FirstEnergy's rating system reflects our outlook for expected performance of an issuer's equity securities relative to its peer group over the next 12 months.

X Yes

No

- A *Top Pick* (Buy) rating represents a security expected to provide a return materially higher than its peer group average.
- An *Outperform* (Buy) rating represents a security expected to provide a return greater than its peer group average.
- A *Market Perform* (Hold) rating represents a security expected to provide a return in line with its peer group average.
- An *Underperform* (Sell) rating represents a security expected to provide a return less than its peer group average.
- A Speculative Buy (Buy) rating represents a security where the return potential is high, but the risk of a significant loss is material.

The author of this report hereby certifies that the views expressed in this report accurately reflect his/her personal views about the subject security and issuer.

The author of this reports further certifies that no part of his/ her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research report.

FirstEnergy Capital Corp. may receive or intends to seek compensation for investment banking services from all issuers under research coverage within the next three months.

## A Strong Start to 2007

#### 1Q07 EPS beats expectations

ENB earned \$0.65/share on a clean operating basis, above our estimate of C\$0.60 and the consensus of \$0.62. Including net negative special items of \$2.4mm, ENB reported 1Q07 earnings of \$0.64/FD share. ENB reaffirmed 2007 EPS guidance range of \$1.75-1.85 and its long term EPS growth rate of 8-10%.

#### Details C\$8 billion Liquids projects portfolio returns

On its conference call, ENB discussed its large oil pipelines project portfolio. ENB focused on the expected returns of the projects (low to mid teens returns on average), the near term earnings impact, and actions to manage capital costs. The 2007/2008 earnings impact is modest but a greater contribution kicks in during the 2009-2010 timeframe when major projects such as Southern Access, Alberta Clipper, and Southern Lights projects come online. ENB noted that it has already secured pipe for Southern Access, Alberta Clipper, the Line 4 Extension, Southern Lights, and Waupisoo pipeline projects as part of its long term strategy to manage capital costs and ensure solid project execution.

## Successful Spearhead Pipeline Expansion Open Season

Recently, ENB announced the successful conclusion of the Spearhead Pipeline Expansion open season. ENB received binding commitments in excess of the available 30 mbd threshold. ENB proposes to add a number of pumping stations to increase the annual average capacity of the Spearhead pipeline further to 190mbd from 125mbd. Of the 65mbd increase, 30mbd will be available to committed shippers, while the other 35mbd will be available to spot shippers.

#### We still like ENB; Maintaining estimates

No change to our 2007 and 2008 EPS estimates of C\$1.80 and C\$1.95, respectively. We reiterate our Buy investment recommendation on ENB shares.

#### **Company Description**

Enbridge (ENB) is one of North America's largest pipeline and energy infrastructure operators. Its pipeline systems deliver more than 2 mmbbls/day of crude oil and liquids. ENB is involved in the natural gas transmission through the Alliance and Vector pipelines. ENB also operates Canada's largest natural gas distribution company, Enbridge Gas Distribution, which serves 1.7 million customers.

#### Stock Data

Average Daily Volume	708,042
Brokers Covered (FirstCall)	NA

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 19

## Strong Organic Growth Projects

ENB earned \$0.65/share on a clean operating basis, above our estimate of C\$0.60 and the consensus of \$0.62. Including net negative special items of \$2.4mm, ENB reported 1Q07 earnings of \$0.64/FD share. Gas Distribution and Services segment was above our estimate, while Liquids Pipelines was below. Corporate charges were lower than modeled. Most other segments were in line (see Table 2).

Results in Liquids Pipelines were below our estimate due to lower than expected results in the Enbridge System, Athabasca System, and Spearhead Pipelines. In Gas Distribution & Services, better than expected earnings at EGD and Noverco were the main reasons for the better than expected segment results.

ENB confirmed its 2007 EPS guidance range of C\$1.75-1.85. Our existing EPS estimate is already within this range at \$1.80, as is consensus at 1.79.

#### Items of Interest

ENB currently has the largest portfolio of organic growth opportunities in its history. A large number of projects will come into service over the next few years. On its conference call, the company highlighted a few key points:

- ENB continues to progress with the US\$1.5 billion Southern Access
   Expansion which will have the capacity to transport 400mbd of crude from Alberta to Chicago by 2009.
- ENB and EEP continue to work on the C\$2.4 billion Alberta Clipper project and the C\$0.3 billion Line 4 Extension Project. Anticipated in service date for the Line 4 Extension pipeline is late 2009, while an in service date of 2010 is expected for the Alberta Clipper Project.
- ENB continues to progress with the US\$1.3 billion Southern Lights Diluent line project. The US\$1.3 billion project will provide 180mbd of diluent capacity from the US Midwest into Alberta.
- ENB continues to progress with its development of contract terminals especially at Hardisty, Stonefell, and Cushing. Also, it continues to work on regional oil sands infrastructure including Waupisoo, Long Lake, Surmont, and the Athabasca expansion.
- Though ENB Offshore has had a slow start over the last two years due to the 2005 Hurricane activity, volumes are expected to increase over the next year as long-delayed deepwater projects produce first hydrocarbons. ENB expects the Neptune project to come on line in 4Q07, with Atlantis in early 2008 and Thunder Horse in early 2009.
- In natural gas, ENB sees excellent long term opportunities for transporting Alaska gas, although they find the near term pace of development is somewhat frustrating. In the lower-48, ENB noted that drilling activity in North and East Texas (Barnett Shale) remains high and that new natural gas infrastructure will be needed over the next several years. ENB also continues to push forward on its Rabaska LNG efforts in Quebec.

## **Investment Summary**

We reiterate our Buy investment recommendation on ENB shares. We continue to regard ENB as one of the highest quality and best-managed companies in the energy industry.

We expect ENB will be able to grow EPS at an average annual rate of around 10% over a multi-year period, and this growth is largely unaffected by major swings in commodity prices. ENB is the major pipeline franchise serving one of the world's fastest growing energy infrastructure markets: the Canadian Oil Sands. ENB even offers a 3% yield.

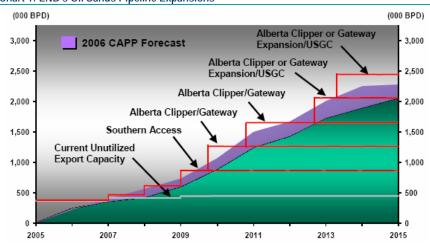

No change to our 12 month price object of C\$43/share. Though ENB shares trade at 21x, the company's EPS growth profile, track record, quality assets, and stability of earnings justifies the premium multiple, in our view.

## Price Objective Basis & Risk

No change to our 12-month price objective to C\$43/share. Our 12-month price objective reflects our DDM/DCF model's fair value assessment of ENB's long term cash flows, discounted at 7.0%, assuming a long term nominal growth rate of 5.0%. We have a high degree of confidence in this growth rate given ENB's extraordinary set of organic investment opportunities driven by the rapidly expanding oil sands play. While ENB is trading near all-time highs with the potential for some consolidation in the near term, we believe in the long term price potential of the shares.

Significant changes in North American energy supply or demand patterns, interest rates, and project delays could affect ENB's ability to achieve our financial estimates and price objective.

## Analyst Certification

I, Andrew Fairbanks, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

## 2Q07 EPS in line with expectations

**Growth on Track** 

ENB earned \$0.36/share on a clean operating basis, above our estimate of C\$0.33 and consensus of \$0.35. Including net special items of \$17mm, ENB reported 2Q07 earnings of \$0.41/FD share. CFPS matched our est of \$0.86/shr.

#### Liquids portfolio to drive strong earnings growth

Enbridge expects its C\$9bn of oil ongoing pipeline projects to drive an annual earnings growth of 16% for ENB Liquids segment and 20% for the EEP Liquids segment in 2006-11. Management continues to target an average 5-year EPS growth of 8-10% for ENB corp, with the bulk of earnings growth occurring in 2009. See Charts 1, 2, and 5 for project by project details.

#### Alberta Clipper Project regulatory filing & capex revision

ENB in 2Q07 filed an application with the NEB to construct a 1,000 mile crude oil pipeline from Hardisty, AB to Superior, WI. It raised project capex estimates for the Canadian segment of the line to C\$2bn and for the US segment to US\$1.0bn to reflect skilled labor shortage and to incorporate added environmental and engineering costs. The project is expected to be completed by end-2009.

## We still like ENB; Maintaining estimates

No change to our 2007 and 2008 EPS estimates of C\$1.80 and C\$1.95, respectively. We reiterate our Buy investment recommendation on low risk ENB shares, which we view as especially attractive in this volatile market environment.

#### **Company Description**

Enbridge (ENB) is one of North America's largest pipeline and energy infrastructure operators. Its pipeline systems deliver more than 2 mmbbls/day of crude oil and liquids. ENB is involved in the natural gas transmission through the Alliance and Vector pipelines. ENB also operates Canada's largest natural gas distribution company, Enbridge Gas Distribution, which serves 1.7 million customers.

#### Stock Data

Average Daily Volume	674,904
Brokers Covered (FirstCall)	NA
Shares / Common - Dual Listed	1.00

## Strong Organic Growth Projects

ENB confirmed its 2007 EPS guidance range of C\$1.75-1.85. Our existing EPS estimate and consensus is already within this range at \$1.80. ENB also reiterated its medium-term goal of 8-10% average annual EPS growth over the next five years.

ENB earned \$0.36/share on a clean operating basis, above our estimate of C\$0.33 and the consensus of \$0.35. Including special items of \$17.0mm, ENB reported 2Q07 earnings of \$0.41/FD share. Cash flow matched our estimate of C\$0.86/FD share. The positive earnings surprise was driven by Gas Distribution & Services and International segments, which completely offset lower than expected results from Gas Pipelines and Liquids Pipelines segments. Corporate charges were also lower than modeled. Other segments were in line, Table 3.

Results from Liquids Pipelines were below our estimate given lower than expected earnings from the Enbridge and Athabasca System. In Gas Pipelines, earnings from Alliance pipelines and Enbridge Offshore were lower than expected. Gas Distribution & Services and International segments outperformed on better than expected earnings from EGD and CLH respectively.

#### Items of Interest

ENB currently has the largest portfolio of organic growth opportunities in its history. Management expects its C\$9bn liquids portfolio to drive an annual earnings growth of 16% for the Liquids segment and 20% for the EEP Liquids segment in 2006-11. Management continues to target an average 5-year EPS growth of 8-10% with the steepest earnings growth occurring in 2009.

On its conference call, the company highlighted a few key points:

- For the Alberta Clipper Project, ENB filed a project application with the NEB. It raised capex for the Canadian segment to C\$2.0bn and the U.S. segment to US\$1.0bn to reflect the shortage of skilled labor and incorporate the cost of detailed environmental and engineering studies. The project is expected to be completed by the end of 4Q09.
- For the Southern Access Expansion, ENB raised its capex estimates to US\$2.1bn (Enbridge US\$0.3bn, EEP US\$1.8bn) from US\$1.5bn to reflect higher cost revisions for labor, materials, and rights-of-way. The 400mbd project is expected to be completed in 2009.
- For the Southern Lights Pipeline, ENB filed state and federal applications for the U.S. portion of the US\$1.3bn project. The 180mbd diluent pipeline is expected to be in service in 2010.
- For the proposed Gateway Pipeline, Enbridge is sticking with its prior 2013-14 project start-up timetable despite some press reports regarding Petro-China's concerns about its ability to make Canadian investments. Project fundamentals remain strong as Canadian producers will ultimately need a Pacific Basin "relief valve" to deal with a potential bitumen oversupply in North America long term. Management attributed the slow project progress to the lack of significant oil sands deals from Asian refineries, but still thinks the project will eventually go.

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 20

- ENB is in discussion with ExxonMobil for a new pipeline from Patoka, IL to the Gulf Coast. Management plans to transport 400mbd of Canadian crude to the Gulf Coast by 2010 as an additional 2.1mbd of oil sands production is expected to come on-stream by 2016.
- ENB received OEB approval to increase the equity component of its deemed capital structure to 36% from 35%. ENB also filed an application for rates commencing in 2008 based on an Incentive Regulation methodology with the OEB. The IR methodology will decrease the forecasting risk related to weather and provide incentives for ENB to improve service and obtain higher segment returns.
- ENB will proceed with the development of the natural gas storage services at EGD's Southwestern Ontario storage facility after OEB upheld its earlier decision to deregulate prices for new storage services. ENB signed a 2.6 Bcf daily service storage contract in April.

## **Investment Summary**

No change to our 2007 and 2008 EPS estimates of C\$1.80 and 1.95, respectively. No change to our 2009 EPS estimates of 2.10.

We reiterate our Buy investment recommendation on ENB shares. We continue to regard ENB as one of the highest quality and best-managed companies in the energy industry. We particularly like the low risk character of the ENB business model, which we view as especially attractive in this volatile market environment.

We expect ENB will be able to grow EPS at an average annual rate of around 10% over a multi-year period, and this growth is largely unaffected by major swings in commodity prices. ENB is *the* major pipeline franchise serving one of the world's fastest growing energy infrastructure markets: the Canadian Oil Sands. ENB even offers a 3% yield.

No change to our 12 month price object of C\$43/share. Though ENB shares trade at 21x, the company's EPS growth profile, track record, quality assets, and stability of earnings justifies the premium multiple, in our view.

We are initiating coverage of Enbridge under the US interlisted symbol, ENB, in addition to our current coverage under the Canadian ticker, YENB.

## Price objective basis & risk

#### Enbridge Inc. (YENB)

No change to our 12-month price objective to C\$43/share. Our 12-month price objective reflects our DDM/DCF model's fair value assessment of ENB's long term cash flows, discounted at 7.0%, assuming a long term nominal growth rate of 5.0%. We have a high degree of confidence in this growth rate given ENB's extraordinary set of organic investment opportunities driven by the rapidly expanding oil sands play. While ENB is trading near all-time highs with the potential for some consolidation in the near term, we believe in the long term price potential of the shares.

Significant changes in North American energy supply or demand patterns, interest rates, and project delays could affect ENB's ability to achieve our financial estimates and price objective.

## Enbridge Inc.

Q2 2007 EPS in line with expectation

Ongoing \$9 bln capital program to provide strong multi-year EPS growth by 2009

#### **HIGHLIGHTS**

- Reported Q2 2007 earnings: \$146.5 million or \$0.41 per share vs. \$157.9 million or \$0.47 per share in Q2 2006 (y/y).
- Operational Q2 2007 earnings: \$129.5 million or \$0.36 per share vs. \$118.7 million or \$0.35 y/y. Operational EPS was in line with our estimate and was a penny higher than the Street
- Operational earnings were higher y/y mostly because of improved operating margins and customer growth at... ...Enbridge Gas Distribution (EGD), higher earnings from Enbridge Energy Partners LP (NYSE-EEP) aided in part by increased ownership, as well as continued strong earnings at CLH in Spain.
- ENB is still targeting 8% to 10% average annual EPS growth over the 2007-2011 period (mostly back-end weighted).

