**Subject:** Enbridge Gas Distribution

I would like to have you explain how it is that you came to the increase of \$400.00 per year for Enbridge Gas. I see no reason for this to go through even if you do so please explain it to me. The reason I see no reason for this is simple last year we had a very warm winter and gas was abundant and yet I did not see or get a \$400.00 decrease in my gas bill nor did any one else. But now we have a cold winter and Enbridge comes crying to you about we have no cheap gas left and we need to buy more so we need to get more money. You need to start looking into who you are hurting by doing things like this. The more people try to conserve energy the more you kick us down. Lets take a look at the profits of these companies on April 3 2009 the stock price was \$18.30 and today it is \$50.03 so once again show me where they are hurting now go out into the public and ask them who you are hurting by doing this increase, them that is who. If you can not see this then you are not doing your job. Just remember unless you get your gas for free and your kids and family get their gas for free you are screwing them too.

If this is not the right place to be sending this to I am sorry and would you please pass this on to the right place

Thank you

David Curzon
