Re: Issues - Priorities List

In Procedural Order No. 7 the Board commented that the Issues List should include the subject of storage, in part because "including energy storage on the issues list may further the exploration and understanding on that issue". Some of the relevant technologies are new so the Board and Intervenors should be given the opportunity to ask questions about these new technologies at the hearing. Written exchanges would not be suitable for such explanations, particularly as they offer the potential for quickly reversing the general trend towards higher electricity prices in Ontario.

The Issue in question is Issue 5.1(a)