## ■ We are maintaining our EPS estimates

Our target price moves to \$40.00 from \$38.40 as we have increased the P/E multiple to 21x from 20x and the REPS multiple to 18x from 16x, to reflect the expected strong multi-year EPS growth that will begin in 2009 as a result of the current large capital program. Our Sector Perform rating is sustained.

#### Company Profile:

Enbridge owns Canada's premier diversified petroleum pipeline system. As a pipeline of choice, it transports most of Canada's petroleum production to markets and accounts for most of Canada's petroleum imports by pipeline. Its 100%-owned subsidiary, Enbridge Gas Distribution, is Canada's largest natural gas distributor. Among numerous interests, ENB has a 50% interest in Alliance Pipeline, a 60% interest in Vector Pipeline, and a 42.7% interest in Aux Sable NGL plant.

Ramin Burney - (416) 869-7933 ramin.burney@nbfinancial.com

#### **Stock Performance**

#### Assessment

If investors believe that Canada has a petroleum future, they must extend their belief to ENB, because we expect it to capture the majority of crude oil transportation projects, since it owns the oil pipelines of choice. ENB remains the premier client server to the Alberta oil sands producers.

ENB **reported Q2 2007 earnings** of \$146.5 million or \$0.41 per share compared with \$157.9 million or \$0.47 per share last year when it benefited from the impact of income tax rate reductions.

**Q2 2007 operational earnings** were \$129.5 million or \$0.36 per share vs. \$118.7 million or \$0.35 per share y/y after excluding some non-recurring items such as a \$11.8 million dilution gain on an Enbridge Energy Partners LP (NYSE-EEP) unit issuance. Operational EPS was in line with our estimate and was a penny higher than the Street.

Operational earnings increased y/y at **Gas Distribution** (improved operating margins and customer growth at Enbridge Gas Distribution (EGD)), **Sponsored Investments** (increased ownership in Enbridge Energy Partners LP (NYSE-EEP) — averaged 16% in H1 2007 vs. 10.9% in H1 2006), and the **International** segment (CLH earnings increased to \$16.7 million from \$14.7 million aided by higher transportation tariffs, higher volumes and the impact of a stronger euro).

ENB is still targeting 8% to 10% average annual EPS growth over the next five years – 2007-2011 (mostly back-end weighted).

Earnings growth will start ramping up in a very meaningful way by 2009 once major crude oil mainline pipeline expansion projects currently under development, such as the Southern Access Pipeline Expansion or SAP (cost: US\$2.1 billion vs. previous US\$1.6 billion estimate), Alberta Clipper or AC (cost: Cdn\$3.1 billion) and the Line 4 extension (cost: Cdn\$300 million) start coming into service.

We expect common share dividend growth to be limited to not more than \$0.02 per quarter (\$0.08 annualized) for the next couple of years, as ENB preserves cash for its ongoing \$9-billion capital program.

We are maintaining our EPS estimates for 2007 and 2008. Our target price moves to \$40.00 from \$38.40 as we have increased the P/E multiple to 21x from 20x and the REPS multiple to 18x from 16x, to reflect the expected strong multi-year EPS growth that will begin in 2009 as a result of the current large capital program. Our Sector Perform rating is sustained.

#### Q2 2007 Highlights

Reported Earnings (\$MIn)	Q2 '07	Q2 '06
Liquids Pipelines	\$65.8	\$68.6
Gas Pipelines	\$13.4	\$15.9
Sponsored Investments	\$33.4	\$23.2
Gas Distribution and Services	\$23.7	\$34.0
International	\$24.0	\$21.3
Corporate	(\$13.8)	(\$5.1)
TOTAL	\$146.5	\$157.9

Source: ENB

#### **Liquids Pipelines**

Q2 Earnings: \$65.8 million vs. \$68.6 million y/y.

Earnings decreased y/y mostly owing to a reduction in Enbridge System (ES) earnings.

**ES** earnings decreased to \$45.1 million from \$48.9 million y/y, reflecting 1) higher compensation expense driven by the strong Alberta labour market, 2) higher pipeline

integrity costs and 3) increased taxes in the Terrace component.

ENB's 65% interest in the **Olympic Pipe Line Company (Olympic)** (acquired on Feb. 1, 2006) contributed earnings of \$1.5 million vs. \$2 million y/y, while the Spearhead Pipeline (SP) (which began operations in early March 2006) contributed earnings of \$3.1 million vs. \$2.4 million y/y.

#### **Gas Pipelines**

Q2 Earnings: \$13.4 million vs. \$15.9 million y/y.

This segment includes Alliance Pipeline (U.S.) (APUS), Vector Pipeline (VP), and Enbridge Offshore Pipelines (EOP).

Gas Pipelines' earnings decreased y/y mostly due to lower earnings at EOP (\$3 million vs. \$6 million y/y) arising from the impacts of natural gas production declines on deliveries to the pipelines as well as the delay of expected start-ups of key production sources. ENB is not expecting significant earnings improvements at EOP until the 2008/09 timeframe when larger projects are scheduled to come into service (Atlantis, Thunderhorse, Shenzi). Earnings at VP and APUS increased y/y.

#### **Sponsored Investments**

Q2 Earnings: \$33.4 million vs. \$23.2 million y/y.

This segment includes results from ENB's interests in **Enbridge Energy Partners LP** (NYSE-EEP) (now 15%), and **Enbridge Income Fund (TSX-ENF.un)** (41.9% equity interest; 72% economic interest).

Earnings increased y/y mostly due to \$11.8 million of dilution gains in EEP, higher ownership interest in EEP (averaged 16% vs. 10.9% last year), partially offset by tax rate changes at ENF.un.

**EEP's** earnings contribution increased to \$12.2 million from \$8.5 million y/y. EEP benefited from higher throughput on its principal natural gas and liquids systems driven by developments in the Bossier Sands and Barnett Shale plays, offset by higher operating expenses. During Q2, there were \$11.8 million of EEP dilution gains resulting from unit offerings that ENB did not participate in. By 2009, we expect ENB to begin sharing in EEP's premium distribution.

**ENF.un's** Q2 earnings increased by \$1 million y/y to \$9.7 million. ENB is looking at a number of different options regarding its large stake in ENF.un now that Bill C-52 (the Canadian Federal government's Tax Fairness Plan) has become law. ENB has stated that it will not be rolling any more corporate assets into ENF.un for the time being.

#### **Gas Distribution and Services**

Q2 Earnings: \$23.7 million vs. \$34 million y/y.

Earnings decreased y/y mostly due to the positive impact of income tax reductions in Q2 2006 (\$28.9 million).

**EGD's** earnings increased y/y mostly due to the impact of colder weather as well as improved operating margins and customer growth. For 2007, the Ontario Energy Board (OEB) has approved for EGD, a rate base of \$3.7457 billion (vs. \$3.6336 billion in 2006), a deemed common equity of 36% vs. the previous 35% (38% was requested), and a rate of return on common equity of 8.39% (vs. 8.74% in 2006). By 2008, EGD is expected to begin operating under a multi-year incentive regulation (IR) methodology, which should enhance returns.

**Aux Sable (AS)** incurred a loss of \$5.9 million vs. earnings of \$0.2 million y/y due to the recording of \$8.3 million of unrealized fair value losses on derivative financial instruments during the quarter. Fractionation margins were positive throughout H1 2007 and AS recognized earnings under the upside sharing agreement during Q2 and expects to recognize more in Q3 and Q4.

#### International

Q2 Earnings: \$24.0 million vs. \$21.3 million y/y.

ENB's 25% investment in **CLH** (Spain's largest refined products transportation and storage business) contributed earnings of \$16.7 million vs. \$14.7 million y/y. CLH earnings increased due to higher transportation tariffs, a 2% increase in volumes, lower operating costs and the impact of the stronger euro. CLH continues to benefit from continued strong demand for refined products and storage in Spain and we expect demand for more storage in Spain to continue. Earnings from **OCENSA/CITCol** (24.7% interest) were flat y/y at \$8.1 million.

#### Corporate

Q2 Costs: (\$13.8 million) vs. (\$5.1 million) y/y.

Corporate costs increased y/y reflecting the \$14 million of positive income tax rate changes in the prior year, partially offset by lower interest expense resulting from lower levels of corporate debt as well as the capitalization of interest on certain growth projects financed by corporate debt.

Major Projects Update				
Southern Access Pipeline Expansion (SAP)	Work continues on the multi-phase SAP with final completion slated for 2009. The capital cost has been revised to US\$2.1 bln from US\$1.6 bln.			
Alberta Clipper (AC)	In Q2 2007, ENB filed an application with the NEB to build the Cdn portion of AC. EEP will file later this year a similar application with the FERC for the U.S. portion. The Cdn\$3.1 bln AC is expected to be in service by mid-2010.			
Line 4 Extension Project	In Q2 2007, ENB filed an application with the NEB to build the \$0.3 bln project which is expected to be in service by early 2009.			
Waupisoo Pipeline (WP)	In Q2 2007, ENB began construction on the \$0.5 bln WP. It is expected to be in service by mid-2008.			
Southern Lights Diluent Pipeline (SLDP)  In Q2 2007, ENB filed state & federal applications for the U.S. portion of the US\$1.3 bln SLDP. ENB filed an application with the NEB to build the Cdn portion in Q1 2007. Construction activities are underway and the 180,000 b/d diluent line is expected to be in service by 2010.				
Source: ENB				
For more detailed project descriptions please refer to our initiation of coverage report dated July 5, 2007.				

#### ENB-ExxonMobil Pipeline Proposal (Patoka, Illinois, to U.S. Gulf Coast)

On June 5, 2007, ENB and ExxonMobil (NYSE-XOM) announced that they were looking at jointly building a new pipeline that would transport crude oil (mostly Canadian heavy crude) from Patoka, Illinois, to Beaumont, Texas, and then finally to Houston and the Gulf Coast region. The proposed 30-inch pipeline would have a capacity of about 400,000 b/d and could be in service by the end of 2010 if the project is moved in a swift fashion. According to ENB, discussions with potential shippers have been so far very positive.

The pipeline would use the existing right-of-way (ROW) of XOM's recently reversed Pegasus Pipeline (65,000 b/d capacity), follow the Pegasus route to Beaumont, Texas, and then proceed further down to Houston. Crude oil would reach the Patoka area via ENB's Mainline through the Mustang Pipeline and perhaps the proposed SAP extension (Chicago to Patoka).

This new proposal is a more desirable way of bringing Canadian crude oil down all the way to

the U.S. Gulf Coast as it will utilize existing ROW. If built, it would lessen the need for ENB's proposed bullet pipeline from Alberta to the Gulf Coast or even Altex Energy Ltd.'s proposed 250,000 b/d pipeline which also aims to transport Alberta crude to the Gulf Coast.

#### **Gateway Project (GP)**

PetroChina Co. recently abandoned plans to be part of ENB's \$4.2 billion Gateway Project (GP). GP consists of a proposed 525,000 b/d crude oil pipeline from Alberta to the B.C. west coast and a 193,000 b/d diluent pipeline running parallel in the opposite direction. Last year, the original in-service date of late 2009/early 2010 was pushed back to the 2012-14 timeframe.

PetroChina had refused to renew the Memorandum of Understanding (MOU) which it signed with ENB in April 2005 wherein it agreed to commit to 50% of the originally proposed 400,000 b/d crude oil pipeline capacity (now 525,000 b/d). PetroChina cited very slow progress and lack of support from the Canadian producers and government to help bring crude oil to the Far East.

We are not surprised by these turn of events. It has been clear over the past year that Canadian crude producers were focusing on serving the growing U.S. demand for their crude oil instead of opening new markets in the Far East. Moving the Canadian crude oil down to the U.S. Midwest and ultimately to the Gulf Coast has been the main priority.

ENB has stated that despite the PetroChina pullout, it has seen a broadening of interest in Southeast Asia for GP and that the fundamentals remain quite strong. ENB is now looking to build GP in the 2013-14 timeframe and China, other Asia Pacific countries (i.e. Japan, South Korea, Singapore), as well as California could be potential markets for the Canadian crude. ENB believes that the main reason why GP has been delayed is that no Southeast Asian refining company has been able to make a significant investment in the oil sands so that the oil can be moved to Southeast Asia.

We believe that a post-2015 timeframe for GP is more likely and that down the road, PetroChina could reassess its position and eventually rejoin the project.

#### **Financial and Outlook**

Funds from operations in Q2 2007 increased to \$305.5 million from \$262 million y/y. During Q2 2007, ENB spent \$457.8 million on capital expenditures, up from \$247.2 million y/y.

At the end of Q2 2007, ENB's debt to total capitalization was about 59.7%, down from 62.2% at the end of Q2 2006, mostly due to the \$566.4 million equity issuance in Q1 2007. In 2008, ENB plans to issue additional debt, common equity and possibly hybrids as a number of projects near completion. ENB could potentially look at asset sales to help fund its capital program.

ENB's adjusted 2007 EPS guidance remains in the \$1.75 to \$1.85 range while its target dividend payout is in the 60-70% range.

In 2007, ENB intends to spend about \$2.5 billion on capital projects, financed through cash from operations, issuance of debt and equity.

#### **VALUATION**

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

**Our target price of \$40.00** is calculated by applying the following: 1) a 21x P/E multiple (previously 20x) to our estimated 2008 EPS of \$1.93 giving us a \$40.53 target price. 2) Using our dividend-based support/residual price approach: for the 2008 fiscal year, we are estimating EPS of \$1.93, DPS of \$1.31, and retained EPS (REPS) of \$0.62. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35. This generates a support price of \$28.30 and using a REPS-multiple of 18x (previously 16x), a residual price of \$11.16, for a target price of \$39.46.

Page 6

#### **DISCLOSURES:**

#### Ratings And What They Mean:

<u>PRIMARY STOCK RATING</u>: NBF has a three-tiered rating system that is relative to the <u>coverage universe</u> of the particular analyst. Here is a brief description of each: **Outperform** – The stock is expected to outperform the analyst's coverage universe over the next 12 months;

Sector Perform – The stock is projected to perform in line with the sector over the next 12 months; **Underperform** – The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; Tender – Our analyst is recommending that investors tender to a specific offering for the company's stock; Restricted – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

**INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

<u>RISK RATING</u>: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

## FIRST GLANCE | COMMENT

MAY 2, 2007

**Enbridge Inc.** (TSX: ENB; 36.69; NYSE: ENB) Q1/07 Results Generally In Line

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 22

## Sector Perform Average Risk

#### **Impact**

Neutral.

