Dear Ms. Walli/Board Secretary/Board Members

RE: Intervenor Status Request, Quinn Felker, for EB-2011-0063: Application for Leave to Construct Transmission Facilities for Grand Renewable Wind LP

I, jointly with my wife, own property located at 1047 Concession 5 Road in Fisherville. The transmission line, if built as proposed, will run parallel to our northern property line for approximately 700 meters.

The purpose of this letter is to request that intervenor status be granted to me, pursuant to Rule 23 of the Board's Rules of Practice and Procedure. I believe that I require intervenor status in order to address a potential need to protect the significant investment that we have recently made in this property.

Our investment has both agricultural and equity components. The equity component is based on market value, which is tied directly to the appeal and desirability of the property.

Potential negative impact will depend entirely on the specific characteristics of any new transmission line structures, for which we have yet to receive any details. A buried transmission line, for example, would have no lasting negative affect after construction, while an aerial 230 kV line will have a significant and lasting negative impact. Financial impact for us could be immediate, as the major portion of our debt is tied to the equity that we have in this property. Lower property value will affect both the amount that we can borrow and the interest rate that we pay. We may need to seek an award of costs.

Further to our primary concern noted above, please note also that we have in the vicinity one(1) USEI 90 -250MCM buried triplex service cable, one(1) USEI 90 – 4/0 buried triplex service cable, one(1) buried 6 conductor 18-AWG telcom cable that we will need to accommodate and one(1) wireless data link, for which we will need to maintain a line-of-sight to the transceiver.

I would like to be informed of all proceedings and be able to participate. Please contact me using the following contact information:
