This is my Letter of Comment and Observer Request:

I am very much OPPOSED to the proposed industrial wind turbines that are planned for West Grey.

Having attended most of the meetings concerning these turbines, and several presentations, I have come to the conclusion that the driving force behind this project is not saving the environment, but it is making money, and that the only people in favour of this project are people who will be making money from it.

I have also come to believe that virtually every other thinking person (i.e., everyone not making money) wishes he/she had never heard of them!

Do we in Ontario not have enough non-usable land where they could be erected?

Why do we need them at all, since it seems we are already generating excess power which has to be sent to the U.S. (at a financial loss to us)?

The list of questions seems endless, and I have not yet heard a real answer to any of them. There is no purpose to be served by listing them again - I am sure those with the power must have by now committed them to memory (If they have even listened to them!).

The complaints and concerns have been heard and denied ad infinitum, so I'll not list them again. They are all denied or ignored, and I do not believe that my listing them will make any difference.

Has anyone actually spent time - I don't mean a few hours - in a few of those homes where people say they have been made ill, or their livestock have suffered ill effects?

Why has it been necessary for a "gag order" to be issued with out-of-court settlements? It seems to me that where there is no guilt or responsibility there would be no settlement - ?

I repeat - only those who stand to gain financially, and do not really care about the environment

want these  
things; the rest of us definitely do not.

Mrs. A. Howard
