assets.

## **AltaGas Income Trust (AltaGas)**

During 2004, AltaGas issued additional trust units. Enbridge did not participate in this offering causing a dilution of ownership to approximately 36% and the recognition of an \$8.0 million after-tax dilution gain. Enbridge subsequently disposed of its investment in AltaGas. Net of underwriting fees, total cash proceeds from the disposition were \$346.7 million, resulting in an after-tax gain of \$97.8 million (\$121.5 million pre-tax).

## The Partnership

The Company owns 17.2% of EEM, which owns i-units, a class of limited partnership interest in EEP representing an 18.1% ownership in EEP. The Company also has a 2% general partner interest in EEP and a 6.5% direct interest for a combined 11.6% effective ownership in EEP. Although 82.8% of EEM is widely held, the Company has voting control of EEM. The Company's statement of financial position includes 100% of EEM's investment in EEP, which totals \$480.6 million (2003 – \$478.8 million). The Company's net investment in the Partnership, after deducting the non-controlling interest of \$398.9 million (2003 – \$396.4 million), is \$331.3 million (2003 – \$347.7 million).

In 2004, EEP completed a public issue of partnership units and in 2003, EEP completed two public issuances of partnership units. As the Company elected not to participate in these offerings, its effective interest in EEP was reduced to 11.6% from 12.2% (2003 – 12.2% from 14.1%). This resulted in recognition of a dilution gain of \$7.6 million (2003 – \$20.3 million), net of tax and minority interest.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 77 of 103 Appendix B

## 8. LONG-TERM INVESTMENTS (continued)

## **Enbridge Income Fund**

The Company has 14,500,000 subordinated trust units of EIF and 38,023,750 preferred units of Enbridge Commercial Trust (ECT), a subsidiary of EIF, at December 31, 2004. The subordinated units result in a 41.9% common equity interest in EIF.

The Company's \$145.0 million initial investment in subordinated units of EIF was offset by a \$145.0 million unrecognized gain resulting in a book value of nil. The unrecognized gain is being amortized into income over the life of the underlying assets of EIF and is included as a component of equity earnings.

The Company's 38,023,750 preferred units are accounted for as a \$380.2 million (2003 – \$380.2 million) cost investment at December 31, 2004. At the request of the Company, the ECT preferred units will be repurchased for cancellation in certain specified circumstances by ECT with a repurchase price per ECT preferred unit based on the net issue price realized from the sale (or that could be realized from the sale) of an ordinary trust unit to the public. The ECT preferred units have no voting rights and mature on June 30, 2033 at which time ECT is obligated to redeem all of the outstanding ECT preferred units for a price of ten dollars per unit. The economic terms of these units are comparable to those of ordinary common units. As such, the approximate fair value of these preferred units, valued at the December 31, 2004 closing price of \$13.94 per ordinary common unit (2003 – \$12.89), is \$530.1 million (2003 – \$490.1 million).

#### **Noverco**

Noverco holds an approximate 10% reciprocal shareholding in the Company. As a result, the Company has a pro-rata interest of 3.2% (2003 – 3.2%) in its own shares. Both the equity investment in Noverco Inc. and shareholders' equity have been reduced by the reciprocal shareholding of \$135.7 million (2003 – \$135.7 million).

The Company owns a cost investment in Noverco, of \$181.4 million (2003 – \$181.4 million), which is entitled to a cumulative dividend based on the average yield of Government of Canada bonds maturing in more than 10 years plus 4.34%. The fair value of the investment approximates its carrying value as its return is based on a floating rate.

#### **CLH**

In 2002, the Company invested \$430.8 million in CLH, a refined products transportation and storage company in Spain. The Company's 25% interest is accounted for by the equity method. The purchase price included \$340.9 million representing the excess of purchase price over the underlying net book value of the assets. The excess is attributable to the value of property, plant and equipment within the investment and is being amortized over the economic life of the assets.

Subsequent to the initial purchase, contingent payments of 10.5 million Euros (\$16.9 million) were made due to CLH meeting minimum annual and cumulative volume targets. In addition, the remaining contingent consideration that may become payable is 74.3 million Euros (\$121.0 million). Of this, 63.4 million Euros (\$103.3 million) has been accrued at December 31, 2004.

## **OCENSA Pipeline**

The Company owns a cost investment in the OCENSA Pipeline of \$223.3 million (2003 – \$223.3 million), which earns a fixed rate of return. The fair value of this investment is approximately \$254.3 million (2003 – \$270.0 million), estimated using year-end market information.

## 10. DEBT (continued)

right to defer, subject to certain conditions, payments of distributions on the securities for up to 20 consecutive quarterly periods. Deferred and regular distribution amounts are payable in cash or, at the option of the Company, in common shares of the Company.

## **Interest Expense**

(millions of dollars)

December 31,	2004	2003	2002
Long-term debt	497.3	468.1	439.3
Commercial paper and other short-term debt	21.7	20.2	29.0
Short-term borrowings	10.5	9.6	9.6
Capitalized	(4.2)	(5.1)	(9.5)
	525.3	492.8	468.4

In 2004, total interest paid was \$549.3 million (2003 - \$508.6 million; 2002 - \$473.2 million).

## **Credit Facilities**

(millions of dollars)

December 31, 2004	Committed	Uncommitted	Drawdowns
Liquids Pipelines	150.0	_	_
Gas Distribution and Services	658.4	6.0	11.0
Corporate	2,222.2	_	361.1
	3,030.6	6.0	372.1

Committed facilities carry a weighted average standby fee of 0.10% per annum on the unutilized portion. The committed facilities for Liquids Pipelines expire in 2005 and are extendible annually subject to the approval of the lenders. The committed facilities for Gas Distribution and Services expire in 2005 and 2007 and are extendible annually thereafter subject to the approval of the lenders. The committed facilities for Corporate expire in 2005, 2006 and 2009 and are extendible annually thereafter subject to the approval of the lenders. Drawdowns under all of these facilities bear interest at prevailing market rates.

## 11. NON-RECOURSE DEBT OF JOINT VENTURES

(millions of dollars)

December 31,	2004	2003
Credit Facilities of Alliance Pipeline U.S. (US\$8.9 million, 2003 – US\$21.7 million)	10.6	28.0
Senior Notes of Alliance Pipeline U.S.:		
7.770% due 2015 (US\$134.7 million, 2003 – US\$140.0 million)	162.1	180.9
6.996% due 2019 (US\$143.2 million, 2003 – US\$153.4 million)	172.3	198.3
7.877% due 2025 (US\$100.0 million, 2003 – US\$100.0 million)	120.4	129.2
4.591% due 2025 (US\$140.6 million, 2003 – US\$146.2 million)	169.3	189.0
Obligations under capital leases (US\$50.5 million, 2003 – US\$47.4 million)	60.7	61.2
	695.4	786.6
Less current portion of long-term debt (US\$25.1 million, 2003 – US\$26.5 million)	(30.2)	(34.2)
	665.2	752.4

The debt of joint ventures is non-recourse to Enbridge. Security provided by the joint ventures is limited to all of the rights and assets of the individual joint venture and does not extend to the rights and assets of Enbridge.

The Senior Notes may be redeemed by Alliance Pipeline U.S. at any time, at a price equal to the outstanding principal plus accrued but unpaid interest and a make-whole premium. Alliance Pipeline U.S. may be required to redeem the Senior Notes, in whole or in part, from proceeds received under insurance claims for damages if the proceeds are not applied to repair or rebuild the Alliance pipeline system.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 80 of 103 Appendix B

Interest and principal repayments on the Senior Notes are payable semi-annually each June 30 and December 31; principal repayments on the 7.877% Senior Notes commence June 2019. Principal repayments are closely tied to the recovery rates for capital depreciation and deferred income taxes contained in the transportation agreements.

Long-term debt maturities on joint venture borrowings for the years ending December 31, 2005 through 2009 are \$30.2 million, \$43.4 million, \$35.5 million, \$36.1 million and \$41.2 million, respectively.

## 12. NON-CONTROLLING INTERESTS

December 31,	2004	2003
EEM	369.8	377.0
Enbridge Gas Distribution preferred shares	100.0	100.0
Other	45.1	46.0
	514.9	523.0

Non-controlling interests in EEM include third party interest in the investment of \$398.9 million (2003 – \$396.4 million) plus third party interests in distributions received from, and earnings of, EEM.

The 4,000,000 4.82% Cumulative Redeemable Enbridge Gas Distribution Preferred Shares, Group 3 Series D are entitled to fixed, cumulative, preferential dividends. Subsequent to July 1, 2009, the Company may, at its option, redeem all or a portion of the outstanding preferred shares, equal to 500,000 or more, for \$25.50 if the preferred shares are listed or \$25.00 in all other circumstances in each case with all accrued and unpaid dividends to the redemption date. On July 1, 2009, and every five years thereafter, the preferred shares are convertible into cumulative, redeemable preference shares, Group 2, Series D. The Series D preferred shares would pay fixed cumulative dividends quarterly at rates selected with reference to the Government of Canada yield.

## 13. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and an unlimited number of preferred shares.

#### **Common Shares**

(millions of dollars; number of common shares in millions)

December 31,	2004		2003	3	2002	2

Balance at end of year	5.4	1.9

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 81 of 103 Appendix B

## 13. SHARE CAPITAL (continued)

The fair value based method to expense stock options has been applied on a prospective basis since January 1, 2003. Stock-based compensation expense from fixed stock options and performance-based options is recognized in earnings over the vesting period with a corresponding increase in contributed surplus. Contributed surplus is decreased and share capital is increased upon the exercise of these options.

## **Preferred Shares**

The 5,000,000 5.5% Cumulative Redeemable Preferred Shares, Series A are entitled to fixed, cumulative, preferential dividends of \$1.375 per share per year, payable quarterly. Subsequent to December 31, 2004, the Company may, at its option, redeem all or a portion of the outstanding preferred shares for \$25.75 if redeemed on or prior to December 1, 2005; \$25.50 if redeemed on or prior to December 1, 2006; \$25.25 if redeemed on or prior to December 1, 2007; and \$25.00 if redeemed thereafter, in each case with all accrued and unpaid dividends to the redemption date.

## **Earnings Per Common Share**

Earnings per common share is calculated by dividing earnings applicable to common shareholders by the weighted average number of common shares outstanding. The weighted average number of shares outstanding has been reduced by the Company's pro-rata weighted average interest in its own common shares of 5.3 million shares (2003 – 5.3 million shares), resulting from the investment in Noverco.

The treasury stock method is used to determine the dilutive impact of stock options. This method assumes that any proceeds from the exercise of stock options would be used to purchase common shares at the average market price during the period.

(number of common shares in millions)

December 31,	2004	2003	2002
Weighted average shares outstanding	167.2	165.5	160.3
Effect of dilutive options	1.4	1.4	1.7
Diluted weighted average shares outstanding	168.6	166.9	162.0

For the year ended December 31, 2004, 875,400 (2003 – nil, 2002 – 33,500) stock options with a weighted average exercise price of \$51.47 (2003 – nil, 2002 – 46.70) were excluded from the diluted earnings per share calculation. Stock options are excluded when the exercise price exceeds the average share price in a respective period.

## **Dividend Reinvestment and Share Purchase Plan**

Under the plan, registered shareholders may reinvest dividends in common shares of the Company or make optional cash payments to purchase additional common shares, in either case free of brokerage or other charges.

## **Shareholder Rights Plan**

The Shareholder Rights Plan is designed to encourage the fair treatment of shareholders in connection with any takeover offer for the Company. Rights issued under the plan become exercisable when a person, and any related parties, acquires or announces its intention to acquire 20% or more of the Company's outstanding common shares without complying with certain provisions set out in the plan or without approval of the Board of Directors of the Company. Should such an acquisition occur, each rights holder, other than the acquiring person and related parties, will have the right to purchase common shares of the Company at a 50% discount to the market price at that time.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 82 of 103 Appendix B

# 14. STOCK OPTION AND STOCK UNIT PLANS

The Company maintains two plans for long-term incentive compensation: the Incentive Stock Option Plan (2002) and the Performance Stock Unit Plan (2004). The Company's Incentive Stock Option Plan includes fixed stock options and performance-based stock options. A maximum of 15 million common shares is reserved for issuance under this plan. The Company's Performance Stock Unit Plan grants notional units equivalent to one Enbridge Inc. common share.

## **Fixed Stock Options**

Full-time, key employees are granted options to purchase common shares that are exercisable at the market price of common shares at the date the options are granted. Generally, options vest in equal annual installments over a four-year period and expire ten years after the issue date. Outstanding stock options expire over a period ending no later than October 1, 2014.

## **Outstanding Fixed Stock Options**

(options in thousands; exercise price in dollars)

	2,521			4,825	

## **Performance-based Options**

The Plan provides for the grant of performance-based options to executive officers that become exercisable based on the performance of the Company's common share price. Of the outstanding performance-based stock options as at December 31, 2004, 810,000 remain unexercisable and were granted September 16, 2002 at \$46.30 per option. These performance-based stock options vest in equal annual installments over their five-year term and become exercisable, as to 50% of the grant, if the price on an Enbridge common share exceeds \$61.00 per share for 20 consecutive trading days during the period the period September 16, 2002 to September 16, 2007 and, as to 100% of the grant, if the price of an Enbridge common share exceeds \$71.00 for 20 consecutive trading days during the same aforementioned period. The term will extend to eight years if any of these options become exercisable before the end of the five-year term.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 83 of 103 Appendix B

# 14. STOCK OPTION AND STOCK UNIT PLANS (continued)

## **Outstanding Performance-based Options**

(options in thousands; exercise price in dollars)

December 31,	2004	ļ	2003		2002	
	Number	Weighted Average Exercise Price	Number	Weighted Average Exercise Price	Number	Weighted Average Exercise Price
Options at beginning of year	1,496	40.05	2,045	37.73	1,479	32.03
Options granted	_	_	_	_	810	46.30
Options exercised	(218)	32.39	(549)	31.39	(244)	31.66
Options cancelled	_	_	_	_	_	_

Options vested	468	32.81	686	32.67	1,235	32.10

At December 31, 2004, the exercise prices of outstanding performance-based options ranged from \$31.35 to \$46.30 (2003 – \$31.35 to \$46.30; 2002 – \$31.35 to \$46.30). Outstanding performance-based options will expire over a period ending no later than September 16, 2010. Vested performance-based options will expire in 2006.

#### **Performance Stock Units**

During the year ended December 31, 2004, the Company implemented a Performance Stock Unit (PSU) plan and granted 32,975 PSUs to the Company's senior officers. Cash awards under the PSU plan may be paid out at the end of a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by the Company's share price at the time and by a performance multiplier as determined by the Company's total shareholder return over the three-year performance period relative to a specified peer group of companies. The performance multiplier ranges from 0, if the Company's performance fails to meet threshold performance levels, to a maximum of 2, if the Company outperforms its peer group. Upon settlement, the number of PSUs outstanding is increased to include additional PSUs equal to the number of additional shares that would have been received had the PSUs been treated as shares enrolled in the Dividend Reinvestment Plan (DRIP) during the three-year period.

## **Outstanding Performance Stock Units**

December 31,	2004
Units at beginning of year	_
Units granted	32,975
DRIP	869
Units at end of year	33,844
Units vested	_

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 84 of 103 Appendix B

## **Pro forma Compensation Expense**

If the Company had used the fair-value based method to account for fixed stock options and performance-based options granted in fiscal 2002, earnings and earnings per share would have been as follows.

(millions of dollars)			
Year ended December 31,	2004	2003	2002
Earnings applicable to common shareholders from continuing operations			
As reported	645.3	667.2	330.0
Total stock-based compensation expense <sup>1</sup>	(8.2)	(5.9)	(2.9)
Included as an expense in the statement of earnings <sup>2</sup>	4.2	1.9	_
Pro forma	641.3	663.2	327.1
Earnings applicable to common shareholders			
As reported	645.3	667.2	572.3
Total stock-based compensation expense <sup>1</sup>	(8.2)	(5.9)	(2.9)
Included as an expense in the statement of earnings <sup>2</sup>	4.2	1.9	_
Pro forma	641.3	663.2	569.4
Earnings per common share from continuing operations			
As reported	3.86	4.03	2.06
Pro forma	3.83	4.01	2.04
Earnings per common share			
As reported	3.86	4.03	3.57
Pro forma	3.83	4.01	3.55

<sup>1</sup> Total stock-based compensation expense if the fair value based method to expense all outstanding stock options had been applied since January 1, 2002.

The Black-Scholes model was used to calculate the fair value of fixed stock options and the barrier valuation model was used to calculate the fair value of performance based options. Significant assumptions used in these models are as follows:

Year ended December 31,	2004	2003	2002	2004	2003	2002
		Fixed Stock Optio	ns	Per	formance Based O	ptions
Fair value per option	\$ 7.70	\$ 8.46	\$ 11.42	_	_	\$ 7.65
Valuation assumptions						
Expected option term (yrs)	8	8	10	_	_	8
Expected volatility	15%	22%	25%	_	_	24%
Expected dividend yield	3.54%	3.95%	3.51%	_	_	3.46%
Risk-free interest rate	4.80%	5.24%	5.33%	_	_	4.20%

## 15. FINANCIAL INSTRUMENTS

## **Derivative Financial Instruments Used for Risk Management**

The Company is exposed to movements in foreign currency exchange rates, interest rates and the price of energy commodities. In order to manage these exposures the Company utilizes derivative financial instruments to create offsetting financial positions to specific underlying or cash market physical exposures. These instruments are not used for speculative purposes.

Derivative financial instruments involve credit and market risks. Credit risk arises from the possibility that a counterparty will default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the instrument. The Company minimizes credit risk by entering into risk management transactions only with institutions that possess investment grade credit ratings or with approved forms of collateral. For transactions with terms greater than five years, the Company may also retain the right to require a counterparty, that would otherwise meet the Company's credit criteria, to provide collateral.

<sup>2</sup> Stock-based compensation recognized as an expense in the statement of earnings for options and performance stock units granted in 2004 and 2003 as a result of the adoption of the fair-valued based method January 1, 2003.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 85 of 103 Appendix B

# 15. FINANCIAL INSTRUMENTS (continued)

## Foreign Exchange

The Company has an exposure to foreign currency exchange rates, primarily because of its U.S. dollar denominated investments and its Euro investment in CLH where both carrying values and earnings are subject to foreign exchange risk. The Company utilizes par forward contracts and cross currency swaps to manage a portion of the foreign exchange exposure. In addition, US\$275 million (2003 – US\$275 million) cross currency swaps have been entered into to hedge the Company's exposure on its U.S. dollar denominated senior term notes.

#### Interest Costs

The Company enters into forward interest rate agreements, swaps and collars to swap floating rate debt to fixed and hedge against the effect of future interest rate movements on its variable rate debt. The Company monitors its debt portfolio mix of fixed and variable rate instruments and has entered into fixed to floating interest rate swaps, with an aggregate notional amount of \$300 million (2003 – \$300 million), to manage the balance of fixed and floating rate debt.

## **Energy Commodity Costs**

The Company uses over-the-counter natural gas price swaps, futures, options and collars to manage the value of pipeline capacity that arise from capacity commitments to the Alliance and Vector pipelines. The Company also uses derivative instruments to fix the value of variable price exposures that arise from physical asset optimization and natural gas supply agreements.

As a result of the Company's ownership interest in Aux Sable Products L.P., it is exposed to price differential between natural gas and natural gas liquids ("NGL"). This risk is hedged through the use of over-the-counter derivatives whereby the forward prices of natural gas and NGLs are fixed with swaps, or capped or collared with options.

## Natural Gas Supply Management

The Company hedges a portion of the cost of future natural gas supply requirements of EGD, on behalf of its ratepayers, as allowed by the regulator. Amounts paid or received under the hedge agreements are recognized as part of the cost of the natural gas purchases and are recovered through the ratemaking process. At December 31, 2004, the Company had entered into natural gas price swaps and options to manage the price for approximately 27%, or 34.9 billion cubic feet, of its forecast fiscal 2005 system gas supply.

## **Fair Values**

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

(millions of dollars unless otherwise noted)

December 31,		2004			2003	
	Notional Principal or Quantity	Fair Value Receivable/ (Payable)	Maturity	Notional Principal or Quantity	Fair Value Receivable/ (Payable)	Maturity

Interest rates						
Interest rate swaps	1,069.0	1.5	2005-2029	561.0	1.9	2005-2029
Forward interest rate swaps	200.0	_	2006	532.0	(1.0)	2004-2005

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 86 of 103 Appendix B

In addition, the Company has forward foreign exchange contracts with a notional principal of Canadian \$214.0 million (2003 – \$214.0 million), to exchange Canadian for U.S. dollars. The outstanding instruments expire in 2005 and 2007. The contracts are not effective hedges for accounting purposes but offset an exposure related to income taxes on foreign currency gains or losses on Canadian dollar debt of a U.S. subsidiary. These instruments are recorded at fair value and have a fair value payable of \$28.8 million as at December 31, 2004 (2003 – \$10.5 million).

As the Company has not settled any hedging instruments in advance of the hedged transactions, there were no deferred gains or losses for any of the Company's hedges of anticipated transactions at December 31, 2004 and 2003. A credit risk on derivative financial instruments amounted to \$211.2 million at December 31, 2004 (2003 – \$94.8 million) with no significant concentration with any single counterparty.

## **Interest Rate Management**

The derivative instruments used to manage interest rate risk and the associated debt related to these instruments are as follows:

(millions of dollars)  December 31, 2004	Maturity	Effective Interest Rate <sup>1</sup>	Notional Amounts
Liquids Pipelines			
Commercial paper (floating interest to fixed interest swap)	2029	6.0%	25.4
Corporate			
Commercial paper (floating interest to fixed interest swap)	2005	2.7%	400.0
Commercial paper (floating interest to fixed interest swap)	2005-2006	2.3%	US\$285.5
Senior term notes (cross currency swap)	2005-2007	7.4%	US\$275.0
Medium term notes 5.45% (fixed to floating interest swap)	2006	floating	300.0

<sup>1</sup> After giving effect to the derivative financial instruments.

# **Fair Values of Other Financial Instruments**

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties, calculated at the reporting date, to settle these instruments. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The fair value of other financial instruments reflect the Company's best estimate and are based on the Company's valuation techniques or models to estimate market values.

## **Total Debt**

(millions	of	dol	lars)	)
-----------	----	-----	-------	---

December 31,	20	2003		
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Liquids Pipelines	913.4	1,037.8	881.4	990.6
Gas Distribution and Services	1,823.4	2,168.9	1,674.5	1,972.1
Corporate	4,020.4	4,275.6	3,855.5	4,089.6
	6,757.2	7,482.3	6,411.4	7,052.3

The fair value of debt does not include the effects of hedging. Non-recourse debt of joint ventures has a carrying value of \$695.4 million (2003 – \$786.6 million) and a fair value of \$769.4 million (2003 – \$845.7 million).

#### **Trade Credit Risk**

Trade receivables related to Liquids Pipelines consist primarily of amounts due from companies operating in the oil and gas industry and are collateralized by the crude oil and other products contained in the Company's pipelines and storage facilities. Trade receivables in Gas Pipelines also consist primarily of amounts due from companies in the oil and gas industry and are collateralized by the products contained in the pipelines and storage facilities. Credit risk in the Gas Distribution and Services segment is reduced by the large and diversified customer base and the ability to recover an estimate for doubtful accounts through the ratemaking process. Included in accounts receivable is an allowance for doubtful accounts of \$45.5 million at December 31, 2004 (2003 – \$35.1 million).

## 16. INCOME TAXES

## **Income Tax Rate Reconciliation**

(millions of dollars)

Year ended December 31,	2004	2003	2002
Earnings before income taxes	941.4	846.7	700.4
Combined statutory income tax rate	34.4%	35.6%	38.0%
Income taxes at statutory rate	323.8	301.4	266.2
Increase/(decrease) resulting from:			
Tax rate changes on future income tax balances	42.7	6.2	8.1
Future income taxes related to regulated operations	(13.2)	(34.5)	(36.7)
Non-taxable items, net	(44.6)	(70.5)	(99.5)
Lower foreign tax rates	(40.9)	(44.4)	(42.2)
Large Corporations Tax	17.6	18.1	16.9
Other	3.8	(3.7)	8.4
Income Taxes	289.2	172.6	121.2
Continuing operations	289.2	172.6	86.6
Discontinued operations	_	_	34.6
	289.2	172.6	121.1
Effective income tax rate	30.7%	30.4%	17.0%

In 2004, income taxes paid amounted to \$243.2 million (2003 - \$202.9 million; 2002 - \$105.2 million).

## **Components of Future Income Taxes**

(millions of dollars)

December 31,	2004	2003
Future Income Tax Liabilities		
Differences in accounting and tax bases of property, plant and equipment	425.3	368.0
Differences in accounting and tax bases of investments	323.0	368.2
Other	197.2	187.2
	945.5	923.4
Future Income Tax Assets		
Loss carryforwards	207.5	241.7
Other	85.7	45.2
	293.2	286.9
Total Net Future Income Tax Liability	652.3	636.5

Accumulated future income taxes related to rate-regulated operations, which have not been recorded in the accounts amounted to \$596.8 million at December 31, 2004 (2003 – \$551.2 million). Had the liability method been prescribed by the regulatory authorities for ratemaking purposes, such amounts would have been recorded and recovered in revenues.

At December 31, 2004, the Company has recognized the benefit of unused tax loss carryforwards of \$596.4 million (2003 - 508.8 million). Unused tax loss carryforwards expire as follows: 2005 - 50.3 million; 2006 - 24.9 million; 2007 - 24.6 million; 2008 - 22.1 million; 2009 - 9.5 million million and 2010 - 4.6 million million and 2011 million.

## **Geographic Components of Pretax Earnings and Income Taxes**

(millions of dollars)			
Year ended December 31,	2004	2003	2002

Continuing operations	289.2	172.6	86.6
Discontinued operations		_	34.6
	289.2	172.6	121.2

# 17. POST-EMPLOYMENT BENEFITS

## **Pension Plans**

The Company has three pension plans which provide either defined benefit or defined contribution pension benefits or both for employees of the Company. The Liquids Pipelines and Gas Distribution and Services pension plans provide non-contributory defined pension and/or defined contribution benefits to Canadian employees of Enbridge. The Enbridge U.S. pension plan provides non-contributory defined benefit pension benefits. The Company has four supplemental pension plans which provide pension benefits that exceed those benefits earned in the regulated plan.

## **Defined Benefit Plans**

Retirement benefits under defined benefit plans are based on employees' years of service and remuneration. Contributions made by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective dates of the most recent actuarial valuations and the next required actuarial valuations are as follows:

	Effective Date of Most	Effective Date of Next
	Recently Filed Actuarial Valuation	Required Actuarial Valuation
Liquids Pipelines	January 1, 2004	January 1, 2007
Enbridge U.S.	January 1, 2004	January 1, 2005
Gas Distribution and Services	January 1, 2002	January 1, 2005

Pension costs under the defined benefit pension plans reflect management's best estimates of the rate of return on pension plan assets, rate of salary increases and various other factors including mortality rates, terminations and retirement ages.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 89 of 103 Appendix B

## 17. POST-EMPLOYMENT BENEFITS (continued)

## **Defined Contribution Plans**

Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution pension benefits, pension costs equal amounts required to be contributed by the Company. Pension costs in respect of these plans during the year were \$2.3 million (2003 – \$2.0 million; 2002 – \$2.3 million).

# **Post-employment Benefits Other than Pensions**

Post-employment benefits other than pensions (OPEB) include primarily supplemental health, dental and life insurance coverage for qualifying retired employees.

The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	OF	Pension Benefit		
(millions of dollars)	2004	2003	2004	2003
Change in benefit obligation				
Benefit obligation, January 1	155.7	160.5	788.3	710.1
Service cost	4.0	5.8	22.7	20.0
Interest cost	9.4	10.6	49.4	46.8
Amendments	(2.2)	(3.3)	0.7	_
Employee contributions	0.4	0.4	_	_
Actuarial loss	13.5	0.8	30.4	68.8
Benefits paid	(5.4)	(5.6)	(38.9)	(37.8)
Other	_	_	3.3	_
Effect of exchange rate changes	(5.1)	(13.5)	(8.0)	(19.6)
Benefit obligation, December 31	170.3	155.7	847.9	788.3
Fair value of plan assets				
Fair value of plan assets, January 1	36.2	35.5	986.7	933.1
Actual return on plan assets	1.7	0.8	110.0	109.7
Employer's contributions	9.9	11.2	14.5	11.2
Employee contributions	0.4	0.4	_	_
Benefits paid	(5.4)	(5.6)	(38.9)	(37.8)
Other	_	-	(8.0)	(1.7)
Effect of exchange rate changes	(2.6)	(6.1)	(9.7)	(27.8)
Fair value of plan assets, December 31	40.2	36.2	1,061.8	986.7
Asset/(Liability)				
Benefit obligation, December 31	(170.3)	(155.7)	(847.9)	(788.3)
Fair value of plan assets, December 31	40.2	36.2	1,061.8	986.7
Surplus/(deficit)	(130.1)	(119.5)	213.9	198.4
Contribution after measurement date	_	_	2.9	2.9
Unamortized prior service cost	0.4	0.5	17.2	19.0
Unamortized transitional obligation/(asset)	24.2	29.4	(24.1)	_
Unrecognized net loss	38.9	28.0	26.0	21.0
Recorded asset/(liability)	(66.6)	(61.6)	235.9	241.3

The previous table reflects the funded status and recorded pension and OPEB assets and liabilities for all of the Company's benefit plans on an accrual basis. However, in accordance with its ability to recover employee benefit costs on a pay-as-you-go basis for the regulated operations of Gas Distribution and Services, the Company records the cost of such benefits on a cash basis. Using the cash basis for the Gas Distribution and Services plans and the accrual method for other plans, the Company's net pension asset was \$72.9 million (2003 – \$71.4 million). The net OPEB liability was \$11.8 million (2003 – \$10.0 million). These net assets or liabilities are recorded on the balance sheet in Deferred Amounts and Other Assets with the current portion recorded in working capital accounts.

## **Major Categories of Plan Assets**

(millions of dollars)	OPEB				Pension Benefit				
Year ended December 31,	20	2004		2003		2004		2003	
	%	Amount	%	Amount	%	Amount	%	Amount	
Equity securities	_	_	_	_	58.7%	691.1	58.5%	639.1	
Debt securities	84.1%	33.8	85.9%	31.1	37.0%	435.4	37.1%	404.4	
Other	15.9%	6.4	14.1%	5.1	4.3%	50.4	4.4%	47.8	
	100.0%	40.2	100.0%	36.2	100.0%	1,176.9	100.0%	1,091.3	
Assets attributable to									
Non-Consolidated Affiliates		_		_		(115.1)		(104.6)	
Total Assets		40.2		36.2		1,061.8		986.7	

Plan assets are invested primarily in readily marketable investments with thresholds on the credit quality of fixed income securities.

## **Expected Rate of Return on Plan Assets**

		Pension Benefit		
Year ended December 31,	2004	2003	2004	2003
Canadian Plans	4.50%	4.50%	7.25%	7.25%
United States Plan	4.50%	4.50%	7.75%	7.25%

The pension funds exist to ensure that pension benefits will be paid. The Company manages the investment risk of its pension funds by setting a long term asset mix policy for each pension fund after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plans; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The above table reflects both the target allocation percentage for each of the categories presented at the end of the years, as well as, the expected long-term rate of return on assets, both on a weighted-average basis. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long term expectations.

# Plan Contributions by the Company

(millions of dollars)			OP	Pension Benefit		
Year ended December 31,			2004	2003	2004	2003
Total contributions			9.9	11.2	14.5	11.2
Contributions expected to be paid in 2005			10.9		12.2	
Benefits Expected to be Paid by (millions of dollars)	the Compar	ny				
Year ended December 31,	2005	2006	2007	2008	2009	2010-2014
Expected future benefit payments	48.2	47.6	49.7	52.0	54.4	316.2

## 17. POST-EMPLOYMENT BENEFITS (continued)

## **Net Pension Plan and OPEB Costs Recognized**

(millions	of	dol	lars)	)
-----------	----	-----	-------	---

Year ended December 31,	2004	2003	2002
Benefits earned during the year	29.0	27.7	25.2
Interest cost on projected benefit obligations	58.8	57.4	54.5
Actual return on plan assets	(111.7)	(110.5)	16.7
Difference between actual and expected return on plan assets	41.1	45.7	(92.0)
Amortization of prior service costs	2.3	2.8	2.3
Amortization of transitional obligation	2.2	0.5	4.2
Amortization of actuarial loss	10.1	12.0	0.4
Special Termination Benefits	3.3	_	_
Amount charged to EEP	(7.8)	(10.2)	(1.7)
Pension and OPEB cost recognized	27.3	25.4	9.6

The above table reflects the pension and OPEB cost for all of the Company's benefit plans on an accrual basis. However, in accordance with its ability to recover employee benefit costs on a pay-as-you-go basis for the regulated operations of Gas Distribution and Services, the Company records the cost of such benefits on a cash basis. Using the cash basis for the Gas Distribution and Services plans and the accrual method for other plans, the Company's pension cost was \$11.6 million (2003 – \$9.4 million; 2002 – \$(3.6) million).

## **Economic Assumptions**

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

		OPEB			Pension Benefits		
Year ended December 31,	2004	2003	2002	2004	2003	2002	
Discount rate	6.31%	6.79%	6.95%	6.29%	6.75%	6.81%	
Average rate of salary increases	S			4.00%	4.00%	4.00%	
Average rate of return on							
pension plan assets	4.50%	4.50%	4.50%	7.32%	7.25%	7.79%	

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

	OPEB			Pension Benefits			
Year ended December 31,	2004	2003	2002	2004	2003	2002	
Discount rate	6.21%	6.31%	6.79%	6.26%	6.29%	6.75%	
Average rate of salary increases				4.00%	4.00%	4.00%	

## **Medical Cost Trend Rates**

The assumed medical cost trend rates for the next year used to measure the expected cost of benefits and the ultimate trend rate and the year in which the ultimate trend rate is assumed to be achieved are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in which Ultimate Medical Cost Trend Rate Assumption is Achieved
Canadian Plans			
Drugs	10%	5%	2017
Other Medical	5%	5%	2005
Enbridge U.S.	12%	5%	2012

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 92 of 103 Appendix B

A one percent increase in the assumed medical and dental care trend rate would result in a change of \$27.1 million in the accumulated post-employment benefit obligations and a change of \$2.5 million in benefit and interest costs. A one percent decrease in the assumed medical and dental care trend rate would result in a change of \$21.6 million in the accumulated post-employment benefit obligations and a change of \$1.9 million in benefit and interest costs.

## 20. RELATED PARTY TRANSACTIONS

Neither, EEP nor EIF have employees and use the services of the Company for managing and operating their businesses. These services, which are charged at cost in accordance with service agreements, amount to \$173.0 million (2003 – \$128.9 million; 2002 – \$97.2 million) for EEP and \$9.4 million (2003 – \$4.7 million) for EIF, which began operation on June 30, 2003.

Through the ownership of Enbridge Income Fund, Enbridge has an ownership interest in Alliance Canada. Alliance Canada has administrative and operation services agreements to provide services to Alliance Pipeline L.P. (an entity Enbridge jointly controls) in exchange for reimbursement of incurred costs or at rates consistent with those obtainable from independent third parties. Certain amounts reimbursed under the services agreements with Alliance Pipeline L.P. also include a recovery of costs relating to the use of common administrative assets. The Company's share of the amounts charged to Alliance Pipeline L.P. during the year ended December 31, 2004 were \$3.2 million (six month period ended December 31, 2003 – \$1.6 million).

The receivable from affiliate of \$171.7 million (2003 – \$169.8 million) resulted from the sale of Enbridge Midcoast Energy to EEP and the assumption of affiliate debt. The weighted average interest rate is 6.60% for 2004 and 2003. The receivable, which matures in 2007 is denominated in U.S. dollars. The balance on December 31, 2004 was US\$142.1 million (2003 – US\$133.1 million). Interest income related to the affiliate receivable was \$11.8 million (US\$9.0 million), \$21.7 million (US\$15.5 million) and \$7.6 million (US\$4.9 million), in 2004, 2003 and 2002, respectively. The fair value of the receivable at December 31, 2004 is \$171.1 million.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 93 of 103 Appendix B

## 20. RELATED PARTY TRANSACTIONS (continued)

Vector uses the services of Enbridge, a 60% interest owner, to operationally manage its business. These services, which are charged at cost in accordance with service agreements, amounted to \$4.4 million for 2004 (2003 – \$3.3 million; 2002 – \$4.1 million).

EGD acquires its customer care services from CustomerWorks Limited Partnership under an agreement having a five-year term starting January 2002. EGD is charged market prices for these services, which amounted to \$127.0 million in 2004 (2003 – \$95.5 million; 2002 – \$71.8 million).

EGD has contracted for gas transportation services from Alliance Pipeline Limited Partnership and Vector Pipeline Limited Partnership. EGD is charged market prices for these services, which amounted to \$50.6 million in 2004 (2003 – \$40.7 million; 2002 – \$41.3 million) for Alliance Pipeline, and \$39.1 million in 2004 (2003 – \$23.2 million; 2002 – \$25.2 million) for Vector Pipeline.

A subsidiary of the Company earns rental revenue from CustomerWorks Limited Partnership for the use of an automated billing system. In 2004, this revenue amounted to \$22.5 million (2003 – \$25.5 million; 2002 – \$35.1 million). CustomerWorks Limited Partnership began operations on January 1, 2002.

In 2004, Enbridge Gas Services Inc., a subsidiary of the Company, purchased \$30.7 million (2003 – \$33.6 million; 2002 – \$6.3 million) and sold \$8.8 million (2003 – \$1.3 million, 2002 – nil) of gas from/to Enbridge Marketing (US) Inc., a subsidiary of EEP.

The Company also provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable; where no market price exists, a cost-based price is determined and charged. The Company may also purchase consulting and other services from affiliates. Prices are determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

## 21. COMMITMENTS AND CONTINGENCIES

## **Enbridge Gas Distribution Inc.**

## Class Action Lawsuit – late payment penalties

On April 22, 2004, the Supreme Court of Canada released its decision in a case commenced against Enbridge Gas Distribution (EGD) by a customer with respect to late payment penalties. The Supreme Court of Canada determined that EGD would be required to repay a portion of amounts paid to it as late payment penalties from April 1994. The total amount of late payment penalties billed between April 1994 and February 2002 (when EGD's late payment penalty was revised), was approximately \$74 million, of which, a portion may be eligible for repayment. The amount payable is not determinable at this time. The Supreme Court has directed that a lower court determine the amount payable. Case conferences were held before a judge of the Ontario Supreme Court in August and December 2004 to discuss the remaining outstanding issues following the Supreme Court's decision. Further court proceedings to determine the amount payable and other related issues are likely to be held in 2005.

Late payment penalty revenues are included in EGD's estimate of revenues for the year and therefore offset rates charged to customers. Revenues from late payment penalties accrue to the benefit of all customers, thereby reducing the cost of providing distribution services. The Ontario Energy Board (OEB) approved these estimates and the resulting rates each year. EGD intends to apply to the OEB for recovery of any amount payable that results from this action.

## **Bloor Street Incident**

EGD has been charged under both the Ontario Technical Standards and Safety Act (the TSSA) and the Ontario Occupational Health and Safety Act (the OHSA) in connection with an explosion that occurred on Bloor Street West in Toronto on April 24,

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 94 of 103 Appendix B

2003. The maximum possible fine upon conviction on all charges would be approximately \$5.0 million in the aggregate. EGD has also been named as a defendant in a number of civil actions related to the explosion. A Coroner's Inquest in connection with the explosion is also possible. The courts have not yet dealt with any of the charges laid under the TSSA or the OHSA, and thus it is not possible at this time to predict or comment upon the potential outcome. EGD does not expect the civil actions to result in any material financial impact.

## Remediation of Discontinued Manufactured Gas Plant Sites

The remediation of discontinued manufactured gas plant sites may result in future costs to EGD. In October 2002, a claim was filed for \$55 million in damages relating to a certain manufactured gas plant site. EGD filed a statement of defence in June 2003 denying liability. EGD expects that trial scheduling will take place in the summer of 2005 and that a trial date will be fixed for early 2006. Although management believes that it has a valid defence to this claim, certain risks exist. The probable overall cost cannot be determined at this time due to uncertainty about the presence and extent of damage in addition to the potential alternative remediation approaches which vary in cost. EGD expects that costs, if any, not recovered through insurance would be recovered through rates. As such, management does not believe that the outcome will have any material financial impact.

#### **CAPLA Claim**

The Canadian Alliance of Pipeline Landowners' Associations and two individual landowners have commenced an action, which they will be applying for certification as a class action, against Enbridge Pipelines Inc. and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. Enbridge Pipelines Inc. believes it has a sound defence and intends to vigorously defend the claim. Since the outcome is indeterminable, Enbridge Pipelines Inc. has made no provision for any potential liability.

## **Enbridge Energy Partners**

Enbridge Energy Company, Inc. (EEC), which holds a portion of the Company's equity interest in EEP, has agreed to indemnify EEP from and against substantially all liabilities, including liabilities relating to environmental matters, arising from operations prior to the transfer of its pipeline operations to EEP in 1991. This indemnification does not apply to amounts that EEP would be able to recover in its tariff rates if not recovered through insurance, or to any liabilities relating to a change in laws after December 27, 1991. In addition, in the event of default, EEC, as the General Partner, is subject to recourse with respect to a portion of EEP's long-term debt, which amounts to US\$217 million at December 31, 2004 (2003 – US\$248 million).

# 22. UNITED STATES ACCOUNTING PRINCIPLES

These consolidated financial statements have been prepared in accordance with Canadian GAAP. The effects of significant differences between Canadian GAAP and U.S. GAAP for the Company are described below.

## **Earnings and Comprehensive Income**

## 1 Stock-based Compensation

Effective January 1, 2003, the Company adopted FAS 123, Accounting for Stock-Based Compensation, on a prospective basis for U.S. GAAP, and elected to use the fair value-based method to measure compensation expense. The adoption of the fair value method for U.S.GAAP eliminates all differences between Canadian and U.S. GAAP for options granted subsequent to the date of adoption. Disclosure differences in pro forma earnings between Canadian and U.S. GAAP will remain only for those options granted prior to adoption, January 1, 2002, of the Canadian accounting standard for stock-based compensation.

Prior to the adoption of FAS 123, the Company accounted for stock-based compensation for U.S. GAAP in accordance with APB 25, Accounting for Stock Issued to Employees, which required the use of the intrinsic value-based method to measure compensation expense. Under Canadian GAAP, the Company's performance-based options did not give rise to compensation expense. Under U.S. GAAP, the Company's performance-based options, which vested during 2002, gave rise to pre-tax compensation expense of \$12.1 million. No performance-based options vested in 2003 or 2004.

#### 2 Future Income Taxes

Under U.S. GAAP, deferred income tax liabilities are recorded for rate-regulated operations, which follow the taxes payable method for ratemaking purposes. As these deferred income taxes are expected to be recoverable in future revenues, a corresponding regulatory asset is also recorded. These assets and liabilities are adjusted to reflect changes in enacted income tax rates. The additional deferred income taxes under U.S. GAAP include the difference between capital cost allowance and depreciation of property, plant and equipment of \$596.8 million (2003 – \$551.2 million) and the incremental revenue required for the recovery of unrecorded taxes of \$331.3 million (2003 – \$286.6 million).

## 3 Accounting for Joint Ventures

U.S. GAAP requires the Company's investments in joint ventures be accounted for using the equity method. However, under an accommodation of the U.S. Securities and Exchange Commission, accounting for joint ventures need not be reconciled from Canadian to U.S. GAAP. The different accounting treatment affects only display and classification and not earnings or shareholders' equity. See Note 7 for summarized financial information of joint ventures.

## 4 Financial Instruments

For U.S. GAAP purposes, FAS 133, Accounting for Derivative Instruments and Hedging Activities, requires that all derivatives be recorded on the balance sheet as either assets or liabilities at their fair value. Changes in the derivative's fair value are recognized in current period earnings unless specific hedge accounting criteria are met.

The accounting for changes in the fair value of derivatives held for hedging purposes depends upon their intended use. For fair value hedges, the effective portion of changes in fair value of derivative instruments is offset in income against the change in fair value, attributed to the risk being hedged, of the underlying hedged asset, liability or firm commitment. For cash flow hedges, the effective portion of changes in fair value of derivative instruments is offset through other comprehensive income, until the variability in cash flows being hedged is recognized in earnings in future accounting periods.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 96 of 103 Appendix B

#### 5 Accumulated Other Comprehensive Loss

At December 31, 2004, Accumulated Other Comprehensive Loss consists of an accumulated foreign currency translation balance of \$129.1 million (2003 – \$131.5 million) and net unrealized losses of \$18.0 million (2003 – gains of \$14.9 million). For U.S. GAAP purposes the foreign currency translation adjustment balance is classified as a component of Accumulated Other Comprehensive Loss. The fair value of derivative financial instruments that qualify as cash flow hedges are also included in Accumulated Other Comprehensive Loss. The reclassification adjustment of \$80.6 million relates to the change in classification of hedging instruments between periods.

Of the total Accumulated Other Comprehensive Loss of \$147.1 million (2003 – \$116.6 million), the Company estimates that approximately \$27.9 million (2003 – \$5.6 million), representing unrecognized net losses on derivative activities at December 31, 2004, is expected to be reclassified into earnings during the next twelve months and primarily relates to natural gas supply management.

#### 6 Consolidation of Variable Interest Entities

On December 24, 2003, the Financial Accounting Standards Board issued a revision to FASB Interpretation (FIN) 46, which replaces the interpretation released in January 2003.

FIN 46R requires the primary beneficiary of a variable interest entity's activities to consolidate the variable interest entity. FIN 46R defines a variable interest entity as an entity which has one or more of the following characteristics:

- 1 The equity investment at risk is not sufficient to permit the entity to finance its activities without additional subordinated financial support provided by any parties, including the equity holders.
- 2 The equity investors as a group lack one or more of the following essential characteristics of a controlling financial interest:
  - a) The direct or indirect ability to make decisions about the entity's activities through voting rights or similar rights that have a significant effect on the success of the entity.
  - b) The obligation to absorb the expected losses of the entity.
  - c) The right to receive the expected residual returns of the entity. The equity investors do not have that right if their return is capped by the entity's governing documents or arrangements with other variable interest holders or the entity.
- 3 The equity investors have voting rights that are not proportionate to their economic interests, and the activities of the entity involve or are conducted on behalf of an investor with a disproportionately small voting interest.

The primary beneficiary is the party that absorbs a majority of the expected losses and/or receives a majority of the expected residual returns of the variable interest entity's activities.

For variable interest entities created, or interests in variable interest entities obtained, on or before January 31, 2003, FIN 46R is required to be applied by the first fiscal year or interim period ending after December 15, 2003. The Company has not identified any material variable interest entities created, or interests in variable entities obtained, before January 31, 2003, which would require consolidation or disclosure under FIN 46R.

On June 30, 2003, the Company formed Enbridge Income Fund (EIF), a publicly traded entity with assets purchased from the Company. The Company has a 41.9% equity interest in EIF, as well as a preferred unit investment that has no voting rights, a stated par value and a 30-year maturity. The preferred units earn a return that is equivalent to the cash distributions per unit to the equity unit holders and are classified as a liability in EIF's financial statements.

EIF is considered a variable interest entity as the equity investors lack the right to receive the expected residual returns of the entity. FIN 46 defines expected residual returns as the expected positive variability in the fair value of EIF's net assets exclusive of variable interests. The preferred units participate in the positive variability as they receive a coupon rate that floats with changes in the cash distributions made to the equity holders of EIF. Consequently, the equity investors lack the right to receive the expected residual returns of the entity.

The Company is the primary beneficiary of EIF through a combination of the 41.9% equity interest and the preferred unit interest.

The U.S. GAAP adjustment reflecting the consolidation of EIF includes a \$380.4 million (2003 – \$381.9 million) reduction to long-term investments and a \$175.0 million (2003 – \$186.5 million) increase in non-controlling interests.

The following accounts of EIF are consolidated for the purposes of the U.S. GAAP financial statements:

## (millions of dollars)

December 31,	2004	2003
Cash	14.8	27.6
Accounts receivable and other	34.7	34.2
Property, plant and equipment	1,395.4	1,454.6
Deferred amounts	42.0	31.5
Intangibles	108.3	113.4
Goodwill	308.1	308.1
Accounts payable and other	33.8	31.0
Current portion of non-recourse long-term debt	41.5	40.0
Long-term debt	207.0	201.9
Non-recourse long-term debt	838.3	885.4
Other long-term liabilities	6.7	6.5
Future income taxes	92.1	96.0

The consolidation of EIF increases cash by \$14.8 million (2003 – \$27.6 million) and the statement of cash flows would reflect an increase in cash from operations of \$73.0 million (2003 – \$36.4 million), cash from investing activities would decrease by \$14.7 million (2003 – \$359.4 million), and cash used in financing activities would decrease by \$71.1 million (2003 – \$350.6 million).

The method of consolidating EIF has been revised and the comparative amounts re-calculated to better reflect the attributes of the ECT preferred units. In the prior period the ECT preferred units were included in equity and consolidated on that basis, however because they are a preferred unit investment that has no voting rights, a stated par value and a fixed-term maturity, they have been reclassified from equity to liabilities. Therefore, the non-controlling interests increase from 27.7% to 58.1%, better reflecting their interest in the net assets of EIF.

The 2003 income reduction of \$2.3 million and the \$173.0 million gain reduction, as reported under US GAAP have been eliminated as a result of the change in consolidation method.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 97 of 103 Appendix B

# 22. UNITED STATES ACCOUNTING PRINCIPLES (continued)

# **Supplemental Disclosure – Pro Forma Compensation Expense**

U.S. GAAP requires that, where the fair value based method is not used to measure compensation expense, pro forma earnings and earnings per share, calculated as if the fair value based method had been used, must be disclosed. In Canada, these requirements apply to options granted on or after January 1, 2002 and therefore, the Company's Canadian GAAP disclosure does not include any options granted prior to that date.

Forecast based on normal weather	4,849	3,565	3,700	3,816	3,629

<sup>1</sup> Certain comparative amounts have been restated to reflect the retroactive adoption of new accounting rules requiring the preferred securities to be classified wholly as debt.

<sup>2</sup> In 2004, Enbridge Gas Distribution (EGD) changed its fiscal year end from September 30 to December 31 to be consistent with Enbridge. Consequently, highlights of Gas Distribution and Services for 2004 include the 15-month period ended December 31 for EGD and other gas distribution operations. Gas Distribution and Services volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas supply arrangements.

<sup>3</sup> Liquids Pipelines operating highlights include the statistics of the 11.2% owned portion of the mainline system located in the United States.

<sup>4</sup> Degree day deficiency is a measure of coldness. It is calculated by accumulating for each day in the fiscal period the total number of degrees by which the daily mean temperature fell below 18 degrees Celsius. The figures given are those accumulated in the Toronto area.

### Enbridge Inc.

# **A leader**

#### in energy delivery

Enbridge Inc., a Canadian company with corporate headquarters in Calgary, Alberta, Canada, is a leader in energy transportation and distribution in North America and internationally. The Company conducts its business through five operating segments: Liquids Pipelines, Gas Pipelines, Sponsored Investments (which consist of the Company's investments in Enbridge Energy Partners, L.P.; Enbridge Energy Management, L.L.C.; and Enbridge Income Fund), Gas Distribution and Services, and International.

#### Crude oil deliveries

# 2 million

#### barrels per day

Enbridge operates, in Canada and the United States, the world's longest crude oil and liquids pipeline system – the combined Enbridge Pipelines and Lakehead systems – that delivers 2 million barrels a day to customers in Canada and the United States Midwest, including approximately 10% of total oil imports to the United States. Current expansion plans will move additional volumes of Canadian petroleum to these markets, as well as farther east and south and to the United States West Coast and Asia-Pacific markets.

#### Infrastructure

# 80 000

#### kilometres

Enbridge owns or has interests in 80 000 kilometres of pipelines. That includes more than 25 000 kilometres of crude oil and liquids pipelines, more than 20 000 kilometres of natural gas gathering and transmission pipelines, and more than 30 000 kilometres of natural gas distribution mains.

### Natural gas distribution

# 1.8 million

#### customers

Enbridge owns and operates Canada's larges natural gas distribution company, and delivers natural gas to 1.8 million customers in Ontario Quebec, New Brunswick and New York State. Enbridge Gas Distribution, based in Toronto, Ontario, is one of the lowest cost natural gas distribution operations in North America, and has provided reliable service for more than 155 years.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 5 of 122 Appendix C

### Natural gas pipelines

### Renewable energy

50%

# of deepwater Gulf of Mexico natural gas production

Enbridge has a growing interest in natural gas pipelines in North America. The Company has major interests in the Alliance and Vector transmission systems, and through Enbridge Energy Partners has interests in a variety of transmission and gathering pipeline systems in the Gulf Coast and Mid-Continent regions of the United States. Enbridge Offshore Pipelines transports approximately half of the deepwater offshore natural gas production in the Gulf of Mexico, a key region for continental supply growth.

**Publicly traded** 

# TSX, NYSE: ENB stock exchange listings

Enbridge has been a publicly traded company for 53 years – its predecessor company, Interprovincial Pipe Line Company, Inc., was listed on the Toronto and Montreal stock exchanges on February 13, 1953. Enbridge's common shares now trade on the Toronto Stock Exchange in Canada and on the New York Stock Exchange in the United States under the symbol ENB. Information about Enbridge is available on the Company's website at www.enbridge.com.

**270** 

#### megawatts of electricity

Enbridge is also investing in renewable energy resources, including wind power and fuel cells. The Company is currently involved in four wind power projects in Canada – two that are currently operating and two being built in 2006 – with a combined capacity of more than 270 megawatts That's enough electricity to meet the power requirements of more than 100,000 homes.

**Human capital** 

4,500

employees

Enbridge employs approximately 4,500 people – knowledgeable and skilled employees – primarily in Canada and the United States, as well as in Colombia and Spain.

Consequently, highlights of Gas Distribution and Services for 2004 include the 15-month period ended December 31 for EGD and other gas distribution operations. Gas Distribution and Services volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas supply arrangements.

<sup>4</sup> Degree day deficiency is a measure of coldness. It is calculated by accumulating for each day in the period the total number of degrees each day by which the daily mean temperature falls below 18 degrees Celsius. The figures given are those accumulated in the Toronto area.

### Letter to Shareholders

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 7 of 122 Appendix C

David A. Arledge Chair of the Board

#### **Introductory Remarks**

In 2005, Enbridge again added significant value for our customers and our shareholders. The progress made on a large number of greenfield crude oil and natural gas pipeline projects will result in improved access to energy supply for consumers, improved markets for our upstream producers, and economic value for our shareholders. A 9.4% growth in adjusted operating earnings in 2005, coupled with a 25.5% total shareholder return (for shareholders trading on the Toronto Stock Exchange), once again provided shareholders with excellent returns.

Reported earnings were \$556 million, or \$1.65 per common share, compared with \$645 million, or \$1.93 per common share in 2004. However, the decrease was primarily due to unusual gains in 2004.

Adjusted operating earnings, which represent earnings applicable to common shareholders adjusted for non-operating factors and variances, reflect Enbridge's continued steady growth. Adjusted operating earnings were \$537 million, or \$1.59 per common share in 2005, compared with \$491 million, or \$1.47 per common share in 2004.

We again exited the year with a stronger balance sheet, putting the Company in an excellent position to pursue its "best-ever" slate of greenfield pipeline projects.

Based on this excellent outlook going into 2006, our Board of Directors increased the annual dividend by 15% in November 2005, and indicated a higher target payout range of 60% to 70% of adjusted earnings, up from the previous 50% to 60% range. Enbridge dividends have increased every year since 1996.

Clearly, our Company is well positioned to continue its history of steady growth, and to pursue the creation of value for customers, which in turn results in creation of value for shareholders.

2005 Annual Report Letter to Shareholders 05

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 8 of 122 Appendix C

#### 2005 Accomplishments - Working Our Strategies

2005 was also a good year in terms of progress against our four key strategies.

Focus on operational excellence: We successfully concluded a new Incentive Tolling Settlement (ITS) with the Canadian Association of Petroleum Producers – the third such five-year agreement between Enbridge and our customers – based on a negotiated incentive model rather than a traditional cost-of-service model. The ITS has as its foundation the National Energy Board's 2005 multi-pipeline rate of return and provides Enbridge with the opportunity to earn a higher rate of return by achieving certain service and reliability targets, as well as continued achievement of cost savings.

Enbridge continues to operate one of the lowest cost crude oil pipeline systems in North America and one of the lowest cost natural gas distribution companies.

In 2005, we continued to strengthen reporting on our Corporate Social Responsibility program, including environmental, safety and social performance. In September, Enbridge was named to the *Dow Jones Sustainability World Index*, and in January 2006 it was announced at the World Economic Forum in Davos, Switzerland, that Enbridge had once again been named to the list of the *Global 100 Most Sustainable Corporations in the World*.

Expand existing core asset platforms: We made excellent progress on numerous pipeline growth opportunities during 2005.

- The Spearhead Pipeline was reversed and first crude oil shipments reached the Cushing terminal in March 2006. Enbridge now directly ships Western Canadian crude oil all the way from Alberta to Oklahoma.
- In December, we announced that we were proceeding with construction of the Southern Access expansion, to add an additional 400,000 barrels per day of capacity between Superior, Wisconsin and the Chicago, Illinois area by 2009. We are also pursuing commitments for a Southern Access extension to Patoka, Illinois.
- In December, based on first customer commitments, we filed an application to build the Waupisoo Pipeline from the Alberta oil sands to a terminal near Edmonton, Alberta. Waupisoo, which would have initial capacity of 350,000 barrels per day, will be in service in 2008.
- During the year we made significant strides on our Gateway proposal to build a petroleum export pipeline from Edmonton to Kitimat, B.C. and a condensate import pipeline from Kitimat to Edmonton to be in service in 2010. We began environmental fieldwork, continued our consultation with Aboriginal groups and stakeholders, and held 17 informational open houses in communities along the right-of-way. Two Open Seasons produced strong interest from potential customers for both pipelines, and we continue to work to get shipping commitments, continue our community consultations, and complete engineering and environmental planning, to be in position to file an application in the second quarter of 2006 for construction of the pipeline.

All of these projects are needed to accommodate growing oil sands production over the next five to 10 years. In February 2006, we also announced plans for the Enbridge Alberta Clipper Pipeline, a proposed 400,000 barrels per day pipeline from Hardisty, Alberta to Superior, Wisconsin.

We are also developing new infrastructure in the oil sands region of northern Alberta. We announced plans in 2005 to build a pipeline and terminal for a new Fort Saskatchewan upgrader, and invested in Value Creation Inc. to participate in the development of upgrading technologies. At year-end we announced the acquisition of a majority interest in Olympic Pipe Line giving us a position in the U.S. Northwest.

In 2005, we also strengthened our interests in natural gas pipelines in North Texas, and announced plans for an expansion and extension of the Partnership's East Texas natural gas system, to handle the strong growth occurring in East Texas natural gas production, particularly from the Bossier Sands and other regional producing formations. We positioned Enbridge for participation in an Alaska natural gas pipeline, and announced expansion of the Vector pipeline.

06 Letter to Shareholders Enbridge Inc.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 9 of 122 Appendix C

Despite the impact of hurricanes last year in the Gulf of Mexico, we are pleased with the footprint of our offshore natural gas pipelines, and we added to our interests in the Gulf because we believe strongly in its potential to be a key source of North American supply for many years to come.

Enbridge Gas Distribution added 50,000 new customers in 2005, and continues to be the second fastest growing gas utility in North America.

Our International investments in Spain and Colombia performed very well in 2005 and provide excellent diversification for our North American focus.

Develop new growth platforms: In addition to our core business opportunities, we pursued opportunities to develop new growth platforms. We see Liquefied Natural Gas (LNG) as a potentially significant contributor to North American supply and we continued to pursue a number of projects – although it's becoming clear that it is going to take time for global LNG production to increase before LNG can make a significant contribution to meeting North America gas demand.

In 2005, we invested in our third wind power project, at Chin Chute, Alberta, and in November we announced a \$400 million, 200-megawatt wind power investment to be made in 2006 in Ontario.

Capitalize on Partnership/Trust Model: Our two sponsored investments had good years, as Enbridge Energy Partners completed its East Texas Expansion Pipeline, and continued to position itself as the major transportation company in the Bossier and Barnett Shale gas plays in Texas. Enbridge Income Fund had strong cash flows, which led to another increase in the monthly cash distributions to unitholders. Since inception in mid-2003, monthly cash distributions have increased 11.4%.

#### In Conclusion

Enbridge is uniquely well positioned for growth, with our extensive and strategically located network of crude oil and natural gas pipeline systems in North America. These assets are ideally situated to deliver new sources of energy supply to a variety of key North American and international markets.

We are financially strong with a low-risk business model that has proven to be very successful. Our Board has declared annual dividend increases averaging 8.5% per year for the past 10 years in a row.

During 2005, we were pleased to welcome Donald J. Taylor back to the Board. Mr. Taylor, the former Chair of the Board, did not stand for re-election as a director at the annual shareholders' meeting in May 2005, having reached the normal age for retirement. However, the Board asked that Mr. Taylor re-join the Board for an additional two years, noting the valuable advice he has provided to Enbridge over the years. We were also pleased to welcome David A. Leslie, the former Chairman and CEO of Ernst & Young LLP, to the Enbridge Board in July 2005.

Louis D. Hyndman, a Director since 1993, will retire from the Board effective with the next shareholders' annual meeting on May 3, 2006, and we thank Mr. Hyndman for his many contributions to Enbridge and for his years of service, most recently as Chair of the Corporate Social Responsibility Committee.

In conclusion, we would like to thank the employees of Enbridge for their outstanding contributions in 2005. All of us at Enbridge will continue to work diligently to continue to add value for our shareholders, our customers, our business partners, and the communities where we live and work.

On behalf of the Board of Directors:

David A. Arledge

- he

Chair of the Board of Directors

March 3, 2006

Patrick D. Daniel

President & Chief Executive Officer

# Strategies and Fundamentals

Enbridge has numerous growth opportunities within each of its core businesses, and is well positioned geographically to deliver new sources of energy supply to North American markets.

d Fundamentals

### **Enbridge will pursue**

## And will expand

4

#### key strategies for growth

- Expand existing core businesses.
- Develop new growth platforms, such as LNG regasification, marketing and storage, gas-fired power generation, wind power and new energy technologies.
- Capitalize on the Partnership/Trust Model. Enbridge Energy Partners and Enbridge Income Fund will develop or acquire energy infrastructure assets.
- Focus on operational excellence.

4

#### core businesses

- Expand the Liquids Pipelines business by developing regional Alberta oil sands infrastructure, increasing capacity to traditional markets, and pursuing new market initiatives.
- Expand and develop the existing Gas

  Distribution and Services businesses.
- Expand the Natural Gas Pipelines business — Alliance, Vector and Enbridge Offshore Pipelines systems – and pursue new infrastructure such as an investment in an Alaska natural gas pipeline.
- Expand International investment focusing on Europe and Latin America.

Enbridge's growth opportunities are built around North America's energy supply/demand fundamentals. The Company is ideally positioned to transport crude oil and natural gas from conventional producing areas in Western Canada and from the continent's largest hydrocarbon play — Alberta's oil sands. Enbridge is also well positioned to tap some of North America's energy growth hotspots: Alaska, the Gulf of Mexico, Texas and the Rockies. With the existing integration of markets between Canada and the United States, growing energy demand, Canada's history of being a secure source of energy supply, and Enbridge's extensive continental pipeline systems, Enbridge will be a major contributor to meeting continental energy needs.

# 1 million

#### barrels per day by 2010

An estimated \$60 billion of investment has been announced for projects in the oil sands in northern Alberta. Based on projects under construction and projects announced, industry forecasts indicate oil sands production will increase by approximately 1 million barrels per day by 2010.

# \$8 billion

#### over five years

Enbridge and Enbridge Energy Partners currently plan on investing more than \$8 billion by 2010 to add to their liquids pipelines capacity to deliver growing oil sands volumes. The investments will include new oil sands infrastructure – pipelines and tankage – to deliver oil sands production to Edmonton and Hardisty, Alberta; additional capacity to traditional markets in the U.S. Midwest, as well as farther east and south in the United States; and the Gateway Pipeline to access U.S. West Coast and Asia-Pacific markets.

Enbridge has an extensive North American network of pipeline systems that historically has transported approximately twothirds of Western Canadian crude oil production to markets. As such, Enbridge is well positioned with assets between areas of growing supply and growing demand.

That is particularly true with regard to oil sands development, where the rapid growth in oil sands projects is expected to add in the order of 1 million barrels per day of new production by 2010.

Enbridge has been working with its customers for the past five years to ensure the right pipeline capacity is in place at the right time for the right markets, and currently expects to invest more than \$8 billion by 2010 just on liquids pipeline projects such as Athabasca, Waupisoo, Southern Access, Spearhead, Gateway and mainline expansion. Additional projects, involving additional expenditures, are also being developed.

Successful completion of these projects will produce a classic win-win result. Oil sands producers will have timely and costeffective access to markets for their growing production, and expanded markets will help maximize netbacks. North
American consumers will benefit from having access to new, secure sources of supply that will continue to produce
petroleum for many decades to come.

Enbridge participated in another win-win outcome in 2005. The Company and the Canadian Association of Petroleum Producers (CAPP) reached agreement on the key terms of a new five-year incentive tolling settlement for 2005 through 2009 for the core component of Enbridge's mainline liquids pipeline system in Canada.

2005 Annual Report Creating Value 11

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 15 of 122 Appendix C

# Incentive Tolling Settlement benefits

### Forecast growth at Enbridge Gas Distribution

# \$119 million

#### shared after tax

Since the inception of incentive tolling in 1995, after-tax benefits of \$119 million have been shared by Enbridge and its customers, approximately 53% and 47%, respectively. Customers also realized an additional cumulative after-tax benefit of \$16 million through the power guarantee mechanism of the ITS.

200,000

#### new customers in the next five years

Enbridge Gas Distribution, Enbridge's natural gas distribution franchise in Ontario, is the second fastest growing gas utility in North America. For the past nine years, Enbridge Gas Distribution has added between 50,000 and 60,000 new customers per year, and expects to continue to grow at a similar pace, forecasting more than 200,000 new customers in the next five years.

Enbridge and CAPP both realized significant benefits under the two previous incentive tolling agreements, which covered the periods 1995 to 2004, and both recognized the benefits of continuing to use a negotiated incentive toll model rather than a traditional cost-of-service model. In the first 11 years of incentive tolling, after-tax benefits of \$119 million were shared by Enbridge and its customers.

Enbridge is also well positioned geographically for growth in natural gas pipelines – in the Gulf of Mexico, in the growing Texas Barnett Shale, Anadarko Basin and Bossier gas plays, and between a potential Alaskan natural gas pipeline and key North American markets.

The addition of new sources of natural gas supply to meet growing demand in North America is essential to avoid shortfalls as traditional sources of supply peak. Enbridge is well positioned, as a pipeline company, to transport that natural gas to markets. In addition, as Canada's largest natural gas distribution company, which expects to add more than 200,000 new customers in the next five years, Enbridge Gas Distribution is interested, as a customer, in new sources of gas supply.

2005 Annual Report Creating Value 13

#### Total shareholder return

### Dividend payout target

25.5%

in 2005

Enbridge's objective is to provide superior long-term value for shareholders, and the Company has consistently delivered strong total shareholder returns. In 2005, the total shareholder return was 25.5%

Total shareholder return includes total cash dividends declared plus common share price appreciation. This is not a standardized measure under Canadian Generally Accepted Accounting Principles, therefore it may not be comparable to similarly titled measures used by other issuers.

60-70%

#### of earnings

In November 2005, the Board of Directors approved a revised dividend policy for Enbridge that will see Enbridge target to pay out approximately 60% to 70% of earnings, an increase from the recent 50% to 60% target range. The change takes into consideration a robust growth outlook combined with the increased attractiveness that many investors are assigning to dividend income, providing Enbridge investors with an attractive combination of strong long-term growth and favourable near-term cash payout.

By being a part of the delivery solution, Enbridge helps provide customers with new long-term sources of supply. That, in turn, will bring greater price stability to markets throughout North America, benefiting all natural gas consumers.

When customers benefit, Enbridge shareholders benefit. In the 53 years that Enbridge has been a publicly traded company, Enbridge shareholders have received an average annual total shareholder return of 13.3%. In the past 10 years alone, the return has averaged 20.9%, and in 2005, the return was 25.5%. Clearly, customer value has translated into shareholder value.

In November 2005, the Enbridge Board of Directors added further value for shareholders by announcing that the Company was increasing its dividend target to pay out between 60% and 70% of earnings. Shareholders receive a direct benefit while the Company retains ample balance sheet capacity and the ability to fund its large portfolio of growth projects.

### Corporate Governance

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 18 of 122 Appendix C

At Enbridge, corporate governance means ensuring that a comprehensive system of stewardship and accountability is in place and functioning among Directors, management and employees of the Company.

Enbridge is committed to the principles of good governance, and the Company employs a variety of policies, programs and practices to manage corporate governance and ensure compliance.

The Board of Directors is responsible for the overall stewardship of Enbridge and, in discharging that responsibility, reviews, approves and provides guidance in respect of the strategic plan of the Company. The Board also monitors implementation.

The Board approves all significant decisions that affect the Company and reviews the results. The Board also oversees identification of the principal risks to the Company on an annual basis, monitors the Company's risk management programs, reviews succession planning, and seeks assurance that internal control systems and management information systems are in place and operating effectively.

Additional information and details about Enbridge's corporate governance policies and practices are available in the Company's annual Management Information Circular, and in the corporate governance section of the Company's website, at www.enbridge.com/investor/corporateGovernance.

# Corporate Social Responsibility

### **Community investment**

# Global 100 Most Sustainable Corporations in the World

\$4.8 million

#### in Canada in 2005

Enbridge continues to invest in communities where the Company operates, primarily in health, social services, education, the environment, arts and culture, and civic leadership. For the sixth year in a row, Enbridge was recognized by the United Way and Centraide as a recipient of their *Thanks a Million Award* for raising more than \$1 million for United Way and Centraide campaigns in Canada.

1 of 5

# Canadian companies named to the listing in 2006

The Global 100 Most Sustainable Corporations in the World is a new global ranking that reviewed 2,000 companies for their ability to manage environmental, social and governance risks and opportunities. Enbridge was named to the listing of 100 companies that was announced at the World Economic Forum at Davos, Switzerland, in January 2005. Enbridge was again named to the listing in January 2006, one of only five Canadian companies.

Corporate Social Responsibility (CSR) is about conducting business in a socially and environmentally responsible manner. It is a process of constant innovation, a team effort to understand and deal with many complex and evolving issues involving our many stakeholder groups, and it goes to the heart of the Company's values and how it does business.

Enbridge's approach to Corporate Social Responsibility and its CSR performance are detailed in the Company's 2005 Corporate Social Responsibility Annual Report. The report, which reviews Enbridge's environmental, economic and social performance, was once again written in compliance with the guidelines outlined in the Global Reporting Initiative's 2002 Sustainability Reporting Guidelines. In addition, selected information and indicators in the current report were subject to an internal review by Enbridge's Audit Services Department.

A copy of the annual report is available in the CSR section of Enbridge's website, at www.enbridge.com/corporate/.

Corporate	(63.9)	(81.3)	(76.6)
Earnings Applicable to Common Shareholders	556.0	645.3	667.2
Earnings Per Common Share 4	1.65	1.93	2.02
Diluted Earnings Per Common Share	1.63	1.91	2.00
Dividends Per Common Share	1.0375	0.92	0.83
Common Share Dividends	361.1	315.8	283.9
Total Assets	17,210.9	14,905.1	13,945.0
Total Long-Term Liabilities	9,690.7	8,182.5	8,028.2

- 1 Financial Highlights have been extracted from financial statements prepared in accordance with Canadian Generally Accepted Accounting Principles.
  2 The reported results for the year ended December 31, 2004, include earnings for the 15 months ended December 31, 2004, for Enbridge Gas Distribution
- 2 The reported results for the year ended December 31, 2004, include earnings for the 15 months ended December 31, 2004, for Enbridge Gas Distribution (EGD), Noverco and other gas distribution entities. This resulted from the elimination of the quarter lag basis of consolidation in 2004.
- 3 The reported results for the year ended December 31, 2003, include earnings for the 12 months ended September 30, 2003, for these entities.
- 4 All per share amounts have been restated to reflect the Company's two-for-one stock split in May 2005.

Earnings applicable to common shareholders are \$556.0 million for the year ended December 31, 2005, or \$1.65 per share, compared with \$645.3 million, or \$1.93 per share, in 2004. The \$89.3 million decrease in earnings is primarily the result of the sale of the investment in AltaGas in 2004, which had resulted in an after-tax gain of \$97.8 million as well as the absence of its earnings. Earnings for 2004 also included 15 months of earnings for gas distribution utilities, reflecting the change in year end for those entities. Positive factors in 2005 include the earnings contribution from the recently acquired Enbridge Offshore Pipelines, higher contribution from the gas distribution utility and lower interest expense.

Earnings applicable to common shareholders for the year ended December 31, 2004, were \$645.3 million, or \$1.93 per share compared with \$667.2 million, or \$2.02 per share, for the year ended December 31, 2003. In addition to the factors noted above, the 2004 results included a full year of incremental earnings from the Terrace Phase III mainline expansion, rate increases and positive variances from forecast costs in Enbridge Gas Distribution, and improved fractionation margins in Aux Sable compared with 2003. These positive factors in 2004 were offset by the absence of earnings from Alliance Pipeline Canada and Enbridge Saskatchewan, which were sold in June 2003 to Enbridge Income Fund for a gain of \$169.1 million.

Earnings Applicable to Common Shareholders (millions of Canadian dollars)

Earnings for 2005 included earnings from Enbridge Offshore Pipelines, acquired at year-end 2004; a higher contribution from the gas utility; and lower interest expense. Earnings in 2004 included an after-tax gain of \$97.8 million on the sale of the investment in AltaGas Income Trust, as well as 15 months of earnings for gas distribution utilities reflecting the change in year end for those entities. Earnings in 2003 included a \$169.1 million after-tax gain on the sale of assets to Enbridge Income Fund.

Significant non-operating factors and variances affecting consolidated earnings are:

(millions of Canadian dollars)	2005	2004	2003
Sponsored Investments			
Dilution gains on the issue of Enbridge Energy Partners (EEP) units	8.9	7.6	20.3
EEP non-cash derivative fair value losses	(5.0)	_	_
Gain on sale of assets to Enbridge Income Fund (EIF)	-	_	169.1
Gas Distribution and Services			
Gain on sale of investment in AltaGas Income Trust	-	97.8	_
Calendar year basis adjustment <sup>1</sup>	-	27.1	_
Calendar year basis adjustment <sup>2</sup>	-	_	(4.0)
Colder than normal weather	-	21.3	33.9
Impairment loss on Calmar gas plant	-	(8.2)	_
Regulatory disallowances	-	_	(35.2)
EGD unbilled revenue	-	_	33.6
Dilution gain in Noverco (Gaz Metro unit issuance)	7.3	_	7.1
Dilution gain – AltaGas Income Trust	-	8.0	_
Revalue future income taxes due to tax rate changes	-	0.6	(52.1)
International			
Gain on land sale in CLH	7.6	_	_
Corporate			
Revalue future income taxes due to tax rate changes	_	_	(1.0)
Total significant non-operating factors and variances increasing earnings	18.8	154.2	171.7

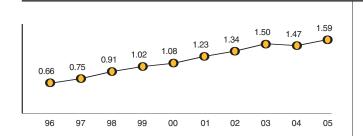

<sup>1</sup> Effective December 31, 2004, EGD changed its fiscal year-end from September 30 to December 31. Consequently, the reported consolidated results for the year ended December 31, 2004, included EGD's results for the fifteen months ended December 31, 2004. The adjustment above deducts EGD's results for the three months ended December 31, 2003, to reflect EGD's 2004 earnings on the calendar basis, consistent with 2005. As a result, this adjustment differs from the adjustment reported in 2004.

#### Significant operating factors affecting earnings in 2005 include:

- Enbridge Offshore Pipelines, acquired December 31, 2004, contributes positive earnings.
- EGD earnings are higher due to higher rate base and a number of smaller favourable variances across the utility.
- There are no earnings from AltaGas in 2005 as the investment was sold in 2004.
- Corporate costs are lower primarily as a result of lower interest expense.

#### Enbridge completed several strategic initiatives during 2005:

- Negotiated new five year Incentive Tolling Settlement on the Enbridge System.
- Obtained founding shipper agreements underpinning the \$400 million Waupisoo Pipeline and filed an application for regulatory approval.
- Confirmed shipper support for both the Gateway Petroleum Export Pipeline and the Gateway Condensate Import Pipeline, through non-binding open seasons, supporting continued preparations to file a full regulatory application in 2006.

## Adjusted Earnings per Common Share (dollars per share)

Adjusted operating earnings represent earnings applicable to common shareholders adjusted for non-operating factors and variances. This is not a measure that has a standardized meaning prescribed by Canadian generally accepted accounting principles (GAAP) and is not considered a GAAP measure. Therefore, this measure may not be comparable with a similar measure presented by other issuers. Management believes that the presentation of adjusted operating earnings provides useful information to investors and shareholders as it provides increased predictive value and performance trends.

<sup>2</sup> This adjustment reflects EGD's 2003 earnings on the calendar basis. Prior to EGD's change in fiscal year end in 2004, described above, EGD's earnings were consolidated on a one-quarter-lag basis. As a result, reported consolidated results for the year ended December 31, 2003, included EGD's results for the twelve months ended September 30, 2003. This presentation differs from the presentation in the 2004 Management's Discussion and Analysis.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 27 of 122 Appendix C

- Secured the BA Energy Upgrader \$80 million terminaling and pipeline services agreement as the initial customer for our new Stonefell terminal at Fort Saskatchewan, Alberta.
- Substantially completed the US\$190 million Spearhead Pipeline project to deliver Canadian crude oil, for the first time, down to the major hub at Cushing, Oklahoma.
- Secured shipper support and commenced field work for the US\$950 million, 400,000 barrels per day (bpd) Southern Access mainline expansion project being undertaken by Enbridge and Enbridge Energy Partners.
- Entered into a 20-year electricity purchase agreement with the Ontario Power Authority for all of the power to be produced from the \$400 million, 200-megawatt wind power project currently under development by Enbridge on the shores of Lake Huron.
- Entered into an agreement to purchase 65% of the Olympic Pipe Line Company, a refined products pipeline in Washington State, for US\$99.8 million.

Enbridge (the Company) has foreign currency denominated earnings, primarily from U.S. based operations and investments, as well as its Euro investment in Compañia Logistica de Hidrocarburos (CLH). The Company uses long-term derivative contracts to economically hedge a significant portion of the cash distributions from these long-term investments. However, this does not eliminate the GAAP earnings volatility caused by exchange rate differences. During the year ended December 31, 2005, the Company received foreign currency denominated cash distributions and settled associated hedge transactions resulting in \$13.0 million (2004 – \$7.5 million) of incremental cash flows, which is not included in reported earnings.

#### CORPORATE STRATEGY

#### **Corporate Vision and Objective**

Enbridge is an energy delivery company that delivers natural gas and crude oil, which are used to heat homes, power transportation systems, and provide fuel and feedstock for industries. The Company's vision is to be North America's leading energy delivery company and its objective is to generate long-term value for investors. The key elements of this vision are to:

- generate above industry-average annual earnings per share growth;
- maintain a stable, low risk investment profile and strong financial position; and
- deliver superior returns (dividends and capital appreciation) to shareholders.

#### **Core Businesses**

The Company's activities are carried out through five business units:

- Liquids Pipelines, which owns and operates the Canadian portion of the world's longest crude oil pipeline system and includes other common carrier and feeder liquids pipelines, including the Athabasca System;
- Gas Pipelines, which includes the Company's interests in Alliance Pipeline US, Vector Pipeline and Enbridge Offshore Pipelines;
- Sponsored Investments, which includes investments in Enbridge Income Fund (EIF) and Enbridge Energy Partners, L.P. (EEP), both managed by Enbridge;
- Gas Distribution and Services, which includes Enbridge Gas Distribution (EGD), the largest gas distribution utility operation in Canada, as well as other gas distribution businesses, CustomerWorks, gas services businesses, Aux Sable and wind power businesses; and
- International, which includes the Company's two energy-delivery investments outside of North America.

#### **Organic Growth Projects**

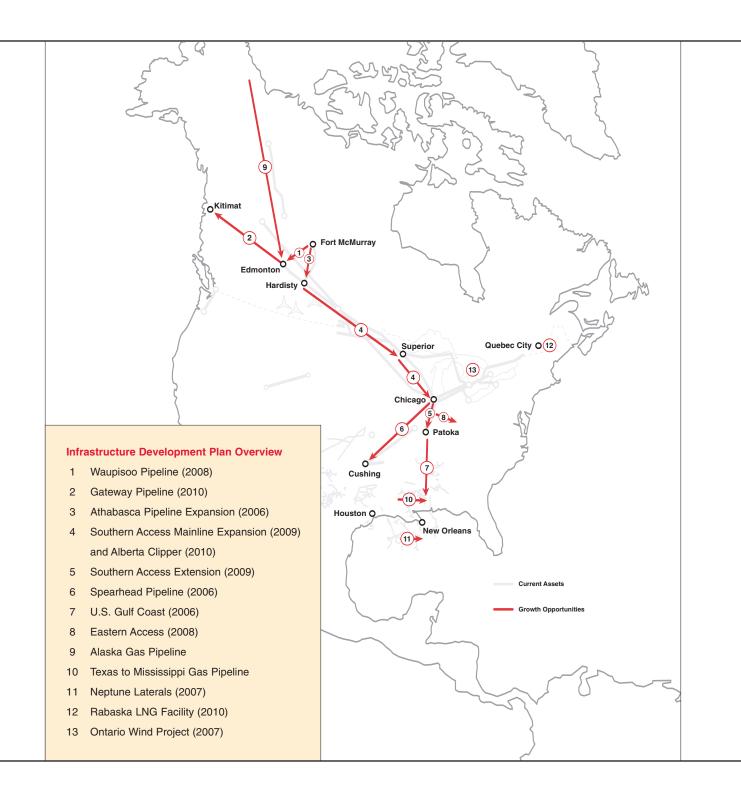

A key focus of the Company's strategy is growth through internally developed organic projects. The Company is targeting organic growth rates averaging 6% over the next five years. The Company is advancing the development of a number of organic growth projects, some of which are summarized below. Enbridge will continue to pursue acquisitions that are accretive to earnings, on an opportunistic basis, as a supplementary source of growth.

Project		Potential Date
(Canadian dollars unless otherwise noted)	<b>Estimated Capital Cost</b>	of Completion
Liquids Pipelines		
Spearhead Pipeline	US\$190 million	March 2006
Surmont Laterals and Facilities	\$42 million	Mid-2006
Athabasca Pipeline Expansions	\$75 million	Mid-2006
Long Lake Laterals and Facilities	\$45 million	Late 2006
Stonefell Terminal	\$80 million	Late 2007
Upstream Terminaling	\$460 million	2007
Downstream Terminaling	US\$220 million	2007
Waupisoo Oil Pipeline	\$400 million 1	Mid-2008
Waupisoo Diluent Pipeline	\$200 million 1	Mid-2008
Southern Access Expansion – Canadian portion	US\$135 million <sup>1</sup>	2009
Southern Access Extension	US\$250-US\$320 million1	2009
Gateway Condensate Import Pipeline	\$1,700 million 1	2010
Gateway Petroleum Export Pipeline	\$2,500 million 1	2010
Alberta Clipper Pipeline - Canadian Portion	US\$1,020 million <sup>1</sup>	2010
Sponsored Investments (EEP)		
Project Clarity - East Texas	US\$530 million	2007
Southern Access Expansion - U.S. portion	US\$815-US\$980 million1	2009
Alberta Clipper Pipeline – U.S. Portion	US\$570 million1	2010
Cushing Terminal Expansion	US\$55 million	2006
Gas Pipelines		
Neptune Laterals	US\$125 million	End of 2007
Gas Distribution and Services		
EGD Customer Additions & System Integrity	\$1,500 million	2006-2010
Ontario Wind Project	\$400 million	Early 2007
Rabaska LNG Facility	\$280 million by Enbridge	2010

<sup>1</sup> Estimated capital costs for these projects are reported in 2005 dollars and exclude escalation to the year of expenditure.

There are a number of competing projects, proposed by other companies, which could preclude the Company from developing one or more of these proposed projects.

Descriptions of each project are included in the strategy section of each core business.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 30 of 122 Appendix C

#### **Dividends**

The Company has modified its dividend payout ratio to reflect a strong long-term outlook for the business, shareholders' increasing preference for income and a challenging acquisition market, which will create surplus capital in the near term. Starting in the fourth quarter of 2005, the Company is targeting to pay out approximately 60% to 70% of earnings as dividends, an increase from the previous target of 50% to 60% of earnings. The graph below shows dividends per share for the last 9 years and annualized pro-forma dividends for 2006, assuming the Board does not increase the dividend subsequent to the increase announced in November 2005.

#### Strategy

Enbridge has four key strategies to achieve the overall objective of generating long-term value for shareholders.

#### 1. Expand Existing Core Asset Platforms

The Company will expand its core asset base and existing businesses. Strategies for each core business are included in the sections below.

#### 2. Develop New Growth Platforms

Enbridge believes it is also important to develop new growth platforms that complement the existing core asset base in the following areas:

- Liquefied Natural Gas (LNG) Regasification Develop LNG regasification projects and related pipeline infrastructure, concentrating on projects that leverage the existing downstream asset base.
- Marketing and Storage Pursue marketing and storage opportunities to optimize existing assets and stimulate growth initiatives for both oil and gas pipelines.
- Power Generation Continue to explore gas-fired power generation opportunities that are underpinned by long-term contracts and improve the utilization of existing assets. Also, increase the scale of the wind power business and build in locations near existing Enbridge infrastructure.
- New Energy Technologies Support development of new technologies that are near commercialization and complement existing businesses. Initiatives will focus on technologies that enhance the economics of oil sands development and thereby ultimately enhance the value of the liquids transportation franchise.

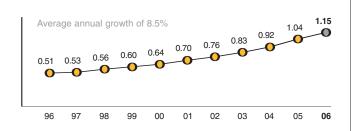

#### 3. Capitalize on the Partnership/Trust Model

Enbridge owns investments in EIF and EEP, which will develop or acquire energy infrastructure assets in North America and optimize the returns on assets they currently own.

#### 4. Focus on Operational Excellence

Enbridge will continue its focus on operational excellence, including cost efficiency, safety and reliability, customer relationships, environmental integrity, innovation and effective stakeholder relations.

To successfully pursue these strategies, the Company must mitigate certain business risks. These risks, and the Company's strategies for managing them, are described under "Risk Management".

