Ontario Energy Board P.O. Box 2319 27th Floor 2300 Yonge Street Toronto ON M4P 1E4

Attention: Ms. Kirsten Walli, Board Secretary

Dear Ms. Walli:

Re: Board Staff Submission on Rideau St. Lawrence Distribution Inc. 2010 Electricity Distribution Rates Application Board File Number EB-2009-0248

Please see attached Board staff's submission for the above proceeding. Please forward the attached to Rideau St. Lawrence Distribution Inc. and any intervenors in this proceeding.

Rideau St. Lawrence Distribution Inc. reply to submissions is due February 26, 2010.

Yours truly,

Board Staff Submission Rideau St. Lawrence Distribution Inc. 2010 IRM3 Rate Application EB-2009-0248

Introduction

Rideau St. Lawrence Distribution Inc. ("Rideau St. Lawrence") filed an application with the Ontario Energy Board (the "Board"), received on October 21, 2009, under section 78 of the Ontario Energy Board Act, 1998, seeking approval for changes to the distribution rates that Rideau St. Lawrence charges for electricity distribution, to be effective May 1, 2010. The application is based on the 2010 3rd Generation Incentive Regulation Mechanism.

The purpose of this document is to provide the Board with the submissions of Board staff based on its review of the evidence submitted by Rideau St. Lawrence.

Board staff makes submissions on the following matters:

- Disposition of Deferral and Variance Accounts as per the Electricity Distributors' Deferral and Variance Account Review Report (the "EDDVAR Report");
- Adjustments to the Retail Transmission Service Rates; and
- Accounting for the implementation of the Harmonized Sales Tax ("HST").

DISPOSITION OF DEFERRAL AND VARIANCE ACCOUNTS AS PER THE EDDVAR REPORT

General Background

For purposes of 2010 IRM applications, the EDDVAR Report requires a distributor to determine the value of its December 31, 2008 Group 1 Deferral and Variance account balance and determine whether the balance exceeded the preset disposition threshold of \$0.001 per kWh using the 2008 annual kWh consumption reported to the Board.

When the preset disposition threshold is exceeded, a distributor is required to file a proposal for the disposition of Group 1 account balances (including carrying charges) and include the associated rate riders in its 2010 IRM Rate Generator for the disposition of the balances in these accounts. The onus is on the distributor to justify why any account balance in excess of the threshold should not be cleared.

Any distributor exceeding the preset disposition threshold was required to file a Deferral and Variance Account Workform.

Rideau St. Lawrence Specific Background

Annual Disposition

Rideau St. Lawrence has requested the dispositon of its Group 1 account balance over a one year period. Board staff interrogatory # 5a requested that Rideau St. Lawrence complete and submit an updated version 4 of the Deferral Variance Account Workform. Rideau St. Lawrence has complied with this request.

Global Adjustment

In response to Board staff interrogatory # 1a, Rideau St. Lawrence stated it had reviewed the Regulatory Audit & Accounting Bulletin 200901 and confirmed that it had accounted for its Account 1588 RSVA power and global adjustment sub-account in accordance with this Bulletin. In response to Board staff interrogatory # 1b, Rideau St. Lawrence confirmed that it made adjustments subsequent to its initial application to comply with the Regulatory Audit & Accounting Bulletin 200901 with respect to account 1588 and the global adjustment sub-account.

In response to Board staff interrogatory # 2a, Rideau St. Lawrence disagreed that a separate rate rider be prospectively applied to non-RPP customers to dispose of the global adjustment sub-account balance would be appropriate on the basis of cost causality. Rideau St. Lawrence noted that there are too many factors that contribute to the variance in the global adjustment sub-account to strictly assign the variance to either

either RPP or non-RPP customers and for that reason advocated that the variance be cleared amongst all customers.

In response to Board staff interrogatories # 2b, Rideau St. Lawrence stated that it would have the billing capability to have a separate rate rider applicable to non-RPP customers to dispose of the global adjustment sub-account balance. Rideau St. Lawrence however indicated that setting billing parameters would be complex and not without costs.

As of November 1, 2009 the MUSH sector (Municipalities, Universities, Schools and Hospitals) and other designated institutional customers that remained as RPP customers were required to switch to non-RPP customer status as per O. Reg. 95/05 of the Ontario Energy Board Act, 1998. In response to Board staff interrogatories # 4d, Rideau St. Lawrence indicated it could not exclude customers in the MUSH sector from the rate rider calculation without a further complex set of billing parameters being developed, test and put into production.

