Ontario Energy Board

IN THE MATTER OF the *Ontario Energy Board Act, 1998*, S.O. 1998, c. 15, (Schedule B);

AND IN THE MATTER OF an application by Horizon Utilities Corporation for an order approving just and reasonable rates and other charges for electricity distribution to be effective January 1, 2011.

ENERGY PROBE RESEARCH FOUNDATION ("ENERGY PROBE") CROSS-EXAMINATION COMPENDIUM

- 2 2. CAROE reduces net income for any regulatory recoveries that relate to prior years.
- 3 Specifically, with respect to 2008 and 2009, net income has been adjusted to reflect
- regulatory recoveries for OMERS and LRAM/SSM adjustments that relate to prior
- fiscal years (i.e. OMERS adjustment in 2008 related to fiscal years 2005 and 2006;
- 6 LRAM/SSM adjustments in 2008 related to fiscal years 2005 and 2006; and
- 7 LRAM/SSM adjustment in 2009 related to fiscal years 2007 and 2008);
- 8 3. The Equity base in the calculation is determined by computing an estimate of rate
- basis for the related calendar year, based on Board rate-making principles, and
- applying the deemed capital structure (i.e., Rate Base multiplied by 40% = Deemed
- 11 Equity);
- 4. Actual interest is adjusted to an estimated amount that would correspond to a
- deemed allowance on the estimated rate base computed in 3. The net income used
- in the CAROE is adjusted for the difference between actual interest and the
- 15 estimated allowance.
- 16 This calculation is appropriate as it provides an estimate of actual ROE on the same
- basis as such is determined through Board rate-making policy.

18

19 Question 1 c

- 20 **Reference:** Exhibit 1/Tab 2/Schedule 1, pages 6 7
- 21 Please provide schedules that show the derivation of the return on equity for 2008, 2009
- 22 and 2010.

23 Response:

- The following table shows the derivation of the ROE for 2008, 2009 and 2010 (Bridge
- Year). Please note that there was a typographical error in the ROE figure quoted for
- 26 2009. The ROE was quoted as 6.6% and should have been 6.4%.

1 Question 2 c

- 2 For each rate class in Tables 3-19 and 3-23 in Exhibit 3, Tab 2, Schedule 1, please
- 3 provide the Board approved kW forecast for each rate class.
- 4 Response:
- 5 **2008 Board Approved kW Forecast**

	General Service 50 to 4,999 kW	Street Lighting	Sentinel Lighting	Large Use
2008 Board Approved kW Forecast	5,535,480	112,919	1,721	3,876,319

7

8

6

Question 2 d

- 9 Based on the response to part (c) above, please calculate the difference in the
- revenues due to the difference in the actual kW from the Board approved kW forecast in
- each applicable rate class, based on the Board approved rates for 2008.

12 Response:

- The table below shows the calculation of the revenue shortfall related to each customer
- class that generates revenue based on kW usage.

Horizon Utilities Corporation
Responses to Energy Probe
Interrogatories on Revised Evidence
Delivered: April 1, 2011
Page 2 of 3

- c) Please provide a revised commodity cost of power calculation in the same format as shown in the Revised Appendix 2-2 that reflects both of the following:
 - i) The RPP/non-RPP volume split based on 2010 actual data as used in the response to Energy Probe Technical Conference Question #3b,
 - ii) A non-RPP price of \$64.66/MWh and a RPP price of \$67.36/MWh as calculated in parts (e) and (f), respectively, of Energy Probe Interrogatory #6.

2 Response:

- a) The 2011 loss factor of 1.041 shown in the Revised Appendix 2-2 for Residential,
- 4 GS<50kW, Unmetered Scattered Load, Sentinel Lighting, and Street Lighting customer
- 5 classes is based on the loss factor of 1.0407 rounded to three decimal places. The loss
- factors for GS>50kW and Large Use customer classes reflect Horizon Utilities' 2010
- 7 rate schedule.
- 8 **b)** Revised Appendix 2-2 reflects the volumes associated with market participants only
- 9 in the calculation of transmission network and transmission connection costs. Market
- 10 participant volumes are included in these costs as Horizon Utilities bills market
- participants for transmission network and connection.
- c) Please find below a revised commodity cost of power calculation that reflects both
- the RPP/non-RPP volume split based on 2010 actual data as used in the response to
- 14 Energy Probe Technical Conference Question 3b) and a non-RPP price of \$64.66/MWh
- and a RPP price of \$67.36/MWh as calculated in the response to Energy Probe 6 e)
- 16 and f) respectively.

