# Cost Allocation Model Sensitivity to Changes in Inputs Unmetered Loads 

Overview

- Background
- Key Inputs in the as-filed model
- Key Outputs in the as-filed model
- Scenarios

## Background

- Costs are Functionalized at the Trial Balance level
- Within this assets are functionalized as providing bulk, primary or secondary service
- Each Trial Balance account has been assigned an allocator or pair of allocators
- Coincident Peak (CP)
- Non-Coincident Peak (NCP)
- Customer Count
- Connection Count
- Weighted Connection Count
- Composite Allocators
- Operating and Maintenance (O\&M)
- Net Fixed Assets (NFA)

## Input - Connection Counts
