

March 19, 2010

Ontario Energy Board P.O. Box 2319 2300 Yonge Street 27th Floor Toronto, ON M4P 1E4

Attention: Ms. Kirsten Walli, Board Secretary

Dear Ms. Walli:

Re: Combined PILs Proceeding, EB-2008-0381

**Interrogatory Responses** 

Enclosed please find EWU's responses to Board Staff's interrogatories filed in the above noted matter.

Yours very truly,

**ENWIN** Utilities Ltd.

Per: Andrew J. Sasso

# Responses of EnWin Utilities Ltd. (EnWin)

**EW1.** Re: Issue #2: What is the adjusted balance of deferred PILs in account 1562 that EnWin is now requesting for disposition as at February 28, 2010?

# **RESPONSE**

*ENWIN* is requesting disposition of \$5,293,658 as at December 31, 2007, plus applicable interest to the date of approved disposition, for account 1562. This is the same balance applied for in *ENWIN*'s January 15, 2010 submission.

**EW2.** Please provide or identify in the evidence the PILs continuity schedule that supports this amount.

#### **RESPONSE**

Please see Attachment 1 for the PILs continuity schedule that supports this amount. This is the same continuity schedule filed in *ENWIN*'s January 15, 2010 submission.

**EW3.** Has EnWin filed the set of models in evidence which support the amount requested in interrogatory EW1 above? If EnWin now has a new set of models other than those already filed that support this requested amount, please file the active Excel versions in evidence.

#### **RESPONSE**

Yes, *ENWIN* has previously filed the set of models in evidence. The only change to the previously filed models is the 2001 SIMPIL model, as set out in response to EW15.

**EW4.** Prior to the August 2009 non-transcribed meeting with parties, Board staff provided EnWin with completed SIMPIL models for EnWin for the years 2001 through 2005 and a summary or PILs continuity schedule of the variances produced from these models.

Please file these active Excel models on the public record. Please explain why and where EnWin disagrees with staff's interpretations of the SIMPIL methodology as displayed in these models.

# **RESPONSE**

The question refers to Excel models created and completed by Board Staff. Given that Procedural Order No. 8 invites other parties to file evidence, *ENWIN* submits that Board Staff should itself file these models if Board Staff considers the models to be relevant and material to this proceeding. This would be a

more appropriate process than for *ENWIN* to file evidence accompanied by its objections to its own evidence.

- **EW5.** Re: Issue #1: Should the stand-alone principle be applied when determining the allocation of the following tax attributes for federal and Ontario tax purposes: business limits; capital thresholds and deductions (exemptions); and eligibility for the small business deduction? That is, should the regulated distributor (licensed utility) use 100% of the tax attributes when calculating the regulatory PILs and SIMPIL true-up entitlements?
  - a) Please explain with reference to EnWin's PILs tax evidence.

#### **RESPONSE**

ENWIN's understanding at the relevant times was that inputs for the SIMPIL models' "Ministry of Finance Corporate tax return" columns were to be taken directly from the corresponding information in the corresponding year end tax returns. ENWIN completed this information in the SIMPIL models on this basis. Moreover, ENWIN understood that the inputs were to match the tax returns and therefore ENWIN used the same allocations as applied for in the tax returns.

The small business deduction does not apply to *ENWIN*.

The capital tax deductions were allocated to *ENWIN* as follows during 2001 to 2005 in the actual tax returns and thus input into the SIMPILs models as such.

	Ontario Capital Tax	Federal Large Corporations Tax					
	Exemption	Exemption					
2001	79%	77%					
2002	81%	100%					
2003	<b>78</b> %	78%					
2004	78%	24%					
2005	77%	21%					

- **EW6.** Re: Issue #3: Has the utility correctly applied the true-up variance concepts established by the Board's guidance?
  - **a)** How important is the sequence of the Board's guidance in determining how and when to apply that guidance in this proceeding? Please elaborate.
  - **b)** Does EnWin believe that there is a regulatory hierarchy in the Board's various decisions, handbooks, FAQs, guidelines and instructions? Please elaborate.

# **RESPONSE**

ENWIN has correctly applied the true-up variance concepts during the relevant period through the relevant filings as prescribed by the Board at the time.

EB-2008-0381 EnWin Utilities Ltd. Responses to Board Staff Interrogatories March 19, 2010

The SIMPIL models as originally filed are not only the primary guidance, but the fundamental expressions of the Board's methodology and the principal "underlying documents". The presumption should be that the models were the methodology and that the appropriate application of the models was the appropriate application of the methodology.

Insofar as sequencing and hierarchy are concerned, it is not apparent to *ENWIN* that alternative "guidance documents" are on the record in this proceeding.

If alternative "guidance documents" that should have affected how *ENWIN* completed its SIMPIL filings do enter the record of this proceeding, *ENWIN* would appreciate the opportunity to comment at that time.

- **EW7.** Re: Issue #3: One Example: Ontario Capital Tax (OCT) and Large Corporation Tax (LCT) were meant to be trued up if there was a capital tax rate or threshold deduction change after the Board's decision and during the intervening period until the next decision.
  - a) Does EnWin believe that Ontario Capital Tax and Large Corporation Tax should be trued up for income tax purposes in the SIMPIL methodology? That is, should the difference between the accrual for accounting purposes and the deduction from the actual tax returns be included in the list of items on which the income tax SIMPIL true-up variance is calculated? Please explain.

# **RESPONSE**

*ENWIN*'s understanding at the relevant times was that inputs for the SIMPIL models' "Ministry of Finance Corporate tax return" columns were to be taken directly from the corresponding information in the corresponding year end tax returns. *ENWIN* completed this information in the SIMPIL models on this basis. The SIMPILs model then used these inputs as set out in the mechanics of the issued models.

# EW8. Re: Issue #4: Background

The change in regulatory assets is one of many reconciling items that appear in EnWin's SIMPIL models. Included in this total movement or change in the balance of regulatory assets from year to year is account 1570, Transition Costs.

EnWin requested on June 29, 2004 to be adjourned from its part in the Board's regulatory asset proceeding - Phase 2; and the Board granted the adjournment on June 30, 2004 in Procedural Order No. 4. EnWin wanted to perfect its evidence on transition costs before the Board's review.

In its 2006 EDR application, RP-2005-0020 / EB-2005-0359, EnWin submitted a study prepared by KPMG to support its transition costs that it sought for recovery. EnWin agreed to a recovery amount of \$5,702,290, plus recalculated

EB-2008-0381 EnWin Utilities Ltd. Responses to Board Staff Interrogatories March 19, 2010

interest, as provided in the Settlement Agreement. With interest included this amount was \$7,298,931.

In its Phase 1 regulatory asset recovery application for the first instalment of four, RP-2004-0042 / EB-2004-0028, EnWin disclosed a transition cost amount of \$11,818,330 including interest as at December 31, 2002. In its application RP-2005-0013 / EB-2005-0023 for the second instalment of recovery, EnWin disclosed an amount of \$13,115,474 including interest as at December 31, 2003.