#### Dividends per Common Share

(dollars per share)

Dividends per common share have increased an average of 8.5% per year since 1996. They were further increased in 2005, and are expected to be \$1.15 per common share for full-year 2006 assuming the Board does not further increase the dividend subsequent to the November 2005 increase.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 31 of 122 Appendix C

#### **Corporate Social Responsibility**

Enbridge defines Corporate Social Responsibility (CSR) as conducting business in a socially responsible and ethical manner, protecting the environment and health and safety of people, supporting human rights and engaging, respecting and supporting the communities and cultures with which the Company works. CSR covers the Company's involvement in areas such as the environment, safety, corporate governance, community investment and stakeholder engagement.

Environmental initiatives include pursuing alternative and renewable energy technologies such as wind power, preventing pipeline leaks by conducting on-going maintenance programs as part of the comprehensive integrity management of pipelines and facilities, and the development of a carbon management strategy to manage the risks from green house gas emissions, such as methane. For example, replacing cast iron pipe with polyethylene mains at EGD is a key factor in reducing fugitive methane emissions. Safety initiatives include regular training and open communication with employees, emphasizing the importance of addressing health and safety risks before serious incidents occur and the establishment of local and regional environmental health and safety committees.

Corporate governance initiatives ensure a comprehensive system of stewardship and accountability is in place and functioning among Directors, management and employees. For example, every employee and Director must follow Enbridge's Statement on Business Conduct. Community investment initiatives include funding for the arts and health services, organizing local United Way campaigns and creating innovative partnerships with not-for-profit groups.

Stakeholder engagement means developing positive relationships with employees, suppliers, customers, investors, government agencies, environmental groups, business partners and local communities. Initiatives include early-stage project consultation on organic growth projects; public awareness programs on pipeline safety and regular customer surveys at EGD to better understand customer needs.

While Enbridge is focused on generating long-term value for investors, Corporate Social Responsibility defines the Company's commitment to achieving and sustaining that objective in a socially and environmentally responsible way.

#### LIQUIDS PIPELINES

#### **Earnings**

(millions of Canadian dollars)	2005	2004	2003
Enbridge System	170.1	171.6	162.0
Athabasca System	48.6	42.8	44.8
NW System	7.3	7.8	8.3
Saskatchewan System	_	_	3.1
Feeder Pipelines and Other	3.1	(2.3)	(4.7)
	229.1	219.9	213.5

#### **Business Activities**

Liquids Pipelines consists of crude oil, natural gas liquids and refined products pipelines, primarily in Canada.

#### Enbridge System

The mainline system is comprised of the Enbridge System and the Lakehead System (the portion of the mainline in the United States that is operated by Enbridge and owned by EEP). The system transports crude oil from Western Canada to the Midwest region of the United States and Eastern Canada and serves all of the major refining centers in Ontario. Enbridge has operated, and frequently expanded, the mainline system since 1949.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 32 of 122 Appendix C

Tolls on the Enbridge System are governed by various agreements, which are subject to the approval of the National Energy Board (NEB). Significant agreements include the Incentive Tolling Settlement (ITS) applicable to the Enbridge mainline system (excluding Line 8 and Line 9), the Terrace agreement relating to the Terrace Expansion Project completed on April 1, 2003, which added additional capacity of 350,000 bpd and the System Expansion Program (SEP) II Risk Sharing Agreement related to SEP II, a 100,000 bpd expansion completed in 1998. Tolls on the older Mainline System have been governed by incentive tolling settlements since 1995. With the incentive tolling model, Enbridge and shippers share the benefits of cost reductions below agreed levels and the benefits of improvements in reliability and the quality of service. This approach aligns the Company's interests with those of its shippers.

Since Enbridge introduced incentive tolling arrangements in 1995, through the cost performance sharing mechanism, after-tax benefits of \$119.2 million have been shared by Enbridge and its customers, approximately 53% and 47%, respectively. Customers also realized an additional cumulative after-tax benefit of \$16.2 million through the power guarantee mechanism of the ITS.

In 2005, Enbridge and the Canadian Association of Petroleum Producers (CAPP) approved the key terms of a new negotiated ITS, effective for January 1, 2005, to December 31, 2009. In January 2006, the NEB approved the new ITS. The new ITS continues the sharing of earnings in excess of a stipulated threshold and provides a fixed annual mainline integrity allowance. In conjunction with the Terrace Agreement, the new ITS continues the throughput protection provisions ensuring the Company is insulated from negative volume fluctuations beyond its control. In addition to the incentive-based provisions in prior agreements, service and reliability metrics, collectively performance metrics, have been added to the new ITS to further align the Company's interests with its shippers. The Company has the opportunity to increase earnings by achieving performance targets under the new performance metric provisions.

The service metrics establish financial bonuses and penalties for prescribed performance targets related to crude oil quality management and predictability of scheduled deliveries. The bonuses and penalties for the service metrics are limited to a maximum of \$10 million after tax in 2005, escalating to \$15 million in each of 2006 and 2007, and to \$20 million in each of 2008 and 2009. The targets to achieve the maximum bonus under the ITS become increasingly difficult to achieve in successive years.

The reliability metric provides for bonuses and penalties associated with optimization of system capacity, which are calculated relative to annual capacity targets. If the Company's performance is below the target, it is charged a penalty of \$200,000 after tax per percentage point for each month that performance is below the target. If the Company's performance exceeds the target, it earns \$500,000 per percentage point for each month that performance is above the target. Practical constraints around pipeline capacity would limit the bonus for the reliability metric to approximately \$12 million per year and penalties are limited to \$10 million per year.

#### Athabasca System

The Athabasca System, a 540-kilometre (340-mile) synthetic and heavy oil pipeline, links the Athabasca oil sands deposits in the Fort McMurray, Alberta region, to a pipeline transportation hub at Hardisty, Alberta. The Athabasca System also includes the MacKay River and Christina Lake feeder lines and tankage facilities, as well as the Company's interest in the Hardisty Caverns Limited Partnership, which provides crude oil storage services.

The Company has a long-term (30 year) take or pay contract with the major shipper on the Athabasca System, which commenced in 1999. Revenue is recorded based on the contract terms negotiated with the major shipper rather than the cash tolls collected. The contract provides for volumes and tolls that will achieve an underpinning return on equity, based on an assumed debt/equity ratio and level of operating costs. The committed volumes and the tolls specified in the contract do not generate sufficient cash revenues in the early years to compensate Enbridge for the debt and equity returns, as well as the cost of providing service. Therefore, Enbridge is recording a receivable in these years ensuring that the revenue recognized each period is in accordance with the agreement. This receivable is contractually guaranteed by the shipper and will be collected in the later years of the contract.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 33 of 122 Appendix C

#### **NW System and Others**

Enbridge's NW System is an 870-kilometre (540-mile) pipeline that transports crude oil from Norman Wells, in the Northwest Territories to Zama, Alberta. Earnings are based on an agreement with the primary shipper and are a product of a deemed common equity ratio of 55% (reduced to 50% after 2009) and the NEB multi-pipeline rate of return on common equity, plus any incentive cost savings.

Feeder Pipelines and Other primarily includes a number of liquids pipelines in the United States (Frontier, Toledo, Mustang, Chicap and Spearhead), as well as business development costs related to Liquids Pipelines activities.

## **Results of Operations**

Liquids Pipelines earnings are \$229.1 million in 2005 compared with \$219.9 million in 2004. The increase is due to higher Athabasca System earnings, consistent with the take or pay agreement with the major shipper, and improved earnings from Feeder Pipelines and Other, primarily Frontier Pipeline, which paid Federal Energy Regulatory Commission (FERC) ordered reparations in 2004 and 2003.

Earnings from Liquids Pipelines were \$219.9 million for the year ended December 31, 2004, an increase of \$6.4 million from 2003. The increase resulted from higher earnings from the Enbridge System, which included incremental earnings from Terrace Phase III. The Saskatchewan System was sold to Enbridge Income Fund effective June 30, 2003.

#### **Enbridge System**

Enbridge System earnings are \$170.1 million for the year ended December 31, 2005, compared with \$171.6 million for the year ended December 31, 2004. The \$1.5 million decrease is due to a lower earnings base from the ITS component of the Enbridge System, recently negotiated with the CAPP and approved by the NEB. As well, earnings were negatively impacted by higher taxes within the Terrace component. The decrease has been partially offset with earnings from the service and reliability incentives under the ITS as well as savings from cost management programs.

Enbridge System earnings are higher in 2004 than 2003 as they include incremental earnings from the Terrace Phase III expansion placed into service on April 1, 2003, as well as the increase in Enbridge's share of the Terrace surcharge. This increase is partially offset by a higher oil loss expense and a higher power allowance credit in 2004.

## Athabasca System

Earnings for the year ended December 31, 2005, are \$48.6 million, an increase of \$5.8 million from 2004. The increase is consistent with the overall return underpinning the long-term take or pay contract with its major shipper as well as lower operating costs due to leak remediation in the prior year.

The Athabasca System 2004 earnings were \$42.8 million for the year ended December 31, 2004, compared with \$44.8 million for the year ended December 31, 2003. Earnings in 2004 included the contribution from the Hardisty storage caverns, completed in the fourth quarter of 2003. This was more than offset by higher tax expense as 2003 included the utilization of loss carryforwards.

#### **NW System**

Earnings in the last three years from the NW System have been consistent and reflect the effect of a declining rate base.

## Feeder Pipelines and Other

Earnings in Feeder Pipelines and Other are \$3.1 million for the year ended December 31, 2005, compared with a loss of \$2.3 million for the year ended December 31, 2004. The increase is the result of Gateway condensate pipeline costs being deferred in 2005 whereas in 2004 they were expensed. In addition, Frontier Pipeline earnings were higher due to lower operating costs and the prior year included FERC ordered reparations.

Feeder Pipelines and Other earnings for the year ended December 31, 2004, increased \$2.4 million from 2003 as a result of the Frontier reparations, the majority of which were recorded in 2003.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 34 of 122 Appendix C

## **Strategy**

The Company seeks to go beyond the traditional regulated utility business model to create additional value for customers. The Liquids Pipelines strategy focuses on meeting the needs of Western Canadian producers. This can be achieved by reducing customers' costs, enhancing their access to premium markets and avoiding restrictions on production volumes caused by limited pipeline capacity.

On existing infrastructure, the Company will maximize cost efficiencies, ensure capacity is reliable and available when required and protect the quality and distinctiveness of the many different batches transported. The new ITS, described above, includes performance metrics which will reward the Company for achieving these goals and penalize the Company if performance in the prescribed areas falls below target levels.

The Company intends to enhance customers' access to favourable markets through ensuring that new transportation and storage infrastructure is developed on a timely basis, to meet customers' needs for expanded capacity in traditional markets and access to new markets with favourable pricing characteristics. There are many organic growth projects underway, described below, driven primarily by forecast increased production from the oil sands. Enbridge will only proceed with projects supported by shippers.

The Liquids Pipelines strategy will focus on: (i) continuing to develop regional Alberta oil sands infrastructure; (ii) enhancing producer access to diluent, which is needed to dilute heavy oils so they can be transported through pipelines; (iii) increasing traditional core PADD II (U.S. Midwest) market penetration; (iv) pursuing new market access initiatives; and (v) continuing to develop customer and stakeholder relationships.

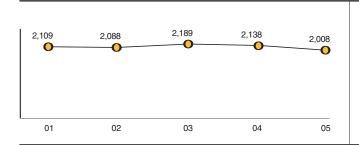

#### Supply and Reserves

The vast resource of the Western Canadian Sedimentary Basin (WCSB) and its development, create the basis for the Company's growth strategy. Generally, development of the oil sands resource has more than offset declining conventional production. In 2005, due to events such as the Suncor fire, growth in oil sands production did not offset the decline in production from conventional resources. The NEB estimates that total Western Canada 2005 production will be 2.3 million bpd <sup>1</sup> at the end of 2005 (2004 – 2.2 million bpd). At the end of 2004, remaining established conventional oil reserves in Western Canada were estimated to be 3.8 billion barrels <sup>2</sup> and remaining established reserves from oil sands were estimated at 174 billion barrels <sup>3</sup>. Combined conventional and oil sands reserves put Canada second only to Saudi Arabia with 14% of the worldwide estimated proven reserves <sup>4</sup>.

- 2 Canadian Association of Petroleum Producers Statistical Handbook 2005
- 3 Alberta Energy and Utilities Board Alberta's Reserves 2004 and Supply/Demand Outlook
- 4 Oil and Gas Journal's Worldwide Look at Reserves and Production, December 19, 2005

## Demand for WCSB Crude

The Company's liquids pipelines are dependent upon the demand for crude oil and other liquid hydrocarbons produced from Western Canada. Historically, the pipeline system has delivered crude oil to two main markets: Ontario/Quebec, and the Midwest portion of the United States with some volume delivered to Western Canada. Through Company initiatives, crude oil will begin to penetrate southern markets in PADD II with the Spearhead Pipeline as well as the U.S. Gulf Coast (PADD III) via a third party pipeline system.

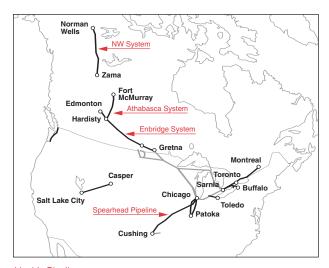

## Deliveries 1

(thousands of barrels per day)

Deliveries declined in 2005 as a result of a fire at an oil sands plant. However, development of the oil sands is expected in future to offset declining conventional production, and total Western Canada production – and Enbridge deliveries – are expected to grow significantly.

1 Includes deliveries by the 10.9% owned Lakehead System

Liquids Pipelines

Historically, Canada has been the third largest supplier of crude to the U.S. However, for the past two years, Canada has surpassed both Mexico and Saudi Arabia to become the largest crude oil exporter to the U.S. Western Canada demand is served by local supply and has increased by 25,800 bpd over the last two years. During 2005, an equal mix of Western Canadian and Atlantic Basin crude satisfied Ontario's crude oil requirement. Deliveries to Ontario from Western Canada and from Montréal, Quebec declined in 2005 with the closure of Petro-Canada's Oakville refinery. Deliveries of WCSB crude into PADD II (the U.S. Midwest) remained relatively flat over the last two years with reduced WCSB crude oil supply in 2005. U.S. deliveries of Canadian crude grew by 116,400 bpd by December compared to the third quarter of 2005, as Suncor's

recovered production entered the market. Over the same two-year period, deliveries into PADD IV (the U.S. Rocky Mountains) have increased by 30,800 bpd and PADD V (the Western U.S.) deliveries have increased by 25,000 bpd.

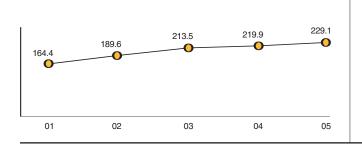

The abundance of established reserves from oil sands, the proximity to the U.S. markets and the relative geopolitical attractiveness of the resource, as well as strong demand, will provide opportunities for the expansion of Enbridge's Athabasca System and the Enbridge System as well as the development of new pipelines.

#### Alberta Oil Sands Infrastructure

A number of projects are underway to develop oil sands infrastructure including the Gateway, Waupisoo, Surmont and Long Lake projects, described below. Both the Gateway and Waupisoo projects provide for diluent pipelines that would bring needed diluent to the oil sands.

#### The Gateway Project

The Gateway Project, which includes both a condensate import pipeline and a petroleum export pipeline, continues to progress through the commercial development phase needed to achieve sufficient shipper commitments for each line. Originally, a 16-inch condensate import pipeline was planned at an expected cost of approximately \$1.7 billion on a stand-alone basis. Based on the results of the Open Season, Enbridge expects to increase the diameter of the pipeline from 16 inches to 20 inches. Enbridge has also offered condensate line shippers the option to participate, as partners, in the ownership of the pipeline. Final commitment amounts and transportation agreements, as well as ownership agreements, are nearing the final stages of negotiations. At the same time, updated cost estimates are being prepared for each line. The estimates, along with the respective tolls, will be required prior to execution of shipper agreements for both pipelines.

Liquids Pipelines Earnings (millions of Canadian dollars)

Liquids Pipelines earnings increased in 2005 due to higher Athabasca System earnings and improved earnings from Feeder Pipelines and Other, primarily Frontier Pipeline.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 36 of 122 Appendix C

The petroleum export line, which would transport crude oil from the Edmonton area to the Canadian west coast, closed its Open Season in December 2005 and discussions with interested shippers have commenced with the objective of signing final agreements by the second quarter of 2006, in time for the anticipated regulatory filing. As with the condensate line, interest expressed during the Open Season supports an increase of the pipeline diameter from 30 inches to 36 inches. The petroleum export pipeline is expected to cost approximately \$2.5 billion (in 2005 dollars) on a stand-alone basis and, if both parts of the Project proceed together, total savings of approximately \$550 million could be realized.

The decision to proceed with the regulatory filing for either pipeline is subject to commercial considerations, including satisfactory completion of shipper agreements, environmental assessment as well as public and Aboriginal consultation. If the Project proceeds, construction could begin as early as 2008 with a target in-service date early in 2010.

#### Waupisoo Pipeline Project

During the third quarter of 2005, Enbridge reached agreements with shippers on long-term transportation commitments on the proposed Waupisoo Pipeline. The 30-inch diameter, 380-kilometre long pipeline will transport crude oil from the Cheecham terminal, currently under construction on the Athabasca Pipeline, to the Edmonton, Alberta area. The initial capacity of the line will be 350,000 bpd and is expandable to a maximum of 600,000 bpd through the addition of pumping units. Enbridge has filed an application for regulatory approval with the Alberta Energy and Utilities Board and other provincial government departments. Pending regulatory approvals, expected in mid-2006, Enbridge will begin construction on the approximately \$400 million pipeline in 2007, with an expected in-service date of mid-2008.

Based on interest expressed by oil sands producers, Enbridge is including a 16-inch, 150,000 bpd diluent return line from the Edmonton area refinery hub north to the oil sands within the scope of the project for regulatory approval and public consultation. The diluent line is expected to cost approximately \$200 million. Shipping commitments on the diluent line have not been finalized.

#### Surmont Oil Sands Project

Enbridge entered into final agreements with ConocoPhillips Surmont Partnership and Total E&P Canada Ltd. (the Surmont Shippers), to provide pipeline transportation services on the Athabasca Pipeline starting in mid-2006. Enbridge will construct the pipeline and tank facilities required by the Surmont Project at the Cheecham terminal on the Athabasca Pipeline. The estimated cost of these facilities is \$42 million. The agreements provide for an initial contract volume of up to 50,000 bpd of crude oil with the option to increase the contract volume to up to 220,000 bpd for future phases of production. The agreement covering the dedicated Surmont lateral facilities and the agreement for transportation service on the Athabasca Pipeline are both for an initial term of 25 years, with extension provisions. The Athabasca Pipeline agreement also provides flexibility for the Surmont Shippers to transfer their production to the proposed Waupisoo Pipeline to the Edmonton area.

#### Long Lake Oil Sands Project

During the first quarter of 2005, the Company finalized agreements with Nexen Inc. and OPTI Canada Inc. (the Long Lake Shippers) to provide pipeline transportation services for the Long Lake Project.

Under the terms of the agreements, Enbridge will construct, own and operate the pipeline and tank facilities required by the Long Lake Project, as well as pipeline laterals and tank facilities at the Cheecham terminal on the Athabasca Pipeline. The estimated cost of these facilities is \$45 million with a planned in-service date in late 2006. Enbridge's 545 kilometre Athabasca Pipeline will also require capacity expansion from the Cheecham terminal to its mainline terminal at Hardisty, Alberta.

The agreements provide for an initial contract volume of up to 60,000 bpd of crude oil with provisions for volume increases. The agreement covering the Long Lake lateral facilities is for a term of 25 years and the agreement for service on the Athabasca Pipeline is for a 50-month term with extension provisions.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 37 of 122 Appendix C

#### Athabasca Pipeline Expansions

In 2005, the Company initiated several expansion projects on the Athabasca Pipeline. The expansion projects include the addition of two pumping stations, one at Elk Point and one at Cheecham, as well as modifications to existing pumping stations. In addition, the Company is adding three new tanks at the Athabasca Terminal. The projects are scheduled to be completed in mid-2006 at a total cost of approximately \$75 million.

#### Market Penetration and Access

Three projects currently under consideration which would increase PADD II penetration and would provide improved access to North American markets are the Southern Access Project, which would expand and extend the mainline; the Alberta Clipper Pipeline, the next tranche of mainline capacity; and the Spearhead Pipeline reversal project, which will provide access for Canadian crude to the Cushing refinery hub.

#### Southern Access Mainline Expansion and Extension Program

On December 23, 2005, EEP, Enbridge's 10.9%-owned affiliate, filed a tolling application with the FERC with respect to the 400,000 bpd Southern Access expansion from the Canada/U.S. border to Griffith, Indiana. The FERC filing is endorsed by CAPP and a FERC decision is expected in the first quarter of 2006. The cost of the expansion is estimated at approximately US\$815 million to EEP. The program is scheduled to be brought into service in stages, with 44,000 bpd in 2007, an additional 146,000 bpd in 2008 and the final 210,000 bpd in 2009. CAPP may request a delay of the target in-service dates if production growth is slower than forecast, but in such case EEP can recover any costs incurred to the date of notification.

Enbridge has also negotiated the Canadian expansion agreement with CAPP for the Southern Access Expansion between Hardisty, Alberta and the Canada/U.S. border. Enbridge intends to file for NEB approval of the Canadian expansion in 2006, the cost of which is estimated at US\$135 million to Enbridge. The Canadian facilities can also be staged, and the in-service dates will be timed to coincide with the U.S. facilities.

Enbridge continues to discuss the extension of the mainline from Flanagan, IL to Patoka, IL or potentially Wood River, IL with shippers. The extension would involve the construction of a new 30-inch diameter, 300,000 bpd pipeline, at a cost of approximately US\$250 million to US\$320 million to Enbridge.

## Alberta Clipper Pipeline

Enbridge anticipates that additional capacity to the U.S. Midwest, over and above Southern Access, described above, will be required. The Company has been actively developing the next tranche of mainline expansion capacity, the Alberta Clipper Pipeline, with selected shippers. The Alberta Clipper Pipeline project involves a new 36" line from Hardisty, Alberta to Superior, Wisconsin where it will interconnect with the existing mainline system to provide access to Enbridge's full range of delivery points and storage options, including Chicago, Toledo, Sarnia, Patoka, Wood River and Cushing. The line would involve a total investment of US\$1.6 billion (in 2005 dollars) for an initial capacity of 400,000 bpd. Shipper interest to date has been strong, and the Company will expand these discussions during the first quarter of 2006 to seek broad industry support.

## Spearhead Pipeline

Enbridge acquired 90% of the Spearhead Pipeline in 2003 and the remaining 10% in 2005. The Company is reversing the flow of the pipeline, which previously operated from Cushing to Chicago, to bring crude oil from Chicago to Cushing. The Spearhead Pipeline project is currently estimated to result in a total investment of \$230 million, of which approximately \$220 million has been spent. The reversed pipeline is expected to be in service in March 2006.

## Other Projects

#### Contract Terminaling

Enbridge directly, and through EEP, has developed a significant position in the contract terminaling business in recent years, with a total of 12 million barrels of storage capacity at six Canadian and U.S. locations. With increasing crude oil production and price volatility, the Company is encountering strong demand from producers, refiners and marketers for

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 38 of 122 Appendix C

term storage capacity and associated terminaling services. In addition to the \$80 million Stonefell terminal agreement for the BA Energy Upgrader, described below, the Company has numerous other terminaling investment opportunities, aggregating approximately \$460 million in Canada and US\$220 million in the U.S., either secured or well advanced.

#### Stonefell Terminal

BA Energy Inc., is building a bitumen upgrader near Fort Saskatchewan, Alberta for which Enbridge has agreed to provide pipeline and terminaling services. Based on initial scope and cost estimates, Enbridge expects to invest approximately \$80 million in new facilities to provide storage services at a new satellite terminal it will develop adjacent to the upgrader. Enbridge will also provide pipeline transportation for the upgrader's output from the new terminal to a refinery hub near Edmonton. These facilities are expected to be in service in the fourth guarter of 2007.

## Olympic Pipe Line

In December 2005, Enbridge announced that it will acquire a 65% interest in the Olympic Pipe Line Company (Olympic) from BP for US\$99.8 million, subject to working capital adjustments. The transaction closed on February 1, 2006. Olympic owns the largest refined products pipeline in the State of Washington, transporting approximately 290,000 bpd of gasoline, diesel and jet fuel. The pipeline system extends 480 kilometres (300 miles) from Blaine, Washington to Portland, Oregon, connecting four Puget Sound refineries to terminals in Washington and Portland and consists of 640 kilometres (400 miles) of 6-to-20 inch diameter pipe, a 500,000-barrel products terminal, 9 pumping stations and 21 delivery points or facilities. Olympic is the sole supplier of jet fuel to the Seattle-Tacoma International Airport and is a major supplier to the Portland International Airport. BP will continue to operate the pipeline system.

## **Customer and Stakeholder Relationships**

To meet the Company's objective of continuing to develop customer and stakeholder relationships, Liquids Pipelines will focus on achieving operational excellence including assuring best practices relative to system reliability, safety, environmental issues and cost efficiency. The Liquids Pipelines business will continue its efforts to maintain a high level of customer satisfaction while striving to meet performance metrics targets in the new ITS.

## **Capital Expenditures**

Liquids Pipelines generally spends \$80 to \$100 million each year on ongoing capital improvements and core maintenance capital projects. This trend is expected to continue in 2006. Expenditures for organic growth projects described above are expected to be approximately \$230 million during 2006 in Canada.

#### Legal Proceeding - CAPLA Claim

The Canadian Alliance of Pipeline Landowners' Associations (CAPLA) and two individual landowners have commenced an action against the Company and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. The Company believes it has a sound defence and intends to vigorously defend the claim. The Plaintiffs have filed a motion to establish a cause of action, one of the requirements to have the motion certified as a class action under the *Class Proceedings Act* (Ontario). These matters are currently before the Ontario District Court for hearing. Since the outcome is indeterminable, the Company has made no provision for any potential liability.

#### **Business Risks**

The risks identified below are specific to the Liquids Pipelines business. General risks that affect the Company as a whole are described under Risk Management.

## Supply and Demand

The operation of the Company's liquids pipelines are dependent upon the supply of, and demand for, crude oil and other liquid hydrocarbons from Western Canada. Supply, in turn, is dependent upon a number of variables, including the availability and cost of capital and labour for oil sands projects, the price of natural gas used for steam production, and the price of crude oil. Demand is dependent, among other things, on weather, gasoline consumption, manufacturing, alternative energy sources and global supply disruptions.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 39 of 122 Appendix C

#### Performance Metrics

The new ITS governing the Enbridge System measures the Company's performance in areas key to customer service. If the Company fails to meet the baseline targets set out in the new ITS, for all service and reliability metrics, the Company could be required to pay penalties to shippers up to a maximum of \$25 million in 2006 and 2007 and \$30 million in 2008 and 2009.

#### Regulation

Earnings from the Enbridge System and other liquids pipelines are subject to the actions of various regulators, including the NEB. Actions of the regulators related to tariffs, tolls and facilities impact earnings from these operations. The NEB prescribes a benchmark multi-pipeline rate of return on common equity. For 2006, this rate of return is 8.88%. To the extent the NEB rate of return fluctuates, a portion of the Enbridge System and other liquids pipelines earnings will change. The Company believes that regulatory risk can be reduced through the negotiation of long-term agreements with shippers.

#### Competition

Competition among common carrier pipelines is based primarily upon the cost of transportation, access to supply, and proximity to markets. Other common carriers are available to producers to ship Western Canadian crude oil to refineries in either Canada or the United States. Although the Company does not compete directly in the regions served by these other pipelines, producers can elect to have their crude oil refined at delivery points not on the Enbridge System. The Company believes that its liquids pipelines are serving larger markets and provide attractive options to producers in the WCSB due to their competitive tolls. Also, the ITS and the Terrace Agreement on the Enbridge System provide throughput protection which insulates the Company from negative volume fluctuations beyond its control. The Lakehead System, owned by EEP, has no similar throughput protection and is exposed to volume fluctuations.

Increased competition could arise from new feeder systems servicing the same geographic regions as the Company's feeder pipelines. Available capacity on the Athabasca System is expected to be more competitive than a new pipeline.

Competition also impacts the Company's ability to execute organic growth projects as a number of competing projects, proposed by other companies, could preclude the Company from developing one or more of the proposed projects. The Company also anticipates challenges in securing the labour that would be required to complete the projects.

## GAS PIPELINES

## **Earnings**

(millions of Canadian dollars)	2005	2004	2003
Alliance Pipeline US	32.1	37.4	40.3
Vector Pipeline	15.9	16.4	10.2
Enbridge Offshore Pipelines	11.8	_	_
Alliance Pipeline Canada	-	_	19.6
	59.8	53.8	70.1

## **Business Activities**

Gas Pipelines activities consist of investments in Alliance Pipeline US, Vector Pipeline and Enbridge Offshore Pipelines. Enbridge has joint control over these investments with one or more other owners. Enbridge owns a 50% interest in the US portion of the Alliance System, a 60% interest in Vector Pipeline and interests ranging from 22% to 100% in the pipelines comprising the Enbridge Offshore Pipelines. Alliance Pipeline Canada was sold to EIF effective June 30, 2003. EIF is included in Sponsored Investments.

## Alliance Pipeline US

The Alliance System (Alliance), which includes both the Canadian and U.S. portions of the pipeline system, consists of an approximately 3000-kilometre (1,875-mile) integrated, high-pressure natural gas transmission pipeline system and an approximately 700-kilometre (440-mile) lateral pipeline system and related infrastructure. Alliance transports liquids-rich natural gas from Fort St. John, British Columbia to Chicago, Illinois and has the capacity to deliver 1.55 billion cubic feet per day (bcf/d).

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 40 of 122 Appendix C

Alliance has take-or-pay contracts ending in 2015 to transport 1.325 bcf/d of natural gas. These contracts permit Alliance to recover the cost of service, which includes operating and maintenance costs, cost of financing, an allowance for income tax, an annual allowance for depreciation, and an allowed return on equity. Each contract may be renewed upon five years notice for successive one-year terms beyond the original 15-year primary term. The rates and tariff for Alliance Pipeline US are regulated by the FERC in the United States.

Alliance connects with a natural gas liquids (NGL) extraction facility (Aux Sable) in Channahon, Illinois. The natural gas may then be transported to two local natural gas distribution systems in the Chicago area and five interstate natural gas pipelines, providing shippers with access to natural gas markets in the Midwestern and northeastern United States and eastern Canada. Aux Sable is owned 42.7% by Enbridge and its results are included under Gas Distribution and Services.

#### Vector Pipeline

The Company provides operating services to, and holds a 60% investment in, Vector Pipeline, which transports natural gas from Chicago to Dawn, Ontario. Vector Pipeline has the capacity to deliver a nominal 1.0 bcf/d and is operating at or near capacity. Vector Pipeline's primary sources of supply are through interconnections with the Alliance System and the Northern Border Pipeline in Joliet, Illinois. Approximately 70% of the long haul capacity of Vector Pipeline is committed to long-term, 15-year firm transportation contracts at rates negotiated with the shippers and approved by the FERC. The remaining capacity is sold at market rates and various term lengths. Transportation service is provided through a number of different forms of service agreements such as Firm Transportation Service and Interruptible Transportation Service.

In 2005, Vector Pipeline announced plans to construct two additional compressor stations, which would expand Vector Pipeline's capacity from 1 bcf/d to 1.2 bcf/d. Vector Pipeline has negotiated long-term binding agreements with shippers and initiated the filing process with the FERC. Preliminary engineering and environmental work is underway and the expansion is expected to be in service by the fourth quarter of 2007.

#### **Enbridge Offshore Pipelines**

Enbridge Offshore Pipelines (EOP) is comprised of 11 natural gas gathering and FERC-regulated transmission pipelines in five major corridors in the Gulf of Mexico, extending to deepwater frontiers. The operations were purchased December 31, 2004. These pipelines include almost 2,400 kilometres (1,500 miles) of underwater pipe and onshore facilities and transport more than half of all current deepwater Gulf of Mexico natural gas production. These pipelines normally transport approximately 2.7 bcf/d.

The primary shippers on the EOP systems are producers who execute life-of-lease commitments in connection with transmission and gathering service contracts. In exchange, EOP provides firm capacity for the contract term at an agreed upon rate. The throughput volume generally reflects the maximum sustainable production that is achievable.

The transportation contracts allow the shippers to define a maximum daily quantity (MDQ), which corresponds with the expected production life. The contracts typically have minimum throughput volumes which are subject to take-or-pay criteria but also provide the shippers with flexibility given advance notice criteria to modify the projected MDQ schedule to match current deliverability expectations.

The long-term transport rates established in the gathering and transmission service agreements are generally established utilizing a cost-of-service methodology, which includes operating cost, projected revenue generation directly tied to production deliverability and the appropriate cost of capital.

#### **Results of Operations**

Earnings from Gas Pipelines are \$59.8 million for the year ended December 31, 2005, an increase of \$6.0 million from 2004. The increase in 2005 is due to incremental earnings from Enbridge Offshore Pipelines, acquired on December 31, 2004.

Earnings from Gas Pipelines were \$53.8 million for the year ended December 31, 2004, a decrease of \$16.3 million from 2003 related primarily to the disposal of Alliance Pipeline Canada to EIF on June 30, 2003.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 41 of 122 Appendix C

## Alliance Pipeline US

Alliance Pipeline US earnings are \$32.1 million for the year ended December 31, 2005, compared with \$37.4 million for the year ended December 31, 2004. The moderate decrease is due to the stronger Canadian dollar in 2005.

Alliance Pipeline US earnings for the year ended December 31, 2004, were \$2.9 million lower than earnings for the year ended December 31, 2003. The decrease reflected the impact of the stronger Canadian dollar in 2004 compared with 2003, and the favourable impact, in 2003, of the adjustment recorded in Alliance to reflect a higher rate base.

#### Vector Pipeline

Vector Pipeline earnings are \$0.5 million lower for the year ended December 31, 2005, compared with the year ended December 31, 2004, resulting from the stronger Canadian dollar in 2005.

Earnings from Vector Pipeline were \$6.2 million more in 2004 compared with 2003, as a result of increased volumes and transportation margins, additional ownership interest of 15.0% acquired in the fourth quarter of 2003 and Canadian dollar effects.

## **Enbridge Offshore Pipelines**

Enbridge Offshore Pipelines contributed \$11.8 million to earnings in 2005. Hurricanes Katrina and Rita negatively affected transmission volumes and the results of this business. The results include property insurance deductibles as well as lost revenue on various systems prior to the commencement of contingent business interruption insurance coverage. The combined effect of the property damage deductibles and the estimated lost revenue reduced expected earnings by approximately \$15 million. In 2006, earnings will likely also be affected, although to a much lesser degree.

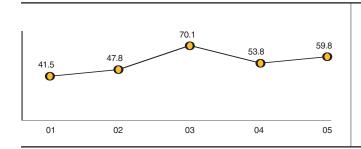

As of December 31, 2005, the pipelines were transporting 90% of pre-hurricane volumes, or approximately 2.4 bcf/d, compared with the pre-hurricane rate of approximately 2.7 bcf/d. The impact on each corridor is described below.

The Mississippi Canyon Corridor was in the direct path of Hurricane Katrina. Minor damage to the Enbridge facilities was isolated primarily to onshore electrical, control and measurement equipment. Two key production source platforms and the Venice gas processing plant, all owned by others, were damaged. Between early September and mid-November 2005, no volumes moved through the Mississippi Canyon Corridor. By year-end, approximately 0.43 bcf/d or 75% of the pre-Katrina throughput level was back on line. Repairs to upstream and downstream infrastructure should allow throughput to fully recover in 2006.

Hurricane Katrina caused modest damage to certain Enbridge assets in the Destin Corridor. However, upstream and downstream oil and natural gas liquids pipelines facilities owned by others experienced damage and were not operational until mid-October. Operations were restored by the end of October with production throughput continuing to increase as repairs of non-Enbridge facilities were completed. As of December 31, 2005, volumes on the Destin Corridor were up to 0.89 bcf/d which is approximately 95% of the pre-hurricane level.

Hurricane Rita caused no material incremental damage to the Mississippi Canyon and Destin Corridors.

Hurricanes Katrina and Rita caused no material damage in the Green Canyon Corridor and volumes were unaffected by the hurricanes.

## Gas Pipelines Earnings

(millions of Canadian dollars)

Earnings from Gas Pipelines increased in 2005 as a result of the addition in 2005 of earnings from Enbridge Offshore Pipelines. Earnings from Alliance Pipeline US and Vector Pipeline were modestly lower due to the stronger Canadian dollar in 2005.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 42 of 122 Appendix C

The Garden Banks and Stingray Corridors were in the direct path of Hurricane Rita. In these corridors, there was minimal damage to the Enbridge owned offshore pipelines and platform facilities. In the Garden Banks Corridor, volumes returned to pre-hurricane levels in mid-November when repairs to an upstream producer gathering line were completed. Volumes on the Stingray pipeline began flowing again in early November at a rate of approximately 0.1 bcf/d and were at 0.325 bcf/d by year-end or 65% of pre-hurricane levels. Volumes are expected to return to pre-hurricane levels in early 2006 following completion of repairs to the Stingray onshore plant facility scheduled for January 2006 and repairs to third party processing facilities.

## **Strategy**

The five main elements of the Gas Pipelines strategy are: (i) continue to expand the existing Alliance and Vector systems and position them for northern gas development; (ii) capitalize on the offshore Gulf of Mexico assets through continued joint venture consolidation, connection of new gas discoveries and acquisition of other deepwater systems; (iii) consolidate Enbridge's assets in the Chicago-to-Dawn corridor and extend its presence downstream of Dawn; (iv) achieve an equity participation in an Alaska-to-Alberta gas pipeline in partnership with producers; and (v) pursue and develop pipeline infrastructure required to move U.S. Rockies gas to the Midwest and northeastern markets. The strategy is based on the Company's assessment of the supply and demand for natural gas.

## Supply and Demand for Natural Gas

North American natural gas demand is expected to grow at a modest rate for the next three to five years primarily driven by growth in power generation, which more than offsets declines in industrial demand. The re-emergence of coal as a generation source, due to advances in clean-coal technology, as well as the re-emergence of nuclear power as a source of electricity generation will mitigate growth in the demand for natural gas in that sector. The development of oil sands projects in Alberta also impacts the demand for natural gas, as various extraction and upgrading processes require the use of natural gas. Demand growth is expected to be constrained by recent strong prices and increased volatility due to supply concerns from traditional sources. Over time, the entry of new supplies from the U.S. Rockies and the Alaska North Slope / Mackenzie Delta as well as Liquefied Natural Gas are expected to alleviate supply concerns and provide opportunities for Enbridge to deliver this natural gas to markets.

To respond to this expected growth in demand, Enbridge will further develop its existing gas pipelines investments and pursue new growth platforms including an increased presence in the Gulf of Mexico. Offshore development is expected to include options that offer both crude oil and natural gas transportation. Alliance will focus on cost-effective optimization, more efficient maintenance practices and increased heating values. Alliance is well positioned to participate in the delivery of Alaska/Mackenzie Delta gas to markets in the United States. Vector's strategy will focus on ensuring a safe and cost-efficient expansion for a late-2007 in-service date. New growth platforms could include significant ownership in a pipeline transporting gas from the U.S. Rockies; ownership in a pipeline connecting Dawn, Ontario, to New York State; storage facilities in Ontario and a significant ownership position in other storage facilities; as well as the pursuit of an equity participation in the Alaska-to-Alberta gas pipeline.

The Company continues to pursue developments in the Gulf of Mexico, building on its initial \$754 million investment in EOP. During 2005, Enbridge increased its interest in Garden Banks Gas Pipeline and Neptune Pipeline Company, two systems within EOP. The Company believes that gas production from the deepwater Gulf of Mexico will increase from pre-Hurricane Katrina flows of 3.5 to 4.0 bcf/d to approximately 8 bcf/d by 2010. Strategically, the Company believes that its status as an independent operator, not a producer, will allow for the further consolidation of joint venture interests across the Gulf of Mexico. Further growth is anticipated from connecting new leases and entry into oil pipelines.

## Neptune Project

The Company plans to construct and operate both a natural gas lateral and a crude oil lateral to connect the deepwater Neptune oil and gas field in the Green Canyon Corridor to existing Gulf of Mexico pipelines, extending Enbridge's existing

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 43 of 122 Appendix C

Gulf of Mexico infrastructure. The laterals are expected to cost a total of approximately US\$125 million and will have the capacity to deliver in excess of 200 mmcf/d of gas and approximately 50,000 bpd of oil. Construction of the Neptune oil and gas laterals is scheduled for the second quarter of 2007 with first throughput expected by year-end 2007.

## **Capital Expenditures**

The Company expects to spend approximately \$100 million in 2006 in the Gas Pipelines segment for on ongoing capital improvements, core maintenance capital projects and expansion, including the Neptune Project described above.

#### **Business Risks**

The risks identified below are specific to the Gas Pipelines business. General risks that affect the Company as a whole are described under Risk Management.

## Alliance Pipeline US and Vector Pipeline

#### Supply and Demand

Currently, pipeline capacity out of the WCSB exceeds supply. Alliance Pipeline US and Vector Pipeline have been unaffected by this excess supply environment mainly because of long-term capacity contracts going to 2015. Vector Pipeline could be negatively impacted by the basis (location) differential in the price of natural gas between Chicago and Dawn, Ontario relative to the transportation toll.

#### Exposure to Shippers

The failure of the shippers to perform their contractual obligations under the transportation contracts could have an adverse effect on the cash flows and financial condition of Alliance Pipeline US and Vector Pipeline. To reduce this risk, Alliance Pipeline US and Vector Pipeline monitor the creditworthiness of each shipper and receive collateral for future shipping tolls should a shipper's credit position not meet agreed thresholds. Vector Pipeline also has a diverse group of long-term transportation shippers, which includes various gas and energy distribution companies, producers and marketing companies, further reducing the exposure.

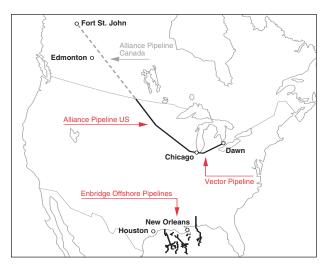

#### Competition

Alliance Pipeline US faces competition for pipeline transportation services to the Chicago area from both existing and proposed pipeline projects. Competing pipelines, with a combined transportation capacity of approximately 3.8 bcf/d provide natural gas transportation services from the WCSB to distribution systems in the Midwestern United States. In addition, there are several proposals to upgrade existing pipelines serving these markets. Any new or upgraded pipelines could either allow shippers greater access to natural gas markets or offer natural gas transportation services that are more desirable than those provided by the Alliance System. Shippers on Alliance Pipeline US have access to additional delivery capacity at no additional cost, other than fuel requirements, serving to enhance Alliance Pipeline US's competitive position.

Vector Pipeline faces competition for pipeline transportation services to its delivery points from new or upgraded pipelines, which could offer transportation that is more desirable to shippers because of cost, supply location, facilities or other factors. Vector Pipeline has mitigated this risk by entering into long-term firm transportation contracts for approximately 70% of its capacity and medium-term contracts for the remaining capacity. These long-term firm contracts penalize early termination if shippers do not extend their contracts beyond the initial term. The effectiveness of these mitigation factors is evidenced by the increase in the utilization of the pipeline since its construction, despite the presence of transportation alternatives.

#### Regulation

Both Vector Pipeline and Alliance Pipeline US are regulated by the FERC which has the responsibility to ensure that rates charged are not greater than those necessary to enable the pipelines to recover costs prudently incurred and to earn a reasonable return. Under FERC regulations, the FERC, shippers and others have the opportunity to contest rates and the tariff structure.

Gas Pipelines

## Enbridge Offshore Pipelines

#### Weather

Adverse weather, such as hurricanes, may impact EOP financial performance directly or indirectly. Direct impacts may include damage to EOP facilities resulting in lower throughput and inspection and repair costs. Indirect impacts include damage to third party production platforms, onshore processing plants and refineries that indirectly decrease throughput on EOP systems.

## Competition

There is significant competition for new and existing business in the Gulf of Mexico. EOP has been able to capture key opportunities, which extends its footprint, positioning EOP to more fully utilize existing capacity. EOP serves a majority of the strategically located deepwater host platforms and its extensive presence in the deepwater Gulf of Mexico has EOP

well positioned to generate incremental revenues, with modest capital investment, by transporting production from sub-sea development of smaller fields tied back to existing host platforms. However, offshore pipelines typically have available capacity resulting in significant and aggressive competition for new developments in the Gulf of Mexico.

#### Regulation

The transportation rates on many of EOP's transmission pipelines are generally based on a regulated cost-of-service methodology and are subject to regulation by the FERC. These rates may be subject to challenge.

## Other Risks

Other risks directly impacting financial performance include underperformance relative to expected reservoir production rates, delays in project start-up timing and capital expenditures in excess of those estimated. Capital risk is mitigated in some circumstances by having area producers as joint venture partners and through cost of service tolling arrangements.

#### SPONSORED INVESTMENTS

## **Earnings**

(millions of Canadian dollars)	2005	2004	2003
Enbridge Income Fund (EIF)	34.2	30.0	17.6
Enbridge Energy Partners (EEP)	21.7	28.6	27.3
Gain on sale of assets to EIF	-	_	169.1
Dilution gains	8.9	7.6	20.3
	64.8	66.2	234.3

## **Business Activities**

Sponsored Investments includes the Company's 10.9% ownership interest in EEP and a 41.9% equity interest in EIF. Enbridge manages the day-to-day operations of, and develops and assesses opportunities for each, including both organic growth and acquisition opportunities.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 45 of 122 Appendix C

## **Enbridge Energy Partners**

EEP owns and operates crude oil and liquid petroleum transmission pipeline systems, natural gas gathering and related facilities and marketing assets in the United States. Significant assets include the Lakehead System, which is the extension of the Enbridge System in the U.S., natural gas gathering and processing assets in Texas, the mid-continent crude oil system, various interstate and intrastate pipelines and a crude oil feeder pipeline in North Dakota.

EEP makes quarterly distributions of its available cash to its common unitholders, including Enbridge. Under the Partnership Agreement, Enbridge, as general partner, receives incremental incentive cash distributions, which represent incentive income, on the portion of cash distributions, on a per unit basis, that exceed certain target thresholds as follows:

	Unitholders	Enbridge
Quarterly Cash Distributions per Unit:		
Up to \$0.59 per unit	98%	2%
First Target – \$0.59 per unit up to \$0.70 per unit	85%	15%
Second Target – \$0.70 per unit up to \$0.99 per unit	75%	25%
Over Second Target - Cash distributions greater than \$0.99 per unit	50%	50%

During 2005, EEP paid quarterly distributions of 0.925 per unit (2004 – 0.925 per unit; 2003 – 0.925 per unit). Of the 21.7 million Enbridge recognized as earnings from EEP during 2005, 64.7% (2004 – 50%; 2003 – 49%) were incentive earnings while 35.3% (2004 – 50%; 2003 – 51%) were Enbridge's share of EEP's earnings.

#### Enbridge Income Fund

EIF's primary assets include a 50% interest in Alliance Pipeline Canada and the Enbridge Saskatchewan System, both purchased from the Company in 2003. The Alliance Pipeline Canada is the Canadian portion of the Alliance System, described in the Gas Pipelines segment above. The Enbridge Saskatchewan System owns and operates crude oil and liquids pipelines systems from producing fields in southern Saskatchewan and southwestern Manitoba connecting primarily with Enbridge Inc.'s mainline pipeline to be transported to the United States.

Enbridge receives a base annual management fee of \$0.1 million for management services provided to EIF plus incentive fees equal to 25% of annual cash distributions over \$0.825 per trust unit. In 2005, the Company received incentive fees of \$2.1 million (2004 – \$0.8 million, 2003 – nil). The Company is the primary beneficiary of EIF through a combination of the voting units and a preferred units investment and as such EIF is consolidated, starting January 1, 2005, under variable interest entity rules.

## **Results of Operations**

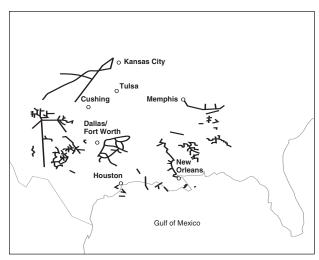

Earnings from Sponsored Investments are \$64.8 million for the year ended December 31, 2005, compared with \$66.2 million in 2004. EIF has increased earnings of \$4.2 million due to allowance oil sales on the Saskatchewan System and collection of a notional tax in tolls on Alliance Canada. This increase is more than offset by EEP's non-cash unrealized mark-to-market losses on derivative instruments that are considered ineffective hedges for accounting purposes.

The decrease in 2004 earnings compared with 2003 stems from the gain of \$169.1 million on the sale of the Company's interests in Alliance Pipeline Canada and Enbridge Pipelines (Saskatchewan) to EIF in 2003.

## Enbridge Income Fund

EIF earnings are \$34.2 million for the year ended December 31, 2005, compared with \$30.0 million for the year ended December 31, 2004. The 2005 results include higher preferred unit distributions as well as higher incentive income consistent with EIF's cash distribution increases in 2004. EIF's operating results benefited from strong performance at both Alliance Pipeline Canada and the Saskatchewan System.

Earnings for 2004 include a full year of operations whereas earnings for 2003 included only the six months from inception of EIF on June 30, 2003.

Enbridge Energy Partners - Gas Pipelines

## **Enbridge Energy Partners**

Earnings of \$21.7 million for the year ended December 31, 2005, are down from 2004 earnings of \$28.6 million due to \$5.0 million (net to Enbridge) of unrealized mark-to-market losses on derivative financial instruments, which do not qualify for hedge accounting treatment. While Enbridge believes the hedging strategies are sound economic hedging techniques, they do not qualify for hedge accounting and must be accounted for on a mark-to-market basis through earnings. In addition, EEP earnings have been negatively affected by lower Lakehead System volumes, a stronger Canadian dollar and a lower ownership interest offset with higher earnings from the natural gas business.

EEP's 2004 results reflected higher operating earnings, compared with 2003, partially offset by the

stronger Canadian dollar, a lower ownership interest and the negative effect of a FERC decision requiring a refund to shippers on one of EEP's regulated natural gas pipelines. The higher operating earnings were from increased volumes on the main crude oil liquids pipeline system, as well as increased throughput and higher processing margins on various natural gas assets.

EEP issued partnership units in each of 2005, 2004 and 2003. Because Enbridge did not fully participate in these offerings, dilution gains resulted.

## Strategy

## **Enbridge Energy Partners**

EEP intends to grow primarily through organic growth, supplemented by opportunistic acquisitions. Specifically, EEP intends to:

- increase the utilization and productivity of its core assets to meet the supply of and demand for hydrocarbons in the markets EEP serves; and
- develop and acquire complementary energy delivery assets, particularly in the Gulf Coast region of the United States, and improve the financial performance and operating efficiency of these assets.

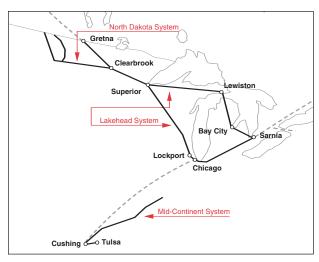

On January 30, 2006, EEP announced that it has received customer commitments to support the construction of a US\$530 million expansion and extension of its East Texas natural gas system (Project Clarity). The Project will handle growing natural gas production in East Texas and will consist of a 36-inch intrastate pipeline with a capacity of approximately 700 mmcf/d, a 250 mmcf/d treating facility and a number of upstream facilities, including gathering pipelines all of which are expected to be fully operational in late 2007.

#### Enbridge Income Fund

Enbridge Income Fund will continue to position itself as a premier income fund in Canada with a value proposition characterized by a low risk profile with dependable but modest organic growth, long-life assets and potential for further growth through energy infrastructure acquisitions.

## **Business Risks**

The risks identified below are specific to the Sponsored Investments business. General risks that affect the Company as a whole are described under Risk Management.

Enbridge Energy Partners - Liquids Pipelines

# Enbridge Energy Partners Supply and Demand

The profitability of EEP depends to a large extent on the volume of products transported on its pipeline systems. The volume of shipments on EEP's Lakehead System depends primarily on the supply of Western Canadian crude oil and the demand for crude oil in the Great Lakes and Midwest regions of the United States and eastern Canada. EEP expects future increased crude oil supplies from the oil sands projects in Alberta. In addition, Enbridge's future plans to provide access to new markets in the southern United States are expected to increase demand for Western Canadian crude, resulting in increased volumes for EEP.

EEP's natural gas gathering assets are also subject to changes in supply and demand for natural gas,

natural gas liquids and related products. Commodity prices impact the willingness of natural gas producers to invest in additional infrastructure to produce natural gas.

These assets are also subject to competitive pressures from third-party and producer owned gathering systems.

## Regulation

In the U.S., the interstate and intrastate gas pipelines owned and operated by EEP are subject to regulation by FERC or state regulators and their revenues could decrease if tariff rates were protested. While gas gathering pipelines are not currently subject to active regulation, proposals to more actively regulate intrastate gathering pipelines are currently being considered in certain of the states in which EEP does business.

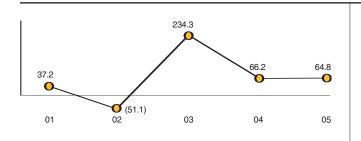

#### Market Price Risk

EEP's gas processing business is subject to commodity price risk for natural gas and natural gas liquids. Historically, these risks have been managed by using financial contracts, fixing the prices of natural gas and natural gas liquids. Certain of these contracts do not qualify for cash flow hedge accounting and EEP's earnings are exposed to mark-to-market valuation changes associated with certain of these contracts.

#### Enbridge Income Fund

Risks for Alliance Pipeline Canada are similar to those identified for the Alliance Pipeline US in the Gas Pipelines segment.

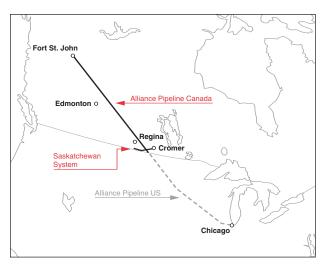

The majority of the volumes shipped on the Saskatchewan and Westspur common carrier pipeline systems, components of the Saskatchewan System, have no specific on-going volume commitments. There is no assurance that shippers will continue to utilize these systems in the future or transport volumes on similar terms or at similar tolls. However, there is limited pipeline competition in this area. The main competition to the pipelines is from trucking.

## Sponsored Investments Earnings

(millions of Canadian dollars)

Sponsored Investments includes the Company's 10.9% ownership interest in Enbridge Energy Partners and a 41.9% equity interest in Enbridge Income Fund. In 2005, Sponsored Investment earnings were down slightly from 2004 as increased EIF earnings were more than offset by EEP's non-cash unrealized mark-to-market losses on derivative investments.

Enbridge Income Fund

EIF's liquids and natural gas pipelines are dependent upon the supply of and demand for crude oil and natural gas from Western Canada. Supply, in turn, is dependent upon a number of variables, including the level of exploration, drilling, reserves and production of crude oil and natural gas, the accessibility of Western Canadian crude oil and natural gas, the price and quality of crude oil and natural gas available from alternative Canadian and United States sources. In addition, the regulatory environments in Canada and the United States, including the continued willingness of the governments of both countries to permit the export of crude oil and natural gas from Canada to the United States on a commercially acceptable basis, could impact the supply of crude oil and natural gas.

#### GAS DISTRIBUTION AND SERVICES

## **Earnings**

(millions of Canadian dollars)	2005	2004	2003
Enbridge Gas Distribution 1	111.9	133.1	103.0
Noverco 1	28.3	32.3	24.2
CustomerWorks/ECS	23.2	20.5	16.9
Other Gas Distribution 1	6.7	8.5	6.8
Enbridge Gas New Brunswick	6.1	3.7	4.4
Gas Services	0.2	(2.8)	(5.9)
Aux Sable	5.3	7.3	(6.9)
AltaGas Income Trust (AltaGas)	_	21.1	12.3
Gain on sale of investment in AltaGas	_	97.8	_
Impairment loss on Calmar gas plant	-	(8.2)	_
Other	(2.9)	(0.2)	(1.2)
	178.8	313.1	153.6

<sup>1</sup> The year ended December 31, 2004 includes earnings for the 15 months ended December 31, 2004. The year ended December 31, 2003 includes earnings for the year ended September 30, 2003.

## **Business Activities**

The largest portion of Gas Distribution and Services is the gas distribution operations of Enbridge Gas Distribution. This segment also includes Noverco, CustomerWorks, the gas services business, which manages the Company's merchant capacity commitments on Alliance and Vector, and the Company's investment in Aux Sable.

## **Enbridge Gas Distribution**

EGD is Canada's largest natural gas distribution company and has been in operation for more than 150 years. It serves over 1.75 million customers in Central and Eastern Ontario, Southwestern Quebec, and parts of Northern New York State. EGD's operations in Ontario are regulated by the Ontario Energy Board (OEB).

#### Gas Distribution Rates

In November 2004, EGD received approval from the OEB for its 2005 rates, under a cost of service model. The key elements are summarized below:

	Requested	Approved	Approved
Regulatory year	2006	2005	2003
Rate base (millions of Canadian dollars)	\$3,596.2	\$3,422.1	\$3,155.8
Deemed common equity for regulatory purposes	35.00%	35.00%	35.00%
Rate of return on common equity	10.11%	9.57%	9.69%

The rate of return on common equity is calculated with reference to a formula approved by the OEB that incorporates the long bond yield forecast. The rate of return of 10.11% requested for 2006 was a preliminary calculation based on the forecast yield for long bonds used in the formula at the time the 2006 rate application was made. Subsequent movements in the forecast yield for long bonds have resulted in an updated rate of return on common equity of 8.74% becoming applicable for 2006.

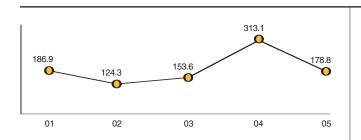

EGD's 2005 and 2003 rates were established pursuant to a cost-of-service methodology that allowed revenues to be set to recover EGD's forecast costs. For 2004, rates were set by increasing 2003 rates by 90 percent of the forecast Ontario consumer price index, resulting in an increase of 1.8 percent. The OEB also added a sharing mechanism to fiscal 2004, whereby if earnings on a weather-normalized basis exceed the benchmark ROE, these excess earnings were shared on a 50/50 basis between ratepayers and the Company's shareholders. The 2004 financial results for the fifteen months ended December 31, 2004, include a reduction of \$8.7 million after tax for the earnings sharing with customers.

Forecast costs included gas commodity and transportation, operation and maintenance, depreciation, income taxes, and the debt and equity costs of financing the rate base. The rate base is EGD's investment in all assets used in gas distribution, storage and transmission, as well as an allowance for working capital. Under the cost-of-service model, it is EGD's responsibility to demonstrate to the OEB the prudence of the forecast costs. EGD does not earn a profit on the price of natural gas.

The rate base is financed by EGD through a combination of debt and equity. The proportion of debt and equity, currently 65% and 35% respectively, is approved by the OEB. For the debt portion, interest expense incurred by the Company is recovered in rates. For the equity portion, the OEB sets the rate of return that EGD may recover in rates. The allowed rate of return on equity for EGD is based on the forecast yield on Canadian government long-term bonds.

Earnings from EGD are impacted to the extent that volumes sold differ from forecasted volumes. There are four key factors that affect the probability that EGD will distribute the forecast volumes. These are weather, economic conditions, gas prices and the prices of competing energy sources and the number of customers added. To the extent that these factors vary unfavourably compared with forecasts, earnings will be less than the total revenue requirements established in the ratemaking process due to lower distribution volumes.

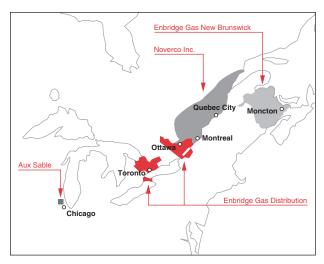

Distribution volume may also be impacted by the increased adoption of energy efficient technologies along with more efficient building construction that continues to place downward pressure on annual average consumption.

## Gas Distribution and Services Earnings

(millions of Canadian dollars)

Gas Distribution and Services earnings in 2005 were down \$134.3 million compared with 2004. Earnings in 2004 included 15 months of operations from the gas distribution operations as a result of the change in fiscal year end, and an after-tax gain of \$97.8 million on the sale of the investment in AltaGas Income Trust.

Gas Distribution and Services

Even in those circumstances where EGD attains its total forecast distribution volume, it may not earn the approved return on equity due to other forecast variables such as the mix between the higher margin residential and commercial sectors, and lower margin industrial sector.

#### 2006 Rate Application

On March 18, 2005, EGD filed an application with the OEB for approval of the 2006 rates, under a cost-of-service model. A final decision on this rate application is expected from the OEB during the first quarter of 2006.

In 2005, EGD added approximately 50,700 customers (15 months ended December 31, 2004 – 74,500; 12 months ended October 31, 2003 – 54,800). The increased number of customers is due primarily to the strong housing market in EGD's franchise area driven

by low interest rates, urbanization and immigration patterns. EGD expects to continue to add 45,000 to 55,000 customers per year in the foreseeable future due to continued growth in the greater Toronto area. This level of customer growth would lead to continued growth of EGD's rate base. EGD serves approximately 95% of the residential homes in its franchise area and, as the price of natural gas continues to be favourable relative to competing energy sources, expects to continue this level of market penetration.

#### CustomerWorks/ECS

CustomerWorks/ECS includes the operations of CustomerWorks and Enbridge Commercial Services (ECS). CustomerWorks is 70% owned by Enbridge and provides customer care services, including billing, collections, and operation of call centers primarily for; EGD, Direct Energy Essential Home Services and Terasen (a gas distribution company in British Columbia). ECS owns the customer information services system that CustomerWorks uses under license to provide services to EGD.

#### Noverco

Enbridge owns an equity interest in Noverco through ownership of 32% of the common shares and a cost investment through ownership of preferred shares. Noverco is a holding company that owns approximately 75% of Gaz Metro Limited Partnership (Gaz Metro), a gas distribution company operating in the province of Quebec and the state of Vermont. Gaz Metro also has a 50% interest in TQM Pipeline, which transports natural gas in Quebec.

Noverco also has an investment in the common shares of Enbridge resulting in dividend and earnings adjustments at Enbridge. Noverco receives dividends from Enbridge but because Enbridge owns part of Noverco, a portion of the dividends Noverco receives are effectively dividends that Enbridge has paid to itself. This portion of the dividends paid reduces the book value of Enbridge's investment in Noverco.

#### Enbridge Gas New Brunswick

The Company owns 64% of, and operates, Enbridge Gas New Brunswick (EGNB), which owns the natural gas distribution franchise in the province of New Brunswick. EGNB is constructing a new distribution system and has approximately 4,858 customers. Approximately 470 kilometres (294 miles) of distribution main has been installed with the capability of attaching approximately 20,000 customers. EGNB is regulated by the New Brunswick Board of Commissioners of Public Utilities.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 51 of 122 Appendix C

#### Aux Sable

Enbridge owns 42.7% of Aux Sable, a NGL extraction and fractionation business. Aux Sable owns and operates a plant, attached to the terminus of the Alliance System. The plant extracts NGL from the energy-rich natural gas transported on the Alliance System, as necessary, to meet the heat content requirements of local distribution companies, which require natural gas with less NGL, or lower heat content, and to take advantage of positive commodity price spreads. The NGL, which include ethane, propane, normal butane, iso-butane and natural gasoline, are resold. Aux Sable's ability to generate earnings is dependent on the difference between the prices of the NGL and natural gas, which Aux Sable must buy to replace the NGL it extracts from the Alliance System. Starting in 2004, heat content requirements were reduced providing increased operating flexibility, largely enabling Aux Sable to operate only when it is economic.

Aux Sable has entered into a binding memorandum of agreement with BP Products North America Inc. to sell all of its NGL production to BP at its facilities near Chicago. In return, BP will pay Aux Sable a fixed annual fee and a share of any net margin generated from the business in excess of specified thresholds. In addition, BP will compensate Aux Sable for all operating, maintenance and capital costs associated with the Aux Sable facilities subject to certain limits on capital costs. BP will supply, at its cost, all make-up gas and fuel supply gas to the Aux Sable facilities and will assume responsibility for the capacity on the Alliance Pipeline held by an Aux Sable affiliate, at market rates. The agreement will be for an initial term of 20 years, commencing December 31, 2005, and may be extended by mutual agreement for 10 year terms. If cumulative losses exceed a certain limit, BP will have the option to terminate the agreement, however Aux Sable has the right to reduce such losses to avoid termination.

#### **Gas Services**

The Company's gas services business markets natural gas to optimize Enbridge's commitments on the Alliance and Vector Pipelines. It also has a growing business of providing fee for service arrangements for third parties, leveraging its marketing expertise.

#### Tidal Energy

Tidal Energy (Tidal) provides crude oil marketing services for the Company and its customers in a full range of crude oil types including light sweet, light and medium sours and several heavy grades and natural gas liquids. Tidal transacts at many of the major North American market hubs and provides its customers with a variety of programs including flexible pricing arrangements, hedging programs, product exchanges, physical storage programs and total supply management, through the analysis and implementation of different transportation options, reduced quality differentials and tariff structures, and utilizing Risk Management Pricing options. Tidal's business involves buying, selling and storing large quantities of crude oil at low margins. Tidal does not trade on a speculative basis and its business is tightly monitored by, and must comply with, the Company's formal risk management policies. Earnings from Tidal are included in Other.

## **Results of Operations**

Earnings are \$178.8 million for the year ended December 31, 2005, compared with \$313.1 million for the year ended December 31, 2004. The 2004 earnings include 15 months of operations from the gas distribution operations as a result of the change in EGD's fiscal year end. Also included in the earnings of 2004 is the after-tax gain of \$97.8 million on the sale of the investment in AltaGas Income Trust.

Reported earnings for the year ended December 31, 2003, included EGD's results for the twelve months ended September 30, 2003.

## **Enbridge Gas Distribution**

(millions of Canadian dollars)	2005	2004	2003
Enbridge Gas Distribution – as reported	111.9	133.1	103.0
Significant non-operating factors and variances:			
Calendar year basis adjustment	-	(11.5)	8.0
Regulatory disallowances	-	_	35.2
Colder than normal weather	-	(21.3)	(33.9)
Unbilled revenue	-	_	(33.6)
Tax rate adjustments	_	_	51.4
	111.9	100.3	122.9

As noted above, earnings for the year ended December 31, 2004, included 15 months of earnings for Enbridge Gas Distribution, as a result of the elimination of the quarter lag basis of consolidation. Earnings for the first quarter, ended December 31, 2003, have been eliminated to adjust 2004 earnings to a calendar basis, making it comparable to 2005. The remaining EGD variance, after considering the items listed above, is the result of a higher rate base and a number of smaller positive variances across the utility.

Earnings for 2003 have also been adjusted to reflect the calendar basis, making them comparable with 2005. The 2003 regulatory disallowances related to gas costs for a long-term transportation contract, an outsourcing disallowance, as well as a \$26.0 million write-down of a regulatory receivable. Unbilled revenue is the difference between amounts charged to customers based on estimated gas consumption and the actual volumes delivered in the reporting period. Starting October 1, 2003, EGD refined its process and began recording unbilled revenue on a quarterly basis using a current estimate of actual volumes delivered. In 2003, the unbilled revenue accrual was based on amounts approved by the OEB for the September 30 year-end. When the 2003 results are adjusted to reflect a calendar year, the quarter added, October 1 to December 31, 2003, has unbilled revenue recorded at the full December 31 amount. The quarter removed, October 1 to December 31, 2002, does not include the full impact of unbilled revenue because EGD was still using its previous estimation process during that period. Therefore, it is necessary to remove the effects of unbilled revenue, recorded in the quarter ended December 31, 2003, from the calendar adjustment to make 2003 comparable with 2004 and 2005.

Normal weather is the weather forecast by EGD in its annual rates application, in the Toronto area, including the impacts of both the long run and short run actual historical weather experience, more heavily weighted on the short run experience, and is subject to OEB approval. This financial measure is unique to EGD and, due to differing franchise areas, is unlikely to be directly comparable to the impact of weather-normalized factors that may be identified by other companies. Moreover, normal weather may not be comparable year-to-year given that the forecasting model weights the degree-days from the most recent years more heavily to determine the estimate. This weather-normalized adjustment method is the same as the manner in which EGD calculates degree-days for regulatory purposes.

## Noverco

(millions of Canadian dollars)	2005	2004	2003
Noverco – as reported	28.3	32.3	24.2
Significant non-operating factors and variances:			
Calendar year basis adjustment	_	(13.6)	3.4
Dilution gains in Noverco on Gaz Metro issuances	(7.3)	_	(7.1)
Tax rate adjustments	_	_	0.7
	21.0	18.7	21.2

Noverco earnings are \$2.3 million higher for the year ended December 31, 2005 compared with the year ended December 31, 2004, after considering the items listed above. The increase reflects a future income tax recovery related to the receipt of cash dividends net of an adjustment for reciprocal dividends. During the year, the Company received a \$70 million cash dividend from Noverco and recorded a \$50 million adjustment for reciprocal dividends paid to Noverco.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 53 of 122 Appendix C

Weather variations do not affect Noverco's earnings as Gaz Metro is not exposed to weather risk. A significant portion of the Company's earnings from Noverco is in the form of dividends on its preferred share investment, which is based on the yield of 10-year Government of Canada bonds plus 4.34%.

#### Other Gas Distribution Operations

(millions of Canadian dollars)	2005	2004	2003
Other Gas Distribution Operations – as reported	6.7	8.5	6.8
Significant non-operating factors and variances:			
Calendar year basis adjustment	-	(2.1)	(0.4)
	6.7	6.4	6.4

Earnings from Other Gas Distribution Operations, after the calendar basis adjustment, are consistent for the three year period.

## Enbridge Gas New Brunswick

Enbridge Gas New Brunswick earnings are \$6.1 million for the year ended December 31, 2005, compared with \$3.7 million for the year ended December 31, 2004. The increase is consistent with the settlement of debt through the issue of equity, resulting in a higher equity base.

#### **Gas Services**

Gas Services recorded earnings of \$0.2 million for the year ended December 31, 2005, an improvement of \$3.0 million from 2004. The Gas Services business includes several natural gas related businesses, including U.S. Oil acquired in January 2005.

Gas Services experienced a loss of \$2.8 million for the year ended December 31, 2004, compared with a loss of \$5.9 million in 2003. The improvement from 2003 reflected a continuing increase in the demand for natural gas and associated transmission services, reducing merchant capacity losses on the Alliance System and Vector Pipeline.

#### Aux Sable

Earnings for the year ended December 31, 2005, are \$5.3 million compared with earnings of \$7.3 million for the year ended December 31, 2004. The decrease is due to higher natural gas costs in 2005, which were not offset by product sales prices causing weak margins and therefore decreased production levels.

The positive earnings from Aux Sable in 2004 compared with 2003 were the result of positive fractionation margins. Enbridge's ownership interest in Aux Sable was also higher in 2004, as an additional 11.8% was acquired in April 2003 resulting in the current ownership of 42.7%. As the acquisition of the additional interest was at a discount to the book value, depreciation expense is lower on that additional interest.

#### AltaGas

The Company sold its investment in AltaGas in the third quarter of 2004. The earnings contribution from AltaGas in 2004 reflected a number of factors including an \$8.0 million after-tax dilution gain.

Other includes higher costs in 2005, compared with 2004, related to the development of the Rabaska LNG facility.

## Strategy

While EGD will continue to be under the cost-of-service model in 2006, EGD will continue to file through the cost-of-service process to ensure a just and reasonable base is in place for a 2008 incentive regulation plan. Enbridge will continue to explore new business opportunities that are complementary to the distribution business, including energy and fuel cell investments. Enbridge will pursue an industry facilitation strategy to make it easier for customers to find, install and finance natural gas appliances. Enbridge is committed to enhancing customer satisfaction by aligning service standards with customer commitment and to ensuring customers have access to a secure gas supply by pursuing new sources of natural gas and storage opportunities.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 54 of 122 Appendix C

Enbridge intends to pursue natural gas business development opportunities complementary to the existing gas distribution and services businesses through:

- developing LNG regasification projects and related pipeline infrastructure, pursuing marketing and storage opportunities that optimize existing assets,
- pursuing marketing and storage opportunities that optimize existing assets,
- exploring gas-fired generation opportunities that are underpinned by long-term contracts and improve the utilization of existing assets, and
- increasing the scale of the wind power business in locations near existing Enbridge infrastructure.

Further to this strategy, Enbridge is developing a number of projects which are described below.

## Rabaska LNG Facility

Enbridge, Gaz Metro and Gaz de France are continuing development of the previously announced Rabaska LNG terminal to be located on the St. Lawrence River in Levis, Quebec. The Levis municipal council has reversed an earlier decision opposing the project and are now fully supportive. Options for the required land have been secured and environmental filings were filed with federal and Quebec authorities in January 2006. The partners are in the process of developing definitive supply and market agreements. The project is expected to cost approximately \$840 million in total.

#### Goreway Power Project

The Company, in partnership with Sithe Global Power, L.L.C., has been selected by the Ontario Power Authority (OPA) to enter into negotiations to develop a 880-megawatt gas-fired power generation plant in Brampton, Ontario. The new plant would provide needed electricity to the Western Greater Toronto Area. Enbridge would hold a 25% interest in the project, which would provide the Company with an entry point into the gas-fired power generation business in a geographical area already served by the Company's largest gas distribution business, EGD.

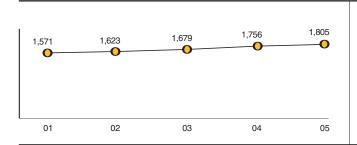

#### **Ontario Wind Project**

Enbridge will be developing 200 megawatts of wind power on the eastern shore of Lake Huron in Ontario. Construction will commence in mid-2006 and total capital expenditures are expected to be approximately \$400 million. Enbridge has entered into a 20-year electricity purchase agreement with the OPA for all of the power produced by the project. Enbridge currently has ownership in three wind power projects, which generate over 70 megawatts, in total.

#### **Capital Expenditures**

In order to support continuing customer growth, expansion of EGD's network on an ongoing basis is required. In addition, as part of its 2006 rate application, EGD has requested the OEB's approval for an accelerated program to replace the remaining cast iron mains with polyethylene mains. If the OEB approves the request for the accelerated cast iron main replacement program along with certain other requested capital expenditures, total capital expenditures during 2006 will be approximately \$460 million, as compared to the annual capital expenditures in recent years of between \$250 million to \$300 million a year.

Capital expenditures in other Gas Distribution and Services businesses, including the Ontario Wind Project, described above, are expected to be approximately \$240 million in 2006.

Gas Distribution Number of Active Customers (thousands)

Enbridge Gas Distribution continues to add between 50,000 and 60,000 new customers per year: the 2004 number reflects the 15-month period reported as part of Enbridge's change in financial reporting to eliminate consolidation of gas distribution operations on a quarter lag basis.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 55 of 122 Appendix C

## **Enbridge Gas Distribution Legal Proceedings**

#### Class Action Lawsuit - late payment penalties

On April 22, 2004, the Supreme Court of Canada released its decision in a case commenced against EGD by a customer with respect to late payment penalties. The Supreme Court of Canada determined that EGD would be required to repay a portion of amounts paid to it as late payment penalties from April 1994. The total amount of late payment penalties billed between April 1994 and February 2002 (when EGD's late payment penalty was revised), was approximately \$74 million, of which a portion may be eligible for repayment. The amount payable is not determinable at this time. The Supreme Court has directed that a lower court determine the amount payable. Case conferences were held before a judge of the Ontario Supreme Court in August and December 2004 and March 2005 to discuss the remaining outstanding issues following the Supreme Court's decision. Further court proceedings to determine the amount payable and other related issues are likely to be held in early 2006.

Late payment penalty revenues are included in EGD's estimate of revenues for the year and therefore accrue to the benefit of all customers, reducing the cost of providing distribution services. The OEB approves these estimates and the resulting rates each year. EGD intends to apply to the OEB for recovery of any amount payable that results from this action.

#### **Bloor Street Incident**

EGD has been charged under both the Ontario Technical Standards and Safety Act (TSSA) and the Ontario Occupational Health and Safety Act (OHSA) in connection with an explosion that occurred on Bloor Street West in Toronto on April 24, 2003. The maximum possible fine upon conviction on all charges would be \$5.0 million in aggregate. EGD has also been named as a defendant in a number of civil actions related to the explosion. A Coroner's Inquest in connection with the explosion has also been called, but the proceedings are stayed pending resolution of the TSSA and OHSA matters. The courts have not yet ruled upon any of the charges laid under the TSSA or the OHSA, and thus it is not possible at this time to predict or comment upon the potential outcome. The trial in respect of these charges commenced January 3, 2006. EGD does not expect the outcome of these civil actions to result in any material financial impact.

#### **Business Risks**

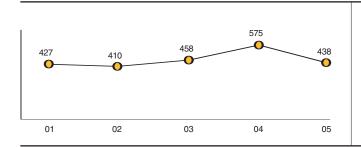

The risks identified below are specific to the Gas Distribution and Services business. General risks that affect the Company as a whole are described under Risk Management.

## **Enbridge Gas Distribution**

The business risks inherent in the natural gas distribution industry impact the ability of EGD to realize the revenue level required to generate the allowed return on equity. These business risks include obtaining timely and adequate rate relief, accuracy in forecasting, and then realizing, natural gas distribution volumes.

#### Volume Risks

Since customers are billed on a volumetric basis, the ability to collect the total revenue requirement (the cost of providing service) depends upon achieving the forecast distribution volume established in the annual ratemaking process. The probability of realizing such volume is contingent upon four key forecast variables: weather; economic conditions; the price of gas and the pricing of competitive energy sources; and the number of customer additions.

## Volume of Gas Distributed

(billions of cubic feet)

Gas volumes distributed reflect the growing number of active customers and the impact each year of warmer than normal or colder than normal weather: the 2004 number reflects the 15-month period.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 56 of 122 Appendix C

Sales and transportation of gas for customers in the residential and commercial sectors account for approximately 78% (2004 – 77%) of total distribution volume. Weather during the year, measured in degree days, has a significant impact on distribution volume as a major portion of the gas distributed to these two markets is used ultimately for space heating. In 2005, degree days closely approximated those forecast, resulting in no weather related volume variance.

Distribution volume may also be impacted by the increased adoption of energy efficient technologies along with more efficient building construction that continues to place downward pressure on annual average consumption. Average annual gas usage has declined by 1.0% per annum over the last 10 years, reflecting consistent customer conservation efforts.

Sales and transportation service to large volume commercial and industrial customers is more susceptible to prevailing economic conditions. As well, the pricing of competitive energy sources affects volumes distributed to these sectors as some customers have the ability to switch to an alternate fuel. Customer additions are important to all market sectors as continued expansion adds to the total consumption of natural gas.

Even in those circumstances where EGD attains its total forecast distribution volume, it may not earn the approved return on equity due to other forecast variables such as, mix of sales and transportation of gas for customers, the mix between the higher margin residential and commercial sectors, and lower margin industrial sector.

#### Rate Relief

Through the regulatory process, the OEB approves the return on equity, which EGD is allowed to earn, in addition to various other aspects of utility operations.

Rate relief could be pursued for significant unforecasted amounts allowing EGD to recover the costs of providing and maintaining the quality of its service while achieving the allowed rate of return on rate base.

EGD does not profit from the price of the natural gas commodity nor is it at risk for the difference between the actual cost of gas purchased and the price approved by the OEB. This difference is deferred as a receivable from or payable to ratepayers until the OEB approves its disposition.

#### **Forecasting Accuracy**

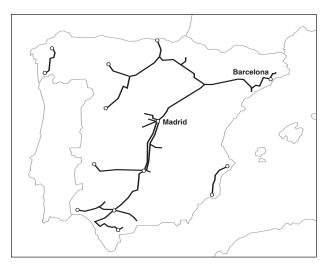

Forecasting accuracy is a risk since rates are established in advance, based on anticipated distribution volume by class of customer. Forecasts are also made for the future cost of capital including the forecast yield rate for long-term Government of Canada Bonds used in the determination of the return on equity. Through the forecasting process, it is intended that any changes in cost of service, regardless of whether they are caused by inflation or by level of business activity, would be reflected in new rates approved for that fiscal year based on the anticipated distribution volume.

## Franchise Rights

To date, the OEB has upheld the Company's exclusive right to serve all end users within its franchise area, under its franchise agreements. Similar franchise agreements are held by peer companies such as Union Gas Limited (UGL). On January 6, 2006, the OEB granted Greenfield Energy Corporation, a potential power-plant customer of UGL, the right to physically bypass UGL's distribution network within UGL's franchise area, in order to serve its own power-plant. The OEB's decision to not uphold exclusive franchise rights of a local distribution utility in Ontario is unprecedented. However, the OEB characterized this decision as transitional, and has set up a rates proceeding to assess the service requirements of gas fired generation in the province of Ontario. At the present time, the Company is unable to assess the possible future financial implications given the recentness of this decision and potential outcomes from the above rates proceeding.

#### **Gas Services**

Earnings from Gas Services are dependent upon the basis (location) differentials between Alberta and Chicago and between Chicago and Dawn. To the extent that the difference in the price of natural gas in the various locations is not greater than the cost of transportation between Alberta and Chicago or Dawn, earnings will be negatively affected.

Spain - CLH

#### Aux Sable

Earnings from Aux Sable were exposed to the effect of spreads between the sale prices of natural gas liquids and the purchase price of replacement natural gas. This risk was mitigated by lower heat content requirements on downstream pipelines, which commenced in 2004, and the use of commodity hedges, which opportunistically locked in positive margins when forward markets allow.

Demand for NGL is influenced by overall weather and economic activity because NGL are used to make energy products for home and industrial heating and as feedstock for the petrochemical industry, among other things. Because Aux Sable's earnings are dependent, to a large degree, on commodity prices, earnings can be volatile. To reduce this volatility,

Aux Sable entered into hedge transactions to fix the spread between natural gas and NGL prices. Starting in 2006, this risk will be eliminated by Aux Sable's contract with BP.

#### INTERNATIONAL

#### **Earnings**

(millions of Canadian dollars)	2005	2004	2003
CLH	61.6	48.6	46.3
OCENSA/CITCol	32.8	33.0	32.3
Other	(7.0)	(8.0)	(6.3)
	87.4	73.6	72.3

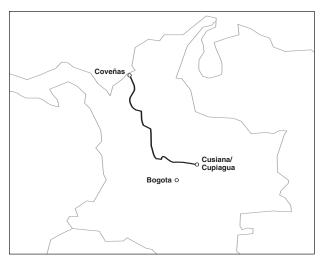

#### **Business Activities**

International includes earnings from the Company's 25% interest in Compañia Logistica de Hidrocarburos (CLH), Spain's largest refined products transportation and storage business, and OCENSA, a crude oil pipeline in Colombia. Earnings also include fees earned from technology and consulting services provided by Enbridge Technology Inc.

#### **CLH**

The primary activity of CLH is the storage and shipment of refined products through a comprehensive distribution network located throughout Spain. Earnings are based on a fee for service tariff, adjusted annually for inflation, and are dependent on throughput volumes and storage levels.

CLH is the primary basic logistics distribution network for refined products in Spain and provides services on an open access non-discriminatory basis. The system consists of over 3,400 kilometres of pipelines and 39 storage facilities located throughout the country. CLH provides product distribution to locations not connected to the pipeline system through its own fleet of tanker trucks and chartered tanker ships. CLH also offers secondary distribution services, the most significant being the services provided through CLH Aviation, which handles aviation fuel at airport locations throughout Spain. This business includes the storage of aviation fuel, loading of aircraft refueling units and the refueling of aircraft. New policies issued by the Spanish airport authority (AENA) to promote competition, allow for new non-CLH operators to enter the aircraft-refueling segment of this business. While CLH's share of this segment of the market may reduce over time, the aviation fuel business will continue. CLH's pipeline facilities are connected to the country's eight crude oil refineries and to major coastal port locations where most of Spain's crude oil and refined products are imported.

Colombia - OCENSA

Earnings from CLH are directly impacted by the demand for refined products including diesel and other fuels for transportation purposes. Economic growth in Spain over the last decade has been one of the highest in the European Union, which has led to increasing demand for energy, including refined products. The central region of the country, in and around Madrid, has seen the largest growth in demand. CLH plans to expand its system over the next several years in order to meet the continued growth expected in this region. This expansion, which includes looping of both the northern and southern main lines, will be constructed in phases to match the expected growth in volumes.

#### OCENSA/CITCol

The Company owns a 24.7% interest in OCENSA, a cost investment on which the Company earns a fixed

return. OCENSA is of one of two crude oil export pipelines within Colombia. Through a 100% owned entity, CITCol, the Company manages it and earns a fee for this service, which includes incentive earnings for operating performance.

#### **Results of Operations**

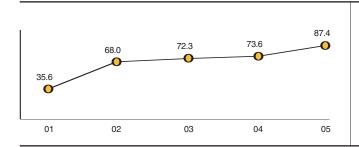

Earnings for the year ended December 31, 2005, are \$87.4 million compared with \$73.6 million for the year ended December 31, 2004. The increase results primarily from a \$7.6 million gain on the sale of land in CLH. Operating results at CLH are also improved due to higher volumes and increased average tariffs and storage revenues.

In 2004, increased earnings of \$1.3 million compared with 2003 were due to stronger results from CLH and from CITCol, operator of the OCENSA pipeline, which exceeded certain operational performance targets resulting in additional incentive income. Operating results from CLH reflected increased volumes in 2004 compared with 2003 due to greater demand for refined products throughout Spain, lower operating costs and the translation impact of the stronger Euro.

Other costs include other administration and business development costs.

## Strategy

Enbridge plans to increase its business development activity in Europe and Latin America. In Europe, Enbridge will seek opportunities to acquire assets or develop greenfield projects that facilitate expected supply flow through eastern European countries to satisfy growing western European demand. In Colombia, where the Company has substantial expertise, Enbridge will focus on acquiring additional assets.

## International Earnings

(millions of Canadian dollars)

International earnings include earnings from the Company's interests in CLH in Spain and OCENSA in Colombia. Earnings in 2005 increased primarily because of improved operating results at CLH and a \$7.6 million gain on the sale of land in CLH.

#### **Business Risks**

The International business is subject to risks related to political and economic instability, currency volatility, market and supply volatility, government regulations, foreign investment rules, security of assets and environmental considerations. The Company assesses and monitors international regions and specific countries on an ongoing basis for changes in these risks. Risks are mitigated by a combination of Enbridge's governance involvement, contractual arrangements, influence in operation of the assets, regular analysis of country risk, as well as foreign currency hedging and insurance programs.

#### CORPORATE

(millions of Canadian dollars)	2005	2004	2003
Corporate	(63.9)	(81.3)	(76.6)

The Corporate segment includes corporate financing costs, business development activities not attributable to a specific business segment and other corporate activities.

Corporate costs are \$63.9 million for the year ended December 31, 2005, compared with \$81.3 million for the year ended December 31, 2004. Corporate costs are lower in 2005 reflecting lower interest expense due to lower rates. Also, business development costs were higher in 2004.

The 2004 corporate costs include a higher expense for stock-based compensation, compared with 2003, and increased business development activity, partially offset with lower interest expense.

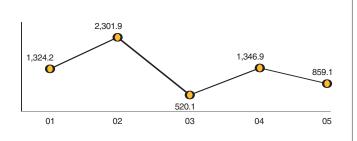

#### LIQUIDITY AND CAPITAL RESOURCES

The Company's cash generated from operations, commercial paper issuances, available capacity under credit facilities, which totaled \$3,454.8 million on December 31, 2005, and access to capital markets in Canada and the United States for the issuance of long-term debt, equity, or other securities are expected to be sufficient to satisfy liquidity and capital expenditure requirements.

The Company continues to manage its debt to capitalization ratio to maintain a strong balance sheet. The debt to capitalization ratio at December 31, 2005, including short-term borrowings, but excluding non-recourse short and long-term debt, was 64.5%, compared with 65.1% at the end of 2004. The improved debt to capitalization ratio reflects the Company's continuing commitment to maintaining a strong balance sheet.

The Company's current liabilities routinely exceed current assets. This deficit is funded through cash from operations, which are typically about double the balance of the deficit in a given year. For example, at the end of 2003, the working capital deficit was \$270.5 million. During 2004, operations generated \$886.7 million cash which easily funded the deficit. The Company expects this trend to continue.

The Company's cash balance at the end of the year includes \$16.4 million (2004 – \$6.0 million; 2003 – \$18.7 million) held in trust in joint ventures, pursuant to finance agreements within the joint ventures.

Capital Expenditures, Investments and Acquisitions (millions of Canadian dollars)

The 2005 total for capital expenditures, investments and acquisitions reflects regular additions to property, plant and equipment, primarily related to the gas distribution utility; expenditures on capital projects such as the reversal of the Spearhead Pipeline and the Ontario Wind Power Project; and the acquisition of additional interests in Enbridge Offshore Pipelines.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 60 of 122 Appendix C

## **Operating Activities**

Cash from operating activities increased to \$903.5 million for the year ended December 31, 2005, from \$886.7 million for the year ended December 31, 2004, and \$368.5 million for the year ended December 31, 2003.

(millions of Canadian dollars)	2005	2004	2003
Earnings net of non-cash items	1,300.9	1,027.8	938.3
Changes in operating assets and liabilities	(397.4)	(141.1)	(569.8)
Cash Provided by Operating Activities	903.5	886.7	368.5

Cash provided by earnings net of non-cash items, was \$1,300.9 million for the year ended December 31, 2005, compared with \$1,027.8 million and \$938.3 million for 2004 and 2003, respectively. This \$273.1 million increase in cash from 2004 reflects special dividends from Noverco, cash generated by Enbridge Offshore Pipelines, acquired on December 31, 2004, and increased earnings from EGD.

In 2004 cash from earnings net of non-cash items reflected increased contributions from the Enbridge System, due to the Terrace Phase III expansion placed into service on April 1, 2003, from EGD, due to increased rates in 2004, and from Aux Sable, due to improved fractionation margins in 2004 compared with 2003.

Changes in operating assets and liabilities were \$258.7 million lower in 2005 compared with 2004. The majority of this change is in EGD where higher commodity prices increased accounts receivable and inventory.

The variance in changes in operating assets and liabilities from 2003 to 2004 was due to the draw down of gas in storage in EGD from September 30, 2003, (the prior year end) to December 31, 2004, (the new year end). Gas in storage is typically lower at the end of December as winter demand has drawn down some of the supply.

Since the Company's pension plans are adequately funded, no additional funding above usual levels is anticipated for 2006.

#### **Investing Activities**

Cash used for investing activities for the year ended December 31, 2005, was \$833.0 million compared with \$999.7 million in 2004. In 2005, the majority of cash spent on investing was for additions to property, plant and equipment, primarily in EGD. The increase in additions to property, plant and equipment in 2005, compared with 2004, is due to increased expenditures on capital projects, such as the reversal of the Spearhead Pipeline and the Ontario Wind Power Project.

In 2005, the Company made minor acquisitions throughout the year of \$88.6 million whereas, in 2004, \$833.9 million was used for acquisitions including Enbridge Offshore Pipelines, acquired for \$743.4 million (net of cash acquired) and other minor acquisitions. Cash proceeds from the sale of the investment in AltaGas partially offset the use of cash for acquisitions in 2004.

Also in 2005, the Company made contingent payments to the former owners of the Company's 25% interest in CLH because CLH met cumulative volume targets. These payments make up the majority of the 2005 expenditure on long-term investments. In 2004, the Company also made smaller contingent payments to the former owners of the 25% interest in CLH.

In 2003, investing activities provided \$259.5 million primarily as a result of the proceeds received on the sale of assets to EIF. Also, 2003 reflected the repayment by EEP of short-term loans from the Company. Additions to property, plant and equipment were primarily related to EGD.

#### **Financing Activities**

In 2005, financing activities used cash of \$22.1 million compared with a source of \$114.4 million in 2004.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 61 of 122 Appendix C

During 2005, the Company issued \$1,020.1 million new long-term debt in the form of medium-term notes and senior notes. This new debt replaced higher interest rate medium-term notes, which matured during 2005, and short-term debt, primarily commercial paper. The repayment of short-term debt was partially offset by an increase in short-term borrowings at EGD. EGD uses short-term borrowings to finance working capital, which was higher at the end of 2005 due to increased commodity prices.

Dividends on common shares have increased again in 2005 due to an increased number of common shares outstanding and a higher dividend rate.

In 2004, cash was generated through a net issuance of debt of \$788.0 million, partially offset by the payment of dividends. The Company also repaid \$350.0 million of preferred securities at the end of 2004. Financing activity in 2003 included the payment of dividends and a net reduction in debt through utilization of the cash proceeds from the sale of assets to EIF.

#### **Expected Capital Expenditures**

The numerous potential organic growth projects and other growth initiatives described in the business unit sections will require capital funding. The Company also requires capital for ongoing core maintenance and capital improvements in many of its businesses. In total, Enbridge expects to spend approximately \$1,130 million during 2006 on capital projects. The Company expects to finance these expenditures through cash from operating activities and additional debt, if required.

The decision to finance with debt or equity is based on the capital structure for each business and the overall capitalization of the consolidated enterprise. Certain of the regulated pipeline and gas distribution businesses issue long-term debt to finance capital expenditures. This external financing may be supplemented by debt or equity injections from the parent company. Debt, and equity when required, has been issued to finance business acquisitions, investments in subsidiaries, and long-term investments. Funds for debt retirements are generated through cash provided from operating activities, as well as through the issue of replacement debt.

Payments due for contractual obligations over the next five years and thereafter are as follows:

		Less than			After
(millions of Canadian dollars)	Total	1 year	1-3 years	3-5 years	5 years
Long-term debt	6,662.5	400.0	788.4	950.0	4,524.1
Non-recourse long-term debt	1,563.0	66.7	155.7	244.5	1,096.1
Capital and operating leases	85.0	5.1	10.3	11.0	58.6
Long-term contracts	822.5	190.9	217.0	196.4	218.2
Total Contractual Obligations	9,133.0	662.7	1,171.4	1,401.9	5,897.0

#### RISK MANAGEMENT

The Company's business activities are subject to both financial and operational risks. The Company has formal risk management policies and risk management systems designed to mitigate these risks.

#### **Market Price Risk**

Enbridge's earnings are subject to movements in interest rates, foreign exchange rates, and commodity prices (collectively Market Price Risk). Given the Company's desire to maintain stable and consistent earnings profile, it has implemented a Board of Directors approved Market Price Risk Policy to minimize the likelihood that adverse earnings fluctuations arising from movements in market prices across all of its businesses will exceed a defined tolerance.

The Market Price Risk metric utilized within that policy is Earnings at Risk. It is an objective, statistically derived risk metric that measures the maximum earnings loss that could result from adverse market price movements over a specified time horizon within a pre-determined level of statistical confidence, under normal market conditions.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 62 of 122 Appendix C

The Company uses derivative financial instruments to manage its exposures to within these policy limits. The following summarizes the types of risks to which the Company is exposed and the hedging programs implemented:

## Foreign Exchange Risk

The Company has exposure to foreign currency exchange rates, primarily arising from its U.S. dollar and Euro denominated investments, where both carrying values and earnings are subject to foreign exchange risk. Furthermore, the Company is exposed to the economic risk on the conversion of the foreign currency denominated cash flows. The Company has a hedging policy to eliminate 50% to 70% of the long-term economic exposure related to its foreign currency denominated cash flows. It will also hedge shorter term anticipated foreign currency capital expenditures. The Company hedges certain of its foreign currency denominated net equity investments with the use of cross currency swaps, par forward contracts, and foreign currency denominated debt. The return of capital on the cost accounted for investment in OCENSA also is hedged with cross currency swaps.

#### Interest Rate Risk

Enbridge is exposed to interest rate fluctuations on variable rate debt. Floating to fixed interest rate swaps, collars and forward rate agreements are used to hedge against the effect of future interest rate movements. The Company monitors its debt portfolio mix of fixed and variable rate debt instruments to ensure that it stays within its Board of Directors approved policy limit band of 15% to 25% floating rate debt within the consolidated portfolio. Fixed to floating swaps are also used from time to time to manage this position and optimize the Company's debt portfolio. The Company is also exposed to fluctuations in interest rates on anticipated fixed rate debt issuances. Also, the Company enters into interest rate derivatives to hedge a portion of the interest cost of future debt issues related to specific capital projects.

#### Commodity Price Risk

The Company uses natural gas price swaps, futures, options and collars to manage the value of commodity purchases and sales that arise from capacity commitments on the Alliance and Vector pipelines. The Company also uses derivative instruments to fix the value of variable price exposures that arise from commodity storage arrangements and natural gas supply agreements.

As a result of the Company's ownership interest in Aux Sable, it is exposed to the price differential between natural gas and NGL. This risk is hedged through the use of over-the-counter derivatives whereby the forward prices of natural gas and NGL are fixed with swaps, or capped or collared with options. Starting in 2006, Aux Sable's contract with BP will eliminate this risk.

The Company has also entered into over-the-counter swap agreements to convert the price of power in Alberta and Ontario from a floating rate to a fixed rate per megawatt hour (MW/H) or convert fixed rate power to floating rate.

## Natural Gas Supply Management

Customers of EGD are exposed to changes in the price of the natural gas commodity. A portion of the future natural gas supply requirements is hedged using natural gas swaps and options that manage the price of natural gas, as allowed by the OEB. Since the cost of the natural gas commodity is paid by customers, this risk mitigation strategy is for the account of the customers. The OEB monitors the policies, procedures, and results of this hedging program.

#### Fair Values of Derivative Instruments

The following table summarizes the financial instruments outstanding at year end for the purposes of mitigating the risks as described above. Amounts shown in the table below under Fair Value Receivable/(Payable) represent unrecognized gains/(losses) associated with these instruments.

(millions of Canadian dollars unless otherwise noted)

December 31,		2005			2004	
	Notional	Fair Value		Notional	Fair Value	
	Principal	Receivable/		Principal	Receivable/	
	or Quantity	(Payable)	Maturity	or Quantity	(Payable)	Maturity
Foreign exchange						
U.S. cross currency swaps	307.3	(2.9)	2007-2022	535.8	(51.1)	2005-2022
Euro cross currency swaps	447.6	39.6	2006-2019	493.5	(51.3)	2005-2019
Forwards (cumulative						
exchange amounts)	1,640.1	241.6	2006-2022	1,740.3	181.0	2005-2022
Interest rates						
Interest rate swaps	954.4	(1.1)	2006-2029	1,069.0	1.5	2005-2029
Forward interest rate swaps	150.0	1.2	2007	200.0	_	2006
Energy commodities						
Natural gas (bcf)	130.5	18.1	2006-2011	107.8	(1.0)	2005-2010
Natural gas supply (bcf)	27.3	(6.7)	2006	34.9	(28.1)	2005
Power (MW/H)	28.0	0.8	2006-2017	_	_	_

In addition, the Company has forward foreign exchange contracts with a notional principal of Canadian \$91.0 million (2004 – \$214.0 million), to exchange Canadian for U.S. dollars. The outstanding instruments expire in 2007. These instruments are recorded at fair value and have a fair value payable of \$14.3 million as at December 31, 2005 (2004 – \$28.8 million).

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

Credit risk on derivative financial instruments amounted to \$351.8 million as at December 31, 2005 (2004 – \$211.2 million) with no significant concentration with any single counterparty.

#### Fair Values of Other Financial Instruments

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties, calculated at the reporting date, to settle these instruments. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The estimated fair values of all other financial instruments are based on quoted market prices or, in the absence of specific market prices, on quoted market prices for similar instruments and other valuation techniques.

#### **Total Debt**

(millions of Canadian dollars)

December 31,	20	2004		
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Liquids Pipelines	1,039.4	1,201.4	913.4	1,037.8
Gas Distribution and Services	1,786.7	2,184.2	1,823.4	2,168.9
Corporate	3,854.2	4,076.3	4,020.4	4,275.6
	6,680.3	7,461.9	6,757.2	7,482.3

The fair value of debt does not include the effects of hedging. Non-recourse debt of joint ventures has a carrying value of \$1,688.1 million (2004 – \$695.4 million) and fair value of \$1,775.1 million (2004 – \$769.4 million).

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 64 of 122 Appendix C

## **Operating Risks**

## Environmental, Health and Safety Risk

Enbridge is committed to protecting the health and safety of employees, contractors and the general public, and to sound environmental stewardship. The Company believes that prevention of accidents and injuries, and protection of the environment benefits everyone and delivers increased value to shareholders, customers and employees. Enbridge has health and safety, and environmental management systems and has established policies, programs and practices for conducting safe and environmentally sound operations. Regular reviews and audits are conducted to assess compliance with legislation and company policy.

#### Pipeline Operating Risk

Pipeline leaks are an inherent risk of operations. Other risks involved in operating a comprehensive pipeline system include: the breakdown or failure of equipment, information systems or processes; the performance of equipment at levels below those originally intended (whether due to misuse, unexpected degradation or design, construction or manufacturing defects); failure to keep on hand adequate supplies of spare parts; operator error; labour disputes; disputes with interconnected facilities and carriers; and catastrophic events such as natural disasters, fires, explosions, fractures, acts of terrorists and saboteurs, and other similar events, many of which are beyond the control of the pipeline systems. The occurrence or continuance of any of these events could increase the cost of operating the Company's pipelines, thereby impacting earnings. The Company has an extensive program to manage system integrity, which includes the development and use of predictive and detective in-line inspection tools. Maintenance, excavation and repair programs are directed to the areas of greatest benefit and pipe is replaced or repaired as required. The Company also maintains comprehensive insurance coverage for significant pipeline leaks.

## Regulation

Many of the Company's pipeline operations are regulated and are subject to regulatory risk. The nature and degree of regulation and legislation affecting energy companies in Canada and the United States has changed significantly in past years, and there is no assurance that further substantial changes will not occur. These changes may adversely affect toll structures or other aspects of pipeline operations or the operations of shippers.

## CRITICAL ACCOUNTING POLICIES AND ESTIMATES

#### **Rate Regulation**

The Company follows generally accepted accounting principles, which may differ for regulated operations from those otherwise expected in non-regulated businesses. In general, these differences occur when the regulatory agencies render decisions that involve the timing of revenue and expense recognition and ensure that the actions of the regulatory authorities, which may create economic assets and liabilities, have been reflected in the financial statements.

The recognition of these items in the Company's financial statements depends on its expectation of the future actions of the regulatory authorities. For example, some of the Company's rate-regulated businesses do not record future income taxes because the regulatory authorities prescribe the use of the taxes payable method for rate-making purposes and there is reasonable expectation that future income taxes will be recovered as they become payable.

If regulatory agencies' future actions are different from the Company's expectations, the timing and amount of the recovery of liabilities or refund of assets, recorded or unrecorded, could be significantly different from that reflected in the financial statements.

The Company's operations are regulated under three main regulatory regimes. Enbridge System negotiates tolls with its shippers under either the ITS or for specific expansions and these agreements are approved by the NEB. EGD files a rate application with the OEB, for its approval. Alliance Pipeline US, Vector Pipeline and Enbridge Offshore Pipelines have negotiated transportation services contracts with shippers that incorporate a FERC-approved toll and tariff structure. Descriptions of each of these regulatory regimes, including how tolls and rates are set, how costs are recovered, and how returns are calculated are included in the sections describing each of these businesses.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 65 of 122 Appendix C

In 2005, the Company adopted the new accounting guideline, *Disclosure by Entities Subject to Rate Regulation*. This guideline requires the disclosure of information to facilitate an understanding of the nature and economic effects of rate regulation, as well as additional information on how rate regulation has affected the entity's financial statements.

#### **Revenue Recognition**

Generally, revenues are recorded when products have been delivered or services have been performed. Certain of the Liquids Pipelines, Gas Pipelines and gas distribution operations within Gas Distribution and Services are subject to regulation and, accordingly, there are circumstances where revenues recognized do not match the cash tolls or the billed amounts. For rate-regulated operations, revenue is recognized in a manner that is consistent with the underlying rate agreements as approved by the regulatory authority.

The Company has entered into a long-term (30 year) take or pay contract with a shipper on the Athabasca System and revenues are recorded based on the contractual terms rather than the cash tolls collected. The contract provides for volumes and tolls that will achieve an underpinning rate of return on equity, based on an assumed debt/equity ratio and level of operating costs of providing service to the shipper on the pipeline. The committed volumes on the pipeline and the tolls specified in the contract do not generate sufficient cash revenues in the early years to compensate the Company for the debt and equity returns, as well as the cost of providing service. The Company is recording a receivable in these years. This ensures that the revenue recognized each period is in accordance with the underpinning return. This receivable is contractually guaranteed from the shipper and will be collected in the later years of the contract.

The recording of revenues under the terms of approved regulatory agreements of the Enbridge System may also not necessarily match the cash tolls. The agreements, and all their terms and conditions, are subject to the review and approval by the pipeline's regulator, the NEB. During their terms, the agreements govern both current and future shippers on the pipeline. The NEB's jurisdiction over the Enbridge System includes statutory authority over matters such as construction, rates and underlying accounting practices, and ratemaking agreements and other contractual arrangements with customers.

Revenues are recognized based on these agreements' definitions of an allowed revenue requirement and are generally not impacted by the level of cash tolls collected. This basis may affect the timing of recognition of revenues from that otherwise expected under generally accepted accounting principles for companies that are not rate-regulated.

Tolls are calculated in accordance with the agreements which stipulate that tolls are to be established each year based on capacity as per the various agreements and/or the allowed revenue requirement. Where actual volumes on the pipeline fall short of agreed capacity and Enbridge is unable to collect its annual revenue requirement, such deficiency is rolled into the subsequent year's tolls for collection from toll payers at that time and a receivable is recognized.

A significant portion of Gas Distribution and Services operations are subject to rate-regulation and accordingly there are circumstances where the revenues recognized do not match the amounts billed. Certain amounts are deferred for recovery with the approval of the regulator and are not included in revenues or expenses that would be recognized in the income statement, absent the actions of the regulator. The regulator, through the rate-making process, allows certain variances between approved and actual expenses or income to be recovered from customers in future periods. The deferred amounts are not included in the calculation of rates to be billed to customers. While there are numerous deferral accounts approved by the regulator, the largest of these typically is the difference between the approved and actual cost of gas, which is not included in the cost of service used to determine rates, and therefore not included in revenues. The recovery of this difference is recognized on the statement of financial position, at the formal direction of the regulator, with no impact on revenues or expenses in the income statement. EGD has no exposure to the cost of gas, as it is a flow through cost that is borne directly by the ratepayer.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 66 of 122 Appendix C

#### CHANGES IN ACCOUNTING POLICIES

#### Consolidation of Variable Interest Entities

Effective January 1, 2005, the Company adopted, without restatement of prior periods, the new CICA accounting guideline for Consolidation of Variable Interest Entities. This new standard requires the primary beneficiary of a variable interest entity's activities to consolidate the variable interest entity. The Company is the primary beneficiary of EIF through a combination of a 41.9% equity interest as well as a preferred unit investment that has no voting rights, a stated par value and a 30-year maturity. The preferred units earn a return that is equivalent to the cash distributions per unit to the equity unit holders and are classified as a liability in EIF's financial statements.

## Financial Instruments, Hedging Relationships and OCI

New accounting standards will be in effect for fiscal years beginning on or after October 1, 2006, for hedge accounting, recognition and measurement of financial instruments and disclosure of comprehensive income. The Company is currently investigating the impact of these new standards.

## EITF 04-5 - Partnership Consolidation

In June 2005, the U.S. Emerging Issues Task Force (EITF) reached a consensus on EITF issue 04-5, *Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights* (EITF 04-5), addressing when a general partner, or general partners as a group, control and should therefore, consolidate a limited partnership. Under EITF 04-5, a sole general partner is presumed to control a limited partnership when certain conditions are met. As a result, for the first reporting period beginning after December 15, 2005, it is expected that the Company will be required to include the accounts of Enbridge Energy Partners, L.P. for U.S. GAAP purposes.

Enbridge continues to equity account for its interest in EEP under Canadian GAAP.

## DISCLOSURE CONTROLS AND PROCEDURES

The Chief Executive Officer and Chief Financial Officer evaluated the effectiveness of the Company's disclosure controls and procedures (as defined in the rules of the Securities and Exchange Commission and the Canadian Securities Administrators) and concluded that the Company's disclosure controls and procedures were effective as of December 31, 2005, and in respect of the 2005 year end reporting period.

## QUARTERLY FINANCIAL INFORMATION<sup>1</sup>

(millions of Canadian dollars, except for per share amounts)

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 67 of 122 Appendix C

Quarterly operating revenue fluctuates primarily due to the seasonality of the Company's gas distribution business. Prior to October 1, 2004, this business had a September 30 year end, which resulted in consolidation by the Company on a quarter lag basis. Therefore, peak revenues were recorded in the Company's second quarter, which represented Enbridge Gas Distribution's winter months. Starting in October 2004, EGD has changed to a December 31 year end and, as a result, the Company's consolidated fourth quarter results for 2004 include the results of EGD for the six months ended December 31, 2004.

Effective October 1, 2004, EGD's seasonal rates were replaced with a uniform annual rate. The impact of this change has resulted in lower earnings in the winter months (fourth and first quarters), offset by higher earnings in the summer months (second and third quarters), causing a shift in earnings between quarters but no earnings impact on a 12 consecutive month basis.

The positive effect of colder than normal weather contributed to an increase in revenues and earnings during the second quarter of 2004. Significant items that impacted 2005 and 2004 quarterly earnings are as follows:

- Fourth quarter earnings in 2005 include a gain of \$7.6 million on the sale of land in CLH and a dilution gain of \$4.3 million in EEP.
- Third quarter earnings in 2005 were negatively impacted by Hurricanes Katrina and Rita and by non-cash losses on the fair value of derivatives in EEP.
- First quarter earnings in 2005 include dilution gains in EEP and within Noverco totaling \$11.9 million.
- Fourth quarter earnings in 2004 include the additional "fifth quarter" for EGD and other gas distribution businesses that account for an increase of \$57.2 million. This was partially offset by an impairment loss of \$8.2 million on the Calmar gas plant.
- Third quarter earnings in 2004 include a \$97.8 million gain on the sale of the Company's investment in AltaGas offset by the remaining reversal of \$25.6 million related to unbilled revenue.
- Second quarter earnings in 2004 reflect the \$9.4 million partial reversal of the \$35.0 million of unbilled revenue recorded in the first quarter of 2004 and a dilution gain of \$8.0 million related to AltaGas.
- First quarter earnings in 2004 reflect a \$47.6 million charge to earnings resulting from an increase in the Ontario tax rate and corresponding revaluation of future income taxes, as well as an increase of \$35.0 million for unbilled revenue, consistent with a change in the estimation process in 2004, both within EGD.

#### FOURTH QUARTER 2005 HIGHLIGHTS

Fourth quarter earnings for 2005 are \$174.0 million, compared with \$104.8 million in 2004. The increase in earnings reflects a higher contribution from the gas distribution utility. Although the prior year quarter includes six months of earnings for the gas distribution utilities, the additional quarter, July 1 to September 30, 2004, is a summer loss quarter and reduced earnings in the fourth quarter of 2004. Also, in the fourth quarter of 2004, an impairment loss of \$8.2 million was recognized on the Calmar gas plant.

#### SUPPLEMENTARY INFORMATION

	Number of units
Outstanding Share Data	outstanding
Preferred Shares, Series A (non-voting equity shares)	5,000,000
Common shares – issued and outstanding (voting equity shares)	349,533,852
Total issued and outstanding stock options (6,164,141 vested)	10,994,291

Outstanding share data information is provided as at January 23, 2006.

## RELATED PARTY TRANSACTIONS

Neither EEP nor EIF have employees and use the services of the Company for managing and operating their businesses. Vector Pipeline uses the services of Enbridge to operationally manage its business. Amounts for these services, which are charged at cost in accordance with service agreements are:

(millions of Canadian dollars)

Year ended December 31,	2005	2004	2003
EEP	184.7	173.0	128.9
EIF	_	9.4	4.7
Vector Pipeline	4.1	4.4	3.3
	188.8	186.8	136.9

EGD, a subsidiary of the Company, has contracts for gas transportation services from Alliance Pipeline Canada and Vector Pipeline. EGD is charged market prices for these services:

(millions of Canadian dollars)

Year ended December 31,	2005	2004	2003

	43.4	21.9	32.3

Enbridge Gas Services Inc., a subsidiary of the Company, has transportation commitments through 2015 on Alliance Pipeline Canada and Vector Pipeline:

(millions of Canadian dollars)

Year ended December 31,	2005	2004	2003
Alliance Pipeline Canada	9.1	8.8	8.4
Vector Pipeline	0.7	0.5	0.6
	9.8	9.3	9.0

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 69 of 122 Appendix C

Enbridge Gas Services (US) Inc., a subsidiary of the Company, has transportation commitments through 2015 on Alliance Pipeline US and Vector Pipeline:

(millions of Canadian dollars)

Year ended December 31,	2005	2004	2003
Alliance Pipeline US	7.1	7.6	7.8
Vector Pipeline	9.5	9.8	10.5
	16.6	17.4	18.3

Tidal Energy Marketing Inc., a subsidiary of the Company, purchases and sells commodities at prevailing market prices with EEP and a subsidiary of EEP.

(millions of Canadian dollars)

Year ended December 31,	2005	2004	2003
Purchases	9.7	_	_
Sales	_	(2.3)	_
	9.7	(2.3)	_

The receivable from affiliate of \$177.0 million (2004 – \$171.7 million) resulted from the sale of Enbridge Midcoast Energy to EEP. The note, denominated in U.S. dollars, bears interest at 6.6% and matures in 2007. The balance on December 31, 2005, was US\$151.9 million (2004 – US\$142.1 million). Interest income related to the affiliate receivable was \$11.7 million (US\$9.4 million), \$11.8 million (US\$9.0 million) and \$21.7 million (US\$15.5 million), in 2005, 2004 and 2003, respectively. The fair value of the receivable at December 31, 2005, is \$176.8 million.

The Company also provides limited consulting and other services to investees as required. Market prices are charged for these services where they are reasonably determinable; where no market price exists, a cost-based price is determined and charged. The Company may also purchase consulting and other services from affiliates. Prices are determined on the same basis as services provided by the Company. The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

Additional information relating to Enbridge, including the Annual Information Form, is available on www.sedar.com.

## Dated February 1, 2006

When used in this document, the words "anticipate", "expect", "project", "believe", "estimate", "forecast" and similar expressions are intended to identify forward-looking statements, which include statements relating to pending and proposed projects. Such statements are subject to certain risks, uncertainties and assumptions pertaining to operating performance, regulatory parameters, weather and economic conditions and, in the case of pending and proposed projects, risks relating to design and construction, regulatory processes, obtaining financing and performance of other parties, including partners, contractors and suppliers.

# Management's Report

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 70 of 122 Appendix C

## To the Shareholders of Enbridge Inc.

Management is responsible for the accompanying consolidated financial statements and all other information in this Annual Report. The consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles and necessarily include amounts that reflect management's judgment and best estimates. Financial information contained elsewhere in this Annual Report is consistent with the consolidated financial statements.

Management has established systems of internal control that provide reasonable assurance that assets are safeguarded from loss or unauthorized use and produce reliable accounting records for the preparation of financial information. The internal control system includes an internal audit function and an established code of business conduct.

The Board of Directors and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee of the Board, composed of directors who are unrelated and independent, has a specific responsibility to oversee management's efforts to fulfil its responsibilities for financial reporting and internal controls related thereto. The Committee meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The Audit, Finance & Risk Committee reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance the shareholders.

PricewaterhouseCoopers LLP, appointed by the shareholders as the Company's independent auditors, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

# Auditors' Report

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 71 of 122 Appendix C

## To the Shareholders of Enbridge Inc.

We have audited the consolidated statements of financial position of Enbridge Inc. as at December 31, 2005 and 2004 and the consolidated statements of earnings, retained earnings and cash flows for each of the years in the three year period ended December 31, 2005. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2005 and 2004 and the results of its operations and cash flows for each of the years in the three year period ended December 31, 2005 in accordance with Canadian generally accepted accounting principles.

Pricewaterhouse Coopers LLP

Calgary, Alberta, Canada February 1, 2006 **Chartered Accountants** 

### Comments by Auditors for U.S. Readers on Canada-U.S. Reporting Difference

In the United States, reporting standards for auditors require the addition of an explanatory paragraph (following the opinion paragraph) when there is a change in accounting principles that has a material effect on the comparability of the Corporation's financial statements, such as the change for the consolidation of variable interest entities described in Note 2 to the consolidated financial statements. Our report to the shareholders dated February 1, 2006 is expressed in accordance with Canadian reporting standards which do not require a reference to such a change in accounting principles in the auditors' report when the change is properly accounted for and adequately disclosed in the financial statements.

# Notes to the Consolidated Financial Statements

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 75 of 122 Appendix C

Enbridge Inc. (Enbridge or the Company) is one of North America's largest energy transportation and distribution companies. Enbridge conducts its business through five operating segments: Liquids Pipelines, Gas Pipelines, Sponsored Investments, Gas Distribution and Services, and International. These operating segments are strategic business units established by senior management to facilitate the achievement of the Company's long-term objectives, to aid in resource allocation decisions and to assess operational performance.

#### **Liquids Pipelines**

Liquids Pipelines includes the operation of the Canadian common carrier pipeline and feeder pipelines that transport crude oil and other liquid hydrocarbons.

#### **Gas Pipelines**

Gas Pipelines consists of proportionately consolidated investments in pipelines that transport natural gas including the U.S. portion of the Alliance Pipeline, Vector Pipeline and transmission and gathering pipelines in the Gulf of Mexico.

#### **Sponsored Investments**

Sponsored Investments consists of the Company's investments in Enbridge Energy Partners, L.P. (EEP), Enbridge Energy Management, L.L.C. (EEM) (collectively, the Partnership) and Enbridge Income Fund (EIF). The Partnership transports crude oil and other liquid hydrocarbons through common carrier and feeder pipelines and transports, gathers, processes and markets natural gas and natural gas liquids. EIF is a publicly traded income fund whose primary operations include a 50% interest in the Canadian portion of the Alliance Pipeline and a 100% interest in a crude oil and liquids pipeline and gathering system.

#### **Gas Distribution and Services**

Gas Distribution and Services consists of gas utility operations which serve residential, commercial, industrial and transportation customers, primarily in central and eastern Ontario. It also includes natural gas distribution activities in Quebec, New Brunswick and New York State, and the Company's proportionately consolidated investment in Aux Sable, a natural gas fractionation and extraction business.

The Company's commodity marketing businesses are also included in Gas Distribution and Services.

## International

The Company's International business consists of two investments in energy delivery projects outside of North America.

#### 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The consolidated financial statements of the Company are prepared in accordance with Canadian generally accepted accounting principles (Canadian GAAP). These accounting principles are different in some respects from United States generally accepted accounting principles (U.S. GAAP) and the significant differences that impact the Company's financial statements are described in Note 26. Amounts are stated in Canadian dollars unless otherwise noted.

The preparation of financial statements in conformity with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the financial statements. Actual results could differ from these estimates.

## **Basis of Presentation**

The consolidated financial statements include the accounts of Enbridge Inc., its subsidiaries and its proportionate share of the accounts of joint ventures. Investments in entities which are not subsidiaries or joint ventures, but over which the Company exercises significant influence, are accounted for using the equity method. EIF is consolidated in the accounts of the Company as it is a variable interest entity. The Company is the primary beneficiary of EIF through a combination of the 41.9% equity interest and a preferred unit interest. Other investments are accounted for using the cost method.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 76 of 122 Appendix C

## 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

The Company's gas distribution activities within Gas Distribution and Services are conducted primarily through a wholly-owned subsidiary, Enbridge Gas Distribution Inc. (EGD). In 2004, EGD changed its fiscal year end to December 31, and accordingly, the Company's financial statements for the year ended December 31, 2004, include 15 months of results for EGD and other gas distribution subsidiaries. Prior to 2004, the fiscal year-end of EGD and certain other gas distribution subsidiaries was September 30 and their results were consolidated on a one quarter lag basis. In respect of 2003, references to "December 31" mean the financial position of EGD as at September 30 and references to the "year ended December 31" mean the results of EGD for the year ended September 30.

#### Regulation

Certain of the Company's Liquids Pipelines, Gas Pipelines, and Gas Distribution and Services businesses are subject to regulation by various authorities, including the National Energy Board (NEB), the Federal Energy Regulatory Commission (FERC), the Alberta Energy and Utilities Board (AEUB) and the Ontario Energy Board (OEB). Regulatory bodies exercise statutory authority over matters such as construction, rates and ratemaking, agreements with customers and the underlying accounting practices. In order to recognize the economic effects of the actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non rate-regulated entities.

#### **Revenue Recognition**

Generally, revenues are recorded when products have been delivered or services have been performed.

However, certain of the operations within Liquids Pipelines, Gas Pipelines and gas distribution operations within Gas Distribution and Services are subject to regulation and, accordingly, there are circumstances where revenues recognized do not match the cash tolls or the billed amounts.

Certain Liquids Pipelines revenues are recognized under the terms of a committed thirty year delivery contract rather than the cash tolls received. On the rate regulated portion of the Company's main Canadian crude oil pipeline system, revenue is recognized in a manner that is consistent with the underlying agreements as approved by the NEB.

For rate-regulated operations in Gas Pipelines and Sponsored Investments, transportation revenues include amounts related to expenses recognized in the financial statements that are expected to be recovered from shippers in future tolls. No revenue is recognized in a given period for tolls received that do not relate to current period expenses. Differences between the recorded transportation revenue and actual toll receipts give rise to receivable or payable balances.

A significant portion of Gas Distribution and Services operations are subject to rate-regulation and accordingly there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as mandated by the OEB. This may result in the recognition of regulatory assets and liabilities. Gas distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading to the end of the reporting period.

## **Income Taxes**

The regulated activities of the Company recover income tax expense based on the taxes payable method when prescribed by regulators for ratemaking purposes or when stipulated in ratemaking agreements. Therefore, rates do not include the recovery of future income taxes related to temporary differences. Consequently, the taxes payable method is followed for accounting purposes as the Company expects that all future income taxes will be recovered in rates when they become payable.

For all other operations, the liability method of accounting for income taxes is followed. Future income tax assets and liabilities are determined based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Future income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 77 of 122 Appendix C

## **Foreign Currency Translation**

The Company has U.S. dollar operations, which are primarily self-sustaining except for certain financing and investing operations. The Company also holds a self-sustaining Euro equity investment in a foreign operation in Spain.

The self-sustaining operations are translated into Canadian dollars using the current rate method. Under this method, assets and liabilities are translated using period-end exchange rates, with revenues and expenses translated using average rates for the period. Gains and losses arising on translation of these operations are included as a separate component of shareholders' equity.

The remaining foreign operations of the Company, including certain financing and investing operations, are integrated with those of the parent company and are translated into Canadian dollars using the temporal method. Under this method, monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect at the balance sheet date. Non-monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect on the dates the assets were acquired or liabilities were incurred. Revenues and expenses are translated at rates of exchange prevailing on the transaction dates. Under this method, gains and losses on translation are reflected in income when incurred.

#### **Cash and Cash Equivalents**

Cash and cash equivalents are recorded at cost and include short-term deposits with a term to maturity of three months or less when purchased.

### **Inventory**

Inventory is primarily comprised of natural gas in storage held in EGD. Natural gas in storage is recorded at the prevailing prices approved by the OEB in the determination of customer sales rates. The actual price of gas purchased may differ from the OEB-approved price and includes the effect of natural gas price risk management activities. The difference between the approved price and the actual cost of the gas purchased is deferred in receivables or payables for future disposition by the OEB.

## **Property, Plant and Equipment**

Expenditures for system expansion and major renewals and betterments are capitalized; maintenance and repair costs are expensed as incurred. Interest incurred during the construction period is capitalized. Regulated operations capitalize an allowance for interest during construction and, if approved, an allowance for equity funds used during construction, at rates authorized by the regulatory authorities. Depreciation of property, plant and equipment generally is provided on a straight-line basis over the estimated service lives of the assets commencing when the asset is placed in service.

#### Intangibles

Intangibles consist primarily of long-term transportation contracts which are amortized on a straight-line basis over the expected lives of the contracts.

#### Goodwill

Goodwill is not subject to amortization but is tested for impairment at least annually and written down to fair value if the criteria for impairment are met. Goodwill represents the excess of the purchase price over the fair value of net identifiable assets upon acquisition of a business.

#### **Asset Retirement Obligations**

The fair value of asset retirement obligations associated with the retirement of long-lived assets is recognized in the period when it can be reasonably determined. The fair value, which approximates the cost a third party would charge in performing the tasks necessary to retire such assets, is recognized at the present value of expected future cash flows and is added to the carrying value of the associated asset and depreciated over the asset's useful life. The liability is accreted over time through periodic charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 78 of 122 Appendix C

## 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

For certain of the Company's assets it is not possible to make a reasonable estimate of the fair value of the liability due to the indeterminate timing and scope of the asset retirements. Management expects all retirement costs associated with the regulated pipelines will be recovered through tolls in future periods and therefore any liability recorded would be offset by an asset.

Depreciation expense for Gas Distribution and Services operations includes a provision for asset retirement obligations at rates approved by the regulator. Actual costs incurred are charged to accumulated depreciation.

### **Deferred Amounts and Other Assets**

The Company defers certain charges, which the regulatory authorities have permitted or are expected to permit recovery through future rates. Assets are realized and liabilities are settled based on the terms of the regulatory approval once received. The Company recognizes revenues under the terms of a committed long-term delivery contract, which results in a long-term receivable. Other deferred charges are amortized on a straight-line basis over various periods depending on the nature of the charges and include long-term financing and hedging costs, which are amortized over the terms of the related debt or hedged items. The straight-line method of amortization for deferred financing costs approximates the effective interest method.

#### **Derivative Financial Instruments**

The Company uses derivative financial instruments and foreign denominated debt to hedge currency risk related to net investments in foreign operations. Gains and losses related to the financial instruments are included in the foreign currency translation adjustment in shareholders' equity. These financial instruments are recognized in the financial statements of the Company at fair value. The net investment hedge strategy is designed such that as foreign cash distributions are received and the net investment decreases, a related portion of the financial instrument is settled and recognized with the distributions. Changes in the value of foreign denominated debt designated as net investment hedges are also included in the foreign currency translation adjustment.

The Company applies settlement accounting to other derivative financial instruments. Under this method, gains and losses on derivative instruments that qualify for hedge accounting are not recorded until they are realized. The notional amounts are not recorded in the financial statements as they do not represent amounts exchanged by the counterparties. Amounts received or paid related to derivative financial instruments used to hedge energy commodities prices are recognized as part of the cost of the underlying physical purchases on settlement. For other derivative financial instruments used to hedge interest costs, amounts received or paid, including any gains and losses realized upon settlement, are recognized over the term of the hedged item.

If a derivative instrument designated as a hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred and recognized concurrently with the related transaction. Subsequent gains and losses from the derivative instrument are recognized in the period they occur. If the anticipated transaction is no longer probable, the gain or loss is recognized immediately.

## **Post-Employment Benefits**

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits. Pension costs and obligations for the defined benefit pension plans are determined using the projected benefit method and are charged to earnings as services are rendered, except for the regulated operations of Gas Distribution and Services, where contributions made to the plan are expensed as paid, consistent with the recovery of such costs in rates. For the defined contribution plans, contributions made by the Company are expensed.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values. Market related values have been calculated using the fair value method. Adjustments arising from plan amendments and the transitional amounts recognized upon adoption of the accounting standard are amortized on a

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 79 of 122 Appendix C

straight-line basis over the average remaining service period of the employees active at the date of amendment or transition. The excess of the net actuarial gain or loss over ten per cent of the greater of the benefit obligation and the fair value of plan assets is amortized over the average remaining service period of the active employees.

The Company also provides post-employment benefits other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependants. The cost of such benefits is accrued during the years employees render service, except for the regulated operations of Gas Distribution and Services where the cost of providing these benefits is expensed as paid, consistent with the recovery of such costs in rates.

The measurement date used to determine the plan assets and the accrued benefit obligation was September 30, 2005.

#### **Stock Based Compensation**

Stock options granted after January 1, 2003, are accounted for using the fair value method. Under this method, compensation expense is measured at fair value at the grant date using the Black-Scholes option pricing model and recognized on a straight line basis over the vesting period with a corresponding credit to contributed surplus. Stock options granted prior to January 1, 2003, continue to be accounted for as capital transactions when the options are exercised, which does not give rise to compensation expense.

Performance stock units (PSUs) are accounted for over the three-year term of the PSU's whereby a liability and expense are recorded based on the number of PSUs outstanding, the current market price of the Company's shares and the Company's current performance relative to the specified peer group.

## **Comparative Amounts**

The Company has reclassified the revenues and cost of sales attributable to its marketing business to reflect the gross amounts. Previously, the Company had reported these balances on a net basis. The reclassification reflects changes in the types of transactions undertaken by the business. Prior period comparative amounts have been restated to reflect this change. The change increases Commodity Sales by \$1,271.9 million for the year ended December 31, 2004 (2003 – \$879.6 million), increases Commodity Costs by \$1,267.3 million for the year ended December 31, 2004 (2003 – \$873.7 million) and reduces Energy Services revenues by \$4.6 million for the year ended December 31, 2004 (2003 – \$5.9 million). The reclassification has no impact on operating income, earnings, earnings per share or retained earnings.

Certain other comparative amounts have been reclassified to conform to the current year's financial statement presentation.

## 2. CHANGES IN ACCOUNTING POLICIES

### **New Accounting Standards**

### Financial Instruments, Hedging Relationships and Other Comprehensive Income

New accounting standards will be in effect for fiscal years beginning on or after October 31, 2006, for hedge accounting, recognition and measurement of financial instruments and disclosure of comprehensive income. The Company is currently investigating the impact of these new standards.

#### Consolidation of Variable Interest Entities

Effective January 1, 2005, the Company adopted, without restatement of prior periods, the accounting guideline for Consolidation of Variable Interest Entities. This new standard requires the primary beneficiary of a variable interest entity's activities to consolidate the variable interest entity. The Company is the primary beneficiary of EIF through a combination of a 41.9% equity interest as well as a preferred unit investment that has no voting rights, a stated par value and a 30-year maturity. The preferred units earn a return that is equivalent to the cash distributions per unit to the equity unit holders and are classified as a liability in EIF's financial statements. Consolidating EIF, a sponsored investment, had the following impact on the consolidated financial statements.

# 3. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

# General Information on Rate Regulation and its Economic Effects

A number of businesses within the Company are regulated. The regulators exercise statutory authority over matters such as construction, rates and underlying accounting practices, and ratemaking agreements with customers. The Company's regulated businesses with significant accounting impacts on the financial statements are described below:

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 81 of 122 Appendix C

### Enbridge System

The primary business activities of the Enbridge System are subject to regulation by the NEB. Tolls are set based on agreements with customers and are filed with the NEB for approval. In 2005, Enbridge and the Canadian Association of Petroleum Producers (CAPP) approved a new incentive tolling settlement (ITS). With the incentive tolling model, Enbridge and shippers share the benefits of cost reductions below agreed levels as well as the benefits of improved quality of service through performance metrics. The new ITS is effective from January 1, 2005, to December 31, 2009, and defines the methodology for calculation of tolls and the revenue requirement on the core component of the Enbridge Mainline System in Canada. In the prior year, tolls were charged in accordance with the previous ITS, in effect from 2000 through 2004. Toll adjustments, for variances from requirements defined in the ITS, are done annually and filed with the regulator for approval.

### Athabasca Pipeline

The Athabasca Pipeline is regulated by the AEUB. Tolls are established based on long-term transportation agreements with individual shippers.

#### **Vector Pipeline**

Vector Pipeline is an interstate natural gas pipeline regulated by the FERC under the terms of the Natural Gas Act and the Natural Gas Policies Act. Vector operates under a FERC approved tariff that establishes rates, terms and conditions under which it provides services to its customers. Rates are determined using a cost of service methodology. Tariff changes may only be implemented upon approval by the FERC, through two methods. First, the Company may voluntarily seek a tariff change by making a tariff filing, which justifies proposed changes and provides notice, generally 30 days, to the appropriate parties. Under the second method, the FERC may, on its own motion or based on a complaint, initiate a proceeding. Tolls include a return on equity component of 12.96% before tax.

## Alliance Pipeline

The U.S. portion of the Alliance Pipeline (Alliance) is regulated by the FERC whereas the Canadian portion of the pipeline is regulated by the NEB. Shippers on Alliance entered into 15-year transportation contracts, expiring in December 2015, with a cost-of-service toll methodology. Alliance estimates the tolls necessary to recover the projected costs of providing transportation service to its shippers in accordance with its transportation contracts and regulations. Toll adjustments are made annually with tolls being submitted to shippers and filed with the regulator. The tolls include a return on equity component of 10.85% after tax for the U.S. portion and 11.25% after tax for the Canadian portion. Alliance tolls are based on a deemed 70% debt and 30% equity structure.

## Enbridge Gas Distribution Inc.

The gas distribution operations of EGD are regulated by the OEB. EGD's rates for 2005 are set under a cost of service methodology that allows revenues to be set to recover EGD's forecast costs and to earn a rate of return on common equity. Applications for changes to rates are made annually and are submitted by EGD for approval by the OEB.

Forecast costs include gas commodity and transportation, operation and maintenance, depreciation, municipal taxes, interest and income taxes. The rate base is the average level of investment in all recoverable assets used in gas distribution, storage and transmission and an allowance for working capital. Under cost of service, it is the responsibility of EGD to demonstrate to the OEB the prudence of the costs it has incurred. For 2005, EGD's approved rate of return on the rate base was 8.10% after tax, and the approved rate of return on common equity was 9.57% after tax based on a 35% deemed common equity for regulatory purposes.

## Enbridge Gas New Brunswick

Enbridge Gas New Brunswick (EGNB) is regulated by the New Brunswick Board of Commissioners of Public Utilities (PUB) and follows a cost of service tolling methodology. An application for rate adjustments is filed annually with the PUB for their approval. For 2005, EGNB's approved rate of return on the rate base was 9.46% before tax and the approved rate of return on equity was 13% before tax based on equity for regulatory purposes which is capped at 50%.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 82 of 122 Appendix C

## 3. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION (continued)

#### Regulatory Risk and Uncertainties Affecting Recovery or Settlement

The regulatory assets and liabilities recorded in the financial statements are based upon an expectation of the future actions of the regulator. To the extent that the regulator's future actions are different from the Company's expectations, the timing and amount of recovery or settlement of amounts recorded on the statement of financial position could be significantly different from the timing and amounts that are eventually recovered or settled.

#### **Financial Statement Effects**

In order to recognize the economic effects of the actions or expected actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under GAAP for non rate-regulated entities.

Regulatory assets represent amounts that are expected to be recovered from customers in future periods through the rate-setting process. In the absence of rate regulated accounting, GAAP would not permit deferral of regulatory assets and therefore the earnings impact would be recorded in the period of recovery. Long-term regulatory assets are recorded in Deferred Amounts and Other Assets in the consolidated statement of financial position whereas current regulatory assets are recorded in Accounts Receivable.

Regulatory liabilities represent amounts that are expected to be refunded to customers as a result of the rate-setting process. The GAAP treatment of regulatory liabilities and the resulting earnings impact is the same as that under rate regulated accounting because the liabilities represent contractual obligations. Regulatory liabilities are recorded in Accounts Payable.

Accounting for rate-regulated entities has resulted in recording the following regulatory assets and liabilities:

(millions of dollars)			Settlement	Earnings
December 31,	2005	2004	Period (years)	Impact <sup>1</sup>
Regulatory Assets and (Liabilities)				
Liquids Pipelines				
Tolling deferrals <sup>2</sup>	172.3	151.0	1	21.3
Gas Pipelines				
Deferred transportation revenue <sup>3</sup>	187.6	170.3	18-20	14.6
Transportation revenue adjustment <sup>4</sup>	11.7	12.6	1	(0.3)
Sponsored Investments				
Deferred transportation revenue <sup>3</sup>	30.0	_	20	0.1
Gas Distribution and Services				
Regulatory deferral <sup>5</sup>	82.7	61.0	35	14.4
Deferred taxes recoverable 6	14.0	23.9	2	_
Ontario hearing cost <sup>7</sup>	11.9	8.0	2	2.5
Purchased gas variance <sup>8</sup>	28.1	(47.6)	1	49.2
Unaccounted for gas variance 9	3.0	(32.7)	1	23.2
Deferred rebates 10	(11.6)	(10.7)	1	(0.6)
Earnings sharing deferral 11	-	(13.4)	1	_
Transactional services deferral 12	(13.1)	(1.2)	1	(7.7)

<sup>1</sup> Represents the effect, increase/(decrease), on 2005 after tax earnings as a result of the treatment under rate regulated accounting.

<sup>2</sup> Tolls on the Enbridge System are calculated in accordance with the ITS, System Expansion Program (SEP) II and the Terrace agreement which stipulate that tolls are to be established each year based on capacity as per the ITS, the allowed revenue requirement and the Terrace surcharge. Where actual volumes shipped on the pipeline do not result in collection of the annual revenue requirement, a receivable is recognized and incorporated into tolls in the subsequent year. However, recovery is dependent on volumes shipped since each shipper is only responsible for their pro-rata share of the increase in tolls. In addition, other tolling deferrals arise as determined in accordance with the various agreements.

<sup>3</sup> Deferred transportation revenue is related to the cumulative difference between depreciation expense included in the financial statements of Alliance and Vector Pipelines and depreciation expense included in regulated transportation rates. The companies expect to recover this difference over a number of years, beginning in 2011 and ending in 2025 for Alliance and beginning in 2008 and ending in 2023 for Vector, when depreciation rates as prescribed in the transportation agreements are expected to exceed the depreciation rates applied in the financial statements. This regulatory asset is not included in the rate base upon which the return on equity is calculated.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 83 of 122 Appendix C

- 4 The transportation revenue adjustment is related to the cumulative difference between actual expenses included in the financial statements of Alliance and estimated expenses included in transportation rates. Differences between actual and estimated costs are recoverable under negotiated long-term transportation agreements with shippers. The transportation revenue adjustment is not included in the rate base upon which the return on equity is calculated.
- 5 The PUB has approved a regulatory deferral account to capture the difference between EGNB's distribution revenues and its cost of service during the development period. The regulatory deferral account balance is to be amortized over a recovery period as approved by the PUB commencing at the end of the development period, currently expected in 2010. In a decision rendered in January 2005, the PUB has indicated that the recovery period would end no sooner than December 31, 2040.
- 6 Deferred taxes recoverable relate to the former rental water heater program of EGD. On November 1, 2004, the OEB authorized EGD to collect from ratepayers \$23.9 million, after tax, over a three-year period beginning October 1, 2004. No earnings impact resulted during 2005 since all collections from the rate payers in the period were applied towards recovery of the receivable.
- 7 Ontario hearing costs represent the amount incurred by EGD on the rate hearing process. EGD has historically been granted approval, by the OEB, for recovery of such hearing costs within one or two years.
- 8 Purchased gas variance represents the difference between the actual and estimated cost of gas purchased by EGD, including risk management costs. The estimated cost of gas is approved by the OEB and is built into rates. EGD has historically been granted approval for recovery or refund of this variance within a year.
- 9 Unaccounted for gas variance represents the difference between the total gas distributed by EGD and the amount of gas billed or billable to customers for their recorded consumption, to the extent it is different from the estimated amount built into rates. Based on approval from the OEB, EGD has deferred unaccounted for gas and has been granted approval for recovery or refund of this amount in the subsequent year.
- 10 Deferred rebates represent an accumulation of amounts that were required by the OEB to be refunded to ratepayers of EGD but remain pending due to the inability to locate certain customers. This amount would be refunded to ratepayers in the following year.
- 11 Earnings sharing deferral represents the ratepayer's portion of EGD's earnings in excess of the allowed return on equity for 2004 which is required to be refunded to ratepayers as stipulated by the OEB. The 2004 amount of \$13.4 million was refunded to ratepayers during 2005.
- 12 Transactional services deferral represents the ratepayer portion of excess earnings generated from optimization of storage and pipeline capacity. EGD has historically been required by the OEB to refund the amount to ratepayers in the following year.

#### Other Items Affected by Rate Regulation

#### **Future Income Taxes**

The regulated activities of the Company recover tax expense based on the taxes payable method when prescribed by regulators for ratemaking purposes or when stipulated in ratemaking agreements. Therefore, rates do not include the recovery of future income taxes related to temporary differences. Consequently, the Company does not record future income taxes for these regulated activities as the Company expects that all future income taxes will be recovered in rates when they become payable. GAAP requires the recognition of future income tax liabilities and future income tax assets in the absence of rate regulation.

Net future income tax liabilities recorded of \$77.8 million (2004 – \$35.9 million) arise from temporary differences related to certain regulatory deferral accounts identified above. Accumulated unrecorded future income taxes of \$71.9 million (2004 – \$54.1 million) relate to the remaining regulatory deferral accounts identified above. In the absence of rate regulated accounting, regulatory deferrals would not be recorded nor would the associated future income tax liabilities. However, future income taxes associated with certain assets, primarily property, plant and equipment, would be recorded in the absence of rate regulated accounting resulting in the recognition of \$654.1 million (2004 – \$552.6 million) in future income tax liabilities. As a result of these impacts, earnings would decrease by \$10.0 million in the year ended December 31, 2005.

#### Allowance For Funds Used During Construction (AFUDC) and Other Capitalized Costs

AFUDC is included in the cost of property, plant and equipment and is depreciated over future periods as part of the total cost of the related asset. AFUDC for rate-regulated entities includes both an interest component and, if approved by the regulator, a cost of equity component. In the absence of rate regulation, GAAP would permit the capitalization of only the interest component. Therefore, the set up of the equity component as a capitalized asset and the corresponding earnings recognized during the construction phase would not be recognized nor would the subsequent depreciation of the capitalized equity component. It is not possible to make a reasonable estimate of the carrying value of the equity component of AFUDC under the pool method of depreciation, prescribed by certain regulators. Under this method, assets with similar useful lives and other characteristics are grouped and depreciated as a pool of assets.

Under the pool method of accounting, when a fixed asset is retired or otherwise disposed of, no gain or loss is reflected in income. Entities not subject to rate regulation write off the net book value of the retired asset, and include any resulting gain or loss in current operating results. Since the Company does not calculate depreciation expense for individual assets, it cannot identify or quantify gains or losses on the retirement of fixed assets in any given year. Similarly, it cannot state the effect on depreciation expense of using the pool method.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 84 of 122 Appendix C

## 3. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION (continued)

#### **Operating Cost Capitalization**

With the approval of the regulator, EGD capitalizes a percentage of certain operating costs into the rate base on an ongoing basis. Such treatment is accorded in recognition of the unique business circumstances faced by rate-regulated entities. EGD is authorized to charge depreciation and earn a rate of return on the net book value of such capitalized costs in future years. In the absence of rate regulated accounting, such overhead costs would need to be charged to the consolidated statement of earnings in the period in which they occurred.

EGD entered into a consulting contract relating to services provided in respect of work and asset management initiatives. The majority of the related costs, primarily consulting fees, are being capitalized to gas mains under property, plant and equipment in accordance with regulatory treatment. At December 31, 2005, \$48.1 million (2004 – \$18.3 million) was included in gas mains, which are depreciated over the average service life of 25 years. In the absence of rate regulated accounting, the majority of these costs would need to be charged to the consolidated statement of earnings in the period in which they occurred.

#### **Pension Plans**

The Company maintains a pension plan which provides defined benefit pension benefits. For the regulated operations of Gas Distribution and Services, contributions made to the plan are expensed as paid, consistent with the recovery of such costs in rates. Under GAAP, pension costs and obligations for defined benefit pension plans are determined using the projected benefit method and are charged to earnings as services are rendered. Had pension costs and obligations been recognized, the net pension asset would have increased by \$191.8 million (2004 – \$163.0 million) at December 31, 2005 and earnings would have decreased by \$0.9 million after tax for the year ended December 31, 2005.

## Post-Employment Benefits Other than Pensions

The Company also provides for post-employment benefits other than pensions (OPEB). For the regulated operations of Gas Distribution and Services, the cost of providing these benefits are expensed when paid, consistent with the recovery of such costs in rates. Under GAAP, the cost of such benefits is accrued during the years employees render service. Had these costs been accrued, the net OPEB liability would have increased by \$60.2 million (2004 – \$54.8 million) at December 31, 2005 and earnings would have decreased by \$4.0 million after tax for the year ended December 31, 2005.

<sup>1</sup> Corporate includes new business development activities and investing and financing activities, including general corporate investments and financing costs not allocated to the business segments.

# **Total Assets**

(millions of dollars)

December 31,	2005	2004
Liquids Pipelines	3,594.2	3,410.7
Gas Pipelines	2,321.8	2,310.2
Sponsored Investments	2,451.9	1,116.3
Gas Distribution and Services	7,318.5	6,599.4
International	894.9	958.6
Corporate	629.6	509.9
	17,210.9	14,905.1

<sup>2</sup> Gas Distribution and Services includes 15 months of results for EGD and other gas distribution businesses, for the year end December 31, 2004. This change eliminated the quarter lag basis of consolidation and resulted in additional earnings of \$57.2 million.

<sup>3</sup> Depreciation expense in Gas Distribution and Services includes a \$12.4 million impairment loss on the Calmar Gas Plant.

<sup>4</sup> The measurement basis for preparation of segmented information is consistent with the significant accounting policies described in Note 1.

<sup>5</sup> The 2003 results for Gas Distribution and Services for the year end 2003 are on a quarter lag basis, and therefore include the 12 months ended September 30, 2003.

## 4. SEGMENTED INFORMATION (continued)

Other	4.1	5.5
	10,466.6	9,066.5

## 5. DISPOSITIONS

## **AltaGas Income Trust (AltaGas)**

During 2004, the Company disposed of its investment in AltaGas for cash proceeds of \$346.7 million net of underwriting fees, resulting in an after-tax gain of \$97.8 million (\$121.5 million pre-tax).

## Alliance Pipeline Canada and Enbridge Pipelines (Saskatchewan) Inc.

On June 30, 2003, the Company formed EIF, an unincorporated open-ended trust established under the laws of Alberta. On formation, the Company sold its 50% interest in the Canadian segment of the Alliance Pipeline together with its 100% interest in Enbridge Pipelines (Saskatchewan) Inc. to EIF for total proceeds of \$905.0 million before working capital adjustments of \$20.6 million and transaction costs of \$0.2 million. The Company recorded an after-tax gain on the sale of \$169.1 million (\$239.9 million pre-tax).

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 87 of 122 Appendix C

#### 6. ACQUISITIONS

## **Enbridge Offshore System**

On December 31, 2004, the Company acquired offshore natural gas pipeline assets located in the Gulf of Mexico, from Shell US Gas & Power LLC for cash consideration of \$754.0 million. The assets are held primarily through joint ventures with ownership interests ranging from 22% to 80%. This acquisition expands the Company's natural gas pipeline operations. The acquisition has been accounted for using the purchase method with the results of operations included in the consolidated financial statements from December 31, 2004. The value allocated to the assets was determined by an independent appraisal.

## **Spearhead Pipelines**

In September 2003, the Company acquired 90% of the outstanding shares of CCPS Transportation L.L.C., owner of the Spearhead Pipelines (formerly known as the Cushing to Chicago Pipeline System) for \$145.8 million. In 2005, the Company acquired the final 10% for \$15.4 million (US\$12.4 million).

The acquisitions were accounted for using the purchase method and the results of operations have been included in the consolidated statement of earnings from the dates of acquisition. The amounts paid were allocated to property, plant and equipment.

#### Other

In 2005, the Company acquired interests in other businesses for a total of \$91.2 million (2004 – \$17.5 million), including \$6.8 million paid in common shares of the Company.

	Combined	Offshore
(millions of dollars)	2005	2004
Fair Value of Assets Acquired:		
Property, plant and equipment	66.6	591.8
Intangibles	25.7	133.9
Goodwill	30.8	31.5
Other assets	0.7	22.5
Future income taxes	(16.3)	_
Other liabilities	(0.9)	(25.7)
	106.6	754.0
Purchase Price:		
Cash (2004 includes cash acquired of \$9.5 million)	88.6	752.9
Contingent consideration	11.2	_
Shares issued	6.8	_
Transaction costs	-	1.1
	106.6	754.0

Factors that contributed to goodwill include the retention of key employees, existing customer base, and the potential to use the assets to accommodate the transportation needs of several proposed liquefied natural gas (LNG) regasification projects.

Fuel Cell Energy		25.0	25.0
International			
OCENSA Pipeline		223.3	223.3
		1,842.8	2,278.3

Equity investments include \$560.1 million (2004 – \$543.1 million) representing the unamortized excess of the purchase price over the underlying net book value of the investee's assets at the date of purchase. The excess is attributable to the value of property, plant and equipment within the investees based on estimated fair values and is amortized over the economic life of the assets.

## The Partnership

The Company has a combined 10.9% ownership in EEP, through a 2.0% interest in general partner units, a 5.9% direct interest in Class B partnership units, and a 17.2% interest in EEM, which owns 17.5% of EEP through an investment in i-units of EEP for an effective ownership interest of 3.0%.

Although 82.8% of EEM is widely held, the Company has voting control and, therefore, consolidates EEM's investment in EEP of \$491.6 million (2004 – \$480.6 million). The Class B partnership units and the general partner units are recorded at \$246.5 million (2004 – \$249.5 million).

In both 2004 and 2005, EEP completed public issuances of partnership units. As the Company elected not to fully participate in these offerings, its effective interest in EEP was reduced to 10.9% from 11.6% (2004 – 11.6% from 12.2%). This resulted in recognition of a dilution gain of \$8.9 million (2004 – \$7.6 million), net of tax and minority interest.

## **Enbridge Income Fund**

The Company owns 14,500,000 subordinated units of EIF and 38,023,750 preferred units of Enbridge Commercial Trust (ECT), a subsidiary of EIF, at December 31, 2005. The Company commenced consolidation of EIF on January 1, 2005, in accordance with the new accounting guideline on Consolidation of Variable Interest Entities. Prior to January 1, 2005, EIF was accounted for as an equity investment and the ECT preferred units were accounted for as a cost investment. The market value of the subordinated units of EIF at December 31, 2005, is \$210.0 million (2004 – \$202.1 million).

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 91 of 122 Appendix C

At the request of the Company, the ECT preferred units will be repurchased for cancellation in certain specified circumstances by ECT with a repurchase price per ECT preferred unit based on the net issue price realized from the sale (or that could be realized from the sale) of an ordinary trust unit to the public. The ECT preferred units have no voting rights and mature on June 30, 2033 at which time ECT is obligated to redeem all of the outstanding ECT preferred units for \$10.00 per unit. The economic terms of these units are similar to those of ordinary common units. As such, the approximate fair value of these preferred units, valued at the December 31, 2005 closing price of \$14.48 per ordinary trust unit (2004 – \$13.94), is \$550.6 million (2004 – \$530.1 million).

#### Noverco

The Company owns a cost investment in Noverco of \$181.4 million (2004 – \$181.4 million), which is entitled to a cumulative dividend based on the average yield of Government of Canada bonds maturing in more than 10 years plus 4.34%. The fair value of the investment approximates its carrying value as its return is based on a floating rate.

The Company also owns an equity investment in the common shares of Noverco of \$28.7 million (2004 - \$46.0 million). Noverco holds an approximate 10% reciprocal shareholding in the Company. As a result, the Company has a pro-rata interest of 3.2% (2004 - 3.2%) in its own shares. Both the equity investment in Noverco and shareholders' equity have been reduced by the reciprocal shareholding of \$135.7 million (2004 - \$135.7 million). Dividends paid by the Company to Noverco are eliminated from the equity earnings of Noverco.

During the year the Company reclassified \$51.2 million in dividends paid to Noverco. The reclassification increased equity investments and retained earnings by \$51.2 million and represents the reciprocal portion of dividends paid to Noverco from September 1, 1997 to December 31, 2004. The reciprocal shareholding results in a portion of the dividends paid to Noverco effectively reduce the amount of dividends paid by the Company and reflects an additional investment in Noverco.

#### CLH

The Company owns a 25% equity interest in CLH, a refined products transportation and storage company in Spain.

Subsequent to the initial purchase of \$430.8 million, contingent payments of 46.4 million Euros (\$73.2 million) have been made to the vendors pursuant to annual and cumulative volume targets being met, as stipulated in the initial purchase and sale agreement. The final contingent payment of 38.4 million Euros (\$53.0 million) has been accrued at December 31, 2005.

## **OCENSA Pipeline**

The Company owns a cost investment in the OCENSA Pipeline of \$223.3 million (2004 – \$223.3 million), which earns a fixed rate of return. The fair value of this investment is approximately \$257.9 million (2004 – \$254.3 million), estimated using year-end market information.

## **Income from Equity Investments**

(millions of dollars)

Year ended December 31,	2005	2004	2003
Liquids Pipelines	0.8	1.1	1.1
Gas Pipelines	_	_	31.6
Sponsored Investments	48.6	79.5	73.3
Gas Distribution and Services	8.9	29.4	19.9
International	58.5	49.6	45.7
Corporate	_	0.7	1.2
	116.8	160.3	172.8

Consolidated retained earnings at December 31, 2005, include undistributed earnings from equity investments of \$12.3 million (2004 – \$121.8 million).

#### 10. DEFERRED AMOUNTS AND OTHER ASSETS

(millions of dollars)		
December 31,	2005	2004
Regulatory deferrals	336.3	266.8
Contractual receivables	132.5	118.6
Long-term portion of hedge fair value changes	221.1	179.9
Deferred pension funding	61.7	65.0
Deferred financing charges	42.8	39.5
Other	99.8	59.4
	894.2	729.2

At December 31, 2005, deferred amounts of \$129.8 million (2004 – \$114.7 million) were subject to amortization. Amortization expense related to deferred amounts in 2005 was \$12.5 million (2004 – \$13.9 million; 2003 – \$18.4 million). Accumulated amortization at December 31, 2005, is \$62.1 million (2004 – \$55.6 million).

## 11. INTANGIBLE ASSETS

(millions of dollars)	Weighted Average		Accumulated	
December 31, 2005	Amortization Rate	Cost	Amortization	Net
Gas Pipelines				
Long-term transportation agreements	4.0%	129.7	5.2	124.5
Sponsored Investments				
Long-term transportation agreements	4.4%	116.0	12.9	103.1
Gas Distribution and Services				
Long-term transportation agreements	4.8%	15.9	_	15.9
Customer lists	7.1%	9.8	0.7	9.1
		271.4	18.8	252.6
			Accumulated	
December 31, 2004		Cost	Depreciation	Net
Gas Pipelines				
Long-term transportation agreements	4.0%	133.9	_	133.9

Increases to intangible assets in the period include \$116.0 million in long-term transportation agreements of Alliance Pipeline Canada, a subsidiary of EIF which is consolidated with Enbridge effective January 1, 2005, \$15.9 million in long-term transportation agreements of Leader Wind Corp., acquired on November 21, 2005 and \$9.8 million (US\$8.4 million) in customer lists of U.S. Oil, acquired on January 6, 2005.

During 2005, amortization expense relating to intangible assets is \$11.1 million (2004 – nil; 2003 – nil). Amortization of the Leader Wind Corp. transportation agreements will commence at the in-service date, anticipated in 2007.

## 12. GOODWILL

#### 13. **DEBT**

(millions of dollars)	Weighted Average			
December 31,	Interest Rate	Maturity	2005	2004
Liquids Pipelines				
Debentures	8.20%	2024	200.0	200.0
Medium-term notes	5.73%	2009-2029	673.0	622.8
Other <sup>1</sup>			166.4	90.6
Gas Distribution and Services				
Debentures	10.98%	2009-2024	585.0	585.0
Medium-term notes	6.04%	2008-2033	1,190.0	1,230.0
Other			11.7	8.4
Corporate				
U.S. dollar term notes (US\$417 million;				
2004 - US\$275 million)	5.82%	2007-2015	486.2	331.0
Medium-term notes	5.87%	2006-2035	1,988.4	1,692.5
Preferred securities	7.80%	2051	200.0	200.0
Other <sup>2</sup>			1,179.6	1,796.9
Total Debt			6,680.3	6,757.2
Current maturities of long-term debt			(401.2)	(530.2)
Other short-term debt			-	(173.7)
Current Maturities and Short-Term Debt			(401.2)	(703.9)
Long-Term Debt			6,279.1	6,053.3

<sup>1</sup> Primarily commercial paper borrowings.

Short-term debt of \$1,340.5 million (2004 – \$1,361.1 million) is supported by the availability of long-term committed credit facilities and has been classified as long-term debt.

Long-term debt maturities for the years ending December 31, 2006 through 2010 are \$401.2 million, \$337.1 million, \$452.7 million, \$350.9 million and \$601.1 million, respectively.

The Company has \$200.0 million of 7.8% Preferred Securities outstanding. The Preferred Securities may be redeemed at the Company's option, in whole or in part, after February 15, 2007, being the fifth anniversary of their issue. The Company has the right to defer, subject to certain conditions, payments of distributions on the securities for up to 20 consecutive quarterly periods. Deferred and regular distribution amounts are payable in cash or, at the option of the Company, in common shares of the Company.

## **Interest Expense**

(millions of dollars)

Year ended December 31,	2005	2004	2003
Long-term debt	382.8	442.8	409.4
Non recourse long-term debt	112.1	54.5	58.7
Commercial paper and other short-term debt	40.6	21.7	20.2
Short-term borrowings	12.7	10.5	9.6
Capitalized	(9.0)	(4.2)	(5.1)
	539.2	525.3	492.8

In 2005, total interest paid was \$537.1 million (2004 – \$549.3 million; 2003 – \$508.6 million).

<sup>2</sup> Primarily commercial paper borrowings. Includes US\$256.9 million (2004 – US\$585.0 million).

## 13. DEBT (continued)

## **Credit Facilities**

(millions of dollars)

December 31, 2005	Expiry Dates	Available	Drawdowns
Liquids Pipelines	2006	150.0	_
Gas Distribution and Services	2006	1,105.8	303.5
Corporate	2006-2010	2,199.0	_
		3,454.8	303.5

Credit facilities carry a weighted average standby fee of 0.095% per annum on the unutilized portion and drawdowns bear interest at prevailing market rates. The credit facilities serve as a backstop to the commercial paper programs and the Company has the option, at its sole discretion, to extend the facilities from 2006 to 2007 should lenders fail to renew their credit commitments.

#### 14. NON-RECOURSE DEBT

(millions of dollars)

December 31,	2005	2004
Gas Pipelines		
Credit Facilities of Alliance Pipeline US (US\$7.7 million, 2004 – US\$8.9 million)	8.9	10.6

	1,688.1	695.4
Current Maturities	(68.2)	(30.2)
	1,619.9	665.2

Long-term debt maturities on non-recourse borrowings for the years ending December 31, 2006 through 2010 are \$68.2 million, \$60.4 million, \$99.7 million, \$171.9 million and \$78.2 million, respectively.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 95 of 122 Appendix C

## **Alliance Pipeline US**

Interest and principal repayments on the Senior Notes are payable semi-annually each June 30 and December 31; principal repayments on the 7.877% Senior Notes commence June 2019. Principal repayments are closely tied to the recovery rates for capital depreciation and income taxes contained in the transportation agreements.

#### **Aux Sable**

The term debt of Aux Sable is for capital funding, bears interest at Libor plus 2%, and is repayable 20% on the third and fourth anniversaries, 2008 and 2009, respectively, and 60% on the fifth anniversary, 2010.

## **Enbridge Income Fund**

The Medium Term Notes (MTNs) are redeemable by EIF prior to maturity, in whole or in part, at the option of EIF by giving at least 30 days, and not more than 60 days, notice to the holders, at the Government of Canada yield plus 0.14% and 0.25% for the Series 1 and Series 2 MTNs, respectively. Interest on the MTNs is payable semi-annually in June and December.

The Senior Notes may be redeemed by Alliance Pipeline Canada at any time at a price equal to the greater of (i) the applicable Government of Canada yield price plus a premium and (ii) par, together with accrued interest. Alliance Pipeline Canada may be required to redeem the Senior Notes, in whole or in part, from proceeds received under insurance claims or other claims for damages if the proceeds are not applied to repair or rebuild the Alliance pipeline system.

Interest on the Senior Notes is payable semi-annually in June and December. Principal repayments are closely tied to the recovery rates for depreciation contained in the transportation agreements.

## 15. NON-CONTROLLING INTERESTS

(millions of dollars)

December 31,	2005	2004
EEM	370.1	369.8
EGD preferred shares	100.0	100.0
EIF	165.5	_
Other	55.4	45.1
	691.0	514.9

Non-controlling interest in EEM represents 82.8% of the listed shares of EEM.

The 4,000,000 4.82% Cumulative Redeemable EGD Preferred Shares are entitled to fixed, cumulative, preferential dividends which gives them a priority claim on the assets of EGD prior to the common shareholder, Enbridge. Subsequent to July 1, 2009, EGD may, at its option, redeem all or a portion of the outstanding preferred shares for \$25.00 plus all accrued and unpaid dividends to the redemption date.

Non-controlling interest in EIF represents 58.1% of EIF held by ordinary unitholders.

#### 16. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and an unlimited number of preferred shares.

#### **Common Shares**

(millions of dollars; number of common shares in millions)

December 31,		2005		2004		2003
	Number		Number		Number	
	of Shares	Amount	of Shares	Amount	of Shares	Amount
Balance at beginning of year	346.2	2,282.4	343.8	2,238.0	339.4	2,169.0
Exercise of stock options	2.1	40.0	2.0	33.4	3.6	51.9
Dividend Reinvestment and Share Purchase Plan	0.4	14.6	0.4	11.0	0.8	17.1
Issued for business acquisition	0.2	6.8	_	_	_	_
Balance at end of year	348.9	2,343.8	346.2	2,282.4	343.8	2,238.0

The fair value based method to expense stock options has been applied on a prospective basis since January 1, 2003. Stock-based compensation expense from fixed stock options and performance-based options is recognized in earnings over the vesting period with a corresponding increase in contributed surplus. Contributed surplus is decreased and share capital is increased for the proceeds from the exercise of these options.

#### **Preferred Shares**

The 5,000,000 5.5% Cumulative Redeemable Preferred Shares, Series A are entitled to fixed, cumulative, preferential dividends of \$1.375 per share per year, payable quarterly. Subsequent to December 31, 2005, the Company may, at its option, redeem all or a portion of the outstanding preferred shares for \$25.50 if redeemed on or prior to December 1, 2006; \$25.25 if redeemed on or prior to December 1, 2007; and \$25.00 if redeemed thereafter, in each case with all accrued and unpaid dividends to the redemption date.

## **Earnings Per Common Share**

Earnings per common share is calculated by dividing earnings applicable to common shareholders by the weighted average number of common shares outstanding. The weighted average number of shares outstanding has been reduced by the Company's pro-rata weighted average interest in its own common shares of 10.6 million shares (2004 – 10.6 million shares), resulting from the investment in Noverco.

The treasury stock method is used to determine the dilutive impact of stock options. This method assumes that any proceeds from the exercise of stock options would be used to purchase common shares at the average market price during the period.

(number of common shares in millions)

December 31,	2005	2004	2003
Weighted average shares outstanding	337.4	334.4	331.0
Effect of dilutive options	3.8	2.8	2.8
Diluted weighted average shares outstanding	341.2	337.2	333.8

For the year ended December 31, 2004, 1,750,800 stock options with a weighted average exercise price of \$25.73 were excluded from the diluted earnings per share calculation. Stock options are excluded when the exercise price exceeds the average share price for the period. For the years ended December 31, 2005 and 2003, no stock options were excluded from the diluted earnings per share calculations.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 97 of 122 Appendix C

## Stock Split

On May 5, 2005, shareholders approved a two-for-one split of the common shares of the Company. All references to common shares, earnings per common share, diluted earnings per common share, stock options and performance stock units have been retroactively restated to reflect the impact of the stock split.

#### **Dividend Reinvestment and Share Purchase Plan**

Under the plan, registered shareholders may reinvest dividends in common shares of the Company or make optional cash payments to purchase additional common shares, in either case free of brokerage or other charges.

## **Shareholder Rights Plan**

The Shareholder Rights Plan is designed to encourage the fair treatment of shareholders in connection with any takeover offer for the Company. Rights issued under the plan become exercisable when a person, and any related parties, acquires or announces its intention to acquire 20% or more of the Company's outstanding common shares without complying with certain provisions set out in the plan or without approval of the Board of Directors of the Company. Should such an acquisition occur, each rights holder, other than the acquiring person and related parties, will have the right to purchase common shares of the Company at a 50% discount to the market price at that time.

#### 17. STOCK OPTION AND STOCK UNIT PLANS

The Company maintains two plans for long-term incentive compensation: the Incentive Stock Option Plan (2002) and the Performance Stock Unit (PSU) Plan (2004). The Company's Incentive Stock Option Plan includes fixed stock options and performance-based stock options. A maximum of 30 million common shares are reserved for issuance under this plan. The PSU Plan grants notional units equivalent to one Enbridge common share.

#### **Fixed Stock Options**

Key employees are granted options to purchase common shares that are exercisable at the market price of the common shares at the date the options are granted. Generally, options vest in equal annual installments over a four-year period and expire ten years after the issue date. Outstanding stock options expire over a period ending no later than June 16, 2015. Compensation expense recorded for the year ended December 31, 2005, for fixed stock options is \$5.5 million (2004 – \$3.7 million) and is included in operating and administrative expenses.

## **Outstanding Fixed Stock Options**

	9,434			5,248		

#### **Performance-based Options**

The Plan provides for the grant of performance-based options to executive officers that become exercisable when both performance targets and time requirements have been met. As of December 31, 2005, all performance targets have been met. Time requirements are fulfilled in equal annual installments over a five-year term. Options not yet vested will vest no later than September 2007.

## **Outstanding Performance-based Options**

(options in thousands; exercise price in dollars)

December 31,		2005		2004		2003
	W	eighted Average	W	eighted Average	W	eighted Average
	Number	Exercise Price	Number	Exercise Price	Number	Exercise Price
Options at beginning of year	2,555	20.68	2,992	20.03	4,090	18.87
Options exercised	(450)	16.51	(437)	16.20	(1,098)	15.69
Options at end of year	2,105	21.57	2,555	20.68	2,992	20.03
Options vested	1,457	20.87	936	16.41	1,372	16.34

At December 31, 2005, the exercise prices of outstanding performance-based stock options ranged from \$15.68 to \$23.15 (2004 – \$15.68 to \$23.15; 2003 – \$15.68 to \$23.15). Outstanding performance-based stock options will expire over a period ending no later than September 16, 2010.

## **Performance Stock Units**

During the year ended December 31, 2004, the Company implemented a PSU Plan for senior officers. Any cash awards under the PSU Plan are paid out at the end of a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by the Company's share price at the time and by a performance multiplier as determined by the Company's total shareholder return over the three-year performance period relative to a specified peer group of companies. The performance multiplier ranges from 0, if the Company's performance fails to meet threshold performance levels, to a maximum of 2, if the Company outperforms its peer group. During the three-year period, the number of PSUs outstanding is increased to include additional PSUs equal to the number of additional shares that would have been received had the PSUs been treated as shares enrolled in the Dividend Reinvestment Plan (DRIP).

### **Outstanding Performance Stock Units**

December 31,	2005	2004
Units at beginning of year	67,688	_
Units granted	130,130	65,950
Units cancelled	(3,265)	_
DRIP	6,099	1,738
Units at end of year	200,652	67,688

Of the total PSUs outstanding at December 31, 2005, 69,766 units have a performance period ending March 8, 2007, and 130,886 units have a performance period ending January 1, 2008. Compensation expense recorded for the year ended December 31, 2005, for PSUs is 2.5 million (2004 - 0.5 million) and is included in operating and administrative expenses. An estimated performance multiplier of 1 (2004 - 1) has been used in determining the expense during the period based upon historical performance.

## **Pro forma Compensation Expense**

If the Company had used the fair-value based method to account for fixed stock options and performance-based stock options granted in fiscal 2002, earnings and earnings per share would have been as follows:

(millions of dollars, except per share amounts)

Year ended December 31,	2005	2004	2003
Earnings applicable to common shareholders			
As reported	556.0	645.3	667.2
Total stock-based compensation expense 1	(12.0)	(8.2)	(5.9)
Included as an expense in the statement of earnings <sup>2</sup>	8.0	4.2	1.9
Pro forma	552.0	641.3	663.2
Earnings per common share			
As reported	1.65	1.93	2.02
Pro forma	1.64	1.92	2.00
Diluted earnings per common share			
As reported	1.63	1.91	2.00
Pro forma	1.62	1.90	1.98

<sup>1</sup> Total stock-based compensation expense if the fair value based method to expense all outstanding stock options had been applied since January 1, 2002.

The Black-Scholes model was used to calculate the fair value of fixed stock options. Significant assumptions used in this model are as follows:

Year ended December 31,	2005	2004	2003
Fair value per option (dollars)	5.31	3.85	4.23
Valuation assumptions			
Expected option term (yrs)	8	8	8
Expected volatility	16%	15%	22%
Expected dividend yield	3.17%	3.54%	3.95%
Risk-free interest rate	4.40%	4.80%	5.24%

## **Contributed Surplus**

(millions of dollars)

December 31,	2005	2004
Balance at beginning of year	5.4	1.9
Stock-based compensation	5.5	3.7
Option exercises	(0.9)	(0.2)
Balance at end of year	10.0	5.4

<sup>2</sup> Stock-based compensation recognized as an expense in the statement of earnings for options and performance stock units granted in 2003 through 2005 as a result of the adoption of the fair-value based method on January 1, 2003.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 100 of 122 Appendix C

#### 18. FINANCIAL INSTRUMENTS

#### **Derivative Financial Instruments Used for Risk Management**

The Company is exposed to movements in foreign currency exchange rates, interest rates and the price of energy commodities. In order to manage these exposures, the Company utilizes derivative financial instruments to create offsetting financial positions to specific underlying or cash market physical exposures. These exposures include the following:

## Foreign Exchange

The Company has exposure to foreign currency exchange rates, primarily arising from its U.S. dollar denominated investments and its Euro investment in CLH, where both carrying values and earnings are subject to foreign exchange risk. The Company utilizes par forward contracts and cross currency swaps to manage a portion of the foreign exchange exposure related to changes in carrying values. In addition, US\$117.0 million (2004 – US\$275.0 million) of cross currency swaps have been entered into to hedge the Company's exposure on its U.S. dollar denominated senior term notes. Long-term fixed rate debt of US\$300.0 million (2004 – \$ nil) has been designated as a hedge of U.S. dollar denominated foreign operations. The fair value of foreign exchange derivatives that are designated as hedges of foreign investments are recognized on the balance sheet, while all foreign exchange derivative instruments that are designated as cash flow hedges are accounted for on a settlement basis.

#### **Interest Costs**

The Company enters into forward interest rate agreements such as swaps and collars to convert floating rate debt to a fixed rate in order to hedge against the effect of future interest rate movements on its interest expense. The Company monitors its debt portfolio mix of fixed and variable rate instruments to ensure that it remains within the parameters of Board approved policy limits. In addition to the floating to fixed interest rate swaps, the Company has entered into fixed to floating interest rate swaps, with an aggregate notional amount of \$300.0 million (2004 – \$300.0 million), to manage its balance of fixed and floating rate debt.

#### **Energy Commodity Costs**

The Company uses gas price swaps, futures, options and collars to manage the value of commodity purchases and sales that arise from capacity commitments on the Alliance and Vector pipelines. The Company also uses derivative instruments to fix the value of variable price exposures that arise from commodity storage arrangements and natural gas supply agreements.

As a result of the Company's ownership interest in Aux Sable, it is exposed to the price differential between natural gas and NGLs. This risk is hedged through the use of over-the-counter derivatives whereby the forward prices of natural gas and NGLs are fixed with swaps, or capped or collared with options.

The Company has also entered into over-the-counter swap agreements that convert the price of power in Alberta and Ontario from a floating rate to a fixed rate per megawatt hour (MW/H) or convert fixed rate power to a floating rate.

### **Natural Gas Supply Management**

The Company hedges a portion of the cost of future natural gas supply requirements of EGD, on behalf of its ratepayers, as allowed by the regulator. Amounts paid or received under the agreements are recognized as part of the cost of the natural gas purchases and are recovered through the ratemaking process. At December 31, 2005, the Company had entered into natural gas price swaps and options to manage the price for approximately 20.7%, or 27.3 billion cubic feet (bcf), of its forecast fiscal 2006 system gas supply.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 101 of 122 Appendix C

#### **Credit Risk**

Entering into derivative financial instruments can give rise to additional credit risks. Credit risk arises from the possibility that a counterparty will default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the instrument. The Company minimizes credit risk by entering into risk management transactions only with institutions that possess investment grade credit ratings or have provided the Company with an acceptable form of credit enhancement. For transactions with terms greater than five years, the Company may also retain the right to require a counterparty that would otherwise meet the Company's credit criteria, to provide collateral.

#### Fair Values

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

(millions of dollars unless otherwise noted)

December 31,		2005			2004	
	Notional Principal	Fair Value Receivable/		Notional Principal	Fair Value Receivable/	
	or Quantity	(Payable)	Maturity	or Quantity	(Payable)	Maturity

Power (MW/H)	28.0	0.8	2006-2017	_	_	_

<sup>1</sup> Included in Deferred Amounts and Other Assets for qualifying hedges of foreign operations.

In addition, the Company has forward foreign exchange contracts with a notional principal of Canadian \$91.0 million (2004 – \$214.0 million), to exchange Canadian for U.S. dollars. The outstanding instruments expire in 2007. The contracts are not effective hedges for accounting purposes but provide an economic hedge of an exposure related to income taxes on foreign currency gains or losses on Canadian dollar debt of a U.S. subsidiary. These instruments are recorded at fair value and have a fair value payable of \$14.3 million as at December 31, 2005 (2004 – \$28.8 million).

The Company has a net positive fair market value of \$352.4 million to its derivative counterparties, as such the Company is exposed to replacement cost risk if these counterparties failed to perform obligations under these contracts. The Company has no significant concentration with any single counterparty and only transacts with highly credit worthy counterparties.

