To Whom It May Concern,

As a new business in the Municipality of Red Lake we fully support the distribution of Union Gas in our community. Red Lake has had a defined need for natural gas for a long period. We are a community that relies on oil, propane and electricity for all our heating requirements. As a Red Lake business owner this puts us at a distinct financial disadvantage. Not only are these heating methods expensive compared to natural gas they add to our operating expenses and affect our ability to be competitive on a provincial, national and international scale.

The Two Feathers Forest Products LP project will have significant kiln drying and space heating requirements and an option to utilize natural gas will enhance our business going forward.

Sincerely,

Terry Favelle, President
