

**Independent Electricity System Operator  
Interrogatories to Hydro One Networks Inc.**

**Reference:** Technical Conference Transcript/Page 83/Lines 15-20

**Preamble:** Hydro One noted that it initiated various meetings involving all of the parties [Hydro One, IESO, Capital Power] to discuss issues associated with connection of the two wind projects to its transmission system, the first of which took place in early September of 2010.

**Schedule and Costs of New or Modified Network Facilities**

1. Please provide an estimate of the planned construction timelines for each of the connection configuration options that were considered for connecting the Summerhaven and Nanticoke Port Dover wind projects to Hydro One's transmission system.
2. Please provide an estimate of the likely costs to provincial transmission customers that are associated with each of the connection configuration options that were considered.
3. Of the connection configuration options considered, please confirm whether Hydro One recommended or have any preference for connecting the two wind projects to its transmission system.
4. If Hydro One recommended or have a preference with respect to question 3 above, to the extent possible, please identify and discuss any efficiency that will be achieved from implementation of the preferred option
