27 28	<u>Response</u>	
29 30 31 32	Attachment 2	located to the UGd class in 2013 were \$10,929,823 as per Exhibit D-1-1, 2 in EB-2012-0136. This works out to an average allocated cost per UGd \$9672.41. The 2015 costs shown are confirmed.
32 33 34 35 36	forecast and contributing	contributing to the increase in 2015 costs for the UGd class are due to load non-load forecast related items. The non-load forecast related items to an increase in costs include: crease of 19.8% in revenue requirement
 37 38 39 40 41 	 chang alloca the all an up	ges to the PLCC calculation which results in an increase in the costs atted to the general service classes location of 2015 fixed assets and OM&A costs by USofA odate to the costs being directly allocated to interval-metered customers, in includes some UGd customers

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.01 Schedule 9 SEC 54 Page 2 of 2

1 The impacts described above are partially offset by a decrease in allocated costs due to

the use of updated density factors for the GSd class, and updates to the proposed loss
 factors for all classes.

4

5 The non-load forecast items described above result in an increase to the 2013 unit cost for

the UGd class to \$14,700.94, as determined using the 2015 CAM with 2010 load forecast

7 inputs.

8

6

9 The balance of the increase to \$14,773.68 is due to the impact of load forecast related

- ¹⁰ items including new demand allocators based on the new 2015 load forecast and updated
- ¹¹ load profile for all rate classes, as well as changes related to the rate class review.

1	Consumers Council of Canada (CCC) INTERROGATORY #28b
2 3 4 5	Issue 7.1 Are the rate classes and their definitions proposed by HON appropriate?
5 6	Interrogatory
7 8 9	Reference: Ex. G1/T2/S1
10 11 12 13 14 15	The evidence states that as a result of implementing the rate class review findings, customers will experience about a 3.4% increase on average across all rate classes to make up for the revenue deficiency resulting from the large number of customers moving to rate classes with lower rates. Please explain how, through the cost allocation process, HON has ensured that this deficiency was recovered from the appropriate customers. Does HON intend to explain this increase to customers?
16 17 18	<u>Response</u>

One of the inputs to the cost allocation model is the revenue collected at current rates, as shown in Input Sheet 6.1 provided at Exhibit G2, Tab 1, Schedule 2. Hydro One's revenue at current rates is based on the forecast number of customers and consumption for each rate class assuming implementation of the rate class review results. The cost allocation model methodology increases the revenue collected at current rates on a uniform basis across all rate classes to match the revenue requirement. As such, all rate classes uniformly experience the 3.4% increase associated with the rate class review.

26

Hydro One will be communicating to customers the bill impacts resulting from the Board's approvals in this application. Customer communications typically include a discussion of the key items contributing to changes the customers will see on their bill.

<u>(</u>	Ontario Energy Board (Board Staff) INTERROGATORY #94
Issue 7.2	Is the proposed definition of "seasonal" customer class appropriate? Particularly, is residency an appropriate criterion in defining a class? Has this criterion been applied consistently?
Interrogatory	
Reference:	Exhibit G1/Tab2/Schedule1 & Technical Conference No. 3 TR p. 37
from the BLC the Seasonal C	chnical conference on April 30, 2014, Hydro One, in response to a question chicated that it could provide an analysis of the impacts of eliminating Class. Please provide such an analysis with a description of such a scenario, cons, and the relevant bill impacts for the affected customers.
<u>Response</u>	
either the low where they ar Seasonal cust	evaluated a scenario where all Seasonal customers were amalgamated to v density (R2) or medium density (R1) residential rate classes based on re located as determined by the rate class review. A very small number of omers would move to the high density (UR) rate class, but this was ignored ation purposes as the impact would be immaterial.
this response.	on Model output sheet O1 for this scenario is provided as Attachment 1 to The rate design results for this scenario are provided as Attachment 2. A ne Distribution and Total Bill impacts for the rate classes under this scenario Table 1.
new 2015 R1	on Seasonal customers migrating from existing 2014 Seasonal rates to the and R2 rate classes under this scenario are provided in Table 2 below for a omer consumptions.
Schedule1, sh see a total bil	in Table 1, as compared to the impacts in Table 2 of Exhibit G1, Tab 4, now that customers at typical consumption levels would, for most classes, 1 decrease. The exception being customers in the R1, UGe, GSd and UGd hich would see a total bill increase.

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.02 Schedule 1 Staff 94 Page 2 of 2

1 2

3

Table 1 Distribution and Total Bill Impacts if All Seasonal Customers Migrate to R1 and R2 **Rate Classes**

Nate Classes									
Rate Class	Monthly Consumption (kWh)	Monthly Peak (kW)	Change in DX Bill (\$)	Change in DX Bill (%)	Change in Total Bill (\$)	Change in Total Bill (%)			
UR	800		(\$4.45)	-11.9%	(\$6.81)	-4.8%			
R1	800		(\$0.08)	-0.1%	(\$1.48)	-0.9%			
R2	800		\$2.04	3.2%	\$2.50	1.5%			
GSe	2,000		\$8.78	7.2%	\$10.76	2.9%			
UGe	2,000		\$22.23	47.0%	\$19.07	6.3%			
GSd	35,000	120	\$328.54	22.8%	\$326.44	5.3%			
UGd	35,000	120	\$188.16	22.0%	\$191.10	3.5%			
St Lgt	500		\$8.98	23.3%	\$8.91	9.1%			
Sen Lgt	50		\$1.19	17.9%	\$1.19	9.3%			
USL	500		\$1.96	3.9%	\$1.29	1.2%			
DGen	2,000	20	\$59.53	36.2%	\$73.09	16.8%			
ST	500,000	1,000	\$597.74	33.9%	\$1,236.60	1.9%			

4

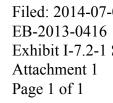

As shown in Table 2, the biggest impact of this scenario is on the Seasonal customers that 5 would move to the new amalgamated residential rate classes. Low volume (50 kWh) 6 Seasonal customers moving to the residential rate classes would see an increase in their 7 total bill. The increase is particularly significant for those low volume customers moving 8 to the R2 rate class (+111% on total bill). Seasonal customers consuming an average 9 amount of 400 kWh per month would see a total bill decrease if moving to the R1 rate 10 class, but would experience an increase if moving to the R2 rate class (+21% on total 11 bill). 12

Iss	sue 7.2	Is the proposed definition of "seasonal" customer class appropriate? Particularly, is residency an appropriate criterion in defining a class? Has this criterion been applied consistently?
In	<u>terrogatory</u>	<u>r</u>
Re	eference:	G1/T2/S1, pg. 5-6 Technical Conference, April 30, 2013, pg. 26, lines 6-7; pg. 31, lines 2- 6; pg. 35, lines 24-27 and pg. 64, lines 14-23
a)	at least 60 currently	plain more fully the basis for the choice of i) 9,600 kWh per year and ii) 00 kWh monthly for a minimum of 10 months as the criteria for treating defined Seasonal customers as Residential customers. In particular, for d criterion why were 600 kWh and 10 months chosen?
b)	Please pro	ovide a schedule that sets out the average use per customer for 2013 for ne following customer classes:
	 R1 R2 Seaso 	nal
	If pos	sible please provide both the actual and weather normalized average use astomer.
c)	roughly 1	he forecast total and average per customer 2015 total kWh usage for the 1,000 Seasonal customers reclassified as Residential? If the 2015 values are not available please indicate their current usage.
d)	Please pro	by the new available prease indicate their current dauge. by the a schedule that indicates how many of the roughly 11,000 were ed to the R1 versus R2 classes and the 2015 forecast usage (or current orecast is not available) in each case.
e)	Based on distribution	the most recent 12 months of data available, please provide a frequency on for each of the UR, R1, R2 and Seasonal classes that indicates the f customers that fall into each of the following usage categories:
	 0 to 1 >100 	00 kWh per month to 250 kWh per month
	• >500	to 500 kWh per month to 800 kWh per month to 1,000 kWh per month

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.02 Schedule 6 VECC 93 Page 2 of 4

- >1,000 to 1,500 kWh per month 1 >1,500 to 2,000 kWh per month • 2 • >2,000 kWh per month. 3 f) Based on the most recent 12 months of data available, please provide a frequency 4 distribution for each of the UR, R1, R2 and Seasonal classes that indicates the 5 number of customers that fall into each of the following usage categories for the 6 ten months with the highest usage: 7 0 to 250 kWh per month for those ten months • 8 >250 to 450 kWh per month for those 10 month • 9 >450 to 600 kWh per month for those 10 months 10 • >600 to 1,000 kWh per month for those 10 months • 11 >1,000 to 1,500 kWh per month for those 10 months • 12 >1,500 to 2,000 kWh per month for those 10 months • 13 >2,000 kWh per month for those 10 months • 14 15 Response 16 17 a) Hydro One has examined the year-round residential (R1, R2, UR) customer data by 18 number of occupancy month, average monthly consumption and annual consumption. 19 The majority (about 80%) of the year-round residential customers have annual 20 consumption over 9,600 kWh, monthly consumption over 600 kWh and reside in the 21 premise for at least 10 months. Based on this analysis, seasonal customers with these 22 energy consumption characteristics should be classified as year-round customers. 23 24 b) The 2013 data is not available. The average actual and weather corrected use per 25
- customer using 2012 data by rate class is provided below.
- 27

	Average actual kwh per	Average WC kwh per
Class	customer	customer
UR	9,322	9,536

Eligibility for rate protection

2. In addition to the persons described in subsection 79 (2) of the Act, the following classes of consumers in Ontario are eligible for rate protection:

2. Consumers who occupy residential premises in a rural area and who, if section 108 of the Power Corporation Act had not been repealed by section 28 of Schedule E to the Energy Competition Act, 1998 and electricity had continued to be distributed by Ontario Hydro, would have been entitled, pursuant to section 108 of the Power Corporation Act as it read on March 31, 1999, to pay Ontario Hydro a discounted rate for the electricity they consumed.