Response:

- 2 a) The first reference shows a change in 2011 working capital requirement from
- \$61.87 M to \$62.10 M as a direct result of the change in the 2011 Cost of Power from
- 4 \$394,028,103 to the refilled 2011 Cost of Power of \$395,726,409. The difference is
- \$1,698,306. When the Allowance for Working Capital of 14% is applied, the increase in
- 6 working capital requirement is \$237,763, rounded to \$230k.
- 7 The second reference is taken from the Lead/Lag Study Exhibit 2, Tab 4, Schedule 1,
- 8 Appendix 2-3 in Table 8 Working Capital Requirement Associated with Distribution
- 9 Operations 2011 and is changed from the Original Application to reflect the revised
- 10 Cost of Power amount, as well as other changes that impact the lead/Lag study but not
- the calculation of the Working Capital Allowance for purposes of the Rate Base
- 12 Calculations. One of the most obvious differences is that the Lead/Lag Study
- incorporates the costs of the Debt Retirement Charges as it reflects a use of cash.
- Such figures are not part of the Cost of Power, nor are they included in any calculation
- of working capital requirement.
- 16 b) Horizon Utilities confirms that the increase in the Cost of Power is due to a
- 17 "correction" in the billing parameters used for Rural Rate Assistance and Wholesale
- Market Service costs in addition to the revised Large User load.
- 19 c) This error was first noted by Horizon Utilities in the answer to Energy Probe's
- Technical Question 3, at which time it is noted that "Additionally, Horizon Utilities has
- 21 corrected the Volume Metrics for Wholesale Market Service and Rural Rate Assistance
- 22 Charges...."
- 23 d) Horizon Utilities has not reflected other errors in/required revisions to the original
- 24 application that have been reflected in the current update (apart from the Large Use
- 25 Customer Load Forecast).
- e) Horizon Utilities requests an update to its evidence relating to changes in its total
- 27 revenue requirement, its revenue deficiency and its rate base as follows.

1)	Revision t	o Large	Use	customer	load	forecast
	I VE VISIOII L	o Laiuc	030	Custonici	luau	TOTOGGE.

Horizon Utilities submitted revised evidence to indicate the change in the Large
Use customer load forecast. Further, as indicated in the response to VECC
Supplementary Interrogatory 44, the Cost Allocation Model has been updated.

2) Cost of Power

The Cost of Power has changed due to the change in the Load Forecast for the Large Use Customer Class. Please see Horizon Utilities' response to Energy Probe Revised Evidence Question 1.

3) Update to Cost of Capital Parameters.

In its initial Application, Horizon Utilities used an ROE and Short Term Debt Rate of 9.85% and 2.07%, respectively. The OEB issued a letter (the "Letter") on November 15, 2010 with regard to Cost of Capital Parameter Updates for 2011 Cost of Service Applications for Rates Effective January 1, 2011. The updated ROE and Short Term Debt Rate per the Letter were 9.66% and 2.43%, respectively. Horizon Utilities has applied these changes.

4) Tax Updates

As detailed in Horizon Utilities' response to Energy Probe Technical Conference Question 8, Horizon Utilities updated Tables 4-37, 4-38, 4-39, and 4-40 to incorporate new information regarding eligibility for the Ontario Tax Training Apprenticeship Credit and for corrections to Class 52 assets.

5) Regulatory Costs

In its original Application, Horizon Utilities amortized Regulatory Costs of \$960,000 related to the Cost of Service Application over an amortization period of 3 years. Horizon Utilities recognizes that the amortization period should be over a period of 4 years. The original amount was \$320,000 per year (\$960,000 divided by 3); the revised amount, reflective of the change in amortization period, is \$240,000 (\$960,000 divided by 4).

Page 4 of 5

6) Interest Rate on Promissory Note.

