**Subject:** RED ALERT ON STATION ROAD IN WAINFLEET!

It must be called to your immediate attention that Station Road in Wainfleet is our main thoroughfare from Lakeshore Road which facilitates our ability to travel to work, schools, shopping and recreation. While the developer may be able to just squeak by with a 550 metre setback allowance there other concerns which must be addressed. There is much activity on Station Road with bicycles, skateboarders, people walking, dog walkers, nature and wildlife explorers all on a daily basis. There is a park and a cemetery located directly across the road from these Vestas V100-18. megawatt IWT's which are more the more bigger and powerful IWT'S. Most certainly there will eventually be some sort of calamity resulting from this ill fated project. These two (2) projected IWT's for Station Road will be encased by surrounding homes, our front yards, our back yards, a backyard swimming pool, our pets, our vehicles etc. What about the 150 mm thick ice that forms on the blades and flips off at 170 mph reaching distances of up to 550 metres away? Do you think we want to sign up for that? In particular, the projected site for Station Road must be stopped at all costs. There are going to be numerous health effects from the electromagnetic radiation in such a small confined area. This is just a large field in the middle of a community. This is not a great expansive area we are talking about. It is of the utmost importance that the road and the homes which we travel each day is protected from harms way. It is vital to get someone down here and see what we are trying to tell you. This is not a good idea. Give your heads a shake. This whole idea is a bad idea! Hear our outcry. Help us PLEASE!