- 19
- 20 Where,
- "residential premises" means a dwelling occupied as a
 residence continuously for at least eight months of the year
 and, where the residential premises is located on a farm,
 includes other farm premises associated with the
 residential electricity meter;
 - "rural area" means those parts of Ontario connected to the IESO-controlled grid that, before March 31, 1999, received electricity from Ontario Hydro and, at the time subsection 26 (1) of the Electricity Act, 1998 comes into force, are receiving electricity from Hydro One Networks Inc.;
- b) Yes, that is Hydro One's proposal with respect to the portion of the 11,000 Seasonal
 customers that would move to the R2 rate class.
- c) The definition of the R2 class customers conform to the definition of an eligible
 residential premise in that those customers reside in a rural area in a dwelling
 occupied as a residence on a year-round basis.
- 39
- d) Hydro One proposes that the high consumption Seasonal customers to be moved to
 the R2 class be considered eligible for RRRP on the basis that their consumption is
 equivalent to the consumption of a residential customer that occupies their residence
 for at least eight months of the year.
- 44
- e) Please see the response at Exhibit I, Tab 7.7, Schedule 6 VECC 110.

1	Balsam Lake Coalition (BLC) INTERROGATORY #7
2	
3	Issue 7.2 Is the proposed definition of "seasonal" customer class appropriate?
4	Particularly, is residency an appropriate criterion in defining a class?
5	Has this criterion been applied consistently?
6	
7	
8	<u>Interrogatory</u>
9	
10	Please provide the number of year-round residential customers that consume on average
11	less than 500 KWH per month, in each of the UR, R1 and R2 density zones. Why are
12	these low-volume, year-round residential customers not charged a premium volumetric
13	charge similar to Seasonal customers?
14	
15	<u>Response</u>
16	
17	The information on year-round residential customers in the UR, R1 and R2 rate classes
18	that consume on average less than 500 kWh per month is included as part of the response
19	at Exhibit I, Tab 7.8, Schedule 8 FOCA 1.
20	
21	The total cost to be recovered from each rate class is recovered via fixed and volumetric
22	components. The size of the fixed charge will determine the rate for the volumetric
22	charge All customers in a given rate class new the same fixed and volumetric charges

charge. All customers in a given rate class pay the same fixed and volumetric charges
which fully recover the cost of serving all customers within the class. No classes,

²⁵ including Seasonal, pay a "premium" volumetric charge.

2			
3	Issue 7.2 Is the proposed definition of "seasonal" customer class appropriate?		
4	Particularly, is residency an appropriate criterion in defining a class?		
5	Has this criterion been applied consistently?		
6			
7			
8	Interrogatory		
9			
10	Please provide the number of year-round residential customers in each UR, R1 or R2		
11	density zone that own a second home elsewhere, other than their principle residence. If		
12	Hydro One's response is that it does not have said information because it is not required-		
13	why does Hydro One's criteria, applicable to Seasonal customers, require information		
14	from Seasonal customers about the ownership of a second home? Why has Hydro One		
15	not applied this residency criterion consistently to all residential customers?		
16			
17	<u>Response</u>		
18			
19	Hydro One does not have information on additional properties that may be owned by its		
20	customers.		
21			
22	Hydro One's residency criterion is applicable to all residential rate classes. The purpose		
23	of the residency criterion, as described in its rate schedules and discussed in Exhibit I,		
24	Tab 7.02, Schedule 10 CCC 34 is to establish if the property being served should be		
25	classified as a year-round residence or a seasonal residence. Seasonal customers have		
26	consistently been recognized as a separate class by Hydro One, and prior to that Ontario		
27	Hydro, since as far back as the 1960's.

1	Federation of Ontario Cottagers' Association (FOCA) INTERROGATORY #1
2	
3	Issue 7.2 Is the proposed definition of "seasonal" customer class appropriate?
4	Particularly, is residency an appropriate criterion in defining a class?
5	Has this criterion been applied consistently?
6	
7	<u>Interrogatory</u>
8	
9	Has Hydro One considered that the seasonal class definition is far more deeply rooted
10	than your proposed definition that would remove 11.000 high use seasonal customers to
11	the R1 & R2 classes? There are definitions as to who can vote in provincial and federal
12	elections.
13	
14	<u>Response</u>
15	
16	Hydro One's definition of the Seasonal class is strictly for the purpose of allocating
17	distribution service costs and setting rates for its customers. It is not tied to the definition

of "seasonal" used for any other purposes, such as voting in elections.

8		
9	Reference:	Ex. G1/T2/S1/p. 5
10		
11	Is HON awa	re of any other examples of "seasonal" rate classes similar to the current
12		al class in place in other jurisdictions? If so, please provide the details as to
13	what qualific	ations exist for those classes and how the rates are derived relative to the
14	other resident	tial rates in that area.
15		
16	<u>Response</u>	
17		

In Ontario, Veridian Connections, Algoma Power and Cornwall Electric are the other utilities Hydro One is aware of that also identify seasonal customers. The customer qualifications for these utilities are similar to Hydro One's residential seasonal class. Similar to Hydro One, Veridian Connections and Algoma Power develop specific seasonal fixed and variable rates based on the costs allocated to that class. Cornwall Electric does not appear to separately allocate costs to the seasonal class.

24

Hydro One is also aware of some utilities in other jurisdictions outside Ontario that 25 recognize seasonal customers (e.g. Maritime Electric Company Limited, Nova Scotia, 26 New Brunswick, Manitoba Hydro, Wisconsin Public Services). The annual costs for 27 seasonal customers for these utilities are the same as the year-round classes, but the 28 qualifications and billing practices are different between year-round and seasonal 29 residential classes. For example: Maritime Electric's terms and conditions of service 30 vary for seasonal customers depending on the number of months the services are used; 31 Manitoba Hydro's seasonal criteria include consumption/demand thresholds; bills are 32 typically rendered less frequently, and only during the 'on-season' months. 33

9	Please explain, in detail, the administrative process HON undertakes in designating a customer "Seasonal".
10 11	customer Seasonar.
	Pasponsa
12	<u>Response</u>
13	Seasonal Residential includes any residential service not meeting the Residential Year-
14	round criteria. Per Section 3.A. of Hydro One's Conditions of Service, a customer is
15	designated as Seasonal when it does not meet the requirements of year-round customer. It
16	includes dwellings such as cottages, chalets and camps. To qualify as Residential Year-
17	round, a customer must complete, sign and return the 'Declaration to Apply for Year
18	Round Rate Status' form and meet all of the following criteria:
19	• Must live in this residence for at least four days of the week for eight months of the
20	year and must not reside anywhere else for more than three days a week during eight
21	months of the year
22	• The address of this residence must appear on the BP's property tax bill, driver's license or credit card invoices
23	 Customers who are eligible to vote in provincial or federal elections must be
24 25	enumerated for voting purposes at the address of this residence
26	 They must declare that for as long as they have year-round residential rate status for
20 27	this residence they will not designate another property that they own as a year-round
	residence for the purpose of Hydro One rate classification
28	residence for the purpose of fryero one fate classification