In its original Application, Horizon Utilities estimated that the long term debt rate on its \$40MM Horizon Holdings Inc. Promissory Note (the "Note") would bear an interest rate of 4.92%. Once the Note was issued, the actual rate was 4.89%. Horizon Utilities has updated its evidence to reflect the 4.89% rate.

7 Please see the table below that summarizes all changes.

. . . .

- 1 The Revenue Deficiency that Horizon Utilities is now requesting is \$20,211,096.
- 2 Horizon Utilities has separately filed a "live" OEB Revenue Requirement Work Form
- 3 model with this evidence.
- 4 In addition to the financial revisions listed above, Horizon Utilities is withdrawing two
- 5 requests for Deferral/Variance accounts as per Exhibit 9, Tab 1, Schedule 1, and Pages
- 6 4 to 8. The first relates to the Provincial Meter Data Management and Repository
- 7 ("MDM/R") Costs from the IESO for the Smart Meter Entity ("SME"). Since the IESO
- 8 has not yet filed an application with the Board requesting recovery of costs as had been
- 9 anticipated at the time of filing, an account accumulating costs in this regard is not
- required at this time. Secondly, Horizon Utilities had requested the establishment of a
- Deferral/Variance account for the Late Payment Penalty ("LPP") Charges. Such costs
- were the subject of a generic hearing by the Board. Therefore, the establishment of a
- deferral/variance account is not required.

Section II: Revenue Lags

A Revenue Lag is the time difference between when service is provided to a customer and when customer payments for such services are available to the Company. A Revenue Lag consists of four sequential components: a) Service Lag; b) Billing Lag; c) Collections Lag; and d) Payment Processing Lag. The Lag times of each of these four components when added together results in the Revenue Lag for the purpose of calculating the working capital requirements of the Company.

Based on an analysis of its components described in greater detail below, the Revenue Lag consists of Service Lag of 30.27 days, a Billing Lag of 17.35 days, a Collections Lag of 24.00 days, and a Payment Processing Lag of 1.21 days. When the components are added together, the overall Revenue Lag for the Company is 72.84 days as shown in Table 1 below.

	_
Component of Overall Revenue Lag	Lag
	Time
Service Lag	30.27 days
Billing Lag	17.35 days
Collections Lag	24.00 days
Payment Processing Lag	1.21 days
Total	72.84 days

Table 1. Calculation of Total Revenue Lag

Service Lag

A Service Lag measures the time from the Company's provision of electricity to a customer to the time the customer's service period ends and the meter is read. Interviews with Company's Customer Services staff indicated that the Company's smaller (residential and small commercial) customers are on a bimonthly service schedule. Larger customers are on a monthly schedule. Considering this information and using a mid-point methodology, a Service Lag of 30.27 days was determined for the Company's regulated distribution operations.

Billing Lag

A Billing Lag is the time period between the end of a customer's service period and meter read to the time that customer's bill is generated and dispatched. While customer consumption data was readily available subsequent to a meter read, interviews with the Company's Customer Service Department indicated that the key determinant of the Company's ability to dispatch a bill to its customer was the receipt of pricing data from the Ontario Independent System Operator ("IESO") which could take up to 11 or 12 business days. Taking this information into account, an overall Billing Lag of 17.35 calendar days was determined.

EB-2010-0131
HORIZON UTILITIES CORPORATION ("HORIZON UTILITIES") RESPONSES TO ENERGY PROBE INTERROGATORIES
DELIVERED: January 24 th , 2011
Question 7
Reference: Exhibit 2, Tab 4, Schedule 1, Appendix 2-3
a) Please provide all the data, calculations and assumptions used by rate class to arrive at a service lag of 30.27 days.
b) Does Horizon have any plans to move residential and small commercial customers to monthly billing? If yes, please elaborate on the timing of any such move.
c) Did the service lags used include 30.42 days for customers billed on a bimonthly basis (i.e. $365 / 6 / 2$) and a service lag of 15.21 days for customers billed on a monthly basis (i.e. $365 / 12 / 2$)? If not, please show the calculation of the monthly and bimonthly service lags.
d) Please indicate which rate classes are billed on a bimonthly basis and which rate classes are billed on a monthly basis.
e) Please provide an example of the pricing data from the IESO that results in the delay in processing the bill to a customer by up to 11 or 12 business days.
f) With respect to the collection lag, is this accounts receivable analysis done on a rate class by rate class basis? If so, please provide the collection lag for each rate class based on the specific accounts receivable analysis for the rate class. If it is not done on a rate class specific basis, please explain why not. g) Please provide the dates and amounts of property tax payments made that result in the average payment lag time of (194.8) days as shown on page 10.