## First Impression

- Q1/07 Results. Enbridge's normalized first quarter 2007 EPS was \$0.64 compared to our estimate of \$0.62, consensus of \$0.62 and first quarter 2006 normalized EPS of \$0.62. All of the segments were essentially in line except for Gas Distribution, which came in higher than expected. Part of this segment's better-than-expected results are from Enbridge Gas Distribution (EGD), which as a cost of service regulated entity could be attributable to a quarterly timing difference.
- Conference Call. A conference call will be held Wednesday, May 2, 2007 at 9:30 AM Eastern to discuss the first quarter results. The dial in number is 1-800-591-6945 (passcode: 86318585).

## **Required Disclosures**

## **Explanation of RBC Capital Markets Rating System**

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

#### **Ratings**

**Top Pick (TP):** Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

**Outperform (O):** Expected to materially outperform sector average over 12 months.

**Sector Perform (SP):** Returns expected to be in line with sector average over 12 months.

**Underperform** (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

**Average Risk (Avg):** Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

**Above Average Risk (AA):** Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

#### Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

		of Ratings/IB Services Capital Markets		
			Investment Serv./Past

Enbridge Inc. (TSX: ENB; NYSE: ENB)

Q1/07 Results Largely In Line; Equity Issue Signalled

for 2008

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 23

## Sector Perform Average Risk

Price:	37.15	Price Target:	42.00
Trice.	37.13	Implied All-In Return:	16.4%
Shares O/S (MM):	367.1	Market Cap (MM):	13,637.8
Dividend:	1.23	Yield:	3.3%
Float (MM):	332.3		
Strategic Ownership: Nover	co - 9.5%		

#### **Event**

Enbridge reported Q1/07 results.

#### **Investment Opinion**

- Q1/07 Results Largely In Line. Enbridge's Q1/07 normalized EPS was \$0.64 compared to our estimate of \$0.62, and \$0.62 a year ago. All of the segments were essentially in line except for Gas Distribution, which came in higher than expected due to slightly better-than-expected results from Enbridge Gas Distribution and Energy Services.
- Equity Issue Expected for 2008. Management disclosed that it intends to issue equity sometime in 2008 to fund its capex program. The company is still evaluating its needs and potential financing sources, but management mentioned that the current thinking on size is similar to the amount issued in Q1/07 (\$566 million). Further, management commented that it will also look at using hybrid equity securities as part of its financing mix.
- On Pace to Meet 2007 EPS Guidance. Management reiterated that it continues to expect 2007 EPS to fall within its \$1.75 to \$1.85 EPS range.
- Modest Near-Term Growth; "Big Prize" Starts in 2009-2010. Over the past three years, EPS has grown at a compound annual rate of about 7%.

  Management stated that it expects EPS growth to be "modest relative to recent past." However, with the slate of sizable projects expected to come on-stream beginning in 2009, management remains comfortable with its 5-year compound annual EPS growth target of 8% to 10%, which implies 2011 EPS of between \$2.56 to \$2.80.
- Low End of 5-Year EPS Growth Target Appears Achievable. Based on the project portfolio and expected returns set out by management in the Q1/07 presentation, it appears that the low-end of the 8% to 10% average annual compound EPS growth rate through 2011 is achievable.
- Valuation. Our target price for Enbridge of \$42.00 (unchanged) is based on a 12-month dividend distribution one-year forward of \$1.33 and a required dividend yield of 3.10%. We believe a required yield of 3.10% is appropriate based on expected interest rate levels, Enbridge's growth prospects and its risk profile.

Attachment 23 Enbridge Inc.

## Q1/07 Highlights

Enbridge's Q1/07 normalized EPS was \$0.64 compared to our estimate of \$0.62, and \$0.62 a year ago. All of the segments were essentially in line except for Gas Distribution, which came in higher than expected due to slightly better-than-expected results from Enbridge Gas Distribution and Energy Services. A table that sets out the Q1/07 earnings compared to our estimate and Q1/06 earnings is shown in Exhibit 2 (next page).

#### **Key Takeaways**

- Equity Issue Expected for 2008. Management disclosed that it intends to issue equity sometime in 2008 to fund its capex program. The company is still evaluating its needs and potential financing sources, but management mentioned that the current thinking on size is similar to the amount issued in Q1/07 (\$566 million). Further, management commented that it will also look at using hybrid equity securities as part of its financing mix.
- On Pace to Meet 2007 EPS Guidance. Management reiterated that it continues to expect 2007 EPS to fall within its \$1.75 to \$1.85 EPS range.
- Modest Near-Term Growth; "Big Prize" Starts in 2009-2010. Over the past three years, EPS has grown at a compound annual rate of about 7%. Management stated that it expects EPS growth to be "modest relative to recent past." However, with the slate of sizable projects expected to come on-stream beginning in 2009, management remains comfortable with its 5-year compound annual EPS growth target of 8% to 10%, which implies 2011 EPS of between \$2.56 to \$2.80.
- **Project-by-Project Information.** In the Q1/07 presentation, the company set out details regarding expected return, volume risk, return profile and capital cost risk on a project-by-project basis. We have shown this table in Exhibit 1.

Exhibit 1: Project Information (In C\$ millions except as noted)

	Capitai					
	Magnitude	Expected	Full Life	Return	Volume	<b>Capital Cost</b>

## Low-End of 5-Year EPS Growth Target Appears Achievable

Based on the project portfolio and expected returns set out by management in the Q1/07 presentation, it appears that the low-end of the 8% to 10% average annual compound EPS growth rate through 2011 is achievable. In Exhibit 3, we have set out our assumptions

Filed: 2007-09-10 EB-2007-0615 Ex. I, Tab 11, Sch. 24 Attachment 23 **Enbridge Inc.** 

May 3, 2007

#### **Valuation**

Our valuation for Enbridge is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Enbridge. Our target price for Enbridge of \$42.00 is based on a 12-month dividend distribution one-year forward of \$1.33 and a required dividend yield of 3.10%. We believe a required yield of 3.10% is appropriate based on expected interest rate levels, Enbridge's growth prospects and its risk profile.

#### **Price Target Impediment**

Our price target is based on the assumption that Enbridge can complete the list of projects that it is pursuing on time and on budget and that these projects will positively contribute to earnings. The target price further assumes that the company's risk profile does not materially change. There could be negative implications for Enbridge's target price if actual events differ from these assumptions.

## **Company Description**

Enbridge is involved in energy transportation and distribution in North America and internationally.

## **Explanation of RBC Capital Markets Rating System**

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

#### **Ratings**

**Top Pick (TP):** Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

**Outperform (O):** Expected to materially outperform sector average over 12 months.

**Sector Perform (SP):** Returns expected to be in line with sector average over 12 months.

**Underperform** (U): Returns expected to be materially below sector average over 12 months.

#### Risk Qualifiers (any of the following criteria may be present):

**Average Risk (Avg):** Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

**Above Average Risk (AA):** Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

#### Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

**Enbridge Inc.** (TSX: ENB; 37.83; NYSE: ENB) Q2/07 Results In Line

Sector Perform Average Risk

## **Impact**

Neutral.

## First Impression

• Q2/07 Results In Line. Enbridge's normalized second quarter 2007 EPS was \$0.36 compared to our estimate of \$0.36, consensus of \$0.35 and second quarter 2006 normalized EPS of \$0.35. All segments appear to be in line with our expectations with slightly better-than-expected results from Sponsored Investments, International and Corporate offset by slightly-lower-than-expected results in Liquids Pipelines, Gas Pipelines, and Gas Distribution and Services.

Enbridge reported Q2/07 results; revision to our 2008 estimates and roll-out of 2009 estimates.

## **Investment Opinion**

Strategic Ownership: Noverco - 9.5%

- **Q2/07 Results In Line.** Enbridge's Q2/07 normalized EPS was \$0.36 compared to our estimate of \$0.36 and Q2/06 normalized EPS of \$0.35. The Thomson One consensus EPS estimate was \$0.35. All of the company's segments were broadly in line with expectations.
- About \$600 Million of Common Equity Still the Likely Scenario. There is an approximate \$600 million equity funding gap that management needs to address in 2008. The company has a number of alternatives including common equity, hybrid securities, asset sales (e.g. Enbridge Income Fund (ENF) units, or rolldowns to either ENF or Enbridge Energy Partners), or any combination of the three. Although management indicated an interest on the Q1/07 call in issuing hybrid securities, our recent discussions, combined with comments on the Q2/07 call, lead us to believe that a common share issuance is currently the most likely scenario.
- Increasing 2008 EPS Estimate; Rolling Out 2009 Estimate. We have increased our 2008 EPS estimate to \$1.85 (from \$1.77) to primarily reflect the allowance for equity used during construction (AEDC) that we expect will be booked for both the Alberta Clipper and Southern Lights pipelines. We have also rolled out our 2009 EPS estimate of \$2.20. We expect a sharp increase in 2009 earnings due to the commissioning of new projects (e.g. Southern Access, Waupisoo, contract terminals) coupled with increased AEDC from Alberta Clipper and Southern Lights.
- Valuation. Our \$38.00/share price target (about US\$36.00) is based on our belief that the company will be able to increase its dividend in 2008 from its current annual dividend of \$1.23/share to \$1.30/share based on a 70% payout ratio, and to \$1.44/share in 2009 based on a 65% payout ratio, which is the mid-point of management's 60% to 70% target payout range. We continue to use a required yield of 3.60%, which is in line with both the 1-year and 3-year historical averages for the company. We estimate that a 10 bp change in our yield assumption changes our price target by approximately \$1.00 per share.

Attachment 25 Enbridge Inc.

## **Second Quarter Highlights**

• Liquids Pipelines: Earnings for the quarter were down \$2.8 million primarily due to lower earnings on the Enbridge System. Higher compensation expense, higher maintenance costs and increased taxes on the Terrace component were cited as the key drivers for the lower year-over-year results. On the conference call, management noted that higher labour costs will likely continue to drag on earnings through the end of the current Incentive Tolling Settlement term (end of 2009). As such, it appears that 2006 results (\$202 million in earnings) for the core Enbridge System might be the high mark through the current ITS term.

- Gas Pipelines: Earnings for Gas Pipelines were down \$2.5 million as a result of a decline in earnings from Enbridge Gas Offshore; this was due to lower throughput as a result of the natural decline from existing Gulf of Mexico production coupled with delays bringing new production on stream due to Hurricanes Katrina and Rita. Looking forward, we expect new laterals coming into service to result in a modest improvement in earnings.
- **Sponsored Investments:** Increased earnings of \$4.0 million primarily resulted from an increase in the company's interest in EEP compared to Q2/06 (average of about 16% in Q2/07 compared to 10.9% in Q2/06). Earnings are expected to continue to improve as a result of higher earnings at EEP primarily due to new projects.
- Gas Distribution and Services: Earnings increased by \$4.1 million as a result of higher earnings at EGD, Aux Sable and Energy Services offset by lower results from Noverco and CustomerWorks. Over our forecast period, improved earnings for the entire segment are expected to be driven primarily from EGD due to continued customer growth and the likely move to incentive regulation beginning in 2008, and the commissioning of its 182 MW Ontario wind project in 2008.
- **International:** A \$2.7 million increase in earnings was primarily attributable to an increased contribution from CLH as a result of a strong Euro, higher volumes and higher transportation tariffs.

# Increasing 2008 EPS Estimate and Rolling Out 2009 Estimate

Although we remain comfortable with our 2007 EPS estimate, we have increased our 2008 EPS estimate to reflect the allowance for equity used during construction (AEDC) that we expect will be booked on Alberta Clipper and Southern Lights coupled with other minor revisions to our financial model. As such, our 2008 EPS estimate increases from \$1.77 to \$1.85.

We have rolled out our financial model resulting in a 2009 EPS estimate of \$2.20. After fairly modest EPS growth in 2007 and 2008, Enbridge's earnings are expected to ramp up sharply as the company begins to bring into service a number of its liquids pipelines projects including Southern Access, Waupisoo, and contract terminals. However, the biggest driver behind the expected increase in earnings is a forecast AEDC for both the Alberta Clipper (about \$75 million) and Southern Lights (about \$60 million) projects. Enbridge should be able to book AEDC on Alberta Clipper as it is a rolled-in pipeline under the existing Mainline coupled with toll principles that explicitly provide for AEDC. On Southern Lights, management expects that it will be able to book AEDC as a result of its long-term shipper agreements. As such, we have included earnings from both projects during construction in our revised financial forecast.

## **Shares Appear Fairly Valued**

In our yield-based valuation that results in our price target of \$38.00/share, we are looking for an increase in the current \$1.23/share annual dividend to \$1.30/share for 2008, and \$1.44/share in 2009. Our forecast dividends imply a payout ratio of 70% in 2008 and 65% in 2009. Management has stated that it is comfortable with a payout ratio at the high-end of its 60% to 70% target range in the near-term. As earnings begin to ramp up (i.e. 2009), we expect the payout ratio to move back to the mid-point of the target range.

Based on our dividend forecasts, we estimate that one-year from now, investors will be expecting \$1.37/share in dividends to be paid over the following 12-months (i.e. from August 2008 to July 2009). In our valuation, we have used a required yield of 3.60%, which is composed of a 4.50% expected 10-year GOC bond yield (based on forward curve) and a 0.90% spread. Our selected 0.90% spread is similar to both the 1-year and 3-year historical average spreads. We estimate that a 10 basis point change in our spread assumption would change our price target by \$1.00 per share.

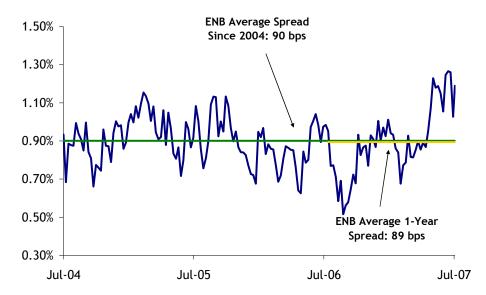

In Exhibit 2, we have charted Enbridge's historical dividend yield spread compared to the 10-year GOC. Currently, Enbridge is trading near 3-year highs with respect to its dividend yield spread.

## **Valuation**

Our valuation for Enbridge is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Enbridge. Our \$38.00/share price target is based on our belief that the company will be able to increase its dividend in 2008 from its current annual dividend of \$1.23/share to \$1.30/share based on a 70% payout ratio, and to \$1.44/share in 2009 based on a 65% payout ratio, which is the mid-point of management's 60% to 70% target payout range. We continue to use a required yield of 3.60%, which is in line with both the 1-year and 3-year historical averages for the company. A 10 bp change in our yield assumption changes our price target by approximately \$1.00 per share.

## **Price Target Impediment**

Our price target is based on the assumption that Enbridge can complete the list of projects that it is pursuing on time and on budget and that these projects will positively contribute to earnings. The target price further assumes that the company's risk profile does not materially change. There could be negative implications for Enbridge's target price if actual events differ from these assumptions.