1	Ontario Energy Board (Board Staff) INTERROGATORY #95
2 3 4	Issue 7.3 Is the reclassification of customers to reflect findings of the company's review of existing customer rate classifications appropriate?
5 6	<u>Interrogatory</u>
7 8	Ref: Exhibit G1/Tab2/Schedule 1
9 10 11 12 13	On page 2 of this exhibit, Hydro one states that: "In a few situations, a (-10%) deadband was applied to the density zone definition where a majority of customers within a proposed density zone boundary would be negatively impacted as a result of moving to a lower-density rate class."
14 15 16 17 18	Please explain this statement in more detail. Why did Hydro One feel this was necessary? How Hydro One apply this methodology? Was it solely bill size (or change) considerations? How was this deadband determined and justified?
19 20	<u>Response</u>
21 22 23 24 25 26 27 28 29 30 31	The -10% deadband was applied in situations where the majority of customers in a proposed density zone boundary were currently classified in a particular rate class, but strict application of the density zone criteria would result in those customers being moved to a lower density rate class with higher rates. As an example, the town of Owen Sound has about 11,000 customers of which 8,600 are residential customers currently classified as high density (UR). However, the proposed density zone boundary results in only 57 customers per circuit km of line, which is less than the 60 customers per circuit km used to define the UR rate class. A strict application of the definition would result in those 8,600 customers having to be reclassified to R1, which would have significant rate impacts to a large number of customers.
 32 33 34 35 36 	In addition, aligning density zone boundaries to major roads or physical features to allow for growth in the community and facilitate customer communications tends to increase the km of line and reduce the customers/km value for a particular density zone, the impact of which is offset by the -10% deadband.
37 38	The -10% deadband is a nominal amount that helps to mitigate customer bill impacts resulting from implementation of the rate class review and provides rate stability for

customers. 39

 18 19 20 21 22 	d)	zone value number of	(lines 15-18), for how many "zones" and "customers" did the density fall below the 10% deadband? In responding please indicate the customers that would be transferred from: i) UR to R1, ii) R1 to R2, R2, iv) UGe to GSe and v) UGd to GSd if the 10% criterion was blied.
23 24 25	e)		counstances why was it not possible to redefine the boundaries (per order to stay within the 10% deadband?
26 27	<u>Re</u>	sponse	
28 29	a)	The GIS da	ata used in the analysis was as of March 2013.
 30 31 32 33 34 35 36 	b)	location of on either location w identify the to each of	asisted of reviewing a GIS map of the whole province that included the fall Hydro One distribution lines and the location of all its customers based their meter location or upstream transformer location, if a smart meter as not available for a particular customer. This GIS map was then used to the location of a concentrated group of customers located in close proximity ther (i.e. a core cluster of contiguous customers or local community) that tially meet the required density zone definition.
37			

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.03 Schedule 6 VECC 96 Page 2 of 2

c) Checks on the number of customers and per km density for potential boundaries was
 done at various stages but the final check against the approved density zone definition
 was done only after Step 4.

4

d) There are 2 density zone boundaries that fall below the 10% deadband. The number
 of customers that would potentially have to be transferred between rate classes if the
 10% criteria was strictly applied is shown below.

8

Rate Class Change	# of Customers
UR to R1	9,892
R1 to R2	0
UR to R2	0
UGe to GSe	515
UGd to GSd	60

9 10

e) In one case this would have been possible, but it would have resulted in the density
zone boundary splitting a contiguous community. In the second case this would not
have been possible, and because this is a high growth community where over 93% of
the more than 4,000 customers in the community are currently classified as urban,
Hydro One gave priority to providing rate stability and mitigating the impacts to these
customers.

1	<u>Balsam Lake Coalition (BLC) INTERROGATORY #10</u>
2	
3	Issue 7.3 Is the reclassification of customers to reflect findings of the company's
4	review of existing customer rate classification appropriate?
5	
6	
7	<u>Interrogatory</u>
8	
9	How does Hydro One justify it's proposed reclassification of 11,000 Seasonal class
10	customers into the R1 & R2 residential classes because of inequitable rates, while
11	ignoring the inequitable rate treatment applied to the remainder Seasonal customers?
12	
13	<u>Response</u>
14	
15	Hydro One's proposal to reclassify about 11,000 Seasonal customers into the R1 and R2
16	rates classes is intended to balance the feedback received during its extensive
17	consultations on this issue as described in the pre-filed evidence at Exhibit A, Tab 20,
18	Schedule 1 and Exhibit G1, Tab 2, Schedule 2. Hydro One believes its proposal results
19	in all Seasonal customers paying a fairer share of the costs to serve them.
20	
21	The customers remaining in the Seasonal class continue to be fairly allocated the cost of
22	serving them as determined by the cost allocation model. As with all rate classes, there is
23	a range of consumption levels within the class that results in some customers paying a
24	bigger share of the rate class costs than other customers, but this is a natural outcome of
25	grouping customers within a rate class and is not considered to be inequitable rate

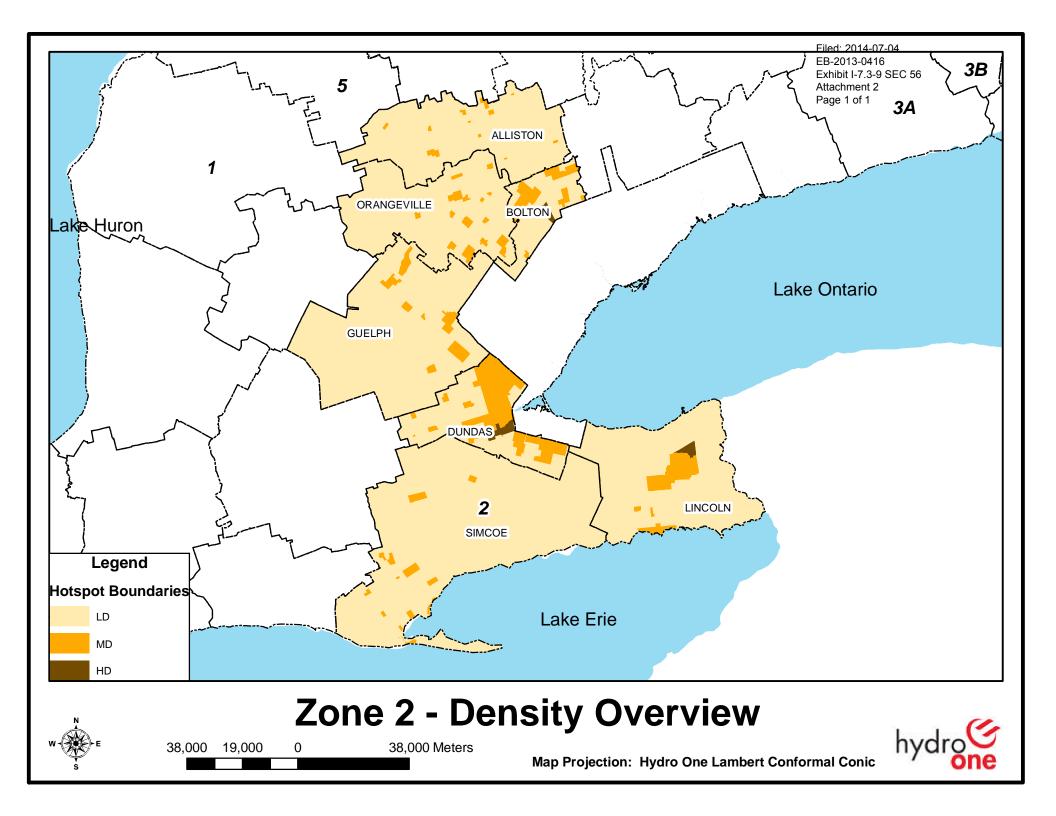

25 grouping26 treatment.

	Ontario Energy Board (Board Staff) INTERROGATORY #96
	ssue 7.4 Is moving revenue-to-cost ratios for all rate classes to within 98% to 102% over the 2015-2019 period appropriate?
<u>_</u>	nterrogatory
I	Ref: Exhibit G1/Tab3/Schedule 1/p. 4
P	At this reference, Hydro One indicates that it,
	believes there is merit to VECC's argument for including directly allocated O&M
	osts when developing the O&M allocator, but does not believe it appropriate to include
	lirectly allocated A&G costs for the purpose of allocating other A&G costs. In the
	surrent application, Hydro One has modified the O&M allocator to include both non-
	lirectly and directly allocated O&M costs, which will then be used to allocate the balance
C	of A&G costs that are not directly allocated."
	Why does Hydro One not believe it appropriate to include directly allocated A&G
(Administration & General) costs for the purpose of allocating other A&G costs?
,	
1	<u>Response</u>
7	The Board's latest Cost Allocation Model (Version 3.1) distributes the A&G costs using
	he O&M allocator, which is based on distribution and customer O&M costs only.
t	
Ι	ncluding directly allocated A&G costs in the O&M allocator would be inconsistent with
t	he Board's approach of using only O&M costs to allocate A&G costs.

