OAPPA Questions for Enbridge Gas Distribution (EGD)

Reference: Exhibit C, Tab 5, Schedule 1, page 7 of 9, paragraph 26
Exhibit C, Tab 6, Schedule 1

Topic: Enbridge Gas Distribution's proposal to amend the definition of contract demand

Questions:

1. Why does EGD consider it important that the determination of contract demand be consistent between bundled and unbundled customers?
2. Please confirm or comment on the following:
 - i. Currently bundled customers can have a contract demand that is less than 24 times their hourly demand.
 - ii. Under EGD's proposal, the bundled customers described in (i) will be required to increase their contract demands assuming their hourly demand remains the same.
 - iii. The increased contract demand described in (ii) leads to higher delivery demand costs for these bundled customers, all else being equal.
3. What percentage of current bundled customers have contract demands that are less than 24 times their hourly demands?
4. Under its proposal, is it EGD's intention to provide bundled customers with historical hourly flow data so they may appropriately size their contract demands?
5. How does the proposed determination of contract demand affect the assignment of the 2008 distribution revenue requirement to customer classes and the determination of rates for 2008?
6. If approved, when will bundled customers have their contract demands re-determined according to the new definition for contract demand?
