IN THE MATTER OF the *Ontario Energy Board Act, 1998*, S.O. 1998, c. 15, (Schedule B);

AND IN THE MATTER OF an application by PowerStream Inc. for an order or orders approving or fixing just and reasonable distribution rates related to Smart Meter deployment, to be effective November 1, 2011.

PowerStream Inc. ("PowerStream") Responses to Vulnerable Energy Consumers Coalition ("VECC") Interrogatories

Filed: September 9, 2011

VECC Question #1

References: PowerStream Smart Meter Cost Recovery Application, Smart Meter Program Costs

Preamble: In this Application, PowerStream is seeking the recovery of costs related to the installation of 69,393 smart meters in the North rate zone from inception of the program to April 30, 2011, and 21, 725 smart meters from January 1, 2010 to April 30, 2011 in the South rate zone.

a) Please complete the following table to show the actual and planned smart meter installations by year, rate zone & customer class.

Year	North Zone Residential	North Zone GS < 50kW	Total North Zone	South Zone Residential	South Zone GS< 50kW	Total South Zone
2006 Actual						
2007 Actual						
2008 Actual						
2009 Actual						
2010 Actual						
Jan 1 to April 30, 2011						
2011 Forecast						
Total						
Number of Outstanding Installations						
Total Number of Customers						

Response:

a) Table VECC 1-1 below shows the actual and planned smart meter installations by year, rate zone & customer class.

Table VECC 1-1: Smart Meter Installations by Rate Zone and Rate Class

	The official motor in ottainations by react 20110 and react a								
Year	North Zone Residential	North Zone GS< 50kW	Total North Zone	South Zone Residential	South Zone GS<50kW	Total South Zone			
2006 Actual	-	-	İ	-	1	ı			
2007 Actual	-	-	-	82,293	-	82,293			
2008 Actual	-	-	-	53,262	-	53,262			
2009 Actual	6,150		6,150	81,481	2,613	84,094			
2010 Actual	57,009	3,301	60,310	3,202	7,867	11,069			
Jan 1 to April 30, 2011	1,040	1,893	2,933	1,268	9,388	10,656			
2011 Forecast	679	180	859	1,383	899	2,282			
Total	64,878	5,374	70,252	222,889	20,767	243,656			
Number of Outstanding Installations	-	-	-	-	-	-			
Total Number of Mandated Customers	64,878	5,374	70,252	222,889	20,767	243,656			

The number of customers mandated to receive smart meters will not equal the total number of customers in the customer class. The mandated customer numbers do not include smart suite metered customers or GS<50 kW customers with demand.

PowerStream has not included smart suite meters as part of its smart meter program.

There are a number of GS<50 kW customers with demand meters who because of their consumption history have moved between the GS<50 kW and GS>50 kW classes. There are no smart meters, capable of measuring demand, that are compatible with the MDM/R at this time. As it would not be prudent to install a non-demand meter in these situations, these customers have not been included in the mandated customer totals.

VECC Question #2

Reference: PowerStream Smart Meter Cost Recovery Application, Page 17 Table 1 & Page 30 Table 12, Summary of Smart Meter Capital Costs

Preamble: Table 1 and Table 12 provide details on smart meter capital costs for the North and South Zones, respectively by customer class.

- a) For the North Zone, please provide the actual smart meter installations and capital costs for the years 2006, 2007, 2008, 2009 and 2010 by customer class. Please breakdown the full capital costs to show meter costs, installation costs and all other cost categories separately by customer class.
- b) For the South Zone, please provide the actual smart meter installations and capital costs for the years 2006, 2007, 2008 and 2009 by customer class. Please breakdown the full capital costs to show meter costs, installation costs and all other cost categories separately by customer class.
- c) Table 12 shows that PowerStream was able to reduce the average installed cost per meter for the residential and GS<50 kW meters in 2011. Please explain.
- d) The total installed cost per meter and the installed cost per meter by customer class for the North rate zone (Page 12) is significantly less than the installed costs per meter for the South rate zone (Page 12). Please explain.

Response:

a) Table VECC 2-1 provides details on smart meter capital costs for the North rate zone for 2006 to 2010.

