To the Ontario Energy Board,

Dear Board Members,

Please do not allow this application. The members of this community have vehemently voiced their opposition to this project since 2009. We are not a willing host community and this is not an industrial area. We are rural residential Canadian tax payers who expect our rights to come before those of an American corporation.

Our dealing with this company to date have demonstrated that they are not honest. The municipality of West Grey had requested proof of insurance from this company. They presented us with a blank document, and expected us to accept that as a surety!
I don't think they expected us to actually read it. It is my understanding that to date, they have failed to provide any proof of insurance for this project.

As a property owner and member of this municipality, I do not wish to be left "on the hook" for any problems that are created by this company. Since they are based out of Florida, there would be no recourse for either the municipality or the taxpayer should they decide to abandon any mess they create.
