Ontario Energy Board
P. O. Box 2319
Toronto, ONM4P 1E4

Attention: Susi Vogt, Case Administrator

Re: Board File No. EB-2013-0031
Procedural Order No. 1

Dear Ms. Vogt:

Thank you for your letter dated April 26, 2013 pertaining to Wainfleet Wind Energy Inc. ("Wainfleet Wind") application dated February 4, 2013 under subsection 41 (9) of the Electricity Act for orders of the Board establishing the location of Wainfleet Wind's proposed distribution facilities ("Distribution System") within road allowances owned by the Township of Wainfleet (the "Township").

Having consulted with an elected official from the Wainfleet Town Council was subsequently notified that they would not be submitting an application for a formal standing as an Intervener due to litigious implications, having already been taken to court in regards to the 2 km setback allowance for industrial wind turbines. The town of Wainfleet is chronically disadvantaged at every turn. These wind developers have unlimited resources at their disposal together with the backing of the Liberal governance. It is for this reason that our citizen based coalition was formed so that we may be allowed to partake in an open forum in which local efforts for inclusion and empowerment could be facilitated.

The Board finds that the concerns of the people of Wainfleet fall outside the scope of the Board's jurisdiction and we have subsequently been denied access to an oral hearing through intervener status.

In the Canadian Charter of Rights and Freedoms, whereas Canada is founded upon principles that recognize the supremacy of our God given inalienable rights

which should preclude any “man-made acts” sustained through a “formed dictatorship”.

“The Democratic process works best. This is not just a matter of social philosophy. Notwithstanding, a platform put in place by a government which has no interest in practicing fiscal restraint and who uses their position of influence to affect change and to determine the governance structures of Ontario with blatant disregard for the rank or territory of an electorate” may result in anarchism.

“This importunity of adversity forced upon the electorate and the never- say- die attitude of the Liberal government will not be sustained due to the social dissatisfaction and the unbridgeable gap” created by the newly formed Liberal “dictatorship” otherwise known as the Green Energy Act. This “act” has effectively eliminated any local representation through the democratic process.

The former Premier McGuinty was able to buy his votes through the elite social class and together they have formed a union allowing them to come into our communities and turn rural Ontario upside down. Premier McGuinty has failed this Province with his Green Energy Act and his successor or shall we say his new “surrogate”, Premier Kathleen Wynne carries on his indelible legacy.

It is a contradiction of fiscal sanity together with incompetence anyone who would approve the Station Road site to erect (2) clustered Vestas V100 – 1.8 megawatt IWT’S. The two (2) IWT’s projected installations for the Station Road site lies directly within the corridor of Niagara Falls. Our current system is most cost effective and we would not benefit economically from a system outside the corridor of the Niagara Falls power authority. Once again, I repeat, there is no practicable argument which would support the two (2) projected IWT’s to be built at the Station Road projected site. This proposed project is wasteful and a redundant form of energy we simply do not need here in Wainfleet.

Ostensibly, the Vestas V100 – 1.8 megawatt IWT proposed installations projected for the Station Road site in Wainfleet are to be clustered in two (2) and are to be precariously perched on the edge of a small community. In particular, anyone who looks at all the facts would clearly see this project as an “unbridled initiative”.

The Station Road site in Wainfleet in particular needs to be reviewed with extreme caution as this site presents many liability issues. The Station Road site of two (2) clustered Vestas V100 – 1.8 megawatt IWT's presents with numerous concerns within its perimeter. Furthermore, this project is not going to benefit the people of Wainfleet in any way economically.

On one side of the proposed project site is our "Station Road" which is too close and dangerous to these proposed IWT installations.

On the other side of the proposed project site is an airport consisting of the Burnaby Sky Dive which has been an icon, a staple of our community for 40 + years. The parachute club was here first and obviously are a number of safety concerns should a pair of two (2) clustered IWT installations were to be allowed onto the proposed Station Road site. These two installations projected for the Station Road site have the potential to cause injurious harm and possibly even death. This is not a risk that we are willing to take. The specific IWT installations projected for the Station Road site must not be allowed to go forward!

Further, Station Road is our direct thoroughfare from Lakeshore Road which facilitates our ability to travel to work, schools, hospitals, shopping, recreation, etc. While this proposed installation may squeak by with a 550 metre setback allowance from family homes what about the setback allowance from the heavily travelled road which we have come to depend on daily?

Station Road also presents with other serious issues. There is much activity on Station Road. We have bicyclists, skateboarders, people walking, picnicking, dog walkers, hikers, nature and wildlife explorers.

In the summer, we are inundated with numerous tourists coming into the area to use the Conservation Parks located on Lakeshore Road, bringing in their RV's, campers, Boats, Jetski's, motorcyclists, ATV's, beach goers, kite flyers, remote controlled airplanes and loads of children coming into the area on a daily basis. All the above aforementioned will be travelling on Station Road in order to gain access to Lakeshore Road. Station Road also has a park and a cemetery together with a nature trail where numerous dog walkers, nature seekers and bird watchers can be seen daily. There are runners, marathons, bicycle races and fund

raisers for “muscular dystrophy” held on Station Road directly adjacent to the proposed two (2) IWT installations.

These two (2) proposed IWT’s are projected to be clustered onto a large field adjacent to Station Road will also be encased by surrounding homes. Our front yards, our backyards, a backyard swimming pool, our pets, our vehicles etc. In winter, the ice which can accumulate to 150 mm thick that forms on the blades and can potentially flip off at speeds of 170 mph reaching an impact distance of up to 550 metres. Think about the potential implications here for a minute. Due to these “falling ice warnings” do we really want to divert the “ambulance driver” to “go around the long way” in order to gain access onto Lakeshore Road and do we want the ambulance driver to set forth to the hospital “the long way around” in an attempt to get the “patient” to the hospital? This is just another “liability factor” to consider when it comes to, in particular, the specific Industrial Wind Turbine projected site adjacent our Station Road in Wainfleet.

This is not a good idea people. Give your heads a shake! This whole idea is a bad idea. In my opinion, any genuine feasibility study would support that the economics for the project is not even borderline.

We have formed coalition of 425 Wainfleet residents, who do hereby submit to you that the IWT application be denied, in particular for the proposed Station Road site where it is the intention of the developer to cluster two (2) Vestas V100 – 1.8 MW. It is therefore our contention that due to the overwhelming evidence which supports our claim that the best interests of our territorial entity, being the jurisdiction of Wainfleet with particular attention noted with regards to the proposed Station Road site is not in accordance with the people’s rights and that a project of this magnitude should not be allowed to go forward in such an unstable environment which is subject to too many liabilities.

For the record, this 30th day of April 2013

Thankyou,
Katherine Pilon