Table VECC 2-1: Smart Meter Capital Costs by Customer Class (North)

North Rate Zone		20	08			200	9			20	10			
Description	Re	sidential	GS-	<50 kW	Re	esidential	G	S<50 kW	R	esidential	G	S<50 kW		Total
Number of Installed Meters		-		-		6,150		-		57,009		3,301		66,460
Meter and Installation					\$	648,234			\$	6,039,274	\$	1,641,940	\$8	3,329,448
Workforce Automation					\$	20,561	\$	1,703	\$	6,648	\$	551	\$	29,463
Collectors (Radio Towers)					\$	738,276	\$	61,153	\$	-	\$	-	\$	799,429
AMI Computers & Software					\$	36,609	\$	3,032	\$	11,837	\$	980	\$	52,458
AMI to CIS Interface					\$	165,454	\$	13,705	\$	135,197	\$	11,199	\$	325,555
Professional Fees					\$	122,078	\$	10,112	\$	39,471	\$	3,269	\$	174,931
Integration					\$	57,956	\$	4,801	\$	18,739	\$	1,552	\$	83,047
Program Management	\$	57,647	\$	4,775	\$	35,648	\$	2,953	\$	-	\$	-	\$	101,023
Other AMI Capital					\$	49,518	\$	4,102	\$	16,011	\$	1,326	\$	70,957
Total	\$	57,647	\$	4,775	\$	1,874,334	\$	101,561	\$	6,267,176	\$	1,660,818	\$9	,966,311

No meters were installed in the North rate zone until 2009. A small amount of capital spending took place prior to 2009. This occurred over several years beginning in 2006 but for simplicity is shown in 2008. Meter and installation costs are based on actual meters installed for each class. Other capital costs have been assigned to customer classes based on the number of mandated customers in each class. Other capital costs are similar for each meter/customer with no discernable difference between different customer classes or types of meters. These costs are either driven by the number of customers/meters or each customer/meter receives similar benefits.

b) Table VECC 2-2 provides details on smart meter capital costs for the South rate zone for 2006 to 2009.

Table VECC 2-2: Smart Meter Capital Costs 2006 to 2009 (South)

				-				10 2003 (0

EB-2011-0128
PowerStream Inc.
2011 Smart Meter Cost Recovery Application
Responses to VECC IRs
Page 5 of 25
Filed: September 9, 2011

- c) Several factors have resulted in a lower average cost of installed meters in 2011. For the residential meters this is primarily due to the impact of more favourable US dollar exchange rates on the contract price with Sensus which is in US dollars. For the GS<50 kW meters, this is primarily due to the procurement of 3-phase meters from another vendor at more favourable pricing. Please see the response to Board Staff IR#6(b) for more details.
- d) Please see the response to Board Staff IR# 8(a).

VECC Question #3

References: PowerStream Smart Meter Cost Recovery Application, Pages 24-26, Tables 5, 6 & 7

Preamble: Appendix 1 includes worksheets that calculate revenue requirement, net fixed assets and the rate rider to recover smart meter costs for the North rate zone.

- a) Please provide a copy of these worksheets by customer class.
- b) Please recast Tables 5, 6 and 7 by customer class based on the revised worksheets. Reconcile to Tables 5, 6 & 7.

Response:

- a) See Appendix 1 for the Smart Meter Cost Recovery Model for the Residential class and Appendix 2 for the Smart Meter Cost Recovery Model for the GS<50 kW class, for the North rate zone.
- b) Table VECC 3-1 compares Table 5, Smart Meter Costs for Recovery to October 31, 2011 from the Application with the results from the response to VECC IR#3(a) above.

Table VECC 3-1: Smart Meter Cost for Recovery to October 31, 2011 (North)

	A	В	С	D	E
	Per Application	VECC 3(a) Residential	VECC 3(a) GS<50 kW	VECC 3(a) Combined	Difference (A-D)
a) Revenue Requirement 2006	\$ 960	\$ 887	\$ 73	\$ 960	\$ (0)
b) Revenue Requirement 2007	\$ 2,225	\$ 2,056	\$ 169	\$ 2,225	\$ 0
c) Revenue Requirement 2008	\$ 5,827	\$ 5,384	\$ 443	\$ 5,827	\$ (0)
d) Revenue Requirement 2009	\$ 169,160	\$ 167,155	\$ 9,287	\$ 176,442	\$ (7,282)
e) Revenue Requirement 2010	\$ 1,271,804	\$ 1,117,265	\$ 159,147	\$ 1,276,412	\$ (4,608)
f) Revenue Requirement 2011 (to Oct 31/11)	\$ 1,663,157	\$ 1,369,461	\$ 291,465	\$ 1,660,926	\$ 2,231
g) Revenue Requirement Total (a+b+c+d+e+f)	\$ 3,113,133	\$ 2,662,208	\$ 460,584	\$ 3,122,792	\$ (9,659)
h) Smart Meter Rate Adder collected	\$(2,801,421)	\$(2,538,894)	\$ (229,876)	\$(2,768,770)	\$ (32,651)
i) Carrying Cost	\$ (49,597)	\$ (46,384)	\$ (2,412)	\$ (48,796)	\$ (801)
j) Smart Meter True-up (g+h+i)	\$ 262,115	\$ 76,930	\$ 228,296	\$ 305,226	\$ (43,111)

The major difference is in the smart meter adder collected amount as the amounts collected from the GS>50 kW customer class are not included in either the Residential or the GS<50 kW models.