EnWin filed an application in 2007 to adjust its rates for a higher income tax PILs allowance [EB-2007-0522]. In 2006 EDR, EnWin agreed to include only capital tax PILs in rates because it had tax loss carry-forwards to offset taxable income in the 2006 test year. EnWin also found that it had made an error in a prior year tax return by including a deduction of \$5,909,165 (1/2 of \$11,818,330) for capital cost allowance (CCA).

# Interrogatories

a) How much did EnWin pay the service company for the CIS system in 2002?

#### **RESPONSE**

ENWIN paid \$11,818,330 for the CIS system.

**b)** Please describe how EnWin treated the change or movement in regulatory assets, including transition costs, in its tax returns for 2001 through 2008.

#### **RESPONSE**

In *ENWIN*'s case, the change or movement of regulatory asset balances as reported for financial statement purposes were reported as an addition to net income on Schedule 1 of the tax returns for 2003 – 2005. In 2002, the change or movement in the regulatory assets balance as reported for financial statement purposes was a deduction to net income on Schedule 1 and the transition costs balance was reflected as an addition on Schedule 8 and CCA related was taken. No further CCA was taken on this balance and in 2006; the remaining UCC of the transition cost asset was removed as an adjustment on Schedule 8.

c) Please provide a numerical table that shows the balances in all of EnWin's regulatory asset accounts at October 1, 2001, and at December 31, 2001 through December 31, 2008 and how the net changes from year to year were disclosed in the tax returns.

#### **RESPONSE**

Please see Attachment 2 for table showing requested information.

- **d)** The difference in "cost" of the CIS between \$13,115,474 and the settled amount of \$7,298,931 is \$5,816,543 and has been absorbed by the shareholder of EnWin.
  - Did EnWin expense this difference of \$5,816,543 in its financial statements and when?
  - Did EnWin claim a deduction for this difference in its tax returns, and for which years?

#### **RESPONSE**

*ENWIN* expensed \$6,000,000 in its 2004 financial statements related to transition costs. *ENWIN* reflected the net income per the financial statements on Schedule 1 of the 2004 tax return. Therefore, this expense was reflected in the opening net income per accounting purposes on the 2004 tax return.

**e)** Does EnWin believe that this difference should be excluded from the SIMPIL reconciliations since it gave up the right to collection in its Settlement Agreement? If yes, please correct the evidence. If no, please explain the regulatory principles that EnWin relies on for its opinion.

#### **RESPONSE**

ENWIN disputes the premise of the question. ENWIN did not give up the right to account 1562 collection in its 2006 EDR Settlement Agreement. Please see Attachment 3 for the 2006 EDR Settlement Agreement.

**EW9.** Re: Issue #4: In <u>Barrie's</u> evidence in its May 27, 2009 answer to Staff IR#6 <u>Barrie</u> stated the following:

"Barrie Hydro ("BH") did use the regulatory assets in the Ministry filing of our tax returns. BH determined regulatory asset/liabilities should not be included in the PILs filing, due to the fact that these are not considered when setting the PILs Proxy and only represent a timing difference of when income tax is paid." In the 2006 EDR Board Report in Chapter 7 on page 61 it states:

"A PILs tax provision is not needed for the recovery of deferred regulatory asset costs, because the distributors have deducted, or will deduct, these costs in calculating taxable income in their tax returns."

On page 4 of the Board's decision on EnWin's 2007 application EB-2007-0522 the Board stated:

"However, the provision for PILs should reflect the proper input with respect to Regulatory Assets. The Board has previously determined that Regulatory Asset recoveries should not be included in the PILs calculation for rate setting purposes."

As regulatory assets were recovered by rate riders from 2004 through 2009, the balance in the PILs 1562 account has been affected by these recoveries only

EB-2008-0381 EnWin Utilities Ltd. Responses to Board Staff Interrogatories March 19, 2010

up to April 30, 2006. In EnWin's SIMPIL evidence, regulatory assets have been used to create a material portion of the PILs 1562 receivable from ratepayers. **a)** In light of *Barrie's* response above, the Board's decision in EB-2007-0522 and similar evidence in many other rebasing applications that have come before the Board, why does EnWin believe that this timing difference should be recovered from ratepayers as at April 30, 2006?

# **RESPONSE**

*ENWIN* is not familiar with the circumstances or evidence of Barrie Hydro. It is likely that Barrie Hydro was commenting on its own experience and insights and not the experience of and guidance received by *ENWIN*. There is no basis for the Board to find the assertions of any individual LDC in relation to its own affairs, including Barrie Hydro or *ENWIN*, to be prescriptive or even persuasive in respect of another LDC's affairs.

The Board's 2006 EDR Board Report applies to 1592 PILs, not 1562 PILs. Further, *ENWIN* submits that it was not the Board's intention in the report to provide retrospective guidance or direction. Finally, the 2006 EDR Board Report cannot be applied retroactively.

The Decision in EB-2007-0522 was issued January 4, 2008 and for the reasons set out above in respect of the 2006 EDR Board Report, is not relevant to this proceeding.

ENWIN's filed tax returns for the "SIMPIL years" included ENWIN's regulatory assets. The SIMPIL methodology as expressed in the SIMPIL models required ENWIN to reflect its tax return in the SIMPIL models. Accordingly, regulatory assets were included in ENWIN's completed SIMPIL models. ENWIN filed its SIMPIL models with the Board as required. The SIMPIL filings were not rejected by the Board and to the best of current ENWIN management's recollection and knowledge, ENWIN was not aware of any alternative requirement to exclude regulatory assets from its SIMPIL models during the SIMPIL period (i.e. 2001-2006).

**EW10.** Re: Issue #5: EnWin has calculated the amount recovered from customers as the billed amount. In its evidence filed on January 15, 2010, EnWin used the PILs "rate slivers" from the PILs application filing models to calculate the amount that represents billed to customers.

Does EnWin believe that this method is the best method to use? Please explain.

# **RESPONSE**

This is the approach that *ENWIN* followed in its most recent evidence. It is one reasonable method that was acceptable and within the Board's methodology at the time of the SIMPIL filings.

**EW11.** Re: Issue #6: In April 2009 in response to staff IR EW #46 EnWin replied as follows.

IR# 46: Please describe how EnWin extracted the PILs amounts from unbilled revenue during the period 2001 through December 31, 2006.

Response: FWIL only factored in unbilled revenue on initial set up of account to

<u>Response</u>: EWU only factored in unbilled revenue on initial set up of account to determine the amount of PILs collected from customers in 2002. Other unbilled revenue amounts were not taken into consideration annually as the revenue would flow through January of the following year.

a) Does EnWin believe that this is the only method to deal with unbilled revenue for purposes of the SIMPIL calculations? Are there other alternatives that could also be considered? Please explain.

#### **RESPONSE**

In *ENWIN*'s most recent evidence of January 15, 2010, the PILs collected from customers was calculated based on PILs rate slivers times billed quantities. Billed quantities represent all usage with an end date occurring in that particular month. It is one reasonable method to deal with unbilled revenue. There may be many other acceptable and reasonable ways to deal with unbilled revenue based on information available to particular LDC's during that time period.

**b)** If the information is not available by an applicant to calculate unbilled revenue as at April 30, 2006, how does EnWin believe this should be treated?