Hydro One has made a number of changes to the inputs used by the cost allocation model
 that it believes result in an improvement to the allocation of costs by rate class. These
 include:

- 2012 smart meter data has been used to develop updated load profiles for all residential and general service energy rate classes, and the load profile for demand billed classes were updated based on currently available hourly data. Both of which result in an improvement to the 12CP and 4NCP allocators used in the model.
- The density factors used to allocate costs within the residential rate classes, the general service energy classes, and the general service demand classes have been incorporated into the model on a USofA basis and have been established based on the results of an independent Density Study that was approved by the Board as part of Hydro One's 2013 IRM application EB-2012-0136.
- The costs by USofA reflect an improvement in the allocation of project and program costs to USofA accounts, and the breakout of fixed asset costs between bulk, primary and secondary have been updated to reflect information available from the fixed asset and GIS systems, and to better delineate secondary assets.
- The creation of a USL rate class, whose customers were previously included as part of the General Service energy class for cost allocation purposes, and establishing a
- load profile for this class based on actual collected data, allows for an improved
- allocation of the costs required to serve both the USL and GSe classes.
- Hydro One has updated the PLCC calculations to provide a better alignment to the
 minimum system split used in the cost allocation model.
- The billing, collection and services weighting factors have been updated to reflect
 Hydro One's circumstances.
- Hydro One is using the updated cost allocation model issued by the Board which
- includes improvements to the allocation of Miscellaneous expenses and the allocation
- 29 of Administrative costs.

20

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.04 Schedule 9 SEC 61 Page 2 of 2

Response 1

2

The proposed distribution volumetric charge in the above table is rounded to three 3 decimals, while Hydro One uses four decimals for all volumetric charges. Since this 4 change results in only a minor impact to the final results, Hydro One has not updated the 5 table. 6

7

The line labeled "Total Monthly Bill" should appropriately be labeled "Total Distribution 8 Charges". The charges shown are only for base distribution service and exclude costs the 9 sample school would pay for deferral/variance account riders, commodity and other Total 10 Bill components. For a typical UGd class customer, distribution represents about 17% of 11 the total bill, and therefore the 74.30% figure shown in the table corresponds to about a 12 12.6% impact on Total Bill or roughly a 2.5% annual increase over the 5 years. 13 14 It is confirmed that the same school will pay about \$18,744.60 in additional base 15

distribution charges over the five year test period, subject to any adjustments in the 16 Applicant's annual filings. 17

ue 7.4 Is moving revenue-to-cost ratios for all rate classes to within 98% to 102% over the 2015-2019 period appropriate?
<u>errogatory</u>
ference: Exhibit G1
 ase provide a breakdown of the drivers of the increases set out in the previous estion, including at least the following categories: (a) Increases in revenue requirement. (b) Changes in the relative costs allocated to the class between 2013 and 2015. (c) Greater increases in the monthly fixed charge relative to the volumetric charge. (d) Adjustments to the revenue to cost ratios to bring other classes within the Board's range. (e) Adjustments to the revenue to cost ratios to bring all classes closer to unity over
(f) Other drivers.
s <u>ponse</u>
e drivers of the increases set out in Exhibit I, Tab 7.4, 9 SEC 61 include: The increase in revenues to be collected from all rate classes, including the UGd rate class, as a result of increases in the total revenue requirement of 18%, 7%, 3%, 2% and 3% for the years 2015 to 2019, respectively, as shown in the rate design sheets provided at Exhibit G1, Tab 4, Schedule 2, Attachments 1 to 5.
A 1% increase in revenues to be collected due to increasing the revenue to cost ratio from 0.93 to 0.94 in 2015 as a result of bringing the revenue to cost ratio for all rate classes within the Board approved ranges.
Increases of 3%, 5%, 5% and 4% in revenues to be collected for the years 2016 to 2019, respectively, due to increasing the revenue to cost ratio from 0.94 to 0.99 as a result of bringing the revenue to cost ratio for all classes closer to 1.0.
The impact of the smoothing rider which reduces charges in the years 2015 to 2017, and increases the charges in 2018 to 2019. Increasing the fixed charge has no impact on the average customer in a rate class, but will result in a small increase on the sample school shown as its consumption is slightly below average. The impact of the fixed charge proposal on schools with

greater than average consumption would be a reduction in their charges.

2 3 4	Issue 7.6 Are Hydro One's proposed charges for street lighting appropriate?
5	Interrogatory
6 7	Reference: Exhibit G1, Tab 3, Schedule 1, pp. 13 ff
8 9 10	(a) What is the additional effort for the street lighting class associated with maintaining and updating the forecast kWh to be used for billing purposes?
11 12	(b) What is the effect of the weighting factors assigned to the street lighting class on the proposed rates for that class?
13 14	Response
15 16 17 18	(a) The additional effort for street lighting is associated with the required communications with streetlight customers to annually update and validate any changes to the billing data, and the efforts associated with updating the billing systems to reflect any changes to the billing data.
19 20 21	(b) The billing and collections weighting factor of 2.0 for streetlight customers has a
22 23 24	relatively small impact on streetlight customers. As a basis for comparison, using a weighting factor of 1.0 would result in about \$200k, or 1.8% reduction, in the costs assigned to this rate class.

2 3	Issue 7.6 Are Hydro One's proposed charges for street lighting appropriate?
4 5	<u>Interrogatory</u>
6 7	Reference: Exhibit G1, Tab 3, Schedule 1
8 9	Preamble:
10	In its Report in EB-2012-0383, the Board states:
11 12 13 14 15	 (i) "The Board believes that there should be ongoing communication between distributors and unmetered load customers. Unmetered load customers should be able to determine, and distributors validate, what the appropriate consumption levels and load profiles are for particular devices that will reflect the technology used in street lights or other unmetered loads." (page 5)
16 17 18 19	(ii) "It appeared that municipal customers were unaware of the phasing-in of higher revenue to cost ratios that had taken place over the past three to five years. They were also unaware that the repeated rate increases attributable to the large changes in the revenue to cost ratios were unlikely to occur again." (page 9)
20 21	(iii)"In general, communication between unmetered load customers and their distributors was not optimum and it may be possible to improve those communications." (page 9)
22 23 24	Please list, and describe, the communications HONI had with the City of Hamilton with respect to the proposed changes in street lighting rates, including the proposed change in the revenue to cost ratio.
25 26 27	<u>Response</u>
28 29 30 31	The referenced Report was issued by the Board on Dec.19, 2013. The Distribution System Code amendments to implement the findings of the report were issued May 15, 2014. As such, Hydro One has not yet implemented the Report findings.
32 33 34 35	Hydro One is not aware of any communications specifically with the City of Hamilton regarding this Application. Hydro One did carry out four stakeholder sessions where its Application proposals were presented and discussed. Information presented at the stakeholder sessions, and meeting notes of the sessions, were made available to all

³⁶ customers via Hydro One's Regulatory Affairs web page.

1		Vulnerable Energy Consumers Coalition (VECC) INTERROGATORY #106
2 3	Issu	e 7.7 Is an increase to the fixed charges revenue appropriate?
4 5	Inter	<u>rogatory</u>
6	Dofe	erence: G1/T4/S1, pg. 6
7 8	Nele	erence: G1/T4/S1, pg. 6
9	a) F	Please confirm that Hydro One Networks' CAM does not include revenues
10		eceived by the Company to cover the RRRP discount.
11		For Table 4, what is the proposed 2015 fixed charge for R2 prior to netting out the
12	F	RRRP credit?
13	c) F	Please explain why the proposed R2 fixed charge (prior to the RRRP credit) was
14	n	not set at the CAM Scenario 3 value as is the case for most other customer
15	С	lasses.
16	d) A	As the proposal to limit the increase in the Seasonal fixed charge for 2015 is
17		based on bill impact concerns, please explain why the proposed fixed percentage
18		of the Seasonal rate design isn't increased further in 2016-2019 in order to
19	а	pproach the CAM Scenario 3 value.
20	D	
21 22	<u>Kesp</u>	<u>ponse</u>
22	а) Confirmed.
23		b) The proposed 2015 fixed charge net of the RRRP credit is \$67.96
25		(b) The proposed fixed charge for the R2 class was set to maintain the current
26		approved fixed/variable split of 56/44. The R2 class collects about 36% of Hydro
27		One's total revenue, and a reduction in the fixed charge split for the R2 class from
28		the current value would deteriorate the current overall fixed/variable split for
29		Hydro One from 40/60 to 37/63. Maintaining the currently approved split for this
30		class aligns with the split previously approved by the Board for this class and is
31		consistent with the Board's direction with respect to revenue decoupling.
32	Ċ) Hydro One's proposal for all rate classes, including the Seasonal class, is to
33		maintain the 2015 fixed/variable split across all years of the application. As an
34		increase in the fixed charge represents a significant impact on the many low
35		volume Seasonal customers, Hydro One is proposing to not make any further
36		changes to the fixed/variable split over the period of the current application.
37

4	
5	Interrogatory
6	
7	Reference: G1/T4/S1, pg. 6 (Table 4) and pg. 10-11 (Table 5)
8	
9	a) Page 11 outlines how the ST fixed charge is based on the Minimum System with
10	the PLCC Adjustment value from Sheet O2 of the CAM adjusted to exclude low
11	voltage meter costs which are recovered through a separate Meter Rate.
12	However, the proposed fixed service charges and meter rates for the ST class (per
13	Table 5) total more than the unit cost per CAM Scenario 3 (per Table 4). Please

- 14
- 15

16 **Response**

reconcile.