There are slight differences in the revenue requirement due to using the capital

additions by year by customer class prepared for the response to VECC IR#2 above. This more closely matches the allocated other capital costs to the North rate zone when the costs were incurred rather than when these costs were reallocated to the North in 2010. These differences are small and PowerStream does not propose to amend its Application to reflect this.

These differences have a slight effect on the carrying charges as well.

Table VECC 3-2 compares the allocation of the true-up amounts and calculation of the disposition rate rider in Table 6 of the Application with the true-up amounts calculated in Table VECC 3-1 for the Residential (column B) and GS<50 kW classes (column C) and the resulting rate rider calculation for recovery over six months.

Table VECC 3-2: True-Up Allocation and Rate Riders (North)

Per Applicat	Per Application								
Customer Class	Number of Customers	,	True-up		lonthly Charge	4	True-up		onthly harge
Residential	64,830	\$	201,871	\$	0.52	\$	76,930	\$	0.20
GS<50 kW	5,886	\$	60,245	\$	1.71	\$	228,296	\$	6.46
Total	70,716	\$	262,116			\$	305,226		

Table VECC 3-3 compares the calculation of the Smart Meter Incremental Revenue Requirement (SMIRR) in Table 7 of the Application with the SMIRR amounts calculated in VECC IR#3(a).

Table VECC 3-3: Smart Meter Incremental Revenue Requirement (SMIRR)(North)

Per Application)				٧	ECC 3(a)			Dif	ference
Rate Base	Aı	mount	Re	sidential	G	S<50 kW	Co	ombined		(A-D)
Net Fixed Assets	\$9,	565,720	\$ 7	7,474,840	\$	2,069,296	\$ 9	9,544,136	\$	21,584
Working Capital Allowance	\$	20,831	\$	19,238	\$	1,593	\$	20,831	\$	0
Total	\$9 ,	586,552	\$ 7	7,494,078	\$	2,070,889	\$ 9	9,564,967	\$	21,585
Revenue Requirement										
Short Term Interest	\$	9,318	\$	7,284	\$	2,013	\$	9,297	\$	21
Long Term Interest	\$	294,192	\$	229,978	\$	63,551	\$	293,529	\$	663
Return on Equity	\$	370,424	\$	289,571	\$	80,019	\$	369,590	\$	834
OM&A	\$	138,875	\$	128,252	\$	10,623	\$	138,875	\$	-
Amortization	\$	798,186	\$	641,657	\$	155,413	\$	797,070	\$	1,116
Grossed-up PILs	\$	113,730	\$	90,917	\$	22,768	\$	113,685	\$	45
Total	\$1 ,	724,725	\$	1,387,659	\$	334,387	\$ '	1,722,046	\$	2,679

There are slight differences as discussed above regarding Table VECC 3-1. The timing differences increased the true-up revenue requirement and decreased the SMIRR. PowerStream does not propose to amend its Application to reflect this.

VECC Question #4

References: PowerStream Smart Meter Cost Recovery Application, Page 38-40, Table 17, 18 & 19

Preamble: Appendix 2 includes worksheets that calculate revenue requirement, net fixed assets and the rate rider to recover smart meter costs for the South rate zone.

- a) Please provide a copy of these worksheets by customer class.
- c) Please recast Tables 17, 18 and 19 by customer class based on the revised worksheets. Reconcile to Tables 17, 18 and 19.

Response:

- a) See Appendix 3 for the Smart Meter Cost Recovery Model for the Residential class and Appendix 4 for the Smart Meter Cost Recovery Model for the GS<50 kW class, for the South rate zone.
- b) N/A (not used)
- c) Table VECC 4-1 compares Table 17, Smart Meter Costs for Recovery to October 31, 2011 from the Application, for the South, with the results from the response to VECC IR#4(a) above.

Table VECC 4-1: Smart Meter Cost for Recovery to October 31, 2011 (South)

	Α	В	С	D	E
	Per Application	VECC 4(a) Residential	VECC 4(a) GS<50 kW	VECC 4(a) Combined	Difference (A-D)
a) Revenue Requirement 2010	\$ 1,039,636	\$ 327,883	\$ 727,157	\$ 1,055,040	\$ (15,404)
b) Revenue Requirement 2011 (to Oct 31/11)	\$ 1,637,891	\$ 459,087	\$ 1,200,152	\$ 1,659,239	\$ (21,348)
c) Revenue Requirement Total (a+b)	\$ 2,677,527	\$ 786,970	\$ 1,927,309	\$ 2,714,279	\$ (36,752)
d) Smart Meter Rate Adder collected	\$(4,718,561)	\$(4,196,784)	\$ (452,248)	\$(4,649,032)	\$ (69,529)
e) Carrying Cost	\$ (50,130)	\$ (61,836)	\$ 11,225	\$ (50,611)	\$ 481
f) Smart Meter True-up (c+d+e)	\$(2,091,164)	\$(3,471,650)	\$ 1,486,286	\$(1,985,364)	\$(105,800)

The main difference is the Smart Meter adder collected from GS<50 kW and Large Use customers which are not included in the models in the response to VECC IR#4(a). There are small differences in the revenue requirement due to using the capital additions by year by customer class prepared for the response to VECC IR#2 above. The timing differences are due to when the allocation of costs to the North are recognized. PowerStream does not propose to amend its Application to reflect this.

Table VECC 4-2 compares the allocation of the true-up amounts and calculation of the disposition rate rider in Table 18 of the Application with the true-up amounts calculated in Table VECC 4-1 for the Residential (column B) and GS<50 kW classes (column C) and the resulting rate rider calculation for recovery over six months.

Table VECC 4-2: True-Up Allocation and Rate Riders

	Per Ap	VECC 4(a)				
Customer Class	Number of Customers	True-up Allocation	Monthl Charge	-	True-up Allocation	Monthly Charge
Residential	226,121	\$ (258,936)	\$ (0.	.19)	\$(3,471,650)	\$ (2.56)
GS<50 kW	24,190	\$(1,832,228)	\$ (12.	.62)	\$ 1,486,286	\$ 10.24
Total	250,311	\$(2,091,164)			\$(1,985,364)	

Table VECC 4-3 compares the calculation of the Smart Meter Incremental Revenue Requirement (SMIRR) in Table 19 of the Application with the SMIRR amounts calculated in VECC IR#4(a).

Table VECC 4-3: Smart Meter Incremental Revenue Requirement (SMIRR)

	Α	В	С	D	E
Per Application	on		VECC 4(a)		Difference
Rate Base	Amount	Residential	GS<50 kW	Combined	(A-D)
Net Fixed Assets	\$ 8,020,936	\$ 1,619,946	\$ 6,362,895	\$ 7,982,841	\$ 38,095
Working Capital Allowance	\$ 94	\$ 23	\$ 71	\$ 94	\$ -
Total	\$ 8,021,030	\$ 1,619,969	\$ 6,362,966	\$ 7,982,935	\$ 38,095
Revenue Requirement					
Short Term Interest	\$ 7,796	\$ 1,575	\$ 6,185	\$ 7,760	\$ 36
Long Term Interest	\$ 246,149	\$ 49,714	\$ 195,267	\$ 244,981	\$ 1,168
Return on Equity	\$ 309,933	\$ 62,596	\$ 245,865	\$ 308,461	\$ 1,472
OM&A	\$ 628	\$ 153	\$ 475	\$ 628	\$ -
Amortization	\$ 710,539	\$ 272,463	\$ 463,473	\$ 735,936	\$ (25,397)
Grossed-up PILs	\$ 67,283	\$ 3,530	\$ 66,652	\$ 70,182	\$ (2,899)
Total	\$ 1,342,328	\$ 390,031	\$ 977,917	\$ 1,367,948	\$ (25,620)

There are slight differences resulting from the timing of fixed asset additions as discussed above regarding Table VECC4-1. The timing differences increased the true-up revenue requirement and decreased the SMIRR. PowerStream does not propose to amend its Application to reflect this.

VECC Question #5

References: PowerStream Smart Meter Cost Recovery Application, Smart Meter Disposition and Smart Meter Incremental Revenue Requirement Calculations

- a) Based on the responses to questions regarding costs, revenue requirement and rate riders by customer class, please provide a summary and comparison to as filed, of the rate changes for each rate zone.
- b) Please update the bill impacts for each rate zone as required.

Response:

a) The tables below show the calculation of the SMIRR rate riders based on the responses to VECC IR#3 and VECC IR#4 and compare the VECC rate riders with the rate riders in the Application.

Table VECC 5-1: Allocation of SMIRR and Calculation of Rate Riders (North)

	Per App	VECC 3(a)			
Customer class	Number of Customers	SMIRR allocation	nthly arge	SMIRR allocation	Monthly Charge

	Per A	pplication	1			VECC	4(a)		
Rate Rider	Res	idential	•	SS<50	Res	idential	GS<50		
Disposition	\$	(0.19)	\$	(12.62)	\$	(2.56)	\$	10.24	
SMIRR	\$	0.06	\$	4.05	\$	0.14	\$	3.37	
Total	\$	(0.13)	\$	(8.57)	\$	(2.42)	\$	13.61	

b) Table VECC 5-5 below summarizes the bill impacts as filed and those resulting from the rate riders determined in the responses to VECC IRs 3, 4 and 5.