## **Company Description**

Enbridge is involved in energy transportation and distribution in North America and internationally.

# **Required Disclosures**

## **Explanation of RBC Capital Markets Rating System**

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

## **Ratings**

**Top Pick (TP):** Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

**Outperform (O):** Expected to materially outperform sector average over 12 months.

**Sector Perform (SP):** Returns expected to be in line with sector average over 12 months.

**Underperform (U):** Returns expected to be materially below sector average over 12 months.

## Risk Qualifiers (any of the following criteria may be present):

**Average Risk (Avg):** Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

**Above Average Risk (AA):** Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

## Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

# Q1/F07 EPS A Slight/Mild Beat

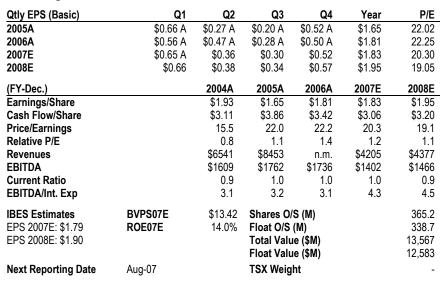

Sam Kanes, CA, CFA - 416-863-7798

#### **Event**

■ Enbridge (ENB) reported Q1/F07 EPS of \$0.65 that included \$0.014 for a 2005 hurricane related insurance recovery. We were at \$0.62 and the Q1/F07 Bloomberg consensus estimate was at \$0.626. 2007 EPS guidance of \$1.75-\$1.85 was reaffirmed.

#### **What It Means**

- Q1/07 EPS: The quarter was relatively clean except for a minor hurricane insurance pick-up (\$0.014/share positive) and unrealized noncash hedge losses (\$0.02/share negative).
- ENB articulated the shape of its 5-year unchanged 8%-10%/year average organic EPS growth profile. Growth will be skewed a bit lower in 2007-08 and higher in 2009-10-11 with another equity issue or equity hybrid 2008 to support growth.
- This caused us to shave \$0.05 off 2008E EPS to \$1.95 and \$1 off our 1-Yr target to \$43/share.

#### Valuation

- Valuation: We chose to stay with our 22x P/E for **now** but our P/E level bias is a little lower as interest rates creep up. Our 2008E EPS forecast is shaved by \$0.05 to reflect ENB's shaping of its guided 5-year average 8%-10%/year EPS growth towards the backend being higher and front-end lower. The 10-year Canada rate is forecast to increase to 4.40% by Q2/08 according to our economists, up from 4.15% forecast previously, on higher 2008 forecast Canadian and U.S. CPI. Our new 1-Yr target is \$43/share, down by \$1/share. ENB reconfirmed its 2007 recurring weather normalized EPS guidance at \$1.75 to \$1.85.
- Sector Call: We downgraded to Market Weight from Sector Overweight on January 2, 2007 as energy utility stock values turned fair after a 14% average total return in Q4/F06 and much better than expected U.S. and Canadian jobs growth data at that time. We maintain that view although Q1/F07 underperformance by the group against the S&P/TSX Composite was material due mainly to \$3.5 billion of new equity issuance of which \$0.5 billion was ENB's., and on higher Canadian and U.S. CPI.

Exhibit 1 – Pipelines' Price Performance 2007-YTD

Source: Bloomberg; Scotia Capital.

- **ENB Stock Performance:** As can be seen in Exhibit
- 1, ENB has materially lagged TransCanada as well as the group as a whole since it issued \$0.5 billion of equity in February, 2007. There was some anger amongst ENB shareholders that were hoping (as we were at one time) that 2007 equity financing needs would be taken care of via selling down its 72% of Enbridge Income Fund interest. The Federal government nixed that with its Halloween taxation surprise for income trusts. The recent small oil spill appeared to have led to some further minor pressure on ENB's stock price event though it will have no bearing on earnings. ENB has traded at the highest P/E multiple in the group for many years due to its 50-year plus track record. Some investors have been doubtful that ENB could continue to trade at 20x plus P/E levels. With the LBO/go-private bid probability for BCE, there is a fresh flow of income oriented telco money with very few places in Canadian equities to go for yield. ENB is one home for that money that we believe will hold up ENB's P/E multiple unless interest rates keep climbing. ENB committed to growing its dividend at its EPS growth rate on the call and keep its payout ratio in a 60%-70% range.

#### Q1/F07 Results

- Q1/F07 Earnings: ENB reported EPS of \$0.65 for Q1/F07 that came in a little above our EPS estimate of \$0.62 as well as the Bloomberg consensus estimate of \$0.626 in a tight \$0.62-\$0.64 range, a slight/mild beat.
- Q1/F07 Liquids Pipelines: Q1/F07 earnings of \$68.9 million were up 4% from \$66.3 million in Q1/F06 due to the Spearhead and Olympic Pipeline's contributions as they did not fully contribute to Q1/F06 earnings. The Athabasca System's earnings contribution grew 11% to \$13.6 million but that was offset by slightly weaker Mainline contributions.
- Q1/F07 Gas Pipeline: Earnings from ENB's three U.S. investments (Alliance, Vector and Enbridge Offshore Pipelines) increased by 60% to \$25.7 million from \$16 million in Q1/F07. This was due mainly to \$6 million of hurricane related business interruption insurance. Two years ago, ENB estimated a run rate of \$30 million/year, moving to \$40 million/year over time for the acquired Shell U.S. Gulf offshore gas pipeline assets. With the strengthening of the Canadian dollar, 2007 contributions will likely be flat with 2006 before

## **Company Comment**

Thursday, May 03, 2007

finally rising in 2008 as the Atlantis and Thunder Horse gas fields come on-stream. Some tag end insurance proceeds (\$1 million to \$2 million) are expected later in 2007.

- Q1/F07 Sponsored Investments: Earnings of \$17.8 million were down 12% versus \$20.2 million in Q1/F06 as Enbridge Energy Partners (EEP.N) had a weaker reported \$8.2 million (net to Enbridge) in earnings vs. \$10.9 million in Q1/F06. However, on an adjusted earnings basis, EEP's Q1/F07 earnings net of non-cash hedge adjustments that swung a negative \$4.7 million year-over-year were \$10.2 million or 25% higher than Q1/F06's recurring \$8.2 million. The recurring strength was due to a slightly higher 16.6% EEP ownership interest as well as higher throughput on the Lakehead System. On April 2, 2007, Enbridge's 16.6% ownership interest was reduced to 15.7% due to an EEP private placement issuance.
- Q1/F07 Gas Distribution and Services: Earnings were \$109.4 million, up 27% year-over-year versus \$86 million in Q1/F06. Enbridge Gas Distribution (EGD) was up almost 50% to \$86.2 million due mostly to colder Q1/F07 weather in Ontario versus Q1/F06. Aux Sable reported weak earnings of \$0.5 million that excludes a \$2.8 mark-to-market hedge-related loss. Aux Sable did not record any NGL marketing upside sharing earnings in Q1/F07, and will not report any until Q4/F07 even though ENB appears confident of its gains due to locking in non-cash fixed-floating 2007 short-term NGL product hedges.
- Q1/F07 International: Total International earnings were flat at \$22 million as higher average transportation tariffs at CLH were offset by a \$1.1 million negative swing in "Other".
- Q1/F07 Corporate Loss: Enbridge's corporate loss for Q1/F07 was \$16.8 million compared to \$19.4 million year-over-year due to lower interest expenses as a result of the \$0.53 billion equity deal.
- Financing: Enbridge's debt to capitalization ratio dropped to 59% from 64.5% at December 31, 2006 due to equity issuance and earnings. ENB stated that it would likely not sell units in 72%

owned EIF to fund 2008 capital requirements but did not elaborate further other than EIF has some growth project for its own that it is pursuing. Financing variations/permutations for its numerous proposed oil and condensate pipeline projects has not been fully determined other than ENB will need equity or equity hybrid some time in 2008. ENB will continue with maintain \$1 billion plus in liquidity for economic/cyclical fluctuations. Some projects will require bridge financing prior to terming out near construction completion. ENB generates about \$0.5 billion/year of free cash that makes up part of its 2008 financing requirements.

- Credit Metrics: Despite Moody's recent ENB credit rating downgrade to Baa1 from A3 (S&P maintained its A- rating with a Stable Outlook) ENB remains comfortable with its credit and financing profile that it admitted would be stretched during the peak of spending \$8 billion on committed projects (\$20 billion plus potential). Its issue with Moody's rating is therefore simply one of timing of peak debt to total capitalization relative to finished project FCF streams that will strengthen ENB's credit in the end.
- Line 3 @ 80% Pressure: We were told that the minor pipeline leak that occurred on ENB's Line 3 would (1) not impact earnings in 2007; and, (2) would not impact the company's expected incentive payment range of \$8 million to \$12 million for 2007.

## **Growth Developments**

- \$20 Billion Plus: With the recent announcement that Enbridge will explore a new oil pipeline from Alberta to the U.S. Gulf Coast, the company's project pipeline is now over \$20 billion, as seen in Exhibit 2. On Liquid Pipelines projects, ENB provided a very interesting guideline of return estimates for each of the projects, which range from 9% ROE to the "mid teens" (Exhibit 3) for its various approved projects to date.
- Oil Sands Oil Production: ENB previously estimated that incremental Alberta oil sands production will reach 1.8 million bbl/day by 2015 plus 0.3 million bbl/day of condensate required for blending. This should allow both ENB's Alberta Clipper and TransCanada's Keystone proposals to proceed. ENB argues its Alberta Clipper's first expansion (2014?) will cost only 25% or US\$0.5 billion for an additional 350,000bpd and should be chosen by CAPP over Keystone's potential expansion. ENB's initial 450,000 bpd Clipper project (expandable to 800,000 bpd) will be filed when the tolling methodology for the pipeline has been finalized with shippers. The line would run between Hardisty, Alberta and Superior, Wisconsin. EEP would build the U.S. portion of Alberta Clipper for about US\$800 million paralleling ENB's mainline.
- Southern Access Extension: ENB previously announced that it will proceed with its Southern Access Extension project for 2009 to provide 400,000 bpd of crude oil delivery capacity to Patoka Ill. U.S. economics will follow the FERC formula of trended original cost (real return plus inflation) while the Canadian benefits of increased volume on the Terrace capacity will be split 50:50 with shippers. If there is no volume pick-up on Terrace, ENB will have nothing to share. There were \$6 billion of proposed refinery spending modifications announced by BP and Marathon to use Canadian crude oil to now total about 800,000 bpd of new refiner demand in PADD II for Canadian crude exports.

## **Definition of Scotia Capital Equity Research Ratings & Risk Rankings**

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

#### **Ratings**

## 1-Sector Outperform

The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

## 2-Sector Perform

The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

## 3-Sector Underperform

The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

#### Other Ratings

Tender – Investors are guided to tender to the terms of the takeover offer.

*Under Review* – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

#### **Risk Rankings**

#### Low

Low financial and operational risk, high predictability of financial results, low stock volatility.

#### Medium

Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

## High

High financial and/or operational risk, low predictability of financial results, high stock volatility.

#### **Caution Warranted**

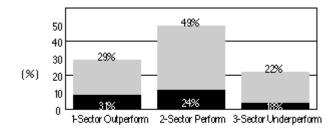

Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

#### Venture

Risk and return consistent with Venture Capital. For risk-tolerant investors only.

## Scotia Capital Equity Research Ratings Distribution\*

## Distribution by Ratings and Equity and Equity-Related Financings\*

- Percentage of companies covered by Scotia Capital Equity Research within each rating category.
- Percentage of companies within each rating category for which Scotia Capital has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

\*Asat April 30, 2007.

Source: Scotia Capital.

For the purposes of the ratings distribution disclosure the NASD requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to buy, neutral and sell ratings, respectively.

# Q2/07 EPS Matches, Street, Us

#### **Event**

■ Enbridge (ENB) reported \$0.41/share of which recurring Q2/07 EPS was \$0.36. This matched the Q2/07 Bloomberg consensus estimate of \$0.36 rounded and our \$0.35/share estimate. 2007 EPS guidance of \$1.75-\$1.85 was reaffirmed again.

#### What It Means

Risk Ranking: Low

- Q2/07 recurring EPS had no major features/variances worth noting up front. ENB restated its 8%-10%/year organic EPS growth profile skewed lower in 2007-08 and higher in 2009-10-11.
- We downgraded Energy Utilities to Underweight in mid-June on a material negative revision upwards to our 10-Yr Canada interest rate forecasts to 5.25% and 5.40% in Q3/08 and Q4/08, respectively. Given YTD weakness in both the major Canadian pipeline stocks, we continue to prefer them in this high yield equity space, especially with \$78/bbl oil.
- ENB's \$9B of liquids projects now underway should allow for 16%/year liquids earnings growth through 2011. The vast majority of cost overrun risk is outsourced to ENB's shippers. A 2H/08 equity or hybrid equity deal in the 600M area (less asset sales, if any) is likely to support overall 8%-9%-10%-11%/year organic EPS growth over the next four years.

#### Valuation

- Valuation: We use a 20x P/E for ENB as it has the best sustainable organic growth in the group. We shaved 2x P/E in YTD 2007 as long interest rates rose, and are now forecast to go up further to 5.25% for Q3/08 and 5.40% by Q4/08 (was previously 4.40% by Q2/08) according to our economists. Given that ENB "remains comfortable" with its 2007 recurring weather normalized EPS guidance at \$1.75 to \$1.85, we kept our EPS/targets unchanged. On F/X, ENB stated on its conference call yesterday that a 1¢ C\$ change impacts its earnings by \$1.1 million.
- Sector Call: We downgraded to Underweight in mid June 2007 and to Market Weight from Overweight on January 2, 2007. Materially higher interest rates and excellent performance in Q4/06 with no change in interest rates were behind our decisions. The \$3.5 billion of new equity issuance in Q1/07 weighed on the sub-sector in YTD 2007 until the BCE LBO deal was announced.
- ENB Stock Performance: As can be seen in Exhibit 1, ENB has caught up somewhat with TransCanada as well as the group as a whole lately. Both ENB and TRP had a nice rally in early July/07 as fundamental BCE shareholders looked for a new equity income home while long interest rates rallied back about 25 points. The recent Burnaby B.C. oil spill will weigh on competitor Kinder Morgan and its westbound oil pipeline growth plans. ENB's westbound Gateway was already materially delayed (2013?) and taken out of ENB's stock earlier this year. Some BCE LBO money has sloshed over to ENB and TRP, most notably in early July/07. On its conference call, ENB committed to growing its dividend consistent with its EPS growth rate (8% -11% over the next four years), and keeping its payout ratio in a 60%-70% range.

