Ms. Kirsten Walli Board Secretary Ontario Energy Board PO Box 2319 2300 Yonge Street, Suite 2700 Toronto, ON M4P 1E4

Dear Ms. Walli:

Re: EB-2010-0008 – Ontario Power Generation Inc. Payment Amounts for Prescribed Facilities

This letter addresses confidential information in the Technical Conference Undertakings in EB-2010-0008. Certain undertakings and the associated responses include information that the OEB has ordered to be treated as confidential information pursuant to Procedural Orders No. 3 and No. 6. One undertaking response includes information for which OPG is requesting confidential treatment.

Undertakings related to documents with confidential status

The following Undertakings include information that the OEB has determined will receive confidential treatment:

- JT1.5
- JT1.13
- JTX1.1
- JTX1.2

With the exception of JTX1.2, OPG has filed redacted versions for the public record and provided the full responses to only those persons who have signed the Declaration and Undertaking. In the case of JTX1.2, the entire response is confidential and OPG has provided the response to only those persons who have signed the Declaration and Undertaking.

Request for confidential treatment of JT1.7 Part 1 of 3

In accordance with Rule 10 of the Ontario Energy Board's (OEB) *Rules of Practice and Procedure* and section 5.3 of the Board's *Practice Direction on Confidential Filings* (the Practice Direction), Ontario Power Generation Inc. (OPG) requests the confidential treatment of certain of its information provided in Undertaking JT1.7 Part 1 of 3 from the Technical Conference held August 26, 2010. In accordance with section 5 of the

Ms. Kirsten Walli September 13, 2010 Page 2

Practice Direction, the reasons for this confidentiality request, including the reasons why OPG considers parts of the response to JT1.7 Part 1 of 3 as confidential and the reasons why public disclosure of the information would be detrimental to OPG, are set out below. In addition, confidential, un-redacted documents fulfilling the Undertaking are provided as attachments.

In accordance with the Practice Direction, this letter is being provided to the OEB along with the attachments identified below. The information for which confidentiality is being requested, which is included at Attachments A.1 and A.2, is to remain confidential at least until the OEB makes its determination on this request. A copy of this letter, including all attachments other than the confidential information, is being provided to each party to the proceeding.

As an interim measure and in the interests of efficiency, prior to the OEB making its final determination, OPG has provided the confidential information to all persons that have filed a Declaration and Undertaking in the form referenced in Procedural Order No. 1.

On a final determination, should the OEB grant OPG's request for confidentiality, OPG proposes that the OEB order that the confidential information be disclosed, subject to any conditions the OEB may find appropriate, to only those persons that have signed the Declaration and Undertaking.

OPG requests that any reference to confidential information contained in the documents produced be conducted *in camera* so as to preserve its confidential nature.

At the conclusion of the proceeding or in the event that the confidentiality request is refused and OPG requests that the information be withdrawn in accordance with 5.1.12 of the Practice Direction, all persons in possession of the information will be required to destroy or return to the OEB Secretary for destruction the confidential information in accordance with 6.1.6 of the Practice Direction.

Reasons for the Request for Confidential Treatment

JT1.7 Part 1 of 3 is a response to AMPCO technical conference question #3. This question requests production of "the business case, the document upon which the budget overrun was approved, and any follow-up analysis performed related to the lessons learned" in relation to the Cafeteria Modifications Project referenced in Ex. L-02-013. By undertaking JT1.7 Part 1 of 3, OPG agreed to produce documents responding to AMPCO's request. OPG is producing the Full Release Business Case Summary on the public record. However, OPG requests confidential treatment of the redactions in the two Superseding Business Case Summaries (JT1.7 Part 1 of 3 Attachments 2 and 3, respectively) related to this project and confidential treatment of the Post Implementation Review (PIR) (JT1.7 Part 1 of 3 Attachment 4) in its entirety. The *confidential* two Superseding Business Case Summaries without redactions are provided at **Attachment A.1** and the *confidential* PIR is provided at **Attachment A.2**.

A non-confidential version of the two Superseding Business Case Summaries, with redactions, is provided at **Attachment A.3**.