Table VECC 5-5: Bill Impact Summary

	F	Per Applic	cation		P	er VECC I	IR# 5	
	Residential		GS< 50		Residential		GS< 50	
	\$	%	\$	%	\$	%	\$	%
PowerStream South	\$ (0.13)	(0.1)%	\$(8.72)	(3.4)%	\$ (2.46)	(2.4)%	\$ 13.84	5.5%
PowerStream North	\$ 2.27	2.0%	\$ 7.44	2.8%	\$ 2.01	1.8%	\$ 11.38	4.4%

The bill impacts in Table VECC 5-5 are based on:

- a typical Residential customer using 800 kWhs of electricity per month
- a typical GS<50 kW customer using 2,000 kWhs of electricity per month

See Appendix 5 for the detailed North rate zone bill impact calculations and Appendix 6 for the detailed South rate zone bill impact calculations.

2011 Smart Meter Cost Recovery Application
Responses to VECC IRs
Page 12 of 25
Filed: September 9, 2011

VECC Question #6

References: PowerStream Smart Meter Cost Recovery Application, Page 21 Table 4 & Page 35 Table 16, OM&A Costs

- a) Table 4 on Page 21 and Table 16 on Page 35 show a breakdown of 2010-2011 OM&A Costs for the North rate zone and South rate zone, respectively. Please provide a detailed explanation of each of the categories listed: AMI Systems Operation, Maintenance, Customer Communication, and Change Management.
- b) For the North rate zone, please provide a breakdown of the OM&A costs for meters installed in 2008, 2009, 2009 and 2011 by customer class.
- c) For the South rate zone, please provide a breakdown of the OM&A costs for meters installed in 2010 and 2011 by customer class.

Response:

a) AMI Systems Operation consists of the monthly system operation and monitoring fees associated with the AMI system and associated costs to process and send the data to the MDM/R including dealing with exceptions and validation issues that arise.

Maintenance consists of the cost to check and replace smart meters that are not operating properly. This also includes costs for repairs to customer owned equipment like Murray Jensen meter bases and the remedial work required in some circumstances to permit installation of a smart meter. See PowerStream's response to Board Staff IR# 1 for more details on the remedial work.

Customer Communications consists of the cost of producing and delivering materials to inform customers regarding the installation of a smart meter, changeover to time-of-use billing and general information on smart meters. It also contains call centre costs related to smart meter inquires from customers.

Change Management consists of staff training on new processes and procedures regarding smart meters and time-of-use billing as well as the costs of identifying and documenting the necessary changes.

PowerStream does not track OM&A costs by customer class. To provide this response PowerStream has allocated the period costs to the customer classes based on the average number of meters installed during the period. Tables VECC 6-1 to VECC 6-5 below show the allocation of the OM&A costs, in Table 4 of the Application, between customer classes for the North rate zone for meters installed in 2008, 2009, 2010 and 2011.

Table VECC 6-1: Allocation of 2010 Actual OM&A (North)

2011 Smart Meter Cost Recovery Application
Responses to VECC IRs
Page 16 of 25
Filed: September 9, 2011

VECC Question #7

Reference: PowerStream Smart Meter Cost Recovery Application, Page 12

Preamble: The evidence states, "Due to delays in availability of approved 3-phase smart meters, PowerStream was unable to complete the planned installations for the GS<50 kW class in 2010.

Please explain the cause of the delays in availability of 3-phase meters and when the delay ended.

Response:

When PowerStream started smart meter deployment for the GS<50 kW customer class in 2009, there was only one vendor with a Measurement Canada approved 3-phase smart meter. This was not the vendor that PowerStream was using for its single phase smart meter installations. With a single supplier the pricing was not as competitive as for single phase meters and supply was limited. PowerStream acquired some of these approved meters so that it could begin this aspect of the smart meter implementation to remain on schedule with the target completion dates sought by the Provincial Government.

PowerStream continued to work with its primary smart meter vendor to have an alternative approved 3-phase smart meter at a more competitive price. In the fall of 2010, Sensus was successful in getting a General Electric (GE) meter with a Sensus module approved by Measurement Canada. PowerStream was able to obtain more favourable pricing for these meters and placed orders for the 3-phase meters required to complete the replacement of conventional 3-phase meters for GS<50 kW customers. The supplier was able to provide shipments in December 2010.

As a result of these factors, PowerStream was unable to complete the 3-phase installations by December 31, 2010 as originally planned. However it was able to substantially complete the installations by April 30, 2011 and at a lower cost by using the GE/Sensus meters.

VECC Question #8

Reference: PowerStream Smart Meter Cost Recovery Application, Page 15

Preamble: Approximately 2% of residential installations required more expensive smart meters. These installations were for larger 400 amp services and for installations where there was a need for a meter with enhanced communication capabilities.

- a) Please provide a description of the more expensive residential smart meters.
- b) Please provide the total number of meters installed by year.
- c) Please describe the situation where a residential installation would require enhanced communication capabilities.