Q2/07 Results

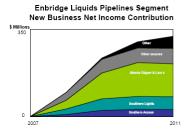

- **Q2/07 Earnings:** ENB had recurring EPS of \$0.36 for Q2/07 net of a \$0.05/share gain on EEP unit issuance dilution. This matched the Bloomberg consensus estimate of \$0.36 in a tight \$0.33-\$0.37 range (we were at \$0.35/share). There were no major variances.
- **Q2/07 Liquids Pipelines:** Q2/07 earnings of \$65.8 million were down 4.1% from \$68.6 million in Q2/06 due to lower year-over-year Enbridge System results (higher compensation expenses, higher pipeline integrity costs and increased taxes for the Terrace component). This was partially offset by increased throughput on the Spearhead Pipeline. The Athabasca System's earnings declined 6% to \$13 million but volumes declined 25% on problems at Suncor's operations. Suncor has a take or pay agreement with Enbridge that mitigated the volume shortfall on earnings. ENB stated that through 2010, its average earnings growth rate in Liquids Pipelines could be 16% per year (Exhibit 2). ENB also stressed that this growth is locked in commercially.
- Q2/07 Gas Pipeline: Earnings from Alliance, Vector and Enbridge Offshore Pipelines decreased by 16% to \$13.4 million from \$15.9 million in Q2/06. This was due solely to a \$3 million fall on normal gas production declines at Enbridge Offshore Gas Pipelines that were not offset by new gas production sources (Thunderhorse, Atlantis) coming on stream. The Alliance and Vector Pipelines both marginally increased their earnings.

Source: Enbridge

## Company Comment Thursday, August 02, 2007

- **Q2/07 Sponsored Investments:** Earnings of \$33.4 million versus \$23.2 million in Q2/06 were due solely to a nonrecurring \$11.8 million unit dilution gain at EEP. Enbridge Income Fund contributed \$9.7 million recurring versus \$8.7 million in Q2/06. Enbridge Energy Partners (EEP.N) reported \$0.64/unit versus a \$0.605/unit average forecast in a \$0.55-\$0.69/unit range on stronger natural gas processing. On April 2, 2007, Enbridge's 16.6% EEP interest was reduced to 15.7% due to EEP's private unit issue and further to 15.0% as noted.
- **Q2/07 Gas Distribution and Services:** Earnings were \$23.7 million, down 30% year over year versus \$34 million in Q2/06. Enbridge Gas Distribution (EGD) earnings of \$17.6 million were up sharply over a Q2/06 loss of \$5.1 million due to colder weather, improved expense management, customer growth, and higher storage revenues. CustomerWorks' contribution fell \$2.2 million due to a regulatory decision to ban CustomerWorks from supplying services to Enbridge Gas. Aux Sable reported a \$5.9 million loss versus Q2/06 earnings of \$0.2 million due to the recognition of \$8.3 million unrealized fair value losses on derivate financial instruments partly offset by an unknown amount of fractionation margin upside sharing. The segment as a whole reported a \$28.9 million gain due to the revaluation of future income taxes due to tax rate changes and a \$3.8 million gain in Q2/07 for lower 2011 corporate tax rates.
- **EGD's 2007 Rate Case Final:** On July 5, 2007, the OEB approved a 3.1% increase to EGD's rate base to \$3.746 billion, as well as a 1% increase in the equity component of its deemed capital structure to 36%. The allowed 2007 ROE fell to 8.39% from 8.74% in 2006. Upon being questioned on why the Enbridge still holds the asset with such a low ROE ENB replied: (1) it is credit rating agency friendly with low risk and low volatility; (2) it generates significant free cash flow that will be used to fund future growth projects; and, (3) the asset could lead to

strategic opportunities down the road. **Q2/07 International:** Total International earnings improved 13% to \$24 million due to (1)

higher transportation tariffs at CLH; (2) higher volumes at CLH; and, (3) a stronger €.

- Q2/07 Corporate Loss: Enbridge's corporate loss for Q2/07 was \$13.8 million compared with a loss of \$5.1 million year over year due to a \$14 million realized gain in Q2/06 due to the revaluation of future income taxes. On a comparable basis, corporate costs improved by over 25% year over year on lower interest expenses due to lower corporate debt levels and \$22 million of interest capitalized in Q2/07 (versus \$7 million in Q2/06) on the company's \$9 billion of liquids growth projects.
- Financing: Enbridge's debt to capitalization ratio dropped to 59.7% in Q2/07 from 62.2% one year earlier. Selling its 72% stake in EIF "still remains an objective" but not likely in 2008. ENB stated it would need about \$600 million in equity or equity hybrid equivalents (less asset sales, if any) some time in 2H 2008 (previously announced but now more articulated). ENB will continue to maintain \$1 billion plus in liquidity for adverse market conditions. It currently has \$4 billion of available credit on a consolidated basis. Some projects will require bridge financing prior to terming out near construction completion. ENB generates about \$0.5 billion/year of free cash.

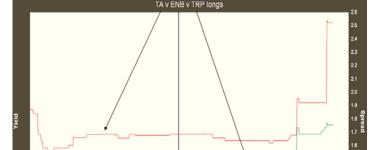

downgrade to Baa1 from A3 (S&P maintained its A- rating with a Stable Outlook) was behind the widening of ENB's debt premium over TRP's but well below TransAlta's (See Exhibit 4). The larger spike in TransAlta's credit premium was due to the debt market believing (as the equity market still does to some degree) that TA could be an LBO candidate plus TA's debt being rated BBB. ENB remains comfortable with its credit and financing profile that it admitted would be stretched during the peak of spending \$9 billion on committed projects (\$20 billion plus potential overall). Moody's downgraded ENB primarily on financing and execution risks if its massive build out program.

## \$20B of Growth Developments

■ ExxonMobil JV: Enbridge recently announced a new JV' with ExxonMobil to explore a new oil pipeline project to the U.S. Gulf Coast from Patoka down to Beaumont Texas using most of ExxonMobil's right of way. On its Liquid Pipelines projects, ENB has provided a guideline of return estimates for each project ranging from 9% ROE to the "mid teens" (Exhibit 5).

Source: PC Bond.

Exhibit 4 - Credit Spread Deterioration

- Alberta Clipper: A 15-year cost of service type agreement (NEB plus 2.25% ROE, indeed cost recover and no supply risk) was agreed to with shippers. The 36-inch pipe will allow for capacity to be increased to 800,000 bpd by adding pumping stations when required. The new oil pipeline will be put into an existing right of way to add 450,000 bpd between Hardisty Alberta and Superior Wisconsin by mid-2010. FERC approval filings are expected in August 2007, while NEB approval filings were completed in Q2/07. The cost estimates for the Canadian portion have increased to \$2 billion from \$1.4 billion previously. On the U.S. portion, ENB stated EEB's cost estimate has also increased, to US\$1 billion, from US\$0.8 billion previously. The higher cost estimates are due to a shortage of skilled labour.
- EEP's Southern Access: This oil pipeline expansion from Superior to Chicago will be EEP's largest project at US\$1.8 billion, up from US\$1.3 billion. We are told that 88% of the cost overrun is net to EEP's U.S. shippers and 12% is net to EEP. We assume ENB has similar features in all of its multi-year pipeline projects. Construction is now underway. EEP raised US\$320 million via issuing 5.9 million Class C units and another US\$310 million for 5.3 million Class C units plus expanded its credit facility to US\$1.5 billion to support this project and others that total about US\$5 billion. As U.S. throughput capacity is added, EEP's Lakehead oil pipeline system will shift to full cost of service tolls under a 30-year term that provides a 9% real ROE and assumes 55% equity. ENB will earn 50% of EEPs' incremental earnings that are forecast to grow at 20%/year prior to further EEP unit dilutions.

Source: Enbridge.

Company Comment Thursday, August 02, 2007

- Southern Access Extension: ENB is proceeding with its Southern Access Extension for 2009 to provide 400,000 bpd of crude oil delivery capacity to Patoka Ill. U.S. economics will follow the FERC formula of trended original cost (real return plus inflation) while the Canadian benefits of increased volume on the Terrace capacity will be split 50:50 with shippers. If there is no volume pick-up on Terrace, ENB will have nothing to share.
- **Spearhead Pipeline:** During Q2/07, ENB completed its Open Season for the pipeline that will see an increase of 65,000 bpd to Cushing, Oklahoma from Chicago. The 65,000 bpd increase will be split 30,000 bpd committed and 35,000 bpd for spot shippers.
- **Waupisoo Pipeline:** Following AEUB approval in Q1/07, ENB began construction of the \$0.5 billion 30-inch crude oil pipeline that is still expected to be in service in mid-2008.
- Oil Sands Oil Production Rising: ENB estimates Alberta oil sands production will increase 2.1 million bpd by 2016 from 1.8 million bpd by 2015 last forecast 90 days ago. Both ENB's Alberta Clipper and TransCanada's expanded Keystone pipeline projects should proceed now. However, ENB stated that only 400,000 bpd would be available by 2010 for export to the U.S., so there is still a race as to who is first to build. ENB argues its Alberta Clipper's first expansion (2014?) will cost only 25% or US\$0.5 billion for an additional 350,000 bpd and should be chosen by CAPP over TRP Keystone's potential expansion post 2010.
- Possible East Coast Expansion: ENB stated on its conference that it was in "very, very, very" early stages of considering a crude oil pipeline expansion from Buffalo to possibly Philadelphia.

## Longer Term LNG, Gas Pipelines, Wind, Gateway

- Quebec LNG: ENB is happy with the progress made at its Rabaska Quebec LNG terminal. It may proceed to finalize construction permits but no construction will occur until long-term LNG supplies are contracted.
- Frontier Gas Pipelines Delayed Further: ENB is not happy with the new Governor's call for interest to construct the Alaska pipeline as ENB believes there will be no project until the Alaska gas producers agree to it and long-term shipper contracts are established. On MacKenzie, ENB does not have a direct active role at this stage but stated that both will eventually be required in North America.
- Ontario Wind Project A Go: The 50% owned 182 MW Bruce County wind farm received approval on July 20, 2007 to proceed from the Ontario government's OMB and the Ministry of the Environment. ENB stated that the cost overrun appears to be about 10% or \$440 million versus \$400 million budgeted. Construction has started.
- Gateway Not Dead: ENB stated the project was not dead as there has been a broadening of interest from South Korean, Japanese and Singapore refineries for Canadian crude lately. The hold-up has been, in part, due to no Chinese oil refining major buying into a significant play in the Alberta oil sands to date.

# Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

## Ratings

## 1-Sector Outperform

The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

## 2-Sector Perform

The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

## 3-Sector Underperform

The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

#### Other Ratings

*Tender* – Investors are guided to tender to the terms of the takeover offer.

*Under Review* – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

## Risk Rankings

#### Low

Low financial and operational risk, high predictability of financial results, low stock volatility.

#### Medium

Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

## High

High financial and/or operational risk, low predictability of financial results, high stock volatility.

## **Caution Warranted**

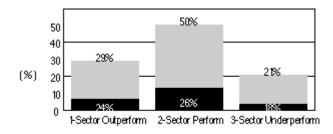

Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

#### Venture

Risk and return consistent with Venture Capital. For risk-tolerant investors only.

#### Scotia Capital Equity Research Ratings Distribution\*

## Distribution by Ratings and Equity and Equity-Related Financings\*

- Percentage of companies covered by Scotia Capital Equity Research within each rating category.
- Percentage of companies within each rating category for which Scotia Capital has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

\*Asat July 31, 2007.

Source: Scotia Capital.

For the purposes of the ratings distribution disclosure the NASD requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to buy, neutral and sell ratings, respectively.

Q2/07 EPS Matches, Street, Us

#### **Event**

■ Enbridge (ENB) reported \$0.41/share of which recurring Q2/07 EPS was \$0.36. This matched the Q2/07 Bloomberg consensus estimate of \$0.36 rounded and our \$0.35/share estimate. 2007 EPS guidance of \$1.75-\$1.85 was reaffirmed again.

#### What It Means

Risk Ranking: Low

- Q2/07 recurring EPS had no major features/variances worth noting up front. ENB restated its 8%-10%/year organic EPS growth profile skewed lower in 2007-08 and higher in 2009-10-11.
- We downgraded Energy Utilities to Underweight in mid-June on a material negative revision upwards to our 10-Yr Canada interest rate forecasts to 5.25% and 5.40% in Q3/08 and Q4/08, respectively. Given YTD weakness in both the major Canadian pipeline stocks, we continue to prefer them in this high yield equity space, especially with \$78/bbl oil.
- ENB's \$9B of liquids projects now underway should allow for 16%/year liquids earnings growth through 2011. The vast majority of cost overrun risk is outsourced to ENB's shippers. A 2H/08 equity or hybrid equity deal in the 600M area (less asset sales, if any) is likely to support overall 8%-9%-10%-11%/year organic EPS growth over the next four years.

#### Valuation

- Valuation: We use a 20x P/E for ENB as it has the best sustainable organic growth in the group. We shaved 2x P/E in YTD 2007 as long interest rates rose, and are now forecast to go up further to 5.25% for Q3/08 and 5.40% by Q4/08 (was previously 4.40% by Q2/08) according to our economists. Given that ENB "remains comfortable" with its 2007 recurring weather normalized EPS guidance at \$1.75 to \$1.85, we kept our EPS/targets unchanged. On F/X, ENB stated on its conference call yesterday that a 1¢ C\$ change impacts its earnings by \$1.1 million.
- Sector Call: We downgraded to Underweight in mid June 2007 and to Market Weight from Overweight on January 2, 2007. Materially higher interest rates and excellent performance in Q4/06 with no change in interest rates were behind our decisions. The \$3.5 billion of new equity issuance in Q1/07 weighed on the sub-sector in YTD 2007 until the BCE LBO deal was announced.
- ENB Stock Performance: As can be seen in Exhibit 1, ENB has caught up somewhat with TransCanada as well as the group as a whole lately. Both ENB and TRP had a nice rally in early July/07 as fundamental BCE shareholders looked for a new equity income home while long interest rates rallied back about 25 points. The recent Burnaby B.C. oil spill will weigh on competitor Kinder Morgan and its westbound oil pipeline growth plans. ENB's westbound Gateway was already materially delayed (2013?) and taken out of ENB's stock earlier this year. Some BCE LBO money has sloshed over to ENB and TRP, most notably in early July/07. On its conference call, ENB committed to growing its dividend consistent with its EPS growth rate (8% -11% over the next four years), and keeping its payout ratio in a 60%-70% range.