<sup>2</sup> Includes \$160.6 million (2004 - \$128.2 million) in Deferred Amounts and Other Assets for qualifying hedges of foreign operations.

## 18. FINANCIAL INSTRUMENTS (continued)

## **Interest Rate Management**

The derivative instruments used to manage interest rate risk and the associated debt related to these instruments are as follows:

(millions of dollars)		Effective	Notional
December 31, 2005	Maturity	Interest Rate 1	Amounts
Liquids Pipelines			
Commercial paper (floating to fixed interest swap)	2029	6.0%	25.4
Corporate			
Commercial paper (floating to fixed interest swap)	2006	2.8%	400.0
Commercial paper (floating to fixed interest swap)	2006-2009	4.0%	US\$196.5
Senior term notes (cross currency swap)	2007	7.5%	US\$117.0
Medium term notes 5.45% (fixed to floating interest swap)	2006	floating	300.0

<sup>1</sup> After giving effect to the derivative financial instruments.

#### **Fair Values of Other Financial Instruments**

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties, calculated at the reporting date, to settle these instruments. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The fair value of other financial instruments reflect the Company's best estimate and are based on the Company's valuation techniques or models to estimate market values.

#### **Total Debt**

(millions of dollars)

December 31,		2004		
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Liquids Pipelines	1,039.4	1,201.4	913.4	1,037.8
Gas Distribution and Services	1,786.7	2,184.2	1,823.4	2,168.9
Corporate	3,854.2	4,076.3	4,020.4	4,275.6
	6,680.3	7,461.9	6,757.2	7,482.3

The fair value of debt does not include the effects of hedging. Non-recourse debt has a carrying value of \$1,688.1 million (2004 – \$695.4 million) and a fair value of \$1,775.1 million (2004 – \$769.4 million).

#### **Trade Credit Risk**

Trade receivables related to Liquids Pipelines consist primarily of amounts due from companies operating in the oil and gas industry and are collateralized by the crude oil and other products contained in the Company's pipelines and storage facilities. Trade receivables in Gas Pipelines and Sponsored Investments also consist primarily of amounts due from companies in the oil and gas industry, where shippers fail to maintain specified credit ratings they are required to provide letters of credit or other suitable security. Credit risk in the Gas Distribution and Services segment is reduced by the large and diversified customer base and the ability to recover an estimate for doubtful accounts through the ratemaking process. Included in accounts receivable is an allowance for doubtful accounts of \$41.4 million at December 31, 2005 (2004 - \$45.5 million).

## 19. INCOME TAXES

## **Income Tax Rate Reconciliation**

(millions of dollars)

Year ended December 31,	2005	2004	2003
Earnings before income taxes	784.2	941.4	846.7
Combined statutory income tax rate	35.2%	35.5%	36.7%
Income taxes at statutory rate	276.0	334.2	310.7
Increase/(decrease) resulting from:			
Tax rate changes on future income tax balances	1.2	42.7	6.2
Future income taxes related to regulated operations	(17.5)	(13.7)	(35.6)
Non-taxable items, net	(41.6)	(72.7)	(99.2)
Lower foreign tax rates	(9.1)	(15.1)	(21.1)
Large Corporations Tax in excess of surtax	12.3	10.0	15.3
Other	-	3.8	(3.7)
Income Taxes	221.3	289.2	172.6
Effective income tax rate	28.2%	30.7%	20.4%

In 2005, income taxes paid amounted to \$150.3 million (2004 - \$243.2 million; 2003 - \$202.9 million).

## **Components of Future Income Taxes**

(millions of dollars)

December 31,	2005	2004
Future Income Tax Liabilities		
Differences in accounting and tax bases of property, plant and equipment	567.0	425.3
Differences in accounting and tax bases of investments	356.1	323.0
Other	230.6	197.2
	1,153.7	945.5
Future Income Tax Assets		
Loss carryforwards	230.2	207.5
Other	49.4	85.7
	279.6	293.2
Total Net Future Income Tax Liability	874.1	652.3

At December 31, 2005, the Company has recognized the benefit of unused tax loss carryforwards of \$660.8 million (2004 - \$596.4 million). Unused tax loss carryforwards expire as follows: 2006 - \$9.9 million; 2007 - \$16.2 million; 2008 - \$19.7 million; 2009 - \$7.2 million; 2010 - \$4.3 million; 2011 - \$8.3 million, and 2014 - \$2.6 million and 2015and beyond – \$592.6 million.

#### 19. INCOME TAXES (continued)

#### **Geographic Components of Pretax Earnings and Income Taxes**

(millions of dollars)

(millions of dollars)			
Year ended December 31,	2005	2004	2003

	108.1	12.7	85.8
Current and future income taxes	221.3	289.2	172.6

#### 20. POST-EMPLOYMENT BENEFITS

#### **Pension Plans**

The Company has three basic pension plans which provide either defined benefit or defined contribution pension benefits or both for employees of the Company. The Liquids Pipelines and Gas Distribution and Services pension plans provide non-contributory defined benefit pension and/or defined contribution benefits to Canadian employees of Enbridge. The Enbridge U.S. pension plan provides non-contributory defined benefit pension benefits for U.S. based employees. The Company has four supplemental pension plans which provide pension benefits that exceed those benefits earned in the basic plans.

#### **Defined Benefit Plans**

Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially indexed to inflation after a member's retirement. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective dates of the most recent actuarial valuations and the next required actuarial valuations for the basic plans are as follows:

	Effective Date of Most Recently Filed Actuarial Valuation	Effective Date of Next Required Actuarial Valuation
Liquids Pipelines	January 1, 2004	January 1, 2007
Enbridge U.S.	January 1, 2005	January 1, 2006
Gas Distribution and Services	January 1, 2005	January 1, 2008

The defined benefit pension plan costs have been determined based on management's best estimates and assumptions of the rate of return on pension plan assets, rate of salary increases and various other factors including mortality rates, terminations and retirement ages.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 105 of 122 Appendix C

#### **Defined Contribution Plans**

Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, pension costs equal amounts required to be contributed by the Company. Pension costs in respect of these plans during the year were \$2.4 million (2004 – \$2.3 million; 2003 – \$2.0 million).

#### **Post-employment Benefits Other than Pensions**

Post-employment benefits other than pensions (OPEB) include primarily supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	OPEB		Pens	ion Benefit
(millions of dollars)	2005	2004	2005	2004
Change in accrued benefit obligation				
Benefit obligation, January 1	170.3	155.7	847.9	788.3
Service cost	4.4	4.0	25.5	22.7
Interest cost	10.5	9.4	52.7	49.4
Amendments	(5.8)	(2.2)	-	0.7
Employee contributions	0.4	0.4	-	_
Actuarial loss	20.4	13.5	159.0	30.4
Benefits paid	(5.8)	(5.4)	(41.7)	(38.9)
Other	_	_	_	3.3
Effect of exchange rate changes	(2.8)	(5.1)	(4.1)	(8.0)
Benefit obligation, December 31	191.6	170.3	1,039.3	847.9
Change in plan assets				
Fair value of plan assets, January 1	40.2	36.2	1,061.8	986.7
Actual return on plan assets	1.0	1.7	161.9	110.0
Employer's contributions	8.7	9.9	14.2	14.5
Employee contributions	0.4	0.4	_	_
Benefits paid	(5.8)	(5.4)	(41.7)	(38.9)
Other	_	_	(0.9)	(8.0)
Effect of exchange rate changes	(1.2)	(2.6)	(4.2)	(9.7)
Fair value of plan assets, December 31	43.3	40.2	1,191.1	1,061.8
Funded status				
Benefit obligation, December 31	(191.6)	(170.3)	(1,039.3)	(847.9)
Fair value of plan assets, December 31	43.3	40.2	1,191.1	1,061.8
Overfunded/(Underfunded) status, December 31	(148.3)	(130.1)	151.8	213.9
Contribution after measurement date	0.8	_	-	2.9
Unamortized prior service cost	_	0.4	14.5	17.2
Unamortized transitional obligation/(asset)	14.7	24.2	(22.0)	(24.1)
Unamortized net loss	57.2	38.9	118.3	26.0
Net amount recognized, December 31	(75.6)	(66.6)	262.6	235.9

The table above reflects the funded status and recorded pension and OPEB assets and liabilities for all of the Company's benefit plans on an accrual basis. However, in accordance with its ability to recover employee benefit costs on a cash basis for the regulated operations of Gas Distribution and Services, the Company records the cost of such benefits. Using the cash basis for the Gas Distribution and Services plans and the accrual method for all other plans, the Company's net pension asset was \$70.8 million (2004 - \$72.9 million). The net OPEB liability was \$15.4 million (2004 - \$11.8 million). These net assets or liabilities are recorded on the balance sheet in Deferred Amounts and Other Assets with the current portion recorded in working capital accounts.

#### 20. POST-EMPLOYMENT BENEFITS (continued)

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

		OPEB			Pension Benefit	S
Year ended December 31,	2005	2004	2003	2005	2004	2003
Discount rate	5.30%	6.21%	6.31%	5.24%	6.26%	6.29%
Average rate of salary increases				4.44%	4.00%	4.00%
Net Pension Plan and OPEB Costs	s Recognized					
(millions of dollars)						
Year ended December 31,				2005	2004	2003
Benefits earned during the year				32.3	29.0	27.7
Interest cost on projected benefit ob	igations			63.2	58.8	57.4
Actual return on plan assets				(162.9)	(111.7)	(110.5)
Difference between actual and expe	cted return on	plan assets		87.3	41.1	45.7
Amortization of prior service costs				2.3	2.3	2.8
Amortization of transitional obligation	ı			0.2	0.1	0.5
Amortization of actuarial loss				9.6	12.2	12.0
Special Termination Benefits				-	3.3	_
Amount charged to EEP				(10.2)	(7.8)	(10.2)
Pension and OPEB cost recognized				21.8	27.3	25.4

The above table reflects the pension and OPEB cost for all of the Company's benefit plans on an accrual basis. However, in accordance with its ability to recover employee benefit costs on a pay-as-you-go basis for the regulated operations of Gas Distribution and Services, the Company records the cost of such benefits on a cash basis. Using the cash basis for the Gas Distribution and Services plans and the accrual method for all other plans, the Company's pension cost was \$11.6 million (2004 - \$11.6 million; 2003 - \$9.4 million), and its OPEB cost was \$5.9 million for 2005 (2004 - \$5.8 million; 2003 - \$7.0 million).

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

		OPEB		Pension Benefits			
Year ended December 31,	2005	2004	2003	2005	2004	2003	
Discount rate	6.21%	6.31%	6.79%	6.26%	6.29%	6.75%	
Average rate of salary increases				4.00%	4.00%	4.00%	
Average rate of return on pension							
plan assets	4.50%	4.50%	4.50%	7.31%	7.32%	7.25%	

#### **Medical Cost Trend Rates**

The assumed medical cost trend rates for the next year used to measure the expected cost of benefits and the ultimate trend rate and the year in which the ultimate trend rate is assumed to be achieved are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in which Ultimate Medical Cost Trend Rate Assumption is Achieved
Canadian Plans			
Drugs	10%	5%	2016
Other Medical and Dental	5%	5%	2006
Enbridge U.S.	12%	5%	2012

A one per cent increase in the assumed medical and dental care trend rate would result in an increase of \$32.8 million in the accumulated post-employment benefit obligations and an increase of \$2.6 million in benefit and interest costs. A one per cent decrease in the assumed medical and dental care trend rate would result in a decrease of \$26.0 million in the accumulated post-employment benefit obligations and a decrease of \$2.0 million in benefit and interest costs.

#### **Major Categories of Plan Assets**

(millions of dollars)	OPEB			Pension Benefits			fits	
Year ended December 31,		2005		2004		2005		2004

Plan assets are invested primarily in readily marketable investments with thresholds on the credit quality of fixed income securities.

#### **Expected Rate of Return on Plan Assets**

	OPER			nsion Benefit
Year ended December 31,	2005	2004	2005	2004
Canadian Plans	4.50%	4.50%	7.25%	7.25%
United States Plan	4.50%	4.50%	7.75%	7.75%

The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each pension fund after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plans; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

#### 23. RELATED PARTY TRANSACTIONS (continued)

The receivable from affiliate of \$177.0 million (2004 – \$171.7 million) resulted from the sale of Enbridge Midcoast Energy to EEP. The note, denominated in U.S. dollars, bears interest at 6.6% and matures in 2007. The balance on December 31, 2005, was US\$151.9 million (2004 – US\$142.1 million). Interest income related to the affiliate receivable was \$11.7 million (US\$9.4 million), \$11.8 million (US\$9.0 million) and \$21.7 million (US\$15.5 million), in 2005, 2004 and 2003, respectively. The fair value of the receivable at December 31, 2005, is \$176.8 million.

The Company also provides limited consulting and other services to investees as required. Market prices are charged for these services where they are reasonably determinable. Where no market price exists, a cost-based price is determined and charged. The Company may also purchase consulting and other services from affiliates. Prices are determined on the same basis as services provided by the Company. The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

#### 24. COMMITMENTS AND CONTINGENCIES

#### **Enbridge Gas Distribution Inc.**

#### Class Action Lawsuit – late payment penalties

On April 22, 2004, the Supreme Court of Canada released its decision in a case commenced against EGD by a customer with respect to late payment penalties. The Supreme Court of Canada determined that EGD would be required to repay a portion of amounts paid to it as late payment penalties from April 1994. The total amount of late payment penalties billed between April 1994 and February 2002 (when EGD's late payment penalty was revised), was approximately \$74 million, of which a portion may be eligible for repayment. The amount payable is not determinable at this time. The Supreme Court has directed that a lower court determine the amount payable. Case conferences were held before a judge of the Ontario Supreme Court in August and December 2004 and March 2005 to discuss the remaining outstanding issues following the Supreme Court's decision. Further court proceedings to determine the amount payable and other related issues are likely to be held in early 2006.

Late payment penalty revenues are included in EGD's estimate of revenues for the year and therefore accrue to the benefit of all customers, reducing the cost of providing distribution services. The OEB approves these estimates and the resulting rates each year. EGD intends to apply to the OEB for recovery of any amount payable that results from this action.

#### Bloor Street Incident

EGD has been charged under both the Ontario Technical Standards and Safety Act (TSSA) and the Ontario Occupational Health and Safety Act (OHSA) in connection with an explosion that occurred on Bloor Street West in Toronto on April 24, 2003. The maximum possible fine upon conviction on all charges would be \$5.0 million in aggregate. EGD has also been named as a defendant in a number of civil actions related to the explosion. A Coroner's Inquest in connection with the explosion has also been called, but the proceedings are stayed pending resolution of the TSSA and OHSA matters. The courts have not yet ruled upon any of the charges laid under the TSSA or the OHSA, and thus it is not possible at this time to predict or comment upon the potential outcome. The trial in respect of these charges commenced January 3, 2006. EGD does not expect the outcome of these civil actions to result in any material financial impact.

#### Remediation of Discontinued Manufactured Gas Plant Sites

The remediation of discontinued manufactured gas plant sites may result in future costs to EGD. In October 2002, a claim was filed for \$55 million in damages relating to a certain manufactured gas plant site. EGD filed a statement of defence in June 2003 denying liability. Trial scheduling court is expected to occur in early 2006 and it is possible that a trial in the matter may take place in 2006. Although management believes that it has a valid defence to this claim, certain risks exist. The probable overall cost cannot be determined at this time due to uncertainty about the presence and extent of damage in addition to the potential alternative remediation approaches which vary in cost. EGD expects that costs, if any, not recovered through insurance may be recovered through rates. As such, management does not believe that the outcome will have any material financial impact.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 111 of 122 Appendix C

#### **CAPLA Claim**

The Canadian Alliance of Pipeline Landowners' Associations (CAPLA) and two individual landowners have commenced a class action against the Company and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. The Company believes it has a sound defence and intends to vigorously defend the claim. The Plaintiffs have filed a motion to establish a cause of action, one of the requirements to have the motion certified as a class action under the *Class Proceedings Act* (Ontario). These matters are currently before the Ontario District Court for hearing. Since the outcome is indeterminable, the Company has made no provision at this time for any potential liability.

#### **Enbridge Energy Company, Inc.**

Enbridge Energy Company, Inc. (EEC), a subsidiary of the Company, is the general partner of EEP. EEC's former subsidiary Enbridge Midcoast Energy Inc. (Midcoast) has been assessed by the U.S. Internal Revenue Service (IRS) taxes, interest and penalties of US\$4.5 million for its 1999 through 2001 taxation years. Midcoast has paid all amounts and has filed a claim for refund of the full amount. The IRS has challenged Midcoast's tax treatment of its 1999 acquisition of several partnerships that owned a natural gas pipeline system in Kansas (these assets were sold to EEP in 2002). The IRS position, if sustained, could decrease the U.S. tax basis for the pipeline assets, which could reduce Enbridge's earnings by up to approximately US\$60 million, although the immediate cash tax impact would be significantly less. Enbridge believes the tax treatment of the acquisition and related tax deductions claimed were appropriate. Enbridge intends to vigorously litigate this matter in U.S. District Court (Houston) beginning in February 2006.

Enbridge and its subsidiaries maintain reserves for income taxes, which include amounts estimated to be adequate to compensate for contingent liabilities arising from tax positions. While fully supportable in the Company's view, these tax positions, if challenged by tax authorities, may not be fully sustained on review.

#### **Olympic Pipe Line Company**

On December 12, 2005 the Company announced that it will acquire a 65% common share interest in the Olympic Pipe Line Company for US\$99.8 million subject to working capital adjustments. The transaction closed on February 1, 2006.

#### 25. GUARANTEES

EEC, as the general partner of EEP, has agreed to indemnify EEP from and against substantially all liabilities including liabilities relating to environmental matters, arising from operations prior to the transfer of its pipeline operations to EEP in 1991. This indemnification does not apply to amounts that EEP would be able to recover in its tariff rates if not recovered through insurance, or to any liabilities relating to a change in laws after December 27, 1991.

In addition, in the event of default, EEC, as the general partner, is subject to recourse with respect to a portion of EEP's long-term debt of US\$186.0 million at December 31, 2005 (2004 – US\$217.0 million).

In the normal course of conducting business, Enbridge enters into a wide variety of agreements which provide for indemnification to third parties. Enbridge cannot reasonably estimate the maximum potential amounts that could become payable to third parties under these agreements, however historically Enbridge has not made any significant payments under these indemnification provisions. While many of these agreements may specify a maximum potential exposure, or a specified duration to the indemnification obligation, there are circumstances where the amount and duration are unlimited. Examples where such indemnification obligations have been issued include:

Filed: 2007-09-04 FB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 112 of 122 Appendix C

#### 25. GUARANTEES (continued)

#### Sale Agreements for Assets or Businesses

- breaches of representations, warranties or covenants;
- loss or damages to property;
- environmental liabilities:
- changes in laws:
- valuation differences:
- litigation; and
- contingent liabilities.

#### Provision of Services and Other Agreements

- breaches of representations, warranties or covenants;
- changes in laws;
- failure to satisfy certain performance standards;
- intellectual property rights infringement; and
- litigation.

When disposing of assets or businesses, the Company may indemnify the purchaser for certain tax liabilities incurred while the Company owned the assets or for a misrepresentation related to taxes that result in a loss to the purchaser. Similarly, the Company may indemnify the purchaser of assets for certain tax liabilities related to those assets.

The Company has also agreed to indemnify EEM for any tax liability related to EEM's formation, management of EEP and ownership of i-units of EEP. The Company has not made any significant payment under these tax indemnifications. The Company does not believe there is a material exposure at this time.

#### 26. UNITED STATES ACCOUNTING PRINCIPLES

These consolidated financial statements have been prepared in accordance with Canadian GAAP. The effects of significant differences between Canadian GAAP and U.S. GAAP for the Company are described below.

#### **Earnings and Comprehensive Income**

(millions of dollars, except per share amounts)

#### 1 Stock-based Compensation

Effective January 1, 2003, the Company adopted FAS 123, Accounting for Stock-Based Compensation, on a prospective basis for U.S. GAAP, and elected to use the fair value-based method to measure compensation expense for all options issued after January 1, 2003. The adoption of the fair value method for U.S. GAAP eliminates all differences between Canadian and U.S. GAAP for options granted subsequent to the date of adoption. Disclosure differences in pro forma earnings between Canadian and U.S. GAAP will remain for those options granted prior to adoption, on January 1, 2002, of the Canadian accounting standard for stock-based compensation. Earnings differences will remain for performance-based options granted during 2002 when they vest.

Prior to the adoption of FAS 123, the Company accounted for stock-based compensation for U.S. GAAP in accordance with APB 25, Accounting for Stock Issued to Employees, which required the use of the intrinsic value-based method to measure compensation expense. Under U.S. GAAP, 1,620,000 of the 2002 issuance of performance-based options vested during 2005 resulting in a pre-tax compensation expense of \$16.6 million (2004 – nil).

#### 2 Future Income Taxes

Under U.S. GAAP, deferred income tax liabilities are recorded for rate-regulated operations, which follow the taxes payable method for ratemaking purposes. As these deferred income taxes are expected to be recoverable in future revenues, a corresponding regulatory asset is also recorded. These assets and liabilities are adjusted to reflect changes in enacted income tax rates. A deferred tax liability of \$654.1 million (2004 – \$596.8 million) is recorded for U.S. GAAP purposes and reflects the difference between the accounting basis and the tax basis of property, plant and equipment. Regulated companies following the taxes payable method are not required to record this additional tax liability under Canadian GAAP. To recover the additional deferred income taxes recorded under U.S. GAAP through the ratemaking process, it would be necessary to record incremental revenue of \$538.3 million (2004 – \$333.1 million).

#### 3 Accounting for Joint Ventures

U.S. GAAP requires the Company's investments in joint ventures be accounted for using the equity method. However, under an accommodation of the U.S. Securities and Exchange Commission, accounting for joint ventures need not be reconciled from Canadian to U.S. GAAP. The different accounting treatment affects only display and classification and not earnings or shareholders' equity.

#### 4 Financial Instruments

For U.S. GAAP purposes, FAS 133, Accounting for Derivative Instruments and Hedging Activities, requires that all derivatives be recorded on the balance sheet as either assets or liabilities at their fair value. Changes in the fair value of derivatives are recognized in current period earnings unless specific hedge accounting criteria are met.

The accounting for changes in the fair value of derivatives held for hedging purposes depends upon their intended use. For fair value hedges, the effective portion of changes in the fair value of derivative instruments is offset in income against the change in fair value, attributed to the risk being hedged, of the underlying hedged asset, liability or firm commitment. For cash flow hedges, the effective portion of changes in the fair value of derivative instruments is offset through other comprehensive income (or loss), until the variability in cash flows being hedged is recognized in earnings in future accounting periods.

#### 26. UNITED STATES ACCOUNTING PRINCIPLES (continued)

#### 5 Accumulated Other Comprehensive Loss

At December 31, 2005, Accumulated Other Comprehensive Loss of \$95.5 million consists of an accumulated foreign currency translation balance of \$149.8 million (2004 - \$129.1 million) and net unrealized gains of \$54.3 million (2004 - losses of \$18.0 million). For U.S. GAAP purposes, the foreign currency translation adjustment balance is classified as a component of Accumulated Other Comprehensive Loss. The fair value of derivative financial instruments that qualify as cash flow hedges are also included in Accumulated Other Comprehensive Loss.

Of the total Accumulated Other Comprehensive Loss of \$95.5 million, the Company estimates that approximately \$10.4 million, representing unrecognized net gains on derivative activities at December 31, 2005, is expected to be reclassified into earnings during the next twelve months and primarily relates to natural gas supply management.

6 Consolidation of Variable Interest Entities

On December 24, 2003, the Financial Accounting Standards Board issued a revision to FASB Interpretation (FIN) 46, which replaces the interpretation released in January 2003.

FIN 46R requires the primary beneficiary of a variable interest entity's activities to consolidate the variable interest. The Company is the primary beneficiary of EIF through a combination of the 41.9% equity interest and the preferred unit interest. Effective January 1, 2005, the Company adopted without restatement of prior periods the new CICA accounting guideline for Consolidation of Variable Interest Entities (AcG 15). AcG 15 and FIN46R do not create U.S. GAAP differences for the Company, therefore there is not a U.S. GAAP difference related to variable interest entities at December 31, 2005. The impact of FIN 46R included in the U.S. GAAP amounts at and for the year ended December 31, 2004, are outlined below:

#### **Statement of Financial Position**

(millions of dollars)		December 31, 2004

Financing activities	(52.6)	362.8
Net cash flow impact	(12.8)	27.6

#### **Supplemental Disclosure – Pro Forma Compensation Expense**

U.S. GAAP requires that, where the fair value based method is not used to measure compensation expense, pro forma earnings and earnings per share, calculated as if the fair value based method had been used, must be disclosed. In Canada, these requirements apply to options granted on or after January 1, 2002, and therefore, the Company's Canadian GAAP disclosure does not include any options granted prior to that date.

#### **New Accounting Standards**

In June 2005, the U.S. Emerging Issues Task Force (EITF) reached a consensus on EITF issue 04-5, Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights (EITF 04-5), addressing when a general partner, or general partners as a group, control and should therefore, consolidate a limited partnership. Under EITF 04-5, a sole general partner is presumed to control a limited partnership when certain conditions are met. As a result, for the first reporting period beginning after December 15, 2005, it is expected that the Company will be required to include the accounts of EEP for U.S. GAAP purposes.

<sup>1</sup> Financial and operating highlights of Gas Distribution and Services for 2004 reflect earnings for the 15 months ended December 31, 2004 for Enbridge Gas Distribution (EGD), Noverco and other gas distribution entities. This resulted from the elimination of the quarter lag basis of consolidation in 2004. For the years ended December 31, 2001 through 2003, earnings are for the 12 months ended September 30 for these entities. For the year ended December 31, 2005, earnings are for the 12 months ended December 31 for these entities.

<sup>2</sup> Adjusted operating earnings applicable to common shareholders represent earnings applicable to common shareholders adjusted for non-operating factors including primarily gains and losses, weather, regulatory disallowances and impacts of tax rate changes. Earnings for 2004 and 2003 have been adjusted to eliminate the quarter lag basis of consolidation described above. This is not a measure that has a standardized meaning prescribed by Canadian generally accepted accounting principles (GAAP) and is not considered a GAAP measure. Therefore, this measure may not be comparable with a similar measure presented by other issuers. Management believes that the presentation of adjusted operating earnings provides useful information to investors and shareholders as it provides increased predictive value and performance trends.

<sup>3</sup> Liquids Pipelines operating highlights include the statistics of the 10.9% owned Lakehead System and other wholly-owned liquid pipeline operations.

<sup>4</sup> Gas Distribution and Services volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas

<sup>5</sup> Degree day deficiency is a measure of coldness. It is calculated by accumulating for each day in the fiscal period the total number of degrees by which the daily mean temperature fell below 18 degrees Celsius. The figures given are those accumulated in the Toronto area.

<sup>1</sup> Reflects a two-for-one stock split approved by the Company's shareholders at the May 5, 2005 Annual and Special Meeting. The Company's shares commenced trading on this basis effective May 18, 2005.

Adjusted operating earnings applicable to common shareholders represent earnings applicable to common shareholders adjusted for non-operating factors including primarily gains and losses, weather, regulatory disallowances and impacts of tax rate changes. Earnings for 2004 and 2003 have been adjusted to eliminate the quarter lag basis of consolidation described above. This is not a measure that has a standardized meaning prescribed by Canadian generally accepted accounting principles (GAAP) and is not considered a GAAP measure. Therefore, this measure may not be comparable with a similar measure presented by other issuers. Management believes that the presentation of adjusted operating earnings provides useful information to investors and shareholders as it provides increased predictive value and performance trends.

<sup>3</sup> Earnings applicable to common shareholders divided by average shareholders' equity (weighted monthly during the year).

<sup>4</sup> Sum of after-tax earnings (including earnings from discontinued operations) and after-tax interest expense, divided by weighted average capital employed. Capital employed is equal to the sum of shareholders' equity, EGD preferred shares, future income taxes, deferred credits and total debt (including short-term borrowings).

<sup>5</sup> Total debt (including short-term borrowings) divided by the sum of total debt and shareholders' equity.

Total debt (including short-term borrowings) divided by capital employed. Capital employed is equal to the sum of shareholders' equity, EGD preferred shares, future income taxes, deferred credits and total debt (including short-term borrowings).

<sup>7</sup> Sum of before-tax earnings and interest expense divided by interest expense (including capitalized interest).

<sup>8</sup> Dividends per common share divided by adjusted operating earnings per share applicable to common shareholders.

## Enbridge Awards and Recognition in 2005

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 119 of 122 Appendix C

#### **Corporate Social Responsibility**

- Dow Jones Sustainability Index 2005/06: Enbridge was added to the Dow Jones Sustainability World Index for 2005/06, effective September 19, 2005. The prestigious global ranking evaluates companies on economic, environmental and social criteria.
- Global 100 Most Sustainable Corporations in the World: A new global ranking that reviewed 2,000 companies for their ability to manage strategic opportunities in new environmental and social markets named Enbridge as one of the top 100 companies in the world. Enbridge was one of six Canadian companies included in the listing that was announced at the World Economic Forum at Davos, Switzerland, in January 2005, and one of five in the listing that was announced in January 2006.
- Canada's Top 100 Employers: Enbridge was named to the 2006 listing of Canada's Top 100 Employers and also named as one of Alberta's Top 20 Employers.
- Thanks a Million Award: For the sixth year in a row, Enbridge was recognized by the United Way and Centraide as a recipient of their Thanks a Million Award for raising more than \$1 million for United Way and Centraide campaigns in Canada in 2004.
- Corporate Knights Best 50 Corporate Citizens Ranking 2005: Enbridge was ranked 47th in the listing of the best 50 Canadian corporate citizens.

- Alberta Venture magazine's Most Respected Corporations in Alberta 2005: Enbridge was selected the Most Respected Corporation for Community Involvement.
- Best Places to Work in Houston: The Enbridge/Enbridge Energy Partners Houston office was named one of the Best Places to Work in Houston by the Houston Business Journal. Enbridge was in the top 10 in its category.

#### **Corporate Governance**

- The Globe and Mail Report on Business Annual Corporate Governance Evaluation 2005: Enbridge Inc. tied for 12th scoring 93 out of a possible 102 points (best score was 97).
- Canadian Business Magazine 2005: Enbridge tied for 15th best Board of Directors scoring 92 (best score was 99).
- Canadian Coalition for Good Governance 2005: Enbridge was one of three honourable mentions for the first Canadian Coalition for Good Governance Golden Gavel Award for effective disclosure of director information.
- Clarity Communications of Canada Inc. ranking of the Top 10 S&P/TSX60 Investor Relations websites: announced December 2, 2005, Enbridge Inc. ranked #5.

# We Deliver

We deliver energy throughout North America and internationally. We do it in a way that provides low-cost, safe and reliable pipeline transportation and gas distribution services when and where they are needed. This focus on meeting our customers' needs delivers value for our customers and, in turn, for our shareholders.

<sup>1</sup> Liquids Pipelines operating highlights include the 16.6% owned Lakehead System and wholly owned liquids pipelines operations excluding Spearhead Pipeline and Athabasca Pipeline.

<sup>2</sup> Enbridge Offshore Pipelines was purchased on December 31, 2004.

<sup>3</sup> In 2004, Enbridge Gas Distribution (EGD) and other gas distribution operations changed their fiscal year ends from September 30 to December 31 to be consistent with Enbridge. Consequently, highlights of Gas Distribution and Services for 2004 include the 15-month period ended December 31. Gas Distribution and Services volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas supply arrangements.

<sup>4</sup> Degree day deficiency is a measure of coldness. It is calculated by accumulating for each day in the period the total number of degrees each day by which the daily mean temperature falls below 18 degrees Celsius. The figures given are those accumulated in the Greater Toronto Area.

## Delivering Customer Value in 2006

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 6 of 128 Appendix D

# 2 million barrels per day

### of crude oil and liquids delivered to customers

Enbridge operates, in Canada and the United States, the world's longest crude oil and liquids pipeline system – the combined Enbridge Pipelines and Lakehead systems – that deliver 2 million barrels per day to customers in Canada and the United States Midwest. Current expansion plans will move additional volumes of Canadian petroleum to these markets, as well as new markets in the U.S. East and South and to Asia-Pacific.

# 410 billion cubic feet

## of natural gas delivered to 1.8 million customers

Enbridge owns and operates Canada's largest natural gas distribution company, and delivered 410 billion cubic feet of natural gas to 1.8 million customers in Ontario, Quebec, New Brunswick and New York State in 2006. Enbridge Gas Distribution, based in Toronto, Ontario, is one of the lowest cost natural gas distribution operations in North America, and has provided reliable service for more than 155 years.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 7 of 128 Appendix D

# a full slate of liquids pipeline projects

For a number of years Enbridge has been pursuing a strategy to broaden access to markets to accommodate growing production from Canada's oil sands. Enbridge is currently proceeding with over \$8 billion of pipeline and terminalling projects to ensure that its customers have access to existing and new markets on a timely basis.

# Spearhead start-up

On March 2, 2006, the first significant volumes of Western Canadian crude oil were delivered to Cushing, Oklahoma through Enbridge's Spearhead Pipeline. Broadening the market for Canadian crude oil will enable more U.S. refineries to receive reliable supplies of Canadian crude oil while providing Canadian producers with favourable pricing for their production. The success of Spearhead acted as a 'catalyst' as customers moved quickly to support the Southern Access and Alberta Clipper initiatives. With the scale and flexibility inherent in the mainline system, these projects will support the continuing development of a pipeline network capable of serving diverse U.S. refinery markets throughout the U.S. midwest, mid-continent and U.S. Gulf Coast.

# contract terminalling

In response to strong demand from customers, Enbridge is expanding its crude oil contract terminalling facilities – at Hardisty, Alberta; Cushing, Oklahoma and numerous other centres along the Liquids Pipelines right-of-way in Canada and the United States. The Company is currently pursuing the potential to add another 30 million barrels of storage to its existing capacity of 16.5 million barrels.

# strengthening the gas position

In the Gulf of Mexico Enbridge acquired the West Cameron lateral, and the Neptune and Shenzi projects are scheduled for completion in 2007. Enbridge is well positioned to capture further opportunities in the Gulf. Enbridge Energy Partners has also strengthened its position in key market areas with expansions of its North and East Texas natural gas systems as well as advancing its 700 million cubic feet per day East Texas Clarity Project.

Enbridge Gas Distribution added more than 40,000 customers in 2006. It has also made progress in the development of a high deliverability natural gas storage service at its Tecumseh Gas Storage facility in Southwestern Ontario. A successful open season was conducted in December 2006 and commercial terms are being finalized.

### Delivering Shareholder Value in 2006

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 8 of 128 Appendix D

### 2006 earnings applicable to common shareholders

# **\$615.4** million

Earnings applicable to common shareholders were \$615.4 million for the year ended December 31, 2006, or \$1.81 per common share, compared with \$556.0 million, or \$1.65 per share, in 2005. The \$59.4 million increase in earnings reflected strong performance from the Enbridge crude oil mainline system, Enbridge Energy Partners, and the Aux Sable natural gas fractionation facility.

#### 2006 adjusted earnings

\$1.74

### per common share

Adjusted operating earnings, which represent earnings applicable to common shareholders adjusted for non-operating factors, increased 9% over 2005.

### 2006 dividends paid

\$1.15

#### per common share

In January 2007, the Board announced a 7% increase in the quarterly dividend to \$0.3075 per common share (or \$1.23 per common share annualized) effective the first quarter of 2007.

# Dividend payout target 60% to 70% of adjusted operating earnings

Enbridge targets to pay out approximately 60% to 70% of adjusted operating earnings, which provides Enbridge investors with an attractive combination of long-term growth and near-term cash payout.

# Total shareholder return has averaged 19% per year over the past 10 years

Enbridge's objective is to create superior long-term value for shareholders, and the Company has consistently delivered strong total shareholder returns – total dividends declared plus share price appreciation – since it became a publicly traded entity in 1953. Since that time, Enbridge has provided an annual average return to shareholders of more than 13%. Total shareholder return over the past decade has averaged 19.1% per year. And in 2006, total shareholder return was 14.3%.

# Enbridge combines a low-risk profile with excellent growth opportunities. The Company's value proposition is supported by:

A DIVERSIFIED ASSET BASE: Enbridge's portfolio of long-lived energy infrastructure assets generates stable cash flow and plentiful new growth opportunities.

A DISCIPLINED INVESTMENT APPROACH: Enbridge's strong financial returns reflect the Company's disciplined approach and stringent criteria for evaluating investments.

FINANCIAL STRENGTH AND FLEXIBILITY: A strong balance sheet and ready access to capital markets ensures growth opportunities can be reliably and cost-effectively financed.

## Letter to Shareholders

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 11 of 128 Appendix D

#### Enbridge has a results-oriented approach

to executing our exceptional inventory of prospects and the largest

capital investment program in our history. We are focused on providing

our customers with value-added solutions and generating

superior returns for our shareholders.

- Patrick D. Daniel

Enbridge had another excellent year in 2006, delivering strong financial results while also receiving commercial support for a number of major new growth opportunities. As a result, the Company is well positioned to continue its very consistent delivery of superior returns to shareholders.

Our 2006 earnings were \$615.4 million or \$1.81 per common share compared with \$556.0 million or \$1.65 per common share in 2005. Adjusted earnings per share increased 9.4 per cent to \$1.74, which was at the upper end of our guidance range and sustains our ten-year EPS growth rate of 10 per cent. Total shareholder return last year was 14.3 per cent, with a ten-year average of 19.1 per cent, and a 53-year average of 13.3 per cent. We are very proud of that track record, and we are focused on maintaining and improving it through our commitment to our customers' needs.

At Enbridge, our core strategies serve as our road map to being one of the leading energy delivery companies in North America. They are: to expand existing businesses; to focus on operational excellence and to develop new growth platforms. Each of these strategies is important to Enbridge. While our 2006 results were primarily targeted at our first strategy – expanding and extending the core businesses, our commitment to operational excellence remains a priority each and every year.

We have an exceptional portfolio of new growth opportunities before us. This growth is highly visible, predictable and has, we believe, low execution risk. We have spent the last six years working on initiatives to broaden access to markets for Canadian crude oil, and it is particularly gratifying to see a number of our oil pipeline projects now moving to the construction phase.

2006 Annual Report Letter to Shareholders 09

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13

Page 12 of 128 Appendix D

With over \$8 billion of liquids pipeline projects now moving forward, we will nearly double our net investment in liquids

pipelines as the Company embarks on the most intense capital program in its history.

The new Spearhead pipeline began operating in March 2006, and we are already considering expanding the capacity. The

Southern Access Expansion (US \$1.5 billion) is now under construction, and portions will be phased in from 2007 to 2009.

The Southern Access Extension (US \$0.4 billion) to Patoka, Illinois is also scheduled for completion in 2009.

Preliminary pre-regulatory approval work has already begun on Alberta Clipper (US \$2 billion in 2006 dollars), a new pipeline

from Hardisty, Alberta to Superior, Wisconsin, with a projected in-service date of late-2009 to mid-2010.

The Southern Lights diluent return line (US \$1.3 billion) is currently under construction in the U.S. with a targeted in-service

date of 2010. Development of the Gateway pipeline from Edmonton to Kitimat, B.C. is proceeding at a reduced pace as it

is now anticipated our customers will not need this capacity until 2012 to 2014.

And this is by no means the end of our list. We are working on several alternatives to expand capacity to the Gulf of Mexico

and to move crude further east from Chicago. In addition, we have plans to build approximately \$2 billion of regional pipeline

delivery infrastructure in the oil sands corridor between Fort McMurray and Edmonton, with nearly one-half of this underway

with Waupisoo, Long Lake, Surmont projects and an expansion of the Athabasca System, all in various stages of construction.

Almost one-half of our current earnings are derived from our gas pipeline and distribution assets, and in 2006 this segment

delivered solid operating and financial results.

Our interests in the Alliance and Vector pipelines, which move natural gas from Western Canada to the Chicago and

Southern Ontario areas, complement our growing natural gas gathering, processing and transmission infrastructure in the

Gulf of Mexico and Southern United States - particularly Texas, where Enbridge Energy Partners has good exposure to the

prolific natural gas plays in the Anadarko Basin, Barnett Shale and Bossier Sands and is strengthening its position with

expansions on its North and East Texas systems. We are encouraged with recent regulatory developments at Enbridge Gas

Distribution (EGD) and we look forward to the introduction of incentive regulation in 2008. EGD continues to be one of the

fastest growing gas utilities in North America, adding more than 40,000 new customers each year.

Our investments in Colombia and Spain performed well in 2006 and continue to be two of our top performing assets.

We also continue to take a measured approach to developing new technology platforms in alternative energy.

The Company's sources of earnings and growth are diversified among all of our businesses. We believe this is critical to

our success because it reduces our exposure to the risks in any one segment of our business while allowing us to increase

potential returns in others.

10

Letter to Shareholders Enbridge Inc.

Appendix D

Protection of the environment is of paramount importance to Enbridge and we focus on 'best-in-class' performance at all of

our worksites. In January 2007, it was announced at the World Economic Forum in Davos, Switzerland that Enbridge had

once again been named to the list of the Global 100 Most Sustainable Corporations in the World. We do realize the need

to raise the Corporate Social Responsibility (CSR) bar to ensure that we continue to operate to emerging standards, and

that we listen and respond to the concerns of our stakeholders. This is going to be particularly true as we deal with one of

today's highest profile issues – climate change. It will be critically important for industry to continue to address this issue by

thinking about the next generation and adopting targets and practices that make a real difference.

We are pleased to welcome J. Herb England to the Board of Directors, effective January 1, 2007. Mr. England has been

appointed to fill the vacancy on the Board created by the resignation of William Fatt in July 2006. Mr. England has extensive

operating experience in both public and private companies. We would like to take this opportunity to thank Mr. Fatt for his

many contributions to Enbridge and for his dedication and service to the Board.

We would like to thank the employees of Enbridge for their outstanding contributions to date and their engagement in

executing our exciting growth plans.

Our Company is well positioned to continue its history of annual growth, and to create value for customers, which in turn

results in creation of value for shareholders.

On behalf of the Board of Directors:

David A. Arledge

Chair of the Board of Directors

March 8, 2007

Patrick D. Daniel

2006 Annual Report Letter to Shareholders 11

## Our Strategies for Growth

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 14 of 128 Appendix D

# Well Positioned

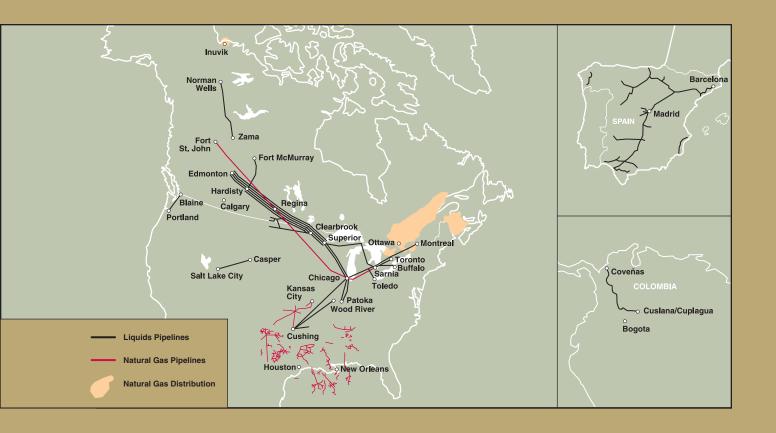

Enbridge's growth opportunities are built around North America's energy supply/demand fundamentals. The Company is ideally positioned to transport crude oil from conventional producing areas in Western Canada and from the continent's largest hydrocarbon play – Alberta's oil sands. Enbridge is also well positioned to tap some of North America's top natural gas growth prospects: Alaska, the Gulf of Mexico, Texas tight gas, and the Rockies. With the existing integration of markets between Canada and the United States, growing energy demand, Canada's history of being a secure source of energy supply, and Enbridge's extensive continental pipeline systems, the Company is ideally positioned to be a major contributor to meeting continental energy needs.

Enbridge plans to capitalize on this positioning by:

- I first and foremost, expanding our existing core businesses;
- I focusing on operational excellence; and
- developing new growth platforms, such as LNG regasification, natural gas storage, gas-fired power generation and new energy technologies to provide business diversification.

### **Our Core Businesses**

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 15 of 128 Appendix D

# Delivery Assets

Although Enbridge reports on its businesses through five business segments, those segments are primarily built around three core businesses:

- The Liquids Pipelines business, which includes the world's longest crude oil pipeline system supplying oil to markets throughout Canada and the United States. Enbridge is expanding this business by developing regional Alberta oil sands infrastructure, increasing capacity to traditional markets, and pursuing new market initiatives.
- Natural Gas Distribution and Services businesses, built around the Company's ownership of Canada's largest gas distribution franchise.
- The Natural Gas Pipelines business, which includes interests in Alliance, Vector and Gulf Coast Offshore Pipelines systems, and the pursuit of new infrastructure projects such as an Alaska natural gas pipeline.

Enbridge is working to expand its core businesses throughout North America, and internationally where the Company is focusing on Europe and Latin America for growth opportunities.

2006 Annual Report Our Core Businesses 13

## **Liquids Pipelines**

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 17 of 128 Appendix D

# 1 million

barrels per day of additional oil sands production forecast by 2010

# over \$8 billion

of liquids pipelines projects currently in progress

Enbridge has an extensive North American network of liquids pipelines systems, and is well positioned with assets that connect areas of growing supply with areas of growing demand. That is particularly true with respect to Canadian oil sands development, where the rapid growth in oil sands projects is projected to add in the order of 1 million barrels per day of new production by 2010, and another 1 million barrels per day by 2015.

Enbridge continues to work with its customers to ensure the right pipeline capacity is in place at the right time for the right markets. At present we have over \$8 billion of liquids pipelines projects in progress. These include the Waupisoo, Southern Access Expansion, Southern Access Extension, Alberta Clipper, Southern Lights and Athabasca Expansion projects as well as investments in contract terminalling. Many other projects are currently in development to further expand markets for Canadian producers. These include the Gateway Project which would provide access to new markets in California and Asia-Pacific, as well as our initiatives to provide additional pipeline capacity to the U.S. Gulf Coast.

Successful completion of these projects will produce a classic win-win result. Oil sands producers will have timely and cost-effective access to markets for their growing production, and expanded markets will help maximize netbacks. North American consumers will benefit from having access to new, secure sources of supply that will continue to produce petroleum for many decades to come.

2006 Annual Report Liquids Pipelines 15

### Natural Gas Distribution and Services

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 19 of 128 Appendix D

# more than 40,000

new customers per year forecast for Enbridge Gas Distribution

## 2nd highest

organic growth rate for natural gas utilities in North America

Enbridge Gas Distribution, Enbridge's natural gas distribution franchise in Ontario, is the second fastest growing gas utility in North America. In recent years Enbridge Gas Distribution has added more than 40,000 new customers per year, and expects to continue to grow at a similar pace, forecasting a customer base of 2 million by 2010.

Enbridge Gas Distribution is also working to capitalize on its changing regulatory environment with the anticipated introduction in 2008 of comprehensive incentive regulation, and the development of high-deliverability contract storage capacity.

Other Natural Gas Distribution and Services opportunities for Enbridge include development of liquefied natural gas (LNG) projects; renewable energy investments; building on its investment in Noverco Inc., which holds a majority interest in Gaz Métro Limited Partnership, the company that distributes natural gas in Quebec; and continuing to develop a natural gas distribution system in the province of New Brunswick.

## Natural Gas Pipelines

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 21 of 128 Appendix D

15%

of all Texas natural gas transported by Enbridge Energy Partners

50%
of deepwater Gulf of Mexico
natural gas transported by Enbridge

Enbridge continues to expand its interests in natural gas pipelines in North America.

Through Enbridge Energy Partners, the Company is involved in a variety of natural gas transmission and gathering pipeline systems in the Gulf Coast and Mid-Continent regions of the United States. The Company is a major player in the fast-growing Anadarko Basin, Barnett Shale and Bossier Sands gas plays in Texas, and transports approximately 15% of all Texas gas production. In 2006, Enbridge Energy Partners announced plans to invest US\$0.6 billion to expand and extend its East Texas natural gas system to handle growing production from that area.

In addition, Enbridge Offshore Pipelines transports approximately half of the deepwater offshore natural gas production in the Gulf of Mexico, and is well positioned there to take advantage of forecast growth from proposed new deepwater projects. Work is currently under-way to construct natural gas and oil laterals to tie in new volumes, and in 2006 another seven deepwater discoveries were announced, reinforcing the Gulf's potential for being a key source for long-term continental supply growth.

Enbridge also has major interests in the Alliance and Vector transmission systems that transport Western Canadian natural gas to markets in the U.S. Midwest and Ontario. Both pipelines announced growth plans in 2006 – Alliance is pursuing a pipeline extension to the east, and Vector is expanding capacity from its approximately 1 billion cubic feet per day to 1.2 billion cubic feet per day. Both pipelines are well positioned to transport northern natural gas, should the Alaska and Mackenzie pipeline projects proceed.

## Corporate Social Responsibility

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 23 of 128 Appendix D

\$5.2 million

of community investments in

North America in 2006

1 of 5

Canadian companies named to the Global 100 Most Sustainable Corporations in the World listing in 2006

Enbridge Inc.'s approach to Corporate Social Responsibility (CSR) and its CSR performance is detailed in the Company's 2006 Corporate Social Responsibility Report. The report, which reviews Enbridge's environmental, economic and social performance, was once again written in compliance with the guidelines outlined in the Global Reporting Initiative's Sustainability Reporting Guidelines as in prior years. In addition, the report was reviewed by Enbridge's Employee Advisory Committee and Disclosure Committee, as well as by an external panel of CSR experts from a variety of organizations and agencies in Canada and the United States. Selected information and indicators in the report were subjected to an internal review by Enbridge's Audit Services Department.

Enbridge continues to invest in communities where the Company operates, primarily in health, social services, education, the environment, arts and culture, and civic leadership. For the seventh year in a row, Enbridge was recognized by the United Way and Centraide as a recipient of their *Thanks a Million Award* for raising more than \$1 million for United Way and Centraide campaigns in Canada. Also in 2006, Enbridge Inc. qualified as an Imagine Canada Caring Company, donating 1 per cent of pre-tax Canadian earnings to Canadian causes and communities.

As part of its commitment to CSR, Enbridge also is investing in renewable energy resources, including wind power and fuel cells. The Company is currently involved, through Enbridge Income Fund, in three operating wind power projects in Western Canada, and one that Enbridge Inc. plans to build in Ontario. The four projects will have a combined capacity of more than 270 megawatts. That's enough electricity to meet the power requirements of more than 100,000 homes.

A copy of the CSR report is available in the CSR section of Enbridge's website, at www.enbridge.com/corporate/.

## Awards and Recognition in 2006

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 24 of 128 Appendix D

#### **Corporate Social Responsibility**

- Global 100 Most Sustainable Corporations in the World: In January 2007, Enbridge was named for the third consecutive year as one of the 100 Most Sustainable Corporations in the World.
- Canada's Top 100 Employers: Enbridge was selected for the 2007 edition of Canada's Top 100 Employers, and was again chosen one of Alberta's Top 25 Employers.
- The Best 50 Corporate Citizens in Canada 2006: Enbridge was included in the Corporate Knights fifth annual listing of best corporate citizens.
- United Way Thanks a Million Award: For the seventh consecutive year, Enbridge received the United Way's Thanks a Million Award recognizing organizations that raise \$1 million or more nationally for United Ways across Canada.
- Alberta Venture Most Respected Corporations: For the third year in a row, Enbridge was named Alberta's Most Respected Corporation in the category of Community Involvement in the annual Alberta Venture Magazine awards.
- Fortune's America's Most Admired Companies: Enbridge Energy Partners was ranked third among pipelines for America's Most Admired Companies 2006.
- Corporate Volunteer Award of Excellence: The Government of Alberta's Wild Rose Foundation presented Enbridge with an award recognizing the company's efforts in the volunteer sector.
- Globe and Mail Business for the Arts Awards: Enbridge received an Award of Distinction in the category of Most Effective Corporate Program.
- Patron Award: Enbridge received the Patron Award for Sustained Support at the annual Mayor's Luncheon for Business and the Arts in Calgary.
- **CEPA Safety Awards:** Enbridge Pipelines received two safety awards from the Canadian Energy Pipeline Association in May for lowest injury frequency rate in Canada in the large pipeline category for 2005, and second place for the lowest motor vehicle incident frequency rate.

- Best Safety Performer: Enbridge received a Work Safe Alberta award from the Alberta Government for exceptional performance in workplace health and safety.
- IX Garrigues-Expansión Environment Prize: CLH, Spain's largest refined products transportation and storage business, was awarded the country's IX Garrigues-Expansión Environment Prize in recognition of the work being done on environmental recovery of land.
- Green Toronto Award: Enbridge Gas Distribution was recognized by the City of Toronto with an Environmental Award of Excellence in the Energy Conservation category for efforts in helping customers reduce energy consumption and greenhouse gas emissions.

#### **Corporate Reporting and Governance**

- Enbridge Inc. received the Award of Excellence for Corporate Reporting in the Utilities and Pipelines category from the Canadian Institute of Chartered Accountants. The award was presented in December as part of CICA's 2006 Corporate Reporting Awards program. Enbridge received the highest average ranking for financial reporting, corporate governance reporting, sustainable development reporting and electronic disclosure.
- Governance Gavel Award: The Canadian Coalition for Good Governance named Enbridge as Corporate Canada's leader in director disclosure for 2006, and recipient of the Governance Gavel Award.
- Corporate Governance Rankings: Enbridge tied for 13th on the 2006 Globe and Mail Report on Business corporate governance ranking of 204 Canadian companies. Enbridge tied for 24th on the 2006 Canadian Business Magazine ranking of the 25 best Canadian boards of directors.

## Corporate Governance

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 25 of 128 Appendix D

#### Corporate Social Responsibility and excellence in

Corporate Governance are integral to the way we do business.

They are an important part of how we manage risk, and they are at the

heart of our reputation – and without our reputation, we will not

succeed in implementing our extensive slate of

opportunities for growth.

At Enbridge, corporate governance means that a comprehensive system of stewardship and accountability is in place and functioning among Directors, management and employees of the Company.

Enbridge is committed to the principles of good governance, and the Company employs a variety of policies, programs and practices to manage corporate governance and ensure compliance.

The Board of Directors is responsible for the overall stewardship of Enbridge and, in discharging that responsibility, reviews, approves and provides guidance in respect of the strategic plan of the Company and monitors implementation.

The Board approves all significant decisions that affect the Company and reviews the results. The Board also oversees identification of the Company's principal risks on an annual basis, monitors risk management programs, reviews succession planning, and seeks assurance that internal control systems and management information systems are in place and operating effectively.

Additional information about Enbridge's Corporate Governance, Board of Directors and Senior Management team can be found in the Corporate Governance section of Enbridge's website, at http://www.enbridge.com/investor/corporateGovernance/.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 29 of 128 Appendix D

#### CONSOLIDATED RESULTS

#### Financial Performance 1

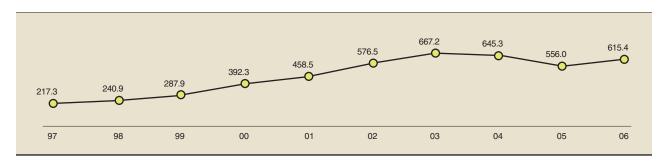

(millions of Canadian dollars, except per share amounts)	2006	2005	2004
Earnings Applicable to Common Shareholders			
Liquids Pipelines	274.2	229.1	219.9
Gas Pipelines	61.2	59.8	53.8
Sponsored Investments	86.8	64.8	66.2
Gas Distribution and Services <sup>2</sup>	178.2	178.8	313.1
International	83.2	87.4	73.6
Corporate	(68.2)	(63.9)	(81.3)
Earnings Applicable to Common Shareholders	615.4	556.0	645.3
Earnings Per Common Share	1.81	1.65	1.93
Diluted Earnings Per Common Share	1.79	1.63	1.91

<sup>1</sup> Financial Performance data have been extracted from financial statements prepared in accordance with Canadian Generally Accepted Accounting Principles.

Earnings applicable to common shareholders were \$615.4 million for the year ended December 31, 2006, or \$1.81 per share, compared with \$556.0 million, or \$1.65 per share, in 2005. The \$59.4 million increase in earnings was primarily the result of higher earnings from the Enbridge crude oil mainline system, strong results from Enbridge Energy Partners, LP (EEP) and from the Aux Sable natural gas fractionation facility. The 2006 results also included \$48.9 million from the revaluation of future income tax balances due to tax rate reductions enacted in 2006. These positive factors were partially offset by a lower earnings contribution from Enbridge Gas Distribution (EGD), as the weather in the Ontario market was significantly warmer than normal during 2006.

Earnings applicable to common shareholders were \$556.0 million for the year ended December 31, 2005, or \$1.65 per share, compared with \$645.3 million, or \$1.93 per share, in 2004. The \$89.3 million decrease in earnings was primarily the result of the sale of the investment in AltaGas in 2004, which resulted in an after-tax gain of \$97.8 million as well as the absence of earnings from AltaGas after the sale. Earnings for 2004 also included 15 months of earnings for gas distribution utilities, reflecting the change in year end for those entities. Positive factors in 2005 included the earnings contribution from the Enbridge Offshore Pipelines, higher contribution from the gas distribution utility and lower interest expense.

## Earnings Applicable to Common Shareholders (millions of Canadian dollars)

<sup>2</sup> The reported results for the year ended December 31, 2004 include earnings for the 15 months ended December 31, 2004 for Enbridge Gas Distribution, Noverco and other gas distribution entities. This inclusion resulted from the elimination of the quarter lag basis of consolidation in 2004.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 30 of 128 Appendix D

#### FORWARD LOOKING INFORMATION

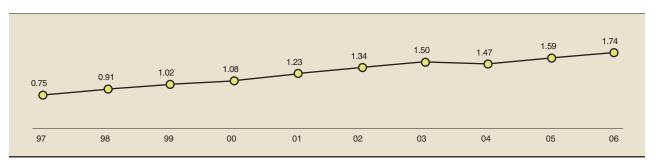

In the interest of providing Enbridge shareholders and potential investors with information about the Company and its subsidiaries, including management's assessment of Enbridge's and its subsidiaries' future plans and operations, certain information provided in this Management's Discussion and Analysis (MD&A) constitutes forward-looking statements or information (collectively, "forward-looking statements"). Forward-looking statements are typically identified by words such as "anticipate", "expect", "project", "estimate", "forecast", "plan", "intend", "target", "believe" and similar words suggesting future outcomes or statements regarding an outlook. Although Enbridge believes that these forward-looking statements are reasonable based on the information available on the date such statements are made, such statements are not guarantees of future performance and readers are cautioned against placing undue reliance on forward-looking statements. By their nature, these statements involve a variety of assumptions, known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such statements.

Enbridge's forward-looking statements are subject to risks and uncertainties pertaining to operating performance, regulatory parameters, weather, economic conditions, exchange rates, interest rates and commodity prices, including but not limited to those risks and uncertainties discussed in this MD&A and in the Company's other filings with Canadian and United States securities regulators. The impact of any one risk, uncertainty or factor on a particular forward-looking statement is not determinable with certainty as these are interdependent and Enbridge's future course of action depends on management's assessment of all information available at the relevant time. Except to the extent required by law, Enbridge assumes no obligation to publicly update or revise any forward-looking statements made in this MD&A or otherwise, whether as a result of new information, future events or otherwise. All subsequent forward-looking statements, whether written or oral, attributable to Enbridge or persons acting on the Company's behalf, are expressly qualified in their entirety by these cautionary statements.

#### Non-GAAP Measures – Adjusted Operating Earnings

Management believes that the presentation of adjusted operating earnings provides useful information to investors and shareholders as it provides increased predictive value and performance trends. Adjusted operating earnings represent earnings applicable to common shareholders adjusted for significant non-operating factors. This measure does not have a standardized meaning prescribed by Canadian generally accepted accounting principles (GAAP) and is not considered a GAAP measure. Therefore, this measure may not be comparable with a similar measure presented by other issuers.

## Adjusted Operating Earnings per Common Share (dollars per share)

#### **Adjusted Operating Earnings**

(millions of Canadian dollars, except per share amounts)	2006	2005	2004
GAAP earnings as reported	615.4	556.0	645.3
Significant after-tax non-operating factors and variances:			
Sponsored Investments			
Dilution gains on the issue of EEP units	-	(8.9)	(7.6)
EEP non-cash derivative fair value losses/(gains)	(6.5)	5.0	_
Revalue future income taxes due to tax rate changes	(6.0)	_	_
Gas Distribution and Services			
Gain on sale of investment in AltaGas Income Trust	-	_	(97.8)
EGD calendar year basis adjustment <sup>1</sup>	-	_	(27.1)
Warmer/(colder) than normal weather	36.9	_	(21.3)
Impairment loss on Calmar gas plant	-	_	8.2
Dilution gain in Noverco (Gaz Metro unit issuance)	(4.0)	(7.3)	_
Dilution gain – AltaGas Income Trust	-	_	(8.0)
Revalue future income taxes due to tax rate changes	(28.9)	_	(0.6)
International			
Gain on land sale in CLH	-	(7.6)	_
Corporate			
Revalue future income taxes due to tax rate changes	(14.0)	_	
Adjusted Operating Earnings	592.9	537.2	491.1
Adjusted Operating Earnings per Common Share	1.74	1.59	1.47

<sup>1</sup> Effective December 31, 2004, EGD changed its fiscal year-end from September 30 to December 31. Consequently, the reported consolidated results for the year ended December 31, 2004 included EGD's results for the fifteen months ended December 31, 2004. The adjustment above deducts EGD's results for the three months ended December 31, 2003, to reflect EGD's 2004 earnings on the calendar basis, consistent with 2005 and 2006.

Each of the significant non-operating factors and variances is described in the Results of Operations sections for the respective business segment.

#### Significant operating factors affecting earnings in 2006 include:

- Enbridge crude oil mainline system earnings were higher primarily due to lower oil loss costs, higher earnings from Terrace and the Incentive Tolling Settlement (ITS).
- EEP earnings increased significantly with higher crude oil throughput, strong margins and increased volumes in the natural gas gathering and processing businesses.
- Aux Sable experienced strong natural gas processing margins throughout the year resulting in significant earnings under the upside sharing agreement.

#### Enbridge advanced several strategic initiatives during 2006:

- Commenced construction of the Southern Access Expansion;
- Completed the reversal of Spearhead Pipeline, which commenced operations in the first quarter of 2006;
- Received industry support for the Alberta Clipper Project;
- Received industry support for the Southern Lights Pipeline Project; and
- Announced plans to construct a natural gas lateral to connect the deepwater Shenzi field to existing Gulf of Mexico pipelines.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 32 of 128 Appendix D

#### CORPORATE STRATEGY

#### **Corporate Vision and Key Objective**

Enbridge is an energy delivery company that transports natural gas and crude oil, which are used to heat homes, power transportation systems, and provide fuel and feedstock for industries. The Company's vision is to be North America's leading energy delivery company and its key objective is to generate superior shareholder value. The key elements of this vision are to:

- focus on operational excellence, customers and communities;
- generate above industry-average annual earnings per share growth;
- maintain a strong risk-reward investment profile and financial position;
- deliver superior dividend growth and capital appreciation to shareholders; and
- position the Company for the energy environment of the future.

#### **Competitive Advantage**

The Company's ability to execute its strategy and realize its corporate vision depends on three key strengths, among others. These include the strategic position of the Company's major assets, the diversification of the business and the Company's consistent focus on customer service.

The Company's assets are well positioned in North America. In the liquids business, the Company operates a major conduit between U.S. markets and the oil sands reserves in Western Canada. Enbridge's existing right of way is valuable in developing major expansion projects due to the substantial capacity of its mainline system. Enbridge has economies of scale because of its multiple separate lines and has flexibility in terms of the types of products moved. Enbridge moves over 60 different grades of crude oil. Also, the Company serves a diversity of markets because of the extent and reach of its pipeline systems.

The Company's sources of earnings and growth are diversified among liquids pipelines, gas pipelines, gas distribution and international investments. As well, the Company is actively exploring new growth platforms that would further diversify the business.

The Company is focused on adding value for customers and improving customers' pricing. This focus has aligned the Company with supply-demand fundamentals, which has consistently formed a basis for the Company's strategy. Two of the ways that the Company seeks to provide value to customers are through providing customers with access to diverse markets and optionality with respect to the timing of project development. The Company has a number of organic growth projects designed to enable customers to reach new markets.

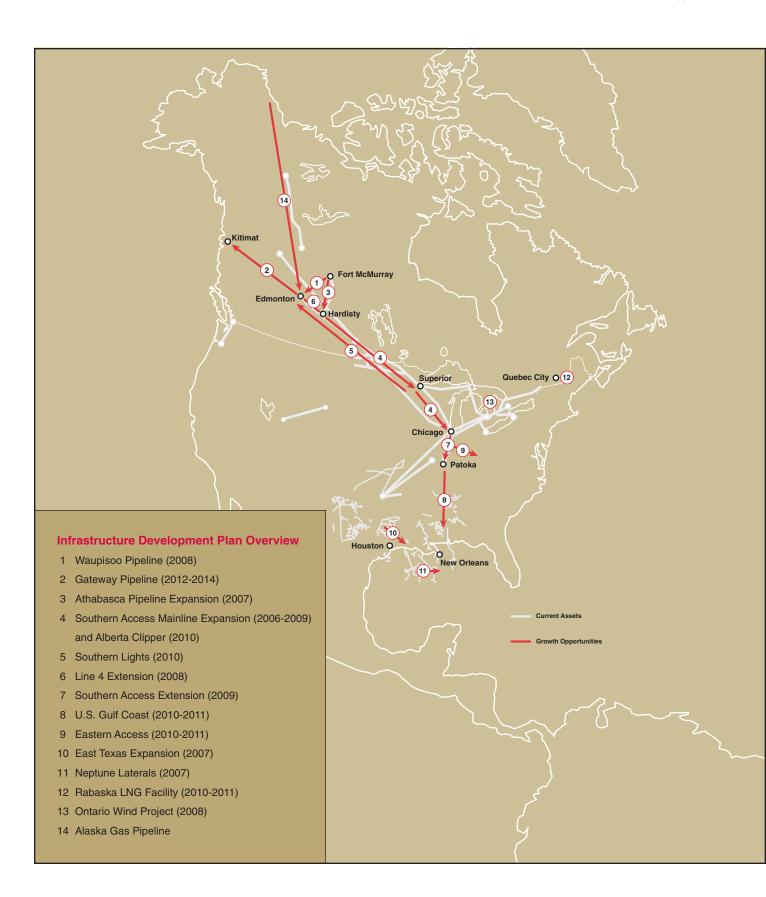

#### **Organic Growth Projects**

The thrust of the Company's strategy is growth through internally developed organic projects. The Company is advancing the development of a number of organic growth projects, some of which are summarized below and would support annual organic growth rates averaging 6% to 9% over the next five years. Enbridge will continue to pursue acquisitions that are accretive to earnings, on an opportunistic basis, as a supplementary source of growth.

Project	Estimated	Expected Date
(Canadian dollars unless otherwise noted)	Capital Cost	of Completion
Liquids Pipelines		
Southern Access - Canadian portion	\$0.2 billion	2006-2009, in stages
Alberta Clipper - Canadian portion	\$1.5 billion (2006 dollars)	Late 2009 or 2010
Spearhead Pipeline Expansion	\$0.1 billion	2009
Line 4 Extension	\$0.3 billion	Late 2008
Waupisoo Oil Pipeline	\$0.5 billion	Mid 2008
Athabasca Pipeline Expansions and Laterals	\$0.2 billion	Early 2007
New Upstream Pipeline Opportunities	See project description	2010-2012
Southern Access Extension	US\$0.4 billion	2009
U.S. Gulf Coast Initiatives	See project description	2010-2011
Eastern PADD II/Canada Initiatives	See project description	2010-2011
Gateway Condensate Import	See project description	2012-2014
Gateway Petroleum Export	See project description	2012- 2014
Southern Lights Pipeline	US\$1.3 billion	Mid 2010
Upstream Contract Terminalling	\$0.6 billion	2007-2009
Downstream Contract Terminalling	US\$0.2 billion	2007-2008
Common Carrier Terminalling	\$0.1 billion	2008
Sponsored Investments (EEP)		
Project Clarity – East Texas	US\$0.6 billion	2007 in stages
Various Gas Plants – Texas	US\$0.1 billion	2007-2008
Southern Access – U.S. portion	US\$1.3 billion	2008-2009 in stages
Alberta Clipper – U.S. portion	US\$0.8 billion	2010
Downstream Contract Terminalling	US\$0.1 billion	2007-2008
Common Carrier Terminalling	US\$0.1 billion	2008
Gas Pipelines		
Neptune Offshore Laterals	US\$0.1 billion	End of 2007
Vector Pipeline Expansion	US\$0.1 billion	Late 2007
Gas Distribution and Services		
EGD Customer Additions & System Integrity	\$1.5 billion	2007-2011
Ontario Wind Project	\$0.5 billion	Late 2008
Rabaska LNG Facility	\$0.3 billion by Enbridge	2010-2011

Risks related to the development and completion of organic growth projects are described under "Risk Management".

Descriptions of each project are included in the strategy section of each core business.

#### **Strategy**

Enbridge has four key strategies to generate superior shareholder value.

#### 1. Expand Existing Core Businesses

The Company will expand its core asset platforms and existing businesses. Strategies for each core business are included in the sections below. The primary goal of this strategy will be organic growth initiatives that leverage advantages from existing assets and expand service into new markets.

#### 2. Focus on Operational Excellence and People

Enbridge will continue its focus on operational excellence, including cost efficiency, safety and reliability, customer relationships, protection of the environmental, innovation and effective stakeholder relations. Enbridge will also focus on managing human capital constraints resulting from the opportunities and growth in the energy industry.

To successfully pursue these strategies, the Company must mitigate certain business risks. These risks, and the Company's strategies for managing them, are described under "Risk Management".

#### 3. Capitalize on the Partnership/Trust Model

Enbridge owns investments in and manages Enbridge Income Fund (EIF) and EEP, which will develop or acquire energy infrastructure assets in North America and optimize the returns on assets they currently own.

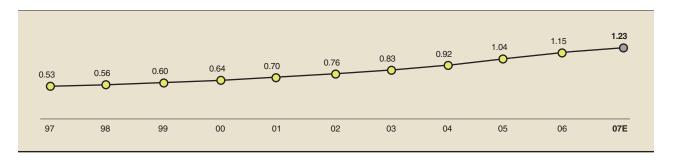

#### 4. Develop New Growth Platforms

Enbridge believes it is also important to develop new growth platforms that complement the existing core asset base. Initiatives include liquefied natural gas (LNG) regasification, power generation and new energy technologies.

#### **Dividends**

The Company's dividend payout ratio reflects a strong and stable long-term outlook for the business. Balancing shareholders' preference for income and its own need for capital, the Company targets to pay out approximately 60% to 70% of adjusted operating earnings as dividends. The following chart shows dividends per share for the last 10 years and estimated dividends for 2007, based on the quarterly dividend of \$0.3075 per common share declared by the Board of Directors on January 16, 2007.

## Dividends per Common Share (dollars per share)

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 36 of 128 Appendix D

#### **Corporate Social Responsibility**

Enbridge defines Corporate Social Responsibility (CSR) as conducting business in a socially responsible and ethical way, protecting the environment and health and safety of people, supporting human rights and engaging, respecting and supporting the communities and cultures with which the Company works.

A comprehensive system of stewardship and accountability is in place and functioning among Directors, management and employees. Examples include compliance with Sarbanes-Oxley requirements and the Canadian equivalent rules, internal and external audits of operations throughout the Company, employee compliance with Enbridge's Statement of Business Conduct and a majority of independent Directors on the Company's Board as well as plain and open communication with stakeholders.

Environmental initiatives include pursuing alternative and renewable energy technologies such as wind power, preventing pipeline leaks by conducting on-going inspection and maintenance programs as part of the comprehensive integrity management of pipelines and facilities, and the development of a strategy to reduce greenhouse gas emissions. This strategy involves initiatives such as improving the energy efficiency of pipelines, encouraging the efficient use of natural gas by customers and replacing older cast iron pipe with new polyethylene mains at EGD. Enbridge engages employees on health and safety issues through training, communication programs and the establishment of local and regional environmental, health and safety committees.

Stakeholder relations involve developing positive relationships with government agencies, environmental groups, landowners, business partners and local communities. Initiatives include early-stage project consultation with a variety of stakeholders on organic growth projects and public awareness programs on pipeline safety.

Enbridge supports universal human rights and reinforces this with comprehensive policies and practices addressing human rights. For example, Enbridge was one of the first Canadian companies to adopt the Voluntary Principles on Security and Human Rights, which stress the importance of promoting and protecting human rights throughout the world and the constructive role business can play in advancing these goals.

Enbridge makes voluntary contributions to charitable organizations in the areas of: education, health, environment, social services, arts and culture, civic leadership and volunteer resources in order to contribute to the economic and social development of communities where Enbridge employees live and work.

While Enbridge is focused on generating long-term value for investors, Corporate Social Responsibility defines the Company's commitment to achieving and sustaining that objective in a socially and environmentally responsible way.

#### **Core Businesses**

The Company's activities are carried out through five business units:

- Liquids Pipelines, which includes the operation of the Enbridge crude oil mainline system and feeder pipelines that transport crude oil and other liquid hydrocarbons;
- Gas Pipelines, which consists of the Company's interests in natural gas pipelines including Alliance Pipeline US, Vector Pipeline and Enbridge Offshore Pipelines;
- Sponsored Investments, which includes investments in EIF and EEP, both managed by Enbridge;
- Gas Distribution and Services, which consists of gas utility operations which serve residential, commercial, industrial and transportation customers, primarily in central and eastern Ontario, the most significant being Enbridge Gas Distribution. It also includes natural gas distribution activities in Quebec, New Brunswick and New York State, the Company's investment in Aux Sable, a natural gas fractionation and extraction business, and the Company's commodity marketing businesses; and
- International, which includes the Company's two energy-delivery investments outside of North America.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 37 of 128 Appendix D

#### LIQUIDS PIPELINES

Liquids Pipelines consists of crude oil, natural gas liquids and refined products pipelines in Canada and the United States.

#### **Earnings**

(millions of Canadian dollars)	2006	2005	2004
Enbridge System	202.3	170.1	171.6
Athabasca System	52.8	48.6	42.8
Spearhead Pipeline	6.3	(1.1)	(0.4)
Olympic Pipeline	6.5	_	_
Feeder Pipelines and Other	6.3	11.5	5.9
	274.2	229.1	219.9

Liquids Pipelines earnings were \$274.2 million in 2006 compared with \$229.1 million in 2005. The increase resulted from strong results from the Enbridge System, the commencement of operations of the Spearhead Pipeline and the acquisition of the Olympic Pipeline.

Earnings from Liquids Pipelines were \$229.1 million for the year ended December 31, 2005, an increase of \$9.2 million from 2004. The increase was due to higher Athabasca System earnings, consistent with the take or pay agreement with the major shipper, and improved earnings from Feeder Pipelines and Other, primarily Frontier Pipeline, which paid Federal Energy Regulatory Commission (FERC) ordered reparations in 2004.

Revenues in the Liquids Pipelines segment increased to \$1,048.1 million in the year ended December 31, 2006 from \$881.0 million in the year ended December 31, 2005. The increased revenue was due to a higher revenue requirement on the Enbridge System as well as the start up of Spearhead Pipeline, which commenced operations in the first quarter of 2006 and Olympic Pipeline, which was acquired in the first quarter of 2006.

Revenues in the Liquids Pipelines segment were \$881.0 million in 2005 comparable with \$872.7 million for 2004.

#### **Enbridge System**

The mainline system is comprised of the Enbridge System and the Lakehead System (the portion of the mainline in the United States that is operated by Enbridge and owned by EEP). Through five adjacent pipelines, the system transports crude oil from Western Canada to the Midwest region of the United States and Eastern Canada and serves all of the major refining centers in Ontario. Enbridge has operated, and frequently expanded, the mainline system since 1949.

#### **Results of Operations**

Enbridge System earnings were \$202.3 million for the year ended December 31, 2006 compared with \$170.1 million for the year ended December 31, 2005. This increase reflected higher earnings from a number of factors including lower oil loss costs, favourable ITS performance and, within Terrace, lower taxes, higher toll revenues and the impact of higher volumes generating surcharge revenue.

Enbridge System earnings were \$170.1 million for the year ended December 31, 2005 compared with \$171.6 million for the year ended December 31, 2004. The \$1.5 million decrease was due to a lower earnings base from the ITS component of Enbridge System and higher taxes within the Terrace component. The decrease was partially offset with earnings from the reliability and service metrics under the ITS as well as savings from cost management programs.

#### Incentive Tolling

Tolls on the Enbridge System are governed by various agreements, which are subject to the approval of the National Energy Board (NEB). The NEB's jurisdiction over the Enbridge System includes statutory authority over matters such as construction, rates and ratemaking agreements and other contractual arrangements with customers. Significant agreements include the ITS applicable to the Enbridge mainline system (excluding Line 8 and Line 9), the Terrace agreement and the System Expansion Program (SEP) II Risk Sharing Agreement. Tolls on the core mainline system have been governed by incentive tolling settlements since 1995.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 38 of 128 Appendix D

In 2005, Enbridge and the Canadian Association of Petroleum Producers (CAPP) approved the key terms of a new negotiated ITS, effective from January 1, 2005 to December 31, 2009. In January 2006, the NEB approved the ITS. The ITS continues the sharing of earnings in excess of a stipulated threshold and provides a fixed annual mainline integrity allowance. In addition to the incentive-based provisions in prior agreements, service and reliability metrics have been added to the new ITS to further align the Company's interests with its shippers. The Company has the opportunity to increase earnings by achieving performance targets under the new performance metric provisions.

In conjunction with the Terrace Agreement, the new ITS continues the throughput protection provisions included in earlier incentive tolling arrangements, ensuring the Company is insulated from volume fluctuations beyond its control. The agreements govern both current and future shippers on the pipeline and establish tolls each year based on an agreed capacity and an allowed revenue requirement. Where actual volumes on the pipeline fall short of the agreed capacity and Enbridge is unable to collect its annual revenue requirement, such deficiency is rolled into the subsequent year's tolls for collection from toll payers at that time and a receivable is recognized. This basis may affect the timing of recognition of revenues compared with that otherwise expected under generally accepted accounting principles for companies that are not rate-regulated.

#### **Athabasca System**

The Athabasca System, a 540-kilometre (340-mile) synthetic and heavy oil pipeline, links the Athabasca oil sands in the Fort McMurray, Alberta region, to a pipeline transportation hub at Hardisty, Alberta. The Athabasca System also includes the MacKay River, Christina Lake, Surmont and Long Lake feeder lines, growing tankage facilities and the Company's interest in the Hardisty Caverns Limited Partnership, which provides crude oil storage services.

#### **Results of Operations**

Earnings for the year ended December 31, 2006 were \$52.8 million, an increase of \$4.2 million from 2005. Infrastructure additions contributed to the increase, partially offset by higher operating expenses.

Athabasca System earnings were \$48.6 million for the year ended December 31, 2005, an increase of \$5.8 million from 2004. The increase was consistent with the long-term contract with its major shipper as well as lower operating costs due to leak remediation costs in 2004.

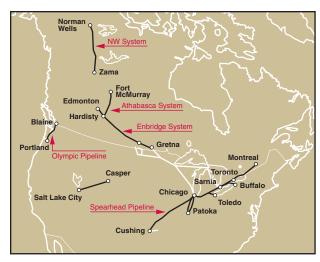

The Company has a long-term (30 year) take-or-pay contract with the major shipper on the Athabasca System, which commenced in 1999. Revenue is recorded based on the contract terms negotiated with the major shipper, rather than the cash tolls collected. The contract provides for volumes and tolls that will achieve an underpinning return on equity, based on an assumed debt/equity ratio and level of operating costs. The committed volumes and the tolls specified in the contract do not generate sufficient cash revenues in the early years to compensate Enbridge for the debt and equity returns, as well as the cost of providing service. Therefore, Enbridge is recording a receivable in these years. This receivable is contractually quaranteed by the shipper and will be collected in the later years of the contract.

#### **Spearhead Pipeline**

The Spearhead Pipeline commenced delivery of crude oil from Chicago, Illinois to Cushing, Oklahoma in March 2006. The performance of the Spearhead Pipeline has continued to surpass Enbridge's expectations with fourth quarter nominations exceeding the pipeline's 125,000 barrels per day (bpd) capacity. Enbridge is currently evaluating the potential to expand the Spearhead Pipeline.

#### **Olympic Pipeline**

In February 2006, Enbridge acquired a 65% interest in the Olympic Pipeline from BP Pipelines. Olympic is the largest refined products pipeline in the State of Washington, transporting approximately 290,000 bpd of gasoline, diesel and jet fuel. The pipeline system extends approximately 480 kilometres (300 miles) from Blaine, Washington to Portland, Oregon, connecting four Puget Sound refineries to terminals in Washington and Portland. The system consists of 640 kilometres (400 miles) of 6 to 20 inch diameter pipe, a 500,000-barrel terminal, 9 pumping stations and 21 delivery points or facilities. BP is the operator of the pipeline.

Liquids Pipelines

Olympic Pipeline has performed reliably and 2006 earnings were in line with expectations.

#### **Feeder Pipelines and Other**

Feeder Pipelines and Other primarily includes the NW System, which transports crude oil from Norman Wells in the Northwest Territories to Zama, Alberta, interests in a number of liquids pipelines in the United States (Frontier, Toledo, Mustang and Chicap), liquid storage facilities (Patoka) and business development costs related to Liquids Pipelines activities.

Earnings in Feeder Pipelines and Other were \$6.3 million for the year ended December 31, 2006 compared with \$11.5 million for the year ended December 31, 2005 primarily due to increased business development costs related to the Company's organic growth projects.

Feeder Pipelines and Other earnings for the year ended December 31, 2005 were \$11.5 million compared with \$5.9 million for the year ended December 31, 2004. The increase was due to the capitalization of Gateway condensate pipeline costs in 2005, as the criteria for capitalization were met, starting in 2005. In addition, Frontier Pipeline earnings were higher due to lower operating costs as well as FERC ordered reparations paid in 2004.

#### Strategy

The Company seeks to go beyond the traditional regulated utility business model to create additional value for customers. The Liquids Pipelines strategy focuses on meeting the needs of Western Canadian producers and is supported by the Company's estimates of supply and demand for Western Canadian crude oil.

#### Supply and Reserves

The vast resource of the Western Canadian Sedimentary Basin (WCSB) and its development, create the basis for the Liquids Pipelines growth strategy. Generally, development of the oil sands resource has more than offset declining conventional production. The NEB estimates that total Western Canada production will be 2.5 million bpd¹ at the end of 2006 (2005 – 2.3 million bpd). At the end of 2005, remaining established conventional oil reserves in Western Canada were estimated to be 3.8 billion barrels ² and remaining established reserves from oil sands were estimated at 174 billion barrels ³. Combined conventional and oil sands reserves put Canada second only to Saudi Arabia with 14% of the worldwide estimated proved reserves <sup>4</sup>.

- 2 Canadian Association of Petroleum Producers Statistical Handbook 2006
- 3 Alberta Energy and Utilities Board Alberta's Reserves 2005 and Supply/Demand Outlook/Overview
- 4 Oil and Gas Journal's Worldwide Look at Reserves and Production, December 18, 2006

#### Demand for WCSB Crude

The Company's liquids pipelines are dependent upon the demand for crude oil and other liquid hydrocarbons produced from Western Canada. Deliveries from the pipeline system are made in the prairie provinces, the Province of Ontario and the Great Lakes, and Midwest regions of the United States, principally to refineries, either directly or through the connecting pipelines of other companies. Within these regions are located major refining centres near Sarnia, Nanticoke, and Toronto, Ontario; the Minneapolis-St. Paul area of Minnesota; Superior, Wisconsin; Chicago, Illinois; the Patoka/Wood River, Illinois area; Detroit, Michigan; and Toledo, Ohio. Through Company initiatives, crude oil has started to penetrate markets in the U.S. Midwest (PADD II) with the Spearhead Pipeline to Cushing, Oklahoma; as well as the U.S. Gulf Coast (PADD III) via a third party pipeline system.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 40 of 128 Appendix D

Historically, Canada has been the third largest supplier of crude to the U.S. However, for the past three years, Canada has surpassed both Mexico and Saudi Arabia to become the largest crude oil exporter to the U.S.<sup>1</sup>

Deliveries of WCSB crude into PADD II increased by 64,300 bpd over the last two years with increased WCSB crude oil supply in 2006 <sup>2</sup>. Over the same two-year period, deliveries into the U.S. Rocky Mountains (PADD IV) have increased by 6,700 bpd, PADD V (the Western U.S.) deliveries have increased by 6,000 bpd, and PADD III deliveries have increased by 63,800 bpd <sup>2</sup>. Western Canadian demand is served by local supply and has remained relatively flat over the last two years <sup>2</sup>. During 2006, greater volumes of Western Canadian crude were transported to Ontario <sup>3</sup>, pushing back Atlantic Basin crude oil <sup>2</sup>.

- 3 "2006 Estimated Production of Canadian Crude Oil and Equivalent", National Energy Board

#### **Key Components of the Liquids Pipelines Strategy**

The Liquids Pipelines strategy is driven by the industry's need for export capacity alternatives, economic sources of diluent and U.S. refiners' need to maintain diversified sources of supply. The six key components of the Liquids Pipelines strategy are described below as well as progress made to date and future plans towards further advancing the strategy.

#### 1. Capitalize on the Mainline ITS

The ITS rewards Enbridge for achieving certain targeted service levels and product attributes, which adds value for customers. To ensure returns on mainline operations are maximized, the Company will focus on cost efficiency, providing reliable capacity and predictable deliveries, and maintaining optimal batch quality.

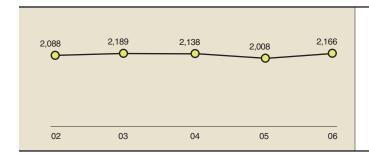

The ITS service metrics establish financial bonuses and penalties for prescribed performance targets related to crude oil quality management and predictability of scheduled deliveries. The potential bonuses and penalties for the service metrics are limited to a maximum of \$10 million after tax in 2005, escalating to \$15 million in each of 2006 and 2007, and to \$20 million in each of 2008 and 2009. The targets to achieve the maximum bonus under the ITS become increasingly difficult to achieve in successive years.

The reliability metric provides for bonuses and penalties associated with optimization of system capacity, which are calculated monthly relative to annual capacity targets. Practical constraints around pipeline capacity would limit the bonus for the reliability metric to approximately \$12 million per year and penalties are limited to \$10 million per year.

ITS metrics bonuses related to 2005 were \$10.2 million. ITS metrics bonuses for 2006 are comparable with 2005 and will be filed as part of 2007 toll application with the NEB.

#### 2. Mainline Capacity Expansion

The Chicago refining market has been a traditional destination for Western Canadian crude. The Company is working with shippers and refiners to further expand this market. The Southern Access Expansion and the Alberta Clipper Project are two projects that the Company is undertaking to meet this objective.