Response:

- a) There are two other meters used for Residential customers where required by the type of electrical service. One is a transformer rated single phase meter required for Residential customers with 400 amp service. This meter is designed to handle the higher electrical load in a residential unit with 400 amp service. The other meter is the network (or two-phase) meter required for multi-unit residential buildings which use two phases of the three phase electrical supply.
- b) PowerStream has not aggregated this data by year. Most of the installations were done in the later stages of the smart meter implementation program (2009 to present) and are included in this Application. Table VECC 8-1 summarizes the types of meters installed for Residential customers.

Table VECC 8-1: Residential Meters Installed by Type

	North	South	Total
Single Phase standard	62,621	215,961	278,582
Single Phase 400 amp	518	1,020	1,538
2-Phase ("network")	1,060	4,525	5,585
Total	64,199	221,506	285,705

c) This was an error in the original explanation. Network meters are not used for enhancing communications but are in fact used for multi-unit residential buildings using two phases of the three phase electrical supply and which require twophase meters. Most of the smart meters installed by PowerStream are capable of being run in "buddy" mode if needed to help other meters communicate with the radio tower collectors.

Page 18 of 25
Filed: September 9, 2011

VECC Question #9

Reference: PowerStream Smart Meter Cost Recovery Application, Page 19 Table 2 & Page 33 Table 14

Preamble: Table 2 and Table 14 provide a comparison of 2010 estimated to actual capital costs for the North rate zone and South rate zone, respectively. For the north and south rate zones, the actual capital costs for programming of billing systems was higher than estimated spending to meet the many changes to the requirements from the Provincial MDM/R.

PowerStream indicates it has accrued \$200,000 for programming of its billing systems to meet new billing requirements and of this amount \$45,000 has been allocated in the North rate zone (Page 18) and \$155,000 has been allocated to the South rate zone (Page 32) based on the total number of smart meters installed in each zone.

Please provide a breakdown of Customer Billing Costs by customer class for each rate zone.

Response:

Table VECC 9-1 shows the total cost of programming changes related to the AMI to CIS processes and time-of-use billing. These costs are similar for all meter and customer types and the asset provides an equal benefit to each. These have been allocated between rate zones based on the total number of mandated customers receiving smart meters in each rate zone. These costs have been allocated within each rate zone between the Residential and GS<50 kW customer classes based on the total number of mandated customers receiving smart meters in each class.

Table VECC 9-1: AMI to CIS Programming Costs by Rate Zone and Customer Class

		Nor	th			So	Total		
	R	esidential	GS	S<50 kW	R	esidential	G	S<50 kW	Total
AMI to CIS Programming Costs	\$	367,954	\$	30,479	\$	1,269,938	\$	118,322	\$1,786,693
Less previously approved	\$	-	\$	-	\$	689,468	\$	64,239	\$ 753,707
Claimed in this Application	\$	367,954	\$	30,479	\$	580,470	\$	54,083	\$1,032,986

Page 19 of 25
Filed: September 9, 2011

VECC Question #10

Reference: PowerStream Smart Meter Cost Recovery Application, Page 11, Provincial Meter Data Management and Repository (MDM/R)

Preamble: PowerStream has not included any amounts in the actual or projected costs for charges for use of the Provincial MDM/R. PowerStream anticipates being permitted to recover these costs at a later date. PowerStream estimated the 2010 MDM/R costs for the South rate zone at \$441,000 (Page 34).

Please provide the actual and projected cost information for the MDM/R charges for each rate zone by year.

Response:

PowerStream has not received any charges to date for use of the Provincial MDM/R. The actual and projected costs in this application do not contain any amounts for the use of the Provincial MDM/R.

In its Decision on PowerStream's 2010 Smart Meter Cost Recovery Application (EB-2010-0209, page 9), the Board noted the following about MDM/R costs.

No distributors have been billed for services related to MDM/R by the IESO. At this point in time these costs could not be accurately estimated by the distributor. The Board further notes that the time period for which the IESO might bill PowerStream for MDM/R related costs is yet unknown.

This statement remains true and PowerStream is not able to accurately project what these costs may be. The MDM/R estimate used in the 2010 Smart Meter cost recovery application was based on a per meter monthly amount based on MDM/R working group discussions at that time. It now appears that this was a very preliminary estimate and no reliance should be placed on this.

VECC Question #11

Reference: PowerStream Smart Meter Cost Recovery Application, Page 20, Table 3

Preamble: Table 3 provides a comparison of Estimated to Actual OM&A Costs (North). PowerStream indicates that the favourable variance in the AMI operational costs is mainly due to lower pricing for monthly system monitoring than was available at the time the estimate was prepared.

- a) Please provide details on the change in monthly system monitoring costs.
- b) Please provide more details on the need for more effort and cost related to the start of TOU billing.

