(2) Exhibit B1, Tab 9, pg 2

Preamble: Union states that "Historically, there have been a number of days during the summer months where gas is imported at Parkway from the TCPL system to fill storage at Dawn or to be exported at Kirkwall. Over the past two years, imports at Parkway from the TCPL system have diminished resulting in a fundamental shift to year-round exports through the Parkway compression as shown in Schedule 2. Year-round exports through the Parkway compression have impacted the ability

to schedule maintenance activities for the Parkway A Unit and Parkway B Unit as well as the associated facilities.”

TransCanada wishes to better understand the nature of these deliveries and the fundamental shift to year round exports.

- Request:
- a) In an Excel spreadsheet, please provide the data used to plot the graph in reference (1).
 - b) In an Excel spreadsheet, please provide the daily scheduled quantity for delivery through Parkway compression by service class. Please provide both the scheduled receipts as well as deliveries. If the sum of the receipts and deliveries do not equate to the net flow, please explain why.
 - c) In a format similar to the graph in reference (1), please provide the flow through the Parkway / Lisgar metering facility. Please also provide the data in Excel format, by service class.