Q2/07 Results

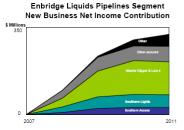

- **Q2/07 Earnings:** ENB had recurring EPS of \$0.36 for Q2/07 net of a \$0.05/share gain on EEP unit issuance dilution. This matched the Bloomberg consensus estimate of \$0.36 in a tight \$0.33-\$0.37 range (we were at \$0.35/share). There were no major variances.
- **Q2/07 Liquids Pipelines:** Q2/07 earnings of \$65.8 million were down 4.1% from \$68.6 million in Q2/06 due to lower year-over-year Enbridge System results (higher compensation expenses, higher pipeline integrity costs and increased taxes for the Terrace component). This was partially offset by increased throughput on the Spearhead Pipeline. The Athabasca System's earnings declined 6% to \$13 million but volumes declined 25% on problems at Suncor's operations. Suncor has a take or pay agreement with Enbridge that mitigated the volume shortfall on earnings. ENB stated that through 2010, its average earnings growth rate in Liquids Pipelines could be 16% per year (Exhibit 2). ENB also stressed that this growth is locked in commercially.
- Q2/07 Gas Pipeline: Earnings from Alliance, Vector and Enbridge Offshore Pipelines decreased by 16% to \$13.4 million from \$15.9 million in Q2/06. This was due solely to a \$3 million fall on normal gas production declines at Enbridge Offshore Gas Pipelines that were not offset by new gas production sources (Thunderhorse, Atlantis) coming on stream. The Alliance and Vector Pipelines both marginally increased their earnings.

## Company Comment Thursday, August 02, 2007

- **Q2/07 Sponsored Investments:** Earnings of \$33.4 million versus \$23.2 million in Q2/06 were due solely to a nonrecurring \$11.8 million unit dilution gain at EEP. Enbridge Income Fund contributed \$9.7 million recurring versus \$8.7 million in Q2/06. Enbridge Energy Partners (EEP.N) reported \$0.64/unit versus a \$0.605/unit average forecast in a \$0.55-\$0.69/unit range on stronger natural gas processing. On April 2, 2007, Enbridge's 16.6% EEP interest was reduced to 15.7% due to EEP's private unit issue and further to 15.0% as noted.
- Q2/07 Gas Distribution and Services: Earnings were \$23.7 million, down 30% year over year versus \$34 million in Q2/06. Enbridge Gas Distribution (EGD) earnings of \$17.6 million were up sharply over a Q2/06 loss of \$5.1 million due to colder weather, improved expense management, customer growth, and higher storage revenues. CustomerWorks' contribution fell \$2.2 million due to a regulatory decision to ban CustomerWorks from supplying services to Enbridge Gas. Aux Sable reported a \$5.9 million loss versus Q2/06 earnings of \$0.2 million due to the recognition of \$8.3 million unrealized fair value losses on derivate financial instruments partly offset by an unknown amount of fractionation margin upside sharing. The segment as a whole reported a \$28.9 million gain due to the revaluation of future income taxes due to tax rate changes and a \$3.8 million gain in Q2/07 for lower 2011 corporate tax rates.
- EGD's 2007 Rate Case Final: On July 5, 2007, the OEB approved a 3.1% increase to EGD's rate base to \$3.746 billion, as well as a 1% increase in the equity component of its deemed capital structure to 36%. The allowed 2007 ROE fell to 8.39% from 8.74% in 2006. Upon being questioned on why the Enbridge still holds the asset with such a low ROE ENB replied: (1) it is credit rating agency friendly with low risk and low volatility; (2) it generates significant free cash flow that will be used to fund future growth projects; and, (3) the asset could lead to

Exhibit 3 - Enbridge's Project Pipeline Cost (\$M) C\$ equiv. In Service Alberta Clipper Canadian segment 2.000 2.000 2010 1,000 US U.S. segment 1,064 2010 **Contract Terminaling** 500 US 532 n.a ENB 800 4.000 4.000 2012/2014 Gateway **New Markets** U.S. Gulf Coast 200 US 213 2009 280 US Eastern PADD II 298 2010 350 n.a Regional Infrastructure Secured/Expansions 650 650 n.a New Facilities/Projects 1.200 1.200 n.a Southern Access 400 US 426 2009 Extension Mainline Expansion (EEP) 1.800 US 1,915 Mainline Expansion (ENB) 300 2009 Southern Lights Pipeline (diluent) 1.300 US 1,383 2010 500 500 2H/08 Waupisoo Pipeline Neptune Pipeline 100 US 106 2H/07 **Vector Pipeline** 100 US 2H/07 300 300 2009 Line 4 Extension Spearhead Expansion I 100 100 2009 Expansion II 215 US 16.471 Subtotal USGC Initiative (JV) 3,830 2H/10 3,600 US 20.301 Total

Source: Company reports; Scotia Capital estimates.

strategic opportunities down the road.

- **Q2/07 International:** Total International earnings improved 13% to \$24 million due to (1) higher transportation tariffs at CLH; (2) higher volumes at CLH; and, (3) a stronger €.
- Q2/07 Corporate Loss: Enbridge's corporate loss for Q2/07 was \$13.8 million compared with a loss of \$5.1 million year over year due to a \$14 million realized gain in Q2/06 due to the revaluation of future income taxes. On a comparable basis, corporate costs improved by over 25% year over year on lower interest expenses due to lower corporate debt levels and \$22 million of interest capitalized in Q2/07 (versus \$7 million in Q2/06) on the company's \$9 billion of liquids growth projects.
- Financing: Enbridge's debt to capitalization ratio dropped to 59.7% in Q2/07 from 62.2% one year earlier. Selling its 72% stake in EIF "still remains an objective" but not likely in 2008. ENB stated it would need about \$600 million in equity or equity hybrid equivalents (less asset sales, if any) some time in 2H 2008 (previously announced but now more articulated). ENB will continue to maintain \$1 billion plus in liquidity for adverse market conditions. It currently has \$4 billion of available credit on a consolidated basis. Some projects will require bridge financing prior to terming out near construction completion. ENB generates about \$0.5 billion/year of free cash.

Company Comment

Thursday, August 02, 2007

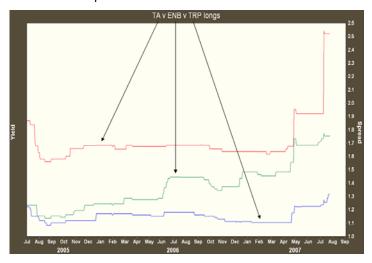

downgrade to Baa1 from A3 (S&P maintained its A- rating with a Stable Outlook) was behind the widening of ENB's debt premium over TRP's but well below TransAlta's (See Exhibit 4). The larger spike in TransAlta's credit premium was due to the debt market believing (as the equity market still does to some degree) that TA could be an LBO candidate plus TA's debt being rated BBB. ENB remains comfortable with its credit and financing profile that it admitted would be stretched during the peak of spending \$9 billion on committed projects (\$20 billion plus potential overall). Moody's downgraded ENB primarily on financing and execution risks if its massive build out program.

## \$20B of Growth Developments

■ ExxonMobil JV: Enbridge recently announced a new JV' with ExxonMobil to explore a new oil pipeline project to the U.S. Gulf Coast from Patoka down to Beaumont Texas using most of ExxonMobil's right of way. On its Liquid Pipelines projects, ENB has provided a guideline of return estimates for each project ranging from 9% ROE to the "mid teens" (Exhibit 5).

Exhibit 4 - Credit Spread Deterioration

Source: PC Bond

- Alberta Clipper: A 15-year cost of service type agreement (NEB plus 2.25% ROE, indeed cost recover and no supply risk) was agreed to with shippers. The 36-inch pipe will allow for capacity to be increased to 800,000 bpd by adding pumping stations when required. The new oil pipeline will be put into an existing right of way to add 450,000 bpd between Hardisty Alberta and Superior Wisconsin by mid-2010. FERC approval filings are expected in August 2007, while NEB approval filings were completed in Q2/07. The cost estimates for the Canadian portion have increased to \$2 billion from \$1.4 billion previously. On the U.S. portion, ENB stated EEB's cost estimate has also increased, to US\$1 billion, from US\$0.8 billion previously. The higher cost estimates are due to a shortage of skilled labour.
- EEP's Southern Access: This oil pipeline expansion from Superior to Chicago will be EEP's largest project at US\$1.8 billion, up from US\$1.3 billion. We are told that 88% of the cost overrun is net to EEP's U.S. shippers and 12% is net to EEP. We assume ENB has similar features in all of its multi-year pipeline projects. Construction is now underway. EEP raised US\$320 million via issuing 5.9 million Class C units and another US\$310 million for 5.3 million Class C units plus expanded its credit facility to US\$1.5 billion to support this project and others that total about US\$5 billion. As U.S. throughput capacity is added, EEP's Lakehead oil pipeline system will shift to full cost of service tolls under a 30-year term that provides a 9% real ROE and assumes 55% equity. ENB will earn 50% of EEPs' incremental earnings that are forecast to grow at 20%/year prior to further EEP unit dilutions.

<sup>\*</sup> Southern Access Expansion U.S. and U.S. portion of Alberta Clipper flow to ENB via EEP incentive distributions which further enhances return at ENB level.

Source: Enbridge.

Company Comment Thursday, August 02, 2007

- Southern Access Extension: ENB is proceeding with its Southern Access Extension for 2009 to provide 400,000 bpd of crude oil delivery capacity to Patoka Ill. U.S. economics will follow the FERC formula of trended original cost (real return plus inflation) while the Canadian benefits of increased volume on the Terrace capacity will be split 50:50 with shippers. If there is no volume pick-up on Terrace, ENB will have nothing to share.
- **Spearhead Pipeline:** During Q2/07, ENB completed its Open Season for the pipeline that will see an increase of 65,000 bpd to Cushing, Oklahoma from Chicago. The 65,000 bpd increase will be split 30,000 bpd committed and 35,000 bpd for spot shippers.
- **Waupisoo Pipeline:** Following AEUB approval in Q1/07, ENB began construction of the \$0.5 billion 30-inch crude oil pipeline that is still expected to be in service in mid-2008.
- Oil Sands Oil Production Rising: ENB estimates Alberta oil sands production will increase 2.1 million bpd by 2016 from 1.8 million bpd by 2015 last forecast 90 days ago. Both ENB's Alberta Clipper and TransCanada's expanded Keystone pipeline projects should proceed now. However, ENB stated that only 400,000 bpd would be available by 2010 for export to the U.S., so there is still a race as to who is first to build. ENB argues its Alberta Clipper's first expansion (2014?) will cost only 25% or US\$0.5 billion for an additional 350,000 bpd and should be chosen by CAPP over TRP Keystone's potential expansion post 2010.
- Possible East Coast Expansion: ENB stated on its conference that it was in "very, very, very" early stages of considering a crude oil pipeline expansion from Buffalo to possibly Philadelphia.

## Longer Term LNG, Gas Pipelines, Wind, Gateway

- Quebec LNG: ENB is happy with the progress made at its Rabaska Quebec LNG terminal. It may proceed to finalize construction permits but no construction will occur until long-term LNG supplies are contracted.
- Frontier Gas Pipelines Delayed Further: ENB is not happy with the new Governor's call for interest to construct the Alaska pipeline as ENB believes there will be no project until the Alaska gas producers agree to it and long-term shipper contracts are established. On MacKenzie, ENB does not have a direct active role at this stage but stated that both will eventually be required in North America.
- Ontario Wind Project A Go: The 50% owned 182 MW Bruce County wind farm received approval on July 20, 2007 to proceed from the Ontario government's OMB and the Ministry of the Environment. ENB stated that the cost overrun appears to be about 10% or \$440 million versus \$400 million budgeted. Construction has started.
- Gateway Not Dead: ENB stated the project was not dead as there has been a broadening of interest from South Korean, Japanese and Singapore refineries for Canadian crude lately. The hold-up has been, in part, due to no Chinese oil refining major buying into a significant play in the Alberta oil sands to date.

## Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

## Ratings

## 1-Sector Outperform

The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

## 2-Sector Perform

The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

## 3-Sector Underperform

The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

#### Other Ratings

*Tender* – Investors are guided to tender to the terms of the takeover offer.

*Under Review* – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

## Risk Rankings

## Low

Low financial and operational risk, high predictability of financial results, low stock volatility.

#### Medium

Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

## High

High financial and/or operational risk, low predictability of financial results, high stock volatility.

## **Caution Warranted**

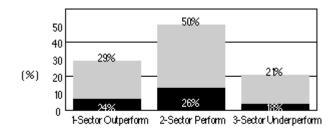

Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

#### Venture

Risk and return consistent with Venture Capital. For risk-tolerant investors only.

## Scotia Capital Equity Research Ratings Distribution\*

## Distribution by Ratings and Equity and Equity-Related Financings\*

- Percentage of companies covered by Scotia Capital Equity Research within each rating category.
- Percentage of companies within each rating category for which Scotia Capital has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

\*AsatJuly 31, 2007.

Source: Scotia Capital.

For the purposes of the ratings distribution disclosure the NASD requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to buy, neutral and sell ratings, respectively.

# Enbridge Inc. (ENB-T, ENB-N) C\$37.15

# Q1 Earnings Flat Year-Over-Year, But the Focus Remains Long-Term

#### **Event**

Enbridge's Q1/07 normalized EPS of \$0.61 was two pennies shy of our estimate and in-line with Q1/06 normalized EPS.

# **Impact**

Neutral.

#### **Details**

**Liquids Pipelines** Q1/07 earnings of \$68.9 million increased \$2.6 million vs. Q1/06 mainly due to the full quarter contributions from the Olympic and Spearhead pipelines, partially offset by slightly lower Enbridge System earnings (Exhibit 1). Enbridge System earnings declined \$2.9 million primarily due to the impact of a strong labour market on compensation expenses as well as increased taxes in the Terrace component.

**Gas Pipelines** earnings of \$14.4 million declined 10% year-over-year primarily due to lower normalized contribution from Enbridge Offshore Pipelines (EOP).

**Sponsored Investments** earnings of \$19.8 million increased \$2.3 million mainly due to a higher ownership interest in Enbridge Energy Partners (EEP), gains from gas storage and lower operating costs on the Lakehead System.

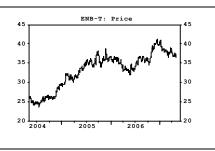

**Gas Distribution and Services** earnings of \$108.0 million were in-line with Q1/06 levels. Higher earnings at Enbridge Gas Distribution (EGD) and Noverco were offset by unrealized fair value losses on derivative instruments and a transition of EGD customer care services from Customer Works to a third party service provider.

**International** earnings of \$22.0 million were in-line year-over-year.

**Corporate** expenses declined \$2.6 million to \$16.8 million during the quarter primarily due to a decreased interest expense from lower corporate debt.

#### **Company Profile**

Enbridge Inc. (ENB-T, N) owns and operates: 1) the world's longest crude oil and liquids pipeline system; 2) Canada's largest gas distribution network in Ontario; and 3) additional oil & gas transmission, gathering, storage and processing assets.

Please see the final pages of this document for important disclosure information.