17

Consistent with the principle of cost causality, the ST fixed service charge is set equal to the Minimum System with the PLCC Adjustment value, recalculated to exclude low voltage meter-related costs allocated to the ST rate class. An ST meter charge is then set to recover the meter-related costs. Since metering facilities for ST customers can either be owned by the customer or Hydro One, having a separate ST meter charge ensures that these costs are appropriately recovered from those customers with Hydro One-owned metering facilities.

25

The ST fixed service charge and the ST meter charge are applied on a different basis. The ST fixed service charge applies per account, whereas the ST meter charge applies per Hydro One-owned metering facility. All of the ST customers attract an ST fixed service charge, whereas the ST meter charge determinant will vary, depending on the number of Hydro One-owned metering facilities that are associated with the ST customer. As a result, the two rates cannot be simply added together to reconcile with the unit cost per CAM Scenario 3 (per Table 4).

1	Energy Probe Research Foundation (EP) INTERROGATORY #57
2 3 4	Issue 7.7 Is an increase to the fixed charges revenue appropriate?
5 6	<u>Interrogatory</u>
7 8	Reference: Exhibit G1, Tab 4, Schedule 1 Table
9 10 11 12	In Exhibit G1, Tab 4, Schedule 1 Table 1, does Hydro One have an estimate to what the service charge for the different rate classes would be if the Board implements its proposal for decoupling?
13 14	<u>Response</u>
15 16	Ontario Energy Board has presented three proposals for revenue decoupling.
17 18 19	i) Proposal 1 – Single monthly charge for the rate class: Table below shows the service charges for Hydro One's residential and energy-billed general service

20 customers if proposal 1 is implemented:

Rate Class	Fixed Monthly Charge
Urban residential [UR]	\$32.60
Residential Medium-Density [R1]	\$50.27
Residential Low-Density [R2]	\$103.05
Seasonal Residential	\$51.02
General Service Energy-Billed [GSe]	\$110.48
Urban General Service Energy-Billed [UGe]	\$58.43

- ii) **Proposal 2 Fixed monthly charge based on the size of the electrical connection:** Hydro One does not have information on the size of customer's electrical connections required to calculate service charges under this proposal.
- iii) Proposal 3 Fixed monthly charge based on use during peak hours: There
 are many variables associated with defining how this proposal would work, all of
 which would influence the calculation of fixed service charges under this
 proposal.

3	Issue 7.7 Is an increase to the fixed charges revenue appropriate?
4	
5	
6	<u>Interrogatory</u>
7	Deference. Exhibit C1 Tab 4 Schedule 1 Table 2
8 9	Reference: Exhibit G1, Tab 4, Schedule 1 Table 2
9 10	In Exhibit G1, Tab 4, Schedule 1 Table 2, why does Hydro One not smooth the rate
10	increases over the five-year plan?
12	nereuses over the rive year plan.
13	
14	Response
15	
16	The rate increases have been smoothed for the total impact across all rate classes over the
17	five-year plan. The annual smoothing revenues required to smooth the total impact
18	across all classes have been allocated among rate classes based on the fixed and
19	volumetric revenues for each class, as shown in Exhibit G1, Tab 5, Schedule 3,
20	Attachments 1 to 5. The rate increases by rate class shown in Exhibit G1, Tab 4,
21	Schedule 1 Table 2 will vary from the overall average as a result of the output of the cost
22	allocation model, the approach to rate design (e.g. setting of R/C ratios), and the

23 calculation of riders.

1	Energy Probe Research Foundation (EP) INTERROGATORY #59			
2 3 4	Issue 7.7 Is an increase to the fixed charges revenue appropriate?			
5				
6	<u>Interrogatory</u>			
7 8	Reference: Exhibit G1, Tab 4, Schedule 1 Table 3			
9 10 11	In Exhibit G1, Tab 4, Schedule 1, Table 3, can Hydro One explain why it does not off the same fixed/volumetric split for all rate classes?	er		
11 12 13	the same fixed volumetric spin for an face classes.			
14 15	<u>Response</u>			
16	Hydro One is proposing to use the fixed charges derived by the cost allocation model,	as		
17	described in Exhibit G1, Tab 4, Schedule 1. The size of the fixed charge will vary by ra			
18	class depending on the allocation of directly related customer costs, administration an	ıd		
19	general costs, and the minimum system customer costs to each rate class as determined	ed		
20	by the cost allocation model. Since the size of the fixed charge drives the	ne		

fixed/volumetric split, the split will not be the same for each rate class.

	Energy Probe Research Foundation (EP) INTERROGATORY #60
Issue 7.7	Is an increase to the fixed charges revenue appropriate?
<u>Interroga</u>	<u>itory</u>
Referenc	e: Exhibit G1, Tab 4, Schedule 1 Table 3
propose a this woul	: It G1, Tab 4, Schedule 1 Table 3, the application says "Hydro One does not adopting the minimum system fixed charge for the Seasonal customer class as d represent a 2.5 times increase in the current fixed charge and would result in e impacts to the many low consumption customers within the Seasonal rate
	Hydro One explain how this is not a cross subsidy from other rate classes to the nal rate class?
	Hydro One plan on eventually moving the seasonal rate class to a minimum n fixed charge?
<u>Response</u>	
fixed	is no cross subsidization between rate classes as a result of establishing the charge for a particular class. Setting a higher/lower fixed charge will result in spondingly lower/higher volumetric charge for customers within that rate class, as no impact on the revenues collected from any other class.
for all system used would	his application Hydro One is proposing to maintain the same fixed/variable split I rate classes over the 5 year application period. A move to the minimum In fixed charge for the Seasonal class would better align with the approach being for all the other residential rate classes, and as such, Hydro One believes it I be appropriate to move to a minimum system based charge for the Seasonal eventually.

7	Re	ference: Cost Allocation Model Tab E2 (Allocators)
8		
9	a)	Please provide the class peak loads used by HONI to calculate distribution demand costs as forecast in each of the upcoming years. Also provide coincident peak (CP)
10 11		load and class non-coincident peak (NCP) and distribution peak loads as used by
12		HONI load in each month of the five previous years and as forecast over the next five
13		year period.
14	b)	Provide the date and time of the monthly CP, NCP, and HONI peak load for
15		distribution cost allocation (by class if different) in the five previous years and
16		identify any peak loads that occurred on Saturdays, Sundays, or holidays. Provide the
17		load by rate class, including wholesale for both generation and
18 19		transmission.Regarding Issue 7.7
20	Re	<u>sponse</u>
21		
22	a)	The class peak loads used by HONI to calculate distribution demand costs are
23		provided below for each of the forecast years. Each table includes the highest, sum of
24		the first 4 highest, and sum of 12 monthly coincident peak values (denoted by CP1
25		CP4, and CP12) and for non-coincident peak (NCP1, NCP4, and NCP12). The tables
26		are followed by class monthly coincident and non-coincident peak (NCP) and
27		distribution peak loads in each month of the forecast years and for the year 2012,
28		which was used as the base year to produce the load shapes for the forecast years.
29		Hydro One did not retrieve information for other historical years as smart meter data
30		were not adequate to do so.

b) The dates and times of the monthly CP, NCP and HONI peak load for distribution
cost allocation for the year 2012 are provided below and peak loads that occurred on
Saturdays, Sundays or holidays are identified. Peak figures for Dgen, STL and USL
rate classes are estimates because actual hourly figures are not available.
Consequently, the date and time of peak for these rate classes are not available. The
tables are followed by the load by rate class, including wholesale for both generation
and transmission.

I. SUMMARY

A. Background and Purpose

R. J. Rudden Associates, a unit of the Enterprise Management Solutions Division of Black & Veatch Corporation ("B&V" or "we") is pleased to submit this Report on Hydro One Networks Inc. Distribution Business Minimum System Study ("Study") to Hydro One Networks Inc. ("Hydro One").

BV was engaged by Hydro One to perform this Study for the purpose of computing the minimum system components for the conductors (sometimes called feeders) and line transformers used in Hydro One's distribution system. The Study included reviewing Line Transformers (account 1850) and Distribution Feeders, which includes poles and conductors (accounts 1830 -1845), and included computation of the Peak Load Carrying Capability of the minimum system.

Hydro One intends to use the results of the Study in its class cost allocation study. The Minimum System approach was recommended by the OEB in its Cost Allocation Review report issued September 29, 2006.

In this Report we present and support our methodology for performing the Study and present the results.

B. Hydro One Distribution System

Hydro One Networks is an integrated transmission and distribution utility, regulated by the OEB. The distribution business spans roughly 75% of the area of Ontario and serves 71 Local Distribution Companies, over one million customers and 43 directly connected large users. There are over \$3 billion in fixed assets consisting of over 119,600 circuit kilometers of distribution lines, operating at voltages below 50 kV, and over 1,000 distributing and regulating substations. Most of the distribution system serves areas with low customer densities. The system is mainly radial in design, with very little redundancy in supply to customers, which is consistent with other rural systems.