Ms. Kirsten Walli September 13, 2010 Page 3

The redactions in the first Superseding Business Case Summary consist of factors applied to develop budget estimates. OPG consistently treats this information as confidential and disclosure of it could prejudice OPG's competitive and negotiating positions. Confidential treatment of this type of information is specifically contemplated by the provisions of Appendix B to the Practice Directions. The redactions in the second Superseding Business Case Summary relate to contractor performance. Issues associated with disclosure of information related to contractor performance and the reasons for seeking confidential treatment are considered in the paragraph below.

The PIR provides details of the most significant issues that impacted the achievement of project milestones and budget. As OPG wished to learn from the challenges experienced with this project, a comprehensive PIR was conducted which includes unfavourable performance reviews of the various persons or entities involved in the project. Disclosure of this information could result in potential harm to those persons with respect to their competitive positions, their abilities to fulfill existing contractual obligations, and could affect any negotiations they are engaged in or would likely produce a significant loss to them. Given that the identity of the persons involved in the project was not confidential at the outset, mere redactions of the names of the persons throughout the PIR would not protect their identities. OPG consistently treats the type of information in the PIR as confidential. Confidential treatment of this type of information is specifically contemplated by Appendix B, subsections (a) i, ii and iv and (b) of the Practice Direction.

A non-confidential description of the PIR is as follows:

The Post Implementation Review (PIR) sets out the origin of the project, a summary of the project approval, planning design and scope, a summary of the project execution, a summary of the project outcomes, a summary of lessons learned and the conclusions of the PIR.

Respectfully submitted,

[Original Signed By]

Barbara Reuber Director, Ontario Regulatory Affairs Ontario Power Generation

The objective of this sustaining project is to refurbish the existing Cafeteria in order to:

- Address sub-standard health & safety conditions of Cafeteria facilities and kitchen equipment
- Improve functionality and aesthetics of Kitchen/Server by remodelling of floors, walls, & fixtures
- Upgrade existing HVAC, mechanical & electrical systems associated with Cafeteria modifications
- Improve public image, employee & visitor satisfaction

BUSINESS CASE SUMMARY TEMPLEAR 1 of 3

EB-2010-0008 Attachment 2 (NON-CONFIDENTIAL)

BACKGROUND & ISSUES

There have not been any significant improvements made to the cafeteria equipment or aesthetics since the last addition 20 years ago except replacement of some kitchen equipment in 2003. The food service equipment is obsolete, defective, and poses a safety concern (a fire in 2003 has been attributed to old equipment). Cafeteria requires modernization and updating in order to meet the needs of the kitchen staff and customer. In addition, the cafeteria is the focal point as you enter the Administration Building. It needs updating to provide a positive message to visitors entering the building.

The refurbishments include bringing the Kitchen and Server area up to current standards, updating the loading and receiving area, modify exiting washrooms and basement rooms to accommodate the cafeteria upgrade, and upgrading the Kitchen/Server area floors, walls and fixtures to ensure a healthy and aesthetically pleasing cafeteria.

An initial release of \$ 365 k Capital in 2005 covered the development of detailed design of Cafeteria refurbishment, equipment purchases and some modifications for the temporary food service facilities. The second release of \$ 1,157 k Capital and \$ 120 k MFA was approved in 2006 to fund the detailed design for discovery work to upgrade mechanical/electrical systems associated with the Cafeteria, install temporary equipment and food service facilities, upgrade power supply to electrical services serving the new kitchen equipment, and purchase new kitchen equipment.

A full release of 5,215 k Capital and \$ 385 k MFA was approved in Jan 2007 to fund the construction costs of Cafeteria refurbishment, installation of temporary food service facilities, new HVAC system, upgrade all mechanical and electrical systems associated with the refurbishment, and complete the project.

Denisat

EB-2010-0008

Attachment 2 (NON-CONFIDENTIAL)

Base Case: (Status Quo) - Not Recommended

Do nothing. There will be no improvements to the Pickering Cafeteria; this will continue to impact on safety and public image. There will be no upgrades to meet current standards, and to ensure a healthy and aesthetically pleasing cafeteria. It is anticipated that continued deterioration of food service equipment will result in shutdown of Cafeteria.

We do not recommend this alternative as this will not address the business objectives of this project.

Alternative 1: (Implement Modifications) - Recommended Alternative

NPV = - \$5,867 k

The improvements to the Pickering Nuclear Cafeteria refurbishment will proceed as per approved Business Plan and Project Charter P-PCH-28160-00002 R01.