Note: Reported earnings have been normalized to reflect the following:

#### Outlook

Earnings Guidance Reiterated: Management reiterated its 2007 EPS (basic) guidance range of \$1.75-1.85, which appears to include \$0.02 of business interruption insurance proceeds that are excluded from our estimate. We note that our estimate is towards the bottom of this range. Longer term, management expects Enbridge to achieve an EPS CAGR of 8-10% over a five-year period. The majority of this growth is forecasted to be back-end loaded as the bulk of Enbridge's large capital projects such as Southern Access, Alberta Clipper and Southern Lights are expected to enter service and start contributing to earnings in 2009 and 2010 (Exhibit 2).

**Dividend Growth Expected to Decelerate**: Management indicated it would not increase dividends to the point where the payout ratio is above its targeted range of 60-70%. Given that Enbridge is now near the top end of this range, by our calculations, suggests that dividend growth might decelerate in 2008 in sympathy with muted near-term EPS growth.

Equity Offering a Possibility for 2008: The company expects to install permanent financing for its projects shortly before they enter service. Therefore an equity financing in 2008, similar to the approximately \$560 million offering in Q1/07, could be expected. Management is also exploring hybrid securities as an alternative or complement to an equity financing.

Well Positioned for Next Export Pipeline Tranche: Management believes that additional pipeline capacity, beyond Southern Access, Alberta Clipper and TransCanada's Keystone, will be needed around 2012. Enbridge believes that it could cost effectively expand Clipper to meet this demand possibly followed in a year or two by its Gateway or US Gulf Coast proposals.

Large Capital Program Update: Enbridge provided an update and additional disclosure relating to the expected returns as well as capital and volume risks of some its capital projects. Full life or DCF returns on equity are expected to range from 9%, on the Canadian portion of Southern Access, to the mid-teens on Waupisoo and the Spearhead Expansion. The amount of capital cost risk assumed by Enbridge also varies from none, as in fully contracted or regulated pipelines, to full, which is rare and only utilized when the company believes they can control capital costs and the expected returns are substantial. We provide a large capital project overview in Exhibit 2.

<sup>1) \$11.3</sup> million of insurance recoveries in Q1/07 at Enbridge Offshore Pipelines

<sup>2)</sup> Non-cash derivative fair-value losses of \$2.0 million in Q1/07 and \$2.7 million in Q1/06 at EEP

<sup>2) \$1.4</sup> million effect of colder than normal weather on EGD in Q1/07 as well as \$21.3 million effect of warmer than normal weather in Q1/06 Source: Company reports, TD Newcrest.

May 3, 2007 Equity Research

4 of 6

#### **Justification of Target Price**

Our \$39.00 target price is predicated on 2008 financial estimates as follows: 1) 50% relative earnings yield of 114% (vs. historical average of 118%), 2) 25% relative dividend yield of 81% (vs. historical average of 71%), and 3) 25% P/B ratio of 2.4x (vs. historical average of 2.4x). We believe Enbridge will trade at a premium versus the sector due to its leverage to growing volumes in the oil sands, favourable negotiated settlements with its shippers, above average profitability, and operational diversification.

#### **Key Risks to Target Price**

1) Higher than expected long bond yields; 2) acquisitions that do not create shareholder value; 3) operational disruptions; 4) potential reduction in historical valuation premium to sector; 5) tougher than expected competition for new oil transmission pipeline capacity; 6) regulatory surprises; 7) substantial delays and/or cancellations of oil sands projects; and 8) WCSB risk.

#### **Investment Conclusion**

This quarter's results reaffirm our view that Enbridge will be challenged to grow earnings in 2007 and 2008, as many of its capital projects are not expected to be in-service until later this decade. We believe Enbridge shares have underperformed the sector in April and year-to-date partially due to a growing recognition of earnings growth being muted in the near-term. Longer term however, we believe Enbridge's large portfolio of growth projects, including higher return crude oil storage terminals and diluent import lines, will help Enbridge achieve above average EPS growth. Give the recent pullback, the shares may be interesting for more patient investors with a long-term horizon, but at this time total returns are not sufficient to warrant a buy recommendation. While our bias is increasingly positive as Enbridge continues to make progress on its projects, we continue to recommend investors HOLD Enbridge.

# Large Capital Program Remains On-Track; Q2 In-Line

#### Event

Enbridge reported normalized Q2/07 EPS of \$0.34. When further adjusted for \$8.5 million (\$0.02 per share) of unrealized derivative fair value losses, which we keep in our operating earnings, the EPS of \$0.36 met our expectations and was up a penny year-over-year.

# Impact

Neutral.

#### **Details**

**Liquids Pipelines** Q2/07 earnings of \$65.8 million declined \$2.8 million vs. Q2/06 (Exhibit 1). This was mainly a result of a lower Mainline System contribution due to the impact of a strong labour market on compensation expense, higher pipeline integrity costs, and increased taxes in the Terrace component.

**Gas Pipelines** earnings of \$13.4 million declined 16% year-over-year primarily due to continuing natural production declines on deliveries to Enbridge Offshore Pipelines.

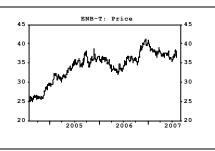

**Sponsored Investments** earnings of \$21.5 million increased 23% mainly due to a higher ownership interest in Enbridge Energy Partners (EEP). We note that Enbridge has an approximate 15% ownership interest in EEP.

**Gas Distribution and Services** earnings of \$10.1 million declined 30% year-over-year. The decline is mainly attributable to an \$8.3 million unrealized fair value losses on derivative instruments at Aux Sable, which was partially offset by a \$3.5 million increase in Enbridge Gas Distribution (EGD) earnings as a result of improved expense management, customer growth, and higher storage and transportation capacity transaction revenues.

**International** earnings of \$24.0 million increased 13% year-over-year, mainly a result of higher transportation tariffs, higher volumes and the impact of a stronger Euro at CLH.

#### **Company Profile**

Enbridge Inc. (ENB-T, N) owns and operates: 1) the world's longest crude oil and liquids pipeline system; 2) Canada's largest gas distribution network in Ontario; and 3) additional oil & gas transmission, gathering, storage and processing assets.

Please see the final pages of this document for important disclosure information.

August 2, 2007 Equity Research

2 of 5

**Corporate** expenses declined \$5.3 million to \$13.8 million during the quarter primarily due to a lower interest expense as a result of a lower level of corporate debt and increased capitalized interest.

Exhibit 1. Segmented Earnings Analysis (\$mm unless otherwise stated)

			YOY	YOY %
	Q2/07	Q2/06	Change	Change
Liquids Pipelines	\$65.8	\$68.6	(\$2.8)	-4%

urce: Company reports, TD Newcrest.										

**Increased Southern Access Capital Costs**: Southern Access Mainline Expansion costs have increased to US\$2.1 billion from US\$1.6 billion, with the bulk of the cost increase occurring within EEP. Labour, material and rights-of-way inflation were all cited as reasons for the increase.

Capital Cost Risk of Growth Projects: Management believes Enbridge's growth projects have a relatively small amount of capital cost risk as the majority of the risk is passed through to its customers. For instance, 88% of Southern Access Mainline Expansion US' capital cost overruns, mentioned above, are borne by the

August 2, 2007 Equity Research

3 of 5

shippers and not the company, which mitigates the effect on shareholders. We note however, that Enbridge bears full capital cost risk on certain projects, such as terminaling or the Ontario Wind Project, whose capital costs we expect have increased to \$440 million from the original \$400 million estimate.

**Operating Cost Risk Could Affect Existing Assets**: Inflationary pressure could have a negative effect on systems that do not have operating cost pass-throughs or are under performance agreements. For example, we believe Mainline earnings, under the Incentive Tolling Settlement (ITS), could continue to come under pressure from high compensation costs until the ITS is reset in 2010.

**Positive Outlook For Enbridge Gas Distribution:** Our expectation is that EGD will benefit from 1) the 1% increase in equity thickness to 36% it was recently awarded by the regulator, and 2) Incentive Regulation beginning 2008 for a period of five years, which should allow it to earn higher returns.

**Equity Offering Expected in 2008**: Enbridge expects to install permanent financing for its projects shortly before they enter service. We assume a \$500 million equity offering in each of 2008 and 2009. Management is also exploring hybrid securities and asset sales as alternatives or complements to equity financing.

Source: Bloomberg, TD Newcrest.

#### **Justification of Target Price**

Our \$38.00 target price is predicated on 50% of our 2008 & 50% of our 2009 financial estimates as follows: 1) 50% relative earnings yield of 116% (vs. historical average of 118%), 2) 25% relative dividend yield of 80% (vs. historical average of 71%), and 3) 25% P/B ratio of 2.2x (vs. historical average of 2.5x). We believe Enbridge will trade at a premium versus the sector due to its leverage to growing volumes in the oil sands, favourable negotiated settlements with its shippers, above average profitability, and operational diversification.

#### **Kev Risks to Target Price**

1) Higher than expected long bond yields; 2) acquisitions that do not create shareholder value; 3) operational disruptions; 4) potential reduction in historical valuation premium to sector; 5) tougher than expected competition for new oil transmission pipeline capacity; 6) regulatory surprises; 7) substantial delays and/or cancellations of oil sands projects; and 8) WCSB risk.

#### **Investment Conclusion**

Although the quarter was neutral, we view Enbridge's progress on its large capital program, including \$9 billion of pipeline projects that are proceeding, positively. We believe Enbridge's large portfolio of growth projects and incumbency in liquids pipelining in Canada will help it achieve above average EPS growth in the long-term. Our bias remains positive, although given the stock's current valuation, at this time we continue to recommend investors HOLD Enbridge.

### COMPANY UPDATE

# **Enbridge Inc. (ENB.TO)**

Neutral

# Lack of near-term catalyst and capital overhang overshadow results

#### What's changed

Enbridge Inc. reported 202007 EPS of C\$0.36 - in line with our estimate and consensus - as better-than-expected results in its International segment and lower interest costs offset modest underperformance in its Liquids segment. Unrelated to 2Q2007 results, we are decreasing our 2009 EPS forecasts as we have applied more conservative assumptions to Enbridge's major capital projects slated to commence service in 2009. Our 2007-2008 estimates are unchanged.

#### **Implications**

We maintain our Neutral rating on Enbridge, in the context of an Attractive Diversified Pipelines coverage view, as current valuation fairly balances the lack of a near-term catalyst with favorable long-term fundamentals, in our view. Enbridge trades at a premium to Buy-rated TransCanada Corp (TRP) despite equally extensive capital expansion portfolios and a similar asset base - Enbridge trades at a 9.5X EV / EBITDA multiple on 2008 versus 8.5X for TransCanada. Furthermore, we expect Enbridge's capital expansion program to require material funding over the next 24 months before cash flow realization and foresee a major overhang on valuation.

#### Valuation

We are lowering our 12-month target price to C\$40 (11% total return potential) from C\$41 due to our moderately lower Liquids earnings forecast. Our Diversified Pipelines valuation methodology utilizes a (1) Dividend Discount Model, (2) normalized EV/EBITDA relative cash flow comparable analysis, and (3) sum-of-the-parts implied value.

#### Key risks

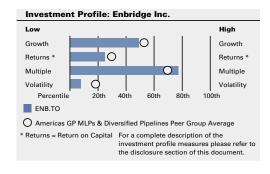

(1) Sharp declines in commodity prices could slow the production of infrastructure projects that are tied to incremental commodity supply. (2) Increased federal or state regulation, or changes to the current regulation, could have negative implications.

# Increasing Alberta oil sands production key to long-term outlook

The Canadian Association of Petroleum Producers (CAPP) expects overall crude oil production in 2020 to be 113% greater than 2005 levels - of which most is derived from the Oil Sands - and we estimate material opportunities exist for long-distance pipeline companies if the export ratio holds constant, as detailed in Exhibit 1, a very conservative assumption considering the trend has been upwards and incremental demand from crude is likely to be from North America.

Exhibit 1: Canadian crude oil imports to the US is likely to increase in thousands of barrels per day

	1990	1995	2000	2005	2010	2015	2020

Enbridge Inc.'s capital expansion portfolio is heavily concentrated on building out its Liquids segment, and more specifically to increase capacity to meet the demands of this north-to-south directional flow. The company's ability to execute on its extensive capital project program is key to its long-term growth profile and supports our favorable fundamental long-term view. A list of its major organic growth projects is detailed in Exhibit 2.

Enbridge Inc. (ENB.TO)

Exhibit 2: Long-term growth focused on increases to Canadian crude oil production Enbridge's capital expansion portfolio

Project Name	Project Specs	Estimated Cost	Estimated Completion	Project Goal
Waupisoo	240 miles of 30-inch diameter crude oil pipeline; initial capacity expected to be 350,000 barrels per day	C\$500 million	to commence service in mid-2008	provide takeaway capacity for increasing oil sands production
Southern Access Expansion*	454 miles of 42-inch diameter pipeline from Superior, WI to Flanagan, IL; increases system capacity to 400,000 barrels per day	US\$2.1 billion	partial startup in 2008, fully operational by 2009	increase capacity on existing system to meet increasing demand for Canadian crude oil
Southern Access Extension	175 miles of 36-inch diameter pipeline from Flanagan, IL to Patoka, IL; initial extension capacity to be 400,000 barrels per day	US\$400 million	to commence service in 2009	extends existing Southern Access system to major interconnects in Patoka, IL
Southern Lights	674 miles diluent pipeline from Chicago, IL to Clearbrook, MN; 313 miles of 20-inch diameter crude oil pipeline from Cromer, Manitoba to Clearbrook, MN	US\$900 million	to be phased in over time with full operations expected in mid-2010	targets demand for diluent in Canada to transport heavy crude oil while increasing crude oil capacity on same system
Alberta Clipper	1,000 miles of 36-inch diameter pipeline from Hardisty, Alberta to Superior, WI; initial capacity to be 450,000 barrels per day	US\$2.8 billion	to commence service in mid-2010	to deliver Alberta oil sands-derived product to markets in the U.S.
Gateway	transport oil from Strathcona County, Alberta to a new marine terminal in Kitimat, British Columbia	N / A	still in preliminary stage	to open access of heavy crude to Pacific Ocean markets via marine transportation
Potential Patoka, IL to Houston, TX crude oil pipeline	will jointly assess, with ExxonMobil (XOM), potential commercial development	N/A	still in preliminary stage	adds input capacity to Houston refining market while completing the link between Canadian crude oil expansion and Gulf Coast refining
* - US portions to be constructed at Enbr	idge Energy Partners (EEP)

# Decreasing 2009 estimates, 2007-2008 forecasts unchanged

We are decreasing our 2009 EPS estimates by C\$0.05 to C\$2.15 as we have moderately lowered our expectations for potential returns on capital projects slated to commence service in 2009. Our 2007-2008 estimates and 2007-2009 dividend forecasts are unchanged following 2Q2007 earnings that were in line with our expectations.

