TO ADVISE PERCENTAGE OF TIME INTERTIES ARE FULL DURING SBG HOURS

4

Response

5 Surplus baseload generation (SBG) is defined as baseload generation that is in excess of
6 Ontario demand and exports. In 2012, there were 435 hours of SBG. There were no
7 instances during these SBG hours when all the interties were congested at the same time.
8 There were 260 hours (or approximately 60% of the time) during SBG hours when no
9 interties were congested; there were 175 hours (approximately 40% of the time) during SBG
10 hours when at least one intertie was congested.