Response:

- a) PowerStream negotiated a lower monthly monitoring cost per meter for any meters in excess of 120,000 meters. The actual AMI operational costs reflect the resulting lower average monthly monitoring cost per meter.
- b) The estimate used in the 2010 Smart Meter adder filed in 2009 was somewhat preliminary as the Time-of-use (TOU) billing communications plan was still in development. Based on the public reaction to the introduction of TOU billing by other utilities, PowerStream felt that it was necessary to do a very good job on communicating about TOU billing.

PowerStream has provided several communications to customers regarding time-of-use billing, its likely impact on the customer's bill and steps that can be taken to reduce bills. This has included providing time-of-use stickers that indicate the on-peak, mid-peak and off-peak time periods.

This higher than planned cost of customer communications has proved to be effective, resulting in lower than planned call centre costs related to smart meters. These lower smart meter call centre costs are reflected in the lower costs projected for 2012 used to calculate the smart meter incremental revenue requirement (SMIRR) rate rider.

The results from PowerStream's annual customer survey attest to the effectiveness of its communications regarding smart meters and TOU billing showing that its customers had a good understanding of these subjects and the time-of-use pricing structure.

The complete smart meter communications, from notification of a smart meter to be installed through to the transition to TOU billing along with potential bill impacts and tips for reducing bills by taking positive steps to utilize the TOU pricing structure, cost less than \$5 per customer.

VECC Question #12

Reference: PowerStream Smart Meter Cost Recovery Application, Page 21 Table 4 & Page 35 Table 16

Preamble: Tables 4 and 16 provide the 2010 actual and 2011 actual (unaudited) and 2011 projected OM&A costs for each rate zone.

Please provide the detailed calculation for the last three columns of each Table.

Response:

i.) "May 1 to Dec. 31, 2011 (Projected)" column:

This column is generally a pro-ration based on the "Jan. 1 to Apr. 30, 2011 (Actual)" column. The projected cost is 8 months based on twice the four months actual cost in 2011 with adjustments for expected differences in the level of costs between the periods as discussed below.

Re: Table 4 OM&A North rate zone:

AMI System operation for the first four months of 2011 had gross costs of \$95,000 less meter reading savings of \$65,849 for a net cost of \$29,151. AMI costs are expected to continue at the same level but there will be some additional meter reading savings in the remaining eight months of 2011 as more meters are installed. Projected costs for the remaining eight months of 2011 are gross costs of \$190,000 less meter reading savings of \$136,010 for a net cost of \$53,990.

Maintenance had no actual costs booked for the first four months of 2011. There are projected costs in the remaining eight months of 2011 of \$145,000 for remedial work on customer premises to allow installation of a smart meter. See the response to Board Staff IR#1 for more details regarding the remedial work.

Customer communications cost for the first four months of 2011 consist of call centre costs of \$8,823 and other communication costs of \$103,204 for a total of \$112,028. Other communication costs relate mainly to the cost of producing and distributing information to customers regarding smart meters and time-of-use billing. Call centre costs are expected to remain at a similar level. Other communication costs will decline as the smart meter implementation program nears completion and most customers have received the necessary information regarding their smart meter and change to time-of-use billing. Projected costs for the remaining eight months of 2011 are \$17,600 for call centre and \$27,875 for other communication costs related to time-of-use billing and remaining installations (refusals or remedial work required) for a total of \$45,475.

EB-2011-0128
PowerStream Inc.
2011 Smart Meter Cost Recovery Application
Responses to VECC IRs
Page 22 of 25
Filed: September 9, 2011

Change management costs booked for the first four months of 2011 were \$7,168 for staff training and process redesign. These costs are expected to continue at a similar level. Projected costs for the remaining eight months of 2011 are \$14,300.

Re: Table 16 OM&A South rate zone:

AMI System operation for the first four months of 2011 had gross costs of \$26,757 less meter reading savings of \$8,844 for a net cost of \$17,913. AMI costs are expected to continue at the same level but there will be some additional meter reading savings in the remaining eight months of 2011 as more smart meters are installed. Projected costs for the remaining eight months of 2011 are gross costs of \$53,514 less meter reading savings of \$27,982 for a net cost of \$25,532.

Maintenance had actual costs of \$12,640 for the first four months of 2011 less \$4,467 already in rates for a net cost of \$8,173. This level of expense is expected to continue. There are projected costs in the remaining eight months of 2011 of \$25,300 for similar work to that carried out in the first four months of 2011, and \$355,000 for remedial work on customer premises to allow installation of a smart meter, less \$8,934 already in rates for a net total of \$371,366. Please see PowerStream's response to Board Staff IR#1 for more details.

