Re. Intervenor application
Board File No. EB-2013-0321

I am writing pursuant to the Board's Notice of Application and Hearing regarding the above proceeding to request intervenor status.

Sustainability-Journal.ca's Interest

Sustainability-Journal.ca is an unincorporated, not-for-profit electronic journal that investigates the means of achieving long term environmental sustainability in the energy sector, including the supply of energy in both electric and thermal forms. The use of these two forms of energy is highly interactive but the administrative and regulatory practices have followed separate and frequently divergent paths, resulting in choices that are damaging to the environment and that are excessively expensive to consumers, especially for electric power. The Ontario Energy Board is one of the very few agencies that does not limit its involvement to just one of these two interactive sides of the same problem - the supply of energy to consumers - so I believe that it would be appropriate and timely to explain how a single integrated solution would serve both purposes better.

Costs

If the hearings are not to be held in Ottawa then I would respectfully request that consideration be given to the award of travel costs in this matter.

Notice

Please serve all correspondence pertaining to this proceeding to:

Mr. Ron Tolmie
Editor, Sustainability-Journal.ca