Deliveries

(thousands of barrels per day)

This includes the deliveries of the 16.6% owned Lakehead System.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 41 of 128 Appendix D

#### Southern Access Mainline Expansion

The Southern Access Mainline Expansion project is currently under construction and will ultimately add a total of 400,000 bpd incremental capacity to the mainline system. The U.S. segment of the expansion from the Canada/U.S. border to Flanagan, Illinois, is being undertaken by EEP and the Canadian segment from Hardisty, Alberta to the Canada/U.S. border is being undertaken by Enbridge.

The Canadian segment expansion schedule has been expedited with 120,000 bpd added in 2006, an additional 63,000 bpd expected in 2008 and another 85,000 bpd expected in 2009 in order to match the total additional capacity of 400,000 bpd being provided in the United States. With the support of industry, the proposed diameter of the Southern Access Expansion from Superior, Wisconsin to Flanagan, Illinois has been increased to 42 inches, increasing the estimated cost to US\$1.3 billion on the U.S. segment, to be undertaken by EEP. The estimated cost of the Canadian segment, to be undertaken by Enbridge is \$0.2 billion.

The FERC has approved an Offer of Settlement with respect to rates for the U.S. segment of the expansion. Enbridge filed a Southern Access Expansion surcharge methodology with the NEB in June 2006.

#### Alberta Clipper Project

The Alberta Clipper Project would involve the construction of a new 36-inch diameter pipeline from Hardisty, Alberta to Superior, Wisconsin, in conjunction with additional pumping power applied to the new 42-inch pipe from Superior to Flanagan, Illinois, described above under Southern Access Expansion. The Alberta Clipper Project would interconnect with the existing mainline system in Superior where it would provide access to Enbridge's full range of delivery points and storage options, including Chicago, Toledo, Sarnia, Patoka, Wood River and Cushing.

The expected capacity of the pipeline has been increased from 400,000 bpd to 450,000 bpd. The Canadian segment of the line is expected to cost \$1.5 billion (in 2006 dollars) and the U.S. segment, which would be undertaken by EEP, is expected to cost US\$0.8 billion.

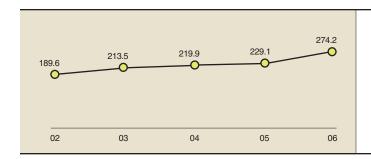

In January 2007, industry confirmed its support for the Alberta Clipper Project. Regulatory applications will be filed once commercial terms are finalized, which is expected to occur in the first quarter of 2007. The Alberta Clipper Project is expected to be in service in late 2009 or 2010.

#### Line 4 Extension Project

The Company obtained industry support for the extension of Line 4, part of the Enbridge mainline system, between Hardisty, Alberta and the Company's terminal at Edmonton, Alberta. The project is expected to cost \$0.3 billion and, subject to receipt of required regulatory approval is targeted to be in service in late 2008.

#### 3. Upstream Pipeline Development

Increasing oil sands production will require significant new infrastructure upstream of the mainline and the Company is developing a number of projects to support the development of the Alberta oil sands. Growth opportunities already secured include construction of the Waupisoo Pipeline and expansion of the Athabasca System, including the construction of Long

Liquids Pipelines Earnings (millions of Canadian dollars)

Liquids Pipelines earnings increased in 2006 primarily due to improved results from the Enbridge crude oil mainline system reflecting higher earnings from the Incentive Tolling Settlement, Terrace expansion and lower oil loss costs. The commencement of operations of the Spearhead Pipeline and the acquisition of the Olympic Pipeline also contributed to higher earnings.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 42 of 128 Appendix D

Lake and Surmont laterals. In addition, a number of large new oil sands projects requiring substantial upstream pipeline facilities will be selecting a service provider in 2007, and the Company is well positioned to secure a significant portion of these growth opportunities.

#### Waupisoo Pipeline

The 30-inch diameter, 380-kilometre (236-mile) long Waupisoo Pipeline will transport crude oil from the Cheecham terminal, currently under construction on the Athabasca Pipeline, to the Edmonton, Alberta area. The initial capacity of the line will be 350,000 bpd and is expandable to a maximum of 600,000 bpd with additional pumping units.

Enbridge has filed an application for regulatory approval with the Alberta Energy and Utilities Board (AEUB) and other provincial government departments. Subject to timely receipt of regulatory approvals, expected in the first quarter of 2007, Enbridge will begin construction on the approximately \$0.5 billion pipeline in 2007, with an expected in-service date of mid-2008.

The previously announced diluent line has been removed from the regulatory filing in order to expedite the crude oil line, which is needed earlier. Enbridge will continue discussion with all interested parties regarding the diluent line, with construction and an in-service date to be determined at a later date.

#### Athabasca Pipeline Expansion Projects

In 2006, the Company furthered several expansion projects on the Athabasca Pipeline. The expansion projects include the addition of pumping stations at Elk Point and Cheecham, as well as modifications to existing pumping stations. Construction is progressing and the projects are scheduled to be completed early 2007.

#### Surmont Oil Sands Project

The Surmont Oil Sands Project consists of pipeline and tank facilities required by the Surmont Project at the Cheecham Terminal on the Athabasca Pipeline. Enbridge has 25-year agreements with ConocoPhillips Surmont Partnership and Total E&P Canada Ltd. (the Surmont Shippers), to provide pipeline transportation services on the Athabasca Pipeline for an initial contract volume of up to 50,000 bpd of crude oil with the option to increase the contract volume to up to 220,000 bpd for future phases of production. The agreements also provide flexibility for the Surmont Shippers to transfer their production to the proposed Waupisoo Pipeline to the Edmonton area. Enbridge has completed construction and is awaiting first production.

#### Long Lake Oil Sands Project

The Company has agreements with Nexen Inc. and OPTI Canada Inc. (the Long Lake Shippers) to provide pipeline transportation services for the Long Lake Project. The agreements provide for an initial contract volume of up to 60,000 bpd of crude oil with provisions for volume increases. The Long Lake lateral agreement is for a term of 25 years and the agreement for service on the Athabasca Pipeline is for a 50-month term with extension provisions. Under the terms of the agreements, Enbridge will construct, own and operate the pipeline and tank facilities required by the Long Lake Project, as well as pipeline laterals and tank facilities at the Cheecham terminal on the Athabasca Pipeline. Construction of the laterals and facilities is underway and expected to be in service in early 2007, to coincide with first production from the Long Lake Oil Sands Project.

#### 4. New Market Access

The Company will develop new options to expand market access for Canadian crude. Specific initiatives include: extending the Mainline south of Chicago to Patoka, Illinois, expansion of the Spearhead Pipeline from Chicago to Cushing by 65,000 bpd, developing access to the Gulf Coast market directly from Alberta or through a combination of existing infrastructure and new pipelines, and accessing markets in Asia and California.

#### Southern Access Extension

The Southern Access Extension involves the construction of a new 36-inch diameter, 400,000 bpd pipeline extending the mainline from Flanagan, Illinois to Patoka at a cost of approximately US\$0.4 billion to Enbridge. Discussions with shippers have been finalized and, with industry support for this project, a FERC Offer of Settlement was filed on September 1, 2006.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 43 of 128 Appendix D

The initial Offer of Settlement proposing a rolled in toll design was not approved by the FERC. However, support for the project remains very strong and Enbridge is working with industry on an alternative tolling structure to address the initial opposition from the intervening parties. The Company expects that a second application will be filed with the FERC in the first quarter of 2007 to allow the project to continue on schedule, with an estimated 2009 in-service date.

#### U.S. Gulf Coast Initiatives

The Company continues to meet with industry to explore and develop various options to enhance access to the U.S. Gulf Coast for Canadian supply. Alternatives under discussion include the development of incremental pipeline capacity to the U.S. Gulf Coast, given the projected increase in Canadian production. This interest includes support for a project from Patoka to the U.S. Gulf Coast to deliver an incremental 400,000 bpd of Canadian crude; and a new 400,000 bpd pipeline, which could transport oil from Alberta directly to Texas. This pipeline would also connect to refining centers in Denver, Colorado and Cushing.

The Company is examining greenfield pipeline options as well as the use of existing pipelines that may be candidates for reversal or expansion. The development of a number of alternative large diameter pipeline initiatives allows shippers to choose the projects that best meet their needs.

#### Eastern PADD II / Eastern Canada

Enbridge is exploring options to provide approximately 300,000 bpd incremental pipeline capacity to the Eastern PADD II region from the Chicago area in conjunction with potential expansion of existing lines serving the Sarnia, Ontario market.

#### The Gateway Project

The Gateway Project includes both a condensate import pipeline and a petroleum export pipeline. The condensate line would transport imported diluent from Kitimat, British Columbia to the Edmonton, Alberta area. The petroleum export line would transport crude oil from the Edmonton area to Kitimat. The condensate line is expected have a 20-inch diameter and an initial capacity of 193,000 bpd. The petroleum export line would have a 36-inch diameter and an initial capacity of 525,000 bpd. Capital cost estimates will be completed once commercial terms are finalized.

Current shipper preferences to accelerate the development of capacity to traditional U.S. markets will likely result in the acceleration of the Alberta Clipper Project, such that it precedes the Gateway Pipeline project. The Company now estimates that the Gateway in-service date will be in the 2012 to 2014 timeframe. The decision to proceed with the regulatory filing for either pipeline is subject to commercial considerations, including satisfactory completion of shipper agreements, environmental assessment as well as public and Aboriginal consultation.

#### 5. Diluent Supply Projects

Increasing heavy oil production requires new supplies of diluent, which is needed to dilute heavy oils for transport through pipelines. The Company is developing projects, to bring diluent to Alberta from the Midwest, as well as imported diluent supplies from the west coast of British Columbia, as described above in the Gateway Project.

#### Southern Lights Pipeline

Following the successful closing of a binding open season in July 2006, Enbridge announced plans in December 2006 to proceed with the Southern Lights Pipeline to increase the availability of diluent in Alberta. When completed, this 180,000 bpd, 20-inch diameter pipeline will transport diluent from Chicago to Edmonton and is expected to be in service in mid 2010.

The Southern Lights Pipeline project involves reversing the flow of a portion of Enbridge's Line 13, an existing crude oil pipeline, from Clearbrook, Minnesota to Edmonton. The Canadian portion of Line 13 is currently part of the mainline system and the U.S. portion of Line 13 is owned by EEP. In order to replace the light crude capacity that would be lost through the reversal of Line 13, the Southern Lights Project also includes the construction of a new 20-inch diameter crude oil pipeline from Cromer, Manitoba to Clearbrook, and the expansion of existing Line 2. These changes to the existing crude oil system will ultimately increase southbound light crude system capacity by approximately 45,000 bpd. The capital cost of the Southern Lights Project, including the new 20-inch diameter diluent pipeline, is estimated at approximately US\$1.3 billion.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 44 of 128 Appendix D

In the fourth quarter of 2006, Enbridge received industry endorsement for the Southern Lights Pipeline project including an acceleration of the light crude capacity replacement and a delay in the transfer of Line 13 from the mainline system to the Southern Lights project. The impact of this change will be to increase the light crude system capacity on the mainline system by 215,000 bpd until the earlier of the completion of construction of new capacity out of the Western Canadian basin or the middle of 2010. On this date, Line 13 will be transferred to the Southern Lights project. Also during the fourth quarter, EEP approved the exchange of the portion of Line 13 currently owned by EEP for a portion of the Cromer to Clearbrook crude oil pipeline to be constructed. Remaining regulatory applications are expected to be filed in the first quarter of 2007.

#### 6. Terminalling and Storage Infrastructure

Based on producer interest, the Company plans to increase its investment in contract terminals over the next five years. Upstream contract storage projects include the Hardisty Terminal, the Stonefell Terminal near Fort Saskatchewan and expansion of the Athabasca Terminal. Downstream projects are under development or consideration by Enbridge or EEP at Flanagan, Patoka, Cushing and the U.S. Gulf Coast. The Company and EEP are also constructing significant additions to the capacity of the common carrier mainline terminals at Edmonton, Superior and Chicago.

#### Hardisty Terminal

The Company plans to proceed with the construction of a new crude oil terminal at Hardisty, Alberta. The terminal is expected to have a capacity of 7.5 million barrels and will cost approximately \$0.4 billion. Enbridge has executed contracts for over 80% of the capacity and is close to closing contracts for the balance of the capacity. It is anticipated that the terminal will start to come into service early in 2008, with tanks being commissioned throughout 2008 and into 2009. An additional phase of development which will increase the terminal's capacity by up to 3.4 million barrels, is planned and the Company is in discussions with customers who are seeking this additional capacity. Once complete, the Hardisty Terminal will be one of the largest crude oil terminals in North America.

#### Stonefell Terminal

BA Energy Inc. is building a bitumen upgrader near Fort Saskatchewan, Alberta for which Enbridge has agreed to provide pipeline and terminalling services. Based on initial scope and cost estimates, Enbridge expects to invest approximately \$0.1 billion in new facilities to provide storage services at a new satellite terminal to be developed adjacent to the upgrader. Enbridge will also provide pipeline transportation for the upgrader's output from the new terminal to a refinery hub near Edmonton. These facilities are expected to be in service in mid-2008.

The Stonefell Terminal is also strategically located adjacent to several other proposed or operating upgrading facilities and pipeline systems and will be a focus for further development of contract terminalling infrastructure.

#### Downstream Terminalling

The Company continues to advance many downstream terminalling projects, including EEP-sponsored projects with an estimated US\$0.1 billion cost for adding approximately 5 million barrels of storage at Cushing in 2007. Enbridge is pursuing several other terminalling projects estimated at US\$0.2 billion with in-service dates of 2007 and 2008.

#### **Capital Expenditures**

Liquids Pipelines generally spends \$80 to \$100 million each year on ongoing capital improvements and core maintenance capital projects. In 2007, the Company expects to spend \$150 million on capital maintenance and improvements. Expenditures for organic growth projects described above were \$320 million in Canada for 2006. For 2007, the Company expects to spend \$1.3 billion for the organic growth projects. Discussion of the Company's access to financing is included under Liquidity and Capital Resources.

#### **Legal Proceeding - CAPLA Claim**

The Canadian Alliance of Pipeline Landowners' Associations (CAPLA) and two individual landowners have commenced a class action against the Company and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. The Company believes it has a sound defence and intends to vigorously defend the claim. The

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 45 of 128 Appendix D

Plaintiffs filed a motion to establish a cause of action, which is one of the requirements to have the motion certified as a class action under the Class Proceedings Act (Ontario). The motion was dismissed by the Ontario District Court in late 2006. The Plaintiff has since appealed the decision and the appeal is expected to be heard by the Court of Appeal during the first half of 2007. Since the outcome is indeterminable, the Company has made no provision at this time for any potential liability.

#### **Business Risks**

The risks identified below are specific to the Liquids Pipelines business. General risks that affect the Company as a whole are described under Risk Management.

#### Supply and Demand

The operation of the Company's liquids pipelines are dependent upon the supply of, and demand for, crude oil and other liquid hydrocarbons from Western Canada. Supply, in turn, is dependent upon a number of variables, including the availability and cost of capital and labour for oil sands projects, the price of natural gas used for steam production, and the price of crude oil. Demand is dependent, among other things, on weather, gasoline price and consumption, manufacturing, alternative energy sources and global supply disruptions.

#### ITS Metrics

The ITS governing the Enbridge System measures the Company's performance in areas key to customer service. If the Company fails to meet the baseline targets set out in the new ITS, for all service and reliability metrics, the Company could be required to pay penalties to shippers up to a maximum of \$25 million in 2007 and \$30 million in 2008 and 2009.

#### Regulation

Earnings from the Enbridge System and other liquids pipelines are subject to the actions of various regulators, including the NEB. Actions of the regulators related to tariffs, tolls and facilities impact earnings from these operations. The NEB prescribes a benchmark multi-pipeline rate of return on common equity, which is 8.46% in 2007 (2006 – 8.88%). To the extent the NEB rate of return fluctuates, a portion of the Enbridge System and other liquids pipelines earnings will change. The Company believes that regulatory risk can be reduced through the negotiation of long-term agreements with shippers.

#### Competition

Competition among common carrier pipelines is based primarily on the cost of transportation, access to supply, the quality and reliability of service and contract carrier alternatives and proximity to markets. Other common carriers are available to producers to ship Western Canadian liquids hydrocarbons to markets in either Canada or the United States. As well, competition could arise from pipeline proposals that may provide access to market areas currently served by the Company's liquids pipelines. One such proposal is the Keystone Project put forward by TransCanada Corporation to ship Western Canadian crude oil into PADD II starting in 2009. The Company believes that its liquids pipelines are serving larger markets and provide attractive options to producers in the WCSB due to their competitive tolls and multiple delivery and storage points. Also, shippers are not required to enter into long-term shipping commitments on the mainline system. The Company's existing right of way provides a competitive advantage, as it can be difficult and costly to obtain new rights of way for new pipelines. This can act as a barrier to entry for other companies considering constructing new pipelines. The ITS and the Terrace Agreement on the Enbridge System provide throughput protection which insulates the Company from negative volume fluctuations beyond its control. The Lakehead System, owned by EEP, has no similar throughput protection and is exposed to volume fluctuations.

Increased competition could arise from new feeder systems servicing the same geographic regions as the Company's feeder pipelines.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 46 of 128 Appendix D

#### GAS PIPELINES

Gas Pipelines activities consist of investments in Alliance Pipeline US, Vector Pipeline and Enbridge Offshore Pipelines. Enbridge has joint control over these investments with one or more other owners. Enbridge owns a 50% interest in the U.S. portion of the Alliance System, a 60% interest in Vector Pipeline and interests ranging from 22% to 100% in the pipelines comprising the Enbridge Offshore Pipelines.

#### **Earnings**

(millions of Canadian dollars)	2006	2005	2004
Alliance Pipeline US	29.7	32.1	37.4
Vector Pipeline	13.4	15.9	16.4
Enbridge Offshore Pipelines	18.1	11.8	_
	61.2	59.8	53.8

Earnings from Gas Pipelines were \$61.2 million for the year ended December 31, 2006 compared with \$59.8 million for the year ended December 31, 2005. The increase was due to improved results at Enbridge Offshore Pipelines in 2006, following two severe hurricanes in 2005. The increase was partially offset by the effects of the stronger Canadian dollar.

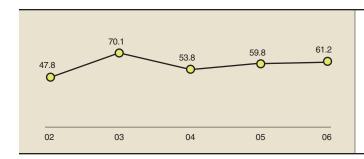

Earnings from Gas Pipelines were \$59.8 million for the year ended December 31, 2005, an increase of \$6.0 million from 2004. The increase in 2005 is due to incremental earnings from Enbridge Offshore Pipelines, acquired on December 31, 2004.

Revenues for the year ended December 31, 2006 were \$345.9 million consistent with \$364.3 million for the year ended December 31, 2005. Revenues for the year ended December 31, 2005 were \$364.3 million compared with \$271.7 million for the year ended December 31, 2004. The increase in revenues was due to the acquisition of Enbridge Offshore Pipelines on December 31, 2004.

#### **Alliance Pipeline US**

The Alliance System (Alliance), which includes both the Canadian and U.S. portions of the pipeline system, consists of an approximately 3000-kilometre (1,875-mile) integrated, high-pressure natural gas transmission pipeline system and an approximately 730-kilometre (455-mile) lateral pipeline system and related infrastructure. Alliance transports liquids-rich natural gas from Northeast British Columbia and Northwest Alberta to Channahon, Illinois, where it connects with a natural gas liquids (NGL) extraction facility (Aux Sable). The pipeline has firm service shipping contract capacity to deliver 1.325 billion cubic feet per day (bcf/d). Enbridge Income Fund, described under Sponsored Investments, owns 50% of the Canadian portion of the Alliance System.

The natural gas may then be transported to two local natural gas distribution systems in the Chicago area and five interstate natural gas pipelines, providing shippers with access to natural gas markets in the Midwestern and Northeastern United States and Eastern Canada. Enbridge owns 42.7% of Aux Sable and its results are included under Gas Distribution and Services.

## Gas Pipelines Earnings (millions of Canadian dollars)

Gas Pipelines earnings increased in 2006 due to improved results from Enbridge Offshore Pipelines which was affected by two severe hurricanes in 2005. Earnings from Alliance Pipeline US and Vector Pipeline were modestly lower due to the stronger Canadian dollar in 2006.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 47 of 128 Appendix D

#### **Results of Operations**

Alliance Pipeline US earnings were \$29.7 million for the year ended December 31, 2006 compared with \$32.1 million for the year ended December 31, 2005. The decrease was primarily due to the stronger Canadian dollar.

Alliance Pipeline US earnings were \$32.1 million for the year ended December 31, 2005 compared with \$37.4 million for the year ended December 31, 2004. The moderate decrease is due to the stronger Canadian dollar in 2005.

#### **Transportation Contracts**

Alliance has long-term take-or-pay contracts through 2015 to transport 1.305 bcf/d of natural gas or 98.5% of the total contracted capacity. Alliance has 20 mmcf/d of natural gas contracted on a short-term basis. These contracts permit Alliance to recover the cost of service, which includes operating and maintenance costs, cost of financing, an allowance for income tax, an annual allowance for depreciation, and an allowed return on equity. Each long-term contract may be renewed upon five years notice for successive one-year terms beyond the original 15-year primary term. Alliance Pipeline US operations are regulated by the FERC.

Depreciation expense included in the cost of service is based on negotiated depreciation rates contained in the transportation contracts while the depreciation expense in the financial statements is recorded on a straight-line basis of 4% per annum. The negotiated depreciated rates are generally less than the straight-line rates in the earlier years and higher than straight-line depreciation in later years of the shipper transportation agreements. This results in recognition of a long-term receivable, referred to as deferred transportation revenue, expected to be recovered from shippers in subsequent rates.

As at December 31, 2006 \$159.8 million (2005 – \$145.8 million) was recorded as deferred transportation revenue.

#### **Vector Pipeline**

The Company provides operating services to, and holds a 60% joint venture interest in, Vector Pipeline, which transports natural gas from Chicago to Dawn, Ontario. Vector Pipeline has the capacity to deliver a nominal 1.0 bcf/d and is operating at or near capacity. Vector Pipeline's primary sources of supply are through interconnections with the Alliance System and the Northern Border Pipeline in Joliet, Illinois. Approximately 70% of the long haul capacity of Vector Pipeline is committed to long-term, 15-year firm transportation contracts at rates negotiated with the shippers and approved by the FERC. The remaining capacity is sold at market rates and various term lengths. Transportation service is provided through a number of different forms of service agreements such as Firm Transportation Service and Interruptible Transportation Service.

#### **Results of Operations**

Vector Pipeline earnings were \$13.4 million for the year ended December 31, 2006 compared with \$15.9 million for the year ended December 31, 2005. The decrease reflected the stronger Canadian dollar and higher operating costs in the second and third quarters of 2006 due to scheduled integrity inspections required by the regulator within the first six years of operation.

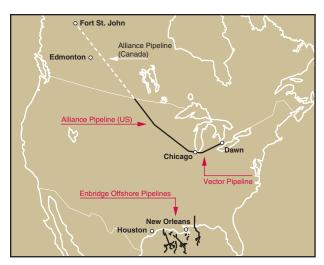

Vector Pipeline earnings were \$0.5 million lower for the year ended December 31, 2005 compared with the year ended December 31, 2004 resulting from the stronger Canadian dollar in 2005.

#### **Business Risks**

The risks identified below are specific to Alliance Pipeline US and Vector Pipeline. General risks that affect the entire Company are described under Risk Management.

#### Supply and Demand

Currently, pipeline capacity out of the WCSB exceeds supply. Alliance Pipeline US and Vector Pipeline have been unaffected by this excess capacity environment mainly because of long-term capacity contracts extending to 2015. Vector Pipeline's interruptible capacity could be negatively impacted by the basis (location) differential in the price of natural gas between Chicago and Dawn, Ontario relative to the transportation toll.

Gas Pipelines

#### Exposure to Shippers

The failure of shippers to perform their contractual obligations could have an adverse effect on the cash flows and financial condition of Alliance Pipeline US and Vector Pipeline. To reduce this risk, Alliance Pipeline US and Vector Pipeline monitor the creditworthiness of each shipper and receive collateral for future shipping tolls should a shipper's credit position not meet tariff requirements. These pipelines also have diverse groups of long-term transportation shippers, which include various gas and energy distribution companies, producers and marketing companies, further reducing the exposure.

#### Competition

Alliance Pipeline US faces competition for pipeline transportation services to the Chicago area from both existing and proposed pipeline projects. Competing pipelines, with a combined transportation capacity of

approximately 3.8 bcf/d provide natural gas transportation services from the WCSB to distribution systems in the Midwestern United States. In addition, there are several proposals to upgrade existing pipelines serving these markets. Any new or upgraded pipelines could either allow shippers greater access to natural gas markets or offer natural gas transportation services that are more desirable than those provided by the Alliance System. Shippers on Alliance Pipeline US have access to additional high compression delivery capacity at no additional cost, other than fuel requirements, serving to enhance Alliance Pipeline US's competitive position.

Vector Pipeline faces competition for pipeline transportation services to its delivery points from new or upgraded pipelines, which could offer transportation that is more desirable to shippers because of cost, supply location, facilities or other factors. Vector Pipeline has mitigated this risk by entering into long-term firm transportation contracts for approximately 70% of its capacity and medium-term contracts for the remaining capacity. These long-term firm contracts provide for additional compensation to Vector Pipeline if shippers do not extend their contracts beyond the initial term. The effectiveness of these mitigating factors is evidenced by the increased utilization of the pipeline since its construction, despite the presence of transportation alternatives.

#### Regulation

Both Vector Pipeline and Alliance Pipeline US operations are regulated by the FERC. On a yearly basis, Alliance Pipeline US files its annual rates with the FERC following consultation with shippers.

#### **Enbridge Offshore Pipelines**

Enbridge Offshore Pipelines (EOP) is comprised of 11 natural gas gathering and FERC-regulated transmission pipelines in five major corridors in the Gulf of Mexico, extending to deepwater frontiers. The operations were purchased December 31, 2004. These pipelines include almost 2400 kilometres (1,500 miles) of underwater pipe and onshore facilities and transport more than half of all current deepwater Gulf of Mexico natural gas production. These pipelines currently transport approximately 2.0 bcf/d.

#### **Results of Operations**

Earnings for the year ended December 31, 2006 in EOP were \$18.1 million compared with \$11.8 million for the year ended December 31, 2005. In 2006, volumes returned to 2005 pre-hurricane levels, resulting in increased earnings compared with 2005. The 2006 results were negatively impacted by the stronger Canadian dollar.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 49 of 128 Appendix D

The Company continues to pursue the settlement of claims under its insurance policies for volume losses and additional costs the Company has incurred to restore the service capacity of these assets following hurricanes Rita and Katrina. A settlement of the insurance claim is anticipated in 2007.

#### **Transportation Contracts**

The primary shippers on the EOP systems are producers who execute life-of-lease commitments in connection with transmission and gathering service contracts. In exchange, EOP provides firm capacity for the contract term at an agreed upon rate. The throughput volume generally reflects the lease's maximum sustainable production.

The transportation contracts allow the shippers to define a maximum daily quantity (MDQ), which corresponds with the expected production life. The contracts typically have minimum throughput volumes which are subject to take-or-pay criteria but also provide the shippers with flexibility given advance notice criteria to modify the projected MDQ schedule to match current deliverability expectations.

The long-term transport rates established in the gathering and transmission service agreements are generally market-based but are established utilizing a cost-of-service methodology, which includes operating cost, projected revenue generation directly tied to production deliverability and the appropriate cost of capital.

#### **Business Risks**

The risks identified below are specific to Enbridge Offshore Pipelines. General risks that affect the Company as a whole are described under Risk Management.

#### Weather

Adverse weather, such as hurricanes, may impact EOP financial performance directly or indirectly. Direct impacts may include damage to EOP facilities resulting in lower throughput and inspection and repair costs. Indirect impacts include damage to third party production platforms, onshore processing plants and refineries that may decrease throughput on EOP systems.

The Company continues to maintain an active risk management program that includes comprehensive insurance coverage, notwithstanding a constrained insurance market. However costs have increased in the form of higher insurance premiums and deductibles as well as longer waiting periods for business interruption claims. It is expected that the incidence and severity of windstorm occurrences, and the Company's direct experience in the Gulf of Mexico, will dictate future costs and coverage levels in this region.

#### Competition

There is significant competition for new and existing business in the Gulf of Mexico. EOP has been able to capture key opportunities, extending its footprint, positioning it to more fully utilize existing capacity. EOP serves a majority of the strategically located deepwater host platforms and its extensive presence in the deepwater Gulf of Mexico has EOP well positioned to generate incremental revenues, with modest capital investment, by transporting production from sub-sea development of smaller fields tied back to existing host platforms. However, given rates of decline, offshore pipelines typically have available capacity resulting in significant and aggressive competition for new developments in the Gulf of Mexico.

#### Regulation

The transportation rates on many of EOP's transmission pipelines are generally based on a regulated cost-of-service methodology and are subject to regulation by the FERC. These rates may be subject to challenge.

#### Other Risks

Other risks directly impacting financial performance include underperformance relative to expected reservoir production rates, delays in project start-up timing and capital expenditures in excess of those estimated. Capital risk is mitigated in some circumstances by having area producers as joint venture partners and through cost of service tolling arrangements.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 50 of 128 Appendix D

#### Strategy

The Company plans to continue to grow the Gas Pipelines segment to capitalize on regional supply and demand imbalances and infrastructure requirements through a combination of organic and acquisition opportunities. The Gas Pipelines strategy is based on the Company's forecast supply and demand for natural gas.

#### Supply and Demand for Natural Gas

North American natural gas demand is expected to grow at a modest rate for the next three to five years primarily driven by growth in power generation, which more than offsets declines in industrial demand. The re-emergence of coal as a generation source, due to advances in clean-coal technology, as well as the re-emergence of nuclear power as a source of electricity generation may reduce growth in the power related natural gas demand in the longer term. The development of oil sands projects in Alberta also increases the demand for natural gas, as various extraction and upgrading processes require the use of natural gas, however growth in this sector may also be tempered by alternative energy sources. Over time, the entry of new supplies from North Texas, the U.S. Rockies and the Alaska North Slope/Mackenzie Delta as well as LNG are expected to adequately supply the market and provide opportunities for Enbridge to deliver this natural gas to markets.

Specific strategies will be executed within two key geographic regions: Western Canadian/U.S. Midwest and Offshore Gulf Coast.

#### 1. Western Canadian/U.S. Midwest Region

The Alliance and Vector Pipelines provide low cost expansion options to the Chicago/Dawn market and the Company plans to expand these systems and position Enbridge to participate in the Alaska gas pipeline. The Company also plans to develop takeaway capacity from Chicago to address the anticipated bottleneck from incremental Rockies and Arctic gas volumes. This could be accomplished through expansion of Vector Pipeline and potentially by developing a new route from Chicago to the U.S. Northeast.

#### Vector Pipeline Expansion

In 2005, Vector Pipeline announced plans to construct two additional compressor stations, which would expand Vector Pipeline's capacity from 1 bcf/d to 1.2 bcf/d. This expansion has been approved by the FERC and is scheduled to be in service in the fourth guarter of 2007.

#### 2. Offshore Gulf Coast

EOP intends to grow through leveraging its existing asset position to attract new prospects including producer tie-backs as well as those requiring new laterals to be constructed by EOP. A significant number of new discoveries exist on the shelf, in deepwater and the ultra-deep areas of the Gulf of Mexico in the corridors where EOP has existing pipeline facilities. EOP is continually monitoring and pursuing these many prospects. Two such projects under construction are described below.

#### Neptune Pipeline Project

The Company plans to construct and operate both a natural gas lateral and a crude oil lateral to connect the deepwater Neptune oil and gas field in the Green Canyon Corridor to existing Gulf of Mexico pipelines, extending Enbridge's existing Gulf of Mexico infrastructure. The laterals are expected to cost a total of approximately US\$0.1 billion and will have the capacity to deliver in excess of 200 mmcf/d of gas and approximately 50,000 bpd of oil. Construction of the natural gas and crude oil laterals is underway with sub-sea tie-ins scheduled for the second quarter of 2007 and throughput is expected to commence in the last half of 2007.

#### Shenzi Project

Enbridge also plans to construct a natural gas lateral to connect the new deepwater Shenzi field to existing Gulf of Mexico pipelines. The 11-mile lateral is expected to cost approximately US\$45 million and to have a capacity of 100 mmcf/d. The Shenzi lateral will deliver natural gas through the Company's 22%-owned Cleopatra Pipeline, the 50%-owned Manta Ray Pipeline and the 50%-owned Nautilus Pipeline and is expected to be completed by the end of 2007, with the first gas expected by mid-year 2009. Construction scheduling has been accelerated to the second half of 2007 to secure a lay vessel, which are in high demand, and avoid interference with the producers' development construction in 2008.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 51 of 128 Appendix D

#### **Capital Expenditures**

The Company expects to spend approximately \$210 million in 2007 in the Gas Pipelines segment for ongoing capital improvements, core maintenance capital projects and expansion, including the projects described above. In 2006, the Company spent \$110 million on capital expenditures in the Gas Pipelines segment. Discussion of the Company's access to financing is included under Liquidity and Capital Resources.

#### SPONSORED INVESTMENTS

Sponsored Investments includes the Company's 16.6% ownership interest in EEP and a 41.9% equity interest in EIF. Enbridge manages the day-to-day operations of, and develops and assesses opportunities for each, including both organic growth and acquisition opportunities.

#### **Earnings**

(millions of Canadian dollars)	2006	2005	2004
Enbridge Energy Partners	43.0	21.7	28.6
Enbridge Income Fund	37.8	34.2	30.0
Dilution gains	_	8.9	7.6
Revalue future income taxes due to tax rate changes	6.0	_	_
	86.8	64.8	66.2

Earnings from Sponsored Investments were \$86.8 million for the year ended December 31, 2006 compared with \$64.8 million in 2005. Earnings increased primarily because of strong results from EEP.

Earnings from Sponsored Investments were \$64.8 million for the year ended December 31, 2005 compared with \$66.2 million in 2004. EIF earnings increased due to allowance oil sales on the Saskatchewan System and collection of a notional tax in tolls on Alliance Canada. This increase was more than offset by EEP's non-cash unrealized mark-to-market losses on derivative instruments that are considered ineffective hedges for accounting purposes.

Revenues include only revenues from EIF as the Company equity accounts for its interest in EEP. For the year ended December 31, 2006, revenues were \$254.7 million consistent with \$249.0 million for the year ended December 31, 2005.

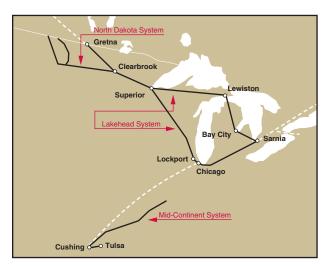

Revenues for the year ended December 31, 2005 were \$249.0 million compared with nil for the year ended December 31, 2004. The Company consolidates EIF under the variable interest entity rules, which came into effect on January 1, 2005. In 2004, the investment in EIF was accounted for as an equity investment.

#### **Enbridge Energy Partners**

EEP owns and operates crude oil and liquid petroleum transmission pipeline systems, natural gas gathering and related facilities and marketing assets in the United States. Significant assets include the Lakehead System, which is the extension of the Enbridge System in the U.S., natural gas gathering and processing assets in Texas, the mid-continent crude oil system, various interstate and intrastate natural gas pipelines and a crude oil feeder pipeline in North Dakota.

#### **Results of Operations**

EEP earnings were \$43.0 million for the year ended December 31, 2006 compared with \$21.7 million for the year ended December 31, 2005. The results improved significantly, despite the stronger Canadian dollar, and reflected considerably higher liquids throughput on the Lakehead System, higher margins and increased volumes in the natural gas gathering and processing businesses in addition to a higher Enbridge ownership interest. The 2006 results also included \$6.5 million (net to Enbridge) of unrealized mark-to-market gains (2005 – \$5.0 million of losses) on derivative financial instruments that did not qualify for hedge accounting treatment. While Enbridge believes the hedging strategies are sound economic hedging techniques, they do not qualify for hedge accounting and have been accounted for on a mark-to-market basis through earnings.

Enbrigde Energy Partners - Gas Pipelines

Earnings of \$21.7 million for the year ended December 31, 2005 were down from 2004 earnings of \$28.6 million primarily due to \$5.0 million (net to Enbridge) of unrealized mark-to-market losses. In addition, EEP earnings were negatively affected by lower Lakehead System volumes, a stronger Canadian dollar and a lower ownership interest offset with higher earnings from the natural gas business.

EEP issued Class A partnership units in 2005 and 2004. Because Enbridge did not fully participate in the 2005 and 2004 offerings, dilution gains resulted. While new Class C units were issued by EEP in the third quarter of 2006, no dilution gains resulted as Enbridge participated in the offering, increasing Enbridge's ownership interest in EEP from 10.9% to 16.6%.

#### **Distributions**

EEP makes quarterly distributions of its available

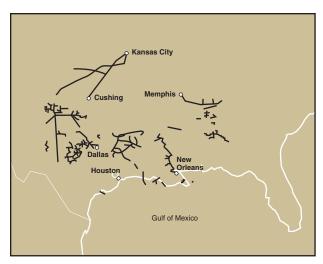

cash to its common unitholders, including Enbridge. Under the Partnership Agreement, Enbridge, as general partner, receives incremental incentive cash distributions, which represent incentive income, on the portion of cash distributions, on a per unit basis, that exceed certain target thresholds as follows.

	Unitholders	Enbriage
Quarterly Cash Distributions per Unit:		
Up to \$0.59 per unit	98%	2%
First Target – \$0.59 per unit up to \$0.70 per unit	85%	15%
Second Target – \$0.70 per unit up to \$0.99 per unit	75%	25%
Over Second Target - Cash distributions greater than \$0.99 per unit	50%	50%

During 2006, EEP paid quarterly distributions of 0.925 per unit (0.925 per unit; 0.925 per unit

#### Strategy

EEP intends to increase its distributions through the optimization of existing assets including increased throughput, the expansion of the existing liquids and gas midstream businesses, and the acquisition of complementary assets. EEP will focus on assets that generate stable cash flows including crude oil mainline, feeder system and mid-continent terminalling, interstate and intrastate gas pipelines and certain gas gathering and processing assets. EEP is benefiting from strong supply growth in both the liquids transportation and gas midstream businesses. Oil sands volume growth will increase throughput and generate opportunities such as the Southern Access expansion. High gas prices and improved technology are driving new capital investment and volume growth in EEP's principal gas regions. Tightening gas quality specifications are also increasing demand for EEP's treating and processing services. EEP's growing base of gas volumes will allow it to aggregate volumes to improve margins and potentially underpin a new take-away pipeline capacity project. Examples of this aggregation include the recent expansion and extension of the East Texas system, the construction of additional pipeline infrastructure and the Alberta Clipper Project.

Enbrigde Energy Partners - Liquids Pipelines

#### East Texas Clarity Project

EEP's East Texas Clarity Project is a US\$0.6 billion expansion of EEP's East Texas system and is progressing on-schedule to add 0.7 bcf/d of natural gas transportation capacity to the Texas intrastate market in 2007. The Clarity Project will be completed in phases during the year with the first phase scheduled for completion in early 2007. This phase involves the construction of a natural gas treating facility and related mainline expansion. Additional phases of the project will be complete in mid-2007 and end of year 2007. When complete, the Clarity project will link growing natural gas production in East Texas, and third party storage assets in East Texas, with major third party pipelines and markets in the Beaumont, Texas area.

#### **Business Risks**

#### Supply and Demand

The profitability of EEP depends to a large extent on the volume of products transported on its pipeline systems.

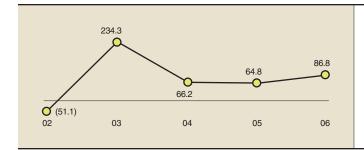

The volume of shipments on EEP's Lakehead System depends primarily on the supply of Western Canadian crude oil and the demand for crude oil in the Great Lakes and Midwest regions of the United States and Eastern Canada. EEP expects significantly increased crude oil supplies from the oil sands projects in Alberta. In addition, Enbridge's future plans to provide access to new markets in the Southern United States are expected to increase demand for Western Canadian crude, resulting in increased volumes for EEP.

EEP's natural gas gathering assets are also subject to changes in supply and demand for natural gas, natural gas liquids and related products. Commodity prices impact the willingness of natural gas producers to invest in additional infrastructure to produce natural gas.

These assets are also subject to competitive pressures from third-party and producer owned gathering systems.

#### Regulation

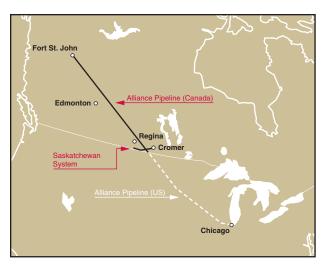

In the U.S., the interstate and intrastate gas pipelines owned and operated by EEP are subject to regulation by the FERC or state regulators and their revenues could decrease if tariff rates were protested. While gas gathering pipelines are not currently subject to active regulation, proposals to more actively regulate intrastate gathering pipelines are currently being considered in certain of the states in which EEP operates.

#### Sponsored Investments Earnings

(millions of Canadian dollars)

Sponsored Investments includes the Company's 16.6% ownership interest in EEP and a 41.9% equity interest in Enbridge Income Fund. Sponsored Investments earnings increased in 2006 due to Enbridge Energy Partners, which experienced significantly higher crude oil throughput, strong margins and increased volumes in the natural gas gathering and processing businesses in addition to a higher Enbridge ownership interest.

Enbrigde Income Fund

#### Market Price Risk

EEP's gas processing business is subject to commodity price risk for natural gas and natural gas liquids. Historically, these risks have been managed by using physical and financial contracts, fixing the prices of natural gas and natural gas liquids. Certain of these financial contracts do not qualify for cash flow hedge accounting and EEP's earnings are exposed to mark-to-market valuation changes associated with certain of these contracts.

## **Enbridge Income Fund**

EIF's primary assets include a 50% interest in Alliance Pipeline Canada and the Enbridge Saskatchewan System, both purchased from the Company in 2003. The Alliance Pipeline Canada, is the Canadian portion of the Alliance System, described in the Gas Pipelines segment above. The Enbridge Saskatchewan System owns and operates

crude oil and liquids pipelines systems from producing fields in Southern Saskatchewan and Southwestern Manitoba connecting primarily with Enbridge's mainline pipeline to the United States.

EIF also owns interests in three wind power generation projects purchased from Enbridge in October, 2006 and a business that develops waste-heat power generation projects at Alliance Pipeline Canada compressor stations.

#### **Results of Operations**

EIF earnings were \$37.8 million for the year ended December 31, 2006, comparable with the prior year, and reflected modest earnings growth at EIF. The increase in earnings reflected lower tax on distributions received from EIF.

EIF earnings were \$34.2 million for the year ended December 31, 2005 compared with \$30.0 million for the year ended December 31, 2004. The 2005 results include higher preferred unit distributions as well as higher incentive income consistent with EIF's cash distribution increases in 2004. EIF's operating results benefited from strong performance at both Alliance Pipeline Canada and the Saskatchewan System.

## Tax Fairness Plan

On October 31, 2006, the Canadian Government announced a "Tax Fairness Plan" that would, among other things, create a new tax regime for publicly traded income trusts including EIF. Under the proposed rules, the taxable portion of an income trust's distributions would be subject to taxation in a manner similar to the treatment of taxable income within a corporation. For existing income trusts, the new rules would not become applicable until 2011 provided they limit their expansion to "normal growth" prior to that year. On December 15, 2006 the Government issued guidelines with respect to what it would consider "normal growth" for existing income trusts that wish to ensure that they do not become subject to the proposed tax rules until 2011. Under these guidelines, the amount of equity units that an income trust can issue to finance growth up to 2011 may not exceed the value of its publicly traded equity units on October 31, 2007 (subject to annual limits). The guidelines do not explicitly limit the amount of debt that an income trust can issue to fund growth although as a practical matter this will be constrained by credit considerations and/or financial covenants.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 55 of 128 Appendix D

On December 21, 2006, the Government released draft legislation for comment. Considerable uncertainty still exists as the draft legislation does not fully address all aspects of the tax regime introduced in the Tax Fairness Plan (including the "normal growth" guidelines. Further, the proposed legislation is now subject to review by a Parliamentary committee through an expedited public hearing process. Timing for enactment of the legislation by Parliament remains uncertain.

If enacted in their present form, the proposed tax changes would, all other things equal, likely result in a reduction of cash available for distribution by the Fund commencing in 2011. With respect to the proposed limitations on equity unit issuances, EIF should be able to fund its currently identified growth plans. However, with the current uncertainty in the capital markets resulting from the proposed tax changes, there can be no assurance that sufficient capital will be available to fund further acquisitions or expansion projects. EIF is closely monitoring legislative developments and carefully assessing the impact of the proposed legislation on the business and financial outlook of EIF and its broader effect on the income trust sector as a whole, all with a view to adopting a strategy that will maximize value to unitholders going forward once legislative framework is finalized.

## Incentive and Management Fees

Enbridge receives a base annual management fee of \$0.1 million for management services provided to EIF plus incentive fees equal to 25% of annual cash distributions over \$0.825 per trust unit. In 2006, the Company received incentive fees of \$2.4 million (2005 – \$2.1 million, 2004 – \$0.8 million). The Company is the primary beneficiary of EIF through a combination of the voting units and a non-voting preferred unit investment and as such EIF is consolidated, starting January 1, 2005, under variable interest entity rules.

#### Strategy

EIF will maximize the efficiency and profitability of its existing assets through representation on the boards and/or management committees of EIF's assets, pursue organic growth and expansion opportunities, invest in the Saskatchewan System expansion and Alliance Canada receipt facilities and expansions and pursue opportunities to acquire energy infrastructure investments or related assets.

#### **Business Risks**

Risks for Alliance Pipeline Canada are similar to those identified for the Alliance Pipeline US in the Gas Pipelines segment.

## Saskatchewan System

The majority of the volumes shipped on the Saskatchewan and Westspur common carrier pipeline systems, key components of the Saskatchewan System, have no specific volume commitments. There is no assurance that shippers will continue to utilize these systems in the future or transport volumes on similar terms or at similar tolls. However, there is limited pipeline competition in this area. The main competition to the pipelines is from trucking.

EIF's liquids and natural gas pipelines are dependent upon the supply of and demand for crude oil and natural gas from Western Canada. Supply, in turn, is dependent upon a number of variables, including the level of exploration, drilling, reserves and production of crude oil and natural gas, the accessibility of Western Canadian crude oil and natural gas, the price and quality of crude oil and natural gas available from alternative Canadian and United States sources. In addition, the regulatory environments in Canada and the United States, including the continued willingness of the governments of both countries to permit the export of crude oil and natural gas from Canada to the United States on a commercially acceptable basis, could impact the supply of crude oil and natural gas.

#### GAS DISTRIBUTION AND SERVICES

Gas Distribution and Services consists of gas utility operations which serve residential, commercial, industrial and transportation customers, primarily in Central and Eastern Ontario, the most significant being EGD. It also includes natural gas distribution activities in Quebec, New Brunswick and New York State, the Company's investment in Aux Sable, a natural gas fractionation and extraction business, and the Company's commodity marketing businesses.

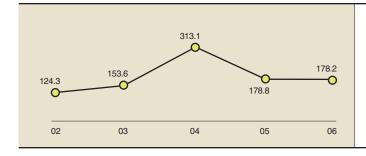

#### **Earnings**

(millions of Canadian dollars)	2006	2005	2004
Enbridge Gas Distribution <sup>1</sup>	61.8	111.9	133.1
Noverco <sup>1</sup>	22.7	28.3	32.3
CustomerWorks/ECS	18.8	23.2	20.5
Enbridge Gas New Brunswick	9.8	6.1	3.7
Other Gas Distribution <sup>1</sup>	6.5	6.7	8.5
Aux Sable	25.8	5.3	7.3
Gas Services	(1.5)	0.2	(2.8)
AltaGas Income Trust (AltaGas)	-	_	21.1
Gain on sale of investment in AltaGas	-	_	97.8
Impairment loss on Calmar gas plant	-	_	(8.2)
Other	5.4	(2.9)	(0.2)
Revalue future income taxes due to tax rate changes	28.9	_	_
	178.2	178.8	313.1

<sup>1</sup> Results for the year ended December 31, 2004 include earnings for the 15 months ended December 31, 2004.

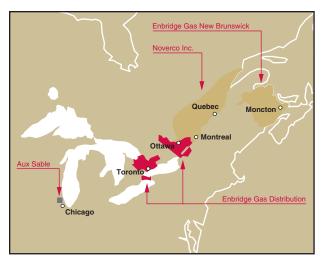

Earnings were \$178.2 million for the year ended December 31, 2006 compared with \$178.8 million for the year ended December 31, 2005. Earnings were comparable with 2005, reflecting a number of offsetting factors including higher earnings from the Aux Sable natural gas fractionation facility due to upside sharing of positive fractionation margins under a new arrangement with BP and lower earnings from EGD resulting from warmer than normal weather and a lower allowed rate of return on common equity.

Earnings were \$178.8 million for the year ended December 31, 2005 compared with \$313.1 million for the year ended December 31, 2004. The 2004 earnings included 15 months of operations from the gas distribution operations as a result of the change in EGD's fiscal year end. Earnings for 2004 also included an after-tax gain of \$97.8 million on the sale of the investment in AltaGas Income Trust.

# Gas Distribution and Services Earnings (millions of Canadian dollars)

Gas Distribution and Services results in 2006 reflected a higher contribution from Aux Sable through an upside sharing arrangement with BP as well as non-cash earnings from the revaluation of future income tax balances due to tax rate reductions enacted in 2006. However, earnings are flat year over year due to the impact of warmer than normal weather and a lower allowed return on equity at Enbridge Gas Distribution.

Gas Distribution and Services

Revenues for the year ended December 31, 2006 were \$8,981.6 million compared with \$6,947.1 million for the year ended December 31, 2005. The factors contributing to this increase were Tidal Energy commencing US operations in December 2005, resulting in a full year of revenues captured in 2006, as well as Tidal Energy earning higher revenues due to a higher average price of crude oil in 2006 and EGD's revenues increasing over 2005, as gas prices were high in Q1 of 2006, when the greatest sales volumes were generated.

Revenues for the year ended December 31, 2005 were \$6,947.1 million compared with \$6,631.1 million for the year ended December 31, 2004. Revenues increased due primarily to increased commodity prices in Tidal which is included in Other.

## **Enbridge Gas Distribution**

EGD is a rate-regulated natural gas distribution utility serving customers in its franchise areas of Central and Eastern Ontario, including the City of Toronto and surrounding areas as well as the Niagara Peninsula, Ottawa and many other Ontario communities. EGD is Canada's largest natural gas distribution company and has been in operation for more than 150 years. It serves over 1.8 million customers in Central and Eastern Ontario, Southwestern Quebec, and parts of Northern New York State. EGD's operations in Ontario are regulated by the Ontario Energy Board (OEB).

#### **Results of Operations**

Earnings for the year ended December 31, 2006 were \$61.8 million compared with \$111.9 million for the year ended December 31, 2005. Warmer than normal weather in 2006 reduced earnings by \$36.9 million compared with relatively normal weather in 2005 which did not significantly impact earnings. EGD earnings were also reduced by a lower allowed rate of return on common equity, partially offset by a higher rate base. EGD's earnings are also affected by variances from the forecast cost of service, including operating and maintenance costs. EGD's costs can vary due to many factors including weather, project timelines and the timing of operating and capital expenditures.

Earnings for the year ended December 31, 2005 were \$111.9 million compared with \$133.1 million for the year ended December 31, 2004 included 15 months of earnings for EGD, as a result of the elimination of the quarter lag basis of consolidation. Earnings for the extra quarter, the three months ended December 31, 2003, were \$11.5 million. Weather in 2004 was colder than normal resulting in an additional \$21.3 million in earnings. The remaining EGD variance is the result of a higher rate base and a number of smaller positive variances across the utility in 2005.

Normal weather is the weather forecast by EGD in its annual rates application, in the Toronto area, including the impacts of both the long run and short run actual historical weather experience, more heavily weighted on the short run experience, and is subject to OEB approval. This financial measure is unique to EGD and, due to differing franchise areas, is unlikely to be directly comparable to the impact of weather-normalized factors that may be identified by other companies. Moreover, normal weather may not be comparable year-to-year given that the forecasting model weights the degree-days from the most recent years more heavily to determine the estimate. This weather-normalized adjustment method is the same as the manner in which EGD calculates degree-days for regulatory purposes.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 58 of 128 Appendix D

## 2007 Rate Application

In August 2006, EGD filed an application with the OEB for approval of the 2007 rates, under a cost of service rate-making methodology. In January 2007, EGD arrived at an agreement to settle certain major issues in its rate application with key stakeholders. This settlement was approved by the OEB on January 29, 2007 and will allow EGD to continue operating within its current environment. A final decision on this rate application is expected during the second quarter of 2007. As part of its 2007 rate application, EGD has requested an increase in the equity component of its deemed capital structure for regulatory purposes. The requested 38% equity level reflects changes in EGD's current business risk environment and financial risk position relative to the current approved deemed equity level of 35%. The rate of return on common equity is calculated with reference to a formula approved by the OEB that incorporates the long bond yield forecast. The rate of return of 8.74% was used in the 2007 rate application as a placeholder and reflected the OEB approved return embedded within 2006 rates. The allowed return on equity for 2007, calculated in accordance with OEB formula is 8.39%. This rate of return on common equity will replace the placeholder used by the Company in its 2007 rate application and will be embedded in 2007 rates.

Given the OEB's scheduled plan to move to Incentive Regulation, the Company expects 2007 to become the base year for a potential four to five year rate capped plan. The details of such plan are expected to be known in 2007. A description of Incentive Regulation is included below under "Strategy".

The key elements of the 2007 application and the 2006 and 2005 decisions are summarized below:

	Requested	Approved	Approved
Regulatory year	2007	2006	2005
Rate base (millions of Canadian dollars)	\$3,801	\$3,634	\$3,422
Deemed common equity for regulatory purposes	38%	35%	35%
Rate of return on common equity	8.39%	8.74%	9.57%

The OEB released its decision relating to EGD's 2006 rate application on February 9, 2006. The new rates approved by the OEB's decision resulted in an overall increase in rates of approximately 1% for the average residential customer.

## 2006 and 2005 Rates

EGD's 2006 and 2005 rates were established pursuant to a cost of service methodology that allowed revenues to be set to recover EGD's forecast costs. Forecast costs included gas commodity and transportation, operation and maintenance, depreciation, income taxes, and the debt and equity costs of financing the rate base. The rate base is EGD's investment in all assets used in gas distribution, storage and transmission, as well as an allowance for working capital. Under the cost-of-service model, it is EGD's responsibility to demonstrate to the OEB the prudence of the forecast costs.

The rate base is financed through a combination of debt and equity. The proportion of debt and equity, currently 65% and 35% respectively, is approved by the OEB. For the debt portion, interest expense incurred by the Company is recovered in rates. For the equity portion, the OEB sets the rate of return that EGD may recover in rates. The allowed rate of return on equity for EGD is based on the forecast yield on Canadian government long-term bonds.

Gas Distribution Number of Active Customers (thousands)

EGD added over 47,000 new customers in 2006 and the Company expects to continue to add between 45,000 and 50,000 customers in 2007. The 2004 number reflects the 15-month period reported as part of Enbridge's change in financial reporting to eliminate consolidation of gas distribution operations on a quarter lag basis.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 59 of 128 Appendix D

For 2004, rates were set by increasing 2003 rates by 90 percent of the forecast Ontario consumer price index, resulting in an increase of 1.8 percent. The OEB also added a sharing mechanism to fiscal 2004, whereby if earnings on a weather-normalized basis exceeded the benchmark ROE, these excess earnings would be shared on a 50/50 basis between ratepayers and the Company's shareholders.

#### Effects of Rate Regulation

EGD is subject to rate-regulation, therefore there are circumstances where the revenues recognized do not match the amounts billed. Certain amounts are deferred for recovery or refund with the approval of the regulator and are not included in revenues or expenses that would otherwise be recognized in the income statement, in the absence of rate regulation. The regulator, allows certain variances between approved and actual expenses to be recovered from, or refunded to, customers in future periods. The deferred amounts are not included in the calculation of rates billed to customers. While there are numerous deferral accounts approved by the regulator, the difference between the price of gas approved by the regulator and the actual cost of gas purchased is the most significant such example. On refund or recovery of this difference, no earnings impact is recorded. Effectively, the income statement captures only the approved cost of gas and the related revenue rather than the actual cost of gas and related revenue. EGD has no exposure to changes in the cost of gas, as it is a flow through cost that is passed to the ratepayer.

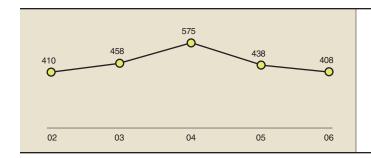

#### Strategy

EGD's vision is to be North America's leading energy distribution company, providing safe and reliable distribution services to customers at fair and reasonable costs. To achieve this vision, EGD has outlined the following strategic objectives:

- to continue growth of the business through enhancement of infrastructure and storage facilities;
- improve opportunities for better returns through Incentive Regulation, which is expected to start in 2008;
- to be best-in-class in the safe and reliable operation of its gas distribution system;
- to be a leader in utility asset management; and
- enhance customer satisfaction by meeting customer commitments and enhancing value of services.

#### **Customer Growth**

A major strategic initiative is enhancing customer growth. EGD added over 47,000 new customers in the year ended December 31, 2006 (over 50,000 in the year ended December 31, 2005). The Company expects to continue to add 45,000-50,000 customers in 2007. New growth areas relating to construction heat, mass markets and distributed energy are also being pursued as part of a profitable utility growth portfolio. EGD will also lead research and development efforts into longer-term promising technologies that have the potential to retain and increase gas load and reduce operating costs while providing customer benefits. EGD has been successful in pursuing its industry facilitation strategy with the recent launch of "EnergyLink", a web-based tool that makes it easier for customers to find and install natural gas appliances.

Volume of Gas Distributed (billions of cubic feet)

Gas volumes distributed reflect the growing number of active customers and the impact each year of warmer than normal or colder than normal weather. The 2004 volumes reflects the 15-month period.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 60 of 128 Appendix D

#### Incentive Regulation

Improving the regulatory environment is also a key strategic thrust to provide greater operational and organizational flexibility. EGD will remain in a cost of service environment in 2007 but a change to Incentive Regulation (IR), is expected in 2008, with 2007 as the base year for a potential four to five year plan. Consultation with the OEB has commenced with respect to potential implementation of IR methodology for setting rates for services provided by EGD, which differs from the existing cost of service methodology. The potential impact on the future operating environment of EGD is not currently known, however EGD expects to obtain details on a proposed IR plan in the fourth quarter of 2007.

The following are the key anticipated parameters of IR:

- Inclusion of an appropriate annual adjustment mechanism to give effect to cost changes and productivity improvements, to ensure that benefits of efficiencies are shared with customers during the term of the plan;
- Mandatory cost of service rebasing at the end of each IR plan term and before a new plan is put in place to ensure that efficiency improvements will be identified and the benefits are passed onto customers through base rates for the following IR plan period;
- Earnings sharing mechanisms will not form part of IR plans, in order to provide a strong incentive to achieve sustainable efficiencies that can be shared with customers through the annual adjustment mechanism and rebasing; and
- IR term plans are expected to run between four and five years.

The objectives of IR are as follows:

- Reduce regulatory costs with less frequent hearings (maximum every 4 to 5 years) rather than every year under the current cost of service mechanism;
- Provide incentives for improved efficiency;
- Provide more flexibility for utility management; and
- Provide more stable rates.

## Capital Expenditures

EGD's capital expenditures in recent years have averaged approximately \$300 million per year. The capital expenditure budget is approved annually by the OEB, under the current cost of service environment.

#### **Legal Proceedings**

#### Class Action Lawsuit - late payment penalties

In July 2006, culminating a 12-year legal case, EGD entered into a settlement agreement with respect to the repayment of a portion of amounts paid to it as late payment penalties. The total amount of late payment penalties billed between April 1994 and February 2002, when the late payment penalty was revised, was approximately \$74 million.

Under a settlement agreement approved by the Ontario Superior Court of Justice (the Court) in December 2006, EGD will contribute \$9 million to the Winter Warmth Fund (WWF), pay class counsel approximately \$10 million for the plaintiff's legal fees and expenses and pay approximately \$2 million to the Class Proceedings Fund. The WWF provides eligible low-income customers of participating Ontario utilities with financial assistance for the payment of their natural gas and electricity bills. In accordance with the settlement agreement, EGD paid \$2 million to class counsel shortly after the settlement agreement was executed, which amount was held in trust by class counsel until the settlement became final. EGD paid the remaining settlement amount of approximately \$19 million in January 2007. EGD has recorded a receivable from ratepayers for the total amount of \$21 million and will apply to the OEB for recovery of payments resulting from the settlement.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 61 of 128 Appendix D

#### Bloor Street Incident

EGD has been charged under both the Ontario Technical Standards and Safety Act (TSSA) and the Ontario Occupational Health and Safety Act (OHSA) in connection with an explosion that occurred on Bloor Street West in Toronto on April 24, 2003. The maximum possible fine upon conviction on all charges would be \$5.0 million in aggregate. EGD has also been named as a defendant in a number of civil actions related to the explosion. A Coroner's Inquest in connection with the explosion has also been called, but the proceedings are stayed pending resolution of the TSSA and OHSA matters. The courts have not yet ruled upon any of the charges laid under the TSSA or the OHSA, and thus it is not possible at this time to predict or comment upon the potential outcome. The trial in respect of these charges commenced January 3, 2006 and is not expected to be completed until well into 2007, at the earliest. EGD does not expect the outcome of these civil actions to result in any material financial impact.

#### **Business Risks**

The risks identified below are specific to EGD. General risks that affect the Company as a whole are described under Risk Management.

The business risks inherent in the natural gas distribution industry impact the ability of EGD to realize the revenue level required to generate the allowed return on equity. These business risks include obtaining timely and adequate rate relief, as well as accuracy in forecasting and realizing natural gas distribution volumes.

#### Volume Risks

Since customers are billed on a volumetric basis, the ability to collect the total revenue requirement (the cost of providing service) depends on achieving the forecast distribution volume established in the annual ratemaking process. The probability of realizing such volume is contingent upon weather; economic conditions; the price of gas relative to competitive energy sources; and the number of customer additions.

Sales and transportation of gas for customers in the residential and commercial sectors account for approximately 77% (2005 - 78%) of total distribution volume. Weather during the year, measured in degree days, has a significant impact on distribution volume as a major portion of the gas distributed to these two markets is used ultimately for space heating. In 2006, the winter months were warmer than forecast, resulting in an unfavourable weather related volume variance of 27.4 bcf.

Distribution volume may also be impacted by the increased adoption of energy efficient technologies along with more efficient building construction that continues to place downward pressure on annual average consumption. Average annual gas usage has declined by 1.2% per annum over the last 10 years, reflecting consistent customer conservation efforts.

Sales and transportation service to large volume commercial and industrial customers is more susceptible to prevailing economic conditions. As well, the pricing of competitive energy sources affects volumes distributed to these sectors as some customers have the ability to switch to an alternate fuel. Customer additions are important to all market sectors as continued expansion adds to the total consumption of natural gas.

Earnings from EGD are impacted to the extent that volumes sold differ from forecasted volumes. Key factors that affect the probability that EGD will distribute the forecast volumes include weather, economic conditions, gas prices and the prices of competing energy sources and the number of customers added. To the extent that these factors vary unfavourably compared with forecasts, EGD will not achieve the total revenue requirements established in the ratemaking process due to lower distribution volumes, thus resulting in lower earnings.

Distribution volume may also be impacted by the increased adoption of energy efficient technologies along with more efficient building construction that continues to place downward pressure on annual average consumption.

Even in those circumstances where EGD attains its total forecast distribution volume, it may not earn the approved return on equity due to other forecast variables such as the mix between the higher margin residential and commercial sectors, and lower margin industrial sector.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 62 of 128 Appendix D

#### Rate Relief

The OEB has in the past, rendered decisions that have disallowed recovery of certain costs incurred by EGD. Through the regulatory process, the OEB approves the return on equity, which EGD is allowed to earn, in addition to various other aspects of utility operations.

Rate relief could be pursued for significant unforecasted amounts allowing EGD to recover the costs of providing and maintaining the quality of its service while achieving the allowed rate of return on rate base.

## Forecasting Accuracy

EGD is exposed to forecasting accuracy risk as rates are established in advance, based on anticipated distribution volume by class of customer. Forecasts are also made for the future costs of debt and equity capital including the forecast yield rate for long-term Government of Canada Bonds used in the determination of the return on equity. Through the forecasting process, it is intended that any changes in cost of service, regardless of whether they are caused by inflation or by level of business activity, would be reflected in new rates applied for in the upcoming fiscal year.

#### Franchise Rights

EGD has an exclusive right to serve all end users within its franchise area, under its franchise agreements. Similar franchise agreements in adjacent areas are held by peer companies such as Union Gas Limited (UGL). On January 6, 2006, the OEB granted Greenfield Energy Corporation, a potential power-plant customer of UGL, the right to physically bypass UGL's distribution network within UGL's franchise area, in order to serve its own power-plant. The OEB's decision to not uphold exclusive franchise rights of a local distribution utility in Ontario was unprecedented. However, the OEB characterized this decision as transitional, and set up a rates proceeding which assessed the service requirements of gas fired generation in the province of Ontario. The OEB decision from this rates proceeding was issued in November 2006. EGD believes the new rates are robust and would make physical bypass of EGD's system unattractive to gas fired power generation plants. However, the OEB decision did not preclude any party from seeking approval from the OEB to build its own pipeline and bypass the local distribution utility. EGD objects strongly to the concept that any such franchise violation is acceptable and will object should any similar proposal arise in the EGD franchise area.

#### Noverco

Enbridge owns an equity interest in Noverco through ownership of 32% of the common shares and a cost investment in preferred shares. Noverco is a holding company that owns approximately 71% of Gaz Metro Limited Partnership (Gaz Metro), a gas distribution company operating in the province of Quebec and the state of Vermont. Gaz Metro also has a 50% interest in TQM Pipeline, which transports natural gas in Quebec, and is partnering with the Company on the Rabaska LNG project (described under "Strategy" below).

Noverco also has an investment in the common shares of Enbridge resulting in dividend and earnings elimination adjustments at Enbridge. Noverco receives dividends from Enbridge but because Enbridge owns part of Noverco, a portion of the dividends Noverco receives are effectively dividends that Enbridge has paid to itself. This portion of the dividends paid reduces the book value of Enbridge's investment in Noverco.

## Results of Operations

Noverco earnings were \$22.7 million for the year ended December 31, 2006 compared with \$28.3 million for the year ended December 31, 2005. Earnings decreased due to a \$7.3 million dilution gain in 2005, which resulted from a Gaz Metro LP unit issuance in which Noverco did not participate, compared with a dilution gain of \$4.0 million in 2006. Excluding dilution gains, earnings from Noverco were lower in 2006 as the prior year included a future income tax recovery stemming from the receipt of a significant cash dividend.

Noverco earnings were \$28.3 million for the year ended December 31, 2005 compared with \$32.3 million for the year ended December 31, 2004. The 2005 results included the \$7.3 million dilution gain within Noverco on unit issuances by Gaz Metro. The 2004 results included 15 months of earnings as a result of the elimination of the quarter lag basis of

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 63 of 128 Appendix D

consolidation. Earnings for the extra quarter, the three months ended December 31, 2003, were \$13.6 million. The remaining variance reflected the future income tax recovery related to the receipt of cash dividends net of an adjustment for reciprocal dividends.

Weather variations do not affect Noverco's earnings as Gaz Metro is not exposed to weather risk. A significant portion of the Company's earnings from Noverco is in the form of dividends on its preferred share investment, which is based on the yield of 10-year Government of Canada bonds plus 4.34%.

#### CustomerWorks/ECS

CustomerWorks/ECS includes the operations of CustomerWorks and Enbridge Commercial Services (ECS). CustomerWorks is 70% owned by Enbridge and provides customer care services, including billing, collections, and operation of call centers primarily for; EGD, Direct Energy Essential Home Services and Terasen Gas (a gas distribution company in British Columbia). EGD is currently reviewing its customer care provider and expect to conclude this process in mid-2007. ECS owns the customer information services system that CustomerWorks uses under license to provide services to EGD.

## **Enbridge Gas New Brunswick**

The Company owns 70% of, and operates, Enbridge Gas New Brunswick (EGNB), which owns the natural gas distribution franchise in the province of New Brunswick. EGNB is constructing a new distribution system and has approximately 5,600 customers. Approximately 565 kilometres (351 miles) of distribution main has been installed with the capability of attaching approximately 27,000 customers.

EGNB earnings were \$9.8 million for the year ended December 31, 2006 compared with \$6.1 million for the year ended December 31, 2005. Earnings were higher in 2006 as debt was settled through the issuance of equity, during the third and fourth guarters of 2005 resulting in a higher equity base throughout 2006.

Enbridge Gas New Brunswick earnings were \$6.1 million for the year ended December 31, 2005 compared with \$3.7 million for the year ended December 31, 2004. The increase is consistent with the settlement of debt through the issue of equity in 2005, resulting in a higher equity base.

EGNB is regulated by the New Brunswick Board of Commissioners of Public Utilities (PUB). As it is currently in the development period, EGNB's cost of service exceeds its distribution revenues. The PUB has approved the deferral of the difference between distribution revenues and the cost of service during the development period for recovery in future rates. This recovery period is expected to start in 2010 and end no sooner than December 31, 2040. On December 31, 2006, the regulatory deferral asset was \$101.8 million (2005 – \$82.7 million).

## **Other Gas Distribution Operations**

Earnings from Other Gas Distribution Operations were \$6.5 million consistent with \$6.7 million for the year ended December 31, 2005.

Earnings from Other Gas Distribution Operations decreased \$1.8 million in 2005, primarily because the 2004 results included 15 months of earnings as a result of the elimination of the quarter lag basis of consolidation. Earnings for the extra quarter, the three months ended December 31, 2003, were \$2.0 million.

## **Aux Sable**

Enbridge owns 42.7% of Aux Sable, a natural gas liquids (NGL) extraction and fractionation business near Chicago. Aux Sable owns and operates a plant, at the terminus of the Alliance System. The plant extracts NGL from the energy-rich natural gas transported on the Alliance System, as necessary, to meet the heat content requirements of local distribution companies, which require natural gas with less NGL, or lower heat content, and to take advantage of positive commodity price spreads.

Aux Sable has an agreement with BP Products North America Inc. to sell its NGL production to BP. In return, BP pays Aux Sable a fixed annual fee and a share of any net margin generated from the business in excess of specified natural gas processing margin thresholds. In addition, BP reimburses Aux Sable for all operating, maintenance and capital costs

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 64 of 128 Appendix D

associated with the Aux Sable facilities subject to certain limits on capital costs. BP supplies, at its cost, all make-up gas and fuel supply gas to the Aux Sable facilities and is responsible for the capacity on the Alliance Pipeline held by an Aux Sable affiliate, at market rates. The agreement is for an initial term of 20 years, commencing January 1, 2006 and may be extended by mutual agreement for 10-year terms. If cumulative losses exceed a certain limit, BP will have the option to terminate the agreement, however Aux Sable has the right to reduce such losses to avoid termination.

Earnings for the year ended December 31, 2006 were \$25.8 million compared with earnings of \$5.3 million for the year ended December 31, 2005. Fractionation margins were very positive throughout 2006 and as a result, earnings from the upside sharing mechanism account for the majority of earnings from Aux Sable.

Fractionation margins are expected to moderate but remain favourable in 2007, given high oil prices and relatively low gas prices.

Earnings for the year ended December 31, 2005 were \$5.3 million compared with earnings of \$7.3 million for the year ended December 31, 2004. The decrease was due to higher natural gas costs in 2005, which were not offset by product sales prices causing weak margins and therefore decreased production levels.

#### **Gas Services**

The Company's Gas Services business markets natural gas to optimize Enbridge's commitments on the Alliance and Vector Pipelines. It also has a growing business of providing fee for service arrangements for third parties, leveraging its marketing expertise. Capacity commitments as of December 31, 2006 were 31.6 mmcf/d on the Alliance Pipeline (2.4% of total capacity) and 159.2 mmcf/d on Vector Pipeline (15.9% of total capacity). In December 2005, capacity commitments on Vector Pipeline of 82.5 mmcf/d, previously held by EGD were assumed by the Gas Services business.

Earnings from Gas Services are dependent upon the basis (location) differentials between Alberta and Chicago, for Alliance Pipeline, and between Chicago and Dawn, for Vector Pipeline. To the extent that the cost of transportation on these two pipelines exceeds the gas commodity basis differential, earnings will be negatively affected.

#### Other

Other earnings were \$5.4 million in 2006 compared with a loss of \$2.9 million in 2005. The 2006 results included an increased contribution from Tidal Energy, which resulted from the expansion of the business into the U.S. at the end of 2005 and increased earnings from its physical storage program.

In 2005, Other included higher costs, compared with 2004, related to the development of the Rabaska LNG facility.

#### Tidal Energy

Tidal Energy (Tidal) provides crude oil and natural gas liquids marketing services for the Company and its customers in a full range of condensate and crude oil types including light sweet, light and medium sours and several heavy grades. Tidal transacts at many of the major North American market hubs and provides its customers with a variety of programs including flexible pricing arrangements, hedging programs, product exchanges, physical storage programs and total supply management, through the analysis and implementation of different transportation options, reduced quality differentials and tariff structures, and utilizing Risk Management Pricing options. Tidal's business involves buying, selling and storing large quantities of crude oil. Tidal is primarily a physical barrel marketing company and in the course of its market activities, physical receipt or delivery shortfalls can create modest commodity exposures. Any open positions created from this physical business are tightly monitored by, and must comply with, the Company's formal risk management policies. Earnings from Tidal are included in Other.

#### **AltaGas**

The Company sold its investment in AltaGas in the third quarter of 2004 for an after-tax gain of \$97.8 million.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 65 of 128 Appendix D

#### Strategy

#### Other Natural Gas Distribution Strategies

Enbridge intends to pursue natural gas business development opportunities complementary to the existing gas distribution and services businesses through:

- developing LNG regasification projects and related pipeline infrastructure,
- pursuing marketing and storage opportunities that optimize existing assets,
- continuing to develop and grow the wind power platform in a measured fashion,
- exploring gas-fired generation opportunities that are underpinned by long-term contracts and improve the utilization of existing assets. The approach is to slowly build this business and utilize partners to share development risks.

Further to this strategy, Enbridge is developing a number of projects, which are described below.

## Rabaska LNG Facility

Enbridge, Gaz Metro and Gaz de France are continuing development of the previously announced Rabaska LNG terminal to be located on the St. Lawrence River in Levis, Quebec. The Levis municipal council is fully supportive of the project and a fiscal agreement has been executed. Options for all required land have been secured. Environmental and marine applications have been filed and are progressing. It is expected that all required permits would be obtained by early summer 2007. Discussions are in progress with potential LNG suppliers regarding long-term terminal use arrangements. The project is expected to cost approximately \$840 million in total.

#### Ontario Wind Project

Enbridge is developing approximately 182 megawatts of wind power in the Municipality of Kincardine on the eastern shore of Lake Huron in Ontario. Construction will commence when final environmental and zoning approvals are obtained. The project is waiting for its Environmental Screening Report to be passed by the Ontario Ministry of Environment and its zoning laws to be approved by the Ontario Municipal Board. Total capital expenditures are expected to be approximately \$0.5 billion. Enbridge has entered into a 20-year electricity purchase agreement with the Ontario Power Authority for all the power produced by the project. The Company expects the Ontario Wind Project to be in service in late 2008.

#### Capital Expenditures

Capital expenditures in other Gas Distribution and Services businesses, including the Ontario Wind Project, described above, are expected to be approximately \$225 million in 2007.

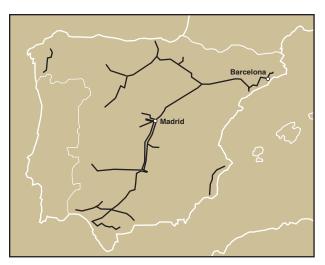

## INTERNATIONAL

International includes earnings from the Company's 25% interest in Compañia Logistica de Hidrocarburos CLH, S.A. (CLH), Spain's largest refined products transportation and storage business, and Oleoducto Central, S.A. (OCENSA), a crude oil pipeline in Colombia. Earnings also include fees earned from technology and consulting services provided by Enbridge Technology Inc.

## **Earnings**

(millions of Canadian dollars)	2006	2005	2004
CLH	54.5	61.6	48.6
OCENSA/CITCol	33.9	32.8	33.0
Other	(5.2)	(7.0)	(8.0)
	83.2	87.4	73.6

Earnings for the year ended December 31, 2006 were \$83.2 million compared with \$87.4 million for the year ended December 31, 2005. Earnings from CLH for 2005 included a \$7.6 million gain on the sale of land, recorded in the fourth quarter.

Spain - CLH

Earnings for the year ended December 31, 2005 were \$87.4 million compared with \$73.6 million for the year ended December 31, 2004. The increase results primarily from the \$7.6 million gain on the sale of land in CLH. Operating results at CLH were also improved due to higher volumes and increased average tariffs and storage revenues.

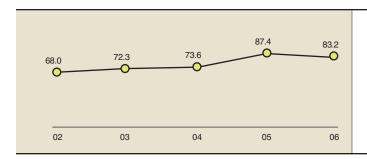

Other includes administration and business development costs and the financial results of Enbridge Technology Inc.

#### **CLH**

The primary activity of CLH is the storage and shipment of refined products through a comprehensive distribution network located throughout Spain. Earnings are based on a fee for service tariff, adjusted annually for inflation, and are dependent on throughput volumes and storage levels.

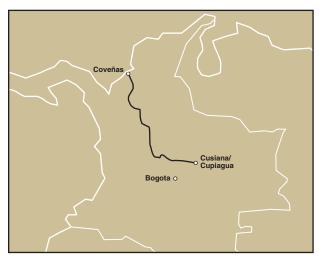

CLH is the primary basic logistics distribution network for refined products in Spain and provides services on an open access basis. The system consists of over 3400 kilometres (2,113 miles) of pipelines and 38 storage facilities located throughout the country. CLH provides product distribution to locations not connected to the pipeline system through its own fleet of tanker trucks and chartered tanker ships. CLH also offers secondary distribution services, the most significant being the services provided through CLH Aviation, which handles aviation fuel at airport locations throughout Spain. This business includes the storage of aviation fuel, loading of aircraft refueling units and the refueling of aircraft. New policies issued by the Spanish airport authority (AENA) to promote competition, allow for new non-CLH operators to enter the aircraft-refueling segment of this business. While CLH's share of this segment of the market may reduce over time, its participation in the aviation fuel business will continue. CLH's pipeline facilities are connected to the country's eight crude oil refineries and to major coastal port locations where most imports of crude oil and refined products into Spain are first delivered.

Earnings from CLH are directly impacted by the demand for refined products including gasoline, diesel, jet fuel and other transportation fuels. Economic growth in Spain over the last decade has been among the highest in the European Union, which has led to increasing demand for energy, including refined products. The central region of the country, in and around Madrid, has seen the largest growth in demand. CLH is in the process of expanding its system over the next several years in order to meet the continued growth expected in this region. This expansion, which includes an increase in storage capacity and looping of both the northern and southern main lines, will be constructed in phases to match the expected growth in volumes.

International Earnings (millions of Canadian dollars)

International includes earnings from the Company's interests in CLH in Spain and OCENSA in Colombia. International earnings continue to be strong but were lower in 2006 due to a one-time gain on the sale of land in CLH in 2005.

Colombia - OCENSA

#### **OCENSA/CITCol**

The Company owns a 24.7% interest in OCENSA, a cost investment on which the Company earns a fixed return. OCENSA is one of two crude oil export pipelines within Colombia. Through a 100% owned entity, CITCol, the Company manages the pipeline and earns a fee for this service, which includes incentives for operating performance.

#### Strategy

The Company plans to increase International earnings contribution over the next several years by leveraging its North American operating expertise in midstream energy infrastructure and relationships with existing partners. The Company will pursue investment opportunities in regions or countries with attractive fundamentals of supply and market demand, in which operating and political risks are acceptable to the Company, and in which attractive risk adjusted returns are available.

#### **Business Risks**

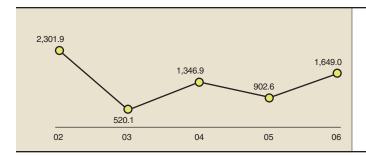

The International business is subject to risks related to political and economic instability, currency volatility, market and supply volatility, government regulations, foreign investment rules, security of assets and environmental considerations. The Company assesses and monitors international regions and specific countries on an ongoing basis for changes in these risks. Risks are mitigated by a combination of Enbridge's governance involvement, contractual arrangements, influence in operation of the assets, regular analysis of country risk, as well as foreign currency hedging and insurance programs.

## CORPORATE

(millions of Canadian dollars)	2006	2005	2004
Corporate	(82.2)	(63.9)	(81.3)
Revalue future income taxes due to tax rate changes	14.0	_	_
	(68.2)	(63.9)	(81.3)

The Corporate segment includes corporate financing costs, business development activities and other corporate costs not attributable to a specific business segment.

Corporate costs were \$82.2 million for the year ended December 31, 2006 compared with \$63.9 million for the year ended December 31, 2005. The increase in Corporate costs was due to a number of factors including higher interest expense as a portion of the Company's floating rate debt was repaid through the issuance of long-term fixed rate debt as well as higher business development activity and the impact of a strong labour market.

Capital Expenditures, Investments and Acquisitions (millions of Canadian dollars)

The 2006 total for capital expenditures, investments and acquisitions reflects additions to property, plant and equipment, primarily related to the gas distribution utility, a number of Liquids Pipelines projects as well as the Ontario Wind Project; the acquisition of a 65% interest in the Olympic Pipeline; and an additional \$280.2 million investment in EEP.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 68 of 128 Appendix D

Corporate costs were \$63.9 million for the year ended December 31, 2005 compared with \$81.3 million for the year ended December 31, 2004. Corporate costs were lower in 2005 reflecting lower interest expense due to lower rates. Also, business development costs were higher in 2004.

#### LIQUIDITY AND CAPITAL RESOURCES

The Company's cash generated from operations, commercial paper issuances, available capacity under credit facilities and access to capital markets in Canada and the United States for the issuance of long-term debt, equity, or other securities are expected to be sufficient to satisfy liquidity and capital expenditure requirements. Subsequent to December 31, 2006, the available capacity under credit facilities was increased to approximately \$4.3 billion.

The Company continues to manage its debt to capitalization ratio to maintain a strong balance sheet. The debt to capitalization ratio at December 31, 2006, including short-term borrowings, but excluding non-recourse short and long-term debt, was 64.6%, compared with 64.5% at the end of 2005.

The Company's current liabilities routinely exceed current assets. Current liabilities include current maturities of long-term debt, which are typically refinanced with long-term debt. Excluding current maturities of long-term debt, the Company does not have a working capital deficit.

The Company's cash balance at the end of the year includes \$7.2 million (2005 – \$16.4 million; 2004 – \$6.0 million) held in trust in joint ventures, pursuant to finance agreements within the joint ventures.

## **Operating Activities**

Cash from operating activities increased to \$1,297.7 million for the year ended December 31, 2006 from \$947.0 million for the year ended December 31, 2004.

(millions of Canadian dollars)	2006	2005	2004
Earnings net of non-cash items	1,171.0	1,300.9	1,027.8
Changes in operating assets and liabilities	126.7	(353.9)	(141.1)
Cash Provided by Operating Activities	1,297.7	947.0	886.7

Cash provided by earnings net of non-cash items, was \$1,171.0 million for the year ended December 31, 2006, compared with \$1,300.9 million and \$1,027.8 million for 2005 and 2004, respectively. In 2005, the Company received special dividends from Noverco totaling \$70 million which resulted in most of the variance between 2005 and 2006.

Changes in operating assets and liabilities were \$480.6 million higher in 2006 compared with 2005. The increase was due primarily to the impact of a declining trend in the price of natural gas in the latter half of 2006 compared with an increasing trend in 2005. This caused reductions in accounts receivable and gas inventories in the current year, compared to increases in the prior year, partially offset by a decrease in payables in the current year, compared with an increase in the prior year, all within EGD.

Changes in operating assets and liabilities were lower in 2005 compared with 2004. The majority of this change was in EGD where higher commodity prices in 2005 increased accounts receivable and inventory.

Since the Company's pension plans are adequately funded, no additional funding above usual levels is anticipated for 2007.

## **Investing Activities**

Cash used for investing activities for the year ended December 31, 2006 was \$1,580.0 million compared with \$876.5 million in 2005, an increase of \$703.5 million. The majority of the increase was due to expenditures on property, plant and equipment, including the commencement of capital expenditures on a number of Liquids Pipelines projects and a \$280.2 million investment in EEP as well as the acquisition of a 65% interest in the Olympic Pipeline for \$101.4 million.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 69 of 128 Appendix D

In 2005, the majority of cash spent on investing was for additions to property, plant and equipment, primarily in EGD. The increase in additions to property, plant and equipment in 2005, compared with 2004, was due to increased expenditures on capital projects. In 2005, the Company also made contingent payments to the former owners of the Company's 25% interest in CLH because CLH met cumulative volume targets. In 2004, the Company also made smaller contingent payments to the former owners of the 25% interest in CLH.

In 2005, the Company made minor acquisitions throughout the year amounting to \$88.6 million whereas, in 2004, \$833.9 million was used for acquisitions including Enbridge Offshore Pipelines, acquired for \$743.4 (net of cash acquired) and other minor acquisitions. Cash proceeds from the sale of the investment in AltaGas partially offset the use of cash for acquisitions in 2004.

## **Financing Activities**

In 2006, the Company generated \$268.1 million through financing activities compared with cash used for financing activities of \$22.1 million in 2005 and cash generated during 2004 of \$114.4 million.

During 2006, the Company issued \$1,125.0 million of new long-term debt in the form of medium term notes and repaid \$400.0 million in medium term notes which matured during 2006. Short-term borrowings at EGD are used primarily to finance working capital, including inventory. EGD's short-term borrowings decreased by \$266.9 million in 2006, reflecting the impact of decreasing natural gas prices. This decrease in short-term borrowings was partially offset by an increase in short-term debt to finance capital expenditures and investments.

Throughout 2005, the Company issued \$1,020.1 million new long-term debt. This new debt replaced higher interest rate medium-term notes, which matured during 2005, and short-term debt, primarily commercial paper. The repayment of short-term debt was partially offset by an increase in short-term borrowings at EGD. EGD's short-term borrowings were higher at the end of 2005 due to increased commodity prices.

Dividends on common shares have increased again in 2006 due to an increased number of common shares outstanding and a higher dividend rate.

In 2004, cash was generated through a net issuance of \$788.0 million of debt, partially offset by the payment of dividends. The Company also repaid \$350.0 million of preferred securities at the end of 2004.