#### **RESPONSE**

This does not apply to *EnWin*'s application. *EnWin* notes that the Board has taken the position in its December 2009 decision that the methodology in place at the time is the methodology that is acceptable. *EnWin* is open to the possibility that there may be a range of acceptable implementations of a particular methodology or even a range of methodologies that are acceptable to the Board for any given filing.

**EW12.** Re: Issue # 7: If a regulated distributor has a service company or parent company that provides services to the LDC, and the service company or parent charges the distribution utility for labour including all overhead burdens, does EnWin believe that the change in the post-employment benefit liability should be reflected in the distributor's PILs reconciliations? Please explain.

#### **RESPONSE**

ENWIN's understanding at the relevant times was that inputs for the SIMPIL models' "Ministry of Finance Corporate tax return" columns were to be taken directly from the corresponding information in the corresponding year end tax returns. ENWIN completed this information in the SIMPIL models on this basis.

The post retirement liability is treated as a reserve in the tax return and therefore reflected as such on the book to tax adjustments required on the TAXREC sheet of the model. The reserve (i.e. post-employment benefit liability) balance at the beginning of the year is deducted from accounting income and the ending balance is added to accounting income in the calculation of taxable income. This treatment is consistent with the treatment in *ENWIN*'s tax returns. The reserve amounts for post-employment benefit liability only represents the liability associated with employees of the LDC.

**EW13.** Re: Issue #8: The materiality threshold incorporated into the SIMPIL models can produce perverse results. In *Halton Hill's* evidence in its 2004 SIMPIL TAXREC2, the accounting bad debt expense was added back, and because it was above the materiality threshold it generated a tax provision on the amount. However, the deduction for the tax deductible bad debt expense was below the materiality threshold and was ignored in the true-up calculations. The net amount between the accounting number and the actual tax deductible amount should be considered in the calculation.

The original intent of the materiality threshold was to reduce the number of reconciling items that the applicant would have to submit evidence to defend.

a) If evidence on non-material items, other than for policy matters, is not required to be filed in this proceeding, should the materiality threshold be retained in the model given that errors like those identified above are created? Please explain.

# **RESPONSE**

This does not appear to arise in *ENWIN*'s application.

EB-2008-0381 EnWin Utilities Ltd. Responses to Board Staff Interrogatories March 19, 2010

**b)** If EnWin believes that the materiality threshold should be retained in the model, how should the materiality threshold be applied to determine which amounts should be trued up to avoid the situation described above? Please explain.

# **RESPONSE**

This does not appear to arise in *ENWIN*'s application.

# EW14. Re: Issue #9: Correct tax rates.

**a)** What income tax rate should be used for true-up calculations and how should this rate be determined?

# **RESPONSE**

*ENWIN* used the tax rates from the tax returns to populate the SIMPIL fields that required tax rates.

**b)** Should Investment Tax Credits, like apprenticeship training, be considered in the determination of the taxes and the tax rate(s) for the SIMPIL true-up calculations? Please explain.

# **RESPONSE**

If the methodology reflected in the SIMPIL models or elsewhere in the contemporary Board guidance provided for true-up of Investment Tax Credits, then those are appropriate true-ups.

**c)** EnWin incurred losses for income tax purposes in 2001 and 2002 and utilized tax loss carry-forwards in 2003, 2004 and 2005 to reduce taxable income to zero.

How should EnWin determine the appropriate income tax rate to use in the true-up calculations when there is no taxable income?

#### **RESPONSE**

*ENWIN* used the legislated tax rate from the tax returns and submits that this is an appropriate methodology.

**EW15.** Re: Issue #10: EnWin has included the 2001 PILs proxy (positive number) in the account 1562 continuity schedule in each period until it was removed from rates. As well, EnWin has shown the amount collected (negative number) from customers by using the 2001 proxy "rate slivers" for the same time period as the proxy remained in rates.

**Re: Issue #11:** For 2002 RRR, EnWin filed the 2001 SIMPIL model. In that document there was no true-up amount in the continuity schedule in the 2002 column.

In its evidence of May 27, 2009, <u>Barrie</u> showed what it had filed in the 2001 SIMPIL under RRR. In that document there was a true-up amount of \$136,041 which it showed in the continuity schedule in the 2002 column.

The true-up amount of \$136,041 appears only once in the 2002 column. It does not appear in the 2003 column; and no proration of this amount appears in the 2004 column up to the date the 2001 proxy was removed from rates.

**a)** Does EnWin consider the Issue #10 treatment described above to be inconsistent with that done by *Barrie* for Issue #11? Please explain.

#### **RESPONSE**

There was an input error in the 2001 SIMPIL model. An amount of \$90,000 was input as Capital Tax, but should have been input as Large Corporation Tax. *ENWIN* has corrected the 2001 SIMPIL model and has enclosed it as Attachment 4. The continuity schedule in *ENWIN*'s most recently filed evidence, which is resubmitted as Attachment 1, is correct.

- **EW16.** Re: Issue #12: In its 2005 SIMPIL model continuity schedule, EnWin has shown prorated amounts for the PILs proxy and the amount collected for the period January 1 to April 30, 2006. It has also shown the true-up items of \$668,760 from the 2005 tax year SIMPIL RRR filing in the 2006 column. There are no true-up items shown that relate specifically to the 2006 four-month stub period.
  - **a)** Does EnWin believe that its disclosure reflects the correct interpretation of the SIMPIL methodology? Please explain.

#### **RESPONSE**

This is the approach that *ENWIN* followed in its most recent evidence. It is one reasonable method that was acceptable and within the Board's methodology at the time of the SIMPIL filings.

ENWIN's understanding is that the SIMPIL methodology used what might best be labelled "SIMPIL years". The SIMPIL years did not necessarily align with any given calendar years. The SIMPIL years started October 1, 2001 and ended April 30, 2006. The SIMPIL models that pertained to the SIMPIL years were numbered 2001-2005.

The question seems to imply that there ought to have been a 2006 SIMPIL filing or some treatment of January 1, 2006-April 30, 2006 that differs from *ENWIN*'s treatment. *ENWIN* is not aware of that alternative methodology, but is open to the possibility that both *ENWIN*'s application of the methodology and

some other methodology could both be appropriate based on the Board's guidance at the time.

- **EW17.** Re: Issue #13: Financing fees are included in the all-in cost of debt by Enbridge, Union Gas and Hydro One when they file rate applications. <u>Barrie</u> and EnWin have shown the amortization of financing fees in their SIMPIL evidence.
  - **a)** Does EnWin consider the amortization of financing fees to be interest expense? Please explain.

# **RESPONSE**

This is the approach that *ENWIN* followed in its most recent evidence. It is one reasonable method that was acceptable and within the Board's methodology at the time of the SIMPIL filings.

**b)** Should this cost be included in interest expense for the purpose of the interest claw-back calculations? Please explain.

#### **RESPONSE**

This does not appear to arise in *ENWIN*'s application. *ENWIN*'s deemed interest expense appears to have always exceeded *ENWIN*'s actual interest expense, thus resulting in "0" for interest claw-back calculations.

EW18: Re: Issues #: 14, 15, 16, 17, 18, 19, 20, 21, 22.

