Dear Ms. Walli:

RE: EB-2013-0111

On March 7th, 2014 OEB brought to Atikokan Hydro's attention that our tariff sheet effective date May 1, 2013 had an error.

The Transmission and Connection rates were transposed from the 2013 IRM EB-2012-0105 RTSR model for our GS>50 and GS>50 Interval meter customers. This effects 18 of our customers.

We have reviewed the error, comparing what was charged versus the correct charges according to the RTSR model with the final OEB approved January 1, 2013 Transmission rates.

Atikokan GS >50 customers (17) were over charged \$18,030.45 and GS>50 Interval customer (1) under charged \$2,138.24. The discrepancy nets to an over collection of \$15,892.21 from Atikokan customers. This calculation is from tariff effective date May 1, 2013 inclusive to our latest billing of February, 2014.

Atikokan requests the IRM 2014 process address the discrepancy through Rate Generator Model on the Continuity Schedule. The variances on Sales vs Costs are registered in the RSVA accounts (1584) Transmission and (1586) Transmission Connection.

Yours sincerely,

Cheryl Marusyk
Atikokan Hydro Inc.