C. Minimum System Study

The purpose of a Minimum System Study is to determine the smallest components (i.e., transformers, overhead conductors, underground conductors, services) that is generally installed by the utility. The cost of each minimum system component is compared to the actual average cost for each component, to determine the minimum system ratio, or the portion of total costs represented by the minimum system.

The results of the Minimum System Study are used to classify Hydro One's transformers, conductors, conduits and services plant, as either demand-related or customer-related. The minimum system study identifies the hypothetical minimum system that the utility could install and uses the ratio of the hypothetical minimum system to the cost of the existing system as the basis for the customer –related classification of costs. The hypothetical minimum system created by the study has some peak load-carrying capacity ("PLCC"), and our Study also determined the PLCC for each component.

<u>D. Results</u>

Table 1 below summarizes the results of the Study.

TABLE 1. SUMMARY OF RESULTS						
Component	Minimum Component	Minimum System Ratio	PLCC Watts Per Customer			
Line transformers	10 kVA 1-phase	61.90%	3,099 W			
Conductors	#2 ASCR two-wire system (one conductor, one neutral)	54.78%	544 W			
Poles, Towers and Fixtures		47.80%				

The Company's prior Minimum System Study, completed in 1985 ("1985 Study"), showed a 62% minimum system ratio for transformers, based on a 3 kVA minimum component. The 1985 Study also showed a 61% minimum system ratio for Conductors, based on a minimum components of #6 Cu for the primary portion of distribution system, 1 X #4 Al plus 2 X #6 Al for the secondary portion and 2X #6 Al for services.

The Minimum System Ratios that resulted from our Study, as presented in Table 1, are reasonable based on our experience and knowledge of minimum system studies for electric distributors, and are reasonably consistent with the results of the 1985 Study.

The 1985 Study showed a transformer minimum system PLCC of 300 Watts per customer. Some of the difference is due to the higher minimum component specified for

the present Study (10kVA) and the 1985 Study (3 kVA). The 1985 Study also showed a conductor minimum system PLCC of 180 Watts per customer.

E. About BV; Scope of Assignment

The Enterprise Management Solutions Division of Black & Veatch Corporation provides strategic, economic and management consulting firm specializing in energy matters. We provide assistance in areas such as economic analysis, strategy development, operational assessment, industry restructuring support, litigation and regulatory support and technical analysis. BV has assisted many electric, gas, water and telecommunications clients in hundreds of proceedings, including recent work in the area of shared services cost allocations.

Consistent with standard practice for consulting assignments, we relied on the genuineness and completeness of all documents presented to us by Hydro One and we accepted factual statements made to us by Hydro One, subject only to overall reasonableness and actual contrary knowledge, but without independent confirmation.

3

All amounts in this Report are in Canadian dollars.

II. MINIMUM SYSTEM STUDY APPROACH

A. Purpose and Uses

The purpose of a Minimum System Study is to determine the smallest components that is generally installed by the utility. Two separate analyses are performed; one for transformers, another for overhead conductors and underground conductors and services.

The cost of the minimum system for each component is compared to the actual cost of the existing system for each component. The ratio of the minimum system costs to the existing system cost is the minimum system ratio for each component.

The results of the Minimum System Study are used to classify Hydro One's transformers, conductors, conduits and services plant, as either demand-related or customer-related. The classification affects how the utility's costs (or revenue requirement) are allocated among the customer classes. The minimum system for each component includes some peak load-carrying capacity ("PLCC"), and our Study determined the PLCC for each component. The PLCC is used to adjust the allocators used for the demand-related component of costs.

The following definitions may be helpful:

<u>Minimum Component</u>- The least-cost/smallest size component that is generally installed by the utility. For example, the minimum component for line transformers was determined to be a 10 kVA transformer.

<u>Minimum System</u>- The system that would be installed if all existing components were replaced with the Minimum Component. For example, the minimum system for line transformers would be a system comprising all 10 kVA transformers instead of the existing mix of transformers capacities.

<u>Minimum System Ratio</u>- The ratio of the X) the cost of the Minimum System to Y) the cost of the existing system.

<u>Peak load-carrying capability</u>- The load carrying capability of each component at the time of the system peak.

In this Study we performed two analyses- One for line transformers, and one for all Conductors including overhead, underground and services.

<u>B. Approach</u>

Our approach for preparing a Minimum System Study is presented below. This approach is applied to each distribution system component in the study. For each component:

- 1. Obtain a listing of all types of the component installed on the system. 'Types' includes differentiation as to capacities, materials, sizes and other pertinent qualities. For example each transformer type is identified as to capacity (kVA), design (line or pad mount) and number of phases.
- 2. Compute the current replacement cost for the existing system, either by indexing historical costs or by using current replacement costs for each component type.
- 3. Determine the Minimum Component; i.e., the least-cost component that is generally installed by the utility, as well as the current cost of the Minimum Component.
- 4. Compute the current cost for the Minimum System; i.e., the system that would be installed if all existing components were replaced with the Minimum Component.
- 5. Compute the Minimum System Ratio; i.e., ratio of the X) current cost of Minimum System to Y) current replacement cost of existing system.
- 6. Compute the PLCC based on the capacity of the minimum system and the number of customers supplied

C. Components in Minimum System Study

In this Study we performed separate analyses for line transformers and for Conductors. Line Transformers included assets in Hydro One's account 1850. Conductors, or Distribution Feeders included overhead conductors (account 1835), underground conduits (account 1840) and underground conductors and devices (account 1845).

Poles, towers and fixtures (account 1830) are classified proportionately to Overhead conductors because these assets support the overhead conductors.

The amounts in the accounts included the costs of material and installation and a charge for corporate overheads.

III. LINE TRANSFORMERS

A. Types of Transformers

Table 2 below summarizes Hydro One's distribution line transformers.

TABLE 2- NUMBERS OF TRANSFORMERS					
Capacity kVA	Overhead Transformers Pad Mount Transformers			ormers	
	1-Phase Supply	3-Phase Supply from 1- Phase (a)	1-Phase Supply	3-Phase Supply	3-Phase Supply from 1- Phase (a)

Total All	451,440				
(a) Number of 1-p	hase units that v	would replace	existing units.		

B. Current Replacement Cost for Existing System

To determine the current replacement cost for Hydro One's existing transformers, we first obtained from Hydro One the current replacement costs for the transformer types for which the costs were available. These transformer types are shown in **bold** in Table 2.

The unit transformer costs provided by Hydro One are shown in Table 3, which also shows the percentage of units and dollars represented by the costs provided by Hydro One. For the other transformer types listed in Table 2, we determined the replacement costs by extrapolation or interpolation.

A range costs were provided for each transformer type. For example, for 10 kVA 1phase overhead transformers, Hydro One provided costs for units with high side voltages from 2.4 kV to 7.2/16 kV. Costs ranged from \$1,828 to \$2,354 per unit. In this Study we used the average of all costs to represent 10 kVA 1-phase overhead transformers.

TABLE 3- UNIT TRANSFORMER COSTS					
Capacity kVA	Overhead Transformers		Pad Mount Transformers		
	1-Phase Supply	3-Phase Supply from 1-Phase	1-Phase Supply	3-Phase Supply	3-Phase Supply from 1-Phase
10	\$1,982	\$6,466			
25	2,414	7,236	\$5,134		\$15,402
50	3,056	8,961	5,624		16,872
75	3,825	11,336	6,318		18,955
100	4,002	12,297	6,378		19,133
150				\$16,324	
167	5,624	18,982	8,134		
300				17,508	
500/501				20,112

999/1000				30,722	
Costs Provided by Hydro One					
% of Units	85%	93%	91%	37%	97%
% of Dollars	89%	94%	93%	33%	98%
Total % of Units	86%				
Total % of Dollars	88%				

The total current replacement cost for existing transformers was \$1,333,357,659.

A Unit of Enterprise Management Solutions - Black & Veatch Corporation

C. Minimum Component and Minimum System

The least-cost Transformer Minimum Component was determined to be a 10 kVA 1-phase overhead transformer, with high-side voltage of 7.2 kV.

The current replacement cost of the Minimum Component is \$1,828.29, as provided by Hydro One. This cost is lower than the cost in Table 3; the cost in Table 3 represents the average of costs for 10 kVA 1-phase overhead transformers with high-side voltages from 2.4 kV to 7.2/16 kV.

The current cost for the Transformer Minimum System, the system that would be installed if all existing components were replaced with the Minimum Component, is \$825,363,000, equal to 451,440 transformers times \$1,828.29 per transformer.