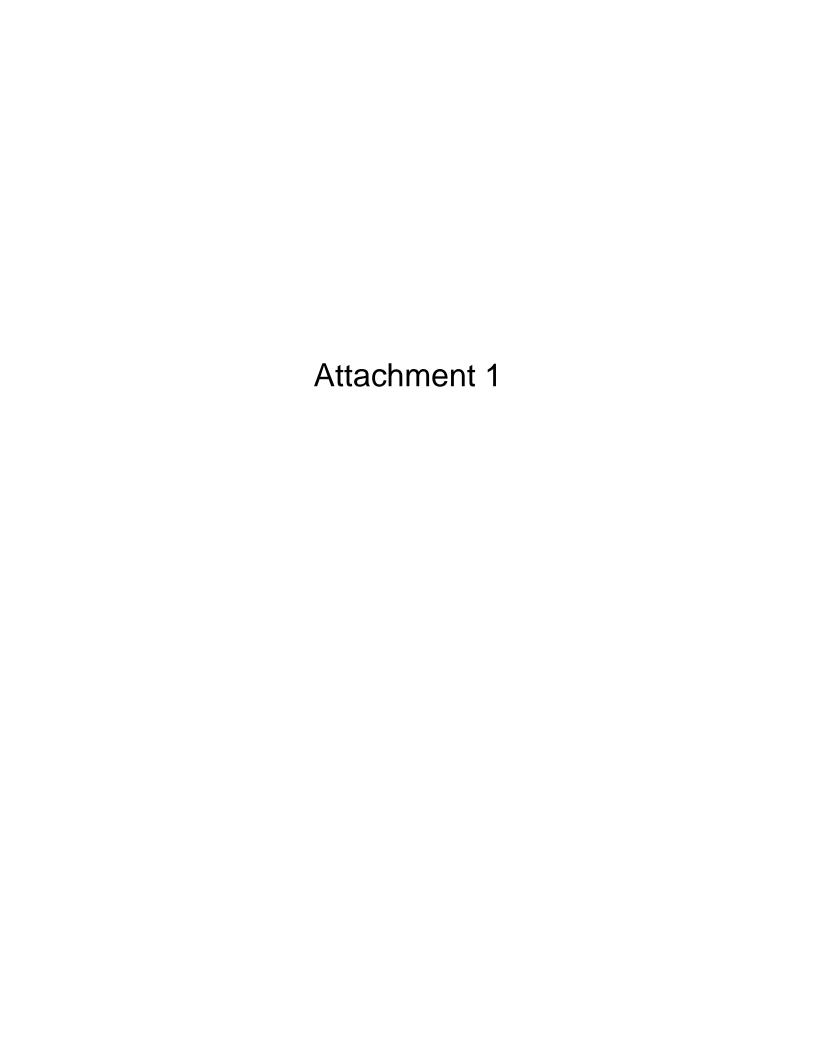

Should EnWin wish to provide its comments to assist the Board with these issues, please do so with reference to each issue number.

#### **RESPONSE**

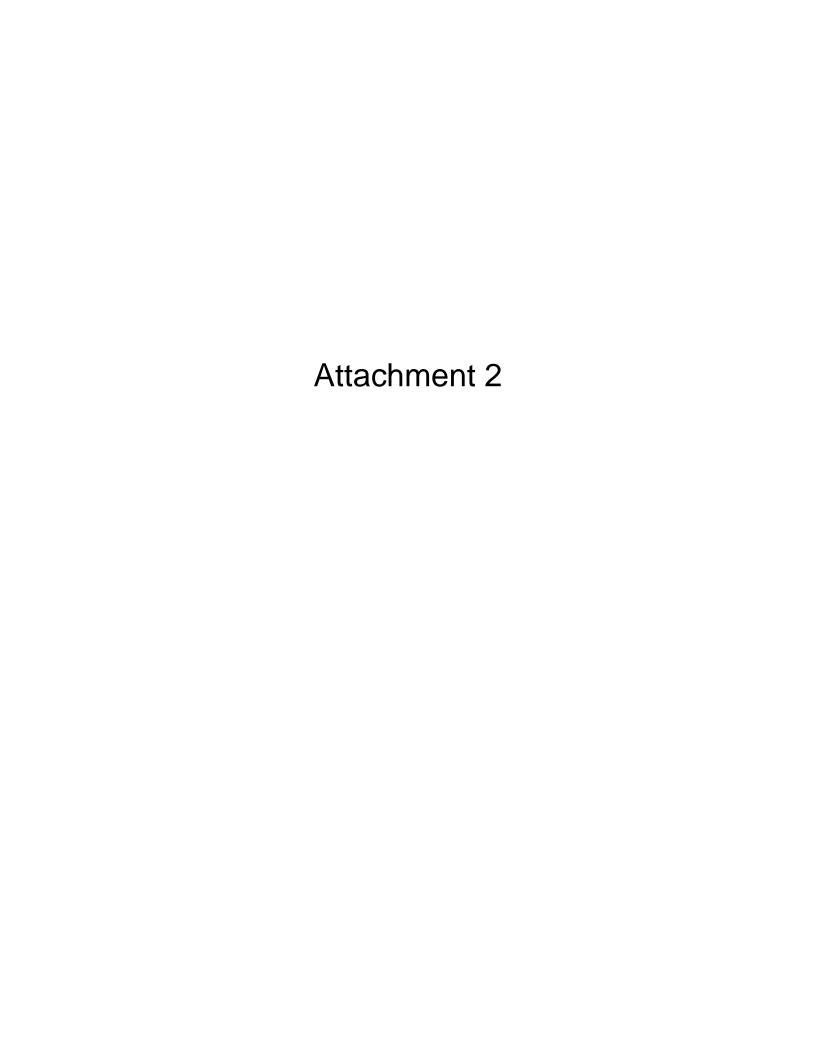

- 14) In *ENWIN*'s case, transferring to account 1595 would be preferable as compared to transferring to account 1590 because *ENWIN* is currently seeking disposition of account 1590 in its 2010 IRM Application, EB-2009-0221. For this practical administrative reason, it would be clearer to track account 1562 to account 1595.
- 15) Disposition of *ENWIN*'s account 1562 should be final in this proceeding. If *ENWIN* were to receive any reassessments for those years, subject to materiality considerations, *ENWIN* submits that it should approach the Board at that time for guidance.
- 16) In *ENWIN*'s recent refilling of its evidence, it recalculated its interest charges. *ENWIN* submits that the methodology it used was appropriate

and notes that it has not received any interrogatories questioning its approach. *ENWIN* would intend to apply the same methodology to calculate interest carrying charges in the event that its principal variances were recalculated.