Customer communications costs for the first four months of 2011 consist of call centre costs of \$67,955 and other communication costs of \$161,427 less \$77,000 already in rates for a net total of \$152,382. Call centre costs are expected to remain at a similar level. Other communication costs will decline for the reasons discussed above in relation to the North rate zone. Projected costs for the remaining eight months of 2011 are \$135,900 for call centre and \$97,125 for other communication costs related to time-of-use billing and remaining installations (refusals or remedial work required) less \$154,000 already in rates for a net total of \$79,025.

Change management costs booked for the first four months of 2011 were \$24,975 for staff training and process redesign less \$37,333 already in rates for a net cost of \$(12,358). These costs are expected to continue at a similar level. Projected costs for the remaining eight months of 2011 are \$49,900 less \$74,666 already in rates for a net cost of \$(24,766).

ii.) "Projected 2011 Total" column:

This column is simply the addition of the "Jan. 1 to Apr. 30, 2011 (Actual)" column amount and the "May 1 to Dec. 31, 2011 (Projected)" column amount.

EB-2011-0128

2011 Smart Meter Cost Recovery Application
Responses to VECC IRs
Page 23 of 25
Filed: September 9, 2011

iii.) "Adjusted 2011" column:

This column is based on the "Projected 2011 Total" column with some adjustments for expected differences in the level of costs between 2011 and future years. Please see also PowerStream's response to Board Staff IR#5.

Re: Table 4 OM&A North rate zone:

AMI System operation gross cost for future years is the same as projected 2011 of \$285,000 less a full year of meter reading savings of \$204,015 for a net cost of \$80,985.

Maintenance costs have been adjusted from projected 2011 costs by removing the one time costs of \$145,000 for remedial work and adding a projected \$10,000 for maintenance of the 69,383 installed smart meters.

Customer communications have been adjusted from the projected 2011 costs by removing the other communications costs of \$131,000 and keeping the call centre costs of \$26,243.

Change management costs are expected to continue at the same level for 2012.

Re: Table 16 OM&A South rate zone:

AMI System operation gross cost for future years is the same as projected 2011 cost of \$80,272 less a full year of meter reading savings of \$41,973 for a net cost of \$38,299.

Maintenance costs have been adjusted from projected 2011 costs by removing the one time costs of \$355,000 for remedial work, replacing the other maintenance amount of \$37,940 with a projected \$40,000 and deducting the \$13,400 already in rates for a net cost of \$26,600.

Customer communications have been adjusted from the projected 2011 costs by removing the other communications costs of \$258,552, keeping the call centre costs of \$203,855 and deducting the amount of \$231,000 already in rates for a net cost of \$(27,145). This is negative since the ongoing costs of \$203,855 are less than the amounts already approved in rates.

Change management costs are expected to continue at the same level for 2012 less the amount already in rates.

PowerStream Inc.
2011 Smart Meter Cost Recovery Application
Responses to VECC IRs
Page 24 of 25
Filed: September 9, 2011

VECC Question #13

Reference: PowerStream Smart Meter Cost Recovery Application, Page 23

Preamble: PowerStream is not seeking disposition of its stranded meter costs at this time. The net book value of the stranded conventional meters was \$3.4 million at April 30, 2011. Proceeds on the stranded meters are captured in account 1555 as an offset to the costs in the deferral account.

Please provide the calculation of the proceeds captured in account 1555.

Response:

PowerStream has recorded a credit of \$85,026 in account 1555 for proceeds on disposition of scrapped meters due to smart meters. The amount paid is for the scrap value of the metal in the meter, which varies over time. Table VECC 13-1 shows the total number of scrapped meters and the average price received for meters scrapped in 2010. With fluctuations in metal prices, the actual proceeds received over time are somewhat higher.

Table VECC 13-1: Estimated Proceeds on Scrapped Meters

	Quantity	erage rice	Proceeds			
Single Phase Meters	263,680	\$ 0.14	\$	36,915		
3-phase meters	20,083	\$ 0.59	\$	11,849		
Total	283.763		\$	48.764		

VECC Question #14

Reference: PowerStream Smart Meter Cost Recovery Application, Page 33

Preamble: The 2010 Smart Meter Funding adder did not contain any estimated costs for program management, consulting and professional fees for contracts, which was an oversight in calculating the adder.

Please provide a breakdown of these costs by customer class.

Response:

Table VECC 14-1 shows the breakdown of these capital costs by customer class.

Table VECC 14-1: Smart Meter Capital Costs by Customer Class (South)

Description	R	esidential	G	Total	
Professional Fees	\$	(5,101)	\$	(475)	\$ (5,576)
Integration	\$	95,115	\$	8,862	\$ 103,977
Program Management	\$	107,971	\$	10,060	\$ 118,031

These costs have been allocated to the customer classes based on the total smart meters to be installed. Please see the response to Board Staff IR#4 for a discussion of the allocation of shared costs.
