Dear Madame:

**Re: EB-2011-0027: Summerhaven Wind, LP ("Summerhaven")
Request to extend**

Pursuant to Procedural Order No. 6 (the "Procedural Order") issued by the Board on May 27, 2011, intervenors and Board Staff were required to file their submissions with the Board by June 22, 2011. The Procedural Order further required Summerhaven to file any reply submission (the "Reply") with respect to intervenor and Board Staff submissions no later than June 30, 2011.

The submissions of both Board Staff and Haldimand County Hydro Inc. ("HCHI") were highly technical in nature and proposed several conditions to the leave to construct approval being sought by Summerhaven. The technical details of these conditions are perhaps unprecedented in a leave to construct application. Board Staff proposed on several occasions conditions that referred to an "imminent need to convert" HCHI's current distribution system, but very little information on that conversion is currently in the record.

In order for Summerhaven to respond to the proposed conditions put forward by Board Staff and HCHI, Summerhaven hereby requests that the Board grant additional time to submit its Reply. Further, given the nature of the proposed conditions and their relation to the potential conversion of the current distribution system, it would be helpful if information respecting such potential conversion be provided. Board Staff proposed that HCHI provide its proposed design, but did not propose a date by which this should be provided. Summerhaven's ability to respond to the proposed conditions would benefit if HCHI provided even high-level design information that included pole locations, pole height, conductor locations and in-service date.

To prevent too material a departure from the current schedule, Summerhaven requests that HCHI provide pole locations, pole height, conductor locations and in-service date by no later than July 8, 2011. If HCHI provides the requested information by this time, or, in the absence of this information by this time, Summerhaven develops its own estimated pole locations, pole height, conductor locations and in-service date, Summerhaven should be in a position to file its Reply by July 22, 2011. This relatively short extension of time will not cause prejudice to any party.

All of which is respectfully submitted.