- 17) *ENWIN*'s interpretation of the SIMPIL methodology was that it was appropriate for *ENWIN* to record its most current tax filing at the time of filing the SIMPIL model.
- 18) *ENWIN* took the approach of recording the repealing of the Large Corporation Tax for January 1 to April 30, 2006 in account 1562.
- 19) Since the revenue requirement is used to allocate PILs, this allocation basis that *ENWIN* proposes to dispose of its balance. *ENWIN* proposes to use the revenue requirement allocation as it is in place at the time of setting the rate rider as opposed to using a revenue requirement allocation(s) from an earlier SIMPIL year(s).
- 20) *ENWIN* originally requested disposition over 2 years when disposition was sought in EB-2008-0227. However, that request was part of a broader disposition request during the Cost of Service proceeding. In this proceeding, a fresh consideration of resulting impact to customers and *ENWIN* will be required. Given the amount currently sought, disposition over 1 to 2 years appears appropriate in *ENWIN*'s case.
- 21) The Board's methodology, as most recently expressed in the EDDVAR Report, addresses forecasted interest carrying charges and applicable rates. There does not appear to be a reason to depart from this methodology.
- 22) To recover the final amount, *ENWIN* proposes to use "volumetric charges" for most of its customer classes, with the exception of "per connection charges" for its USL, Street Lighting and Sentinel Lighting classes.

**SETTLEMENT PROPOSAL** 

RP-2005-0020 EB-2005-0359

Page 2 of 19

This Settlement Proposal is filed with the Ontario Energy Board ("the Board") for the Board's consideration in respect of the 2006 EDR Application (the "EDR Application") of EnWin Powerlines Limited (the "Applicant") and the Regulatory Asset Application (the "Regulatory Asset Application") of the Applicant. Both applications are collectively referred to as "the Applications". A Settlement Conference was conducted on February 8 and 9 of 2006 in accordance with Rule 31 of the Board's *Rules of Practice and Procedure* and the Board's *Settlement Conference Guidelines*. The Settlement Proposal arises from the Settlement Conference.

# **PARTIES**

The following parties (the "Parties") participated in the settlement discussions and are in agreement with this Settlement Proposal:

- EnWin Powerlines Limited;
- Consumers Council of Canada (the Council);
- Energy Probe Research Foundation (Energy Probe);
- The School Energy Coalition (SEC);
- Vulnerable Energy Consumers Coalition (VECC).

Ontario Energy Board Staff ("Board Staff") participated in the Settlement Conference but indicated at the outset of the Settlement Conference that Board Staff would not be a signatory to any Settlement Proposal amongst the Parties. Board Staff did play a major role in working with the Parties to flesh out the Issues and to achieve a Settlement Proposal which was acceptable to all the Parties.

Hydro One Networks Inc. is taking no position with respect to any of the Issues in the EDR Application and the Regulatory Asset Application.

Canadian Cable Telecommunication Association (CCTA) was an intervenor in the EDR Application and Regulatory Asset Application. CCTA withdrew its intervention on December 20, 2005.

RP-2005-0020 EB-2005-0359

Page 3 of 19

# THE ISSUES

The Settlement Proposal deals with all of the issues on the Board's Issues List (the "Issues") outlined in the Board's Procedural Order No. 3 issued January 25, 2006. The Issues include the following:

- 1. Regulatory Assets Application
  - 1.1 Reasonableness of Transition Costs
  - 1.2 Transition Cost-Affiliate Issue
  - 1.3 Storm Costs
  - 1.4 Remaining Regulatory Asset Account Balances
- 2. 2006 Distribution Rate Application
  - 2.1 Tier 1 Adjustments
  - 2.2 Affiliate Costs and Revenues
  - 2.3 Large Use 3TS and Ford Annex Rates
  - 2.4 Capital Structure and Costs
  - 2.5 PILs
  - 2.6 Retail Transmission Rates
  - 2.7 Specific Service Charges
  - 2.8 Regulatory Cost Variance Account

# THE SETTLEMENT PROPOSAL

There is a complete settlement on each of the Issues.

# a) Background to the Settlement Proposal

In Procedural Order No. 2 issued November 28, 2005, the Board stated (at paragraph 9) that "Parties are advised that any settlement proposal should be structured such that settlement for each issue is separable and able to be accepted or rejected by the Board independently from any other issue."

The Parties acknowledge the Board's request that Issues be resolved on a severable basis. However, in order to reach the Settlement Proposal now before the Board, the Parties agreed on a comprehensive approach whereby settlement of the entire package of Issues forms the basis of the settlement. The Parties agreed to compromise on certain positions they held in order to reach a settlement on all of the Issues. While the Board has the authority to separate and only accept settlement of a subset of the Issues, it is the request of the Parties that the Settlement Proposal be accepted in its entirety so as to reflect the intentions of all the Parties to this Settlement Proposal.

RP-2005-0020 EB-2005-0359

Page 4 of 19

This Settlement Proposal was prepared in accordance with Rule 32 of the Board's Rules of Practice and Procedure and the Settlement Conference Guidelines. The Settlement Proposal accordingly describes the agreements reached on the Issues, including the rationale, and provides a direct and transparent link between each settlement issue and the supporting evidence in the record to date. In this regard, the Parties agree that the evidence provided in the Settlement Proposal Supporting Materials along with the Applicant's previously filed evidence is sufficient to support the Settlement Proposal. Moreover, the quality and the detail of the supporting evidence together with the corresponding rationale will allow the Board to make findings on the Issues.

# b) Settlement Proposal Supporting Materials

The Applicant has prepared the additional supporting materials accompanying the Settlement Proposal in order to give further explanation to the Intervenors and to provide explanation for the Board on the recommendation of Board Staff. The material has been prepared by the Applicant and provided to the Intervenors and Board Staff.

# c) Detail of the Settlement Proposal

# 1.0 REGULATORY ASSETS APPLICATION

1.1 Is the revised claim by EnWin of \$97.21 per customer for Account 1570 Transition Costs reasonable?

**Settlement:** There is a complete settlement of Issue 1.1 on the following basis:

The Applicant will reduce its Transition Costs claimed in Account 1570 by a further 10% to an amended amount of \$5,702,290.20 plus applicable interest. Interest on the reduced principal amount shall be calculated at the same rate previously used in the Regulatory Asset Application.

Rationale: The Intervenors took the view that other LDCs had, as part of the regulatory asset application process for minimal review, been required to take a reduction of 10% of their claimed Account 1570 Transition Costs. Therefore, the Intervenors took the position that the Applicant should also be required to reduce the amount it submitted for prudently incurred transition costs by a further 10%

RP-2005-0020 EB-2005-0359

Page 5 of 19

and are prepared to accept the resulting transition costs on the basis of this adjustment.

**Evidence**: The following evidence supports this settlement:

Regulatory Asset Application: Tab B, pages 4-7, Tabs D and H.

# Answers to Interrogatories, Volume 2

Board Staff Interrogatory 32, page 8. Board Staff Interrogatories 5 and 10, page 1.

# 1.2 Does the incurrence of the transition costs through affiliate EnWin Utilities raise any issues that would impact on the reasonability of the claim?

**Settlement:** There is a complete settlement of Issue 1.2 on the following basis:

Rationale: The affiliate incurred costs to develop a Customer Information ("CIS") System on behalf of the Applicant. The affiliate sold the CIS System to the Applicant at cost with no markup. The Intervenors took note of the fact that the Applicant, pursuant to the KPMG CIS Cost Review Report, which is found at Tab D of the Regulatory Asset Application, applied for a substantially reduced amount of transition costs. In addition, by way of this Settlement Proposal, the Applicant is agreeing to a further 10% reduction in transition costs.