Rideau St. Lawrence has requested that the Board review and approve the disposition of the December 31, 2008 balances of other Group 1 Deferral and Variance accounts as defined by the EDDVAR Report. The total balance of the Group 1 accounts, excluding the 1588 Global Adjustment sub-account is a debit of \$20,704. The balance in the 1588 global adjustment sub-account is a debit of \$183,181. Rideau St. Lawrence has included interest, using the Board's prescribed interest rates, on these account balances up to April 30, 2010. Debit balances are amounts recoverable from customers.

Submission

Board staff suggests that as a matter of principle, the global adjustment sub-account balance should be recovered by means of a separate rate rider that would apply prospectively to non-RPP customers, and would exclude the MUSH sector and other designated customers that were on RPP. This approach would be more reflective of cost causality since it was that group of customers that were undercharged by the distributor in the first place.

Board staff however notes that Rideau St. Lawrence's current billing system can not readily accommodate that change. Board staff suggests that it would be useful to the Board were Rideau St. Lawrence to review the Board's EB-2009-0405 Decision dated January 29, 2010 and provide comments in its reply submission as to whether the approach for the disposition of the global adjustment contained in that Decision (i.e. implementation through an adjustment to the Provincial Benefit item on thee bill) could be readily implemented by Rideau St. Lawrence.

Alternatively, the Board may wish to consider, as proposed by Rideau St. Lawrence, the recovery of the allocated global adjustment sub-account balance from all customers in each class. This approach would recognize the customer migration that occurs both away from the non-RPP customer group and into the non-RPP customer group.

In addition to the decision on whether a separate rate rider should be established for the disposition of the global adjustment sub-account, the Board must decide on the time period over which the rate riders should apply. As previously noted, customer migration might occur in the low volume group. For this group of customers, there would be a benefit to dispose of the global adjustment sub-account balance over a relatively short period of time in order to reduce inter-generational inequities. Board staff submits that a disposition period no longer than one year would be appropriate. These balances have been accumulating over the last four year period and to delay immediate action is not in the customer's best interest. Board staff recognizes that some volatility in electricity bills may result. That aside, Board staff believes that a one year disposition period would be in the interest of all parties. Hence Board staff agrees with Rideau St. Lawrence's proposal.

In order to reduce inter-generational inequities, Board staff submits that the disposition period for all Group 1 accounts should not exceed one year. This is consistent with Rideau St. Lawrence's proposal.

Board staff notes that the final proposed balances for disposition may no longer reconcile with previously audited balances nor with Rideau St. Lawrence's RRR filings. Board staff has reviewed the balances and notes that the changes do not result in material differences. Board staff notes that Rideau St. Lawrence stated in response to staff's interrogatory # 5d that Rideau St. Lawrence has complied with the Board's accounting policies and procedures. Board staff is mindful of the importance of a timely disposition of deferral and variance account balances and does not believe that the disposition should be delayed. Board staff suggests that the Board consider approving the proposed deferral and variance account balance disposition rate riders on a final basis.

ADJUSTMENTS TO THE RETAIL TRANSMISSION SERVICE RATES (RTSR)

General Background

Electricity transmitters in Ontario charge Uniform Transmission Rates (UTR) to their transmission connected customers. These UTRs are charges for network, line connection and transformation connection services. Based on the Decision and Rate Order of the Board in the EB-2008-0272 proceeding, the new UTRs effective July 1, 2009 were as follows:

• Network Service Rate was increased from \$2.57 to \$2.66 per kW per month, a 3.5% increase;

• Line Connection Service Rate remained unchanged at \$0.70 per kW per month; and

• Transformation Connection Service Rate was decreased from \$1.62 to \$1.57 per kW per month, for a combined Line and Transformation Connection Service Rates reduction of 2.2%.

On July 22, 2009 the Board issued an amended "Guideline for *Electricity Distribution Retail Transmission Service Rates*" ("RTSR Guideline"), which provided electricity distributors with instructions on the evidence needed, and the process to be used, to adjust Retail Transmission Service Rates ("RTSRs") to reflect the changes in the UTRs effective July 1, 2009. The Board set as a proxy at that time an increase of 3.5% for the Network Service Rate and reduction of 2.2% for the combined Line and Transformation Connection Service Rates. The Board also noted that there would be further changes to the UTRs in January 2010.

Based on the Decision and Rate Order of the Board in the EB-2008-0272 proceeding, a Rate Order issued January 21, 2010 revised the UTRs effective January 1, 2010 as follows:

- Network Service Rate has increased from \$2.66 to \$2.97 per kW per month, an 11.7% increase over the July 1, 2009 level or 15.6% over the rate in effect prior to July 1, 2009;
- Line Connection Service Rate has increased from \$0.70 to \$0.73 per kW per month; and
- Transformation Connection Service Rate has increased from \$1.57 to \$1.71 per kW per month, for a combined Line and Transformation Connection Service Rates increase of 7.5% over the July 1, 2009 level or 5.2% over the rate in effect prior to July 1, 2009.