## **Debt Covenants**

Enbridge Inc. and all of its subsidiaries are in compliance with all debt covenants. However currently, EGD does not meet a new long-term debt issuance test contained in its trust indenture due primarily to significantly warmer weather and a decline in EGD's allowed return on equity. In order for EGD to issue new long-term debt, EGD requires a long-term debt interest coverage ratio of 2.0 times for 12 consecutive months out of the last 23 months. Although EGD cannot issue new long-term debt until it meets the test, EGD may refinance existing long-term debt or issue new short-term debt without having to meet the new issue test.

#### Equity Issuance

On February 2, 2007, Enbridge closed the issuance of 13.5 million common shares for \$38.75 per share to the public and issued 1.5 million common shares to Noverco for \$38.75 per share, which maintains Noverco's ownership interest in Enbridge at approximately 9.5%. Gross proceeds from both offerings were \$581.2 million.

## **Preferred Securities**

The Company has \$200.0 million of 7.8% Preferred Securities outstanding. On December 18, 2006, the Company announced its intention to redeem all 8,000,000 Preferred Securities on February 15, 2007 for \$25.00 per Preferred Security plus accrued and unpaid interest of \$0.2458 per security for the period covering from the last interest payment date of December 31, 2006 to the redemption date of February 15, 2007.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 70 of 128 Appendix D

## **Expected Capital Expenditures**

The numerous potential organic growth projects and other growth initiatives described in the business unit sections will require capital funding. The Company also requires capital for ongoing core maintenance and capital improvements in many of its businesses. In total, Enbridge expects to spend approximately \$2.5 billion during 2007 on capital projects and maintenance. The Company expects to finance these expenditures through cash from operating activities, the equity issuance described above and additional debt, if required.

The decision to finance with debt or equity is based on the capital structure for each business and the overall capitalization of the consolidated enterprise. Certain of the regulated pipeline and gas distribution businesses issue long-term debt to finance capital expenditures. This external financing may be supplemented by debt or equity injections from the parent company. Debt, and equity when required, has been issued to finance business acquisitions, investments in subsidiaries, and long-term investments. Funds for debt retirements are generated through cash provided from operating activities, as well as through the issue of replacement debt.

Payments due for contractual obligations over the next five years and thereafter are as follows:

		Less than			After
(millions of Canadian dollars)	Total	1 year	1-3 years	3-5 years	5 years
Long-term debt	7,574.4	535.3	800.0	748.4	5,490.7
Non-recourse long-term debt	1,566.9	58.4	301.3	180.0	1,027.2
Capital and operating leases	85.6	7.4	14.2	12.3	51.7
Long term contracts <sup>1</sup>	1,306.1	454.2	309.1	256.6	286.2
Total Contractual Obligations	10,533.0	1,055.3	1,424.6	1,197.3	6,855.8

<sup>1</sup> Approximately \$214.4 million of these contracts are commitments for products related to the construction of Liquids Pipelines projects; the minimum cancellation charge related to these contracts is \$127.2 million.

## SENSITIVITY ANALYSIS

The Company's earnings will fluctuate with changes in the market prices and certain volumetric parameters, such as weather. Enbridge manages its financial market risks through an Earnings at Risk (EaR) metric. Under the Company's EaR policy, using a two standard deviation confidence interval, the maximum adverse change in 12 months forward earnings from movements in market prices over a 1 month period of time will not exceed 5% of earnings. On December 31, 2006, the Company's EaR was 2.9%.

The following table shows the effect of changes in certain key financial market variables on earnings. These sensitivities are approximations based on business conditions as of December 31, 2006 and may not be applicable to other periods, under other economic conditions or for greater magnitude changes.

Factor	Decrease	After-Tax Earnings Impact
Exchange rate (CAD Dollar to US Dollar)	CAD\$0.01	\$1.1 million
Exchange rate (CAD Dollar to Euro)	CAD\$0.01	\$0.3 million
Interest rates	0.5%	\$4.0 million

Interest rate fluctuations are captured in the Company's EaR metric. However, under GAAP, the impact of foreign currency fluctuations on earnings from foreign subsidiaries cannot be hedged and as such, these fluctuations have been excluded from the Company's EaR metric. The Company hedges the foreign currency risk of dividends it receives from foreign currency denominated subsidiaries. Any unhedged foreign currency dividends are captured in the EaR metric.

Weather is a significant driver of delivery volumes at EGD, given that a significant portion of EGD's customers use natural gas for space heating. Weather, measured in terms of degree day deficiency, directly impacts EGD's earnings as noted below. Degree-day is a measure of coldness, calculated as the total number of degrees each day by which the daily mean temperature falls below 18 degrees Celsius.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 71 of 128 Appendix D

Factor	Incremental change	Approximate incremental impact
Weather	18 degree days	1 billion cubic feet
Volume	1 billion cubic feet	\$1.3 million (after-tax)

In 2006, weather negatively impacted earnings by a larger magnitude than the above sensitivities would suggest. This resulted from the unusual pattern of distribution degree days during the year and their relative effectiveness. Degree days are fully effective, typically in the peak winter months, when their occurrence directly impacts the consumption pattern by a similar magnitude.

#### RISK MANAGEMENT

The Company's business activities are subject to market price, credit, and operating risks. The Company has formal risk management policies and risk management systems designed to mitigate these risks.

#### **Market Price Risk**

Enbridge's earnings are subject to movements in interest rates, foreign exchange rates, and commodity prices (collectively Market Price Risk). Given the Company's desire to maintain a stable and consistent earnings profile, it has implemented a Board of Directors approved Market Price Risk Policy to minimize the likelihood that adverse earnings fluctuations arising from movements in market prices across all of its businesses will exceed a defined tolerance.

The Market Price Risk metric utilized within that policy is Earnings at Risk. It is an objective, statistically derived risk metric that measures the maximum earnings loss that could result from adverse market price movements over a specified time horizon within a pre-determined level of statistical confidence, under normal market conditions.

The Company uses derivative financial instruments for risk management purposes. The following summarizes the types of market price risks to which the Company is exposed and the hedging programs implemented.

## Foreign Exchange Risk

The Company has exposure to foreign currency exchange rates, primarily arising from its U.S. dollar and Euro denominated investments, where both carrying values and earnings are subject to foreign exchange risk. Furthermore, the Company is exposed to the economic risk on the conversion of the foreign currency denominated cash flows. The Company has a hedging policy to eliminate 50% to 70% of the long-term economic exposure related to its foreign currency denominated cash flows. It will also hedge shorter term anticipated foreign currency capital expenditures.

The Company hedges certain of its foreign currency denominated net equity investments with the use of cross currency swaps, par forward contracts, and foreign currency denominated debt. These long-term derivative contracts also serve to economically hedge a significant portion of the cash distributions from these equity investments. However, this does not eliminate the GAAP earnings volatility caused by exchange rate differences. During the year ended December 31, 2006, the Company received foreign currency denominated cash distributions and settled associated hedge transactions resulting in \$17.1 million (2005 – \$13.0 million) of incremental cash flows, which were not included in reported earnings.

## Interest Rate Risk

Enbridge is exposed to interest rate fluctuations on variable rate debt. Floating to fixed interest rate swaps, collars and forward rate agreements are used to hedge against the effect of future interest rate movements. The Company monitors its debt portfolio mix of fixed and variable rate debt instruments to ensure that the consolidated portfolio of debt stays within its Board of Directors approved policy limit band of 15% to 25% floating rate debt as a percentage of total debt outstanding. Fixed to floating swaps are also used from time to time to manage this position and optimize the Company's debt portfolio. The Company is also exposed to fluctuations in interest rates ahead of anticipated fixed rate debt issuances. The Company may enter into interest rate derivatives to hedge a portion of the interest cost of these future debt issues.

Information about the debt portfolio itself is included in Notes 12 and 17 of the Company's consolidated financial statements for the year ended December 31, 2006.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 72 of 128 Appendix D

#### Commodity Price Risk

The Company uses natural gas price swaps, futures and options to manage the value of commodity purchases and sales that arise from capacity commitments on the Alliance and Vector pipelines. The Company also uses natural gas, power, crude oil, and natural gas liquids derivative instruments to fix the value of variable price exposures that arise from commodity usage, storage and supply agreements.

## Natural Gas Supply Management

Customers of EGD are exposed to changes in the price of the natural gas commodity. A portion of the future natural gas supply requirements is hedged using natural gas swaps and options that manage the price of natural gas, as allowed by the OEB. Since customers pay the cost of the natural gas commodity, this risk mitigation strategy is for the benefit of customers. The OEB monitors the policies, procedures, and results of this hedging program.

#### Fair Values of Derivative Instruments

Information about the financial instruments outstanding at year end for the purposes of mitigating the risks as described above, including the fair values, notional or principal amounts and maturities are shown in Note 17 of the Company's Consolidated Financial Statements for the year ended December 31, 2006.

#### **Credit Risk**

Entering into derivative financial instruments can give rise to additional credit risks. Credit risk arises from the possibility that a counterparty will default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the instrument. The Company minimizes credit risk by entering into risk management transactions only with institutions that possess high investment grade credit ratings or have provided the Company with an acceptable form of credit protection. The Company has no significant concentration with any single counterparty. For transactions with terms greater than five years, the Company may also require a counterparty that would otherwise meet the Company's credit criteria to provide collateral.

Trade receivables include amounts due from companies operating in the oil and gas industry and are collateralized by the commodities contained in the Company's pipelines and storage facilities. Where shippers fail to maintain specified credit ratings they are required to provide letters of credit or other suitable security. Credit risk in the Gas Distribution and Services segment is reduced by the large and diversified customer base and the ability to recover an estimate for doubtful accounts through the ratemaking process. For customers of our non-regulated businesses, credit exposure is minimized through the use of credit monitoring processes, contractual agreements with collateral requirements, master netting agreements, and credit exposure limits.

## **Operating Risks**

## Environmental, Health and Safety Risk

The Company's operations, facilities and petroleum product shipments are subject to extensive national, regional and local environmental, health and safety laws and regulations governing, among other things, discharges to air, land and water, the handling and storage of petroleum compounds and hazardous materials, waste disposal, the protection of employee health, safety and the environment, and the investigation and remediation of contamination. The Company's facilities could experience accidents, malfunctions or other unplanned events that could result in spills or emissions in excess of permitted levels and result in personal injury, fines, penalties or other sanctions and property damage. The Company could also incur liability in the future for environmental contamination associated with past and present activities and properties. The facilities and pipelines must maintain a number of environmental and other permits from various governmental authorities in order to operate and these facilities are subject to inspection from time to time. Failure to maintain compliance with these requirements could result in operational interruptions, fines or penalties, or the need to install potentially costly pollution control technology. Finally, compliance with current and future environmental laws and regulations, which are likely to become more stringent over time, including those governing greenhouse gas emissions, may impose additional capital costs and financial expenditures and affect the demand for the Company's services, which could adversely affect operating results and profitability.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 73 of 128 Appendix D

Enbridge is committed to protecting the health and safety of employees, contractors and the general public, and to sound environmental stewardship. The Company believes that prevention of accidents and injuries, and protection of the environment, benefits everyone and delivers increased value to shareholders, customers and employees. Enbridge has health and safety, and environmental management systems and has established policies, programs and practices for conducting safe and environmentally sound operations. Regular reviews and audits are conducted to assess compliance with legislation and company policy.

## Pipeline Operating Risk

Pipeline leaks are an inherent risk of operations. Other operating risks include: the breakdown or failure of equipment, information systems or processes; the performance of equipment at levels below those originally intended (whether due to misuse, unexpected degradation or design, construction or manufacturing defects); failure to maintain adequate supplies of spare parts; operator error; labour disputes; disputes with interconnected facilities and carriers; and catastrophic events such as natural disasters, fires, explosions, fractures, acts of terrorists and saboteurs, and other similar events, many of which are beyond the control of the pipeline systems. The occurrence or continuance of any of these events could increase the cost of operating the Company's pipelines or reduce revenues, thereby impacting earnings. The Company has an extensive program to manage system integrity, which includes the development and use of predictive and detective in-line inspection tools. Maintenance, excavation and repair programs are directed to the areas of greatest benefit and pipe is replaced or repaired as required. The Company also maintains comprehensive insurance coverage for significant pipeline leaks and has a comprehensive security program designed to reduce security-related risks.

#### Regulation

Many of the Company's pipeline operations are regulated and are subject to regulatory risk. The nature and degree of regulation and legislation affecting energy companies in Canada and the United States has changed significantly in past years, and there is no assurance that further substantial changes will not occur. These changes may adversely affect toll structures or other aspects of pipeline operations or the operations of shippers.

## **Execution Risk**

Cost escalation and internal and external resource shortages, including human resources, may adversely affect the Company's ability to develop and complete organic growth projects in a cost effective and timely manner. In addition, there are a number of competing projects, proposed by other companies, which could preclude the Company from developing one or more of the proposed projects.

## CRITICAL ACCOUNTING ESTIMATES

#### **Depreciation**

Depreciation of property, plant and equipment, the Company's largest asset with a net book value at December 31, 2006 of \$11,264.7 million, or 61% of total assets, generally is provided on a straight-line basis over the estimated service lives of the assets commencing when the asset is placed in service. When it is determined that the estimated service life of an asset does not reflect the expected remaining period of benefit, prospective changes are made to the estimated service life. In general, estimates of service lives are based on third party engineering studies, experience and industry practice. There are a number of assumptions inherent in estimating the service lives of the Company's assets including the level of development, exploration, drilling, reserves and production of crude oil and natural gas in the supply areas served by the Company's pipelines as well as the demand for crude oil and natural gas and the integrity of the Company's systems. Changes in these assumptions could result in adjustments to the estimated service lives, which could result in material changes to depreciation expense in future periods in any of the Company's business segments, with the exception of the Corporate segment. Generally, revised assumptions have historically resulted in extending useful lives. For certain rate regulated operations, depreciation rates are approved by the regulator and the regulator may require periodic studies or technical updates on useful lives which may change depreciation rates.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 74 of 128 Appendix D

## **Regulatory Assets and Liabilities**

Certain of the Company's Liquids Pipelines, Gas Pipelines, and Gas Distribution and Services businesses are subject to regulation by various authorities, including but not limited to, the National Energy Board (NEB), the Federal Energy Regulatory Commission (FERC), the Alberta Energy and Utilities Board (AEUB) and the Ontario Energy Board (OEB). Regulatory bodies exercise statutory authority over matters such as construction, rates and ratemaking, and agreement with customers. To recognize the economic effects of the actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non rate-regulated entities. The Company also records regulatory assets and liabilities to recognize the economic effects of the actions of the regulator. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in futures periods through rates. As of December 31, 2006, the Company's regulatory assets totaled \$574.1 million (2005 – \$542.5 million) and regulatory liabilities totaled \$148.6 million (2005 – \$24.7 million). To the extent that the regulator's actions differ from the Company's expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

## **Post-Employment Benefits**

The Company maintains pension plans, which provide defined benefit and/or defined contribution pension benefits and post-employment benefits other than pensions to eligible retirees. Pension costs and obligations for the defined benefit pension plans are determined using the projected benefit method. This method involves complex actuarial calculations using several assumptions including discount rates, expected rates of return on plan assets, health-care cost trend rates, projected salary increases, retirement age, mortality and termination rates. These assumptions are determined by management and are reviewed annually by the Company's actuaries. Actual results that differ from assumptions are amortized over future periods and therefore could materially affect the expense recognized and the recorded obligation in future periods. See Note 19 to the 2006 annual consolidated financial statements for disclosure of the difference between the actual and the expected results for the past two years. Pension expense is recorded within all of the Company's business segments.

Impact of a 0.5% Change in Key Assumptions	Pension Benefit		OP	EB
(millions of dollars)	Obligation	Expense	Obligation	Expense
Decrease in Discount Rate	79.2	9.3	15.4	1.8
Decrease in expected return on assets	n/a	4.9	n/a	0.2
Decrease in rate of salary increase	(18.3)	(4.0)	_	_

## **Contingent Liabilities**

Provisions for claims filed for damages against the Company are determined on a case by case basis. Case estimates are reviewed on a regular basis and are updated as new information is received. The process of evaluating claims involves the use of estimates and a high degree of management judgment. The final determination by the courts in respect of the claims outstanding could have a material impact on the financial results of the Company and certain of the Company's subsidiaries and investments including Enbridge Gas Distribution Inc. and Enbridge Energy Company, Inc. as disclosed in Note 23 of the 2006 annual consolidated financial statements.

## **Asset Retirement Obligations**

The fair value of asset retirement obligations (AROs) associated with the retirement of long-lived assets are recognized as long—term liabilities in the period when they can be reasonably determined. The fair value approximates the cost a third party would charge in performing the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. AROs are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The present value of expected future cash flows is determined using assumptions such as the probability of abandonment in place versus removal and the estimated costs required upon abandonment in each case, the discount rate and the estimated time to abandonment. For the majority of the Company's assets it is not possible

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 75 of 128 Appendix D

to make a reasonable estimate of AROs due to the indeterminate timing, the long-lived nature of the assets and the scope of the asset retirements. Therefore, changes in these assumptions could materially affect the asset and liability recognized in respect of asset retirement obligations as well as the resulting accretion of the liability and depreciation of the asset within any of the Company's business segments, with the exception of the Corporate segment.

## CHANGE IN ACCOUNTING POLICIES

#### Financial Instruments, Hedging Relationships and Other Comprehensive Income

New accounting standards will be in effect January 1, 2007 for hedge accounting, recognition and measurement of financial instruments and disclosure of comprehensive income. The adoption of these standards will result in the recognition of financial instruments and hedging relationships principally consistent with similar requirements in the United States, as currently reflected in the Company's United States Accounting Principles note.

The Company will recognize other comprehensive income in a separate financial statement and include accumulated other comprehensive income as a component of shareholders' equity. To the extent economic hedges do not qualify for hedge accounting, are ineffective, or are not documented as hedges in accordance with the new standards, gains and losses and any ineffectiveness will be charged to current period earnings.

If the Company were to adopt the standards at December 31, 2006, a payable to counterparties of \$44.8 million, a due from ratepayers of \$26.6 million, accumulated other comprehensive income of \$30.6 million, a future tax liability of \$16.8 million, and a charge to retained earning of \$66.1 million would be recognized in the financial statements.

## CONTROLS AND PROCEDURES

## **Disclosure Controls and Procedures**

The Chief Executive Officer and Chief Financial Officer evaluated the effectiveness of the Company's disclosure controls and procedures (as defined in the rules of the Securities and Exchange Commission and the Canadian Securities Administrators) and concluded that the Company's disclosure controls and procedures were effective as of December 31, 2006 and in respect of the 2006 year-end reporting period.

## Management's Report on Internal Controls over Financial Reporting

Management of Enbridge Inc. is responsible for establishing and maintaining adequate internal control over financial reporting as such term is defined in the rule of the United States Securities and Exchange Commission and the Canadian Securities Administrators. The Company's internal control over financial reporting is a process designed under the supervision and with the participation of executive and financial officers to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the Company's financial statements for external reporting purposes in accordance with generally accepted accounting principles.

The Company's internal control over financial reporting includes policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets of the Company;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles; and
- Provide reasonable assurance regarding prevision or timely detection of unauthorized acquisition, use, or disposition of the Company's assets that could have a material effect on the financial statements.

The Company's internal control over financial reporting may not prevent or detect all misstatements because of inherent limitations. Additionally, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or deterioration in the degree of compliance with our policies and procedures.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 76 of 128 Appendix D

Management assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2006, based on the framework established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organization of the Treadway Commission (COSO). Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2006.

Management's assessment of the effectiveness of the Company's internal control over financial reporting as of December 31, 2006 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report included with the Company's audited financial statements.

## QUARTERLY FINANCIAL INFORMATION<sup>1</sup>

(millions of Canadian dollars, except for per share amounts)

<sup>1</sup> Quarterly Financial Information has been extracted from financial statements prepared in accordance with generally accepted accounting principles.

Quarterly operating revenue fluctuates primarily due to the seasonality of the Company's gas distribution business. Typically, revenue peaks in the winter months during the first quarter and, to a lesser extent, in the fourth quarter when higher volumes are delivered and sold. Also, revenue and earnings are affected by variations in the weather, especially in the winter, when warmer or colder than normal temperatures can result in lower or higher distribution volumes, respectively.

## Significant items that impacted 2006 and 2005 quarterly earnings are as follows:

- Fourth quarter 2006 earnings reflected higher earnings from the mainline system and Aux Sable, offset by lower earnings from EGD due primarily to warmer than normal weather and higher costs.
- Third quarter 2006 earnings reflected higher earnings from Enbridge System, increased earnings from the Company's investment in EEP and the initial recognition of upside sharing in Aux Sable which resulted from high fractionation margins.
- Second quarter earnings in 2006 included the impact of tax rate reductions, which increased earnings by a total of \$48.9 million. Revenues in the second quarter of 2006 were higher than the second quarter of 2005 due to higher commodity prices and were offset by higher commodity costs, as EGD passes through to customers changes in the price of natural gas.
- First quarter earnings in 2006 reflected improved earnings in the Enbridge System more than offset by lower results from EGD, due primarily to warmer than normal weather. Revenues in the first quarter of 2006 were higher due to higher commodity prices and were offset by higher commodity costs.
- Fourth quarter earnings in 2005 include a gain of \$7.6 million on the sale of land in CLH and a dilution gain of \$4.3 million in EEP.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 77 of 128 Appendix D

- Third quarter earnings in 2005 were negatively impacted by Hurricanes Katrina and Rita and by non-cash losses on the fair value of derivatives in EEP.
- First quarter earnings in 2005 include dilution gains in EEP and within Noverco totaling \$11.9 million.

## FOURTH QUARTER 2006 HIGHLIGHTS

Fourth quarter earnings for 2006 were \$171.1 million, or \$0.50 per share, compared with \$174.0 million, or \$0.52 per share, in 2005. The fourth quarter of 2006 reflected higher earnings from the Enbridge crude oil mainline system and Aux Sable, offset by lower earnings from EGD due primarily to warmer than normal weather and higher costs in the fourth quarter of 2006.

#### SELECTED ANNUAL INFORMATION

(millions of Canadian dollars, except per share amounts)	2006	2005	2004
Dividends Per Common Share	1.15	1.0375	0.92
Common Share Dividends	403.1	361.1	315.8
Total Assets	18,379.3	17,210.9	14,905.1
Total Long-Term Liabilities	10,544.8	9,690.7	8,182.5

Total assets and total long-term liabilities increased from 2005 to 2006 because of ongoing investments in core businesses and a \$280 million investment in EEP, increasing the Company's interest from 10.9% to 16.6%.

Total assets and total long-term liabilities increased from 2004 to 2005 primarily because the Company began consolidating its 41.9% investment in EIF. This change was due to the adoption of Accounting Guideline 15, Consolidation of Variable Interest Entities (AcG-15). Under AcG-15, EIF is considered a variable interest entity and Enbridge is the primary beneficiary through a combination of a 41.9% equity interest and a preferred unit investment that has no voting rights, a stated par value and a 30-year maturity.

## SUPPLEMENTARY INFORMATION

	Number
Outstanding Share Data	outstanding
Preferred Shares, Series A (non-voting equity shares)	5,000,000
Common shares – issued and outstanding (voting equity shares)	351,920,358
Total issued and outstanding stock options (7,558,307 vested)	11,501,657

Outstanding share data information is provided as at February 12, 2007.

## RELATED PARTY TRANSACTIONS

Information about the Company's related party transactions is included in Note 22 to the Company's consolidated financial statements for the year ended December 31, 2006.

Additional information relating to Enbridge, including the Annual Information Form, is available on www.sedar.com.

Dated February 21, 2007

# Management's Report

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 78 of 128 Appendix D

## To the Shareholders of Enbridge Inc.

## **Financial Reporting**

Management is responsible for the accompanying consolidated financial statements and all other information in this Annual Report. The consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles and necessarily include amounts that reflect management's judgment and best estimates. Financial information contained elsewhere in this Annual Report is consistent with the consolidated financial statements.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

The Board of Directors and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee of the Board, composed of directors who are unrelated and independent, has a specific responsibility to oversee management's efforts to fulfil its responsibilities for financial reporting and internal controls related thereto. The Committee meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The Audit, Finance & Risk Committee reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

## Internal Control over Financial Reporting

Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets of the Company;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the Company's assets that could have a material effect on the financial statements.

Management assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2006, based on the framework established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2006.

Management's assessment of the effectiveness of the Company's internal control over financial reporting as of December 31, 2006 has been audited by PricewaterhouseCoopers LLP, as required by the Sarbanes-Oxley Act, as stated in their report included herein.

# Auditors' Report

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 79 of 128 Appendix D

## To the Shareholders of Enbridge Inc.

We have completed an integrated audit of the consolidated financial statements and internal control over financial reporting of Enbridge Inc. as of December 31, 2006 and audits of its 2005 and 2004 consolidated financial statements. Our opinions, based on our audits, are presented below.

#### Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Enbridge Inc. as at December 31, 2006 and 2005, and the related consolidated statements of earnings, retained earnings and cash flows for each of the three years in the period ended December 31, 2006. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audit of the Company's financial statements as at December 31, 2006 and for the year then ended in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). We conducted our audits of the Company's financial statements as at December 31, 2005 and 2004 and for each of the two years in the period ended December 31, 2005 in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. A financial statement audit also includes assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as at December 31, 2006 and 2005 and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2006 in accordance with Canadian generally accepted accounting principles.

#### Internal Control over Financial Reporting

We have also audited management's assessment, included in the accompanying Management's Report on Internal Control Over Financial Reporting, that the Company maintained effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and on the effectiveness of the Company's internal control over financial reporting based on our audit.

We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

2006 Annual Report Auditors' Report 77

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 80 of 128 Appendix D

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, management's assessment that the Company maintained effective internal control over financial reporting as of December 31, 2006 is fairly stated, in all material respects, based on criteria established in *Internal Control – Integrated Framework* issued by the COSO. Furthermore, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2006 based on criteria established in *Internal Control – Integrated Framework* issued by the COSO.

## Notes to the Consolidated Financial Statements

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 84 of 128 Appendix D

Enbridge Inc. (Enbridge or the Company) is one of North America's largest energy transportation and distribution companies. Enbridge conducts its business through five operating segments: Liquids Pipelines, Gas Pipelines, Sponsored Investments, Gas Distribution and Services, and International. These operating segments are strategic business units established by senior management to facilitate the achievement of the Company's long-term objectives, to aid in resource allocation decisions and to assess operational performance.

#### **Liquids Pipelines**

Liquids Pipelines includes the operation of the Canadian common carrier pipeline and feeder pipelines that transport crude oil and other liquid hydrocarbons.

#### **Gas Pipelines**

Gas Pipelines consists of proportionately consolidated investments in natural gas pipelines including the U.S. portion of the Alliance Pipeline, Vector Pipeline and transmission and gathering pipelines in the Gulf of Mexico.

## **Sponsored Investments**

Sponsored Investments consists of the Company's investments in Enbridge Energy Partners, L.P. (EEP), Enbridge Energy Management, L.L.C. (EEM), a 17.2% owned subsidiary which owns 100% of EEP's i-units, (collectively, the Partnership) and Enbridge Income Fund (EIF). The Partnership transports crude oil and other liquid hydrocarbons through common carrier and feeder pipelines and transports, gathers, processes and markets natural gas and natural gas liquids. EIF is a publicly traded income fund whose primary operations include a 50% interest in the Canadian portion of the Alliance Pipeline and a crude oil and liquids pipeline and gathering system.

#### **Gas Distribution and Services**

Gas Distribution and Services consists of gas utility operations which serve residential, commercial, industrial and transportation customers, primarily in central and eastern Ontario. It also includes natural gas distribution activities in Quebec, New Brunswick and New York State, and the Company's proportionately consolidated investment in Aux Sable, a natural gas fractionation and extraction business.

The Company's commodity marketing businesses are also included in Gas Distribution and Services. These businesses manage the Company's volume commitments on Alliance and Vector Pipelines as well as offer commodity storage, transport, and supply management services.

#### International

The Company's International business consists of investments in energy delivery businesses, Compañía Logistica de Hidrocarburos CLH, S.A. (CLH) in Spain and Oleoducto Central, S.A. (OCENSA) in Colombia.

## 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The consolidated financial statements of the Company are prepared in accordance with Canadian generally accepted accounting principles (Canadian GAAP). These accounting principles are different in some respects from United States generally accepted accounting principles (U.S. GAAP) and the significant differences that impact the Company's financial statements are described in Note 26. Amounts are stated in Canadian dollars unless otherwise noted.

The preparation of financial statements in conformity with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the financial statements. Actual results could differ from these estimates.

## **Basis of Presentation**

The consolidated financial statements include the accounts of Enbridge Inc., its subsidiaries and its proportionate share of the accounts of joint ventures. EIF is consolidated in the accounts of the Company as it is a variable interest entity. The Company is the primary beneficiary of EIF through a combination of a 41.9% equity interest and a preferred unit investment. Investments in entities which are not subsidiaries or joint ventures, but over which the Company exercises significant influence, are accounted for using the equity method. Other investments are accounted for using the cost method.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 85 of 128 Appendix D

The Company's gas distribution activities within Gas Distribution and Services are conducted primarily through a wholly-owned subsidiary, Enbridge Gas Distribution Inc. (EGD). In 2004, EGD changed its fiscal year end to December 31 from September 30, and accordingly, the Company's financial statements for the year ended December 31, 2004 include 15 months of results for EGD and other gas distribution subsidiaries.

## Regulation

Certain of the Company's Liquids Pipelines, Gas Pipelines, and Gas Distribution and Services businesses are subject to regulation by various authorities, including but not limited to, the National Energy Board (NEB), the Federal Energy Regulatory Commission (FERC), the Alberta Energy and Utilities Board (AEUB) and the Ontario Energy Board (OEB). Regulatory bodies exercise statutory authority over matters such as construction, rates and ratemaking, and agreements with customers. To recognize the economic effects of the actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non rate-regulated entities.

#### **Revenue Recognition**

Generally, revenues are recorded when products have been delivered or services have been performed. However, certain operations are subject to regulation and, accordingly, there are circumstances where revenues recognized do not match the cash tolls or the billed amounts, resulting in the recognition of regulatory assets and liabilities.

For the rate-regulated portion of the Company's main Canadian crude oil pipeline system, revenue is recognized in a manner that is consistent with the underlying agreements as approved by the NEB. Certain Liquids Pipelines revenues are recognized under the terms of a committed thirty-year delivery contract rather than the cash tolls received.

For rate-regulated operations in Gas Pipelines and Sponsored Investments, transportation revenues include amounts related to expenses recognized in the financial statements that are expected to be recovered from shippers in future tolls. Revenue is not recognized in a given period for tolls received that do not relate to current period expenses. Differences between the recorded transportation revenue and actual toll receipts give rise to receivable or payable balances.

A significant portion of Gas Distribution and Services operations are subject to rate-regulation. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as mandated by the regulator. Gas distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period.

## **Income Taxes**

For non-regulated operations, the liability method of accounting for income taxes is followed. Future income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Future income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse.

The regulated activities of the Company recover income tax expense based on the taxes payable method when prescribed by regulators or in ratemaking agreements that are subject to regulatory approval. Therefore, rates do not include the recovery of future income taxes related to temporary differences. The Company expects that all unrecorded future income taxes will be recovered in rates when they become payable.

## **Foreign Currency Translation**

The Company's U.S. dollar operations are primarily self-sustaining except for certain financing and investing operations. The Company also holds a self-sustaining Euro equity investment in a foreign operation in Spain.

The self-sustaining operations are translated into Canadian dollars using the current rate method. Under this method, assets and liabilities are translated using period-end exchange rates, with revenues and expenses translated using average rates for the period. Gains and losses arising on translation of these operations are included in the foreign currency translation adjustment.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 86 of 128 Appendix D

## 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Certain financing and investing operations are integrated with those of the parent company and are translated into Canadian dollars using the temporal method. Under this method, monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect at the balance sheet date. Non-monetary assets and liabilities denominated in foreign currencies are translated at exchange rates in effect on the dates the assets were acquired or liabilities were incurred. Revenues and expenses are translated at exchange rates prevailing on the transaction dates and gains and losses on translation are reflected in income when incurred.

## **Cash and Cash Equivalents**

Cash and cash equivalents are recorded at cost and include short-term deposits with a term to maturity of three months or less when purchased.

## **Inventory**

Inventory is primarily comprised of natural gas in storage, held in EGD. Natural gas in storage is recorded at the quarterly prices approved by the OEB in the determination of customer sales rates, adjusted for price risk management activities. The actual price of gas purchased may differ from the OEB approved price. The difference between the approved price and the actual cost of the gas purchased is deferred for future refund or collection as approved by the OEB. Other inventory, consisting primarily of commodities held in storage is recorded at the lower of cost and net realizable value.

## **Property, Plant and Equipment**

Expenditures for project development, construction, expansion, major renewals and betterments are capitalized; maintenance and repair costs are expensed as incurred. The Company capitalizes interest incurred during construction, and if approved, an allowance for equity funds used during construction for regulatory assets, at rates authorized by the regulatory authorities. Depreciation of property, plant and equipment is generally provided on a straight-line basis over the estimated service lives of the assets commencing when the asset is placed in service.

## **Deferred Amounts and Other Assets**

Deferred amounts and other assets include costs which regulatory authorities have permitted or are expected to permit to be recovered through future rates, contractual receivables under the terms of long-term delivery contracts, and hedging costs. Deferred financing costs are amortized over the terms of the related debt. Other deferred charges are amortized on a straight-line basis over various periods depending on the nature of the charges.

#### Intangibles

Intangibles consist primarily of acquired long-term transportation contracts which are amortized on a straight-line basis over the expected lives of the contracts.

#### Goodwill

Goodwill represents the excess of the purchase price over the fair value of net identifiable assets upon acquisition of a business. Goodwill is not subject to amortization but is tested for impairment with a cash flow analysis, at least annually, and written down to fair value if impairment occurs.

## **Asset Retirement Obligations**

The fair value of asset retirement obligations (AROs) associated with the retirement of long-lived assets are recognized as long-term liabilities in the period when they can be reasonably determined. The fair value approximates the cost a third party would charge in performing the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. AROs are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For certain of the Company's assets it is not possible to make a reasonable estimate of AROs due to the indeterminate timing and scope of the asset retirements.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 87 of 128 Appendix D

Depreciation expense for Gas Distribution and Services operations includes a provision for asset retirement obligations at rates approved by the regulator. Actual costs incurred are charged to accumulated depreciation.

#### **Derivative Financial Instruments**

The Company uses derivative financial instruments and foreign currency denominated debt to hedge currency risk related to net investments in foreign operations. These financial instruments are recognized in the financial statements of the Company at fair value and gains and losses are included in the foreign currency translation adjustment in shareholders' equity. Changes in the carrying amount related to exchange rate movements of foreign denominated debt designated as net investment hedges are also included in the foreign currency translation adjustment.

The Company applies settlement accounting to other derivative financial instruments. Under this method, gains and losses on derivative instruments that qualify for hedge accounting are not recorded until they are realized. Amounts received or paid related to derivative financial instruments used to hedge energy commodities prices are recognized as part of the cost of the underlying transaction on settlement. For other derivative financial instruments used to hedge interest costs or foreign exchange changes, amounts received or paid, including any gains and losses realized upon settlement, are recognized over the term of the hedged item. The notional amounts are not recorded as they do not represent amounts exchanged by the counterparties.

If a derivative instrument designated as a hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred and recognized concurrently with the related transaction. Subsequent gains and losses from the derivative instrument are recognized in earnings in the period they occur. If the anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings.

#### **Post-Employment Benefits**

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits. Pension costs and obligations for the defined benefit pension plans are determined using the projected benefit method and are charged to earnings as services are rendered, except for the regulated operations of Gas Distribution and Services, where contributions made to the plan are expensed as paid, consistent with the recovery of such costs in rates. For the defined contribution plans, contributions made by the Company are expensed.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values. Market related values have been calculated using the fair value method. Adjustments arising from plan amendments and the transitional amounts recognized upon adoption of the accounting standard are amortized on a straight-line basis over the average remaining service period of the employees active at the date of amendment or transition. The excess of the net actuarial gain or loss over ten per cent of the greater of the benefit obligation and the fair value of plan assets is amortized over the average remaining service period of the active employees.

The Company also provides post-employment benefits other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependants. The cost of such benefits is accrued during the years employees render service, except for the regulated operations of Gas Distribution and Services where the cost of providing these benefits is expensed as paid, consistent with the recovery of such costs in rates.

The measurement date used to determine the plan assets and the accrued benefit obligation was September 30, 2006.

## **Stock Based Compensation**

Stock options granted after January 1, 2003 are recorded using the fair value method. Under this method, compensation expense is measured at fair value at the grant date using the Black-Scholes option pricing model and recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility with a corresponding credit to contributed surplus. Balances in contributed surplus are transferred to share capital when the options are exercised. Stock options granted prior to January 1, 2003 do not result in the recognition of compensation expense and continue to be accounted for as capital transactions when the options are exercised.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 88 of 128 Appendix D

## SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Performance Stock Units (PSUs) and Restricted Stock Units (RSUs) vest at the completion of a three-year term and are settled in cash. During the term, a liability and expense are recorded based on the number of units outstanding and the current market price of the Company's shares. The value of PSU's is also dependent on the Company's current performance relative to a specified peer group.

## **Comparative Amounts**

Certain comparative amounts have been reclassified to conform with the current year's financial statement presentation.

#### 2. CHANGES IN ACCOUNTING POLICIES

## **New Accounting Standards**

## Financial Instruments, Hedging Relationships and Other Comprehensive Income

New accounting standards will be in effect January 1, 2007 for hedge accounting, recognition and measurement of financial instruments and disclosure of comprehensive income. The adoption of these standards will result in the recognition of financial instruments and hedging relationships principally consistent with similar requirements in the United States, as currently reflected in the Company's United States Accounting Principles note.

The Company will recognize other comprehensive income in a separate financial statement and include accumulated other comprehensive income as a component of shareholders' equity. To the extent economic hedges do not qualify for hedge accounting, are ineffective, or are not documented as hedges in accordance with the new standards, gains and losses and any ineffectiveness will be charged to current period earnings.

If the Company were to adopt the standards at December 31, 2006, a payable to counterparties of \$44.8 million, a due from ratepayers of \$26.6 million, accumulated other comprehensive income of \$30.6 million, a future tax liability of \$16.8 million, and a charge to retained earning of \$66.1 million would be recognized in the financial statements.

## 3. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

#### General Information on Rate Regulation and its Economic Effects

A number of businesses within the Company are subject to regulation where regulators exercise statutory authority over matters such as construction, operation, rates, ratemaking agreements with customers. The Company's significant regulated businesses and related accounting impacts are described below:

## **Enbridge System**

The primary business activities of the Enbridge System are subject to regulation by the NEB. Tolls are set based on agreements with customers and are filed with the NEB for approval. In 2005, Enbridge and the Canadian Association of Petroleum Producers (CAPP) approved an incentive tolling settlement (ITS). The ITS is effective from January 1, 2005 to December 31, 2009 and defines the methodology for calculation of tolls and the revenue requirement on the core component of the Enbridge System in Canada. Toll adjustments, for variances from requirements defined in the ITS, are filed annually with the regulator for approval.

## Athabasca Pipeline

The Athabasca Pipeline is regulated by the AEUB. Tolls are established based on long-term transportation agreements with individual shippers and taxes are recorded using the taxes payable method.

## Vector Pipeline

Vector Pipeline is an interstate natural gas pipeline with a FERC approved tariff establishing rates, terms and conditions governing its service to customers. Rates are determined using a cost of service methodology. Tariff changes may only be implemented upon approval by the FERC. Tolls include a return on equity component of 12.96% (2005 – 2.96%) before tax.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 89 of 128 Appendix D

## Alliance Pipeline

The US portion of the Alliance Pipeline (Alliance) is regulated by the FERC and the Canadian portion of the pipeline is regulated by the NEB. Shippers on Alliance entered into 15-year transportation contracts expiring in December 2015, with a cost of service toll methodology. Toll adjustments are filed annually with the regulator. The tolls include a return on equity component of 10.85% (2005 - 10.85%) after tax for the US portion and 11.25% (2005 - 11.25%) after tax for the Canadian portion. Alliance tolls are based on a deemed 70% debt and 30% equity structure.

## **Enbridge Gas Distribution**

EGD's gas distribution operations are regulated by the OEB. EGD's rates are set under a cost of service methodology with revenues charged to recover EGD's forecast costs and to earn a rate of return on common equity. Applications for changes to rates are made annually and are submitted for approval by the OEB.

Forecast costs include gas commodity and transportation, operation and maintenance, depreciation, municipal taxes, interest and income taxes. The rate base is the average investment of permitted assets used in gas distribution, storage and transmission and an allowance for working capital. EGD's 2006 approved rate of return on the rate base was 7.74% (2005 -8.10%) after tax, and the approved rate of return on common equity was 8.74% (2005 -9.57%) after tax based on a 35% deemed common equity.

## Enbridge Gas New Brunswick

Enbridge Gas New Brunswick (EGNB) is regulated by the New Brunswick Board of Commissioners of Public Utilities Board (PUB) and follows a cost of service tolling methodology. An application for rate adjustments is filed annually for PUB approval. EGNB's rate of return on the rate base was 9.78% (2005 – 9.46%) before tax and the approved rate of return on equity was 13% (2005 – 13%) before tax, based on equity which is capped at 50%.

## Regulatory Risk and Uncertainties Affecting Recovery or Settlement

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the regulator. To the extent that the regulator's actions differ from the Company's expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

## **Financial Statement Effects**

To recognize the actions or expected actions of the regulator, the timing and recognition of certain revenues and expenses may differ from that otherwise expected for non rate-regulated entities.

Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. In the absence of rate regulation, GAAP would not permit the recognition of regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned. Long-term regulatory assets are recorded in Deferred Amounts and Other Assets whereas current regulatory assets are recorded in Accounts Receivable and Other. Regulatory liabilities are recorded in Accounts Payable and Other.

# 3. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION (continued)

Accounting for rate-regulated entities has resulted in recording the following regulatory assets and liabilities:

(millions of dollars)			Estimated Settlement	Earnings	Impact 1
December 31,	2006	2005	Period (years)	2006	2005
Regulatory Assets/(Liabilities)					
Liquids Pipelines					
Enbridge system tolling deferrals <sup>2</sup>	166.2	172.3	1	(6.1)	21.3
Gas Pipelines					
Deferred transportation revenue 3	203.8	187.6	17-19	9.8	14.6
Transportation revenue adjustment 4	9.3	11.7	1	(1.4)	(0.3)
Sponsored Investments					
Deferred transportation revenue 3	47.4	30.0	19	7.3	0.1
Gas Distribution and Services					
EGNB regulatory deferral <sup>5</sup>	101.8	82.7	34	12.4	14.4
Deferred taxes recoverable <sup>6</sup>	6.0	14.0	1	-	_
Class action lawsuit settlement 7	22.0	0.8	2	13.5	_
Gas distribution access rule 8	8.4	0.4	2	5.1	0.3
Ontario hearing cost <sup>9</sup>	9.2	11.9	2	(1.7)	2.5
Purchased gas variance 10	(127.4)	28.1	1	(99.3)	49.2
Unaccounted for gas variance 11	(11.7)	3.0	1	(9.4)	23.2
Deferred rebates 12	(2.0)	(11.6)	1	-	-
Transactional services deferral <sup>13</sup>	(7.5)	(13.1)	1	_	

- 1 Represents the increase/(decrease) reflected in after tax earnings as a result of rate regulated accounting.
- 2 Tolls on the Enbridge System are calculated in accordance with the ITS, System Expansion Program (SEP) II and the Terrace agreements and are established each year based on capacity, the allowed revenue requirement and the Terrace agreement. Where actual volumes shipped on the pipeline do not result in collection of the annual revenue requirement, a receivable is recognized and incorporated into tolls in the subsequent year. However, recovery is dependent on volumes shipped since each shipper is only responsible for their pro-rata share of the increase in tolls. In addition, other tolling deferrals occur in accordance with the various agreements.
- 3 Deferred transportation revenue is related to the cumulative difference between GAAP depreciation expense of Alliance and Vector Pipelines and depreciation expense included in the regulated transportation rates. The Company expects to recover this difference over a number of years when depreciation rates in the transportation agreements are expected to exceed the GAAP depreciation rates, for Alliance beginning in 2011 and ending in 2025 and for Vector beginning in 2008 and ending in 2023. This regulatory asset is not included in the rate base.
- 4 The transportation revenue adjustment is the cumulative difference between actual expenses of Alliance US and estimated expenses included in transportation rates. The transportation revenue adjustment is recoverable under the long-term transportation agreements and is not included in the rate base.
- 5 A regulatory deferral account captures the difference between EGNB's distribution revenues and its cost of service revenue requirement during the development period. The regulatory deferral account balance will be amortized over a recovery period approved by the PUB commencing at the end of the development period, currently expected in 2010. In a January 2005 decision, the PUB indicated that the recovery period would end no sooner than December 31, 2040.
- 6 Deferred taxes recoverable relate to a former rental water heater program of EGD. On November 1, 2004, the OEB authorized EGD to collect \$23.9 million after tax from ratepayers over a three-year period ending October 1, 2007. Collections are applied against the receivable and therefore do not impact earnings.
- 7 Class action lawsuit settlement deferral represents amounts paid towards the settlement of the class action lawsuit related to late payment penalties. This amount is expected to be recovered in future periods, subject to OEB approval.
- 8 Gas Distribution Access Rule (GDAR) receivable represents amounts that are expended for the GDAR implementation, mandated by the OEB, which includes costs relating to consulting services for system design and development. The amount will be recovered from ratepayers in future periods, in accordance with the OEB's approval.
- 9 Ontario hearing costs are incurred by EGD for the rate hearing process. EGD has historically been granted OEB approval for recovery of such hearing costs, generally within two years.
- 10 Purchased gas variance is the difference between the actual and approved cost of gas, including risk management costs. The approved cost of gas is reflected in rates. EGD has historically been granted approval for recovery or required refund of this variance within the year.
- 11 Unaccounted for gas variance represents the difference between the total gas distributed by EGD and the amount of gas billed or billable to ratepayers, to the extent it is different from the approved gas variance. EGD has deferred unaccounted for gas variance and has historically been granted approval for recovery or required refund of this amount in the subsequent year.
- 12 Deferred rebates are an accumulation of amounts required by the OEB to be refunded to EGD ratepayers but remain pending due to the inability to locate certain ratepayers. This amount will be refunded to ratepayers in the following year.
- 13 Transactional services deferral represents the ratepayer portion of excess earnings generated from optimization of storage and pipeline capacity. EGD has historically been required to refund the amount to ratepayers in the following year.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 91 of 128 Appendix D

#### Other Items Affected by Rate Regulation

#### **Future Income Taxes**

The regulated operations of the Company recover tax expense using the taxes payable method when prescribed by regulators for ratemaking purposes or when stipulated in ratemaking agreements. Therefore, rates do not include the recovery of future income taxes related to temporary differences. Consequently, the Company does not record future income taxes for regulated activities as the Company expects that all future income taxes will be recovered in rates when they become payable. GAAP requires the recognition of future income tax liabilities and future income tax assets in the absence of rate regulation. In the absence of rate regulation, future income taxes liabilities of \$584.0 million (2005 – \$654.1 million) associated with certain assets, primarily property, plant and equipment, would be recorded.

Net future income tax liabilities of \$32.9 million (2005 – \$77.8 million) are recorded and relate to certain regulatory deferral accounts identified above. Accumulated unrecorded future income tax assets of \$64.7 million (2005 – \$71.9 million) relate to the remaining regulatory deferral accounts identified above. In the absence of rate regulation, regulatory deferrals would not be recorded nor would the associated future income tax liabilities. As a result of these tax impacts, earnings during the year would increase by \$65.0 million (2005 – decrease \$10.0 million).

#### Allowance For Funds Used During Construction (AFUDC) and Other Capitalized Costs

AFUDC is included in the cost of property, plant and equipment and is depreciated over future periods as part of the total cost of the related asset. AFUDC includes both an interest component and, if approved by the regulator, a cost of equity component. In the absence of rate regulation, GAAP would permit the capitalization of only the interest component. Therefore, the capitalized equity component, the corresponding earnings during the construction phase, and the subsequent depreciation would not be recognized.

Certain regulators prescribe the pool method where similar assets with comparable useful lives are grouped and depreciated as a pool. When those assets are retired or otherwise disposed of, gains and losses are not reflected in income, but are booked as an adjustment to accumulated depreciation. Entities not subject to rate regulation write off the net book value of the retired asset and include any resulting gain or loss in earnings. With the pool method, it is not possible to identify the carrying value of the equity component of AFUDC or its effect on depreciation. Similarly, gains or losses on the retirement of specific fixed assets in any given year cannot be identified or quantified.

#### **Operating Cost Capitalization**

With the approval of the regulator, EGD capitalizes a percentage of certain operating costs into the rate base. EGD is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of accounting for the effects of rate regulation, such costs would be charged to current earnings.

EGD entered into a consulting contract relating to asset management initiatives. The majority of the costs are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2006, \$66.4 million (2005 – \$48.1 million) was included in gas mains, which are depreciated over the average service life of 25 years. In the absence of accounting for the effects of rate regulation, the majority of these costs would be charged to current earnings.

#### Pension Plans

Contributions made to the defined benefit pension plan for the regulated operations of Gas Distribution and Services are expensed as paid, consistent with the recovery of such costs in rates. GAAP requires pension costs and obligations for defined benefit pension plans to be determined using the projected benefit method and charged to earnings as services are rendered. Had pension costs and obligations been recognized, the net pension asset would have increased by \$157.1 million at December 31, 2006 (2005 – \$191.8 million) and earnings would have decreased by \$0.5 million (2005 – \$0.9 million).

## Post-Employment Benefits Other than Pensions

The cost of providing post-employment benefits other than pensions (OPEB) for the regulated operations of Gas Distribution and Services is expensed when paid, consistent with the recovery of such costs in rates. In the absence of accounting for the effects of rate regulation, the cost of such benefits is accrued during the years employees render service. Had these costs been accrued, the net OPEB liability would have increased by \$67.1 million (2005 – \$60.2 million) and earnings would have decreased by \$5.5 million (2005 – \$4.0 million).

Corporate			
Value Creation		25.0	25.0
		2,299.4	1,842.8

Equity investments include the unamortized excess of the purchase price over the underlying net book value of the investee's assets at the purchase date of \$617.5 million at December 31, 2006 (2005 – \$560.1 million). The excess is attributable to the value of property, plant and equipment within the investees based on estimated fair values and is amortized over the economic life of the assets. Consolidated retained earnings at December 31, 2006 include undistributed earnings from equity investments of \$10.4 million (2005 – \$12.3 million).

#### The Partnership

The Company has a combined 16.6% ownership in EEP, through a 2.0% interest in general partner units, a 5.0% interest in Class B units, a 6.9% interest in Class C units, and a 2.7% interest in EEP via a 17.2% investment in EEM, which owns 100% of EEP's i-units.

The aggregate Class B, Class C and general partner units are recorded at \$560.5 million (2005 – \$246.5 million). Although 82.8% of EEM is widely held, the Company has voting control, and therefore consolidates EEM, including its investment in EEP of \$545.0 million (2005 – \$491.6 million). As a result, in 2006, the Company recorded EEM's equity investment income of \$52.2 million (2005 – \$14.4 million) and non-controlling interests of \$27.8 million (2005 – \$12.4 million).

During the year, the Company acquired 5.4 million Class C units of EEP for \$280.2 million. The Class C units have the same voting rights as Class A and B units and are entitled to quarterly distributions equal to those paid to Class A and B unitholders. Prior to August 15, 2009, distributions are paid in additional Class C units, where Class C units are valued at the market value of Class A units. After August 15, 2009, distributions will be paid in cash and, subject to the approval of existing Class A and Class B unitholders, Class C units will convert to Class A units on a one-to-one basis. If approval of the conversion is not received, the Class C units will receive cash distributions equal to 115% of those paid to Class A unitholders.

In 2005, EEP completed public issuances of partnership units. As the Company elected not to fully participate in these offerings, its effective interest in EEP was reduced to 10.9% from 11.6%, resulting in recognition of a dilution gain of \$8.9 million (2004 – \$7.6 million), net of tax and minority interest.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 99 of 128 Appendix D

#### **Noverco**

The Company owns a cost investment in Noverco of \$181.4 million (2005 – \$181.4 million), which is entitled to a cumulative preferred dividend based on the average yield of Government of Canada bonds maturing in greater than 10 years plus 4.34%. The fair value of the investment approximates its carrying value as its return is based on a floating rate.

The Company also owns an equity investment in the common shares of Noverco of \$37.0 million (2005 - 28.7 million). Noverco owns an approximate 9.5% reciprocal shareholding in the shares of the Company. As a result, the Company has an indirect pro-rata interest of 3.2% (2005 - 3.2%) in its own shares. Both the equity investment in Noverco and shareholders' equity have been reduced by the reciprocal shareholding of \$135.7 million (2005 - 135.7 million). Noverco records dividends paid by the Company as dividend income and the Company eliminates these dividends from the earnings of Noverco. The Company records the pro-rata portion of dividends paid by the Company to Noverco as a reduction of dividends paid and an increase in the Company's investment in Noverco.

In 2005, the Company reclassified \$51.2 million in dividends paid to Noverco representing the reciprocal portion of dividends paid to Noverco from September 1, 1997 to December 31, 2004. The reclassification increased equity investments and retained earnings by \$51.2 million.

#### **CLH**

The Company owns a 25% equity interest in CLH of \$662.2 million (2005 – \$596.1 million), a refined products transportation and storage company in Spain.

#### **OCENSA**

The Company owns a cost investment in OCENSA, a crude oil export pipeline in Colombia of \$223.3 million (2005 – \$223.3 million), which earns a fixed rate of return. The fair value of this investment is approximately \$245.9 million (2005 – \$257.9 million), estimated using year-end market information.

#### **Enbridge Income Fund**

The Company owns 14.5 million subordinated units of EIF and 38.0 million preferred units of Enbridge Commercial Trust (ECT), a subsidiary of EIF, at December 31, 2006. The Company consolidates EIF in accordance with the accounting guideline for Consolidation of Variable Interest Entities, prior to January 1, 2005, EIF was accounted for as an equity investment and the ECT preferred units were accounted for as a cost investment. The market value of the subordinated units of EIF at December 31, 2006 is \$191.4 million (2005 – \$210.0 million).

At the request of the Company, subject to certain conditions, ECT will repurchase and cancel the ECT preferred units based on the net issue price realized from the sale (or that could be realized from the sale) of an ordinary trust unit to the public. The ECT preferred units have no voting rights and mature on June 30, 2033 at which time ECT is obligated to redeem all of the outstanding ECT preferred units for \$10.00 per unit. The economic terms of these units are similar to those of ordinary common units. As such, the approximate fair value of these preferred units, valued at the December 31, 2006 closing price of \$13.20 per ordinary trust unit (2005 – \$14.48), is \$501.9 million (2005 – \$550.6 million).

Current Maturities			(537.0)	(401.2)
Long-Term Debt			7,054.0	6,279.1

<sup>1</sup> Primarily commercial paper borrowings.

Short-term debt of \$1,519.1 million (2005 – \$1,340.5 million) is supported by the availability of long-term committed credit facilities and has been classified as long-term debt.

Long-term debt maturities for the years ending December 31, 2007 through 2011 are \$537.0 million, \$602.7 million, \$200.9 million, \$601.1 million and \$151.1 million, respectively. The Company's debentures and medium-term notes bear interest at fixed rates.

The Company has \$200.0 million of 7.8% Preferred Securities outstanding. The Preferred Securities are redeemable on February 15, 2007. On December 18, 2006 the Company announced its intention to redeem all 8,000,000 Preferred Securities. The redemption price is \$25.00 per Preferred Security plus accrued and unpaid interest of \$0.2458 per security for the period covering from the last interest payment date of December 31, 2006 to the redemption date of February 15, 2007.

#### **Interest Expense**

(millions of dollars)

Year ended December 31,	2006	2005	2004
Long-term debt	403.4	382.8	442.8
Non recourse long-term debt	104.9	112.1	54.5
Commercial paper and other short-term debt	60.3	40.6	21.7
Short-term borrowings	19.1	12.7	10.5
Capitalized	(20.6)	(9.0)	(4.2)
	567.1	539.2	525.3

In 2006, total interest paid was 563.3 million (2005 - 537.1 million; 2004 - 549.3 million).

<sup>2</sup> Primarily commercial paper borrowings. Includes US\$348.4 million (2005 – US\$256.9 million).

## 12. DEBT (continued)

#### **Credit Facilities**

(millions of dollars)

December 31, 2006	Expiry Dates	Available	Drawdowns
Liquids Pipelines	2007	150.0	_
Gas Distribution and Services	2007	1,005.8	2.7
Corporate	2007-2011	1,908.7	291.3
		3,064.5	294.0

Credit facilities carry a weighted average standby fee of 0.064% per annum on the unutilized portion and drawdowns bear interest at prevailing market rates. The credit facilities serve as a backstop to the commercial paper programs and the Company has the option to extend the facilities from 2007 to 2008.

## 13. NON-RECOURSE DEBT

(millions of dollars)	Weighted Average			
December 31,	Interest Rate	Maturity	2006	2005

Senior Notes of Alliance Pipeline Canada	6.80%	2015-2025	733.7	761.6
Fair value increment on Senior Notes acquired			48.2	53.5
Total Non-Recourse Debt			1,682.1	1,688.1
Current Maturities			(60.1)	(68.2)
Long-Term Non-Recourse Debt			1,622.0	1,619.9

Long-term debt maturities on non-recourse borrowings for the years ending December 31, 2007 through 2011 are \$60.1 million, \$65.0 million, \$241.3 million, \$79.3 million and \$106.8 million, respectively.

## **Alliance Pipeline US**

The Senior Notes bear interest at fixed rates, are payable semi-annually each June 30 and December 31. The credit facility is an extendible revolving facility with a five year term.

## **Enbridge Income Fund**

The Medium Term Notes (MTNs) bear interest at fixed rates and are redeemable by EIF prior to maturity, in whole or in part, at the option of EIF. Interest on the MTNs is payable semi-annually in June and December. EIF has a three year revolving credit facility. Interest on the Senior Notes of Alliance Pipeline Canada bears interest at fixed rates, is payable semi-annually in June and December. Alliance Pipeline Canada's credit facility is an extendible revolving facility with a five-year term.

#### 14. NON-CONTROLLING INTERESTS

December 31,	2006	2005
EEM	398.5	370.1
EGD preferred shares	100.0	100.0
EIF	167.3	165.5
EGNB	39.8	46.9
Other	9.6	8.5
	715.2	691.0

Non-controlling interest in EEM represents the 82.8% of the listed shares of EEM not held by the Company.

The Company owns 100% of the common shares of EGD; however, the 4,000,000 4.82% Cumulative Redeemable EGD Preferred Shares held by a third party are entitled to a claim on the assets of EGD prior to the common shareholder. Subsequent to July 1, 2009, EGD may, at its option, redeem all or a portion of the outstanding preferred shares for \$25.00 plus all accrued and unpaid dividends to the redemption date. The preferred shares have no fixed maturity date.

Non-controlling interest in EIF represents the 58.1% held by ordinary unitholders. Non-controlling interest in EGNB represents 30.4% held by third parties.

## 15. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and an unlimited number of preferred shares.

#### **Common Shares**

(millions of dollars; number of common shares in millions)

December 31,		2006		2005		2004
	Number		Number		Number	
	of Shares	Amount	of Shares	Amount	of Shares	Amount
Balance at beginning of year	348.9	2,343.8	346.2	2,282.4	343.8	2,238.0
Exercise of stock options	2.4	53.9	2.1	40.0	2.0	33.4
Dividend Reinvestment and Share Purchase Plan	0.5	18.4	0.4	14.6	0.4	11.0
Issued for business acquisition	_	_	0.2	6.8	_	_
Balance at end of year	351.8	2,416.1	348.9	2,343.8	346.2	2,282.4

#### **Preferred Shares**

The 5,000,000 5.5% Cumulative Redeemable Preferred Shares, Series A are entitled to fixed, cumulative, quarterly preferential dividends of \$1.375 per share per year. Subsequent to December 31, 2006, the Company may, at its option, redeem all or a portion of the outstanding preferred shares for \$25.25, if redeemed on or prior to December 1, 2007; \$25.00, if redeemed thereafter, in each case all accrued and unpaid dividends will be paid on redemption.

#### **Earnings Per Common Share**

Earnings per common share is calculated by dividing earnings applicable to common shareholders by the weighted average number of common shares outstanding. The weighted average number of shares outstanding has been reduced by the Company's pro-rata weighted average interest in its own common shares of 10.6 million shares (2005 – 10.6 million shares), resulting from the Company's reciprocal investment in Noverco.

The treasury stock method is used to determine the dilutive impact of stock options. This method assumes that any proceeds from the exercise of stock options would be used to purchase common shares at the average market price during the period.

## 15. SHARE CAPITAL (continued)

(number of common shares in millions)

December 31,	2006	2005	2004
Weighted average shares outstanding	340.0	337.4	334.4
Effect of dilutive options	3.3	3.8	2.8
Diluted weighted average shares outstanding	343.3	341.2	337.2

For the year ended December 31, 2006, 1,548,900 anti-dilutive stock options (2005 - nil; 2004 - 1,750,800) with a weighted average exercise price of \$36.47 (2004 – \$25.73) were excluded from the diluted earnings per share calculation.

#### **Dividend Reinvestment and Share Purchase Plan**

Under the plan, registered shareholders may reinvest dividends in common shares of the Company and make additional optional cash payments to purchase common shares, free of brokerage or other charges.

#### **Shareholder Rights Plan**

The Shareholder Rights Plan is designed to encourage the fair treatment of shareholders in connection with any takeover offer for the Company. Rights issued under the plan become exercisable when a person, and any related parties, acquires or announces its intention to acquire 20% or more of the Company's outstanding common shares without complying with certain provisions set out in the plan or without approval of the Company's Board of Directors. Should such an acquisition occur, each rights holder, other than the acquiring person and related parties, will have the right to purchase common shares of the Company at a 50% discount to the market price at that time.

## 16. STOCK OPTION AND STOCK UNIT PLANS

The Company maintains three plans for mid to long-term incentive compensation: the Incentive Stock Option Plan (ISO), the Performance Stock Unit Plan (PSU) and the Restricted Stock Unit Plan (RSU). The Company's ISO Plan includes Fixed Stock Options (FSOs) and Performance Based Stock Options (PBOs). A maximum of 30 million common shares are reserved for issuance under the ISO plan. The PSU and RSU plans grant notional units equivalent to one Enbridge common share and are payable in cash.

#### **Fixed Stock Options**

Key employees are granted FSOs to purchase common shares at the market price on the grant date. Generally, FSOs vest in equal annual installments over a four-year period and expire ten years after the issue date. Compensation expense recorded for the year ended December 31, 2006 for FSOs is \$10.5 million (2005 - \$5.5 million; 2004 - \$3.7 million).

## **Outstanding Fixed Stock Options**

(options in thousands; exercise price in dollars)

December 31,	2006		:	2005		2004	
		Weighted	eighted Weighted			Weighted	
		Average		Average		Average	
		Exercise		Exercised		Exercised

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 105 of 128 Appendix D

The total intrinsic value of FSOs exercised during the year ended December 31, 2006 was \$27.8 million (2005 – \$21.3 million; 2004 - \$17.2 million) and cash received on exercise was \$32.9 million (2005 - \$28.3 million; 2004 - \$23.4 million). Intrinsic value represents the difference between the Company's share price and the exercise price, multiplied by the number of options.

The total intrinsic value of FSOs outstanding and vested at December 31, 2006 was \$99.1 million and \$81.0 million, respectively.

#### **Fixed Stock Option Characteristics**

(options in thousands; exercise price in dollars)

December 31, 2006		Options Outstanding			Options Vested	
Exercise Price Range	We Number	eighted Average Remaining Life (years)	Weighted Average Exercise Price	Number	Weighted Average Exercise Price	
10.00-14.99	692	2.5	13.20	692	13.20	
15.00-19.99	1,613	2.9	18.18	1,613	18.18	
20.00-24.99	2,459	5.3	21.26	2,008	21.36	
25.00-29.99	1,484	6.9	25.74	679	25.74	
30.00-34.99	1,433	8.0	31.79	331	31.70

	9,186	6.0	24.97	5,323	20.54	

Assumptions used to determine the fair value of the FSOs using the Black-Scholes model are as follows:

Year ended December 31,	2006	2005	2004
Fair value per option (dollars)	6.30	5.31	3.85
Valuation assumptions <sup>1</sup>			
Expected option term (years)	8	8	8
Expected volatility	19%	16%	15%
Expected dividend yield	3.23%	3.17%	3.54%
Risk-free interest rate	4.16%	4.40%	4.80%

<sup>1</sup> The expected option term and the expected volatility are based on historical information.

## **Performance Based Options**

PBOs are granted to executive officers and become exercisable when both performance targets and service requirements have been met. As of December 31, 2006, all performance targets have been met. Service requirements are fulfilled evenly over a five-year term ending September 2007. Outstanding PBOs will expire on September 16, 2010.

#### **Outstanding Performance Based Options**

(options in thousands; exercise price in dollars)

December 31,		2006		2005		2004	
		Weighted		Weighted		Weighted	
		Average		Average		Average	
		Exercise		Exercise		Exercise	
	Number	Price	Number	Price	Number	Price	
Options at beginning of year	2,105	21.57	2,555	20.68	2,992	20.03	
Options exercised	(645)	18.00	(450)	16.51	(437)	16.20	
Options cancelled	(81)	23.15	_	_	_	_

Options vested	1,119	23.15	1,457	20.87	936	16.41	

The total intrinsic value of PBOs exercised during the year ended December 31, 2006 was \$11.4 million (2005 – \$7.8 million; 2004 - \$4.3 million) and cash received on exercise was \$11.6 million (2005 - \$7.4 million; 2004 - \$7.1 million).

The total intrinsic value of PBOs outstanding and vested at December 31, 2006 is \$17.4 million and \$14.1 million, respectively.

## 16. STOCK OPTION AND STOCK UNIT PLANS (continued)

#### **Contributed Surplus**

(millions of dollars)

December 31,	2006	2005
Balance at beginning of year	10.0	5.4
Stock-based compensation	10.5	5.5
Option exercises	(2.2)	(0.9)
Balance at end of year	18.3	10.0

#### **Pro Forma Compensation Expense**

If the Company had used the fair value method to account for stock based compensation granted in fiscal 2002, earnings would have been \$1.5 million lower for the year ended December 31, 2006 (2005 - \$4.0 million; 2004 - \$4.0 million), resulting in no reduction in basic earnings per share (2005 & 2004 - \$0.01) and no reduction in diluted earnings per share (2005 & 2004 - \$0.01).

## **Unrecognized Compensation Expense**

As of December 31, 2006, unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO plan was \$13.4 million. The cost is expected to be recognized over a period of 2.5 years.

#### **Performance Stock Units**

The Company has a PSU Plan for senior officers where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by the Company's current share price and by a performance multiplier as determined by the Company's total shareholder return over the three-year performance period relative to a specified peer group of companies. The performance multiplier ranges from 0, if the Company's performance fails to meet threshold performance levels, to a maximum of 2, if the Company outperforms its peer group. During the three-year period, the number of PSUs outstanding is increased to include additional PSUs equal to the number of additional shares that would have been received had the PSUs been treated as shares enrolled in the Dividend Reinvestment Plan (DRIP).

Compensation expense recorded for the year ended December 31, 2006 for PSUs is \$4.1 million (2005 – \$2.5 million; 2004 - \$0.5 million). An estimated performance multiplier of 0.7, 1 and 1 has been used to calculate the expense based upon historical performance for the 2004, 2005 and 2006 grants, respectively.

## **Outstanding Performance Stock Units**

December 31,	2006	2005	2004
Units at beginning of year	200,652	67,688	_
Units granted	117,900	130,130	65,950
Units cancelled	_	(3,265)	_
DRIP	10,164	6,099	1,738
Units at end of year	328,716	200,652	67,688

Of the PSUs outstanding at December 31, 2006, 71,991 units have a performance period ending March 8, 2007, 135,063 units have a performance period ending January 1, 2008 and 121,662 units have a performance period ending January 1, 2009. The total intrinsic value of PSUs outstanding at December 31, 2006 is \$12.4 million.

Filed: 2007-09-04 FB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 107 of 128 Appendix D

#### **Restricted Stock Units**

On September 1, 2006, the Company granted 181,882 RSUs to certain non-executive employees of the Company. The RSUs mature on November 30, 2008 at which time the RSU holders will receive cash equal to the Company's current share price for each RSU held. During the vesting period, the number of RSUs outstanding is increased to include additional units equal to the number of additional shares that would have been received had the RSUs been treated as shares enrolled in the DRIP. Compensation expense recorded for the year ended December 31, 2006 for RSUs is \$0.8 million.

#### **Outstanding Restricted Stock Units**

December 31,	2006
Units at beginning of year	_
Units granted	181,882
DRIP	1,371
Units at end of year	183,253

The total intrinsic value of RSUs outstanding at December 31, 2006 is \$7.4 million.

## **Unrecognized Compensation Expense**

As of December 31, 2006, unrecognized compensation expense related to non-vested units granted under the PSU and RSU plans was \$11.3 million, expected to be recognized over a period of 1.8 years.

## 17. FINANCIAL INSTRUMENTS

#### **Derivative Financial Instruments Used for Risk Management**

The Company is exposed to movements in foreign currency exchange rates, interest rates and the price of energy commodities. In order to manage these exposures, the Company utilizes derivative financial instruments to create offsetting financial positions to specific exposures. These exposures include the following:

#### Foreign Exchange

The Company has exposure to foreign currency exchange rates, arising from its Euro and U.S. dollar denominated investments, where both carrying values and earnings are subject to foreign exchange risk. The Company utilizes par forward contracts and cross currency swaps to manage a portion of the foreign exchange exposure related to changes in carrying values. Cross currency swaps of US\$117.0 million (2005 - US\$117.0 million) hedge the Company's exposure on its U.S. dollar denominated senior term notes. In addition, long-term fixed rate debt of US\$300.0 million (2005 – US\$300.0 million) hedges the carrying value of U.S. dollar denominated investments. The Company also utilizes foreign exchange contracts to manage exposure related to foreign currency denominated receivables and payables. The fair value of foreign exchange derivatives that are designated as hedges of foreign investments are recognized on the balance sheet, while foreign exchange derivative instruments that are designated as cash flow hedges are accounted for on a settlement basis.

## Interest Costs

The Company enters into interest rate agreements such as swaps and collars to convert floating rate debt to a fixed rate in order to hedge against the effect of future interest rate movements on its interest expense. In addition, the Company has entered into fixed to floating interest rate swaps, with an aggregate notional amount of \$nil (2005 - \$300.0 million), to manage its balance of fixed and floating rate debt.

## **Energy Commodity Costs**

The Company uses gas price swaps, futures, options and collars to manage the value of commodity purchases and sales that arise from capacity commitments on the Alliance and Vector pipelines. The Company also uses derivative instruments to fix the value of variable price exposures that arise from commodity storage arrangements and natural gas supply agreements.

The Company uses over-the-counter swap agreements to convert the price of power in Alberta from a floating rate to a fixed rate per megawatt hour (MW/H) or convert fixed rate power to a floating rate.

Filed: 2007-09-04 FB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 108 of 128 Appendix D

## 17. FINANCIAL INSTRUMENTS (continued)

## Natural Gas Supply Management

The Company hedges a portion of the cost of future natural gas supply requirements of EGD, on behalf of its ratepayers, as permitted by the regulator. Amounts paid or received under the agreements are recognized as part of the cost of the natural gas purchases and are recovered through the ratemaking process. At December 31, 2006, the Company had entered into natural gas price swaps and options to manage the price for approximately 20.8%, or 28.0 billion cubic feet (bcf), of its forecast fiscal 2007 system gas supply.

#### **Credit Risk**

Entering into derivative financial instruments can give rise to additional credit risks. Credit risk arises from the possibility that a counterparty will default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the instrument. The Company minimizes credit risk by entering into risk management transactions only with institutions that possess high investment grade credit ratings or have provided the Company with an acceptable form of credit protection. The Company has no significant concentration with any single counterparty. For transactions with terms greater than five years, the Company may also require a counterparty that would otherwise meet the Company's credit criteria to provide collateral. The Company has credit risk of \$ 267.3 million (2005 – \$352.4 million) related to its derivative counterparties.

Trade receivables include amounts due from companies operating in the oil and gas industry and are collateralized by the commodities contained in the Company's pipelines and storage facilities. Where shippers fail to maintain specified credit ratings, they are required to provide letters of credit or other suitable security. Credit risk in the Gas Distribution and Services segment is reduced by the large and diversified customer base and the ability to recover an estimate for doubtful accounts through the ratemaking process. Included in accounts receivable is an allowance for doubtful accounts of \$50.6 million at December 31, 2006 (2005 – \$41.4 million). For customers of our non-regulated businesses, credit exposure is minimized through the use of credit monitoring processes, contractual agreements with collateral requirements, master netting agreements, and credit exposure limits.

## **Fair Values**

The fair values of derivatives have been estimated using year-end market information. These fair values approximate the amount that the Company would receive or pay to terminate the contracts.

December 31,		2006			2005	
	Notional Principal or Quantity	Fair Value Receivable/ (Payable)	Maturity	Notional Principal or Quantity	Fair Value Receivable/ (Payable)	Maturity
Foreign exchange						
U.S. cross currency swaps	307.3	(0.5)	2007-2022	307.3	(2.9)	2007-2022
Euro cross currency swaps	447.6	(9.9)	2007-2019	447.6	39.6	2006-2019
Forwards (cumulative						
exchange amounts)	1,536.7	231.3	2007-2022	1,640.1	241.6	2006-2022
Interest rates						
Interest rate swaps	1,947.3	(17.2)	2007-2029	1,104.4	0.1	2006-2029
Energy commodities						
Energy commodity (bcf)	100.1	(12.9)	2007-2011	130.5	18.1	2006-2011
Natural gas supply (bcf)	29.1	(26.6)	2007	27.3	(6.7)	2006
Power (MW/H)	25.8	(8.3)	2007-2024	28.0	0.8	2006-2017

In addition, the Company has Canadian to U.S. dollar forward foreign exchange contracts with a notional principal of Canadian \$91.0 million that expire in 2007 (2005 - \$91.0 million). The contracts are not effective hedges for accounting purposes but provide an economic hedge of an exposure related to income taxes on foreign currency gains or losses on Canadian dollar debt of a U.S. subsidiary. These instruments are recorded at fair value in deferred amounts and have a fair value payable of \$14.5 million as at December 31, 2006 (2005 – \$14.3 million).

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 109 of 128 Appendix D

The fair value of financial instruments, other than derivatives, represents the amounts that would have been received from or paid to counterparties to settle these instruments at the reporting date. The carrying amount of all financial instruments classified as current approximates fair value because of the short maturities of these instruments. The fair value of other financial instruments reflect the Company's best estimates of market value based on generally accepted valuation techniques or models.

#### **Total Debt**

(millions of dollars)		2006	2005		
December 31.	Carrying Amount	Fair Value	Carrying Amount	Fair Value	
Liquids Pipelines	1,155.6	1,301.6	1,039.4	1,201.4	
Gas Distribution and Services	2,258.2	2,613.8	1,786.7	2,184.2	
Corporate	4,177.2	4,294.0	3,854.2	4,076.3	
	7,591.0	8,209.4	6,680.3	7,461.9	

The fair value of debt does not include the effects of hedging. Non-recourse debt has a carrying value of \$1,682.1 million (2005 – \$1,688.1 million) and a fair value of \$1,786.6 million (2005 – \$1,775.1 million).

#### **Interest Rate Management**

The derivative instruments used to manage interest rate risk and the associated debt related to these instruments are as follows:

(millions of dollars)		Effective	Notional
December 31, 2006	Maturity	Interest Rate 1	Amounts
Liquids Pipelines			
Commercial paper (floating to fixed interest swap)	2029	6.0%	25.4
Corporate			
Commercial paper (floating to fixed interest swap)	2007	4.1%	600.0
Commercial paper (floating to fixed interest swap)	2008-2019	4.4%	US\$169.0
Senior term notes (cross currency swap)	2007	7.5%	US\$117.0

<sup>1</sup> After giving effect to the derivative financial instruments.

## 18. INCOME TAXES

#### **Income Tax Rate Reconciliation**

(millions	ot	dollars)

Vanuardad Danaska (Of	0000	0005	0004
Year ended December 31,	2006	2005	2004
Earnings before income taxes	814.6	784.2	941.4
Combined statutory income tax rate	34.4%	35.2%	35.5%
Income taxes at statutory rate	280.2	276.0	334.2
Increase/(decrease) resulting from:			
Tax rate changes on future income tax balances	(63.0)	1.2	42.7
Future income taxes related to regulated operations	(10.5)	(15.3)	(13.7)
Non-taxable items, net	(21.4)	(44.1)	(72.7)
Lower foreign tax rates	(6.7)	(9.6)	(15.1)
Large Corporations Tax in excess of surtax	-	15.1	10.0
Other	13.7	(2.0)	3.8
Income Taxes	192.3	221.3	289.2
Effective income tax rate	23.6%	28.2%	30.7%

In 2006, income taxes paid amounted to \$182.6 million (2005 - \$150.3 million; 2004 - \$243.2 million).

## 18. INCOME TAXES (continued)

## **Components of Future Income Taxes**

(millions of dollars)

December 31,	2006	2005
Future Income Tax Liabilities		
Differences in accounting and tax bases of property, plant and equipment	639.8	572.8
Differences in accounting and tax bases of investments	375.6	356.1
Other	201.7	224.8
	1,217.1	1,153.7
Future Income Tax Assets		
Loss carryforwards	257.9	230.2
Other	96.8	49.4
	354.7	279.6
Total Net Future Income Tax Liability	862.4	874.1

At December 31, 2006, the Company has recognized the benefit of unused tax loss carryforwards of \$760.6 million (2005 -\$660.8 million). Unused tax loss carryforwards expire as follows: 2007 - \$0.5 million; 2008 - \$15.9 million; 2009 - \$7.2 million; 2010 – \$2.2 million; 2014 – \$1.7 million; and 2015 – \$5.9 million and 2019 and beyond – \$727.2 million.

## **Geographic Components of Pretax Earnings and Income Taxes**

(millions of dollars)

	(21.0)	108.1	12.7
Current and future income taxes	192.3	221.3	289.2

## 19. POST-EMPLOYMENT BENEFITS

## **Pension Plans**

The Company has three basic pension plans, which provide either defined benefit or defined contribution pension benefits, or both to employees of the Company. The Liquids Pipelines and Gas Distribution and Services pension plans provide Company funded defined benefit pension and/or defined contribution benefits to Canadian employees of Enbridge U.S. pension plan provides Company funded defined benefit pension benefits for U.S. based employees. The Company has four supplemental pension plans, which provide pension benefits in excess of the basic plans for certain employees.

#### **Defined Benefit Plans**

Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially inflation indexed after a member's retirement. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective dates of the most recent actuarial valuations and the next required actuarial valuations for the basic plans are as follows:

	Effective Date of Most Recently	Effective Date of Next Required
	Filed Actuarial Valuation	Actuarial Valuation
Liquids Pipelines	January 1, 2004	January 1, 2007
Enbridge U.S.	January 1, 2006	January 1, 2007
Gas Distribution and Services	January 1, 2005	January 1, 2008

The defined benefit pension plan costs have been determined based on management's best estimates and assumptions of the rate of return on pension plan assets, rate of salary increases and various other factors including mortality rates, terminations and retirement ages.

#### **Defined Contribution Plans**

Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, pension costs equal amounts required to be contributed by the Company. Pension costs in respect of these plans during the year were \$3.0 million (2005 – \$2.4 million; 2004 – \$2.3 million).

## **Post-employment Benefits Other than Pensions**

Post-employment benefits other than pensions (OPEB) primarily include supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

		Pension Benefit		
(millions of dollars)	2006	2005	2006	2005
Change in accrued benefit obligation				
Benefit obligation, January 1	191.6	170.3	1,039.3	847.9
Service cost	5.2	4.4	37.5	25.5
Interest cost	10.0	10.5	54.2	52.7
Amendments	-	(5.8)	2.9	_
Employee contributions	0.4	0.4	-	_
Actuarial loss (gain)	(7.7)	20.4	17.3	159.0
Benefits paid	(6.2)	(5.8)	(42.5)	(41.7)
Effect of exchange rate changes	(0.1)	(2.8)	0.3	(4.1)
Benefit obligation, December 31	193.3	191.6	1,109.0	1,039.3
Change in plan assets				
Fair value of plan assets, January 1	43.3	40.2	1,191.1	1,061.8
Actual return on plan assets	1.5	1.0	78.8	161.9
Employer's contributions	11.0	8.7	0.7	14.2
Employee's contributions	0.4	0.4	-	-
Benefits paid	(6.2)	(5.8)	(42.5)	(41.7)
Other	-	_	(1.1)	(0.9)
Effect of exchange rate changes	0.2	(1.2)	0.1	(4.2)
Fair value of plan assets, December 31	50.2	43.3	1,227.0	1,191.1

## 19. POST-EMPLOYMENT BENEFITS (continued)

	OP	EB	Pension Benefit		
(millions of dollars)	2006	2005	2006	2005	
Funded Status					
Benefit Obligation, December 31	(193.3)	(191.6)	(1,109.0)	(1,039.3)	
Fair value of plan assets, December 31	50.2	43.3	1,227.0	1,191.1	
Overfunded/(Underfunded) status, December 31	(143.1)	(148.3)	118.0	151.8	
Contribution after measurement date	0.4	8.0	16.7	_	
Unamortized prior service cost	-	_	15.5	14.5	
Unamortized transitional obligation/(asset)	13.4	14.7	(19.8)	(22.0)	
Unamortized net loss	46.0	57.2	93.1	118.3	
Net amount recognized December 31	(84.1)	(75.6)	223.5	262.6	

The amounts recognized include all of the Company's plans. However, the Gas Distribution and Services plans are funded through regulated rates on a cash basis and are not recorded as net pension assets or liabilities. Excluding Gas Distribution and Services plans, the Company's plans using the accrual method provide for a net pension asset of \$66.4 million (2005 - \$70.8 million) and a net OPEB liability of \$17.0 million (2005 - \$15.4 million). These net assets or liabilities are recorded on the balance sheet in Deferred Amounts and Other Assets with the current portion recorded in working capital accounts.

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

		OPEB			Pension Benefit	
Year ended December 31,	2006	2005	2004	2006	2005	2004
Discount rate	5.37%	5.30%	6.21%	5.27%	5.24%	6.26%
Average rate of salary increases				5.00%	4.44%	4.00%
Net Pension Plan and OPEB Cos	ts Recognized					
(millions of dollars)						
Year ended December 31,				2006	2005	2004
Benefits earned during the year				45.7	32.3	29.0
Interest cost on projected benefit obligations				64.2	63.2	58.8
Actual return on plan assets				(80.3)	(162.9)	(111.7)
Difference between actual and expe	ected return on p	olan assets		(3.4)	87.3	41.1
Amortization of prior service costs				2.0	2.3	2.3
Amortization of transitional obligation	n			(8.0)	0.2	0.1
Amortization of actuarial loss				15.3	9.6	12.2
Special Termination Benefits				-	_	3.3
Amount charged to EEP				(10.5)	(10.2)	(7.8)
Pension and OPEB cost recognized	k			32.2	21.8	27.3

The table reflects the pension and OPEB cost for all of the Company's benefit plans on an accrual basis. Using the cash basis for Gas Distribution and Services rate regulated plans and the accrual method for all other plans, the Company's pension cost was \$20.1 million (2005 - \$11.6 million; 2004 - \$11.6 million), and its OPEB cost was \$7.0 million for 2006 (2005 – \$5.9 million; 2004 – \$5.8 million).

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

		OPEB			Pension Benefit	
Year ended December 31,	2006	2005	2004	2006	2005	2004
Discount rate	5.30%	6.21%	6.31%	5.24%	6.26%	6.29%
Average rate of salary increases				4.44%	4.00%	4.00%
Average rate of return on pension						
plan assets	4.50%	4.50%	4.50%	7.31%	7.31%	7.32%

#### **Medical Cost Trend Rates**

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in which Ultimate Medical Cost Trend Rate Assumption is Achieved
Canadian Plans			
Drugs	10%	5%	2016
Other Medical and Dental	5%	5%	2016
Enbridge U.S.	10%	5%	2012

A one percent increase in the assumed medical and dental care trend rate would result in an increase of \$30.0 million in the accumulated post-employment benefit obligations and an increase of \$2.8 million in benefit and interest costs. A one percent decrease in the assumed medical and dental care trend rate would result in a decrease of \$24.1 million in the accumulated post-employment benefit obligations and a decrease of \$2.2 million in benefit and interest costs.

## **Major Categories of Plan Assets**

(millions of dollars)			OPEB			Pe	nsion Benefits	3
Year ended December 31,		2006		2005	_	2006		2005
	Target	%	Amount	%	Target	%	Amount	%
Equity securities	_	_	_	_	60%	61.1%	799.5	58.8%
Fixed income securities	100%	86.9%	43.6	84.8%	40%	34.0%	436.4	31.7%
Other	_	13.1%	6.6	15.2%	_	4.9%	68.0	9.5%
Total Assets	100%	100%	50.2	100%	100%	100%	1,303.9	100%
Assets attributable to								
former Affiliates			_				(76.9)	
			50.2				1,227.0	

Plan assets are invested primarily in readily marketable investments with constraints on the credit quality of fixed income securities.

#### **Expected Rate of Return on Plan Assets**

		Pensio	n Benefits	
Year ended December 31,	2006	2005	2006	2005
Canadian Plans	4.5%	4.50%	7.25%	7.25%
United States Plan	4.5%	4.50%	7.25%	7.75%

The Company manages the investment risk of its pension funds by setting a long term asset mix policy for each pension fund after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plans; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long term expectations.

## **Plan Contributions by the Company**

(millions of dollars)				OPEB	Pens	sion Benefit

Gain/(loss) on foreign currency contracts	13.3	6.8	(21.3)
Other	22.8	37.0	15.7
	107.8	142.4	123.9

## 21. CHANGES IN OPERATING ASSETS AND LIABILITIES

(millions of dollars)	(millions	of	dollars)
-----------------------	-----------	----	----------

Year ended December 31,	2006	2005	2004
Accounts receivable and other	3.9	(441.4)	(347.4)
Inventory	134.1	(215.7)	35.3
Deferred amounts and other assets	(67.3)	(90.2)	(94.2)
Accounts payable and other	43.5	394.8	278.3
Interest payable	12.5	(1.4)	(13.1)
	126.7	(353.9)	(141.1)

Changes in construction payables are included in investing activities.