Page 20 of 46

EB- 2010-0131 Horizon Utilities Corporation Responses to Energy Probe Interrogatories Delivered: January 24, 2011 Page 2 of 5

- h) Please show the derivation of the GST/HST lag of (17.41) days shown in Table 5
 and reconcile it with the total revenue lag shown in Table 1.
- i) Please recalculate the percentages of 13.6%, 13.8% and 14.2% shown in Tables
 6 through 8, respectively under the assumption that all rate classes are billed on a
 monthly basis.
- j) With reference to the interest costs shown in Exhibit 5, Tab, Schedule 2, Table 5 1, please explain \$10.1 million interest expense shown in Table 8 for 2011.

Response:

8

a) The data, calculations and assumptions used in the derivation of the 30.27 days are
 shown in the Table below. The Table includes data on the number of monthly and bi monthly customers. The assumptions regarding the mid-points of the service period for
 both monthly and bi-monthly customers are shown. Items that are calculated in the
 Table below are a) the weighting factors and b) the resulting service lag in days.

	Numk	er of Customers/	Accounts	Weightin	g Factors	Mic	Service Lag Days	
Rate Classification	Monthly	Bi Monthly	Total	Monthly	Bi Monthly	Monthly	Bi Monthly	
Residential	-	212,580	212,580	0.00%	90.49%	15.21	30.42	27.52

General Service > 50	2,216		2,216	0.94%	0.00%	15.21	30.42	0.14
Large Users	12		12	0.01%	0.00%	15.21	30,42	0.00
Unmetered and								
Scattered		1,879	1,879	0.00%	0.80%	15.21	30.42	0.24
Sentinel		250	250	0.00%	0.11%	15.21	30.42	0.03
Streetlights	4		4	0.00%	0.00%	15.21	30.42	0.00
Total	2,232	232,688	234,920					30.27 days

14

15

16

- b) No, Horizon Utilities does not currently have any plans to move residential and small commercial customers to monthly billing.
- 17 **c)** Yes.
- d) As used in Horizon's lead/lag study, the information requested is provided in the Table below.

20

Page 21 of 46

EB- 2010-0131 **Horizon Utilities Corporation** Responses to Energy Probe Interrogatories Delivered: January 24, 2011 Page 3 of 5

1

Class	Frequency of Billing
Residential	Bi-Monthly
General Service < 50 kW	Bi-Monthly
General Service > 50 kW	Monthly
Large Users	Monthly
Unmetered and Scattered	Bi-Monthly
Sentinel	Bi-Monthly
Streetlights	Monthly

2

5

6 7

10

14

15

e) Horizon's meters measure volumes of kilowatthours consumed by customers. These 3

volumes need to be applied to prices (cents/KWh) in order to generate a bill. 4 f) No. The analysis has not been performed on a rate class by rate class basis (see

response to d) for a list of rate classes). Horizon Utilities prepares its aged accounts

receivable and credit analysis using two categories of customers; a) residential, and b)

commercial, which closely aligns to its credit policies. g) As explained on page 2 of 8

Exhibit 2, Tab 4, Schedule 1, Appendix 2-3, the expense lead time consists of two 9

components: a service component, and a payment component. Adding the two

together and dollar weighting them produces a weighted average expense lead time for 11

a particular of expense. In the instance of property taxes (page 10 of Exhibit 2, Tab 4, 12

Schedule 1, Appendix 2-3), the weighted average expense lead time was determined to 13

be (12.30) days and the service lead time was 182.50 days. The average payment lag

time of (194.8) days is the "delta" between the service lead time and the weighted

average expense lead time. 16

h) The derivation of the (17.41) days of the GST/HST lag is shown on Cols (A) through 17

18 (F) of the Table below. The discussion following the Table explains how the values in

the Table were calculated and, in doing so, reconciles with the total revenue lag

calculation shown on Table 1 of Exhibit 2, Tab 4, Schedule 1, Appendix 2-3.