These improvements will have intrinsic value for the Pickering nuclear station and also a positive impact on visitors to the station.

Current full releases of \$ 5,215 k covered the complete refurbishment of Cafeteria kitchen, server, loading and receiving areas, upgrading of HVAC, mechanical, electrical systems serving the new kitchen equipment, and modification of washrooms on the first floor of Administration Building.

This release of \$1,600 k will cover the completion of independent kitchen/server HVAC system, high cost variance of HVAC installation, additional cost of discovery work and scope changes for Cafeteria project including HVAC system during demolition and installation phases.

We recommend satisfying the Business Objectives of this project by completing the installation of Cafeteria modifications outlined in the proposal section.

Alternative 2: (Delay work) - Not Recommended

Delaying the investment is not considered as a feasible alternative since it is anticipated that continued deterioration of equipment will result in shutdown of cafeteria food services.

5. THE PROPOSAL

The Cafeteria is to be refurbished to upgrade the Kitchen, Server and loading and receiving area up to current standards, modify existing washrooms and basement rooms to accommodate the Cafeteria upgrade, and replace walls, floors, and fixtures to ensure a healthy and pleasing facility.

To support this project and maintain food services during Cafeteria refurbishment. Temporary Facilities will be set up on site.

The existing electrical, HVAC, grease interceptors and drainage systems were found deficient, obsolete and unable to handle the current or future upgrades. The full release covers the costs of Cafeteria refurbishment, installation of Temporary Food Service Facilities, new HVAC system, and upgrade of all mechanical and electrical systems associated with the refurbishment. This superseding release will cover

Attachment 2 (NON-CONFIDENTIAL)

the additional installation cost of HVAC system, extensive discovery work and scope changes due to interferences, configuration management errors, higher labour rates, and project contingency.

The project will be executed as an Owner-Constructor Contract.

Deliverables/refurbishments completed in 2005:

- Develop project scope.
- Detailed design of selected layout option and design documents.
- Detailed design of Temporary Food Service Facilities
- Equipment purchases for Temporary Facilities

Deliverables/refurbishments completed in 2006:

- Detailed Design for the Discovery Work to upgrade mechanical/electrical systems in the Administration Building
- Final design and design documents
- Installation of temporary food service facilities including:
 - Retrofit training trailer to accommodate hot food services and extra seating
 - Installation of mobile kitchen & food prep trailers
 - Installation of cold food server area in the main building
- Prepare tendering package for upgrade installation and award construction contract
- Upgrade power supply to electrical services serving the new kitchen equipment
- Install covered walkway between Administration Building and renovated trailer
- Close main Cafeteria and move operation to Temporary Facilities

Deliverables/refurbishments to complete in 2007:

- Install Cafeteria Kitchen/Server/loading and receiving refurbishment
- Install independent kitchen/server HVAC system
- Install additional work due to Scope changes and discovery work
- Upgrade mechanical/electrical systems for new Cafeteria
- Modify existing washrooms and basement rooms to accommodate Cafeteria upgrade
- Removal of Temporary Food Services Facilities

Milestones:

- Project Charter: August 2006
- Detailed Design Phase Complete: September 2006
- Temporary Food Service Facilities Complete: October 2006
- Close main Cafeteria: December 2006
- Cafeteria Construction Complete: September 2007
- Washrooms modifications Complete: September 2007
- Project Complete: December 2007

The objective of this sustaining project is to refurbish the existing Cafeteria in order to:

- Address sub-standard health & safety conditions of Cafeteria facilities and kitchen equipment
- Improve functionality and aesthetics of Kitchen/Server by remodelling of floors, walls, & fixtures
- Upgrade existing HVAC, mechanical & electrical systems associated with Cafeteria modifications
- Improve public image, employee & visitor satisfaction

BUSINESS CASE SUMMARY TEMPLATE

BACKGROUND & ISSUES

There have not been any significant improvements made to the cafeteria equipment or aesthetics since the last addition 20 years ago except replacement of some kitchen equipment in 2003. The food service equipment is obsolete, defective, and poses a safety concern (a fire in 2003 has been attributed to old equipment). Cafeteria requires modernization and updating in order to meet the needs of the kitchen staff and customer. In addition, the cafeteria is the focal point as you enter the Administration Building. It needs updating to provide a positive message to visitors entering the building.

