Dear Ms. Walli:

Re: EB-2012-0459 – Enbridge Gas Distribution Inc. (EGD) 2014-2018 Customized IR Application

Industrial Gas Users Association (IGUA) - Supplemental Written Submissions to IGUA's Final Argument

Further to IGUA's Final Argument that was filed with the Board on April 22, 2014, we write to note one issue that was not addressed in IGUA's Final Argument.

In this Application, EGD has filed evidence that proposes changes to the minimum load factor for qualification for service under Rate 110: Large Volume Load Factor Service [ExH-1/T2/S3]. The only argument filed to date which noted this proposal was Energy Probe's. Energy Probe took no position on the proposal.

IGUA members have recently advised us that they support this proposal, and we write to note that support for the reasons outlined by EGD.

We apologize for this late submission.

Yours truly,

Mark Crane
MC/ev
