Ms. Kirsten Walli Board Secretary Ontario Energy Board P.O. Box 2319 2300 Yonge Street, 27th Floor Toronto, ON M4P 1E4

Dear Ms. Walli:

Re: 2010 Electricity Distribution Rate Application - Veridian Connections Inc.

**Revised Draft Accounting Order** 

Further to the Board's Rate Order dated May 10<sup>th</sup> 2010, Veridian is pleased to file the enclosed draft Accounting Order relating to a test year capital expenditure.

Veridian hereby seeks the Board's approval of this version of the Accounting Order.

Yours truly,

# Draft Accounting Order - Test Year Capital Expenditure Variance Account

### Request for Establishment of a Variance Account

Veridian requests Board approval for the establishment of a variance account related to the Test Year Capital expenditure known as the Ajax Building Expansion Project (the "Project"). Establishment of the variance account was agreed upon during settlement and is referenced on page 6 of the Draft Rate Order. In particular Veridian seeks approval to establish the following variance account

Revenue Requirement Variance Account – Ajax Building Expansion Project – Account number to be established by the Board.

Details of the purpose of the variance account and example entries and descriptions of the manner in which this account would be used are provided here.

As outlined on page 6 of the Draft Rate Order, "a variance account will be established to be in effect for the Test Year and the subsequent IRM period until Veridian's next cost of service rebasing period. The purpose of the variance account will be to track the revenue requirement impacts in the test year and subsequent IRM period. This variance account was agreed upon in light of concern of the intervenors that the required capital spending may be less than the forecast, or that the in-service date will not be in 2010."

### Purpose and General Mechanics of the Variance Account

The following description of the mechanics of the variance account is as set out in the Settlement Proposal on pages 11 and 12:

The purpose of the variance account will be to track the revenue requirement impacts in the test year and subsequent IRM period resulting from Veridian's capital investment and associated OM&A costs for its proposed Ajax Building Expansion Project. The total capital expenditures related to that project in the Test Year have been forecast at \$6,000,000 and a reduction in normalized OM&A costs of \$163,151. The "asfiled" accounting impact of the Project, both OM&A and capital (including amortization and return on capital) forms the baseline for variances for the years 2010 through 2013 or the end of the IRM period. The baseline includes the expected accounting entries related to the Project for each of those years, including the initial test year under cost of service, and the subsequent three years where rates are expected to be set under the IRM formula. Actuals will then be compared to that baseline, and entries to the variance account will reflect the difference between actuals and baseline each year.

The variance account will capture the following:

- a) Asymmetric revenue requirement variances resulting if the actual capital costs are less than forecast capital costs. The reduction in revenue requirement would be credited to the variance account for future distribution to ratepayers.
- b) The decrease in revenue requirement for the Test Year, and the change (increase or decrease) in revenue requirement for each of the subsequent IRM years, due to a change of in-service date of the Ajax Building Expansion Project from 2010 or beyond. The annual increase or decrease in revenue requirement would be recorded in the variance account. The cumulative balance would be distributed to ratepayers in the future.

#### <u>Illustration of Proposed Accounting Entries</u>

An appendix was included in the Settlement Agreement which outlined numerical examples showing the hypothetical calculation of the variance account in different scenarios. The Appendix set out four scenarios.

Scenario 1 is the agreed baseline, i.e. the amounts that are assumed to be the accounting costs and savings each year for the Project on an "as-filed" basis. Accounting variations from this baseline are to be captured through entries to the variance account.

Scenario 2 illustrates the same calculation for each year, but with a lower total cost of the Project in 2010, and identifies the variance account entries that would reflect that lower cost in that scenario.

Scenario 3 illustrates the variance account entries if the Project does not come into service until March 31, 2011 (used as a hypothetical date beyond the 2010 Test Year). In that scenario, the capital costs are delayed, so amortization and return on capital are lower in years 2010 and 2011, but the OM&A savings are also delayed, increasing OM&A in 2011 to partially offset the delay in the capital cost.

Similar 4 is similar to Scenario 3, but with a lower total cost of the Project as well.

Detailed accounting entries for the variance scenarios listed above follow. These were originally filed as Appendix "L" to the Settlement Agreement. In the Settlement Agreement, all parties agreed that Appendix "L" correctly described the operation of the variance account in the specific examples and agreed that the actual entries in the variance account should be consistent with the rules underlying those calculations.