2 3 4 5	HORIZON UTILITIES CORPORATION ("HORIZON UTILITIES") RESPONSES TO ENERGY PROBE TECHNICAL CONFERENCE QUESTIONS
6	DELIVERED: February 23rd, 2011
7	
8	QUESTION TC #4
9	Reference: EP Interrogatory 7 & Exhibit 2, Tab 4, Schedule 1, Appendix 2-3
10 11 12	a) The evidence indicates that the billing lag was estimated to be 17.35 days. Was this estimate based on the assumption that the lag was the same for each rate class? If not, please provide a table showing the calculation of the overall 17.35 day billing lag.
13 14 15 16	b) Similar to (a) above, was the estimate of the overall payment processing lag of 1.21 days based on the assumption that the lag was the same for each rate class? If not, please provide a table showing the calculation of the overall 1.21 day payment processing lag.
17 18 19	c) The evidence indicates that the collection lag is a dollar weighted average. Please provide a table, similar to the response provided in part (a) of the interrogatory, showing the calculation of the collection lag.
20 21 22	d) The response provided to part (a) of the interrogatory indicates that the number of customers/accounts was used for the weighting. What year was used to arrive at these figures?
23 24 25 26 27 28	e) The response provided to part (a) of the interrogatory shows that the weighting factor used to arrive at the overall service lag is the number of customers/accounts. Please provide a revised calculation of the overall service lag if the weighting factors were changed from the number of customers/accounts to revenue (i.e. distribution revenue, transmission related costs, cost of power, regulatory charges, debt retirement charge, etc.).

Horizon Utilities Corporation
Responses to Energy Probe
Technical Conference Question 4
Delivered: February 23, 2011
Page 2 of 4

Response:

1

- Yes, the estimate that the billing lag was estimated to be 17.35 days was based on the assumption that the lag was the same for each rate class.
- b) Yes, the estimate of the overall payment processing lag of 1.21 days was based on the assumption that the lag was the same for each rate class.
- 6 **c)** The following table provides the computation of the collection lag:

RECEIVABLES BALANCES - \$s	
Current	45,710,004
Less Than 30 Days	10,531,479
31 - 60 days	1,999,527

11

- d) The year 2009 was used to arrive at the figures.
- e) Service Lag is intended to measure the amount of time between the start of a period of energy delivery to a customer and the time the service period ends and the customer's meter is read. For working capital purposes, the overall service lag for Horizon Utilities would be exactly at the mid-point of the service lags for all customers served.
- Assume hypothetically that a utility such as Horizon Utilities has two customers:
 Customer A whose meter is read bi-monthly and Customer B whose meter is read
 monthly. The mid-point of the service period for the bi-monthly customer would be 30
 days and that for the monthly customer would be 15 days. All else being equal, a
 weighted average of the time that service was received from the Company by both
 customers and meters were read would be 22.5 days i.e., (30+15)/2. Horizon Utilities

Page 24 of 46

EB- 2010-0131 Horizon Utilities Corporation Responses to Energy Probe Technical Conference Question 4 Delivered: February 23, 2011 Page 3 of 4

submits that this result is appropriate given that the weighted average service time is

2 exactly at the mid-point of the mid-point of both customers.

3 Assume further that that the bi-monthly customer (Customer A) has a bill of \$1,000 and

the monthly customer (Customer B) has a bill of \$9,000. Using dollars to weight the

period of service would indicate that the average period of service for both customers

6 would be (30 * \$1,000/\$10,000) + (15 * \$9,000/\$10,000), i.e., 16.5 days. Horizon

7 Utilities submits that this result of 16.5 days is not appropriate given that it is not

8 representative of how service was provided to both customers, particularly the bi-

9 monthly customer.

service.

Respectfully, Horizon Utilities submits that it is not appropriate to use weights based on revenues to calculate the service lag. Horizon Utilities' meter reading and billing cycles initiate a revenue cycle which affects specific customers irrespective of the revenues associated with those specific customers. In the example above, the meter reading and billing cycles would occur when the service period ends and meters are read. Horizon Utilities has a fixed meter reading schedule that is dependent on the resources available, the number of customers that receive service, where they are located, and how their meters are read (e.g., AMR, manual, etc.). Horizon Utilities' meter reading schedule is not based on expectations of revenues from any particular class or type of customer and thus, it would be inappropriate to use a revenue weighting approach to determine the average period of time over which Horizon Utilities' customers receive

With consideration for the foregoing submissions, the following is a revised calculation of the overall service lag if the weighting factors were changed from the number of customers/accounts to revenue. The service lag for 2009 would be 26.70 days.

