## UNDERTAKING J4.7

## Undertaking

To provide appropriate conversion multiplier from kilograms to pounds of uranium, or provide numbers in chart 2 converted into pounds.

## Response

The conversion factor is approximately 2.6. It is slightly different than the standard pounds to kilogram conversion because OPG is converting the weight of U3O8 in pounds, which includes the weight of the oxygen and uranium, to kilograms of uranium, i.e., just uranium.

Please see chart 2 below converted into pounds.
Chart 2 in pounds U3O8