**Evidence:** The following evidence supports this settlement:

**Regulatory Asset Application**: Tab B, pages 4-7, pages 11-12, paras. 47-50, Tabs D and H.

1.3 Is the \$1.2 million being claimed by EnWin in Account 1572 related to 2002 ice storm losses appropriate for recovery and reasonable in amount, and is the proposed method of allocation (per customer) appropriate?

**Settlement:** There is a complete settlement of Issue 1.3 on the following basis:

The Parties agree that the recovery of storm costs should be granted as requested in the Regulatory Asset Application, both in terms of quantum claimed and proposed allocation among all customers.

Rationale: The record provided evidence of the extraordinary nature of the January 31, 2002 storm. The effects of the January 31, 2002 storm were widespread and therefore allocation across all customers was deemed to be a reasonable way to allocate these costs, although admittedly not the only way to allocate them. The Applicant provided further evidence demonstrating that the 2002 storm budget of \$220,000 had been exhausted by other storms that occurred during the 2002 year exclusive of the January 31, 2002 storm.

**Evidence:** The following evidence supports this settlement:

The Applicant has provided additional evidence at Tab 4 of the Settlement Proposal Supporting Materials which describes the storm costs in 2002 separate and apart from the costs incurred for the January 31, 2002 storm.

**Regulatory Asset Application**: Tab B, page 11, para. 46, pages 11-12, paras. 47-50, Tabs G and I.

# 1.4 Are the remaining account balances being claimed appropriately calculated?

**Settlement:** There is a complete settlement of Issue 1.4 on the following basis:

The Parties agree that the remaining account balances being claimed are appropriately calculated.

**Rationale:** In reviewing the Regulatory Asset Application and the Applicant's Answers to Interrogatories, the Intervenors take no issue with the calculation of the remaining account balances.

**Evidence:** The following evidence supports the settlement:

**Regulatory Asset Application**: Tab B, pages 8-15, paras. 34-52, Tab F.

# 2.0 2006 DISTRIBUTION RATE APPLICATION

#### 2.1 TIER 1 ADJUSTMENTS

# 2.1.1 Are the components and amounts of the Tier 1 Adjustments applied for appropriate?

**Settlement:** There is a complete settlement of Issue 2.1.1 on the following basis:

The components and amounts of the Tier 1 Adjustments applied for are appropriate.

Rationale: Having reviewed the Applicant's Tier 1 Adjustments, the Intervenors are satisfied that the Applicant has made all applicable Tier 1 Adjustments in accordance with the requirements of the 2006 EDR Handbook (the "Handbook"). Further, the Intervenors are satisfied that the one non-routine/unusual Tier 1 Adjustment made by the Applicant in the amount of \$578,355 with respect to regulatory costs, and more particularly pertaining to legal, professional and consulting costs related to, among other matters, the review of the Applicant's regulatory asset balances following the adjournment of the Applicant's Phase 2 Regulatory Assets application in 2004, is reasonable. The amount attributable to regulatory proceedings remaining in the Applicant's revenue requirement (exclusive of the Applicant's \$141,400 Tier 1 adjustment for OEB annual dues and other fees paid to energy regulators) is \$225,067, pertaining to matters such as consulting and legal fees for the Applicant's Phase 1 Regulatory Asset application in early 2004, the balance of the 3TS/Ford Annex application (discussed below), the Board's 2006 EDR process and intervenor costs. The Tier 1 Revenue Adjustment in the (revised) amount of \$625,843 on account of payments to be made by the Applicant's affiliate, EnWin Utilities Ltd., for the use of the Applicant's CIS system, is also accepted by the Intervenors as an appropriate adjustment. This adjustment is addressed in greater detail below in the context of Issue 2.2. This settlement agreement is without prejudice to the Parties in future proceedings challenging the amount of 2006 regulatory costs recoverable from ratepayers if the Board approves a regulatory cost deferral account.

RP-2005-0020 EB-2005-0359

#### 2.2 AFFILIATE COSTS AND REVENUES

- 2.2.1 Are the costs that EnWin seeks to recover for services from its affiliates reasonable?
- 2.2.2 Are the revenues that EnWin receives from affiliated companies for use of EnWin's CIS system, sentinel light maintenance and other services reasonable?

**Settlement:** There is a complete settlement of Issues 2.2.1 and 2.2.2 on the following basis:

The costs that the Applicant seeks to recover for services from its affiliates, and the revenues that it receives from affiliated companies for use of the Applicant's CIS System, sentinel light maintenance and other services are reasonable for the purposes of establishing electricity distribution rates effective May 1, 2006.

The Intervenors accept that the Applicant has adopted a cost allocation methodology developed by KPMG for use by the Applicant and affiliates and the resulting costs are reasonable.

Prior to filing its next distribution rate application, the Applicant shall conduct a study and prepare a report related to affiliate costs and revenues and transfer pricing arrangements (the "Affiliate Report"). The Affiliate Report shall be provided to the Board and the Intervenors as part of the Applicant's next rate application. The Applicant will undertake a tender for consultant services for the

RP-2005-0020 EB-2005-0359

Page 10 of 19

Affiliate Report. The Applicant will contact the Intervenors in the EDR Application and seek from them input into the issues the Intervenors would like addressed in the Affiliate Report. The Applicant will consider, but will not be required to adopt, the Intervenors' suggestions.

Rationale: The Parties recognize that issues related to affiliates are a concern across the electricity distribution sector. In the Settlement Proposal Supporting Materials, the Applicant has provided further material that addresses the relationship between the Applicant and its affiliates and the reasonableness of the Applicant's current costs and revenues in respect of services purchased from, shared with and provided to its affiliates. The Applicant has agreed to conduct a study related to affiliate costs and seek input from the intervenors on areas of interest and concern.

# 2.3 LARGE USE 3TS AND FORD ANNEX RATES

2.3.1 Are the rates charged to these two classes through the use of the separate model proposed by EnWin adequately justified and reasonable?

**Settlement:** There is a complete settlement of Issue 2.3.1 on the following basis:

The Parties have settled this issue on the basis that the rates charged to these two classes through the use of the separate model proposed by the Applicant are adequately justified and reasonable. However, intervenors believed that the allocation of O&M to these two classes was likely understated. To address this, Intervenors requested, and the Applicant has agreed to, the addition of a total of \$50,000 to the annual O&M for the 3TS and Ford Annex classes in the same proportion as the ratio between the O&M for the 3TS and Ford Annex classes in the Rate Application. The \$50,000 will be deducted for the O&M component of the revenue requirement for the Applicant's remaining customer classes (ie. those other than the 3TS and Ford Annex classes).