5	TECHNICAL CONFERENCE QUESTIONS
6	DELIVERED: February 23, 2011
7	
8	QUESTION TC #2
9	Reference: VECC #3 and VECC #13
10 11	a) The response to part (a) does not address the question as originally proposed. For each year (2003-2009), please provide a schedule that sets out:
L2	1. The actual HDD and CDD values for the year
L3	2. The "weather normal" HDD and CDD values
L4	3. The difference between the actual and weather normal values for HDD and CDD
15 16 17	4. The product of these differences and the respective coefficients for HDD and CDD, as established in through the regression analysis. In doing so, please use the updated coefficients from VECC #2 c).
18	5. The actual purchases (excluding Large Users) for each year.
19 20	6. The "weather normal" purchases for each year calculated by adjusting the actual purchases (item (5)) by the estimated impact of weather (item (4)).
21	b) Please repeat part (a) based using the actual results for 2010, per VECC #13 a).
22	Response:
23 24 25 26	a) The requested information is provided in the following table. Please note the resulting Estimated Actual Weather Normal values are consistent with the Estimated Actual Weather Normal numbers shown in Horizon Utilities' response to VECC Interrogatory 3.

1	EB-2010-0131
2 3 4 5	HORIZON UTILITIES CORPORATION ("HORIZON UTILITIES") RESPONSES TO
6	ENERGY PROBE TECHNICAL CONFERENCE QUESTIONS
7	DELIVERED: February 23rd, 2011
8	QUESTION TC #8
9	Reference: Energy Probe Interrogatory #31
10 11 12 13	a) The response to part (b) is not clear. Please confirm that the total number of apprentices eligible for the Ontario Apprenticeship Tax Training Credit in 2011 will be 34, consisting of 8 hired in 2009, 13 in 2010 and 11 in 2011. If this is not correct, please indicate how many apprentice positions are eligible for this tax credit in 2011
14 15	b) The following is copied from http://www.cra-arc.gc.ca/tx/ndvdls/tpcs/ncm-tx/rtrn/cmpltng/ddctns/lns409-485/412/jctc-eng.html
16	Apprenticeship Job Creation Tax Credit (AJCTC)
17 18 19 20	The AJCTC is a non-refundable tax credit equal to 10% of the eligible salaries and wages payable to eligible apprentices in respect of employment after May 1, 2006. The maximum credit an employer can claim is \$2,000 per year for each eligible apprentice. If your business hires an "eligible apprentice", you qualify to claim the credit.
21	Who is an "eligible apprentice"?
22 23 24 25	An "eligible apprentice" is someone who is working in a prescribed trade in the first two years of their apprenticeship contract. This contract must be registered with a federal, provincial or territorial government under an apprenticeship program designed to certify or license individuals in the trade.
26 27	A prescribed trade includes the 53 trades currently listed as Red Seal Trades. For more information, see the <u>Interprovincial Standards Red Seal Program</u> .
28	Since the apprenticeship contracts are registered with the province and the reference to
29	the Red Seal Trades appears to be used only to identify the prescribed trades that are
30	eligible, please explain why Horizon does not believe it is eligible for the federal
31	apprenticeship job creation tax credit.

EB- 2010-0131 Horizon Utilities Corporation Responses to Energy Probe **Technical Conference Question 8** Delivered: February 23, 2011

- c) Has Horizon investigated or sought a ruling on whether or not its apprentice 1
- positions are eligible for the federal credit? If not, why not? Has Horizon talked about 2
- this issue with any other Ontario electricity distributor that is claiming this tax credit? 3