Rideau St. Lawrence Specific Background

Rideau St. Lawrence has applied for an adjustment to its RTSR rates based on the July 22, 2009 RTSR Guideline proxy rate adjustments.

Submission

Board staff notes that very few distributors, including Rideau St. Lawrence, included in their 2009 rates the July 1, 2009 level of UTRs since for most of them, distribution rates were implemented on May 1, 2009. Therefore, in accordance with the July 22, 2009 RTSR Guideline, Board staff submits that the revisions to the RTSRs ought to reflect the changes from the current level to the January 1, 2010 level, that is an increase of about 15.6% to the RTSR Network Service rate, and an increase of about 5.2% to the RTSR Line and Transformation Connection Service Rate.

Board staff has reviewed the evidence provided by the applicant and submits that the proposal by Rideau St. Lawrence may no longer be reasonable, based on the January 1, 2010 level of the UTRs. Board staff submits that the applicant's proposed rates be revised to reflect the January 1, 2010 values.

ACCOUNTING FOR THE IMPLEMENTATION OF THE HARMONIZED SALES TAX

General Background

The Ontario provincial sales tax ("PST") (currently at 8%) and the Federal goods and services tax ("GST") (currently at 5%) will be harmonized effective July 1, 2010, at 13%, pursuant to Ontario Bill 218 which received Royal Assent on December 15, 2009.

The PST is currently an incremental cost applied to the price of goods purchased by an electricity distributor and is included in a distributor's OM&A expenses and capital expenditures. The PST is therefore included in the distributor's revenue requirement and is recovered from ratepayers through the application of distribution rates.

When the PST and GST are harmonized, distributors will pay the HST on purchased goods and service but will now claim an input tax credit for the PST portion. The mechanics of HST as a value added tax means that the distributor will no longer incur

that portion of the tax that was formerly applied as PST (i.e. the 8%) on goods purchased. However, the current rates as applied will continue to effect cost recovery as if the PST was still in place. If no action is taken, the distributor will realize a savings in the cost of goods purchased while applying rates which do not reflect those savings.

Rideau St. Lawrence Specific Background

In response to Board staff interrogatory # 8a which asked if Rideau St. Lawrence agreed that a deferral account should be established to capture the reductions in OM&A and capital expenditures, Rideau St. Lawrence stated:

"Rideau will comply with the Boards direction as it relates to the HST.

Rideau would submit that the amount of this potential reduction in OM & A and capital expenditure spending may be less than the current materiality limit. Rideau would suggest the Board consider that the appropriate timing to reflect the effect of the HST would be at the time of rebasing. This approach would be consistent with the Board's approach to addressing certain other major factors only at rebasing time, such as the timing of the implementation of the recent Cost of Capital Decision. Early indications regarding the implementation of the HST are that the taxation measures appear to be phased in and are also dependent on the sales volumes of companies. As the implementation of the HST unfolds it may change substantially and for that reason it is difficult to provide an absolute opinion. This economic adjustment is typical of many changes an LDC is faced with year over year that are not in their control."

Submission

Board staff notes that many distributors' comments on the administrative burden and costs of sales tax harmonization are at odds with the provincial and Federal governments' pronouncements regarding the stimulative and competitive results of harmonization. Because the costs and savings are not clear at this point, Board staff

submits that tracking of these is warranted at this point to quantify, per government pronouncements, that the potential savings for corporations like Rideau St. Lawrence could be significant. Accordingly, Board staff submits that the Board may wish to consider establishing a deferral account to record the amounts, after July 1, 2010 and until Rideau St. Lawrence's next cost-of-service rebasing application, that were formerly incorporated as the 8% PST on capital expenditures and expenses incurred, but which will now be eligible for an HST Input Tax Credit ("ITC"). The intention of this account would be to track the incremental change due to the introduction of the HST that incorporates an ITC from the 5% to the 13% level. To qualify for this treatment, the cost of the subject items must be in the category of distribution revenue requirement. Tracking of these amounts would continue in the deferral account until Rideau St. Lawrence's next cost of service application is determined by the Board or until the Board provides guidance on this matter, whichever occurs first.

Rideau St. Lawrence would apply to clear the balance in the account as a credit to customers at the next opportunity for a rate change after the account balance information becomes available and is supported by audited financial statements.

All of which is respectfully submitted