## 22. RELATED PARTY TRANSACTIONS

Neither EEP nor EIF have employees and use the services of the Company for managing and operating their businesses. Vector Pipeline contracts the services of Enbridge to operate the pipeline. Amounts for these services, which are charged at cost in accordance with service agreements, are:

#### (millions of dollars)

Year ended December 31,	2006	2005	2004
EEP	244.9	184.7	173.0
EIF	_	_	9.4
Vector Pipeline	4.1	4.1	4.4
	249.0	188.8	186.8

EGD, a subsidiary of the Company, has contracts for gas transportation services from Alliance Pipeline and Vector Pipeline. EGD is charged market prices for these services:

#### (millions of dollars)

Year ended December 31,	2006	2005	2004
Alliance Pipeline Canada	23.6	22.9	29.7
Alliance Pipeline US	14.1	17.5	20.9
Vector Pipeline	27.3	29.2	39.1
	65.0	69.6	89.7

CustomerWorks Limited Partnership (CustomerWorks), a joint venture, provides customer care services to EGD under an agreement having a five-year term starting January 2002. EGD is charged market prices for these services. CustomerWorks also rents an automated billing system from ECS, a subsidiary of the Company. Amounts charged by/(to) CustomerWorks: (millions of dollars)

Year ended December 31,	2006	2005	2004
EGD	108.5	103.6	127.0
ECS	(8.1)	(8.7)	(22.5)
	100.4	94.9	104.5

Enbridge Gas Services (US) Inc., a subsidiary of the Company, purchases and sells gas at prevailing market prices with Enbridge Marketing (US) Inc., a subsidiary of EEP. Amounts paid/(recovered) are as follows:

(millions of dollars)

Year ended December 31,	2006	2005	2004
Purchases	29.2	48.1	30.7
Sales	(6.3)	(4.7)	(8.8)
	22.9	43.4	21.9

Enbridge Gas Services Inc., a subsidiary of the Company, has transportation commitments through 2015 on Alliance Pipeline Canada and Vector Pipeline. Amounts paid are as follows:

(millions of dollars)

Year ended December 31,	2006	2005	2004
Alliance Pipeline Canada	8.3	9.1	8.8
Vector Pipeline	0.6	0.7	0.5
	8.9	9.8	9.3

Enbridge Gas Services (US) Inc., has transportation commitments through 2015 on Alliance Pipeline US and Vector Pipeline. Amounts paid are as follows:

(millions of dollars)

Year ended December 31,	2006	2005	2004
Alliance Pipeline US	6.9	7.1	7.6
Vector Pipeline	16.5	9.5	9.8
	23.4	16.6	17.4

Tidal Energy Marketing Inc., a subsidiary of the Company, purchases and sells commodities at prevailing market prices with EEP and a subsidiary of EEP as follows:

(millions of dollars)

Year ended December 31,	2006	2005	2004
Purchases	17.0	9.7	_
Sales	(6.7)	_	(2.3)
	10.3	9.7	(2.3)

#### **Receivable from Affiliate**

The receivable from affiliate of \$158.8 million (2005 – \$177.0 million) resulted from the sale of Enbridge Midcoast Energy to EEP. The receivable, denominated in U.S. dollars, bears interest at 6.6% and matures in 2007 and is included in Accounts Receivable and Other. The balance on December 31, 2006 was US\$136.2 million (2005 - US\$151.9 million). Interest income related to the note was \$11.8 million (US\$10.0 million), \$11.7 million (US\$9.4 million), and \$11.8 million (US\$9.0 million), in 2006, 2005 and 2004, respectively. The fair value of the receivable at December 31, 2006 is \$158.6 (2005 - \$176.8 million).

The Company also provides limited consulting and other services to investees as required. Market prices are charged for these services where they are reasonably determinable. Where no market price exists, a cost-based price is charged. The Company may also purchase consulting and other services from affiliates, prices are determined on the same basis as services provided by the Company. The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

Filed: 2007-09-04 FB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 116 of 128 Appendix D

#### 23. COMMITMENTS AND CONTINGENCIES

#### **Enbridge Gas Distribution Inc.**

#### **Bloor Street Incident**

EGD has been charged under both the Ontario Technical Standards and Safety Act (TSSA) and the Ontario Occupational Health and Safety Act (OHSA) in connection with an explosion that occurred on Bloor Street West in Toronto on April 24, 2003. The maximum possible fine upon conviction on all charges would be \$5.0 million in aggregate. EGD has also been named as a defendant in a number of civil actions related to the explosion. A Coroner's Inquest in connection with the explosion has also been called, but the proceedings are stayed pending resolution of the TSSA and OHSA matters. The Ontario Court of Justice have not yet ruled upon any of the charges laid under the TSSA or the OHSA, and thus it is not possible at this time to predict or comment upon the potential outcome. The trial in respect of these charges commenced in January 2006 and is not expected to be completed until late 2007 at the earliest. EGD does not expect the outcome of these civil actions to result in any material financial impact.

#### Remediation of Discontinued Manufactured Gas Plant Sites

EGD may incur future costs due to claims relating to alleged coal tar contamination at or near former manufactured gas plant (MPG) sites. In October 2002, a claim was filed for \$55.0 million in damages relating to a certain MPG site. EGD filed a statement of defence in June 2003 denying liability. Although the Company believes that it has a valid defence to this claim, certain risks exist. The probable overall cost cannot be determined at this time due to uncertainty about the presence and extent of damage in addition to the potential alternative remediation approaches which vary in cost. EGD expects that costs, if any, not recovered through insurance may be recovered through rates. As such, EGD does not believe that the outcome will have any material financial impact.

#### **CAPLA Claim**

The Canadian Alliance of Pipeline Landowners' Associations (CAPLA) and two individual landowners have commenced a class action against the Company and TransCanada PipeLines Limited. The claim relates to restrictions in the National Energy Board Act on crossing the pipeline and the landowners' use of land within a 30-metre control zone on either side of the pipeline easements. The Plaintiffs filed a motion to establish a cause of action which is one of the requirements to have the motion certified as a class action under the Class Proceedings Act (Ontario). The motion was dismissed by the Ontario District Court in late 2006. The Plantiff has since appealed the decision and the appeal is expected to be heard by the Court of Appeal during the first half of 2007. The Company believes it has a sound defence and intends to defend the claim. Since the outcome is indeterminable, the Company has made no provision at this time for any potential liability.

## **Enbridge Energy Company, Inc.**

Enbridge Energy Company, Inc. (EEC), a subsidiary of the Company, is the general partner of EEP. EEC's former subsidiary Enbridge Midcoast Energy Inc. (Midcoast) has been assessed by the U.S. Internal Revenue Service (IRS) for US\$4.5 million in taxes, interest and penalties for its 1999 through 2001 taxation years. Midcoast has paid all amounts and has filed a claim for refund of the full amount. The IRS has challenged Midcoast's tax treatment of its 1999 acquisition of several partnerships that owned a natural gas pipeline system in Kansas (these assets were sold to EEP in 2002). The IRS position, if sustained, could decrease the U.S. tax basis for the pipeline assets, which could reduce Enbridge's earnings by up to approximately US\$60.0 million, although the immediate cash tax impact would be significantly less. Enbridge believes the tax treatment of the acquisition and related tax deductions claimed were appropriate. Enbridge initiated proceedings in U.S. District Court (Houston) in 2006 to litigate this matter and depositions are underway. The trial is scheduled for October 2007.

Enbridge and its subsidiaries maintain tax liabilities related to uncertain tax positions. While fully supportable in the Company's view, these tax positions, if challenged by tax authorities, may not be fully sustained on review.

#### **Commitments**

The Company has commitments of approximately \$214 million for materials related to the construction of Liquids Pipeline projects during 2007. The minimum cancellation charge related to these contracts is approximately \$127 million.

Filed: 2007-09-04 FB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 117 of 128 Appendix D

#### 24. GUARANTEES

EEC, as the general partner of EEP, has agreed to indemnify EEP from and against substantially all liabilities including liabilities relating to environmental matters, arising from operations prior to the transfer of its pipeline operations to EEP in 1991. This indemnification does not apply to amounts that EEP would be able to recover in its tariff rates if not recovered through insurance, or to any liabilities relating to a change in laws after December 27, 1991.

In addition, in the event of default, EEC, is subject to recourse with respect to US\$155.0 million of EEP's long-term debt at December 31, 2006 (2005 - US\$186.0 million).

The Company has also agreed to indemnify EEM for any tax liability related to EEM's formation, management of EEP and ownership of i-units of EEP. The Company has not made any significant payment under these tax indemnifications. The Company does not believe there is a material exposure at this time.

In the normal course of conducting business, Enbridge, enters into a wide variety of agreements which provide for indemnification to third parties. Enbridge cannot reasonably estimate the maximum potential amounts that could become payable to third parties under these agreements. However, historically Enbridge has not made any significant payments under these indemnification provisions. While many of these agreements may specify a maximum potential exposure, or a specified duration to the indemnification obligation, there are circumstances where the amount and duration are unlimited. Examples where such indemnification obligations have been issued include:

#### **Sale Agreements for Assets or Businesses**

- breaches of representations, warranties or covenants;
- loss or damages to property;
- environmental liabilities;
- changes in laws;
- valuation differences:
- litigation; and
- contingent liabilities

#### **Provision of Services and Other Agreements**

- breaches of representations, warranties or covenants;
- changes in laws;
- intellectual property rights infringement; and
- litigation.

When disposing of assets or businesses, the Company may indemnify the purchaser for certain tax liabilities incurred while the Company owned the assets or for a misrepresentation related to taxes that result in a loss to the purchaser. Similarly, the Company may indemnify the purchaser of assets for certain tax liabilities related to those assets.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 13 Page 118 of 128 Appendix D

## 25. SUBSEQUENT EVENTS

On February 2, 2007, the Company closed the public issuance of 13.5 million common shares at \$38.75 per common share. The Company also closed a private placement issuance of common shares to Noverco at the same price, allowing Noverco to maintain its approximate 9.5% interest in the Company. The Board of Directors also increased the dividend to \$0.3075 from \$0.2875 per common share, payable on March 1, 2007 to shareholders of record on February 15, 2007.

## 26. UNITED STATES ACCOUNTING PRINCIPLES

These consolidated financial statements have been prepared in accordance with Canadian GAAP. The effects of significant differences between Canadian GAAP and U.S. GAAP for the Company are described below.

## 26. UNITED STATES ACCOUNTING PRINCIPLES (continued)

#### 1 Stock-based Compensation

Effective January 1, 2006, the Company adopted Financial Accounting Standard 123 Revised 2004 (FAS 123R), Share Based Payment, on a modified prospective basis for U.S. GAAP purposes. FAS 123R requires the use of the fair value method to measure compensation expense for the Company's Fixed Stock Options (FSOs) and Performance Based Options (PBOs) issued after January 1, 2006, as well as for the portion of awards for which the requisite service has not been performed that are outstanding as of January 1, 2006. FAS 123R also requires the use of the fair value method for awards settled in cash, including the Company's Performance Stock Units (PSUs) and Restricted Stock Units (RSUs).

The Company had previously adopted the fair value recognition provisions of the former FAS 123, Share Based Payment, effective January 1, 2003, resulting in the recognition of stock based compensation expense using the fair value method for FSOs and PBOs issued subsequent to that date.

2 Future Income Taxes

Under U.S. GAAP, deferred income tax liabilities are recorded for rate-regulated operations, which follow the taxes payable method for ratemaking purposes. As these deferred income taxes are expected to be recoverable in future revenues, a corresponding regulatory asset is also recorded. These assets and liabilities are adjusted to reflect changes in enacted income tax rates. A deferred tax liability of \$648.7 million (2005 - \$727.6 million) is recorded for U.S. GAAP purposes and reflects the difference between the carrying value and the tax basis of property, plant and equipment and regulatory deferrals. Regulated companies following the taxes payable method are not required to record this additional tax liability under Canadian GAAP. To recover the additional deferred income taxes recorded under U.S. GAAP through the ratemaking process, it would be necessary to record incremental revenue of \$926.7 million (2005 - \$1.119.4 million).

3 Accounting for Joint Ventures

U.S. GAAP requires the Company's investments in joint ventures to be accounted for as investments using the equity method, as opposed to proportionately consolidated. However, under an accommodation of the U.S. Securities and Exchange Commission, the accounting for a joint venture need not be reconciled from Canadian to U.S. GAAP if this joint venture is jointly controlled by all owners. Joint ventures in which all owners do not share joint control are reconciled to U.S. GAAP. The different accounting treatment affects only display and classification and not earnings or shareholders' equity.

4 Financial Instruments

For U.S. GAAP purposes, FAS 133, Accounting for Derivative Instruments and Hedging Activities, requires that all derivatives be recorded on the balance sheet as either assets or liabilities at their fair value. Changes in the fair value of derivatives are recognized in current period earnings unless specific hedge

The accounting for changes in the fair value of derivatives held for hedging purposes depends on their intended use. For fair value hedges, the effective portion of changes in the fair value of derivative instruments is offset in income against the change in the fair value attributed to the risk being hedged, of the underlying hedged asset, liability or firm commitment. For cash flow hedges, the effective portion of changes in the fair value of derivative instruments is offset through other comprehensive income until the variability in cash flows being hedged is recognized in earnings in future accounting periods. For certain regulated operations the effective portion of the changes in fair value of derivative instruments is deferred as an asset or liability until it is settled. Upon settlement the recognized gain or loss is recognized as a regulatory asset or liability and collected from/refunded to ratepayers in subsequent periods. At December 31, 2006 hedge losses of \$26.6 million are deferred and offset by a receivable from ratepayers of \$26.6 million.

5 Accumulated Other Comprehensive Loss

At December 31, 2006, Accumulated Other Comprehensive Loss of \$193.2 million (2005 - \$95.5 million) consists of an accumulated foreign currency translation balance of \$111.7 million (December 30, 2005 - \$149.8 million), net unrealized losses of \$9.9 million (2005 - gains \$54.3 million) on derivative financial instruments that qualify as cash flow hedges, and an underfunded pension status of \$114.2 million.

Of the total Accumulated Other Comprehensive Loss of \$193.2 million, the Company estimates that approximately \$17.4 million, \$13.2 million representing unrecognized net losses on derivative activities and \$4.2 million representing the underfunded status pension and OPEB plans, at December 31, 2006, is expected to be reclassified into earnings during the next twelve months.

6 Underfunded Pension Status

The Company has adopted FAS 158, Employers' Accounting for Defined Pension and Other Postretirement Plans, effective December 31, 2006. FAS 158 requires an employer to recognize the overfunded or underfunded status of a defined benefit postretirement plan or OPEB as an asset or liability and to recognize changes in the funded status in the year in which they occur through comprehensive income. Adopting FAS 158 results in the Company recognizing a liability of \$110.1 million for the underfunded status of the plans, a deferred tax asset of \$38.5 million and accumulated other comprehensive loss of \$71.6 million. As required by FAS 158, the Company will change the measurement date of its defined benefit pension plan from September 30, to December 31, effective the year ended 2008.

7 Consolidation of a Limited Partnership

In September 2005, the U.S. Emerging Issues Task Force (EITF), reached a consensus on EITF issue 04-5, Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights (EITF 04-5), addressing when a general partner, or general partners as a group, control and should therefore, consolidate a limited partnership.

Effective January 1, 2006, the Company adopted, without restatement of prior periods, EITF 04-5. As a result of adopting EITF 04-5, the Company is consolidating its 16.6% interest in Enbridge Energy Partners (EEP). The impact of adopting EITF 04-5, for U.S. GAAP purposes as at and for the year ended December 31, 2006, is outlined below.

Net cashflow impact	110.4

## **New Accounting Standards**

FASB Interpretation Number 48 - FASB issued FIN 48 "Accounting for Uncertainty in Income Taxes, an Interpretation of FAS 109." This interpretation is effective January 1, 2007 and applies to all tax positions related to income taxes subject to FAS 109, including those acquired in business combinations. FIN 48 clarifies the accounting for income taxes by prescribing a minimum recognition threshold for recording a tax position including a contingent tax position. Management is currently evaluating the impacts of FIN 48.

Forecast based on normal weather	3,745	3,747	4,849	3,565	3,700

<sup>1</sup> Financial and operating highlights of Gas Distribution and Services for 2004 reflect earnings for the 15 months ended December 31, 2004 for Enbridge Gas Distribution (EGD), Noverco and other gas distribution entities. This resulted from the elimination of the quarter lag basis of consolidation in 2004. For the years ended December 31, 2002 and 2003, earnings are for the 12 months ended September 30 for these entities. For the years ended December 31, 2005 and 2006, earnings are for the 12 months ended December 31 for these entities.

<sup>2</sup> Adjusted operating earnings applicable to common shareholders represent earnings applicable to common shareholders adjusted for non-operating factors including primarily non-operating gains and losses, the impact of weather, regulatory disallowances and impacts of tax rate changes. This is not a measure that has a standardized meaning prescribed by Canadian generally accepted accounting principles (GAAP) and is not considered a GAAP measure. Therefore, this measure may not be comparable with a similar measure presented by other issuers. Management believes that the presentation of adjusted operating earnings provides useful information to investors and shareholders as it provides increased predictive value and performance trends. Earnings for 2004 and 2003 have been adjusted to eliminate the quarter lag basis of consolidation described above.

<sup>3</sup> Liquids Pipelines operating highlights include the statistics of the 16.6% owned Lakehead System and other wholly-owned Liquid Pipeline operations, excluding Spearhead Pipeline and Athabasca Pipeline.

<sup>4</sup> Enbridge Offshore Pipelines was purchased on December 31, 2004.

<sup>5</sup> Gas Distribution and Services volumes and the number of active customers are derived from the aggregate system supply and direct purchase gas supply arrangements.

<sup>6</sup> Degree day deficiency is a measure of coldness which is indicative of volumetric requirements of natural gas utilized for heating purposes. It is calculated by accumulating for each day in the fiscal period the total number of degrees by which the daily mean temperature fell below 18 degrees Celsius. The figures given are those accumulated in the Greater Toronto Area.

Earnings coverage of interest <sup>6</sup>	2.4x	2.4x	2.8x	2.7x	2.5x
Dividend payout ratio <sup>7</sup>	66.1%	65.2%	62.3%	55.3%	56.9%

<sup>1</sup> Adjusted operating earnings applicable to common shareholders represent earnings applicable to common shareholders adjusted for non-operating factors including primarily non-operating gains and losses, the impact of weather, regulatory disallowances and impacts of tax rate changes. This is not a measure that has a standardized meaning prescribed by GAAP and is not considered a GAAP measure. Therefore, this measure may not be comparable with a similar measure presented by other issuers. Management believes that the presentation of adjusted operating earnings provides useful information to investors and shareholders as it provides increased predictive value and performance trends. Earnings for 2004 and 2003 have been adjusted to eliminate the quarter lag basis of consolidation described above.

Earnings applicable to common shareholders divided by average shareholders' equity (weighted monthly during the year).

<sup>3</sup> Sum of after-tax earnings (including earnings from discontinued operations) and after-tax interest expense, divided by weighted average capital employed. Capital employed is equal to the sum of shareholders' equity, EGD preferred shares, future income taxes, deferred credits and total debt (including short-term borrowings).

Total debt (including short-term borrowings) divided by the sum of total debt and shareholders' equity.

Total debt (including short-term borrowings) divided by average capital employed. Capital employed is equal to the sum of shareholders' equity, EGD preferred shares, future income taxes, deferred credits and total debt (including short-term borrowings).

Earnings before taxes and interest expenses divided by interest expense (including capitalized interest).

<sup>7</sup> Dividends per common share divided by adjusted operating earnings per share applicable to common shareholders.

# Dividend Reinvestment and Share Purchase Plan, and Dividend Direct Deposit

Enbridge Inc. offers a Dividend Reinvestment and Share Purchase Plan that enables shareholders to reinvest their cash dividends in Common Shares and to make additional cash payments for purchases at the market price. The Company also offers Dividend Direct Deposit which enables shareholders to receive dividends by electronic fund transfer to the bank account of their choice in Canada. Details may be obtained from the Investor Information section of the Enbridge web site at www.enbridge.com, or by contacting CIBC Mellon Trust Company at any of the locations listed above.

Le présent document est disponible en français.

#### **Shareholder Inquiries**

If you have inquiries regarding the following:

- Dividend Reinvestment and Share Purchase Plan
- change of address
- share transfer
- lost certificates
- dividends
- duplicate mailings

Please contact the registrar and transfer agent – CIBC Mellon Trust Company in Canada or Mellon Investor Services in the United States.

#### Other Investor Inquiries

If you have inquiries regarding the following:

- additional financial or statistical information
- industry and company developments
- latest news releases or investor presentations Please contact Enbridge Investor Relations or visit Enbridge's web site at www.enbridge.com.

## **SEC INTERROGATORY #14**

## INTERROGATORY

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/12] Please expand on the differences between publicly owned LDCs and investor owned LDCs that justify or require differences in the structure of incentive regulation mechanisms. In addition, please specifically enumerate the ways in which a publicly-traded shareholder "demands" a different kind of incentive regulation, and describe how ownership by a publicly-traded shareholder changes how utility managers make operating and other business decisions, relative to ownership by public sector entities or by private companies.

# **RESPONSE**

Investor owned companies which are publicly traded on equity markets must grow earnings and must make competitive returns in order to support its equity share price. In contrast, it is the Company's perception that many of Ontario's electricity LDCs, which are owned by municipal governments, do not have a similar drive to make competitive returns. This may be because, within a municipality, ratepayers, taxpayers and voters are for the most part, the same subset of the population.

A revenue cap incentive plan shifts some risks (interest rates, tax rates, operations cost recovery) to the utility, as compared to Cost of Service regulation. A price cap plan goes further by shifting the volume risk to the utility which is especially onerous to a utility which has and is expected to have declining average volume use per customer. For this reason, given the business circumstances faced by the Company, a revenue cap plan is preferred.

# **SEC INTERROGATORY #15**

# **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/12] Please provide a detailed comparison of the "customer mix, asset base, cost structure, revenue generating opportunities, and rate structure" of Union and Enbridge. Please provide all supporting data, including numbers of customers by category, types and ages of asset by category, types of revenue generating opportunities and amounts of revenue available from each, etc.

# RESPONSE

A detailed comparison is not available. The observation referenced is based on the Company's general understanding of some of the distinctions between the two companies.

# **SEC INTERROGATORY #16**

# <u>INTERROGATORY</u>

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/12] Please provide a detailed table showing the original capital cost, the accumulated depreciation, the net book value, the depreciation rate, and the annual depreciation, for each of Enbridge's categories of assets included in rate base. On the same table, please provide the same information for Union's assets using the same categories.

# RESPONSE

The table on page 2 of this response provides the Company's 2006 historical utility year end gross plant, accumulated depreciation and net book value and annual related depreciation.

The information relative to Union Gas should be requested of them.

# **SEC INTERROGATORY #17**

# <u>INTERROGATORY</u>

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/12] Please provide a table comparing the vintage of capital assets by asset category for each of Union and Enbridge, to support the statement "Union does not have aged infrastructure to replace".

# **RESPONSE**

See response to SEC Interrogatory #11 at Exhibit I, Tab 11, Schedule 11.

Witness: P. Hoey

R. Campbell T. Ladanyi K. Culbert

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 18 Page 1 of 1

# **SEC INTERROGATORY #18**

# <u>INTERROGATORY</u>

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/14] Please provide a table in Excel format showing the data that produced Chart 1. Please provide a further table, in Excel format, showing the actual distribution revenue, actual volumes, actual number of customers, average percentage rate increase, and average percentage bill increase per customer, for each year commencing 1997 and continuing to and including 2006.

# <u>RESPONSE</u>

The data used to produce the Chart are the two observations on the Chart; 3.83% and 2.35%. The observation 3.83% is derived from the data in Table 1, page 9 of the referenced exhibit. That data is Board approved forecasts for rate setting purposes for each year. Actual data is available in the corresponding rate case documents for the year's cited. Due to the resources required to assemble this data, the Company is unable to assemble this data on behalf of SEC.

Witnesses: R. Campbell

# **SEC INTERROGATORY #19**

# **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/1/1/16] Please explain how Enbridge plans to calculate each "monthly average" number of bills in order to then average those monthly averages over the year.

# **RESPONSE**

Consistent with previous rate cases, annual average of monthly customer numbers measured by number of active meters that use gas as presented at Exhibit C, Tab 2, Schedule 1, Table 1 instead of bills will be used in the determination of Revenue per Customer Cap as filed at Exhibit C, Tab 4, Schedule 1.

Witnesses: I. Chan T. Ladanyi

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 11 Schedule 20 Page 1 of 1

## SEC INTERROGATORY #20

# **INTERROGATORY**

Issue 1.2 What is the method for incentive regulation that the Board should approve for each utility?

[B/3/1/24] Please reconcile the statement "the most effective signal for energy conservation is the price signal" with the evidence of Enbridge in its 2006 rate case, accepted by the Board, that price signals from distribution rates are overwhelmed by the price signals from commodity rates, and therefore no differences in distribution rates between summer and winter were required.

# **RESPONSE**

It is true that commodity rates are overwhelmingly larger than distribution rates in the final price paid by consumers. Nevertheless, there is no discernable economic principle underlying the use of a stretch factor. Therefore, arbitrarily reducing the price paid by consumers will send a mixed policy signal to the public, even if it is a disproportionately small impact.

On the other hand, for the Company, which is operating with a limited capital budget, the application of a stretch factor makes a very noticeable impact by reducing revenues that may otherwise be used to invest in productivity enhancements. From an economic perspective it makes little sense to arbitrarily limit the Company's ability to invest in productivity-enhancing projects by reducing revenues, all else equal. For this reason, and many others further detailed in Exhibit B, Tab 3, Schedule 1, the Company is proposing a zero stretch factor.

## **SEC INTERROGATORY #22**

## INTERROGATORY

Issue 1.3 Should weather risk continue to be borne by the shareholders, and if so what other adjustments should be made?

Please confirm that the utility's weather methodology is not intended to predict the weather for a future period, but to create a situation in which, in the long term, cumulative annual differences between actual and forecast will approach zero.

# **RESPONSE**

The utility's weather methodology is not intended to predict the weather of a future period.

The Company's degree day forecasting methodology is intended to predict degree days for a future period. In order to set the volumetric budget for a particular test year the Company requires a point estimate of degree days for that test year. The Company's budgets are not set on cumulative annual degree days (for example the sum of annual degree days from 1987 to, in this case, 2006) but rather a point estimate, or forecast, of degree days for each particular test year.

The degree day forecasting methodology is one that, in the long term, has the lowest average annual variance relative to actual degree days. The closer this variance, however measured, is to zero the closer the cumulative degree day variance will be to zero. Please refer to Exhibit C2, Tab 4, Schedule 1 from the Company's EB-2006-0034 rate case evidence for a more thorough discussion of the desirable properties for a degree day forecasting methodology and the standard statistical tests used to measure these properties.

# **SEC INTERROGATORY #23**

## INTERROGATORY

Issue 1.3 Should weather risk continue to be borne by the shareholders, and if so what other adjustments should be made?

[B/5/1/6] Please advise whether Enbridge would be happy with a weather deferral account, in which variances in actual revenue caused by differences between the actual and forecast degree days were debited or credited annually, and recovered from or paid to ratepayers, with interest, over the following ten years on a rolling annual basis.

# **RESPONSE**

Please see response to Board Staff Interrogatory #5 at Exhibit I, Tab 1, Schedule 5.

Witnesses: J. Denomy

P. Hoey

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 11 Schedule 24 Page 1 of 2 Plus Attachments

# **SEC INTERROGATORY #24**

## INTERROGATORY

Issue 1.3 Should weather risk continue to be borne by the shareholders, and if so what other adjustments should be made?

Please provide any studies, memos, research, analyses, or other documents, physical or electronic, in the possession of Enbridge, its affiliates, or parent dealing in whole or in part with:

- a. The impact of weather uncertainty on perceived investment risk related to the utility's equity;
- The impact of weather risk on appropriate level of ROE or equity thickness, or the utility's cost of debt or credit rating, in each case whether quantitatively or qualitatively;
- c. The impact of weather risk on the price of any past acquisition or sale of Enbridge or its parent.

# **RESPONSE**

a) Please refer to the responses to VECC Interrogatory #44 at Exhibit I, Tab 24, Schedule 44 and VECC Interrogatory #51 which can be found at Exhibit I, Tab 24, Schedule 51 of the Company's EB-2006-0034 rate case.

Attached to this interrogatory response are some of the recent security analyst and credit rating agency reports which would not have been available at the time the responses noted above were filed.

In addition, responses to interrogatories in the Company's EB-2006-0034 Rate Case provide the views of various expert witnesses on the relationship between weather risk and the Company's financial parameters:

Dr. Booth in response to EGD Interrogatory #1 at Exhibit I, Tab 28, Schedules 1to17, page 1:

Witnesses: J. Denomy

P. Hoev

Filed: 2007-09-10 EB-2007-0615 Exhibit I Tab 11 Schedule 24 Page 2 of 2 Plus Attachments

"Yes but weather risk should not be a factor in setting the firm's financial parameters as the Company's expert Dr. Carpenter pointed out it is a diversifiable risk."

Dr. Carpenter in response to VECC Interrogatory #58 a) at Exhibit I, Tab 24, Schedule 58, page 1:

"Dr. Carpenter believes that weather risk is generally diversifiable by investors in EGDI's securities, but that it may not be fully diversifiable because there may be some correlation between seasonal weather conditions and economic activity."

Dr. Carpenter in response to VECC Interrogatory #58 b) at Exhibit I, Tab 24, Schedule 58, page 1:

"Dr. Carpenter believes that the risks that matter the most from and equity holder's perspective (and thus those that equity investors should be compensated for bearing) are those that are "systematic," or generally correlated with the level of (or changes in) general economic activity."

- b) Please see response to a) above.
- The Company is not possession of, nor is it aware of any such research or analysis.

# **OEB Issues 2007 Rate Decision – Outperform Rating Unchanged**

#### **Event**

The Ontario Energy Board has issued its Decision with Reasons pertaining to Enbridge Gas Distribution's application for approval of delivery rates for fiscal 2007. The Decision deals with the outstanding issues that were not otherwise subject to a settlement agreement filed by the company with the Board on January 24, 2007, and approved on March 26. The Decision increases the deemed equity to 36% versus 35% previously, and 38% applied for by the company. Although we believe that the decision is largely in line with expectations, we have a number of significant concerns with the Board's reasons as outlined relating to the deemed equity component of rates.

## **Impact**

Neutral.

## **Forecasts**

We have updated our outlook to reflect a deemed equity component at Enbridge Gas Distribution of 36% versus our previous estimate of 35%. Our diluted 2007 EPS estimate of \$1.75 is unchanged and our diluted 2008 EPS estimate increases to \$1.97 from \$1.96, previously.

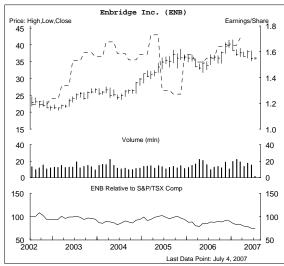

## **Valuation**

Our target price of \$40.50 reflects a weighted valuation approach: 18x diluted 2008E EPS of \$1.97 (12.5%), 2.5x 2008E book value per share of \$16.17 (12.5%), and a target yield of 3.10% (75%), assuming 2008E dividends of \$1.29.

#### Recommendation

We believe the shares are attractively valued at current levels. Our rating is Outperform.

# **Details & Analysis**

The Ontario Energy Board has issued its Decision with Reasons pertaining to Enbridge Gas Distribution's application for approval of delivery rates for the fiscal 2007 year. The Decision deals with the outstanding issues that were not otherwise subject to a settlement agreement filed by the company with the Board on January 24, 2007, and approved on March 26. The Decision increases the deemed equity to 36% versus 35% previously, and 38% applied for by the company. Although we believe that the decision is largely in line with expectations, we have a number of significant concerns with the Board's reasons as outlined relating to the deemed equity component of rates.

## We note the following:

- Change Covenants in Trust Indentures: in order to remedy the situation where declining ROEs, warmer than normal weather and inadequate deemed equity have caused tightness with trust indenture covenants, the Board acknowledges that, "there may not be a practical way to circumvent the interest rate covenants in the current trust indenture," and expresses the view that, "it is unfortunate that these covenants pose such a high restriction". The Board is actively encouraging the utility to pursue an initiative to replace existing trust indenture covenants in the longer term. This is clearly a red flag for equity and bond investors, as the Board is not apparently prepared to credibly deal with the increase in financial risk associated with declining credit metrics associated with confiscatory allowed rates of return on equity, deemed equity that is too low and weather volatility.
- Problem is Temporary: the Board is not convinced that the company could have difficulty issuing long term debt in 2007, and believes that higher interest rates and weather may provide relief. We are surprised by this approach the Board is prepared to gamble with the financial integrity of the utility by betting on future movements in interest rates and capricious weather to resolve this "temporary" issue. The Board is also encouraging the utility to "engage in financing alternatives other than issuing of long term debt in the short term. This may involve a number of market instruments that are available to the Company, if indeed the company cannot issue long term debt when it needs it".
- Dancing at the Edge of the Precipice: throughout this section of the decision, the Board implies that it needs to have tangible evidence that the utility either cannot issue debt when it needs to or can only do so on unfavourable terms and conditions. We are frustrated by this presumption of bad faith and once again note that if the utility can demonstrate that it cannot attract capital on reasonable terms and conditions, then the Fair Return Standard, a legal must have, has already been violated and the regulatory has failed to fulfill its legislated mandate.
- Payments to Affiliates: the Board indicates that "the company must also be more wary of the impact of excessive payments to its affiliates on EBIT" suggesting that covenant issues are a consequence of "excessive" payments to affiliated entities. There are a number of issues with this statement: (i) it is unclear to us how payments to affiliates affect EBIT, positively or negatively, unless EBIT is being used as some sort of proxy for cash flow, which we do not believe to be an accurate characterization; (ii) it appears that the Board is suggesting liquidity that would have the effect of increasing the actual equity levels of the utility above the deemed level should be retained by the utility. We disagree with this approach, as ratepayers would then be subsidized by the utility's affiliates; and (iii) payments to affiliates clearly demonstrate that the total return on capital employed in the utility and the return allowed on that capital are inadequate and that the organization has alternatives for investment that yield superior returns at comparable risks. This is consistent with our estimated EPS growth profile over 2006 to 2010; EPS growth arises

from corporate activities not regulated by the Ontario Energy Board. The estimated contribution from Enbridge Gas Distribution is expected to be relatively flat (and decline slightly on a per share basis) over the forecast period.

- Least Cost and Customer Impact: we believe that the decision clearly violates the Fair Return Standard in a couple of ways: (i) the Board is focused on establishing a total return on capital employed that is least cost – it reduces the total aggregate return on equity by only increasing the deemed equity to 36% from 35% and states, "the Board is not convinced that the company's proposed remedy to what is or may be a temporary problem represents the least cost solution." The regulator is charged with determining the cost of capital (determined by the quantity of equity and the rate earned thereon) that meets the Fair Return Standard. That Standard is not least cost; and (ii) the Board states that, "the company's proposal to increase the common equity thickness from 35% to 38% carries an annual cost of about \$10 million to ratepayers. In view of that substantial cost, the Board must consider other remedies." As highlighted in our recent report entitled "Off the Bottom?" we highlight the determination of the Federal Court of Appeal in 2004 that stated the "cost of equity capital does not change because allowing the Mainline to recover it would cause an increase in tolls" and "the cost to the Mainline of providing that rate of return on the equity component of its deemed capital structure is unaffected by the impact of tolls on customers or consumers." The Board has clearly rejected a higher deemed equity due to the impact of that increase on customers, a violation of the Standard and contrary to the 2004 determination of the Federal Court of Appeal.
- The Board makes absolutely no attempt to reconcile its determinations with the report it recently commissioned entitled "A Comparative Analysis of Return on Equity of Natural Gas Utilities" by Concentric Energy Advisors that, among other things, found that there are no evident fundamental differences in the business and operating risks facing Ontario utilities as compared to those facing U.S. companies or other provinces' utilities that would explain the 160 to 200 basis point gap between the Ontario allowed ROE and those of comparable U.S. utilities. The report also highlights that average deemed equity for a group of comparable U.S. gas utilities is 46% versus 36% for both Enbridge Gas Distribution and Union Gas (100% Spectra Energy Corporation).

## **Estimates**

We have updated our outlook to reflect a deemed equity component at Enbridge Gas Distribution of 36% versus our previous estimate of 35%. Our diluted 2007 EPS estimate of \$1.75 is unchanged and our diluted 2008 EPS estimate increases to \$1.97 from \$1.96, previously.

## **Valuation**

Our target price of \$40.50 reflects a weighted valuation approach: 18x diluted 2008E EPS of \$1.97 (12.5%), 2.5x 2008E book value per share of \$16.17 (12.5%), and a target yield of 3.10% (75%), assuming 2008E dividends of \$1.29.

## Recommendation

We believe the shares are attractively valued at current levels. Our rating is Outperform.

## **BMO Capital Markets**

#### **Company Risk Disclosure**

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. The company's operations are subject to complex regulation by a variety of provincial, state, and federal (Canada & the United States) agencies. A change in regulation could adversely affect performance. The company's oil pipeline and natural gas pipeline operations (transmission and distribution) depend on the continued availability of liquid hydrocarbons and natural gas. Operations in the company's natural gas distribution businesses are subject to seasonality. The company's assets produce carbon dioxide and emit methane.

Changes in environmental regulations may adversely affect performance and the implementation of Kyoto (Canada) may cause the company to incur additional costs. The U.S. Securities & Exchange Commission has commenced an informal inquiry into the US\$820 million sale transaction and the initial public offering by Enbridge Energy Management. It is not clear what the potential effect of this inquiry could be.

#### **Analyst's Certification**

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

#### **General Disclosure**

#### **Ratings Key**

We use the following ratings system definitions:

OP = Outperform - Forecast to outperform the market;

Mkt = Market Perform - Forecast to perform roughly in line with the market;

Und = Underperform - Forecast to underperform the market;

(S) = speculative investment;

NR = No rating at this time;

R = Restricted – Dissemination of research is currently restricted.

Market performance is measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company. Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

#### **Dissemination of Research**

Our research publications are available via our web site http://bmocapitalmarkets.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Reuters. All of our research is made widely available at the same time to all BMO NB, BMO Capital Markets Corp. and BMO Nesbitt Burns Securities Ltd. client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

# Q1/07 EPS Slightly Lower than Expected

**Impact** 

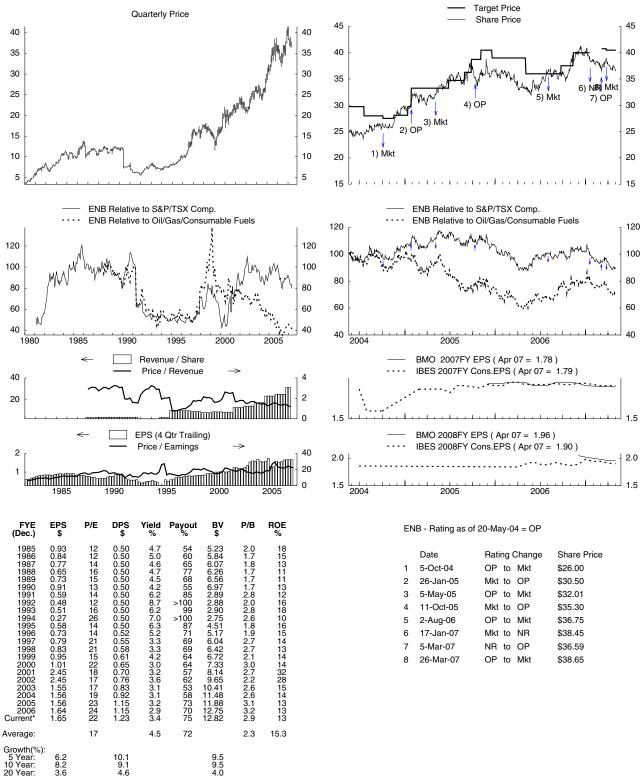

Mixed

**Details & Analysis** 

Enbridge reported Q1/07 EPS of \$0.65 per share. After adjusting for a number of one-time items and mark-to-market losses that are not reflected in our estimates, comparable earnings for the quarter are \$0.64 per share, slightly less than our estimate of \$0.65 per share. Items that were not in our estimates include: (i) property insurance recovery of \$5.3 million at Enbridge Offshore Pipelines (EOP); (ii) business interruption insurance settlement at EOP of \$6 million; (iii) benefit of colder than normal weather at Enbridge Gas Distribution of \$1.4 million; (iv) mark-to-market loss at Enbridge Energy Partners (15.7% - Enbridge Inc.); (v) mark-tomarket loss of \$4.3 million in the Energy Services Segment; and (vi) mark-to-market loss of \$2.8 million at Aux Sable. While we do not estimate potential mark-to-market gains in our estimates, we do not normalize quarterly performance for these gains or losses (similar to our approach to weather-related earnings volatility). Accordingly, we are likely to state the quarterly result as \$0.615 per share. Conference today at 9:30 ET; Phone: 1-800-591-6945; Code: 86318585; Replay: 1-888-286-8010; Code: 83532352. ## **Company Risk Disclosure**

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. The company's operations are subject to complex regulation by a variety of provincial, state, and federal (Canada & the United States) agencies. A change in regulation could adversely affect performance. The company's oil pipeline and natural gas pipeline operations (transmission and distribution) depend on the continued availability of liquid hydrocarbons and natural gas. Operations in the company's natural gas distribution businesses are subject to seasonality. The company's assets produce carbon dioxide and emit methane.

Changes in environmental regulations may adversely affect performance and the implementation of Kyoto (Canada) may cause the company to incur additional costs. The U.S. Securities & Exchange Commission has commenced an informal inquiry into the US\$820 million sale transaction and the initial public offering by Enbridge Energy Management. It is not clear what the potential effect of this inquiry could be.

### **Analyst's Certification**

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

#### **General Disclosure**

The information and opinions in this report were prepared by BMO Nesbitt Burns Inc. and BMO Nesbitt Burns Ltée./Ltd., collectively ("BMO NB"). BMO NB is not subject to U.S. rules with regard to the preparation of research reports and the independence of analysts. "BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale/institutional arms of Bank of Montreal and BMO NB in Canada, and BMO Capital Markets Corp. in the U.S. BMO Capital Markets Corp. is an affiliate of BMO NB. BMO NB and BMO Capital Markets Corp. are subsidiaries of Bank of Montreal. Bank of Montreal or its affiliates ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO NB research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein. The reader should assume that BMO NB, BMO Capital Markets Corp., Bank of Montreal or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein. The opinions, estimates and projections contained in this report are those of BMO NB as of the date of this report and are subject to change without notice. # Enbridge Inc.

(ENB-TSX; ENB-NYSE)

Stock Rating: Outperform ↑ **Industry Rating: Market Perform** 

# Q1/07 Modestly Lower than Expected: Rating Raised to Outperform

## **Event**

Enbridge reported Q1/07 EPS of \$0.65 per share. After adjusting for a number of one-time items and mark-to-market losses that are not reflected in our estimates, comparable earnings for the quarter are \$0.64 per share, slightly less than our estimate of \$0.65 per share. Items that were not in our estimates include: (i) property insurance recovery of \$5.3 million at Enbridge Offshore Pipelines (EOP); (ii) business interruption insurance settlement at EOP of \$6.0 million; (iii) \$1.4 million benefit from colder than normal weather at Enbridge Gas Distribution; (iv) mark-to-market loss at Enbridge Energy Partners (15.7%) of \$2.0 million; (v) \$4.3 million Energy Services Segment mark-to-market loss; (vi) mark-to-market loss of \$2.8 million at Aux Sable. While we do not estimate potential mark-to-market gains or losses in our estimates, we do not normalize quarterly performance for these items. Accordingly, we will be stating the quarter as \$0.615 per share.

### **Impact**

Neutral.

## **Forecasts**

We have reflected Q1/07 results and the conference call in our financial model. As set out herein, our diluted 2007 and 2008 EPS estimates decline to \$1.75 and \$1.93, respectively, from \$1.78 and \$1.96.

### **Valuation**

Our target price of \$40.50 reflects a weighted valuation approach: 18x diluted 2008E EPS of \$1.93 (12.5%), 2,5x 2008E BV of \$16.13 per share (12.5%) and a target yield of 3.10% (75%), assuming 2008 dividends of \$1.29.

#### Recommendation

We believe that the shares are attractively valued at current levels. We are increasing our rating to Outperform.

# **Details & Analysis**

Enbridge reported Q1/07 EPS of \$0.65 per share. After adjusting for a number of one-time items and mark-to-market losses that are not reflected in our estimates, comparable earnings for the quarter are \$0.64 per share, slightly less than our estimate of \$0.65 per share. Items that were not in our estimates include: (i) property insurance recovery of \$5.3 million at Enbridge Offshore Pipelines (EOP); (ii) business interruption insurance settlement at EOP of \$6.0 million; (iii) \$1.4 million benefit from colder than normal weather at Enbridge Gas Distribution; (iv) mark-to-market loss at Enbridge Energy Partners (15.7%) of \$2.0 million; (v) \$4.3 million Energy Services Segment mark-to-market loss; (vi) mark-to-market loss of \$2.8 million at Aux Sable. While we do not estimate potential mark-to-market gains or losses in our estimates, we do not normalize quarterly performance for these items. Accordingly, we will be stating the quarter as \$0.615 per share.

We believe the following points are relevant about the quarter and our outlook:

- The contribution from the Enbridge System of \$49.1 million was lower than expected. As illustrated in Table 1, we have reduced the estimated contribution from this segment for fiscal 2007 to approximately \$190 million versus our previous assumption of approximately \$200 million. The revised expectations reflect the potential for higher labour costs, volatility in Terrace taxes, seasonality and the possibility of lower incentive earnings pursuant to the cost savings, batch quality and delivery predictability metrics and capacity reliability metrics in the current Incentive Tolling Agreement. Management indicated that Line 3 is likely to operate at 80% of normal operating pressure until midsummer, although it further clarified that the line is not running full and the pressure reduction is not likely to adversely affect system throughput.
- Management presented additional information about the tolling and risks associated with its
  major liquids pipeline projects, as set out for greater clarity in Table 2. We believe that
  greater clarity is required to reassure the market about the efficacy of the company's
  planned growth initiatives and solidify the market's belief that the risk/return metrics of the
  projects are consistent with past undertakings and can be reasonably achieved.
- We have updated our outlook to incorporate the Phase I, US\$100 million Spearhead
  Pipeline Expansion. Enbridge announced the successful conclusion of the Open Season to
  determine shipper support for this project on April 27 (see our upcoming edition of Wires,
  Pipes & Btus for additional information). This project is expected to be in-service in early
  2009.
- We have updated our outlook to accelerate the next equity issue from 2009 to 2008. We now assume that the company issues \$500 million in equity in mid-2008 at a price of \$38.00 per share. We continue to assume that \$50 million issued annually pursuant to the company's dividend reinvestment plan.
- We have not reduced our 2007 EPS estimates to reflect the adverse effect of non-cash mark-to-market losses recorded in Q1/07. We expect the majority of these positions will mature prior to year-end 2007 and as such, reported Q1/07 losses are likely to reverse over the remaining quarters. Earnings volatility in the Energy Services, Aux Sable and Enbridge Energy Partners (15.7% Enbridge Inc.) should be expected to continue through 2007 and

EB-2007-0615 Ex. I, Tab 11, Sch. 24 **BMO Capital Markets** Enbridge Inc. Attachment 3

Filed: 2007-09-10

in 2008 and the contribution from these businesses may be back-end loaded. Our estimates are exclusive of mark-to-market gains and losses and further assume normal weather at Enbridge Gas Distribution.

On March 27, we highlighted that the Ontario Energy Board (OEB) approved changes to natural gas commodity and delivery rates charged by Enbridge Gas Distribution effective April 1, 2007, in an order dated March 26. As set out in that comment, the OEB has approved a Settlement Agreement, which includes a 2007 rate base of \$3,743.7 million, a return on equity of 8.39%, depreciation of \$227.1 million and 2007 capital expenditures of \$318 million. There was no settlement on the utility's request to increase deemed equity to 38% from 35%, and a decision by the board on this item is outstanding. Our estimates reflect the approved metrics and deemed equity of 35%.

# **Estimates**

We have reflected Q1/07 results and the conference call in our financial model. As set out herein, our diluted 2007 and 2008 EPS estimates decline to \$1.75 and \$1.93, respectively, from \$1.78 and \$1.96.

## **Valuation**

Our target price of \$40.50 reflects a weighted valuation approach: 18x diluted 2008E EPS of \$1.93 (12.5%), 2,5x 2008E BV of \$16.13 per share (12.5%) and a target yield of \$2.10% (75%), assuming 2008 dividends of \$1.29.

# Recommendation

We are increasing our rating on the shares of Enbridge to Outperform from Market Perform. We believe the following remarks are relevant about this rating change:

- We believe the company's EPS growth profile over the 2006 to 2010 period is approximately 8.66% and that this growth is somewhat weighted to the latter part of this time period.
- For longer-term, buy and hold players, we believe the current valuation levels (all macro variables being equal) are attractive, although the anticipated issuance of equity in 2008 and temperate EPS growth over the next 9 to 12 months may limit stock price appreciation, absent private-equity takeover speculation.
- There is execution risk in the present project profile; however, we note that expected EPS growth is concentrated in the company's core liquids pipeline franchise, where the company has a strong (arguably dominant) market position and a strategic advantage.
- The company has a solid set of opportunities in its core liquids pipeline segment; however, we do believe that some simplification of its corporate organizational structure is required to minimize governance issues, increase transparency and narrow the strategic focus of the organization. The potential implementation of structural change could result in some price volatility over the forecast period.

We rate the shares Outperform.

#### **Company Risk Disclosure**

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. The company's operations are subject to complex regulation by a variety of provincial, state, and federal (Canada & the United States) agencies. A change in regulation could adversely affect performance. The company's oil pipeline and natural gas pipeline operations (transmission and distribution) depend on the continued availability of liquid hydrocarbons and natural gas. Operations in the company's natural gas distribution businesses are subject to seasonality. The company's assets produce carbon dioxide and emit methane.

Changes in environmental regulations may adversely affect performance and the implementation of Kyoto (Canada) may cause the company to incur additional costs. The U.S. Securities & Exchange Commission has commenced an informal inquiry into the US\$820 million sale transaction and the initial public offering by Enbridge Energy Management. It is not clear what the potential effect of this inquiry could be.

#### **Analyst's Certification**

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

#### **General Disclosure**

The information and opinions in this report were prepared by BMO Nesbitt Burns Inc. and BMO Nesbitt Burns Ltée./Ltd., collectively ("BMO NB"). BMO NB is not subject to U.S. rules with regard to the preparation of research reports and the independence of analysts. "BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale/institutional arms of Bank of Montreal and BMO NB in Canada, and BMO Capital Markets Corp. in the U.S. BMO Capital Markets Corp. is an affiliate of BMO NB. BMO NB and BMO Capital Markets Corp. are subsidiaries of Bank of Montreal. Bank of Montreal or its affiliates ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO NB research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein. The reader should assume that BMO NB, BMO Capital Markets Corp., Bank of Montreal or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein. The opinions, estimates and projections contained in this report are those of BMO NB as of the date of this report and are subject to change without notice. ### **Distribution of Ratings**

Rating	BMO	BMO	BMO	First Call
Category	Rating	Universe	I.B. Clients*	Universe**
Buy	Outperform	39%	41%	45%
Hold	Market Perform	52%	52%	47%
Sell	Underperform	9%	7%	8%

<sup>\*</sup> Reflects rating distribution of all companies where BMO Capital Markets has received compensation for Investment Banking services.

### **Ratings Key**

We use the following ratings system definitions:

OP = Outperform - Forecast to outperform the market;

Mkt = Market Perform - Forecast to perform roughly in line with the market;

Und = Underperform - Forecast to underperform the market;

(S) = speculative investment;

NR = No rating at this time;

R = Restricted – Dissemination of research is currently restricted.

Market performance is measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company. Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

#### **Dissemination of Research**

Our research publications are available via our web site http://bmocapitalmarkets.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Reuters. All of our research is made widely available at the same time to all BMO NB, BMO Capital Markets Corp. and BMO Nesbitt Burns Securities Ltd. client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

### **Additional Matters**

TO U.S. RESIDENTS: BMO Capital Markets Corp. and/or BMO Nesbitt Burns Securities Ltd., affiliates of BMO NB, furnish this report to U.S. residents and accept responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp. and/or BMO Nesbitt Burns Securities Ltd.

TO U.K. RESIDENTS: The contents hereof are intended solely for the use of, and may only be issued or passed onto, persons described in part VI of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2001.

BMO Nesbitt Burns Inc. and BMO Nesbitt Burns Ltée/Ltd. are Members of CIPF. BMO Capital Markets Corp. and BMO Nesbitt Burns Securities Ltd. are Members of SIPC.

"BMO Capital Markets" is a trade-mark of Bank of Montreal, used under licence.

"BMO (M-Bar roundel symbol)" is a registered trade-mark of Bank of Montreal, used under licence.

# Enbridge Inc.

(ENB-TSX; ENB-NYSE)

Stock Rating: Outperform **Industry Rating: Market Perform** 

Member of: **Top 15 Income Stock Selections** 

### Q2/07 Slightly Higher than Expected; **Outperform Rating Unchanged**

### **Event**

Enbridge reported Q2/07 EPS of \$0.41. After adjusting for (i) mark to market gains and losses; (ii) benefits arising from lower future corporate income taxation rates; (iii) dilution gains for Enbridge Energy Partners; (iv) taxation revaluation losses associated with the implementation of the federal government's Tax Fairness initiatives; and (v) colder than normal weather at Enbridge Gas Distribution, comparable Q2/07 EPS were \$0.36 versus our estimate of \$0.33 and a mean estimate of \$0.35. We do not normalize quarterly results for mark-to-market gains and losses and the positive or negative effect of weather. We will therefore be stating the quarter as \$0.37 per share.

**Impact** 

Neutral.

### **Forecasts**

Our diluted 2007 and 2008 EPS estimates of \$1.75 and \$1.97 are unchanged.

### Valuation

Our target price of \$40.50 reflects a weighted valuation approach: 18x diluted 2008E EPS of \$1.97 (12.5%), 2.5x 2008E book value per share of \$16.17 (12.5%), and a target yield of 3.10% (75%), assuming 2008E dividends per share of \$1.29.

### Recommendation

We believe that the shares are attractively valued at current levels. Our rating is Outperform.

**Changes** 

Quarterly EPS Q4/07E \$0.55 to \$0.51

### **Details & Analysis**

Enbridge reported Q2/07 EPS of \$0.41. After adjusting for (i) mark to market gains and losses; (ii) benefits arising from lower future corporate income taxation rates; (iii) dilution gains for Enbridge Energy Partners; (iv) taxation revaluation losses associated with the implementation of the federal government's Tax Fairness initiatives; and (v) colder than normal weather at Enbridge Gas Distribution, comparable Q2/07 EPS were \$0.36 versus our estimate of \$0.33 and a mean estimate of \$0.35. We do not normalize quarterly results for mark-to-market gains and losses and the positive or negative effect of weather. We will therefore be stating the quarter as \$0.37 per share. Quarterly and annual performances by segment are set out in Table 1.

We believe that the following points are relevant about quarterly performance and our outlook:

- The company highlighted that CAGR in its Enbridge Liquids Pipeline segment is expected to be about 16% for the period 2006 to 2011 and about 20% for the Enbridge Energy Partners segment over a similar time frame. Management also indicated that none of the projects currently under way contribute to 2007 earnings per share and have only a modest effect in 2008. This is consistent with our expectations. Earnings growth is expected to be skewed toward the latter half of the 2006 to 2011 forecast period. We note that management has been using these metrics in investor presentations since at least the beginning of July.
- We continue to expect the issuance of approximately \$550 million of equity in 2008 to fund the capital program that is currently under way, and highlighted in Table 2. We have assumed that an additional \$1 billion of equity is issued in 2010, when a significant number of the projects are either in commercial service or are substantially complete. We have not assumed that the current capital program is funded by asset sales. In total, we believe that the net equity deficiency associated with the current capital program is approximately \$2 billion.
- We believe that there are a number of assets in the company's portfolio that are either non-core, underperforming, or in which the company has an ownership interest that is higher than its medium- to long-term target. These assets include: 25% interest in CLH, Enbridge Offshore Pipelines, 182-MW, \$440 million wind farm that is currently under construction, and its 38.024 million ECT Preferred Unit investment in Enbridge Income Fund. We believe that the sale of any or all of these assets could substantially mitigate the potential need for future equity and, in the case of underperforming assets, actually increase consolidated corporate earnings. We do not expect additional corporate asset sales into either of Enbridge Income Fund or Enbridge Energy Partners, L.P. over the forecast period.
- As set out in Table 2, the Gateway Pipeline Project is no longer reflected in our estimates and has not been since April 2007.
- The company indicated on the conference call that it does not plan to appeal certain portions of the Ontario Energy Board's (OEB) recently issued Decision with Reason relating to fiscal 2007 delivery rates. We believe that:
  - o The decision could be challenged on the basis that it relied on a "Least Cost Standard" rather than the "Fair Return Standard" and clearly rejected higher deemed equity on the basis of the cost to customers, contrary to the 2004 determination of the Federal Court of Appeal;

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 4 **Enbridge Inc.** 

**BMO Capital Markets** 

- o It is inappropriate to implement a multi-year incentive agreement in order to "bootstrap" the utility to a total return on equity (i.e., rate of return on a stipulated quantity of equity) to which it is entitled in a cost of service regime without the assumption of additional risk. Shareholders are entitled to a Fair Return under a cost of service regime, and should not have to assume the risks that are incremental to this regime as part of an incentive arrangement to realize a Fair Return. The utility should have a Fair Return and appropriate deemed equity going into a multiperiod settlement period. Absent these key benchmarks, gains to shareholders will not likely endure past the end of the settlement period, as the proposed regulatory framework in Ontario for incentive rate structures presently contemplates full rebasing at the end of the settlement period. We do not believe that Enbridge is likely to use an Incentive Regulator regime to obtain a Fair Return, and we will watch how any future regulatory processes in this regard, unfold; and
- The strategic value of the utility to contract for capacity on pipelines bringing natural gas to market from frontier areas may be limited for a number of reasons: (i) consistent with the company's testimony at legislative hearings in 2006 and 2007 in Alaska regarding the Alaska Gas Inducement Act (AGIA), Enbridge is not likely to submit a bid pursuant to this process, unless such a bid is made in conjunction with Alaska producers. Bids are due by October 1, 2007; (ii) contracting from the production area to the first liquid hub rather than from the nearest liquid hub to the final delivery area may be problematic for regulatory approval, given that utility ratepayers in the Enbridge Gas Distribution area may be subsidizing all other gas consumers who are unwilling or unable to sign similar long-term natural gas transportation contracts. This may well be less of an issue if the utility were to be used to anchor additional expansions of affiliated pipelines into the delivery area. In this latter case, the utility would have to be mindful of its Affiliate Code of Conduct to ensure the full recovery of all firm natural gas transportation costs; and (iii) the Alaska gas pipeline is unlikely to be in service prior to 2016, too far into the future to justify the ongoing promise of financial returns that do not meet the comparable investment standard.

### **Estimates**

Our diluted 2007 and 2008 EPS estimates of \$1.75 and \$1.97 are unchanged.

### **Valuation**

Our target price of \$40.50 reflects a weighted valuation approach: 18x diluted 2008E EPS of \$1.97 (12.5%), 2.5x 2008E book value per share of \$16.17 (12.5%), and a target yield of 3.10% (75%), assuming 2008E dividends per share of \$1.29.

### Recommendation

We believe that the shares are attractively valued at current levels. Our rating is Outperform.

### Enbridge Inc. (ENB)

Last Daily Data Point: July 31, 2007

**BMO Capital Markets** 

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 4 **Enbridge Inc.** 

### **Company Risk Disclosure**

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. The company's operations are subject to complex regulation by a variety of provincial, state, and federal (Canada & the United States) agencies. A change in regulation could adversely affect performance. The company's oil pipeline and natural gas pipeline operations (transmission and distribution) depend on the continued availability of liquid hydrocarbons and natural gas. Operations in the company's natural gas distribution businesses are subject to seasonality. The company's assets produce carbon dioxide and emit methane.

Changes in environmental regulations may adversely affect performance and the implementation of Kyoto (Canada) may cause the company to incur additional costs. The U.S. Securities & Exchange Commission has commenced an informal inquiry into the US\$820 million sale transaction and the initial public offering by Enbridge Energy Management. It is not clear what the potential effect of this inquiry could be.

### **Analyst's Certification**

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

### **General Disclosure**

The information and opinions in this report were prepared by BMO Nesbitt Burns Inc. and BMO Nesbitt Burns Ltée./Ltd., collectively ("BMO NB"). BMO NB is not subject to U.S. rules with regard to the preparation of research reports and the independence of analysts. "BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale/institutional arms of Bank of Montreal and BMO NB in Canada, and BMO Capital Markets Corp. in the U.S. BMO Capital Markets Corp. is an affiliate of BMO NB. BMO NB and BMO Capital Markets Corp. are subsidiaries of Bank of Montreal. Bank of Montreal or its affiliates ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO NB research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein. The reader should assume that BMO NB, BMO Capital Markets Corp., Bank of Montreal or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein. The opinions, estimates and projections contained in this report are those of BMO NB as of the date of this report and are subject to change without notice. BMO NB endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. ### **Distribution of Ratings**

Rating	BMO	BMO	BMO	First Call
Category	Rating	Universe	I.B. Clients*	Universe**
Buy	Outperform	38%	47%	47%
Hold	Market Perform	52%	45%	46%
Sell	Underperform	10%	8%	7%

<sup>\*</sup> Reflects rating distribution of all companies where BMO Capital Markets has received compensation for Investment Banking services.

### **Ratings Key**

We use the following ratings system definitions:

OP = Outperform - Forecast to outperform the market;

Mkt = Market Perform - Forecast to perform roughly in line with the market;

Und = Underperform - Forecast to underperform the market;

(S) = speculative investment;

NR = No rating at this time;

R = Restricted - Dissemination of research is currently restricted.

Market performance is measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company. Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

#### **Dissemination of Research**

Our research publications are available via our web site http://bmocapitalmarkets.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Reuters. All of our research is made widely available at the same time to all BMO NB, BMO Capital Markets Corp. and BMO Nesbitt Burns Securities Ltd. client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

### Q2/07 Slightly Higher than Expected

**Impact** 

Slightly Positive

**Details & Analysis** 

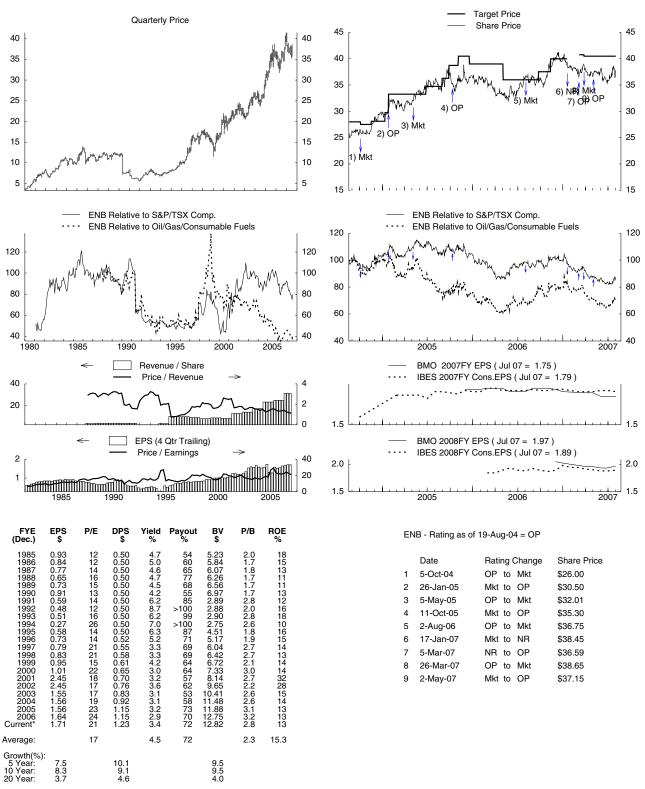

Enbridge reported Q2/07 EPS of \$0.41 per share. After adjusting for: (i) mark-to-market gains and losses; (ii) benefits arising from future lower corporate taxation rates; (iii) dilution gains from Enbridge Energy Partners; (iv) taxation revaluation losses associated with implementation of the federal government's Tax Fairness initiatives; and (v) colder than normal weather, comparable Q2/07 EPS were \$0.36 versus our estimate of \$0.33 and the mean estimate of \$0.35 per share. We do not normalize quarterly results for mark-to-market gains and losses and the positive or negative effect of weather. We will therefore be stating the quarter as \$0.37 per share. We continue to review the release. Conference call today at 9:00 a.m. ET; Tel: 1-617-213-4861 or 1-888-713-4199; 28881509; Replay: 1-888-286-8010 or 1-617-801-6888; Passcode: 69728638; Webcast: www.enbridge.com/investor.

### Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. The company's operations are subject to complex regulation by a variety of provincial, state, and federal (Canada & the United States) agencies. A change in regulation could adversely affect performance. The company's oil pipeline and natural gas pipeline operations (transmission and distribution) depend on the continued availability of liquid hydrocarbons and natural gas. Operations in the company's natural gas distribution businesses are subject to seasonality. The company's assets produce carbon dioxide and emit methane.

Changes in environmental regulations may adversely affect performance and the implementation of Kyoto (Canada) may cause the company to incur additional costs. The U.S. Securities & Exchange Commission has commenced an informal inquiry into the US\$820 million sale transaction and the initial public offering by Enbridge Energy Management. It is not clear what the potential effect of this inquiry could be.

### **SHARE PRICE PERFORMANCE:**

### **COMPANY SUMMARY:**

Enbridge operates the world's longest crude oil and liquids pipeline system. The company owns and operates Enbridge Pipelines Inc., a variety of affiliated pipelines in Canada, and has a 13% interest in Enbridge Energy Partners LP and a 72% interest in Enbridge Income Fund. Enbridge owns and operates Canada's largest gas distribution company and also holds 24.7% in the OCENSA pipeline in Colombia and a 25% interest in CLH of Spain.

All amounts in C\$ unless otherwise noted.

### Energy -- Pipeline and Power Utilities EARNINGS ON TRACK

#### **Event**

Enbridge announced first quarter recurring earnings per share that were slightly below expectations.

### **Impact**

Neutral. Given the seasonality of Enbridge's earnings and with new projects contributing to earnings later in the year, we believe the company is on track to meet our \$1.75 EPS estimate.

### **Valuation**

We are raising our rating on the shares of Enbridge to BUY from Hold to reflect share price weakness but we are maintaining our \$42.00 target price. Our target price is derived from a combination of valuation metrics including earnings and dividend yields relative to long-term interest rates, a dividend discount model and earnings multiples relative to its energy utility peers. Most of the project and financing risk associated with the near-term planned expansions will be incurred over the next two years, while earnings growth only begins to ramp up in 2009. Consequently, we anticipate our target price for Enbridge to escalate as projects are completed, risk declines, and earnings growth becomes more meaningful.

### Outlook

We are maintaining our 2007 and 2008 EPS estimates of \$1.75 and \$1.85, respectively. Our \$1.75 estimate for this year is at the bottom end of the company's guidance of \$1.75-1.85 per share and reflects some dilution from the recent 15 million share equity issue, lower rates of return on the company's regulated operations and our adjustments to exclude insurance gains related to lost income in prior periods. Earnings in 2008 (and modestly in the latter part of 2007) should benefit modestly from the startup of the Long Lake Pipeline, Surmont Diluent Lateral

Canaccord Adams is the global capital markets group of Canaccord Capital Inc. (CCI: TSX|AIM)

The recommendations and opinions expressed in this Investment Research accurately reflect the Investment Analyst's personal, independent and objective views about any and all the Designated Investments and Relevant Issuers discussed herein. 3 May 2007

and the Athabaska Terminal. In 2008, the first phase of Southern Access, Waupisoo Pipeline, and the Stonefell Terminal projects are expected to come online and could add modestly to earnings in the later part of the year. Despite the addition of new projects over the next two years, near-term earnings growth is under the rate experienced in the last few years, with longer-term growth (2009 and beyond) expected to increase significantly as larger projects are completed. The company expects EPS growth over the next five years to average 8-10%. Growth from acquisitions appears to be on the back burner as Enbridge continues to see high valuations on assets for sale and has its hands full with North American projects. That said, Enbridge continues to examine opportunities to purchase existing underutilized infrastructure to transport oil to the Gulf Coast.

### **Earnings summary**

Enbridge reported first quarter recurring (and weather normalized) earnings of \$0.61 versus \$0.62 last year, slightly below the consensus estimate of \$0.63. Including the impact of modestly colder than normal weather at Enbridge Gas Distribution (EGD), earnings were \$0.62 versus \$0.56 per share. Net reported earnings per share of \$0.65 for the quarter include \$11.3 million of insurance proceeds at Enbridge Offshore Pipelines stemming from the impact of Hurricane Katrina in 2005 (\$5.3 million for infrastructure damage and \$6.0 million for lost earnings in prior periods). Earnings benefitted from a full quarter contribution of both the Spearhead Pipeline (contributed two months to Q1/06) and Olympic Pipeline (contributed only one month in Q1/06), improved earnings at EGD and Noverco, and reduced interest expenses as a result of the February repayment of \$200 million of 7.8% preferred shares. On the negative side, earnings were impacted by higher labour expenses and increased taxes on the Terrace system at Enbridge System, lower earnings at Enbridge Offshore Pipelines (despite 2006 results being impacted by lasting effect of 2005 hurricanes), and unrealized (non-cash) derivative losses. For additional details on the first quarter results, please refer to Figure 1.

### **Noteworthy items**

- 15 million equity issue closed February 2, 2007
  - o Fully diluted shares outstanding now at 357.4 million
- Potential to improve EGD earnings through rate decision
  - Potential to increase equity component of rate base to 38% from 35%
  - Could improve consolidated EPS by 2-3 cents
  - o Regulatory decision expected in the second quarter
- Enbridge Offshore Pipelines earnings contribution lower than expected
  - \$3.8 million of earnings contribution after removing \$11.3 million total insurance proceeds related to 2005 hurricane impact on prior periods
    - Could receive more in future periods
  - Significantly below the C\$30-40 million of annual earnings contribution originally expected at time of purchase
  - Earnings should improve once production from new projects is tied in
    - Neptune Pipeline expected to be connected in Q4/07
    - Atlantis production expected to be connected in early 2008
    - Thunder Horse production expected to be connected in early 2009
- Aux Sable profits locked in for 2007
  - o Expected to be >\$10 million through hedges

- 5 Canaccord Adams or any of its affiliated companies is a market maker or liquidity provider in the securities of the relevant issuer or in any related derivatives.
- In the past 12 months, Canaccord Adams, its partners, affiliated companies, officers or directors, or any authoring analyst involved in the preparation of this investment research has provided services to the relevant issuer for remuneration, other than normal course investment advisory or trade execution services.
- 7 Canaccord Adams intends to seek or expects to receive compensation for Corporate Finance/Investment Banking services from the relevant issuer in the next six months.
- 8 The authoring analyst, a member of the authoring analyst's household, or any individual directly involved in the preparation of this investment research, has a long position in the shares or derivatives, or has any other financial interest in the relevant issuer, the value of which increases as the value of the underlying equity increases.
- The authoring analyst, a member of the authoring analyst's household, or any individual directly involved in the preparation of this investment research, has a short position in the shares or derivatives, or has any other financial interest in the relevant issuer, the value of which increases as the value of the underlying equity decreases.
- Those persons identified as the author(s) of this investment research, or any individual involved in the preparation of this investment research, have purchased/received shares in the relevant issuer prior to a public offering of those shares, and such person's name and details are disclosed above.
- A partner, director, officer, employee or agent of Canaccord Adams and its affiliated companies, or a member of his/her household, is an officer, or director, or serves as an advisor or board member of the relevant issuer and/or one of its subsidiaries, and such person's name is disclosed above.
- As of the month end immediately preceding the date of publication of this investment research, or the prior month end if publication is within 10 days following a month end, Canaccord Adams or its affiliate companies, in the aggregate, beneficially owned 1% or more of any class of the total issued share capital or other common equity securities of the relevant issuer or held any other financial interests in the relevant issuer which are significant in relation to the investment research (as disclosed above).
- As of the month end immediately preceding the date of publication of this investment research, or the prior month end if publication is within 10 days following a month end, the relevant issuer owned 1% or more of any class of the total issued share capital in Canaccord Adams or any of its affiliated companies.
- **14** Other specific disclosures as described above.

Canaccord Adams is the business name used by certain subsidiaries of Canaccord Capital Inc., including Canaccord Adams Inc., Canaccord Adams Limited, and Canaccord Adams, a division of Canaccord Capital Corporation. Clients of Canaccord Adams, in the past 12 months, may have been clients of Canaccord Capital Corporation, Canaccord Capital (Europe) Limited, Canaccord Capital Corporation USA Inc., and/or Adams Harkness Financial Group Ltd.

The authoring analysts who are responsible for the preparation of this investment research are employed by Canaccord Adams, a securities broker-dealer with principal offices located in Vancouver, Calgary, Toronto, Montreal (all Canada), Boston, New York, San Francisco (all US) and London (UK).

In the event that this is compendium investment research (covering six or more relevant issuers), Canaccord Adams and its affiliated companies may choose to provide specific disclosures of the subject companies by reference, as well as its policies and procedures regarding the dissemination of investment research. To access this material or for more information, please send a request to Canaccord Adams Research, Attn: Disclosures, P.O. Box 10337 Pacific Centre, 2200-609 Granville Street, Vancouver, BC, Canada V7Y 1H2 or disclosures@canaccordadams.com.

The authoring analysts who are responsible for the preparation of this investment research have received (or

3 May 2007

will receive) compensation based upon (among other factors) the Corporate Finance/Investment Banking revenues and general profits of Canaccord Adams. However, such authoring analysts have not received, and will not receive, compensation that is directly based upon or linked to one or more specific Corporate Finance/Investment Banking activities, or to recommendations contained in the investment research. Canaccord Adams and its affiliated companies may have a Corporate Finance/Investment Banking or other relationship with the company that is the subject of this investment research and may trade in any of the designated investments mentioned herein either for their own account or the accounts of their customers, in good faith or in the normal course of market making. Accordingly, Canaccord Adams or their affiliated companies, principals or employees (other than the authoring analyst(s) who prepared this investment research) may at any time have a long or short position in any such designated investments, Related designated investments or in options, futures or other derivative instruments based thereon. Some regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. This investment research has been prepared in accordance with Canaccord Adams' policy on managing conflicts of interest, and information barriers or firewalls have been used where appropriate. Canaccord Adams' policy is available upon request.

The information contained in this investment research has been compiled by Canaccord Adams from sources believed to be reliable, but (with the exception of the information about Canaccord Adams) no representation or warranty, express or implied, is made by Canaccord Adams, its affiliated companies or any other person as to its fairness, accuracy, completeness or correctness. Canaccord Adams has not independently verified the facts, assumptions, and estimates contained herein. All estimates, opinions and other information contained in this investment research constitute Canaccord Adams' judgement as of the date of this investment research, are subject to change without notice and are provided in good faith but without legal responsibility or liability.

Canaccord Adams salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our proprietary trading desk that reflect opinions that are contrary to the opinions expressed in this investment research. Canaccord Adams' affiliates, proprietary trading desk, and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this investment research.

This investment research is provided for information purposes only and does not constitute an offer or solicitation to buy or sell any designated investments discussed herein in any jurisdiction where such offer or solicitation would be prohibited. As a result, the designated investments discussed in this investment research may not be eligible for sale in some jurisdictions. This investment research is not, and under no circumstances should be construed as, a solicitation to act as a securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. This material is prepared for general circulation to clients and does not have regard to the investment objectives, financial situation or particular needs of any particular person. Investors should obtain advice based on their own individual circumstances before making an investment decision. To the fullest extent permitted by law, none of Canaccord Adams, its affiliated companies or any other person accepts any liability whatsoever for any direct or consequential loss arising from or relating to any use of the information contained in this investment research.

### For Canadian Residents:

Avg. Daily Vol. (000):	812.2
Market Capitalization (M):	\$13,248.5
Shares Out. (M) basic:	357.2
Current Dividend/Share:	\$1.23
Current Dividend Yield:	3.3%

#### **EARNINGS SUMMARY:**

FYE Dec	2005A	2006A	2007E	2008E
EPS:	\$1.59	\$1.74	\$1.75	\$1.90
P/E:	23.3x	21.3x	21.2x	19.5x
CFPS:	\$3.75	\$3.85	\$3.90	\$4.10
P/CF:	9.9x	9.6x	9.5x	9.0x

### **SHARE PRICE PERFORMANCE:**

### **COMPANY SUMMARY:**

Enbridge operates the world's longest crude oil and liquids pipeline system. The company owns and operates Enbridge Pipelines Inc., a variety of affiliated pipelines in Canada, and has a 13% interest in Enbridge Energy Partners LP and a 72% interest in Enbridge Income Fund. Enbridge owns and operates Canada's largest gas distribution company and also holds 24.7% in the OCENSA pipeline in Colombia and a 25% interest in CLH of Spain.

All amounts in C\$ unless otherwise noted.

### **Energy -- Pipeline and Power Utilities**

# Q2 EARNINGS IN LINE; GROWTH PROJECTS CONTINUE TO ADVANCE

#### **Event**

Target: C\$42.00

Enbridge announced second quarter recurring earnings per share that were in line with expectations.

### **Impact**

Neutral. Enbridge's share price will likely be more influenced by its future growth initiatives and less influenced by slight differences between actual and expected quarterly earnings.

### **Valuation**

We are maintaining our BUY rating and C\$42.00 target price on the shares of Enbridge. Our target price is derived from a combination of valuation metrics including earnings and dividend yields relative to long-term interest rates, a dividend discount model and earnings multiples relative to its energy utility peers. Most of the project and financing risk associated with the near-term planned expansions will be incurred over the next two years, while we expect earnings growth will only begin to ramp up in 2009. Consequently, we anticipate our target price for Enbridge to escalate as projects are completed, risk declines, and earnings growth becomes more meaningful.

### Outlook

We are maintaining our 2007 normalized EPS estimate of \$1.75 but we are increasing our 2008 estimate modestly to \$1.90 from \$1.85. With the first half of the year under its belt, Enbridge appears on track to achieve our 2007 estimate. In 2008, earnings should benefit from the positive impact of the startup of the Long Lake Pipeline, Surmont Diluent Lateral and the Athabaska Terminal. Also in 2008, Waupisoo Pipeline, the Stonefell Terminal and the first phase of Southern Access, should come on-line and add to earnings later in the year. The company

Canaccord Adams is the global capital markets group of Canaccord Capital Inc. (CCI: TSX|AIM)

The recommendations and opinions expressed in this Investment Research accurately reflect the Investment Analyst's personal, independent and objective views about any and all the Designated Investments and Relevant Issuers discussed herein. For important information, please see the Important Disclosures section in the appendix of this document or visit <a href="http://www.canaccordadams.com/research/Disclosure.htm">http://www.canaccordadams.com/research/Disclosure.htm</a>.

2 August 2007

continues to advance its impressive portfolio of growth projects that forms the basis of its 8-10% annual average EPS growth estimate over the next five years (note: this equates to about 50-60% higher earnings and dividends in five years). That said, the growth in earnings is expected to be back-end weighted (beyond 2008) as larger capital projects are completed. To fund its growth projects, the company will use internally generated funds, debt, common equity, and possibly hybrid equity. While management has not yet determined the size and timing of a potential equity issue, it does expect a 2008 common equity issue of a similar size as its 2007 issue of \$581 million.

### **Earnings summary**

Enbridge reported second quarter recurring (and weather-normalized) earnings of \$0.34 per share versus \$0.35 last year, in line with the consensus estimate of \$0.35. Including the impact of modestly colder-than-normal weather at Enbridge Gas Distribution (EGD), earnings were \$0.37 versus \$0.32 per share. Net reported earnings per share for the second quarter were \$0.41, which includes \$11.8 million of dilution gains and \$3.5 million of non-cash tax gains. For the first half of the year, weather-normalized recurring EPS was \$0.95 versus \$0.97.

Positives in the second quarter include: a higher contribution from an increased interest in Enbridge Energy Partners (from 10.9% to ~16%); improved CLH earnings from higher tariffs and transportation volumes; and lower corporate expenses due to higher capitalized interest on organic growth projects and debt repayment. Offsetting these positive contributions were: lower earnings at the Enbridge System from higher labour and pipeline integrity expenses and taxes on the Terrace System; natural production declines at Enbridge Offshore Pipelines; and non-cash derivative losses at Aux Sable. For additional details on the second quarter results, please refer to Figure 1.

### **Noteworthy items**

- EGD rate decision
  - Equity component of rate base raised to 36% from 35%
  - Approved rate base increase of 3%
  - Allowed return on equity lowered to 8.39% from 8.74%
  - Positive retroactive adjustment expected in H2/07
    - Could improve EPS by ~1¢ per unit
- Enbridge Offshore Pipelines earnings contribution lower than expected
  - Natural production declines
  - New connections delayed due to 2005 hurricane impact
  - Earnings should improve as scheduled tie-ins occur
    - Neptune Pipeline expected to be connected in September 2007
    - Atlantis production expected to be connected in Q4/07
    - Thunder Horse production expected to be connected in late 2008 or early 2009
    - Shenzi in 2009

2 August 2007

- · Capital cost update
  - Alberta Clipper
    - Now: \$2.0 billion in Canada and US\$1.0 billion in the US
    - Was: \$1.4 billion in Canada and \$0.7 billion in the US
  - o Southern Access Mainline Expansion;
    - Now: \$0.3 billion in Canada and US\$1.8 billion in the US
    - Was: \$0.135 billion in Canada and US\$815-US\$980 million in the US
  - Southern Lights

• Now: US\$1.3 billion

Was: US\$0.92 billion

- Aux Sable interest has \$8.3 million non-cash derivative losses in the quarter
  - Should reverse in H2/07
  - o Profits of >\$10 million locked-in for 2007 through hedges

### Q1 In Line But Reducing '08 Slightly On Project Timing and Financing Needs

Filed: 2007-09-10

- Enbridge reported Q1'07 EPS of \$0.65 vs. our estimate of \$0.62 and \$0.62 in Q1'06. Management confirmed our thesis that growth will remain slow through 2008 but then begin to accelerate in 2009. We are making modest downward reductions to '08E EPS and our price target (to \$40 from \$41).
- The Q1 results were slightly higher than we anticipated but only because of a \$0.02 per share insurance payment on the offshore pipelines that really relates to a prior year. Otherwise, earnings per share were in line with expectations and essentially flat to last year.
- Growth will remain modest in 2008 as construction of new projects continues. We are reducing our '08 EPS estimate by \$0.05 due to delays in bringing on the Ontario wind project and the likely issuance of more equity sometime during the year (we assume mid-year '08).
- Despite the slow near-term growth, we concur with management that the 2009 and especially 2010 picture looks very attractive. Our Sector Performer rating balances the premium valuation and relatively slow nearterm EPS growth against the positive future outlook.

### **Stock Price Performance**

CIBC World Markets does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

See "Important Disclosures" section at the end of this report for important required disclosures, including potential conflicts of interest.

See "Price Target Calculation" and "Key Risks to Price Target" sections at the end of this report, where applicable.

### **Investment Summary**

Enbridge reported Q1'07 EPS of \$0.65 vs. our estimate of \$0.62 and \$0.62 in Q1'06. Management confirmed our thesis that growth will remain slow through 2008 but then begin to accelerate in 2009. We are making modest downward reductions to our '08 EPS estimate and our price target.

For a breakdown and analysis of earnings by segment, please see the appendix to this comment.

The Q1 results were slightly higher than we anticipated but only because of a \$0.02 per share insurance payment on the offshore pipelines that really relates to a prior year. Otherwise, earnings per share were in line with expectations and essentially flat to last year.

A lack of growth was apparent across most of the business units. Earnings were up only modestly on a normalized basis for the pipeline businesses. On a per share basis, there was no significant growth in pipeline earnings. Gas Distribution is performing well and will likely earn in excess of the allowed ROE. We see Gas Distribution as the one bright spot among the operating business units at Enbridge in 2007.

We believe growth will remain modest in 2008 as construction of new projects continues. Management confirmed so much on the conference call. We are reducing our '08 EPS estimate by \$0.05 due to delays in bringing on the Ontario wind project and the likely issuance of more equity sometime during the year (we assume \$500 mln mid-year '08).

Despite the slow near-term growth, we concur with management that the 2009 and especially 2010 picture looks very attractive. In a full report on the company dated September 18, 2006, we quantified the potential growth in earnings contribution from Enbridge Energy Partners (EEP, SP) at about \$60 million between 2006 and 2010. With the major part of EEP's growth (Southern Access) on track, this analysis still holds. As a result, we think Enbridge can grow EPS at a 10%-12% compound annual rate in the 2009–2011 timeframe.

The key questions for Enbridge's stock performance now are:

- 1. How much of the future growth is already reflected in the stock?
- 2. How much of the remaining growth not in the stock should investors pay for today?

The answer to the first question is that some but not all of the growth is in the stock. Some of it must be because Enbridge still trades at a premium to the group despite having a slower than average growth rate right now. The EV/EBITDA multiple of about 10.5x is considerably higher than the group average of about 8.5x and higher than TransCanada (TRP, SO) at about 9.3x. As is well documented, Enbridge also trades at a higher P/E multiple than the group, even now after some recent underperformance.

On the other hand, 10.5x EV/EBITDA is not expensive any more when it comes to pipeline stocks. Our analysis suggests that Spectra (SE, SP) trades at about 10.0x EV/EBITDA and that U.S. pipeline master limited partnerships trade at more like 12.0x. Once the superior growth at Enbridge kicks in, the 10.5x EV/EBITDA multiple may look too low. That is why we believe not all of the future growth is factored into the stock price.

Whether investors will and should pay for that growth today is a challenging question. Achieving the growth is not without risk. We see a few key risks:

- MLP policy framework The company's master limited partnership growth depends on the continuation of a policy framework in the U.S. that supports the structure. While we believe the FERC is supportive, pipeline shippers have challenged the model in court. In particular, the FERC policy of allowing a tax allowance in rates has been the subject of recent court challenges. Any court-imposed change in tax treatment could impact the economics of MLPs.
- Capital cost risk Cost escalation has been a common theme for all types
  of energy infrastructure lately. In the Q1 presentation, Enbridge
  acknowledged it has partial or full risk on most projects. Returns and
  ultimate growth are contingent upon bringing projects in on time and on
  budget.
- Financing risk Management acknowledged the company will likely have to issue more common equity to complete the construction-spending program in 2008/9. Market conditions at the time equity is required will dictate the cost of any new financing. New financing needs can also overhang valuation in the near-term.

These risks are far from insurmountable. Enbridge is a top project manager and has likely built adequate cushion into its budgets. Also, we believe market appetite for Enbridge shares will be strong when financing attractive growth initiatives.

Nevertheless, risks cannot be ignored and we do not think the market will totally ignore them. Therefore, until sometime in 2008, we doubt all of the company's new growth will factor into Enbridge's share price. Our view is essentially unchanged following the Q1 report. We recommend the stock as a core holding for the medium and long-term but doubt it will outperform the group this year. Our Sector Performer rating and \$40 target price are consistent with this view.

## Appendix: Summary of Q1'07 and Full-Year **Estimates by Segment**

Source: Company reports and CIBC World Markets Inc.