Response: 4

- 5 a) There are 34 apprentices eligible in 2011 in part, consistent with the breakdown
- provided for 2009, 2010, and 2011 with a carryover of 2 eligible apprentices from 2008. 6
- Horizon Utilities has investigated its eligibility for the AJCTC further. Based on b) 7
- such review, Horizon Utilities believes that its "Powerline Maintainer" trades, which 8
- correspond to the "Powerline Technician" Red Trades, would qualify for this credit. Of 9
- the 34 apprentices noted in a). 19 would represent Powerline Technician trades in 2011. 10
- 11 It will be Horizon Utilities' intention to file for the AJCTC in 2010 and 2011.
- In order to ensure the integrity of its evidence, Horizon Utilities submits revised PILs Tax 12
- Calculations provided in Exhibit 4, Tab 3, Schedule 2 as follows: 13
- 14 Table 4-37;
- Table 4-38; 15
- Table 4-39: 16
- Table 4-40 17

- These tables have been revised and appear below to provide for the following: 18
- 1. Eligibility of 34 apprentices in 2011 for the Ontario Tax Training Apprenticeship 19 20 Credit, which results in an aggregate credit of \$340,000 (provided in Table 4-37);
- 2. Eligibility of 15 Powerline Technician apprentices in 2011 for the AJCTC 21 (provided in Table 4-37), which results in an aggregate credit of \$38,000; 22
- 3. Recognition that 1. And 2. are taxable credits and, as such, are adjusted as 23 24 Other Additions through line 295 of Table 4-38;
- 4. Correction of Table 4-39 for 2010 and Table 4-40 for 2011 with respect to Class 25 52 assets. The nature of the correction is to recognize the following: 26
- a. Class 52 additions in the year are not subject to the ½ year rule. As such, 27 CCA will be adjusted in Table 4-39 for 2010 to reflect full Class 52 UCC

Page 33 of 46

Technical Conference Question 8
Delivered: February 23, 2011
Page 3 of 10

1	utilization in that year. The 2010 UCC Ending Balance in Table 4-39 is
2	corrected to report \$0;
3	b. Table 4-40 incorrectly reports additions in Class 52 for 2011. Class 52 is
4	no longer valid following January 31, 2011. Such additions reported in
5	Class 52 in Table 4-40 are properly recorded in Class 50. As such, the
6	following changes have been made in Table 4-40:
7	i. The UCC Prior Ending Balance for Class 52 is restated to \$0 to
8	correspond to the change in 4.a.;
9	ii. The \$1,612,172 of additions reported as Class 52 have been now
10	reported as additions in Class 50;
11	iii. UCC and CCA balances and amounts have been revised to reflect
12	the changes in 4.b.i. and 4.b.ii.
13	Table 4-38 has been revised to reflect the corrected CCA values resulting from 4.
14	Based on the revisions reported in 14. above, Horizon Utilities submits a revised 2011
15	Total PILs value of \$6,042,540 for recovery in its Application.
16	c) Please refer to the response in b.)

6	DELIVERED January 24 th , 2011
7	
8	Question 28
9	Reference: Exhibit 4, Tab 3, Schedule 1
LO L1 L2	a) Please confirm that the Ontario surtax claw-back on the first \$500,000 of taxable income was eliminated effective July 1, 2010 and that the provincial income tax rate on the first \$500,000 of taxable income was reduced to 4.50%.
L3 L4 L5	b) Has HOBNI included a tax reduction of \$36,250 related to the Ontario small business tax rate on the first \$500,000 in taxable income (calculated as \$500,000 times the difference between 11.75% and 4.50%)? If not, why not?
L6	Response:
L7 L8 L9	a) Horizon Utilities confirms that the Ontario surtax claw-back on the first \$500,000 of taxable income was eliminated effective July 1, 2010 and that the provincial income tax rate on the first \$500,000 of taxable income was reduced to 4.50%.
20 21 22	b) Horizon Utilities presumes that this question applies to it and not "HOBNI". Horizon Utilities apologizes for the oversight not to have adjusted the schedule noted to accommodate the tax change provided in the March 25, 2010 Ontario budget.