D. Minimum System Ratio

The Minimum System Ratio is the ratio of X) current cost of Minimum System to Y) current replacement cost of existing system. The Transformer Minimum System Ratio is computed in Table 4:

TABLE 4- TRANSFORMERS MINIMUM SYSTEM RATIO			
	Total (\$000s)		
Current replacement cost:			
Existing transformers at existing capacities	\$1,333,358		
Minimum System Cost	\$ 825,363		
Transformers Minimum System Ratio	<u>61.90%</u>		

E. Peak Load Carrying Capability

The Transformers Peak Load-Carrying Capability ("PLCC") is based on all existing transformers being replaced with the minimum component, 10 kVA 1-phase transformers. The Transformers PLCC was calculated as follows:

Number of existing transformers	451,440
Capacity (kVA) of Minimum Component	10
Assumed power factor	80%
Distribution system Transformers PLCC	3,611,520
Number of customers	1,165,092
Transformers PLCC (Watts Per Customer)	3,099

IV. CONDUCTORS

A. Types of Conductors

Hydro One's distribution system includes conductors operating at voltages 12.5 kV and under. The primary distribution system comprises voltages 12.5 kV to 4.16 kV, and the secondary distribution system, which is primarily service drops, comprises conductors operating at voltages under 750 V. Table 5 below shows the types and lengths of conductors in Hydro One's distribution system, as provided by Hydro One.

TABLE 5- CONDUCTOR TYPES AND LENGTHS							
DescriptionVoltagesConduct- ors (km)NeutralsTotal (km)							
Subtransmission	44 kV-13.8 kV	75,600	8,200	83,800			
Primary	12.5 kV-4.16 kV	155,100	83,800	238,900			
Secondary / Services	<750 V	47,800		47,800			
Total		<u>278,500</u>	<u>92,000</u>	<u>370,500</u>			

The Subtransmission portion of the distribution system was determined by Hydro One to be 100% capacity-related, which is consistent with generally accepted practice. The Study included the Primary and Secondary / Services portions of the distribution system.

<u>B.</u> Current Replacement Cost for Existing System

To compute the current replacement cost for the existing Primary Distribution system and for Secondary / Services system, we obtained the vintaged historical costs for Overhead conductors, Underground conductors and devices and Underground conduits, from Hydro One's PeopleSoft Asset Management ("PS_AM") system.

The PS_AM system provided vintaged historical costs for each of Overhead conductors, Underground conductors and devices and Underground conduits. To compute the historical cost in 2006 dollars, we indexed each year's costs for each asset category using the appropriate Handy-Whitman index, for the North Central region, which is the region used by Hydro One for planning purposes.

The PS_AM report includes the entire distribution system. To obtain the Primary distribution portion we multiplied the total by 65%, which is Hydro One's estimate of the Primary portion of the Historical costs. To obtain the Secondary / Services portion we multiplied the total by 15%, Hydro One's estimate of that portion of Historical costs.

The results are presented in Table 6 below. The Lengths and Historical Costs for Overhead conductors, Underground conductors and devices and Underground conduits are from the PS_AM Report. The Indexed Costs were computed by applying the appropriate Handy-Whitman index. The Primary and Secondary / Services portions were computed by multiplying the totals by the 65% and 15% portions respectively.

TABLE 6- CONDUCTOR SYSTEM REPLACEMENT COSTS					
Description	Length (km)	Historical Cost (\$000s)	Indexed Cost (a) (\$000s)		
Overhead conductors	363,517	\$964,228	\$2,377,566		
Underground conductors / devices	6,183	98,321	158,871		
Underground conduits		22,895	44,735		
Total	<u>369,700</u>	<u>\$1,085,444</u>	<u>\$2,581,172</u>		
Primary portion	65%	65%	65%		
Primary	<u>238,900</u>	<u>\$705,539</u>	<u>\$1,677,762</u>		
Secondary / Services portion	15%	15%	15%		
Secondary / Services	<u>47,800</u>	<u>\$162,817</u>	<u>\$387,176</u>		
(a) Indexed to 2006 dollars.					

C. Minimum Component and Minimum System

1. Primary Distribution System

The Primary distribution system comprises conductors operating at voltages from 12.5 kV to 4.16 kV.

The Minimum Component was determined to be a #2 ASCR two-wire system (one conductor and one neutral). The length of the minimum system was determined to be the length of the existing neutrals, 83,800 km. All existing conductors were deemed to be replaced with Overhead conductors in the Minimum System, because Overhead conductors are less costly than Underground conductors and there are no regions with engineering restrictions on Overhead conductors. There may be some restrictions on Overhead conductors due to local by-laws but these were deemed to be not relevant and not material for the Study.

Hydro One provided the standard current cost for a 1km installation of the Minimum Component, including a corporate overhead charge to be comparable to the values in the PS_AM Report. The current cost for the Minimum System was calculated by scaling the

1 km standard cost for a 720 meter installation, which was the average installation length reported in 2006. The current replacement cost was thus computed to be \$9,109 per km.

The current cost for the Primary Minimum System, the system that would be installed if all existing Primary components were replaced with the Minimum Component, is \$763,334,000 equal to 83,800 circuit km times \$9,109 per km.

2. Secondary Distribution System / Services

The Secondary distribution system / Services comprises conductors operating at voltages under 750 V. The material and length, and therefore cost, for these conductors vary based on the customers' requirements, however the service installed for each customer must be selected to meet that customer's needs without the benefit of diversity. No Minimum Component was specified for the Secondary distribution system / Services.

Based on our experience and generally accepted practice, B&V determined that the Secondary distribution system / Services Minimum System Ratio was 95%. Multiplying 95% times the current replacement cost of Secondary / Services, \$387,176,000 as shown in Table 6, produces a current replacement cost for Secondary / Services Minimum System of \$367,817,000.

<u>D. Minimum System Ratio</u>

The Minimum System Ratio is the ratio of X) current cost of Minimum System to Y) current replacement cost of existing system. The Conductors Minimum System Ratio is computed as shown in Table 7:

TABLE 7- CONDUCTORS MINIMUM SYSTEM RATIO						
DescriptionPrimary (\$000s)Secondary / Services (\$000s)Total (\$000s)						
Current replacement cost:						
Existing conductors	\$1,677,762	\$387,176	\$2,064,938			
Minimum System Cost	763,334	367,817	1,131,151			
Conductors Minimum System Ratio 54.78%						

E. Poles, Towers and Fixtures Minimum System Ratio

Poles, towers and fixtures (account 1830) are classified proportionately to Overhead conductors because these assets support the overhead conductors. The Minimum System Ratio for Poles, towers and fixtures was computed as shown in Table 8.

TABLE 8- POLES, TOWERS AND FIXTURES MINIMUM SYSTEM RATIO			
Description	Amount (\$000s except per km)		
Overhead conductors, Index costs	\$2,377,566		
Primary portion	65%		
Primary	1,545,418		
Replacement circuit km	81,099		
Replacement cost per circuit km	<u>\$9,109</u>		
	738,726		
Poles, Towers and Fixtures Minimum System Ratio	<u>47.80%</u>		

F. Peak Load Carrying Capability

The Conductors Peak Load-Carrying Capability ("PLCC") is based on is based on a rating of 184 amps per feeder of #2 ASCR wire. Hydro One's system contains 1,035 distribution substations and it is assumed that (in the Minimum System) each distribution substation would supply a single feeder.

The existing system has a combination of feeders at capacities of 12.5 kV and 4.16 kV. The Transformer Minimum Component has a high-side capacity of 7.2 kV; therefore the Minimum System would operate at 4.16 kV, because 12.5 kV would exceed the capacity of the Transformer Minimum Component.

The Conductors PLCC was calculated as follows:

Rating for each distribution feeder circuit, amps (a)	184
Line-to-Neutral Voltage, kV	4.16
Circuit capacity per distribution feeder, kVA	765
Assumed power factor	80%
Circuit capacity per distribution feeder, kW	612
Number of distribution substations (b)	<u>1,035</u>
Distribution system Conductors PLCC, kW	633,420
Number of customers	1,165,092
Conductors PLCC (Watts Per Customer)	544

- (a) Continuous Current Rating Under Summer 60C/40C, Sun/No Wind Condition (Amp)
- (b) Assumed equal to number of distribution feeders

11

Based on the information available, the following table summarizes the Hydro One Distribution owned wood poles by height and class.

14

	Class					
Heights	1 2 3 4 5 0				Other	
30' - 39'	109	781	91,214	8,093	409,003	243,310
40' - 49'	303	6,188	376,192	128,653	109,566	5,055
50' - 59'	821	22,241	14,442	68,962	906	280
60' - 69'	2,419	20,409	687	11,038	84	56
70' – 100'	2,422	4,837	42	308	15	221
Other	2	15	263	133	1,005	8,322

15

16 The following table summarizes the approximate 2014 unit price ranges for wood poles

17 by height and class.