The refurbishments include bringing the Kitchen and Server area up to current standards, updating the loading and receiving area, modify exiting washrooms and basement rooms to accommodate the cafeteria upgrade, and upgrading the Kitchen/Server area floors, walls and fixtures to ensure a healthy and aesthetically pleasing cafeteria.

A full release of 5,215 k Capital and \$ 385 k MFA was approved in Jan 2007 to fund the construction costs of Cafeteria refurbishment, installation of temporary food service facilities, new HVAC system, upgrade all mechanical and electrical systems associated with the refurbishment, and complete the project.

Project construction costs included in the full release were based on tendered price for Cafeteria kitchen/servery, budgetary estimates for HVAC package. HVAC design package was not completed, and not included in the tendered Scope of Work for Cafeteria. During the demolition phase of Cafeteria, HVAC design package was tendered and the actual HVAC installation cost provided by Cafeteria's Constructor with a good knowledge of demolitions issues, and scope changes was 3 times higher than the budgetary estimates. The cost variance of HVAC package was \$ 1,200 k. The superseding release of \$6,815 k and \$ 385 k MFA was approved in April 2007.

During the installation phase of Cafeteria and the HVAC, mechanical and electrical systems, additional scope of work and scope changes were discovered due to interferences with new equipment, actual site conditions, building code violations, and lack of updated drawings from previous renovations.

Additional factors that coupled with the estimates have contributed to exceeding the budget: higher overhead charges, EPSCA and training costs, EPSCA rates increase, and cost of additional engineering and station support resources.

This new superseding release will cover the completion of installation and commissioning of the Cafeteria equipment, HVAC system, mechanical and electrical system, modifications of existing washrooms on first floor, resolution of open items, and the closing the EC engineering packages.

The total cost variance of this superseding release is \$ 1,800 k with a required cash flow of \$ 1,400 k in 2007 and \$ 400 k in 2008.

BUSINESS CASE SUMMARY TEMPLATE

ALTERNATIVES & ECONOMIC ANALYSIS

Base Case: (Status Quo) - Not Recommended

Do nothing.

Cafeteria and HVAC system installations are near completion and commissioning plans are in place to start in November. The Cafeteria upgrades will not be completed, the facility will be shut down permanently, and food services will be discontinued.

The objective of this project to improve the existing facility and ensure a healthy ,safe, modern and aesthetically pleasing Cafeteria for Pickering staff and visitors.

We do not recommend this alternative as this will not address the business objectives of this project.

Alternative 1: (Implement Modifications) - Recommended Alternative

NPV = - \$ 7.342 k

The improvements to the Pickering Nuclear Cafeteria refurbishment will proceed as per approved Business Plan and Project Charter P-PCH-28160-00002 R01.

These improvements will have intrinsic value for the Pickering nuclear station and also a positive impact on staff and visitors to the station.

Current superseding releases of \$ 6,815 k covered the complete refurbishment of Cafeteria kitchen, server, loading and receiving areas, upgrading of HVAC, mechanical, electrical systems serving the new kitchen equipment, and modification of washrooms on the first floor of Administration Building.

This new release of \$ 1,800 k will cover the additional funding required to complete the installation, commissioning of systems and equipment, additional cost of discovery work, scope changes during installation of Cafeteria, HVAC system and washrooms modification. This release includes the allowance for resolution of open items to project close-out in May 2008, and performance of chilled water loop commissioning in spring of 2008. Existing system has been already winterized.

We recommend satisfying the Business Objectives of this project by completing the installation of Cafeteria modifications outlined in the proposal section.

Alternative 2: (Delay work) - Not Recommended

Delaying the investment is not considered as a feasible alternative.

Delays will result in higher expenditure of OM&A funds (Project 13-40514) for extension of rental and operation of the Temporary Mobile Kitchen Trailers through another winter. Also the covered walkway between the Administration Building and renovated seating trailer would be re-installed

THE PROPOSAL

The Cafeteria is to be refurbished to upgrade the Kitchen, Server and loading and receiving area up to current standards, modify existing washrooms and basement rooms to accommodate the Cafeteria upgrade. and replace walls, floors, and fixtures to ensure a healthy and pleasing facility.

