Has the Applicant discussed its plan for overhead lines through wetlands with the administrators of the program? If the activities associated with the construction and maintenance of the overhead lines jeopardizes the affected lands, with penalties for non compliance, has the Applicant fully informed the landowner of the possible implications.

Question

the Conservation Land Tax Incentive Program (CLTIIP) policy, in accordance with Ontario Regulation 282/98 under the Assessment Act 2001 establishes the framework to evaluate where lands and land use activities are permitted under the CLTIIP. Most owners of wet lands in the area have been invited to participate in the program. Participation in the program includes a signed declaration not to undertake activities that will degrade, destroy or result in the loss of the natural values of the site

1. Preamble - Change 5: Overhead line through wetlands features.

Forsey Lyster submits the following additional information to the Applicant Jeffrey Wind Power Inc.

2013-04-10

In the matter of an application by Jeffrey Wind Power Inc. for an order granting leave to construct a transmission line and associated facilities.

EB-2012-0365

Has the Applicant any specific information indicating that County has modified its position in respect of locating a line through the Town of Shulbourn in response to the possible extension of the underground line as set out in change 6?

Question.

At its meeting on February 7, 2013, Dufferin County Council passed a motion that included the following position:

- That the Provincial approval authority be advised that the County of Dufferin request that any transmission lines, if approved be located underground and not located in the Town of Shulbourn.

2.1 Preamble - Change 6. Extend the underground system of line through Shulbourn

3. Item 5 - Change 5: Overhead lines through wetland features

As stated, DWP originally planned "to HDD under all potentially significant wetland features." This was the message to the community. The move to overhead lines, although not affecting the acre, does represent a significant change in the facilities to be built. Such changes are material not only to the landowner hosting the line, but also and equally to the adjacent landowners.

It is noted that this change of plans was not mentioned in DWP's March 2013 Project Information Guide nor in its April flyer.

Question

Will DWP undertake to inform all affected public of this significant change in plans?