Page 38 of 46

Horizon Utilities Corporation EB-2010-0131 Exhibit 5 Tab 1 Schedule 1 Page 3 of 3 August 26, 2010

- 1 Deemed Long-Term Debt is Horizon Utilities' dollar weighted average Funded Debt Rate of
- 2 5.80%.
- 3 Based on the foregoing analysis, and subject to any Board updates of parameters applicable to
- 4 2011 Cost of Service applications, the Long-Term Debt rate requested for the 2011 Test Year is
- 5 the dollar weighted average of the Funded Debt Rate of 5.80%.
- 6 Horizon Utilities submits that the \$116MM HUC Note matures on July 31, 2012. It is Horizon
- 7 Utilities' intention to refinance such note at that time through the issuance of a promissory note
- 8 to HHI ("Future HHI Note"). HHI is expected to finance the Future HHI Note through the
- 9 issuance of a debenture obligation under its Trust Indenture ("Future HHI Debenture"). The
- terms of the Future HHI Note would be identical, mutatis mutandis, to the terms of the Future
- 11 HHI Debenture. Horizon Utilities requests that, effective with the time of such refinancing of the
- 12 \$116MM HUC Note in its next scheduled incentive rate mechanism adjustment, its Long-Term
- 13 Debt rate be adjusted based on the above analysis by substituting the rate on the \$116MM HUC
- 14 Note with the Future HHI Note.
- Long-term debt cost information for the 2007 Actual, 2008 Board Approved, 2008 and 2009
- 16 Actual, 2010 Bridge Year, and 2011 Test Year are also provided in Table 5-2.

17 Return on Equity

- Horizon Utilities is requesting a return on equity ("ROE") for the 2011 Test Year of 9.85%, in
- 19 accordance with the Cost of Capital Parameter Updates for 2010 Cost of Service Applications
- 20 issued by the OEB on February 24, 2010. Horizon Utilities understands that the OEB will be
- 21 finalizing the ROE for 2011 rates based on January 2011 market interest rate information.
- Horizon Utilities' use of an ROE of 9.85% is without prejudice to any revised ROE that may be
- adopted by the OEB in early 2011.

24 Rate Base and Rate of Return

- 25 The tables below detail Horizon Utilities' rate base, deemed debt/equity ratios, deemed rate of
- return, actual debt/equity ratios and actual rates of returns for 2008 Board Approved, 2008
- 27 Actual, 2009 Actual, 2010 Bridge Year Forecast, and 2011 Test Year Forecast.

Page 42 of 46

Horizon Utilities Corporation EB-2010-0131 Exhibit 3 Tab 3 Schedule 3 Page 4 of 5 Filed: August 26, 2010

- 1 inter-company Management Fees in respect of the services provided to its affiliates. The
- 2 Master Services Agreement (the "MSA") and the accompanying Schedules and Appendices
- 3 outline the shared services and the costing mechanism used for the shared services. A copy of
- 4 the MSA dated January 1, 2007 and its Schedules and Appendices are enclosed as Exhibit 3,
- 5 Tab 3, Schedule 3, Appendix 3-4 to this Schedule.

10

11

14

- 6 The amounts of management fee revenue included in miscellaneous revenue for the
- 7 2010 Bridge Year and 2011 Test Year are summarized in Table 3-28, below. The
- 8 revenues received for these services are offset against Horizon Utilities' revenue
- 9 requirement to reduce the revenue required from customers, through distribution rates.

Table 3-28 - Summary of Management Fee Revenue in Miscellaneous Revenue

Description	2010 Bridge	2011 Test
Hamilton Utilities Corporation	19,200	19,776
Hamilto Hydro Services IncHamilton Community Energy	52,800	54,384
Hamilto Hydro Services IncWater Heater Rental	25,000	25,750
Horizon Utilities - Non-Regulated Billing Services	583,000	600,490
St. Catharines Hydro Inc.	71,976	71,976
Total	751,976	772,376

12 Horizon Utilities has provided further information on the shared service charges and the method

of allocating these costs in Exhibit 4, Tab 2, Schedule 11.

2009 Actual Comparison to 2008 Actual Other Operating Revenue

- Horizon Utilities' other Operating Revenue in 2009 was \$6,083,647 as presented in Table 3-25.
- The variance from 2009 actual to 2008 actual of \$ 1,261,006 includes \$430,261 recorded
- incorrectly in account 4225, Late Payment Charges. This amount should have been recorded in
- 18 account 4235, Miscellaneous Service Charges. One time revenues for administration charges
- applied to external invoices as noted above and sales of property were recorded only in 2008.
- 20 As noted above, the OPA program bonus of \$214,610 was recorded in account 4375 -
