Dear Sir,

ONTARIO ENERGY ED

Don't allow an out of province company to destroy 9KM of Land with transmission towers and lines. This project should be condensed and built beside the existing lines and not spread over 22,000 acres. North of this line we just built a \$116 million line from Niagara Falls NY to Laledonia and on to Middleport. According to Energy Minister Brad Duguid it will bring coal fired U.S. hydro to cover for these windmills and closing of Nanticoke.

Can the existing grid handle this new unreliable power?

Derek Paterson