Rationale: These rate classes were established by a Decision and Order of the Board in 2004, which followed applications by the Applicant in 2001 (suspended by operation of the *Electricity Pricing*, Conservation and Supply Act, 2002 ["Bill 210"]), and in 2003, with the approval of the Minister. The customers in these classes are served by dedicated transformer stations constructed and owned by the Applicant. The establishment of new customer classes in order to recover the costs associated with these transformer stations which were not included in the initial unbundling process undertaken as part of the Applicant's initial rate unbundling and design in 2000, was recommended by Board Staff. In 2001, EnWin Powerlines approached OEB staff for assistance in determining how the costs associated with the four transformer stations might best be recovered. A copy of a letter sent by EnWin Powerlines to OEB staff on December 6, 2001 confirming the discussions that took place at a meeting on October 10, 2001 between EnWin Powerlines representatives and OEB staff, which confirms that "The discussion that took place with Board staff identified the need to separate these transformation assets for rate making purposes in order to have a level playing field with other Local Distribution Company's who do not own transformation assets and also to

RP-2005-0020 EB-2005-0359

Page 12 of 19

reflect accurate costs for the remaining customer base and those customers for whom the dedicated facility was built", accompanies the supplementary narrative contained at Tab 3 of the Settlement Proposal Support Materials. The OEB staff recommendation was that EnWin Powerlines make an application to the OEB for the creation of customer classes that would enable EnWin Powerlines to recover the costs associated with the assets serving these customers directly from them.

The treatment of these classes in the Applicant's 2006 EDR Application is consistent with that Decision. These customers will experience a distribution rate decrease in 2006.

The Applicant is filing as part of the Settlement Proposal Supporting Materials further information that provides additional explanation with respect to the creation of these customer classes and the rationale for maintaining the treatment of these customers in accordance with the 2004 Decision. This material is provided at Tabs 2 and 3 of the Settlement Proposal Supporting Materials.

**Evidence:** The following evidence supports this settlement:

# Settlement Proposal Supporting Materials:

Tabs 2 and 3

# 2.4 CAPITAL STRUCTURE AND COSTS

- 2.4.1 Is EnWin's use of short-term debt in place of long-term debt appropriate, or does it create unjustified additional risk?
- 2.4.2 Should the cost of the \$45.2 million of short-term debt in EnWin's capital structure be incorporated into its deemed debt cost calculation?
- 2.4.3 Does the significant differential between EnWin's deemed debt rate of 55% and its actual debt rate of 66% pose an unacceptable financial risk to the utility and its customers?

**Settlement:** There is a complete settlement of Issues 2.4.1, 2.4.2 and 2.4.3 on the following basis:

- 1. The Applicant shall revise its EDR Application and use the following debt rates; long-term debt at 6.35% and short-term debt at 5.25% based on the Applicant's current capitalization.
- 2. The Applicant will be converting an appropriate amount of short term debt to long term financing. The Applicant is targeting August 2006 for this change to occur and will advise the Board and Intervenors when it is completed. The agreed upon rate of 5.25% to be applied to the short-term debt component reflects this expectation.
- 3. The Applicant undertakes to provide to the Board and the Intervenors information evidencing the new debt rates once those new rates are established.
- 4. The Applicant confirms that it will re-establish the debt/equity ratio as prescribed in the Handbook. The Applicant shall advise the Board when it has done so.

**Rationale:** The Intervenors raised the issue of the Applicant's variance from the debt/equity ratio prescribed in the Handbook.

RP-2005-0020 EB-2005-0359

Page 14 of 19

The Intervenors also were of the view that the calculation of the Applicant's weighted average debt rate, the calculation of which is set out in Schedule 5-2 to the Rate Application, should incorporate the Applicant's short-term debt in addition to the long term debt currently used in the calculation. The Parties agreed that the rate to be used for the short term debt will be 5.25%. The Applicant has provided evidence contained in the Settlement Proposal Supporting Materials that confirms that the Applicant is in the process of addressing the above-stated financing and structuring issues. In reaching this Settlement Proposal certain commitments as stated above have been made by the Applicant in this regard.

**Evidence:** The following evidence supports this settlement:

2006 EDR Application:

Exhibit B, Tab 5, page 1 Schedule 5-2

Answers to 2006 EDR Interrogatories:

Board Staff Interrogatory 19, Tab 1, page 28.

Settlement Proposal Supporting Materials:

Tab 1

#### 2.5. PILs

2.5.1 Is the 58% increase in the PILs recovery being claimed by EnWin over actual 2004 levels reasonable and justifiable?

**Settlement:** There is a complete settlement of Issue 2.5.1 on the following basis:

The Applicant will re-run its PILs and EDR Models so as to apply available loss carryforwards against its 2006 income tax PILs liability. The effect will be a decrease in the Applicant's 2006 PILs liability of 22% under actual 2004 levels. For the entire application, including 3TS and the Ford Annex, only Large Corporation Tax and Ontario Capital Tax PILs will be recovered in 2006 rates.

RP-2005-0020 EB-2005-0359

Page 15 of 19

# Rationale:

In calculating its 2006 PILs liability in the PILs Model filed with the Application and in updates prior to the Settlement Conference, the Applicant used available loss carryforwards to fully offset its 2005 income tax PILs liability. The Applicant then used available Capital Cost Allowance ("CCA") to offset PILs liability for 2006, but the available CCA was not sufficient to fully offset that 2006 PILs liability.

Intervenors and Board Staff expressed concern with the large increase in PILs for the test year. In discussion with Intervenors and upon review with KPMG, the Applicant's tax experts, the Applicant has agreed that applying full CCA credits to its PILs liability for 2005 will allow loss-carry-forwards to be saved and applied to the 2006 PILs liability, thereby completely offsetting PILs for 2006. The Applicant notes that this will leave approximately \$1,000,000 in loss carryforwards available for the subsequent rate year, although this estimate is subject to change when the revisions to the PILs Model are finalized. This calculation will be shown at Sheet 7-1 of the Applicant's updated PILs Model, which will be filed together with its revised Rate Model. The Applicant anticipates that its 2007 PILs liability may be in the range of \$3 - \$4 million, and will address this matter in its 2007 distribution rate application.

**Evidence:** The following evidence supports this settlement:

2006 EDR Application:

Tab 7, Schedules 7-1, 7-2 and 7-3, Tab E Revised PILs Model filed February 7, 2006

Answers to EDR Interrogatories:

Board Staff Interrogatories 46-57, pages 58-70.

Settlement Proposal Supporting Materials:

Tabs 5, 7, 8, 9

RP-2005-0020 EB-2005-0359

Page 16 of 19

# 2.6 RETAIL TRANSMISSION RATES

# 2.6.1 Are the proposed changes to retail transmission rates reasonable and justifiable?

**Settlement:** There is a complete settlement of Issue 2.6.1 on the following basis:

It is agreed that the Applicant may separate its overall Retail Transmission Service Charge for "Connection" into separate Line Connection and Transformation components in the portions of the Applicant's Schedule of Rates and Charges pertaining to the 3TS Class, the Ford Annex Class, and the "Large User-Remaining" Class.

The proposed charges as indicated in the EDR Application shall stand.

Rationale: The Applicant has proposed to (a) separate out the two components of the proposed Retail Transmission "Connection" Charge (i.e. Line Connection and Transformation Connection) for members of its "Large Use-Remaining" class (the total Connection-related RTS Rate would remain the requested \$1.9485/kW); and (b) limit the "Connection"-related charge in the transmission charges applicable to the "Large Use-3TS" and "Large Use-Ford Annex" classes, to the value of the line connection component of the overall "Connection" charge.