<sup>1.</sup> Unusual items in Q1/07 include unrealized losses on derivative instruments at EEP of \$2 million, insurance proceeds of \$5.3 million on damaged parts at Offshore Pipelines, \$2.8 million mtm loss at Aux Sable and \$4.3 million Tidal Energy mtm loss.

<sup>2.</sup> Unusual items in 2006 include \$6.5 million of EEP non-cash derivative fair value gains, \$48.9 million adjustment from changes to future federal and provincial income tax rates and a \$4 million Noverco dilution gain.

### **Liquids Pipelines**

Liquids Pipelines reported earnings of \$68.9 million for the quarter, an increase of \$2.6 million from the same time period in 2006. Improved earnings came from the full three months operation of the Olympic Pipeline and Spearhead Pipeline (which commenced operations in February and March 2006, respectively). Higher transportation revenues will likely be offset by increasing operational costs in the industry. We see the Liquids Pipelines segment flat for the remainder of the year and until 2008, when new pipelines come into service.

### **Gas Pipelines**

Normalized first quarter earnings where \$20.4 million compared to \$16 million in Q1'06. Enbridge Offshore Pipelines earnings included insurance proceeds of \$6 million from business interruption policies (this amount was not deducted as an adjusting item). The Gas Pipelines segment should see slight earnings growth to 2006 as the Neptune Pipeline and Vector expansion come into service near the latter part of 2007. However, strength in the C\$ could offset this.

### **Sponsored Investments**

Normalized earnings in the Sponsored Investments segment were \$19.8 million, up from the first quarter of 2006. Improved results primarily came from Enbridge Energy Partners due to increased ownership interest and gains from gas storage and lower operating costs on the Lakehead System, offset slightly by gas processing margins and higher gas measurement losses. Q1 operational issues at EEP should subside and new pipelines will increase earnings from the subsidiary in the back half of '07.

### **Gas Distribution and Services**

Excluding unusual weather impacts, Enbridge Gas Distribution and Services reported earnings that were \$5.2 million higher than Q1'06 due to customer growth and higher storage and transportation capacity transaction revenues. For Q1'07, Enbridge Gas Distribution realized returns on a 35% common equity ratio and we anticipate an increase in the ratio to around 36% - 38%, upon a regulatory decision. A partial rate increase will also be effective April 1 2007.

### International

Earnings for the International segment in Q1'07 were up from Q1'06 due to higher average transportation tariffs, longer hauls and a stronger Euro.

### Corporate

Adjusted corporate costs were lower in Q1'07 compared to Q1'06 due to decreased interest expense from lower corporate debt levels, which were repaid from the issuance of common equity.

# **Price Target Calculation**

Our \$40 price target is derived from our dividend discount valuation analysis, with regard and reference to 2008E relative P/E and EV/EBITDA. Our \$40 target price implies a 10.4x 2008E EV/EBITDA multiple and a 21.6x multiple of our 2008E EPS forecast of \$1.85. The price target also implies a 3.0% dividend yield. Enbridge's earnings and dividend growth rate have been among the highest of the Canadian pipelines and utilities group, with a relatively low-risk profile. We also believe that Enbridge will have earnings acceleration later in the decade. For these reasons, despite the low growth forecasts we are carrying for the very near-term, we continue to use a target multiple at a premium to the group average for the Canadian pipeline and utility stocks.

# **Key Risks to Price Target**

Enbridge could fall short of our 2007 and 2008 earnings forecasts (and fail to meet our target price) for various reasons, including (but not limited to) the impact of negative regulatory decisions, and unanticipated weaker commodity prices. Increased competition in oil pipelining introduces risks to returns on existing and new oil pipeline assets. Increased competition for pipeline and utility assets by financial players also raises risks to returns on possible acquisitions. The pipeline and utility sector, as a whole, is sensitive to changes in Canadian long-term bond yields. If broader market risk dissipates and bond yields rise, shares could be negatively impacted.

# **Our EPS estimates are shown below:**

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly	
2006 Current	\$0.62A	\$0.35A	\$0.27A	\$0.50A	\$1.74A	
2007 Prior	\$0.62E	\$0.36E	\$0.26E	\$0.51E	\$1.75E	
2007 Current	\$0.65A	\$0.36E	\$0.25E	\$0.50E	\$1.75E	
2008 Prior					\$1.90E	
2008 Current			-		\$1.85E	

### **IMPORTANT DISCLOSURES:**

**Analyst Certification:** Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

**Potential Conflicts of Interest:** Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

Pipelines, Utilities, & Power

# Enbridge Inc.

Q2 In Line - Positive 3-5 Year Outlook Intact

- Enbridge reported normalized Q2'07 EPS of \$0.36 in line with our estimate of \$0.36 and \$0.35 in Q2'06. Despite slow growth now, projects driving EPS in the 2009/10 timeframe are more visible than ever. We are maintaining our estimates, Sector Performer rating and \$40 price target.
- We had been concerned that exposure to the US\$ may cause Enbridge to reduce 2007 guidance. With frac spreads at historically wide levels, however, we now see little, if any, risk to this year's earnings range (\$1.75-\$1.85).
- Risks we cited only one quarter ago, namely project approvals and MLP growth, are no longer major concerns, in our opinion. Financing the growth is perhaps an emerging risk, though, as capital markets remain choppy. Our models include a \$700 million common equity issue in mid-2008.
- Enbridge continues trading at a premium to the group with a 10.5x EV/EBITDA multiple (8.5x is average) and 20x forward P/E multiple (18x is average). But we concur with management that 8%-10% growth is doable in the 2007-2011 timeframe, so some premium is justified, in our view.

### **Stock Price Performance**

CIBC World Markets does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

See "Important Disclosures" section at the end of this report for important required disclosures, including potential conflicts of interest.

See "Price Target Calculation" and "Key Risks to Price Target" sections at the end of this report, where applicable.

# **Investment Summary**

Enbridge reported normalized Q2'07 EPS of \$0.36 in line with our estimate of \$0.36 and \$0.35 in Q2'06. Despite slow growth now, projects driving EPS in the 2009/10 timeframe are more visible than ever. We are maintaining our estimates, Sector Performer rating and \$40 price target.

For a breakdown and analysis of earnings by segment, please see the appendix.

We had been concerned that exposure to the US\$ may cause Enbridge to reduce 2007 guidance. Management disclosed on the conference call that a \$0.01 change in the US\$/C\$ exchange rate impacts net income by just over \$1.0 million. We believe the guidance was based on an exchange rate of about \$0.88 so the exchange rate impact this year could be about \$7 million.

With frac spreads at historically wide levels, however, we now see little if any risk to this year's earnings guidance range (\$1.75-\$1.85). An earnings reduction even in the range of \$7-\$10 million can probably easily be made up at Aux Sable this year. In addition, the strong Euro is boosting results from CLH Spain and also offsetting the drag on earnings from U.S. assets.

Meanwhile, the positive forward view (2009–2011) is clearer. Risks we cited only a quarter ago, namely project approvals and MLP growth, are no longer major concerns, in our opinion. Enbridge has achieved approvals on sufficient new projects to carry it through 2011 at least. The MLP will be used extensively, but the FERC and U.S. courts have recently further entrenched this structure by including MLP returns in pipeline toll calculations and by confirming tax allowances in pipeline rates whether the corporate entity (MLP) pays tax or not.

We also alluded to a third risk in our Q1 commentary that is unfortunately more present today than it was three months ago: financing. As long as capital markets remain choppy, finding the some \$5 billion at EEP (EEP-SP) and \$9 billion at ENB that are required in the 2007–2010 timeframe could pose challenges. The good news for Enbridge is that most debt financing costs will be passed through to customers under negotiated tolling arrangements.

The cost of equity is harder to predict. Management noted on the conference call that a "comparable amount" of equity raised this year will likely need to be raised again in 2008. With about \$600 million raised this year and capital expenditures accelerating into next year, our models include a \$700 million common equity issue in mid-2008. Absent asset sales, we see the \$700 million as a baseline forecast given that our 2008 models show the company generating \$1.35 billion in cash flow, paying \$470 million in dividends and investing \$3.5 billion for a total financing gap of around \$2.6 billion.

Asset sales are possible, in our view, though on the conference call management showed strong reluctance to part with quality subsidiaries such as Gas Distribution. The company must ultimately show prudence on the matter and sell assets – including part of or all of Gas Distribution – if these assets appear to hold their private market valuations to a greater extent than the stock holds its own valuation in the next 6-12 months. The issue remains unresolved for now.

Enbridge continues trading at a premium to the group with a 10.5x EV/EBITDA multiple (8.5x is average) and 20x forward P/E multiple (18x is average). But based on our preliminary 2008–2010 modeling of both ENB and EEP, we concur with management that 8%-10% growth is doable in the 2007-2011 timeframe, so some premium is justified. It is still hard to know when the market will reward this growth, especially with a sizeable equity issue coming, but we recommend holding Enbridge shares through the coming 3-5 year period.

### **Liquids Pipelines**

Liquids Pipelines reported earnings of \$65.8 million for the quarter, a decrease of \$2.8 million from the same time period in 2006. The decrease was attributable to the Enbridge System, which saw earnings decline due to higher compensation expenses, higher pipeline integrity costs and increased Terrace

<sup>1.</sup> Unusual items in Q2/07 include unrealized gains on derivative instruments at EEP of \$0.4 million, dilution gain on EEP Class A unit issuance of \$11.8 million, revalued future income taxes due to tax rate changes of \$3.5 million, unrealized derivative fair value loss of \$0.2 million in Energy Services, unrealized derivative fair value loss of \$8.3 million at Aux Sable.

<sup>2.</sup> Unusual items in 2006 include \$6.5 million of EEP non-cash derivative fair value gains, \$48.9 million adjustment from changes to future federal and provincial income tax rates and a \$4 million Noverco dilution gain.

taxes. Results in the back half should be better than the first half, as certain costs will not be recurring. Also, we see the Liquids Pipelines segment improving from 2007 levels as new pipelines come into service.

### **Gas Pipelines**

Second quarter earnings were \$13.4 million compared to \$15.9 million in Q2'06. Earnings were lower due to Offshore Pipelines, which saw less deliveries resulting from natural production declines. Key drilling projects in the area continue to be delayed. The Gas Pipelines segment should see slight earnings growth to 2006 as the Neptune Pipeline and Vector expansion come into service near the latter part of 2007. However, strength in the C\$ could offset this.

### **Sponsored Investments**

Normalized earnings in the Sponsored Investments segment were \$21.5 million, up from the second quarter of 2006. Improved results primarily came from Enbridge Energy Partners due to increased ownership interest. New pipelines will increase earnings from this segment in the back half of '07.

### **Gas Distribution and Services**

Normalized Enbridge Gas Distribution and Services reported earnings that were \$2.2 million higher than Q2'06 mainly due to customer growth and higher storage and transportation capacity transaction revenues. During the quarter, EGD was granted a 1% increase in the deemed equity component (from 35% to 36%). This rate increase was effective April 1 2007.

### **International**

Earnings for the International segment in Q2'07 were up \$2.7 million from Q2'06 due to higher average transportation tariffs, higher volumes and a stronger Euro.

### Corporate

Normalized corporate costs were lower in Q2'07 compared to Q2'06 as the company began capitalizing interest on certain organic growth projects which were financed through corporate debt.

# **Price Target Calculation**

Our \$40 price target is derived from our dividend discount valuation analysis, with regard and reference to 2008E relative P/E and EV/EBITDA. Our \$40 price target implies a 10.4x 2008E EV/EBITDA multiple and a 21.6x multiple of our 2008E EPS forecast of \$1.85. The price target also implies a 3.0% dividend yield. Enbridge's earnings and dividend growth rate have been among the highest of the Canadian pipelines and utilities group, with a relatively low-risk profile. We also believe that Enbridge will have earnings acceleration later in the decade. For these reasons, despite the low growth forecasts we are carrying for the very near term, we continue to use a target multiple at a premium to the group average for the Canadian pipeline and utility stocks.

# **Key Risks to Price Target**

Enbridge could fall short of our 2007 and 2008 earnings forecasts (and fail to meet our price target) for various reasons, including (but not limited to) the impact of negative regulatory decisions, and unanticipated weaker commodity prices. Increased competition in oil pipelining introduces risks to returns on existing and new oil pipeline assets. Increased competition for pipeline and utility assets by financial players also raises risks to returns on possible acquisitions. The pipeline and utility sector, as a whole, is sensitive to changes in Canadian long-term bond yields. If broader market risk dissipates and bond yields rise, shares could be negatively impacted.

# **Our EPS estimates are shown below:**

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly	
2006 Current	\$0.62A	\$0.35A	\$0.27A	\$0.50A	\$1.74A	
2007 Prior	\$0.65A	\$0.36E	\$0.25E	\$0.50E	\$1.75E	
2007 Current	\$0.65A	\$0.36A	\$0.25E	\$0.50E	\$1.75E	
2008 Current					\$1.85E	

### **IMPORTANT DISCLOSURES:**

**Analyst Certification:** Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

**Potential Conflicts of Interest:** Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

# **Important Disclosure Footnotes for Enbridge Inc. (ENB)**

- 2a Enbridge Inc. is a client for which a CIBC World Markets company has performed investment banking services in the past 12 months.
- 2c CIBC World Markets Inc. has managed or co-managed a public offering of securities for Enbridge Inc. in the past 12 months.
- 2e CIBC World Markets Inc. has received compensation for investment banking services from Enbridge Inc. in the past 12 months.

Enbridge Inc.

Pipelines, Utilities, & Power

Q2 In Line - Positive 3-5 Year Outlook Intact

- Enbridge reported normalized Q2'07 EPS of \$0.36 in line with our estimate of \$0.36 and \$0.35 in Q2'06. Despite slow growth now, projects driving EPS in the 2009/10 timeframe are more visible than ever. We are maintaining our estimates, Sector Performer rating and \$40 price target.
- We had been concerned that exposure to the US\$ may cause Enbridge to reduce 2007 guidance. With frac spreads at historically wide levels, however, we now see little, if any, risk to this year's earnings range (\$1.75-\$1.85).
- Risks we cited only one quarter ago, namely project approvals and MLP growth, are no longer major concerns, in our opinion. Financing the growth is perhaps an emerging risk, though, as capital markets remain choppy. Our models include a \$700 million common equity issue in mid-2008.
- Enbridge continues trading at a premium to the group with a 10.5x EV/EBITDA multiple (8.5x is average) and 20x forward P/E multiple (18x is average). But we concur with management that 8%-10% growth is doable in the 2007-2011 timeframe, so some premium is justified, in our view.

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 10

# **Investment Summary**

Enbridge reported normalized Q2'07 EPS of \$0.36 in line with our estimate of \$0.36 and \$0.35 in Q2'06. Despite slow growth now, projects driving EPS in the 2009/10 timeframe are more visible than ever. We are maintaining our estimates, Sector Performer rating and \$40 price target.

For a breakdown and analysis of earnings by segment, please see the appendix.

We had been concerned that exposure to the US\$ may cause Enbridge to reduce 2007 guidance. Management disclosed on the conference call that a \$0.01 change in the US\$/C\$ exchange rate impacts net income by just over \$1.0 million. We believe the guidance was based on an exchange rate of about \$0.88 so the exchange rate impact this year could be about \$7 million.

With frac spreads at historically wide levels, however, we now see little if any risk to this year's earnings guidance range (\$1.75-\$1.85). An earnings reduction even in the range of \$7-\$10 million can probably easily be made up at Aux Sable this year. In addition, the strong Euro is boosting results from CLH Spain and also offsetting the drag on earnings from U.S. assets.

Meanwhile, the positive forward view (2009-2011) is clearer. Risks we cited only a quarter ago, namely project approvals and MLP growth, are no longer major concerns, in our opinion. Enbridge has achieved approvals on sufficient new projects to carry it through 2011 at least. The MLP will be used extensively, but the FERC and U.S. courts have recently further entrenched this structure by including MLP returns in pipeline toll calculations and by confirming tax allowances in pipeline rates whether the corporate entity (MLP) pays tax or not.

We also alluded to a third risk in our Q1 commentary that is unfortunately more present today than it was three months ago: financing. As long as capital markets remain choppy, finding the some \$5 billion at EEP (EEP-SP) and \$9 billion at ENB that are required in the 2007-2010 timeframe could pose challenges. The good news for Enbridge is that most debt financing costs will be passed through to customers under negotiated tolling arrangements.

The cost of equity is harder to predict. Management noted on the conference call that a "comparable amount" of equity raised this year will likely need to be raised again in 2008. With about \$600 million raised this year and capital expenditures accelerating into next year, our models include a \$700 million common equity issue in mid-2008. Absent asset sales, we see the \$700 million as a baseline forecast given that our 2008 models show the company generating \$1.35 billion in cash flow, paying \$470 million in dividends and investing \$3.5 billion for a total financing gap of around \$2.6 billion.

Asset sales are possible, in our view, though on the conference call management showed strong reluctance to part with quality subsidiaries such as Gas Distribution. The company must ultimately show prudence on the matter and sell assets - including part of or all of Gas Distribution - if these assets appear to hold their private market valuations to a greater extent than the stock holds its own valuation in the next 6-12 months. The issue remains unresolved for now.

Enbridge continues trading at a premium to the group with a 10.5x EV/EBITDA multiple (8.5x is average) and 20x forward P/E multiple (18x is average). But based on our preliminary 2008-2010 modeling of both ENB and EEP, we concur with management that 8%-10% growth is doable in the 2007-2011 timeframe, so some premium is justified. It is still hard to know when the market will reward this growth, especially with a sizeable equity issue coming, but we recommend holding Enbridge shares through the coming 3-5 year period.

### **Liquids Pipelines**

Liquids Pipelines reported earnings of \$65.8 million for the quarter, a decrease of \$2.8 million from the same time period in 2006. The decrease was attributable to the Enbridge System, which saw earnings decline due to higher compensation expenses, higher pipeline integrity costs and increased Terrace

<sup>1.</sup> Unusual items in Q2/07 include unrealized gains on derivative instruments at EEP of \$0.4 million, dilution gain on EEP Class A unit issuance of \$11.8 million, revalued future income taxes due to tax rate changes of \$3.5 million, unrealized derivative fair value loss of \$0.2 million in Energy Services, unrealized derivative fair value loss of \$8.3 million at Aux Sable.

<sup>2.</sup> Unusual items in 2006 include \$6.5 million of EEP non-cash derivative fair value gains, \$48.9 million adjustment from changes to future federal and provincial income tax rates and a \$4 million Noverco dilution gain.

taxes. Results in the back half should be better than the first half, as certain costs will not be recurring. Also, we see the Liquids Pipelines segment improving from 2007 levels as new pipelines come into service.

### **Gas Pipelines**

Second quarter earnings were \$13.4 million compared to \$15.9 million in Q2'06. Earnings were lower due to Offshore Pipelines, which saw less deliveries resulting from natural production declines. Key drilling projects in the area continue to be delayed. The Gas Pipelines segment should see slight earnings growth to 2006 as the Neptune Pipeline and Vector expansion come into service near the latter part of 2007. However, strength in the C\$ could offset this.

### **Sponsored Investments**

Normalized earnings in the Sponsored Investments segment were \$21.5 million, up from the second quarter of 2006. Improved results primarily came from Enbridge Energy Partners due to increased ownership interest. New pipelines will increase earnings from this segment in the back half of '07.

### **Gas Distribution and Services**

Normalized Enbridge Gas Distribution and Services reported earnings that were \$2.2 million higher than Q2'06 mainly due to customer growth and higher storage and transportation capacity transaction revenues. During the quarter, EGD was granted a 1% increase in the deemed equity component (from 35% to 36%). This rate increase was effective April 1 2007.

### **International**

Earnings for the International segment in Q2'07 were up \$2.7 million from Q2'06 due to higher average transportation tariffs, higher volumes and a stronger Euro.

### Corporate

Normalized corporate costs were lower in Q2'07 compared to Q2'06 as the company began capitalizing interest on certain organic growth projects which were financed through corporate debt.

# **Price Target Calculation**

Our \$40 price target is derived from our dividend discount valuation analysis, with regard and reference to 2008E relative P/E and EV/EBITDA. Our \$40 price target implies a 10.4x 2008E EV/EBITDA multiple and a 21.6x multiple of our 2008E EPS forecast of \$1.85. The price target also implies a 3.0% dividend yield. Enbridge's earnings and dividend growth rate have been among the highest of the Canadian pipelines and utilities group, with a relatively low-risk profile. We also believe that Enbridge will have earnings acceleration later in the decade. For these reasons, despite the low growth forecasts we are carrying for the very near term, we continue to use a target multiple at a premium to the group average for the Canadian pipeline and utility stocks.

# **Key Risks to Price Target**

Enbridge could fall short of our 2007 and 2008 earnings forecasts (and fail to meet our price target) for various reasons, including (but not limited to) the impact of negative regulatory decisions, and unanticipated weaker commodity prices. Increased competition in oil pipelining introduces risks to returns on existing and new oil pipeline assets. Increased competition for pipeline and utility assets by financial players also raises risks to returns on possible acquisitions. The pipeline and utility sector, as a whole, is sensitive to changes in Canadian long-term bond yields. If broader market risk dissipates and bond yields rise, shares could be negatively impacted.

# **Our EPS estimates are shown below:**

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly
2006 Current	\$0.62A	\$0.35A	\$0.27A	\$0.50A	\$1.74A
2007 Prior	\$0.65A	\$0.36E	\$0.25E	\$0.50E	\$1.75E
2007 Current	\$0.65A	\$0.36A	\$0.25E	\$0.50E	\$1.75E
2008 Current					\$1.85E

### **IMPORTANT DISCLOSURES:**

**Analyst Certification:** Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

**Potential Conflicts of Interest:** Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

# **Important Disclosure Footnotes for Enbridge Inc. (ENB)**

- 2a Enbridge Inc. is a client for which a CIBC World Markets company has performed investment banking services in the past 12 months.
- 2c CIBC World Markets Inc. has managed or co-managed a public offering of securities for Enbridge Inc. in the past 12 months.
- 2e CIBC World Markets Inc. has received compensation for investment banking services from Enbridge Inc. in the past 12 months.
- 2f CIBC World Markets Corp. expects to receive or intends to seek compensation for investment banking services from Enbridge Inc. in the next 3 months.
- 2g CIBC World Markets Inc. expects to receive or intends to seek compensation for investment banking services from Enbridge Inc. in the next 3 months.
- 7 CIBC World Markets Corp., CIBC World Markets Inc., and their affiliates, in the aggregate, beneficially own 1% or more of a class of equity securities issued by Enbridge Inc.

**Equity Research** 

Pipelines (Pipelines & Utilities) / UNDERWEIGHT

# Enbridge Inc. (ENB.TO / ENB.N)

**RESULTS** 

# Overflowing opportunity

- Largely inline results: Enbridge reported headline Q2 2007 EPS of C\$0.41, and after considering dilution gains arising from Enbridge Energy Partners, weather at Enbridge Gas Distribution and, among other things, Aux Sable, we view adjusted operating EPS as C\$0.36. That number was slightly below our C\$0.37 forecast and slightly ahead of the Street's C\$0.35 consensus estimate (within a C\$0.34 to C\$0.37 range). As an ongoing issue, the liquids pipelines segment had slightly higher costs than we had anticipated.
- Issues to watch: In our view, investors should pay particular attention to a few areas, including: (a) Liquids pipelines segment's operating costs; (b) financing needs in the future; (c) selected regulatory issues surrounding its Ontario-based gas distribution utility; and, (d) the company's ongoing growth plans for its liquids pipelines network.
- A long-term focus: Our investment thesis is largely based upon a long-term view of Alberta's growing oil sands production volumes. In our view, the company continues to hold a structurally advantaged position that provides the opportunity for highly visible significant future growth over an extended time frame.
- Valuation: We obtain our rating and target price by using multiple valuation methodologies, including: a variety of multiples; yield based analysis; and, a discounted cash flow. In summary, our C\$42.00 target price implies a 22.0x P/E multiple on 2008 earnings; a dividend yield spread of 145 bps; and, an 11.9x EV/EBITDA multiple. We reiterate our Outperform rating.

01 August 2007

Enbridge reported headline Q2 2007 EPS of C\$0.41, and after considering dilution gains arising from Enbridge Energy Partners, weather at Enbridge Gas Distribution and, among other things, Aux Sable, we view adjusted operating EPS as C\$0.36. That number was slightly below our C\$0.37 forecast and slightly ahead of the Street's C\$0.35 consensus estimate (within a C\$0.34 to C\$0.37 range). This research note is divided into three parts: (a) results; (b) outlook; and, (c) valuation. Each of these areas will be addressed in greater detail below.

Largely in line results

### **Results**

Enbridge's results were largely in line with our expectations and those of the Street. Our segmented analysis appears below.

**Exhibit 1: Adjusted earnings by segment** 

C\$ in millions, unless otherwise stated

	Q2 07	Q2 06	Q1 07	Chg (%) y/y	Chg (%) q/q
Liquids Pipeline	65.8	68.6	68.9	-4.1%	-4.5%
Gas Pipeline	13.4	15.9	20.4	-15.7%	-34.3%
Sponsored Investments	21.5	17.5	19.8	22.9%	8.6%
Gas Distribution and Services	18.6	14.5	115.1	28.3%	-83.8%
International	24.0	21.3	22.0	12.7%	9.1%
Corporate	(13.8)	(19.1)	(16.8)	-27.7%	-17.9%
Total	129.5	118.7	229.4	9.1%	-43.5%

Source: Company data and Credit Suisse

### **Liquids Pipelines**

The Liquids Pipeline segment's earnings fell 4.1% versus last year and declined by 4.5% on a sequential basis (see Exhibit 1 above). Perhaps, the most significant issue facing this segment is the impact of a strong labour market on compensation expenses. As Enbridge continues to expand its pipeline network from Alberta, we believe this issue will be an important factor to watch. Notably, throughput modestly increased on the Enbridge System and delivered meaningful growth on the Spearhead pipeline (see Exhibit 2).

Strong labour market is impacting compensation expenses

**Exhibit 2: Liquids deliveries** 

Deliveries ('000 bpd)	Q2 07	Q2 06	Chg (%) y/y
Enbridge System	2,074	2,054	1.0%
Athabasca System	236	315	-25.1%
Spearhead Pipeline	112	72	55.6%
Olympic Pipeline	280	284	-1.4%

Source: Company data and Credit Suisse

### **Gas Pipelines**

Earnings in this segment declined by 15.7% in Q2 2007 compared to Q2 2006 which is largely related to weak performance at Enbridge Offshore Pipelines (see Exhibit 3). That decline was partly related to "continuing natural production declines on deliveries to the pipelines." Several new production sources in the Gulf of Mexico continue to be delayed by the effects of the 2005 hurricane season.

Exhibit 3: Gas pipelines - average daily throughput volume (mcf/d)

	Q2 07	Q2 06	Q1 07	Chg (%) y/y	Chg (%) q/q
Alliance Pipeline US	1,607	1,592	1,676	0.9%	-4.1%
Vector Pipeline	973	1,011	1,007	-3.8%	-3.4%
Enbridge Offshore Pipelines	2,105	2,229	2,021	-5.6%	4.2%

Source: Company data and Credit Suisse

### **Sponsored Investments**

Both Enbridge Energy Partners and the Enbridge Income Fund grew earnings in Q2 2007 compared to the same quarter last year. For greater detail on the results of Enbridge

01 August 2007

Energy Partners please refer to the 27 July 2007 "Earnings Beat, Southern Access Expands Costs" research note by Sam Arnold.

### **Gas Distribution and Services**

After adjusting for weather (see Exhibit 4), Enbridge Gas Distribution's delivered improved Q2 2007 earnings which were partly the result of improved expense management.

Exhibit 4: Degree day deficiency

	Q2 07	Q2 06	Q1 07	Chg (%) y/y	Chg (%) q/q
Actual degree days	487	439	1,908	10.9%	-74.5%
Forecast based on normal weather	499	546	1,894	-8.6%	-73.7%
Differential	(12)	(107)	14

	Q2 07	Q2 06	Q1 07	Chg (%) y/y	Chg (%) q/q
Volumes (Bcf)	77	70	191	10.0%	-59.7%

Source: Company data and Credit Suisse

The number of active customers showed steady strength on a year-over-year basis with 2.8% growth compared to last year; although it is roughly flat on a sequential quarterly basis (see Exhibit 6 below).

**Exhibit 6: Active customers** 

	Q2 07	Q2 06	Q1 07	Chg (%) y/y	Chg (%) q/q
Number of active customers ('000)	1,876	1,825	1,874	2.8%	0.1%

Source: Company data and Credit Suisse

### International

Earnings in this segment were up 12.7% to C\$24.0m compared to C\$21.3m last year. Operating results from Compañía Logistica de Hidrocarburos (CLH) were the contributor to the growth as Oleoducto Central S.A. (OCENSA) earnings remained flat.

### Corporate

Corporate costs, after adjusting for tax revaluations, were roughly 27.7% lower than last year. This was primarily due to decrease interest expense resulting from lower levels of corporate debt which was repaid from the proceeds of the C\$566.4m equity issuance on 2 February 2007.

### Outlook

In our view, Enbridge investors, whether existing or prospective, should be aware of several major issues, including: (a) Laying lots of pipe and (b) New market development; and, (c) Financing plans.

### Laying lots of pipe

We continue to believe Enbridge's current asset base has a structurally advantaged position serving growing production volumes from Alberta's oil sands. In fact, we estimate that Alberta's oil takeaway pipeline capacity will need to more than double from current levels by 2025. Our approach to analyzing selected energy infrastructure companies is somewhat unique, in part, because we generate long-term financial forecasts that are based upon very visible industry fundamentals. For instance, a considerable portion of our Enbridge financial model is based upon our long-term view of Alberta's need for takeaway pipeline capacity. Selected highlights from our model include:

Compounded annual earnings per share growth rate of 6.6% from 2006-2025;

01 August 2007

- A dividend CAGR of 6.5% from 2006 to 2025; and,
- During our forecast period of 2007-2020, an average of C\$2.0 billion of growth capital expenditures per year.

Until 2025, we project that Enbridge will engage in capital projects with an approximate value of C\$25 billion largely related to its liquids pipeline network. A meaningful part of that capital will be allocated to new market development initiatives.

### New market development

For greater details on our oil sands outlook, please refer to our Enbridge report "A pipeline full of opportunities" dated 16 July. That report outlines significant elements of our crude dispersion thesis which includes:

- In most markets, additional coking capability will be required to process future flows of western Canadian crude;
- For the foreseeable future, the Midwest market (Petroleum Administration Defense District II) will likely continue to receive the majority of western Canadian crude;
- PADD III will continue to develop into a significant market for heavy biased Canadian crude oil;
- Over the longer-term, we expect markets to develop in both Asia and California for western Canadian crude; and,
- Growing potential for oil transportation to PADD I (i.e. the need to "go east").

Ultimately, we continue to believe that Enbridge will be perhaps the most dominant player in oil related energy infrastructure in North America through our forecast period.

### Financing plans

Enbridge management has been extremely clear about the company's future financing needs. Our financial model forecasts the need for common equity or hybrids in 2008, 2009 and 2015 to support the company's current credit rating and balance sheet strength. Aside from that forecast need for equity issuance, we do believe Enbridge possesses a number of opportunities to dispose of certain assets that are either under development or projected to be under development. Additionally, we believe there is significant potential for Enbridge to engage in several activities that may improve the share price, including: potential joint venture with more patient capital, like certain pension funds; and, selected asset monetisations via asset backed securities. In our view, the capital market does understand the company's need for capital, however, there is a lack of understanding about the level of financial flexibility facing Enbridge. We believe that lack of understanding arises, in part, because of a shorter-term focus by many, limited creativity with prospective asset repackaging and a general limited appreciation for long duration assets.

Future financing needs have been well communicated to the market

Misunderstanding of the level of flexibility

## **Valuation**

We continue to believe that Enbridge is uniquely positioned with a structural asset advantage related to ongoing oil sands developments in Alberta. That asset positioning provides a significant amount of visibility and the potential for longer-term sustainable growth. This combination of factors leads to our reiterating our Outperform rating and a C\$42.00 target price. That rating and target price are obtained by using multiple valuation methodologies, including: a variety of multiples; yield based analysis; and, a discounted cash flow. In summary, our target price implies a 22.0x P/E multiple on 2008 earnings; a dividend yield spread of 145 bps; and, an 11.9x EV/EBITDA multiple.

Companies Mentioned (Price as of 31 Jul 07)

Enbridge Energy Partners (EEP, \$55.61, OUTPERFORM, TP \$63.00, OVERWEIGHT) Enbridge Inc. (ENB.TO, C\$37.83, OUTPERFORM, TP C\$42.00, UNDERWEIGHT) Enbridge Income Fund (ENF\_u.TO, C\$11.15)

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities.

### Analysts' stock ratings are defined as follows\*\*\*:

**Outperform:** The stock's total return is expected to exceed the industry average\* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

**Neutral:** The stock's total return is expected to be in line with the industry average\* (range of  $\pm 10\%$ ) over the next 12 months.

**Underperform\*\*:** The stock's total return is expected to underperform the industry average\* by 10-15% or more over the next 12 months.

\*The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and Credit Suisse Small and Mid-Cap Advisor stocks, where

01 August 2007

stock ratings are relative to the regional Credit Suisse Small and Mid-Cap Advisor investment universe.

\*\*In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.

\*\*\*For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions, with a required equity return overlay applied.

**Restricted:** In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

**Volatility Indicator [V]:** A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All Credit Suisse Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings\* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe\*\* versus the relevant broad market benchmark\*\*\*:

**Overweight:** Industry expected to outperform the relevant broad market benchmark over the next 12 months.

**Market Weight:** Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

**Underweight:** Industry expected to underperform the relevant broad market benchmark over the next 12 months.

- \*Credit Suisse Small and Mid-Cap Advisor stocks do not have coverage universe weightings.
- \*\*An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.

# Credit Suisse's distribution of stock ratings (and banking clients) is: Global Ratings Distribution

Outperform/Buy*	42%	(59% banking clients)
Neutral/Hold*	40%	(55% banking clients)
Underperform/Sell*	14%	(49% banking clients)
Restricted	3%	-

<sup>\*</sup>For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.

Price Target: (12 months) for (ENB.TO)

**Method:** We obtain our C\$42 target price for Enbridge by using multiple valuation methodologies, yield base analysis, and discounted cash flow. We use a P/E (price/earnings) multiple of 22.0x our 2008 EPS (earnings per share) estimate of C\$1.92, a higher than historical P/E multiple reflecting the significant capital program over the next few years that will not generate meaningful cash earnings until certain assets are commissioned. In addition, we use an EV/EBITDA (enterprise value/earnings before interest, taxes, depreciation, and amortization) of 11.9x, a slightly higher than historical average because of improving prospective capital efficiency from Enbridge's affiliate vehicles and future growth. We also use

<sup>\*\*\*</sup>The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.

01 August 2007

the dividend method, based on 3.05%, slightly lower than the historical median dividend yield as a result of the current low interest rate environment and ongoing yield affection.

**Risks:** There are a number of risk to Enbridge's achievement of our C\$42 target price: an extensive capital program that requires access to capital markets; global and North American crude market dynamics may have a significant impact on underlying asset valuations; regulatory; commodity prices; and interest rates. Moreover, one should never underestimate the power of the regulator in any regulated business.

See the Companies Mentioned section for full company names.

The subject company (ENB.TO) currently is, or was during the 12-month period preceding the date of distribution of this report, a client of Credit Suisse.

Credit Suisse provided investment banking services to the subject company (ENB.TO) within the past 12 months.

Credit Suisse expects to receive or intends to seek investment banking related compensation from the subject company (ENB.TO) within the next 3 months.

## **Important Regional Disclosures**

An analyst involved in the preparation of this report has visited certain material operations of the subject company (ENB.TO) within the past 12 months. The analyst may not have visited all material operations of the subject company. The travel expenses of the analyst in connection with such visits were not paid or reimbursed by the subject company, other than de minimus local travel expenses.

CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CS does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CS believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CS believes are reliable, but CS makes no representations as to their accuracy or completeness. Additional information is available upon request. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CS may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CS is involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

Preferred Shares	Pfd-2 (low)					

## **RATING UPDATE**

DBRS has confirmed the ratings of Enbridge Gas Distribution Inc. (EGD or the Company), as listed above, all with Stable trends. The confirmation reflects EGD's reasonable financial profile and a continually constructive regulatory environment that underpins the ratings.

The Company's credit metrics have weakened gradually over the past few years as a result of lower approved return on equity (ROE), warmer than normal weather, high dividend payouts and increased debt levels. However, EGD's financial metrics still remain reasonable and consistent with the current rating category. The Company's financial results and liquidity are exposed to changes in weather conditions. EGD's liquidity requirement is mainly managed through a \$1 billion commercial paper program and internal cash flows. DBRS notes that

EGD was not in compliance of an interest coverage test at December 2006 for additional debt issuance as specified in the Trust Indenture, largely due to warmer weather. However, this did not cause a credit issue due to EGD's financial flexibility. The Company was in compliance as of March 31, 2007.

Free cash flow deficits are expected to continue as a result of EGD's large capital expenditure program for ongoing system maintenance and an accelerated plan to replace the existing aged cast iron mains over the medium term. DBRS believes that cash flow deficits could further pressure the Company's credit ratios. The rating confirmation is based on the assumption that EGD will manage its external financings and dividends prudently in order to prevent further erosion of its credit metrics. (Continued on page 2)

## **RATING CONSIDERATIONS**

## Strengths

- Reasonable balance sheet and credit metrics
- Constructive regulatory environment
- Strong franchise and low business risk

## Challenges

- Volume risk remains significant
- Cash flow deficits due to high capital expenditures
- Significant seasonal liquidity requirements
- Low allowed ROE due to lower long-term interest rates

## THE COMPANY

Enbridge Gas Distribution Inc. is a regulated natural gas distribution utility, serving approximately 1.8 million customers in the central, eastern and the Niagara Peninsula regions of Ontario. The Company also distributes natural gas to approximately 15,000 customers in northern New York State through a wholly-owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence or the Subsidiary) (approximately 2% of total revenue). EGD is an indirect wholly-owned subsidiary of Enbridge Inc (rated A).

**AUTHORIZED COMMERCIAL PAPER LIMIT \$1 Billion** 

**Energy** DBRS

## **RATING UPDATE** (Continued from page 1).

The regulatory environment remains constructive, allowing EGD to recover operating and capital expenses within a reasonable time frame. In March 2007, the Ontario Energy Board (OEB) approved an interim rate order in accordance with a Settlement Proposal filed by the Company, allowing EGD to increase its natural gas delivery rates effective April 1, 2007. Allowed ROE has declined to 8.39% in 2007 from 8.74% in 2006 due to lower long-term interest rates. The lower ROE impact on EBIT is partially mitigated by an increased rate base to \$3,743.7 million in 2007 (from \$3,633 million in 2006). A final decision on the requested increase in deemed equity component to 38% from 35% is expected in July 2007.

EGD's exposure to commodity price risk remains low, as gas supply costs are passed through with a quarterly adjustment to reflect changes in gas prices. However, EGD still faces volumetric risk as the forecast volumes are built into the Company's base rates, which are contingent upon weather, economic conditions, pricing of competitive energy sources and the number of customers.

Beyond 2007, the regulatory framework in Ontario will likely switch from cost of service to performance based rates (PBR). The proposed PBR is intended to benefit efficiently-run utilities; however, the utility would have to bear the risk of rising operating expenses. DBRS will further assess the credit impact of the proposed PBR once the final decision is made.

## RATING CONSIDERATIONS

## **Strengths**

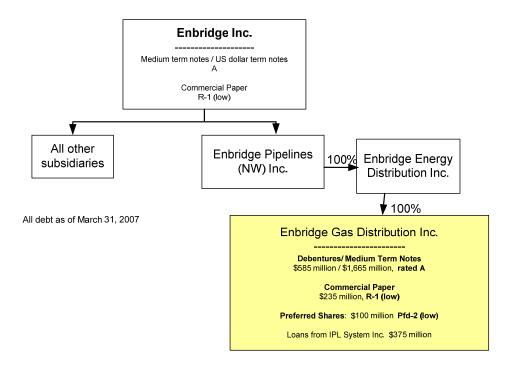

- EGD's credit metrics remained reasonable and consistent with the current ratings, with leverage ratio at 57.3% at March 2007, which is below the regulatory approved level of 65%.
   EBIT interest and cash flow coverage ratios are 2.04 times and 14.5%, respectively. EGD is committed to maintaining its capital structure within the regulatory approved level.
- The supportive regulatory regime allows EGD to recover prudently incurred operating expenses in a timely fashion and earn a reasonable return on its investment. The Company has limited exposure to commodity price risk as its gas purchased cost is passed on to customers through quarterly rate adjustments.
- EGD is the largest regulated natural gas utility in Canada, serving approximately 1.8 million customers in strong franchise areas, including the central, eastern and Niagara Peninsula regions of Ontario. Strong economic conditions in its service territories with favourable growth in customer base (about 3% annually over the past five years) will allow the Company to continue to generate strong earnings and cash flow.

## Challenges

- Weather remains the most significant risk, as forecast volumes, which are based on the normalized weather, are built into the Company's base rates while actual usage varies with weather. The sales volume, to a lesser degree, is also exposed to economic conditions in the service areas and prices of alternative energy sources and customer usage. The Company has asked the OEB to take into account the warmer weather in the forecast.
- Free cash flow deficits are expected to continue over the medium term, mainly attributable to the Company's high capital expenditures associated with network expansion and upgrades to support customer growth. EGD is expected to finance these deficits through its debt issuances and management of dividend payments to (or equity injections from) the parent to maintain the debt-to-capital ratio well within the regulatory-approved level of 65%.
- The Company has very large and volatile seasonal liquidity requirements, which strained its available liquidity in the past.
- Approved ROE declined to 8.39% in 2007 from 8.74% in 2006 due to lower long-term interest rates. Lower ROEs are expected to have a negative affect on EGD's earnings; however the impact should be partially mitigated by a higher rate base.

## SIMPLIFIED ORGANIZATIONAL CHART

## REGULATION

- The OEB regulates EGD's gas storage, transmission and distribution businesses.
- Consumers in Ontario have been able to choose their natural gas suppliers since 1985.

## Gas Distribution - Ontario

- Since 2004, EGD has operated under the traditional cost-of-service (COS) regulation, with an earning sharing mechanism (ESM) implemented in 2005.
  - The cost of gas supply is adjusted quarterly, subject to prior approval by the OEB, to reflect future expected prices based on published forward market prices. Differences between the approved and actual costs incurred are accumulated in a deferral account to be reviewed by the OEB on an annual basis.
  - Operating expenses that are deemed prudent by the OEB can be recovered through annual general rate applications.
  - Variations between the actual sales volume and the forecast volume are borne by the Company. The discrepancies are largely due to weather changes.
  - The Company's allowed ROE is calculated by an OEB-approved formula with reference to a consensus forecast of

- long-term Government of Canada bond yields.
- In February 2006, the OEB approved the Company's 2006 rate application, which included a rate base of \$3,633.6 million and an allowed ROE of 8.74% on a 35% deemed common equity component. The ROE impact on earnings was modest, as it was approximately \$3 million in 2006.
- In August 2006, EGD filed an application for the 2007 rates, under the COS regulation, with the OEB.
- On March 26, 2007, the OEB approved an interim rate order to allow EGD to increase its gas delivery rates, effective April 1, 2007, to recover higher expenses incurred by the Company. The changes were made in accordance with an Interim Rate Order Arising from 2007 Test Settlement Proposal, filed by the Company on January 24, 2007. The OEB also set the Company's 2007 rate base at \$3,743.7 million, compared with the requested \$3,801 million, and a ROE of 8.39%.
- A final decision on the remaining issues in the 2007 rate application, including a proposed increase in deemed equity to 38% from 35% is expected during July 2007.

- On January 11, 2007, the OEB accepted comments on a discussion paper in which the regulator is considering establishing a multiyear incentive regulation framework for all gas distribution companies in Ontario. The new regime, expected to begin in 2008, would be similar to the performance-based regulation (PBR) implemented between 2001 and 2003.
  - Under the incentive regulation, base rates would be determined by a formula from the base year rate level (2007) by an escalator that is adjusted annually using inflation less a fixed productivity improvement factor.
  - EGD would be required to file the rate supporting information by October 1 of each year, and the OEB is to issue a rate order by December 15 for new rates to be implemented for January 1 of the following rate year.
  - The plan is expected to be in effect for four to five years.
  - The OEB has stated that an earning sharing mechanism should not be included in the PBR.

- Gas supply costs continue to be passed through.
- Approved ROE continues to remain formula-based.
- On June 1, 2007, the OEB approved EGD's application to construct natural gas pipelines to supply natural gas to Portlands Energy Centre (Portlands), a 550 MW natural gas-fired generation station equally owned by Ontario Power Generation (rated A (low)) and TransCanada Pipelines Ltd. (rated A).
  - The pipelines are expected to be in service by February 2008.
  - The estimated project cost is \$48.5 million.

## Gas Distribution - New York

 The Company owns St Lawrence Gas Company, which provides natural gas distribution services to 15,000 customers in New York State. The regulatory framework in New York is viewed as stable.

EARNINGS AND OUTLOOK								
	For the 12 months ended							
(CAD millions)	Mar. 07	Dec. 06	Dec. 05	Dec. 04*	Sept. 04	Sept. 03	Sept. 02

Return on equity	9.3%	7.9%	10.8%	12.2%	12.3%	13.1%	10.8%	
FRIT margin	36.6%	33 4%	30 3%	41.6%	42 4%	45 7%	42 1%	

<sup>(1)</sup> Net gas distribution revenues are net of the commodity cost of gas.

- EBIT fluctuations over the past few years have been due largely to weather, as evidenced by a decline in 2005 and 2006 when weather was warmer than the normalized forecast and an improvement for the 12 months ended March 31, 2007 as weather was colder than the forecast in the first quarter of 2007.
- EBIT and earnings are also negatively impacted by lower allowed ROEs; however, the EBIT impact is partially offset by a higher rate base and strong customer growth.
- Transportation revenues remain stable and represent over 50% of the Company's gas distribution margins.
- Usage by large commercial and industrial customers also declines modestly. These customers are more sensitive to economic conditions than they are to weather.
- Interest expense has increased steadily as a result of rising debt levels.

<sup>\*</sup> Effective December 31, 2004, the Company changed its financial reporting year end to December 31 from September 30

## Outlook

- EGD's earnings, under normal weather conditions, should grow moderately over the medium term, driven primarily by economic and customer growth in the Company's franchise areas.
  - The Company anticipates adding approximately 45,000 to 55,000 customers annually over the next several years.
- A final decision on the Company's 2007 rate application is expected during July 2007.
- The Company has also requested that the weather forecast going forward take into account warmer weather conditions, which, if allowed, should somewhat mitigate sales volume volatility.

 $<sup>(1) \</sup> Debt \ is \ adjusted \ for \ loans \ from \ an \ affiliate \ (40\% \ debt \ treatment) \ and \ peferred \ securities \ (30\% \ debt \ treatment)$ 

- EGD's financial profile remains reasonable, reflecting generally strong cash flows, moderate leverage and reasonable interest coverage metrics. However, these metrics have been under pressure from increased free cash flow deficits (as the Company has undertaken a large capital expenditure program), warmer weather and maintained high dividend payout ratios.
- DBRS notes that cash flow stability is influenced by the timing of deferred taxes.
- Internally generated cash flows are sufficient to cover dividends paid to the parent and maintenance capital expenses.
- However, cash flow shortfalls have been incurred due to increased capital expenditures for growth, which were estimated to account for 30% of total. These deficits have been

- financed with debt, which led to higher debt levels and leverage and a gradual decline in the interest coverage ratio.
- For the 12 months ended March 2007, all credit metrics improved and remained consistent within the current rating category. This improvement reflects stronger Q1 earnings and cash flows, and lowered working capital requirements, resulting in a significant reduction in short-term debt.
- Working capital remains volatile, mainly attributable to changes in gas commodity prices and seasonality.
  - Inventories and accounts receivable peak during the cold weather, which requires strong liquidity.
  - The Company's liquidity was strained in the past, such as in December 2005, when

<sup>\*</sup> Effective December 31, 2004, the Company changed its financial reporting year-end from September 30 to December 31.

high levels of accounts receivables and gas inventory exhausted available liquidity, causing EGD to source short term funds from its parent.

### Outlook

- Free cash flow deficits are expected to continue, as capital expenditures remain high over the medium term. DBRS estimates that EGD will likely spend approximately \$400 million in 2007, mostly on system upgrades and customer growth.
- In the Interim Rate Order, the OEB approved:
  - A capital expenditure budget of \$318 million for 2007.

- ROE at 8.39%.
- A rate base of \$3,743.7 million.
- The final decision on the application, including the request to increase EGD's deemed equity ratio to 38% from 35%, is expected during July 2007.
- DBRS notes that EGD's credit metrics have weakened gradually, mainly due to lower EBIT, higher debt levels and a high dividend payout ratio. Going forward, DBRS expects that the Company will manage its external financings and dividends prudently to maintain the stability of credit metrics.

## LONG-TERM DEBT MATURITIES AND BANK LINES

Long Term debt				
(CAD millions)	Average Coupon	Maturity	Mar. 31, 2007	Dec. 31, 2006
Debentures	11.10%	2009-2024	585	585
Medium-term notes	6.00%	2008-2036	1,665	1,665
Other			8	8
Total long-term debt			2,258	2,258
Loans from affiliate			375	375

Debt Maturity schedule	<u>2007</u>	2008	<u>2009</u>	<u>2010</u>	<u>2011</u>	Thereafter	<u>Total</u>
As at Mar. 31, 2007 (CAD millions)	-	270	100	150	150	1,588	2,258

## **Summary**

- The debt repayment schedule is reasonable, as the Company has no long-term debt due in 2007. Between 2008 and 2011, the annual debt amount due represents only 5% to 12% of total debt, which reduces EGD's exposure to refinancing risk.
- EGD should be able to refinance the \$270 million debt due in 2008, given its strong financial profile.
- In February 2006, EGD filed a Shelf Prospectus that allows the Company to issue up to \$750 million of unsecured medium term notes (MTNs).
  - Under the prospectus, \$300 million and \$175 million of MTNs were issued in February 2006 and December 2006, respectively. Some proceeds were used to refinance commercial paper with the balance for capital expenditures.
  - EGD is subject to an EBIT interest covenant in order to issue additional indebtedness. EBIT for twelve consecutive months out of the previous 23 months must be at least two times its annual pro-forma interest requirements for all debt that has a maturity term longer than 18 months.

- The covenant does not apply to debt issuance for refinancing and interest expenses do not include short-term interest expenses.
- The Company did not meet the interest covenant in December 2006 but was in compliance at 2.14 times for the 12 months ended March 31, 2007, according to the Company's disclosure.
- EGD intends to redeem its outstanding 10.60% debentures (\$100 million) due in 2012. The redemption will be on July 9, 2007, and will be funded by existing liquidity.

## **Inter-company debt**

- As of March 31, 2007, EGD owned \$825 million of non-voting redeemable, retractable preferred shares of IPL System Inc. (IPL), which is 100% owned by Enbridge Inc.
- The Company owes IPL \$375 million in loans, which is deeply subordinate to the debentures and MTNs. EGD is able to defer interest payments on the loans for up to five years, and the deferred interest can be paid by either cash or non-retractable preferred shares of the Company. DBRS treats 60% of this amount as equity.

**Bank Lines/Liquidity** 

Credit facilities						As of Ma	rch 31, 2007
	<u>Amount</u>	<u>]</u>	<u>Drawn</u>	Commerc	<u>ial Paper</u>	<u>Availa</u>	<u>ble</u>
Committed lines of credit	1,000.0		0.0	235	.0	765.0	)
Uncommitted lines of credit	5.8		1.7	0.0	)	4.1	
Total	1,005.8		1.7	235.0		769.1	
(CAD millions)	<u>Mar. 07</u>	Dec. 06	<b>Sept. 06</b>	Jun. 06	Mar. 06	Dec. 05	
Short term debt usage	252	831	666	221	449	1,171	

- EGD requires relatively high liquidity to support its volatile and highly seasonal working capital needs and increased capital expenditures. Working capital requirements are very seasonal, with high demand during cold weather; they are also heavily influenced by the volatility of gas prices. These fluctuating capital requirements are mainly supported by the Company's commercial paper (CP) program.
- As of March 2007, the Company's liquidity position remained solid, as seasonal levels of accounts receivables and gas inventory are much lower than the winter months. EGD had about \$765 million in its CP program available at the end of March 2007.
  - EGD increased its CP program to \$1 billion in September 2006 from \$800 million.

- The CP program is supported by the 364day revolving committed lines of credit of \$1 billion.
- In addition, EGD has \$5.8 million in the uncommitted 364-day lines of credit that are used to support its working capital needs.
  - A separate credit line of \$300 million was closed in June 2006.
  - The facility does not have a MAC clause at the time of the borrowing.
- DBRS views EGD's current liquidity as acceptable; however, the Company remains exposed to gas price volatility. A combination of cold weather and high gas prices could exhaust the Company's available liquidity, which happened in December 2005 when EGD sought short-term funds from its A-rated parent.

## Company description

Quarterly data

EPS (basic)<sup>2</sup>

Enbridge Inc. operates the world's longest crude oil and liquids pipeline system, as well as natural gas transmission and distribution assets in Canada and the US. The company also owns interests in pipeline systems in Spain and Colombia, and is developing a large wind-powered generation project

## Enbridge Inc. (ENB C\$37.15, TSX)

Reports solid results, but resumption of earnings growth remains a ways off; regardless, shares look attractive based on fundamentals; reiterating Buy rating and C\$41 target

Daniel Shteyn, CA (514) 281-8755 daniel.shteyn@vmd.desjardins.com

## The Designations Takeaway

Enbridge reported a decent quarter, with practically all segments firing on all cylinders, though dilution from the recent equity issue muted the benefit to EPS. Additional disclosure on various growth project risk/return profiles provided during the call was unexpected. So was the announcement of an additional financing likely to come in 2008. Regardless of the fact that a resumption of significant earnings growth prior to 2010 remains unlikely, the shares look attractive at current levels, in our view. We are reiterating our Buy-Average Risk recommendation and C\$41 price target.

## **Event**

Enbridge reports decent 1007 results and declares dividend. Enbridge Inc. (Enbridge or 'the company') reported decent 1007 results, with adjusted operating EPS (as defined by Enbridge) coming in at C\$0.65 vs consensus of C\$0.63 and 1006 results of C\$0.62. A quarterly dividend of C\$0.3075 per share was also declared.

**Enbridge shares have underperformed TransCanada in 2007.** Enbridge shares have underperformed relative to its closest (and only) Canadian pipeline comparable, TransCanada Corporation (TRP TSX, C\$39.76, rated Buy-Average Risk with a C\$43 price target) on a year-to-date basis. Enbridge shares have corrected by 7.7% vs TransCanada weakening by 2.1% in 2007.

## **Implication**

Relatively strong performance across different segments. Adjusted operating income rose by C\$19.9m, or by 9.5%. However, EPS increased by only 5.8%, due to dilution from the 1Q07 equity issue. Main earnings drivers for the quarter were: (1) colder weather and customer growth in the Enbridge Gas Distribution (EGD) franchise area, predominantly in Ontario; (2) full quarter of earnings contribution from Olympic and Spearhead pipelines; (3) insurance proceeds received by Enbridge Offshore Pipelines (EOP) related to the 2005 hurricane season; and (4) dilution from the 1Q07 C\$566m equity issue. We also note that GAAP earnings have become significantly more volatile following the adoption of the new accounting rule regarding financial instruments, which requires mark-to-market treatment for many financial derivatives.

## **MorningPulse**

Adjusting financial estimates. While Enbridge reiterated its guidance range of C\$1.75–1.85 in basic adjusted operating EPS for 2007, we note that the guidance assumed an exchange rate of US\$0.88/C\$1 vs an exchange rate of US\$0.90/C\$1 as of the close on May 2, 2007. Given that Enbridge hedges approximately half of its foreign exchange exposure, a sustained rate at or above US\$0.90/C\$1 may very well mean the loss of a penny or two in EPS. Regardless, we are choosing to leave our 2007 basic EPS estimate of C\$1.86 unchanged for now. While our estimate is a penny above the higher end of Enbridge's guidance range, we note that we are not normalizing for different-than-normal weather at EGD as a matter of policy. Given that gas distribution earnings do not have a weather normalization rider under EGD's regulatory framework, there is insufficient justification to normalize adjusted operating results for weather, in our view. However, we are slightly increasing our 2009 EPS forecast (to C\$2.01 from C\$1.98) based on additional clarity on project economics and timing disclosed by Enbridge during the conference call, as further discussed below.

**Update on growth projects.** Enbridge has updated its growth capex guidance regarding its various Liquids Pipelines growth projects. We note that 2008 will see capex requirements peak at C\$4b, with C\$1b to be funded at the Enbridge Energy Partners (EEP NYSE, US\$59.95, not rated) level. EEP is Enbridge's sponsored master limited partnership, the US equivalent to a Canadian income fund structure.

**Project risk/return profiles.** Enbridge has, for the first time, officially provided additional colour on the risk/return profiles of the various projects. In general, we would note that full-life economics seem to be quite attractive on the majority of these projects on a risk-adjusted basis.

**Desjardins**

Another round of financing to come in 2008. During the conference call to discuss the quarterly results, Steve Wuori, Enbridge's CFO, stated that Enbridge would need to issue equity in the 2008 timeframe. We can only agree, given the growth capex requirements set out in Exhibit 2. We believe that Enbridge will need to tap the capital markets on the order of C\$2.7b in 2008, to be issued in the form of debt, common equity and hybrids. Enbridge is likely to use at least some hybrids in the form of junior unsecured debentures, in our view, as hybrids have several key advantages: (1) they are cheaper than common equity, given that interest is usually tax-deductible; (2) avoid EPS dilution; (3) relatively credit-friendly, with an equity credit treatment of 50% being achievable with S&P and Moody's, as per TransCanada's upcoming issue; and (4) tap into an additional investor class. Please refer to the exhibit below for our calculation of Enbridge's external financing requirements.

Year-end Dec-31 (C\$b)	2007E	2008E	2009E
Financing requirement			
Funds from operations (FFO)	1.5	1.5	1.7
Dividends	-0.5	-0.5	-0.6
Net cash flow	1.0	1.0	1.1
Maintenance capex	-0.4	-0.4	-0.5

Growth capex—Liquids Pipelines (ENB only)	-1.4	-3.0	-1.1
Growth capex—other segments	-0.4	-0.3	-0.1
External financing requirement	-1.2	-2.7	-0.6
External financing			
Debt issue	0.6	1.5	0.4
Hybrid equity issue	0.0	0.6	0.2
Common equity issue	0.6	0.6	0.0
Total external financing	1.2	2.7	0.6

Solid execution on a variety of growth projects, but earnings growth still a ways off. Enbridge has demonstrated impressive skill in sourcing, developing, financing and executing its outsized slate of growth projects. We believe that Enbridge's execution will continue to be very good, given the management team's track record and ongoing focus on managing capital costs—eg through early procurement of pipe and strategic alliances struck with contractors. Unfortunately, even flawless execution will not be sufficient to meet Enbridge's long-term target EPS growth rate in the 8-10% range, in our view. Our financial model returns an average EPS growth rate on the order of 6% until Alberta Clipper and Southern Lights come onstream in 2010, as the cost of financing the construction program will continue to pressure operating earnings.

# **MorningPulse**

## **Recommendation**

Maintaining C\$41 price target. We rely on our fundamental valuation work to set our price target, with backup support from relative valuation techniques. Our fundamental valuation work returns a range of C\$40.63—42.29 from our DDM and DCF models, respectively. Our relative valuation work returns a value of C\$39.91, based on sum-of-the-parts segment-by-segment analysis using 2007 estimated P/E multiples. Our C\$41 12-month price target implies a forward P/E ratio of ~22x, which we feel is appropriate for Enbridge due to the proven track record of the management team, growth potential, earnings quality, cash flow stability, solid capital structure and defensive stock characteristics.

**Reiterating Buy recommendation.** At a closing price of C\$37.15 as of May 2, 2007, our price target represents a potential total return of 13.6%, inclusive of our 2007 dividend per share estimate of C\$1.23. Given our Average Risk rating and a potential 12-month total return of 13.7%, Enbridge shares deserve a Buy recommendation at current valuation levels, in our view. **We are reiterating our Buy–Average Risk recommendation and C\$41 price target.** 

Risk factors. Our financial estimates, price target and investment recommendation are subject to various risk factors, including but not limited to the following: (1) lower-than-expected oil sands output and faster-than-expected decline in conventional production could derail much of Liquids Pipelines' growth program; (2) regulatory risk in case of adverse decisions for regulated assets located in North America, South America and Europe; (3) operational risk for existing assets; (4) execution risk related to large growth program; (5) competition from rival pipeline projects for expansion of currently-permitted infrastructure; (6) financing risk for large external capital requirements; and (7) inverse interest rate risk (lower interest rates resulting in lower allowed ROEs for regulated assets, as offset by an increase in the stock price due to interest sensitivity).

**Rating Buy-Average Risk** 

**Target C\$41.00** 

Another quarter of solid execution offset by lacklustre EPS growth -- Daniel Shteyn, CA (514) 281-8755, daniel.shteyn@vmd.desjardins.com

**Impact: Positive** 

Enbridge Inc. (Enbridge) announced 2Q07 results this morning, with adjusted earnings of C\$0.36 per share, up by a penny from C\$0.35 in 2Q06 and higher than the 2Q07 consensus estimate of C\$0.35. The increase in adjusted earnings was primarily due to (1) improved operating margins and customer growth at Enbridge Gas Distribution (EGD), and (2) Enbridge's increased ownership interest in Enbridge Energy Partners. Management will hold a conference call and webcast to discuss the results at 9am EDT today (dial-in 888-713-4199, passcode 28881509#; webcast www.enbridge.com/investor).

## **COMPANY SPECIFIC DISCLOSURES**

## Legend

- Desjardins Securities makes a market in the securities of the issuer.
- 2. Desjardins Securities has performed investment banking services for the issuer in the past 12 months.
- Desjardins Securities has received compensation for investment banking services from the issuer within the past 12 months.
- 4. Desjardins Securities has managed or co-managed a public offering of securities for the issuer in the past 12 months.
- 5. Desjardins Securities beneficially owned 1% or more of the common equity (including derivatives exercisable or convertible within 60 days) as of the month end preceding this report.
- 6a. The Desjardins Securities research analyst(s) and/or associate(s) who covers the issuer discussed has a long position in its common equity securities.
- 6b. A member of the household of the Desjardins Securities research analyst(s) and/or associate(s) who covers the issuer has a long position in its common equity securities.
- 7a. The Desjardins Securities research analyst(s) and/or associate(s) has viewed a material operation of the issuer, and the related travel expenses have not been paid for by the issuer.
- 7b. The Desjardins Securities research analyst(s) and/or associate(s) has viewed a material operation of the issuer, and the related travel expenses have been paid for partially by the issuer.
- 7c. The Desjardins Securities research analyst(s) and/or associate(s) has viewed a material operation of the issuer, and the related travel expenses have been paid for fully by the issuer.
- 8. Desjardins Securities has received compensation for non-investment banking, non-securities-related services from the company in the past 12 months.
- 9. The issuer is a client for which a Desjardins Securities company has performed non-investment banking, non-securities related services in the past 12 months.
- 10. The issuer is (or was) a client of Desjardins Securities or an affiliate within the Desjardins Group within the past 12 months and received non-securities related services.
- 11. A partner, director or officer of Desjardins Securities or any analyst(s) involved in the preparation of this publication has provided services (other than for investment advisory or trade execution purposes) to the issuer for remuneration within the past 12 months.
- 12. An officer or director of Desjardins Securities, outside of the Equity Research Department, or a member of his/her household is an officer or director of the issuer or acts in an advisory capacity to the issuer.
- 13. The Desjardins Securities research analyst(s) and/or associate(s) had communication with the issuer regarding the verification of factual material in this research publication.
- 14. The Desjardins Securities research analyst(s) and/or associate(s) had communication with Investment Banking regarding the verification of material in this research publication.
- 15. A director or officer of the issuer (or any of its affiliates) serves on the board of the Desjardins Group.
- 16. The issue date for this research publication is within the restricted period for any recent IPO, secondary offering or lock-up agreement between the issuer and Desjardins Securities.
- 17. The Desjardins Securities supervisory analyst serves as an officer, director or employee of the issuer or acts in an advisory capacity to the issuer.

### STOCK RATING SYSTEM

## Top Pick

Desjardins' best investment ideas – stocks that offer the best risk/reward ratio and that are expected to significantly outperform their respective peer group\* over a 12-month period

#### Buy

Stocks that are expected to outperform their respective peer group\* over a 12-month period

## Hold

Stocks that are expected to perform in line with their respective peer group\* over a 12-month period

## Sell

Stocks that are expected to underperform their respective peer group\* over a 12-month period

#### Not Rated

Stock is being covered exclusively on an informational basis

## **RISK QUALIFIERS**

### Average Risk

Risk represented by the stock is in line with its peer group\* in terms of volatility, liquidity and earnings predictability

### Above-average Risk

Risk represented by the stock is greater than that of its peer group\* in terms of volatility, liquidity and earnings predictability

### Speculative

High degree of risk represented by the stock, marked by an exceptionally low level of predictability

## **DESJARDINS SECURITIES INC. LEGAL DISCLAIMERS**

## **Dissemination of Research**

Desjardins Securities makes all reasonable effort to provide research simultaneously to all eligible clients. Research is available to our institutional clients via FirstCall Research Direct, Reuters and Bloomberg. In addition, sales personnel distribute research to institutional clients via email, fax and regular mail.

## **Analyst Certification**

Each Desjardins Securities research analyst named on the front page of this research publication, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this publication and all other companies and securities mentioned in this publication that are covered by such research analyst, and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this publication.

## Additional Disclosures

Desjardins Securities' equity research analysts are compensated from revenues generated by various Desjardins Securities businesses, including Desjardins Securities' Investment Banking Department. Desjardins Securities will, at any given time, have a long or short position or trade as principal in the securities discussed herein, related securities or options, futures, or other derivative instruments based thereon. The reader should not rely solely on this publication in evaluating whether or not to buy or sell the securities of the subject company. Desjardins Securities expects to receive or will seek compensation for investment banking services within the next three months from all issuers covered by Desjardins Securities Research.

## **Legal Matters**

## Company description

Enbridge Inc. operates the world's longest crude oil and liquids pipeline system, as well as natural gas transmission and distribution assets in Canada and the US. The company also owns interests in pipeline systems in Spain and Colombia, and is developing a large wind-powered generation project in Ontario.

www.enbridge.com

## Enbridge Inc. (ENB C\$37.09, TSX)

Another quarter of solid execution offset by lacklustre EPS growth; no change to Buy recommendation or C\$41 target

Daniel Shteyn, CA (514) 281-8755 daniel.shteyn@vmd.desjardins.com Jeremy Rosenfield, Associate (514) 985-1862 jeremy.rosenfield@vmd.desjardins.com

## The Desjardins Takeaway

While 2Q07 EPS growth was marginal, Enbridge continues to lay the groundwork for massive earnings growth by the end of the decade as it expands its Liquids Pipelines business. We continue to consider Enbridge as an excellent way to play oil sands growth while avoiding commodity risk. We are updating our financial estimates to incorporate the benefits of AFUDC and other factors. There is no change to our Buy—Average Risk investment recommendation or C\$41 price target.

## Event

The company released 2Q07 earnings and held a conference call on Wednesday. Enbridge Inc. (Enbridge) announced 2Q07 results Wednesday morning. While headline earnings came in at C\$146.5m compared with C\$157.9m in 2Q06, adjusted 2Q07 earnings were C\$129.5m vs C\$118.7m in 2Q06. Earnings per share (EPS) came in at C\$0.36 vs C\$0.35 in 2Q06, representing a 2.9% growth rate, while consensus estimates for 2Q07 EPS stood at C\$0.35.

**Dividends declared by the board of directors.** On July 31, 2007, Enbridge's board of directors declared quarterly dividends of C\$0.3075 per common share and C\$0.34375 per Series A preferred share. Both dividends are payable on September 1, 2007 to shareholders of record on August 15, 2007.

## **Implication**

**Details of the quarter.** Adjusted earnings were up compared with 2Q06, primarily due to the following: (1) Enbridge Gas Distribution (EGD) earnings were up by C\$12.9m due to improved expense management, customer growth and storage/transportation capacity transaction revenues; (2) Enbridge's share of Enbridge Energy Partners (EEP) earnings increased by C\$3.7m, as Enbridge held a 15.0% interest in EEP vs 10.9% a year ago; (3) Aux Sable added C\$2.2m to earnings (after adjusting for mark to market on derivatives); and (4) corporate segment expenses decreased by C\$5.3m (after adjusting for the impact of tax rate changes) as a result of using proceeds from the recent equity issue to pay down debt. Cash provided by operating activities, before changes in working capital, was C\$305.5m in 2Q07, compared with C\$262.0m in 2Q06 (or C\$0.86 vs C\$0.77 on a per-share basis). Please see Exhibit 1 on the following page for further details on a segmented basis.

Developments during the quarter. During the quarter, Enbridge completed its open season for the Spearhead pipeline expansion project, slated for completion in 2009. Enbridge also received final governmental approvals from the Ontario Municipal Board and Ontario's Ministry of the Environment for its Bruce County wind-power project, expected to be in service toward the end of 2008 at an updated capital cost of C\$440m (up by roughly 10%). EGD received a final decision from the Ontario Energy Board (OEB) regarding its 2007 rate application, with a 1% increase in the equity component of deemed capital structure (to 36%, up from 35%), as well as approval for a new 20-year trend method to calculate normal weather for the GTA region, and an order to cease the risk management program used to manage price volatility of natural gas. In addition, EGD expects to shift to incentive regulation (IR) starting January 2008 for its distribution operations, and will proceed with development of unregulated gas storage services following a favourable decision by the OEB.

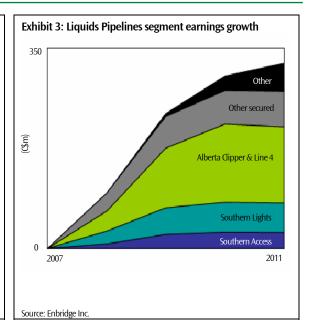

**Update on growth prospects.** Enbridge's Liquids Pipelines segment continues to advance a number of large pipeline projects to be completed during 2009–10, with equity returns in the low-to-mid teens. The ramp-up in Liquids Pipelines earnings, though back-end loaded, should work out to earnings growth of roughly 16% over the 2006–11 timeframe according to management guidance. We agree, as this is consistent with the output from our financial model. Please refer to the exhibits below for more details of the Liquids Pipelines projects and the segment's resulting earnings growth profile.

**US Gulf Coast expansion—still trying.** During the conference call, in response to a question posed by Desjardins Securities, management reiterated its strategic goal of connecting the growing Alberta crude oil supply to the refining capacity situated in the US Gulf Coast (USGC) PADD III market. With the expectation that current supply from Mexico and Venezuela will continue to decrease, the USGC will represent a significant amount of underused refining infrastructure, sufficient to absorb whatever incremental oil sands output can be delivered. Please refer to our *Morning Pulse* comment dated April 9, 2007 for additional details on proposed pipeline projects to the USGC region. In our view, Enbridge's proposed joint venture with ExxonMobil to connect Cushing, Oklahoma, to the USGC would be able to gather sufficient shipper interest in transporting crude from the Alberta oil sands as this would protect producer netbacks. Netbacks (the producer's margin net of the toll to transport oil to the market) would otherwise be pressured by a supply glut in the PADD II market, where Enbridge's mainline and TransCanada's proposed Keystone project currently terminate.

Capital cost inflation a modest positive? While most crude oil producers' returns are pressured by mounting capital costs, Enbridge is generally not significantly exposed to the risks associated with capital cost increases on regulated projects. Although costs have dramatically escalated for certain projects, such as the Southern Access expansion, given that Southern Access tolls will be mostly set under a regulated cost-of-service framework, Enbridge (and EEP) should actually see an increase in earnings, as prudently incurred growth capex is included in the rate base.

**Upcoming financings.** During the conference call, management reiterated its expectation of a capital market financing to come sometime in 2008, of a size similar to 2007 (~C\$600m). Given that management considers the entirety of the

# **MorningPulse**

current asset base as core, asset sales do not seem to be on the agenda, with the only possible exception being a sell-down of Enbridge's interest in Enbridge Income Fund (EIF), given the right market conditions. A reduction in Enbridge's interest in EIF is likely not imminent given the current market environment for income funds following recent changes in tax legislation. While the exact financing mix of the 2008 capital raise remains to be determined, management stated that hybrids and preferred shares are under consideration in addition to straight equity and debt.

A meagre dividend increase in 2008? Management does not have any plan to increase the dividend payout ratio (currently 60–70 %) at present. As a result, we believe that while the 2008 DPS increase will be modest ( $\sim$ C\$0.08, or 6.5%) to  $\sim$ C\$1.31 per share, down from our previously expected  $\sim$ C\$1.34, 2009–10 DPS growth ought to look better.

Change in financial estimates. We have now incorporated in our financial model the benefit of the allowance for funds used during construction (AFUDC) for capital spending on the Alberta Clipper and Southern Lights pipeline projects, as well as a plethora of smaller changes in our assumptions concerning Enbridge's other assets. Please consult the exhibit below for details of the changes in our financial estimates.

Year-end Dec-31 (C\$)	New	Previous	Change
2007E	1.79	1.86	-0.07
2008E	1.87	1.99	-0.12
2009E	2.11	2.01	0.10

## Recommendation

Maintaining C\$41 price target. We rely on our fundamental valuation work to set our price target, with backup support from relative valuation techniques. Our fundamental valuation work returns a range of C\$39.80—41.66 from our DDM and DCF models, respectively. Our relative valuation work returns a value of C\$39.32, based on sum-of-the-parts segment-by-segment analysis using 2007 estimated P/E multiples. Our C\$41 12-month price target implies a forward P/E ratio of  $\sim$ 23x, which we feel is appropriate for Enbridge due to growth potential, the proven track record of the management team, earnings quality, cash flow stability, a solid capital structure and defensive stock characteristics.

**Reiterating Buy recommendation.** At a closing price of C\$37.09 as of August 1, 2007, our price target represents a potential total return of 13.9%, inclusive of our 2007 dividend per share estimate of C\$1.23. Given our Average Risk rating and a potential 12-month total return of 13.9%, Enbridge shares deserve a Buy recommendation at current valuation levels, in our view. **We are reiterating our Buy–Average Risk recommendation and C\$41 price target.** 

Risk factors. Our financial estimates, price target and investment recommendation are subject to various risk factors, including but not limited to the following: (1) Lower-than-expected oil sands output, a faster-than-expected decline in conventional production and/or a fall in crude oil prices could derail much of the Liquids Pipelines growth program; (2) regulatory risk in case of adverse decisions for regulated assets located in North America, South America and Europe; (3) operational risk for existing assets; (4) execution risk related to the large growth program; (5) competition from rival pipeline projects for expansion of currently permitted infrastructure; (6) financing risk for large external capital requirements; and (7) inverse interest rate risk (lower interest rates resulting in lower allowed ROEs for regulated assets, as offset by an increase in the stock price due to interest sensitivity).

### Dissemination of Research

Desjardins Securities makes all reasonable effort to provide research simultaneously to all eligible clients. Research is available to our institutional clients via FirstCall Research Direct, Reuters and Bloomberg. In addition, sales personnel distribute research to institutional clients via email, fax and regular mail.

## **Analyst Certification**

Each Desjardins Securities research analyst named on the front page of this research publication, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this publication and all other companies and securities mentioned in this publication that are covered by such research analyst, and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this publication.

## **Additional Disclosures**

Desjardins Securities' equity research analysts are compensated from revenues generated by various Desjardins Securities businesses, including Desjardins Securities' Investment Banking Department. Desjardins Securities will, at any given time, have a long or short position or trade as principal in the securities discussed herein, related securities or options, futures, or other derivative instruments based thereon. The reader should not rely solely on this publication in evaluating whether or not to buy or sell the securities of the subject company. Desjardins Securities expects to receive or will seek compensation for investment banking services within the next three months from all issuers covered by Desjardins Securities Research.

## Legal Matters

This publication is issued and approved for distribution by (i) in the US, Desjardins Securities International Inc., a member of the FINRA and SIPC, (ii) in Canada, Desjardins Securities Inc., a member of the IDA and CIPF (collectively, "Desjardins Securities").

This publication is provided for informational purposes only, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. The securities mentioned in this publication may not be suitable for all types of investors; their prices, value and/or income they produce may fluctuate and/or be adversely affected by exchange rates. This publication does not take into account the investment objectives, financial situation or specific needs of any particular client of Desjardins Securities. Before making an investment decision on the basis of any recommendation made in this publication, the recipient should consider whether such recommendation is appropriate, given the recipient's particular investment needs, objectives and financial circumstances. Desjardins Securities suggests that, prior to acting on any of the recommendation herein, you contact one of our client advisors in your jurisdiction to discuss your particular circumstances. Since the levels and bases of taxation can change, any reference in this publication to the impact of taxation should not be construed as offering tax advice; as with any transaction having potential tax implications, clients should consult with their own tax advisors. ## Ranking System

FirstEnergy's rating system reflects our outlook for expected performance of an issuer's equity securities relative to its peer group over the next 12 months.

- A *Top Pick* (Buy) rating represents a security expected to provide a return materially higher than the peer group average.
- An Outperform (Buy) rating represents a security expected to provide a return greater than the peer group average.
- A Market Perform (Hold) rating represents a security expected to provide a return in line with the peer group average.
- An Underperform (Sell) rating represents a security expected to provide a return less than the peer group average.
- A Speculative Buy (Buy) rating represents a security where the return potential is high, but the risk of a significant loss is material.

The author of this report hereby certifies that the views expressed in this report accurately reflect his/her personal views about the subject security and issuer.

The author of this report further certifies that no part of his/her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research report.

FirstEnergy Capital Corp. may receive or intends to seek compensation for investment banking services from all issuers under research coverage within the next three months.

Opinion: **OUTPERFORM**12 MONTH TARGET PRICE **\$42.90** *Analyst: Steven I. Paget* 

## **Impact**

- Enbridge reported first quarter 2007 results that were in line with our estimates.
- Earnings for the quarter improved 19% from the same period last year, benefiting from strong performance from all business units, particularly from Enbridge Gas Distribution.
- Our Outperform ranking and target price of \$42.90 remain unchanged.

## **Analysis**

- Earnings improved 19% from \$190.9 Mm in Q1′06 to \$227.2 Mm in Q1′07, in line with our estimate of \$225.2 Mm. EPS advanced from \$0.56 per share to \$0.64 per share during the same period. This was in line with our expectation of \$0.64 per share. This boost was largely due to increased contributions from Enbridge Gas Distribution and 2005 hurricane proceeds received by Enbridge Offshore Pipelines. The increase in earnings will greatly contribute to the Company achieving its 2007 earnings target of \$1.75 to \$1.85 per share. Our EPS-FD is unchanged at \$1.80 per share.
- Earnings from *Liquids Pipelines* climbed 4% to \$68.9 Mm in Q1'07, from the same period last year. Earnings were supported by a full quarter of contributions from the Spearhead and Olympic Pipelines. Gains were limited by lower earnings from the Enbridge System, due to higher labour costs and increased taxes in the Terrace component.
- Gas Pipelines earnings rose 61% year-over-year to \$25.7 Mm in Q1'07, soundly beating our estimates by \$7.9 Mm, due to one-time insurance payments from the 2005 hurricanes. Proceeds included \$5.3 Mm towards the replacement of damaged infrastructure and \$6.0 Mm for business interruptions.
- Gas Distribution earnings gained 27% to \$109.4 Mm in Q1′07, from the same period last year. This improvement was the result of colder weather during the quarter. Gains were hindered by decreases from Energy Services and Aux Sable, due to losses on derivative instruments.
- Sponsored Investments tumbled 12% from Q1'06 to \$17.8
   Mm in Q1'07, due to Enbridge Energy Partners incurring \$2.0 Mm in losses on derivative financial instruments.
- Dividends per share increased to \$0.3075 in Q1′07, up from \$0.2875 during the same quarter of 2006. We expect Enbridge will have sufficient earnings to maintain this dividend, and further increase it into 2008.

Ranking System: Top Pick (T) Outperform (O) Market Perform (M) Underperform (U) Speculative Buy (SB)

## Enbridge Inc. - ENB \$37.15

May 3, 2007

- The successful conclusion of the Open Season for the Spearhead Expansion (65,000 additional Bbl/d from Chicago, IL to Cushing, OK) shows that Enbridge continues to turn prospects into projects.
- A portion of Line 3 is still operating at 80% of normal pressure after incurring a line break on April 15, 2007. Enbridge expects the line to continue operating at this pressure until at least Q3, until the cause of the break can be determined. This break is not expected to significantly hinder Enbridge's earnings.

## **Outlook**

- Enbridge calls its growth that starts in 2009-2010 the "Big Prize"; these are attractive low-risk projects that are very accretive, based on its existing infrastructure. Southern Access, Spearhead and Line 4 Extension are expected to come on in 2009, while Southern Lights and Alberta Clipper are forecast to start-up in 2010. Near term growth expectations over 2007 and 2008 are relatively modest. Enbridge has secured line pipe for its upcoming projects at a price that is favorable, and has lined up contractors for these projects.
- The upcoming growth strategy will be primarily organic, with acquisitions in the near term unlikely. Enbridge believes that acquisition assets are highly valued. The Company's gas infrastructure offshore the U.S. Gulf Coast is also well positioned for further organic expansion.
- Enbridge continues to trade at a well-deserved premium EV/EBITDA multiple to its competitors in Canada and the U.S. We continue to rank Enbridge as Outperform with a target price of \$42.90.

## Ranking System

FirstEnergy's rating system reflects our outlook for expected performance of an issuer's equity securities relative to its peer group over the next 12 months.

- A *Top Pick* (Buy) rating represents a security expected to provide a return materially higher than the peer group average.
- An *Outperform* (Buy) rating represents a security expected to provide a return greater than the peer group average.
- A Market Perform (Hold) rating represents a security expected to provide a return in line with the peer group average.
- An *Underperform* (Sell) rating represents a security expected to provide a return less than the peer group average.
- A Speculative Buy (Buy) rating represents a security where the return potential is high, but the risk of a significant loss is material.

The author of this report hereby certifies that the views expressed in this report accurately reflect his/her personal views about the subject security and issuer.

The author of this reports further certifies that no part of hisl her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research report.

FirstEnergy Capital Corp. may receive or intends to seek compensation for investment banking services from all issuers under research coverage within the next three months.

Company: Enbridge Inc. Company Ticker: ENB Rating: Outperform Target Price: 43.40

Analyst: Steven I. Paget

Enbridge reported Q2'07 results that were slightly higher than our estimates. Earnings applicable to common shareholders were \$146.5 Mm for the quarter, 15% higher than our estimate of \$127.4 Mm. The Company reported diluted EPS of \$0.41 per share, compared to our estimate of \$0.36 per share. This is mainly the result of higher than expected earnings from *Gas Distribution* and *Sponsored Investments*. During the second quarter, *Gas Distribution* earnings were \$23.7 Mm, \$12.8 Mm higher than our estimate. The division benefited from customer growth and improved expense management. Earnings from *Sponsored Investments* were \$33.4 Mm, \$13 Mm higher than our expectations. *Sponsored Investments* was boosted by a dilution gain from Enbridge Energy Partners' issuance of more partnership units in Q2'07.

Earnings from Liquids Pipelines were \$65.8 Mm, \$6.4 Mm lower than our estimate. Earnings from the division were hindered by lower earnings from Enbridge Systems, due to increased compensation expense, higher pipeline integrity costs and increased taxes in the Terrace component. Gas Pipelines reported earnings of \$13.4 Mm, \$4.3 Mm lower than our estimate. Results from the division were impacted by the decline in natural gas production on deliveries to pipelines.

Construction is currently in progress for several pipelines and terminal projects, with a budget of \$9 billion in liquids pipelines projects going forward. Management stated on the conference call that the crude oil pipelines will continue to be a key driver of growth for Enbridge

## Ranking System

FirstEnergy's rating system reflects our outlook for expected performance of an issuer's equity securities relative to its peer group over the next 12 months.

- A Top Pick (Buy) rating represents a security expected to provide a return materially higher than the peer group average.
- An Outperform (Buy) rating represents a security expected to provide a return greater than the peer group average.
- A Market Perform (Hold) rating represents a security expected to provide a return in line with the peer group average.
- An Underperform (Sell) rating represents a security expected to provide a return less than the peer group average.
- A Speculative Buy (Buy) rating represents a security where the return potential is high, but the risk of a significant loss is material.

The author of this report hereby certifies that the views expressed in this report accurately reflect his/her personal views about the subject security and issuer.

The author of this report further certifies that no part of his/her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research report.

FirstEnergy Capital Corp. may receive or intends to seek compensation for investment banking services from all issuers under research coverage within the next three months.

## Impact

- Enbridge reported Q2'07 results that were slightly higher than our estimates.
- We continue to rank Enbridge as Outperform with a 12 month target price of \$43.40 per share.

## **Analysis**

After adjusting for dilution gain on EEP unit issuance, Aux Sable unrealized derivative losses, and weather affecting Enbridge Gas Distribution, earnings were \$0.36 per share, as forecast. Actual earnings applicable to common shareholders were \$146.5 Mm for the quarter, or \$0.41 per diluted share. This is mainly the result of higher than expected earnings from *Gas Distribution* and *Sponsored Investments*. This is still lower than the \$157.9 Mm in earnings, or \$0.47 per share, reported in Q2'06, due to impact of tax rate changes in Q2'06.

## **Business Environment**

- Canada's National Energy Board (NEB) issued a report on July 27, 2007, that forecasted that Canadian crude oil pipelines may need to constrain oil shipments as soon as the fourth quarter of this year, due to faster than expected production from the oil sands. In the report, the NEB estimates that oil shipments from Western Canada may be constrained until late 2008. What happened to make crude capacity so tight? Our estimates from 2005 show that while conventional oil and synthetic crude production appears in line with our historical estimates, in-situ bitumen production is higher than we forecast in early 2005.
- This lack of spare pipeline capacity underscores the need for the service Enbridge provides the Company is the leader in moving oil sands-based crude. The Company has a budget of \$9 billion in liquids pipelines projects going forward.
- However more capacity is not enough. Oil sands crude also needs new markets if growth projections are to be met: the Company has formed a joint venture with ExxonMobil to consider opening the Texas Gulf Coast market for Canadian crude.
- Enbridge indicated it may not build the \$30 billion proposed Alaska Pipeline. Management stated that it will not submit an application unless changes are made to how Alaska is soliciting applications to build the project. Currently the Alaska Gasline Inducement

## Enbridge Inc. - ENB \$36.27

August 7, 2007

Act requires companies to submit project proposals by Oct. 1, 2007, but does not require producers to support any new pipeline. Enbridge stated it will not go ahead unless it has resource commitments from producers.

■ Enbridge is our best idea among energy infrastructure names. We remain concerned that the equity value will lag in the short-term, with our forecast for a 5.00% yield on the Government of Canada 10-year bond.
