Cost Allocation Study

2

3

1

Introduction:

- 4 On September 29, 2006, the OEB issued its directions on Cost Allocation Methodology for
- 5 Electricity Distributors (the "Directions"). On November 15, 2006, the Board issued the Cost
- 6 Allocation Information Filing Guidelines for Electricity Distributors ("the Guidelines"), the Cost
- 7 Allocation Model (the "Model") and User Instructions (the "Instructions") for the Model. Festival
- 8 Hydro prepared a cost allocation information filing consistent with Festival Hydro's
- 9 understanding of the Directions, the Guidelines, the Model and the Instructions. Festival Hydro
- submitted this filing to the OEB on February 28, 2007.
- 11 One of the main objectives of this filing was to provide information on any apparent cross-
- 12 subsidization among a distributor's rate classifications. It was felt that this would give an
- 13 indication of cross-subsidization from one class to another and this information would be useful
- 14 as a tool in future rate applications.
- As noted above, the results of a cost allocation study are typically presented in the form of
- 16 revenue to cost ratios. The ratio is shown by rate classification and is the percentage of
- 17 distribution revenue collected by rate classification compared to the costs allocated to the
- 18 classification. The percentage identifies the rate classifications that are being subsidized and
- 19 those that are over-contributing. A percentage of less than 100% means the rate classification
- 20 is under-contributing and is being subsidized by other classes of customers. A percentage of
- 21 greater than 100% indicates the rate classification is over-contributing and is subsidizing other
- 22 classes of customers.
- 23 As part of Festival's 2010 COS application, the original 2006 cost of service model had been
- 24 updated to reflect 2010 test year data included forecasted assets balances, loss factors,
- 25 deemed capital structure and 2010 income and expenses. Rather than complete a full weather
- 26 normalization study, the load profiles from the 2006 study were updated and scaled to match
- 27 the 2010 load forecast. This filing followed the cost allocation policies reflected in the Board's

- 3 In Festival's 2010 COS application Decision and Order, the Board approved Festival's proposed
- 4 phase-in approach to adjust certain revenue to cost ratios in order to place all rate classes
- 5 within the acceptable target ranges. The Decision stated that "The Board has reviewed the
- 6 revenue to cost ratios proposed in Festival Hydro's reply submission. The Board accepts
- 7 the proposal to:
 - Move the ratio for the street light and sentinel light classes half way to the Board's lower target of 70%, and to move these classes to ratios of 70% by 2012.
 - Move the ratio for GS>50 customers to 80%; and
 - Move the ratio for USL customers to 120%.

The Board accepts the proposed revenue to cost ratio of 82.65% for residential Hensall customers in 2010. The Board also accepts the ratios proposed for residential Hensall customers for 2011, 2012 and 2013, noting the Applicant's submission that rate impacts for 250 kWh customers will not exceed 10% in these three years." The purpose of adjusting the revenue to cost ratios for Hensall Residential was to bring the rates closer together so as to facilitate future rate harmonization. These requested changes were implemented by Festival over the interim IRM application years as outlined in the chart below.

Current Cost Allocation Study Requirements

On March 31, 2011 the Board issued its Report of the Board on the Review of Electricity Distribution Cost Allocation Policy, EB-2010-0219. This report contained several revisions to the Board's policy with respect to cost allocation that were to be implemented through cost of service applications beginning with the 2012 test year. In the report, the Board noted that the default weighting factors should now be used only in exceptional circumstances and that distributors were expected to develop their own weighting factors that better reflecting

9 rate class costing.

