

I do not believe that there should be an additional administrators charge for a meter that was really not required for the end user but only wanted by the hydro distributor in effort to capture additional costs for time of day usage for power consumed.

There are controls applied to prevent to cost of power from just rising but there are however no controls to prevent the addition of another line for office use and or the rate changes for that billing tag.

It is ridiculous to see my hydro bill and see that I pay more for office tags on the bill than the actual power I consumed.

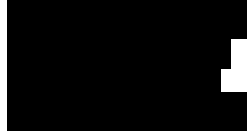

The rates for power consumed is controlled and that is the message everyone presents and the rates everyone talks about freezing or not.

But the admin costs and debt retirement costs seem to make the whole thing funny and makes a person wonder who thought of this method of fooling the public sector to make use thing our hydro bills will not go up.

The new fee being introduced was not told when people were told they had no choice in metering so this is just another method of robbing us of our hard earned money.

Next we will be billed for the current un-measurable power that we are putting back on the grid on a fee tag for disposable of some kind.