One of the members of the Applicant's "Large Use-Remaining" class owns its own transformer station. As a result, at the transmission connection point serving that customer, the Applicant is charged only for network and line connection services, and not for transformation connection services. Because the Applicant does not pay for transformation service at this connection point, it is not appropriate for the Applicant to impose a transformation-related retail transmission service charge on this customer. To date, the Applicant has addressed this situation by charging this customer only the line connection portion of the overall connection charge. As part of its EDR Application, the Applicant wishes to formalize this arrangement by breaking the overall charge for retail transmission connection services down into line connection and transformation connection components for the Large Use-

RP-2005-0020 EB-2005-0359

Page 17 of 19

Remaining Class in the Applicant's schedule of rates and charges that will be approved and issued by the Board.

With respect to the 3TS and Ford Annex customers, unlike the "Large Use-Remaining" customer referred to above, the customers in these two classes do not own their own transformer stations. Instead, they are served from transformer stations owned by the Applicant. However, similar to the "Large Use-Remaining" customer, the Applicant is charged only for network and line connection services at the transmission connection points serving these customers, and not for transformation connection services. Again, because the Applicant does not pay for transformation service at these connection points, it is not appropriate for the Applicant to impose a transformation-related retail transmission service charge on these customers.

As with the "Large Use-Remaining" customer, to date, the Applicant has addressed this situation by charging these customers only the line connection portion of the overall connection charge. As part of its EDR Application, the Applicant wishes to formalize this arrangement by ensuring that only the line connection portion of the overall "Connection" charge is payable by these customers. This will be accomplished by limiting the connection-related rate to the line connection value. To ensure that the basis for this rate is clear, the reference to the "Connection" charge for these two classes should instead be a reference to a "Line Connection" charge. Unlike the case of the Large Use-Remaining class, it will not be necessary to establish a Transformation Connection rate, as no members of these classes are served by transformation assets in respect of which Transformation Connection-related transmission charges would be eligible.

The division of the "Connection"-related charge for these classes into line connection and transformation connection components, and the collection of only the line connection charge in the circumstances set out above, is consistent with the Board's desire (expressed at Section 12.3.2 of the Handbook) to maintain existing RTS rates for 2006.

Answers to 2006 EDR Interrogatories:

Board Staff Interrogatory 45, Tab 1, page 56.

# 2.7 SPECIFIC SERVICE CHARGES

# 2.7.1 Are the proposed specific service charges appropriate?

**Settlement:** There is a complete settlement of Issue 2.7.1 on the following basis:

The Applicant shall modify its EDR Application to charge the specific charges as proposed in the Handbook with the exception of one charge. The "Disconnect/Reconnect at the meter – after regular hours charge" shall be charged at the amended rate of \$65.00 as proposed by the Applicant.

Rationale: The Intervenors take the position that in the interests of consistency across LDCs, specific service charges should be in accordance with the charges listed in the Handbook except where special circumstances warrant otherwise. In the case of this Disconnect/Reconnect charge delineated above, the Applicant has based its proposed charge on the actual costs to perform the service. These costs are lower than the amount proposed in the Handbook and therefore the amended change proposed by the Applicant should be used.

**Evidence:** The following evidence supports this settlement:

2006 EDR Application

Schedule 11-1

Settlement Proposal Filed: February 15, 2006

RP-2005-0020 EB-2005-0359

Page 19 of 19

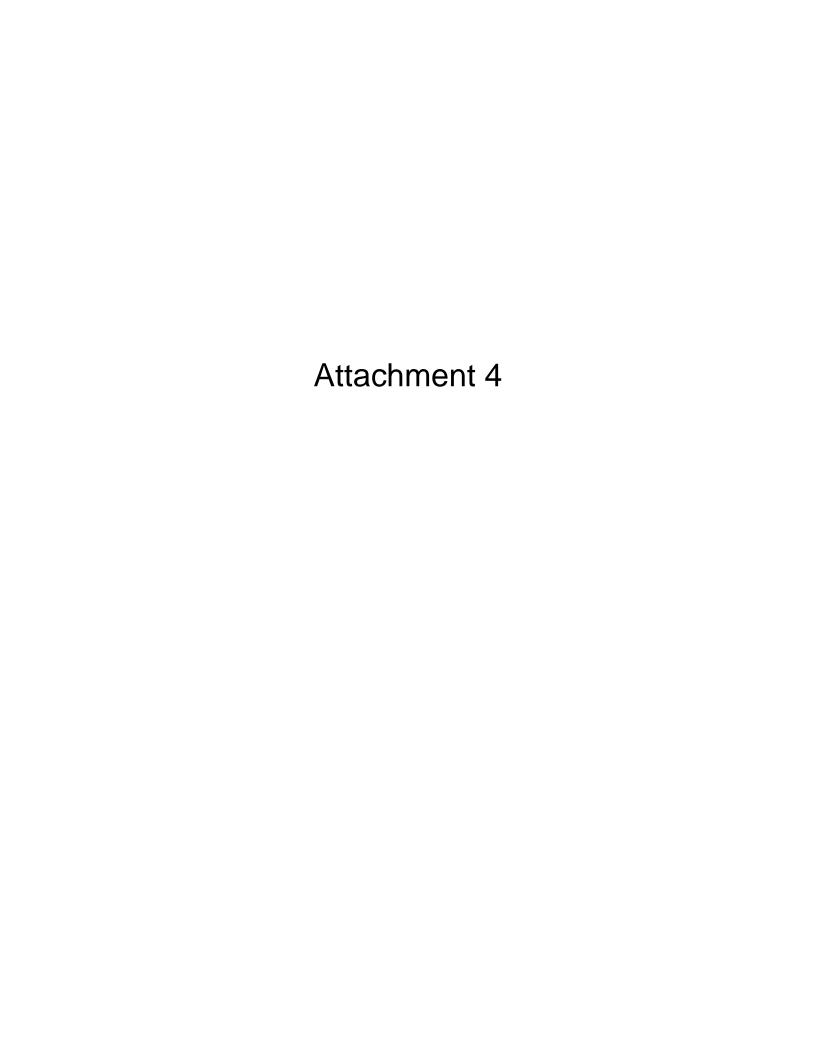

## 2.8 REGULATORY COST VARIANCE ACCOUNT

The Parties have agreed that this Issue shall not be dealt with as part of the Applications. The establishment of the regulatory cost variance account is before the Board as part of the Generic hearing (RP-2005-0020/EB-2005-0529) and to deal with this Issue now as part of the Applications, would be premature. The Parties will determine whether this Issue needs to be further addressed subsequent to the Board's decision in the Generic hearing.

## 2.9 REVISED RATE SCHEDULE

As a result of the Settlement Proposal, changes will be need to be made to the PILs and Rate Models and accordingly a Revised Rate Schedule will need to be prepared. While the changes effected by the Settlement Proposal will effect a downward trend on rates, the new rates will not be available until the PILs and Rate Models are re-run. It is anticipated this will be completed by mid-week the week of February 20, 2006. We will provide the Board with a revised Rate Schedule as soon as it is available.