Cost Allocation Model inputs weighting factors:

13 Festival has developed its own weighting factors as outlined below.

1 Services (Acct # 1855)

- 2 Festival records costs in this account for new services added. The bulk of these services
- 3 are for Residential and G.S. < 50 kW customers. Using residential at a factor of 1.0,
- 4 Festival assigned weighting factors as follows:
- 5 Residential Service factor set at 1 as per Cost allocation instruction.
- 6 G.S. < 50 Factor set at 1.0 as the number of G.S. < 50 kW services are substantially less
- 7 but the costs to install is higher per connection than residential, so the same factor has
- 8 been assigned.
- 9 G.S. > 50 and Large Use There has been only 0.1 assigned as generally these customers
- 10 are responsible for their own services.
- 11 Streetlight, unmetered loads and sentinel lights A factor of 0.3 has been assigned as
- these service connections are infrequent and less complex in nature.

13 14

Billing and Collection (5315, 5320 and 5340)

- 15 Comparing a residential bill as a base of 1, Festival reviewed the time spent in billing and
- 16 customer service on customers in each rate class. Festival has found that with TOU billing
- 17 now in place, there are no major differences in rate class billing costs. In terms of collection
- 18 costs, the higher dollar value accounts, such as G.S. > 50 kW and Large Use tend to have
- 19 less time spent on these accounts. More time is spent with residential customers for
- 20 example, explaining bills, taking care of retailer questions, making payment arrangements,
- 21 LEAP and AMP provisions, and collection and disconnection activities. Most large account
- 22 interaction relates to conservation and energy management, which is taken care of by our
- conservation officer (through PAB funding). The following factors have been assigned:
- 24 G.S. < 50 kW a factor of 1.5 as there is more time spent when collections are involved on
- a per bill basis. Billing costs are about the same as they are both on TOU pricing.
- 26 G.S. > 50 kW Factor set as 1.5 as more time is spent on collections on a per bill basis
- 27 when issues arise. However, these customers usually have infrequent collection issues as
- the continuous supply of electricity is essential to their operations and they make it a priority
- 29 to pay. The billing is still somewhat more complex than the TOU billing for residential and
- 30 G.S. < 50 kW accounts.

 File Number:
 EB-2014-0073

 Exhibit:
 7

 Tab:
 1

 Schedule:
 1

 Page:
 5 of 5

 Date Filed:
 May 29, 2014

1 Large Use- Has been assigned a 1.2 factor as this customer billing is more complex as

compared to TOU billing. There has been no collection activity associated with this

3 account.

4 Streetlighting, Unmetered Load - The proposed weighting is .80 as these customers have

5 limited collection activity and the volumes of bills are low. There is some added work

6 related to recording of new connections and lights on the accounts, and reconciliation of

7 accounts with the account holders, but that is done on limited occasions.

8

2

Meter Capital - Sheet 1.7.1

10 11

12

13 14 Festival followed a similar approach as in COS 2010 whereby the Metering Department determined the various types of meters installed for each rate class and the per installation costs for each meter type. For the smart meter installation costs, Festival has used the cost as filed in the Festival's Smart Meter Disposition Application (effective November 1, 2012).

15 16

Meter Reading

17

19

20

21

18 Festival has completed its deployment of smart meters for the residential and G.S. < 50 kW

rate classes. In terms of meter reading, basically all meters are electronically read and the

data is backhauled over WIFI, cellular lines or phone lines to retrieve the data. There is

now similar levels of complication associated with meter reading of residential and G. S. <

22 50 kW service smart meters as there is with the G.S. > 50 interval meters.

23 Using 1 as a factor for residential, a factor of 1.25 has been applied to G.S. < 50 kW, to

G.S. > 50 kW and Large Use reflecting slightly more complexity.

OEB Cost Allocation Model

2

1

- 3 The Cost Allocation model used by Festival Hydro is version 3.1 issued on August 2, 2013.
- 4 Festival has followed the policies as outlined in the March 31, 2011 report and as presented
- 5 within the Cost Allocation Model.