Enbridge Inc. (ENB.TO)

# Reg AC

I, David Chiaro, hereby certify that all of the views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

# Investment profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

**Growth** is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

# Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

# **Disclosures**

Enbridge Inc. (ENB.TO)

As of July 1, 2007, Goldman Sachs Global Investment Research had investment ratings on 2,631 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by NASD/NYSE rules. See 'Ratings, Coverage groups and views and related definitions' below.

#### Price target and rating history chart(s)

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

#### **Regulatory disclosures**

#### Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; market making and/or specialist role.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Distribution of ratings:** See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

#### Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. Australia: This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act. Canada: Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research in Canada if and to the extent it relates to equity securities of Canadian issuers. Analysts may conduct site visits but are prohibited from accepting payment or reimbursement by the company of travel expenses for such visits. Hong Kong: Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. India: Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited; Japan: See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company. Korea: Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. Russia: Research reports distributed in the Russian Federation are not advertising as defined in Russian law, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian Law on Appraisal. Singapore: Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). United Kingdom: Persons who would be categorized as private customers in the United Kingdom, as such term is defined in the rules of the Financial Services Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs

**European Union:** Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/126/EC is available at http://www.gs.com/client\_services/global\_investment\_research/europeanpolicy.html

#### Ratings, coverage groups and views and related definitions

**Buy (B), Neutral (N), Sell (S)** -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

**Return potential** represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Enbridge Inc. (ENB.TO)

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. Attractive (A). The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. Neutral (N). The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. Cautious (C). The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

**Not Rated (NR).** The investment rating and target price, if any, have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target, if any, for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

#### Ratings, coverage views and related definitions prior to June 26, 2006

Our rating system requires that analysts rank order the stocks in their coverage groups and assign one of three investment ratings (see definitions below) within a ratings distribution guideline of no more than 25% of the stocks should be rated Outperform and no fewer than 10% rated Underperform. The analyst assigns one of three coverage views (see definitions below), which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and valuation. Each coverage group, listing all stocks covered in that group, is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html.

#### Definitions

Outperform (OP). We expect this stock to outperform the median total return for the analyst's coverage universe over the next 12 months. In-Line (IL). We expect this stock to perform in line with the median total return for the analyst's coverage universe over the next 12 months. Underperform (U). We expect this stock to underperform the median total return for the analyst's coverage universe over the next 12 months.

Coverage views: Attractive (A). The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. Neutral (N). The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. Cautious (C). The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

**Current Investment List (CIL).** We expect stocks on this list to provide an absolute total return of approximately 15%-20% over the next 12 months. We only assign this designation to stocks rated Outperform. We require a 12-month price target for stocks with this designation. Each stock on the CIL will **automatically** come off the list after 90 days unless renewed by the covering analyst and the relevant Regional Investment Review Committee.

#### Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs, and pursuant to certain contractual arrangements, on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy.

This research is disseminated in Australia by Goldman Sachs JBWere Pty Ltd (ABN 21 006 797 897) on behalf of Goldman Sachs; in Canada by Goldman Sachs Canada Inc. regarding Canadian equities and by Goldman Sachs & Co. (all other research); in Germany by Goldman Sachs & Co. oHG; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs JBWere (NZ) Limited on behalf of Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

**European Union:** Goldman Sachs International, authorised and regulated by the Financial Services Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman, Sachs & Co. oHG, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also be distributing research in Germany.

#### General disclosures in addition to specific disclosures required by certain jurisdictions

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than some industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division.

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our proprietary trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, our proprietary trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives (including options and warrants) thereof of covered companies referred to in this research.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of the investments referred to in this research and the income from

### **SEC INTERROGATORY #25**

# **INTERROGATORY**

Issue 1.3 Should weather risk continue to be borne by the shareholders, and if so what other adjustments should be made?

[B/1/1/20] Please advise what rules, if any, Enbridge proposes should be applicable to their forecasting of volumes and customer numbers.

# **RESPONSE**

Consistent with previous rate cases, the Company always uses either the latest Board Approved or proposed new degree day forecasting methodology in generating the test year volume budget. As stated in EB-2006-0034's Decision with Reasons, the Board accepted the Company's amended proposal to apply the 20-Year Trend method in the Central region, the Energy Probe method in the Eastern region and the 50/50 method in the Niagara region based upon recent years actual data. Therefore, these are the appropriate degree days methodologies to be used for forecasting volumes.

### **SEC INTERROGATORY #29**

# **INTERROGATORY**

Issue 3.1 How should the X factor be determined?

[B/3/1/2] Please explain why historical data on which X factor calculation is based should be Board-approved figures rather than actual figures. Please confirm the intention of paragraph 3 that the baseline for future Enbridge productivity should be the productivity levels built into past cost of service decisions by the Board.

# **RESPONSE**

Using historical Board-approved revenues is a relevant guidepost on which to test the reasonableness of the X-Factor estimate on an annual basis. For one, the historical cost of service decisions are the only source of information that discretely measured, weighed, and ultimately ruled on the Company's revenues. The relevance of the data is increased when measured over a long time period since short term revenue variations can be smoothed out to gain an appreciation for the long term average annual change. Using actual data, on the other hand, would require data manipulation in order to sort out any unusual revenue events or one-time gains/losses.

Furthermore, as stated in paragraph 86 of Exhibit B, Tab 1, Schedule 2, the Company was responding to PEG's analysis since they chose to test the reasonableness of their recommendation against historical rate escalations over a limited time period.

The intention of paragraph 3 in Exhibit B, Tab 1, Schedule 2, is not that the baseline for future Enbridge productivity should be the productivity levels built into past cost of service decisions by the Board. The intent of incentive regulation is to "incent" the Company to invest in productivity-enhancements. The Company's ability to invest in productivity enhancements will be compromised, if revenues do not increase at a sustainable rate. Otherwise, the final result could be little productivity enhancement and little long-term customer benefit. Historically, this sustainable rate has averaged 3.86% (4.05% excluding the 2004 Test Year).

# INTERROGATORY

Issue 3.1 How should the X factor be determined?

[B/3/1/4] Please provide the full set of data behind Table 1, on an annual basis, as set forth in the original source. Please explain why there is an overlap in years between the 1988-1997 period and the 1996-2005 period. Please confirm that the CSLS data includes both 1987 and 2006. Please include that data in your response. Please confirm that Table 1 uses "Hours Worked" as the labour input. Please confirm that CSLS also uses "Employment" as the labour input. Please provide the full set of CSLS data for utilities' total factor productivity for 1987-2006 using "Employment" as the labour input. Please confirm that pages S10 and S11 in the attached document entitled "CSLS Summary Data" are the CSLS summaries of total factor productivity for the twenty- year period 1987 – 2006 inclusive, and they show Ontario utility TFP at 0.23 or 0.24 depending on how labour is input.

# <u>RESPONSE</u>

The table on the next page shows the calculations that underlie the data in Table 1. For the full data set, please see the Attachment 1.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 30 Page 3 of 5 Plus Attachments

The November dataset that was used reported data up to 2005. A variety of time periods were selected for presentation so that a complete picture could be developed. Growth rates were calculated for the full time period as well as for 10-year periods calculated using the first year (1988-1997) and ending with the final year (1996-2005). In addition, since the indexes calculated for the Company are over the period 2000-2005, the Company believed it would be useful to see the changing 5 year time periods (1991-1995, 1996-2000, 2001-2005).

The choice to begin the sample period at 1988 was due to the fact that the Company originally calculated growth rates as the annual year over year growth rate, which precluded the use of 1987 growth. For final presentation, and comparability with PEG's study, the growth rates were changed to annual average logarithmic form, and the sample was inadvertently left as 1988-2005.

The Company did not know that the CSLS dataset was updated in July 2007, until after the Company had already filed evidence. For the full data set, please see Attachment 2". The updated dataset includes both 1987 and 2006.

Table 1 in the Company's evidence at Exhibit B, Tab 3, Schedule 1 represents TFP calculated with the labour input as "Hours Worked".

The CSLS also calculates TFP with the labour input as "Employment". The choice to represent the TFP growth rates using "Hours Worked" to represent the labour input was on the basis of the following excerpt from Rao, Tang, and Wang:

Another issue in computing labour productivity is the concept of labour input. One could use either employment or hours as the labour input. Because of large and growing differences in average hours worked per employed person across firms, industries, countries and time, a labour productivity measure based on persons employed will not necessarily accurately reflect true labour productivity differences and could lead to misleading conclusions. Hence, in this paper we use total hours worked as the labour input.<sup>1</sup>

The intention of Table 1 was to illustrate the reality of historical productivity for Canada's Utilities and Natural Gas Utilities sectors, and this is accomplished whether using "Hours Worked" or "Employment" as the labour input. The tables below present the updated CSLS data using both "Hours Worked" and "Employment" as the labour inputs over the full data set (1987-2006), the 10-year periods with a start date at the beginning

<sup>&</sup>lt;sup>1</sup> Rao, Someshwar, Tang, Jianmin, and Wang, Weimin, Micro-Economic Policy Analysis Branch, Industry Canada, <u>Measuring the Canada-U.S. Productivity Gap: Industry Dimensions</u>, International Productivity Monitor, Number 9, Fall 2004, p. 5-6.

Filed: 2007-09-04 EB-2007-0615 Exhibit I Tab 11 Schedule 30 Page 5 of 5 Plus Attachments

Source: Centre for the Study of Living Standards, based on Statistics Canada Labour Force Survey, GDP and Capital Stock data.

It is confirmed that pages S10 and S11 in SEC's attached document entitled "CSLS Summary Data" are the CSLS summaries of total factor productivity for the twenty- year period 1987 to 2006 inclusive, and they show that the combination of electricity generation, transmission and distribution, natural gas distribution, and water & sewage utilities have seen collective average annual logarithmic TFP growth of 0.23% using "Hours Worked" and 0.24% using "Employment" over the period 1987-2006.

The comparable numbers for Canada's Natural Gas Utilities are 0.0%, and 0.7%, respectively for the period 1987-2006. It can be seen from the tables above that productivity for Canada's Natural Gas Utilities has slowed markedly over the past decade relative to the previous decade, whichever labour input is used.

For the period used by PEG and the Company to estimate the X-Factor (2000-2005), the corresponding annual average TFP growth for Canada's Natural Gas Utilities was -3.9% and -1.8%, respectively.

<sup>&</sup>lt;sup>1</sup>Disaggregated provincial data for Natural Gas Utilities is not available

<sup>&</sup>lt;sup>2</sup>The Total Utilities category includes electricity generation, transmission and distribution, natural gas distribution, and water & sewage utilities

Surroes: National Accounts, Labour Force Survey, Statistics Canada unpublished data, Nuceros Front Study of Li Ving Standards.  Nuceros Front Study of Li Ving Standards to 1996, and on a Fisher chain weighted Nuceros Front 1997 to 2006 and a Laspayres index on 1996, and on a Fisher chain weighted index from 1997 to 2006 and a reason of the Canada for confidentially reason and swithfle or cannot be released by Statistics Canada for confidentially pressures. Estimates from the Labour Force Survey and Force 1997 (NACS) level should be used withprodence, as their level of sampling variability is high.

Sources: National Accounts, Labour Force Survey, Statistics Canada unpublished data, Come for the Study of Living Standards.  Noues: Real GDP is based on a Laspeyres index up to 1996, and on a Fisher chain weighted intext from 1997 to 2018. Earlies are not available because the underlying data are not available or learnes armetal as 'na' are not available because the underlying data are not available or Labour Force Survey at the four-eight NAICS level should be used withprundence, as their level of sampling variability is high.

Sources: National Accounts, Labour Force Survey, Statistics Canada unpublished data, Centre for the Study of Living Standards. Notes: Real GDP is based on a Laspeyres index up to 1996, and on a Firsher chain weighted inste, from 1997 as 30, and a Firsher chain weighted barites marked as "na" are not available because the underlying data are not available or cannot be relacady Datastiscs Canada for confedentiality reasons. Estimates from the Labour Force Stuvey at the four-clipt NACS level should be used withprudence, as their level of sampling variability is high.

AGRICULTURE, FORESTRY, FISHING & HUNTING
Crop and Animal Production
Foresty and Logging
Fleshing Huning and Trapping
Support Activities for Agriculture and Forestry

MINING AND OIL AND GAS EXTRACTION
Oil and Gas Exraction
Mining (EXCEPT OIL AND GAS)
Coal Mining
Meal Oor Mining
Non-Meallic Mineral Mining and Quarrying
Support Activities for Mining and Oil and Gas Extraction

Electric Power Generation, Transmission and Distribution Natural Goal Darishtution, Water and Other Systems Natural Gas Distribution Water, Sewage and Other Systems UTILITIES

## MANUFACTURING CONSTRUCTION

Food Manufacturing
Amain Food Manufacturing
Sugar and Confectionery Product Manufacturing
Sugar and Confectionery Product Manufacturing
Parit and Vegetable Preserving and Specialty Food Manufacturing
Dairy Product Manufacturing
Neat Product Manufacturing
Mase alterous Food Manufacturing
Mase alterous Food Manufacturing
Subservises and Totalia numfacturing
Other Food Manufacturing
Other Food Manufacturing

Beverage and Tobacco Product Manufacturing Beverage Manufacturing Tobacco Manufacturing

Textile and Textile Product Mills

Textile Mills Fibre, Yarn and Thread Mills Fabric Mills Textile and Fabric Finishing and Fabric Coating

Textile Product Mills

Clothing Manufacturing
Clothing Knitting Mills
Cut and Sew Clothing Manufacturing
Clothing Accessories and Other Clothing Manufacturing

Leather and Allied Product Manufacturing
Footwear Manufacturing
Leather and Allied Product Manufacturing (excluding footwear)

Wood Product Manufacturing Sawmills and Wood Preservation Veneerjplywood and engineered wood product manufacturing Other wood product manufacturing

Paper Manufacturing
Pulp, Paper and Paperboard Mills
Converted Paper Product Manufacturing

Printing and Related Support Activities

Petroleum and Coal Products Manufacturing

Chemical Manufacturing
Basic Chemical Munifacturing
Resun, Synthetic Rubber, and Artificial and Synthetic Fibres and Filame
Passine, Ferritary and Other Agestioung Chemical Manufacturing
Pharmaceutical and Medicine Manufacturing
Pharmaceutical and Medicine Manufacturing
Pharmaceutical and addiscive manufacturing
Paint conting and addiscive manufacturing
Syap and electioning compound

Sources, National Accounts, Labour Force Survey, Statistics Canada unpublished datu, Cecane for the Study of Living Standards.

Notes:
Real GDP is based on a Laspoyres index up to 1996, and on a Fisher chain weighted index from 1997 to
2006.

Entries marked as "a" are not available because the underlying data are not available or
Entries marked as "a" are not available because the underlying data are not available or
Labour Force Study at the four-digit NALICS level should be used with produces, as their

level of sampling variability is high.
