Undertaking

UNDER HIGH 5 METHODOLOGY, TO PROVIDE NUMBER OF CUSTOMERS WHO WOULD HAVE A ZERO BILLING DETERMINANT FOR TRANSMISSION, TAKING INTO ACCOUNT ALL OF THEIR DELIVERY POINTS

Response

Based on the 2011 forecast load used in the response to interrogatory Exhibit I, Tab 4, Schedule 63 part b), there are 7 customers who would have a zero charge determinant at all their delivery points under the High 5 methodology. All 7 of these customers are power producers.

The 2011 forecast load does not account for any customer load shifting in response to the adoption of the High 5 methodology, in which case more customers could potentially have a zero charge determinant.