- 7 For the 2014 Cost allocation model, Festival followed a consistent approach with the initial
- 8 2006 and 2010 studies in terms of breaking out of assets, capital contributions, depreciation,
- 9 accumulated depreciation, customer data and load data by primary, line transformer and
- 10 secondary categories were developed from the best data available to Festival Hydro, its
- 11 engineering records, and its customer and financial information systems. The current model
- 12 incorporates the 2015 test year customer numbers, kWh load forecast, and kW demand values.
- 13 There have been no direct allocations within the model.
- 14 For streetlighting, Festival Hydro completed a study to determine the number of lights per
- 15 connection by going into the service territory and taking sample tests. It was found that there
- was generally one connection for every eight lights. This is the ratio used in the 2015 model,
- which compares to the default five to one ratio used in the 2010 Cost of service model.
- 18 In terms of load profiles, Festival utilized the load profiles that Hydro One prepared of the 2006
- 19 Cost Allocation model and scaled the profiles to match the 2015 load forecast.
- 20 The 2015 demand values are based on the weather normalized load forecast used to design
- 21 rates.
- 22 The excel version of the Cost Allocation Model has been filed separately. Schedules I-6, I-8, O-
- 23 1 and O-2 from the model are attached.

OEB CA Output Sheet O-2

2014 Cost Allocation Model

EB-2014-0073

Sheet O2 Monthly Fixed Charge Min. & Max. Worksheet - Run 1

Output sheet showing minimum and maximum level for Monthly Fixed Charge

Summary
Customer Unit Cost per month - Avoided Cost
Customer Unit Cost per month - Directly Related
Customer Unit Cost per month - Minimum System with PLCC Adjustment
Existing Approved Fixed Charge

Class Revenue Requirements

2

- 3 Based on the various inputs into the Cost allocation model, the model generates the revenue
- 4 requirements for each rate class. Table B of OEB Appendix 2-P provides information on the
- 5 calculated class revenues. The resulting 2015 proposed base revenue will be the amount used
- 6 in Exhibit 8 to design the proposed distribution charges in this application.

Street Lighting	\$ 196,840	1.91%	\$ 115,738	0.97%
Total	\$ 10,288,195	100.00%	\$ 11,871,009	100.00%

Notes

- 1 Customer Classification If proposed rate classes differ from those in place in the previous Cost Allocation study, modify the rate classes to match the current application as closely as possible.
- 2 Host Distributors Provide information on embedded distributor(s) as a separate class, if applicable. If embedded distributor(s) are billed as customers in a General Service class, include the allocated cost and revenue of the embedded distributor(s) in the applicable class. Also complete Appendix 2-Q.
- 3 Class Revenue Requirements If using the Board-issued model, in column 7A enter the results from Worksheet O-1, Revenue Requirement (row 40 in the 2013 model). This excludes costs in deferral and variance accounts. Note to Embedded Distributor(s), it also does not include Account 4750 Low Voltage (LV) Costs.

B) Calculated Class Revenues

	(Column 7B		Column 7C		Column 7D		Column 7E		
Classes (same as previous table)	Lo	ad Forecast	L	.F. X current	ı	LF X proposed	M	iscellaneous		Total
	(L	F) X current	app	proved rates X		rates		Revenue		Total
Residential	\$	5,562,948	\$	6,082,604	\$	6,082,604	\$	471,450	\$	6,554,054
Residential Hensall	\$	136,181	\$	148,902	\$	151,156	\$	11,465	\$	162,621
GS < 50 kW	\$	1,673,081	\$	1,829,370	\$	1,829,370	\$	104,622	\$	1,933,992
GS > 50 kW to 4999 kW	\$	2,452,296	\$	2,681,373	\$	2,731,647	\$	149,504	\$	2,881,151

Sentinel Lighting	\$	4,865	\$	5,320	\$	5,320	\$	552	\$	5,872
Street Lighting	\$	147,619	\$	161,409	\$	129,442	\$	9,443	\$	138,885
Total	\$	10,165,694	\$	11,115,310	\$	11,115,310	\$	755,699	\$ ^	11,871,009

Notes:

- 1 Columns 7B to 7D LF means Load Forecast of Annual Billing Quantities (i.e. customers or connections X 12, (kWh or kW, as applicable). Revenue Quantities should be net of Transfomrer Ownership Allowance. Exclude revenue from rate adders and rate
- 2 Columns 7C and 7D Column total in each column should equal the Base Revenue Requirement
- 3 Columns 7C The Board cost allocation model calculates "1+d" in worksheet O-1, cell C21. "d" is defined as Revenue Deficiency/Revenue at Current Rates.
- 4 Columns 7E If using the Board-issued Cost Allocation model, enter Miscellaneous Revenue as it appears in Worksheet O-1, row 19.

Revenue-to-Cost Ratios

2

3

1

Previous Revenue to Cost Ratios

- 4 Festival's Revenue-to-Cost ratios from the 2010 EDR Approved results (EB-2008-0238) were
- 5 implemented over a four year period, as explained earlier under Exhibit 7, Tab 1, Sch 1. A
- 6 phased in approach was followed from the 2010 COS through to the 2013 IRM filing. The final
- 7 2013 revenue to cost ratios have been entered in section c) Rebalancing Revenue-to-Cost
- 8 (R/C) Ratios in Appendix 2- P.

9 Proposed Revenue to Cost Ratios

- 10 In the Report of the Board on Cost Allocation released in relation to EB-2010-0219, dated March
- 11 31, 2011, the OEB established what it considered to be the appropriate ranges of revenue-to-
- 12 cost ratios, which are summarized in Table D of OEB Appendix 2-P.

13

24

- 14 While most ratios for 2015 are similar to the ratios from 2010, there have been some changes
- 15 which are primarily a result of the differences in forecasted loads used in the 2010 model
- 16 compared to the updated load projections used in the 2015 model. The contribution from
- 17 streetlighting has gone up substantially, primarily due to the change in the light to connection
- 18 ratio from the standard five to one used in the 2010 study to the eight to one ratio based on the
- 19 study completed by Festival. Unmetered scattered load is well over the target range.
- 20 Festival is proposing in this application to re-align its revenue to cost ratios by adjusting the
- 21 allocations of revenue among rate classes in order to reduce some of the cross-subsidization
- 22 that is occurring. The following re-alignments are proposed for each rate class:
- Residential class in well within the range at 104.51, so no adjustments are proposed.
 - Residential Hensall is being adjusted from 103.06 to 104.51 in order to harmonize Residential Hensall with the regular Residential class.

 Page:
 2 of 5

May 29, 2014

Date Filed:

- General Service <50 kW is within the range so no adjustments have been made It
 continues to have the highest ratio at 116.79.
 - General Service > 50 kW has been raised by 1.44 from the current ratio of 81.41 to 82.85. This class is being used as the offset account to be increased as a result of reduction to USL and sentinel lights.
- Large Use is at 100.62 so no adjustment required.
- Sentinel lights is within the range at 86.08 so no adjustment required.
- Street Lighting is beyond the range at 147.62 so Festival proposes a 27.62 adjustment
 in test year 2015 to bring this class to the 120 maximum target immediately.
 - Unmetered Scattered Load is at 202.66. Festival is proposing to reduce the ratio by 82.66 in the test year 2015 to bring this class to the 120 maximum target immediately.
 - The table below shows the dollar impact of the realignment, with the difference going to G.S. > 50 kW as that rate class currently has the lowest revenue to cost ratio:

Class	Hensall	USL	Streetlights	G.S. <> 50 kW
	Residential			(net offset)
Rev to Cost Ratio (initial)	103.06	202.66	147.62	81.41
Rev to Cost Ratio (final)	104.51	120.00	120.00	82.85
Dollar change to achieve final ratio	\$2,254	(20,561)	(\$31,967)	50,274

1 Table B of OEB Appendix 2-P provides information on calculated class revenues. The resulting

- 2015 proposed base revenue will be the amount used in Exhibit 8 to design the proposed
- 3 distribution charges in this application. This table is included in E7/T1/S3/A1.