To support this project and maintain food services during Cafeteria refurbishment, Temporary Facilities were set up on site

Revision: R04 ** Page: 4 of 10

BUSINESS CASE SUMMARY TEMPLATE

The existing electrical, HVAC, grease interceptors and drainage systems were found deficient, obsolete and unable to handle the current or future upgrades. The full release covered the costs of Cafeteria refurbishment, installation of Temporary Food Service Facilities, new HVAC system, and upgrade of all mechanical and electrical systems associated with the refurbishment. This first superseding release covered the additional installation cost of HVAC system, extensive discovery work and scope changes due to interferences, configuration management errors, higher labour rates, and project contingency.

The new superseding release is required for the completion of installation, commissioning, and resolution of the open items to project close-out in May 2008.

The project will be executed as an Owner-Constructor Contract. Construction contract is set as a MSA "Target Price" contract.

Deliverables/refurbishments completed in 2005:

- Develop project scope.
- Detailed design of selected layout option and design documents.
- Detailed design of Temporary Food Service Facilities
- Equipment purchases for Temporary Facilities

Deliverables/refurbishments completed in 2006:

- Detailed Design for the Discovery Work to upgrade mechanical/electrical systems in the Administration Building
- Final design and design documents
- Installation of temporary food service facilities including:
 - o Retrofit training trailer to accommodate hot food services and extra seating
 - Installation of mobile kitchen & food prep trailers
 - Installation of cold food server area in the main building
- Prepare tendering package for upgrade installation and award construction contract
- Upgrade power supply to electrical services serving the new kitchen equipment
- Install covered walkway between Administration Building and renovated trailer
- Close main Cafeteria and move operation to Temporary Facilities

Deliverables/refurbishments to complete in 2007.

- Install Cafeteria Kitchen/Server/loading and receiving refurbishment
- Install independent kitchen/server HVAC system
- Install additional work due to Scope changes and discovery work
- Upgrade mechanical/electrical systems for new Cafeteria

Printed on 07/11/02. This template may have been revised since it was printed. Approved current version posted on the intranet Associated with FIN PROC-PA-001 Business Case Summary Guidelines

Page: 5 of 10

BUSINESS CASE SUMMARY TEMPLATE

- Modify existing washrooms and basement rooms to accommodate Cafeteria upgrade
- Removal of Temporary Food Services Facilities

Deliverables/refurbishments to complete in 2008:

- Commissioning of chilled water loop for HVAC in spring
- Resolve open items
- Project documentation & EC 's close-out

Milestones:

Project Charter: August 2006

Detailed Design Phase Complete: September 2006

Temporary Food Service Facilities Complete: October 2006

Close main Cafeteria: December 2006

Cafeteria In-Service: November 2007

Washrooms modifications Complete: December 2007

Project Complete: December 2007

Project Close-out May 2008

Note: Cafeteria In-service is contingent on the availability of fire water supply from the station to Cafeteria sprinklers system

QUALITATIVE FACTORS

Implementation will result in visible improvements and help to sustain a healthy and aesthetically pleasing cafeteria at the Pickering Nuclear station; this in turn will result in positive public image; there are no Sustainable Energy Development impacts.

7. RISKS

The Risk Management Table identifying the Risks, Consequences, Mitigating Activity and residual risk is attached in Appendix A.

8. POST IMPLEMENTATION REVIEW (PIR) PLAN

The Post Implementation Review (PIR) plan will be prepared by the Project Leader, reviewed by project Manager/Owner and approved by the Project Sponsor.

APPENDIX C:

Financial Model - Assumptions

Project Cost Assumptions:

- 1. The cost of the project was calculated assuming that project will be completed by December. 2007. Changes in the schedule, scope and, the availability of resources would likely increase the cost of the project.
- 2. Project Cost includes the interest of 3% and contingency of 3.5% for the cost variance.

Financial Assumptions:

- 1. Only the recommended alternative was analysed. The other alternatives (Status Quo and Delay Work) are not viable alternatives and were not analysed.
- 2. Project Type -Sustaining
- 3. Capital Expenditure Type: Class 1- Buildings& other structures

Printed on 07/11/02. This template may have been revised since it was printed. Approved current version posted on the Intranet