Rate Harmonization

In 2001, Festival Hydro purchased the electrical assets of the former Hensall Public Utilities Commission. Because of the large differences in residential rates, the rates were not harmonized at that time. As part of the 2010 rate application process, Festival Hydro took steps through revenue to cost ratio adjustments to move Hensall residential rates close to regular residential rates in order to harmonize. To harmonize in 2015, it will cost a Hensall residential customer approximately 0.46 per month more to be fully harmonized (i.e. 2.254/409 customers/ 12 = 0.46), as a result of changing Hensall's revenue to cost ratios to equal the Residential class ratio of 104.51. Festival is proposing the Hensall Residential rate be removed from the rate schedule and one set of Residential rates apply to all of Festival's residential customers. The tariff sheet has been created with the Residential Hensall rate class removed.

The table below provides a bill comparison for the residential customers to the Hensall residential customers based on the approved May 1, 2014 rates. The difference on a monthly bill for a 250 kWh, 500 kWh, and 800 kWh residential customer is \$0.21, \$0.37, and \$0.55 respectively (i.e. Festival residential higher than residential Hensall). The required adjustment to harmonize is negligible.

The second table shows the bill impact comparing residential Hensall May 1, 2014 rates to proposed harmonized January 1, 2015 residential rates. Residential Hensall customers with monthly usage of 800 kWh or less will see a slight decrease in their monthly bill.

Attachment 1 of 1

OEB Appendix 2-P Tables 3 & 4

C) Rebalancing Revenue-to-Cost (R/C) Ratios

Class	Previously Approved Ratios Most Recent Year: 2013	Status Quo Ratios (7C + 7E) / (7A)	Proposed Ratios (7D + 7E) / (7A)	- Policy Range
	%	%	%	%
Residential	106.47	104.51	104.51	85 - 115
Residential Hensall	106.27	103.06	104.51	80 - 120
GS < 50 kW				
	112.03	116.79	116.79	80 - 120
GS > 50 kW to 4999 kW	81.31	81.41	82.85	80 - 120
Large Use	112.03	100.62	100.62	85 - 115
Unmetered Scattered Load (USL)	70.00	202.66	120.00	70 - 120
Sentinel Lighting	70.00	86.09	86.09	80 - 120
Street Lighting	120.00	147.62	120.00	80 - 120

Notes

- 1 Previously Approved Revenue-to-Cost Ratios For most applicants, Most Recent Year would be the third year of the IRM 3 period, e.g. if the applicant rebased in 2009 with further adjustments over 2 years, the Most recent year is 2011. For applicants whose most recent rebasing year is 2006, the applicant should enter the ratios from their Informational Filing.
- 2 Status Quo Ratios The Board's updated Cost Allocation Model yields the Status Quo Ratios in Worksheet O-1. Status Quo means "Before Rebalancing".

D) Proposed Revenue-to-Cost Ratios

Class	Propos	Deliev Denge		
	2015	2016	2017	Policy Range
	%	%	%	%
Residential	104.51			85 - 115
Residential Hensall	104.51			80 - 120
GS < 50 kW	116.79			80 - 120
GS > 50 kW to 4999 kW	82.85			80 - 120
Large Use	100.62			85 - 115
Unmetered Scattered Load (USL)	120.00			70 - 120
Sentinel Lighting	86.09			80 - 120
Street Lighting	120.00			80 - 120
0	-			

Note

1 The applicant should complete Table D if it is applying for approval of a revenue to cost ratio in 2013 that is outside the Board's policy range for any customer class. Table (d) will show the information that the distributor would likely enter in the IRM model) in 2013. In 2014 Table (d), enter the planned ratios for the classes that will be 'Change' and 'No Change' in 2014 (in the current Revenue Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision – Cost Revenue Adjustment', column d), and enter TBD for class(es) that will be entered as 'Rebalance'.