18

Heights	Class				
	1	2	3	4	5
30' - 49'	N/A	\$0.3K to \$0.5K	\$0.2K to \$0.4K	\$0.2K to \$0.4K	\$0.1K to \$0.2K
50' - 59'	\$0.6K to \$0.9K	\$0.6K to \$0.9K	\$0.5K to \$0.7K	\$0.4K to \$0.5K	N/A
60' - 69'	\$1.3K to \$1.6K	\$1.1K to \$1.4K	\$0.7K to \$0.8K	N/A	N/A
70' – 100'	\$2.1K to \$4.7K	\$1.9K to \$4.5K	N/A	N/A	N/A

Green Energy Coalition (GEC) INTERROGATORY #13 1 2 Issue 7.7 Is an increase in the fixed charges revenue appropriate? 3 4 *Interrogatory* 5 6 Please identify the heaviest type of overhead conductor and largest size of pole-mounted 7 transformer that can be installed on (a) the minimum sized pole and (b) the smallest size 8 pole in common use for primary distribution if different from the minimum sized pole. 9 10 Response 11 12 Hydro One Distribution adheres to all applicable Canadian Standards Association (CSA) 13 Standards in design of its distribution system and installations are subject to inspection by 14 the Electrical Safety Authority (ESA) to ensure compliance with these standards. 15 16 The minimum size pole used by Hydro One is a 25 foot, Class 5 pole - it is used 17 primarily for guying purposes or for secondary services. It would not be used for primary 18 conductors or polemount transformers. The most common pole used is in the 35 to 40 19 foot range, however, the list below provides the many variables that are involved in line 20 design when selecting pole class including: 21 Pole location / terrain – setting depth, soil type, changes in elevations 22 • Single phase or three phase configurations • 23 • Framing – Armless or Crossarm 24 • Span Lengths 25 Configuration – Tangent(Straight Line), Corner poles, Line angles • 26 Forestry considerations • 27 • Guying 28 • Clearances – for road crossings, ditches 29 • Joint use considerations – Communication tenants, LDC Circuits etc. 30 Number of customers dictates service conductor - Triplex, Ouadruplex, Lashed • 31 Secondary Bus 32 • Customer loading 33 Future needs of area • 34 35 Due to these many variables, every installation may be different and consideration for all 36 of these is given as part of the design. 37

2		
3	Issue 7.7	Is an increase in the fixed charges revenue appropriate?
4		
5	Interrogatory	
6		
7	Reference:	Cost Allocation Model, Sheet 15.2,
8		
9	Please explai	n why services are not part of the costs for all non-residential customers.
10	Identify any	tariffs or rules requiring all non-residential customers to own or contribute
11	100% of the c	cost of their services.

Regarding the service weighting factors, please include available information on service 12 length and type of conductor and differences in cost between single-phase and three-13 phase service. 14

15

Response 16

17

As noted in Section 2.1.1.(v) of Hydro One's Conditions of Service, Hydro One's basic 18 connection includes secondary services for year-round residential and seasonal residential 19 classes only. 20

21

Based on discussion with the experts in the field, average connection length for a 22 residential service is assumed to be 20 meters. As mentioned in Exhibit G1, Tab 3, 23 Schedule 1 (pg. 14), estimated service connection length for UR, R1, R2, and Seasonal 24 rate classes are 10, 15, 30 and 20 meters. Based on this information, services weighting 25 factors are calculated to be 0.50 (10/20) for UR, 0.75 for R1 (15/20), 1.5 for R2 (30/20), 26

and 1 for Seasonal (20/20) customers. 27

Green Energy Coalition (GEC) INTERROGATORY #15
Issue 7.7 Is an increase in the fixed charges revenue appropriate?
<u>Interrogatory</u>
Reference: Cost Allocation Model, Sheet 17.1,
For each of the meter costs identified on this sheet, please provide meter size, whether the
meter is single-phase or three-phase, the customer's voltage of interconnection, the
percentage of customers assumed to use Current Transformers (CTs) and Potential
Transformers (PTs) included in each rate class and the cost of CTs and PTs.
If CTs and PTs are not included in the cost of meters in the cost allocation study, please
identify the number of customers actually having CTs and PTs installed by rate class
<u>Response</u>
The meter costs provided in Sheet I7.1 of CAM are a blended average for the class, based
on the different types of meters installed within the class. The table below provides the
requested information based on best available data.

²³ The cost of CTs and PTs are included with the cost of meters.

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.07 Schedule 13 GEC 15 Page 2 of 2

Rate Class	Meter Size	1 Phase/3 Phase	Voltage of interconnection	Use of CTs	Cost of CTs	Use of PTs	Cost of PTs
UR (Urban Residential)	The rate class includes a range of meter sizes, majority of which are 2-200 Amps.	Majority of the meters are 1 phase	Connection voltage for majority of the meters is 240 V.	No use of CTs in this class.	Not Applicable	No use of PTs in this class.	Not Applicable
R1 (Residential- Medium Density)	The rate class includes a range of meter sizes, majority of which are 2-200 Amps.	Majority of the meters are 1 phase	Connection voltage for majority of the meters is 240 V.	Approx. 0-5% of the customers in this class have CTs.	Approx. cost per installation is less than \$100	No use of PTs in this class.	Not Applicable
R2 (Residential-Low Density)	The rate class includes a range of meter sizes, majority of which are 2-200 Amps.	The rate class include both 1 phase and 3 phase meters, majority of which are 1 phase	Connection voltage for majority of the meters is 240 V.	Approx. 10-15% of the customers in this class have CTs.	Approx. cost per installation is less than \$100	No use of PTs in this class.	Not Applicable
Seasonal Residential	The rate class includes a range of meter sizes, majority of which are 2-200 Amps.	Majority of the meters are 1 phase	Connection voltage for majority of the meters is 240 V.	Approx. 0-5% of the customers in this class have CTs.	Approx. cost per installation is less than \$100	No use of PTs in this class.	Not Applicable
GSe (General Service Energy-Billed)	The rate class includes a range of meter sizes, majority of which are 0.5-200 Amps or 2-200 Amps.	The rate class include both 1 phase and 3 phase meters, majority of which are 1 phase	Connection voltage ranges from 120V to 480 V.	Approx. 10-20% of the customers in this class have CTs	Approx. cost per installation ranges from \$90 to \$700	Approx. 0-5% of the customers in this class have PTs	Approx. cost per installation for majority of these customers is less than \$100
GSd (General Service Demand-Billed)	The rate class includes a range of meter sizes, majority of which are 0.2-20 Amps.	The rate class include both 1 phase and 3 phase meters, majority of which are 3 phase	Connection voltage ranges from 120V to 480 V.	Approx. 50-60% of the customers in this class have CTs	Approx. cost per installation is \$100	Approx. 45-55% of the customers in this class have PTs	Approx. cost per installation for majority of these customers is \$130
UGe (Urban General Service Energy- Billed)	The rate class includes a range of meter sizes, majority of which are 0.5-200 Amps or 2-200 Amps.	The rate class include both 1 phase and 3 phase meters, majority of which are 1 phase	Connection voltage ranges from 120V to 480 V.	Approx. 10-20% of the customers in this class have CTs	Approx. cost per installation ranges from \$90 to \$700	Approx. 0-5% of the customers in this class have PTs	Approx. cost per installation for majority of these customers is less than \$100
UGd (Urban General Service Demand- Billed)	The rate class includes a range of meter sizes, majority of which are 0.2-20 Amps.	The rate class include both 1 phase and 3 phase meters, majority of which are 3 phase	Connection voltage ranges from 120V to 480 V.	Approx. 50-60% of the customers in this class have CTs	Approx. cost per installation is \$100	Approx. 45-55% of the customers in this class have PTs	Approx. cost per installation for majority of these customers is \$130
Distributed Generation	The rate class includes a range of meter sizes, majority of which are 0.2-20 Amps.	The rate class include both 1 phase and 3 phase meters, majority of which are 3 phase	Connection voltage ranges from 120V to 480 V.	Approx. 80-90% of the customers in this class have CTs	Approx. cost per installation is \$900	Approx. 30-40% of the customers in this class have PTs	Approx. cost per installation for majority of these customers is \$780
Sub-Transmission	The rate class includes a range of meter sizes, majority of which are 0.2-20 Amps.	All meters in this rate class are 3 phase	Connection voltage ranges from 120V to 480 V.	Approx. 40-50% of the customers in this class have CTs	Approx. cost per installation is \$700	Approx. 40-50% of the customers in this class have PTs	Approx. cost per installation for majority of these customers is \$130

	Green Energy Coalition (GEC) INTERROGATORY #16
Issue 7	7.7 Is an increase in the fixed charges revenue appropriate?
<u>Interro</u>	ogatory
	d to number of customers per transformer and transformer sizing in calculation of harges:
spe	ase provide excerpts from HONI's design manuals or other engineering ecifications regarding the calculation of loads and the diversity among loads umed for installation and sizing of transformers.
trai inte	hat is the average number of residential and small commercial customers per insformer? Divide by density zones and into single-family and multi-family and b basic and electric heating if available for residential. Divide by density zones d into single-phase and three-phase for small commercial customers.
pol	ase provide the total number of line transformers by kVA size; divide into emount, padmount, and other underground if available. Provide the current cost w) for each type of transformer.
13,	ease provide the number of transformers serving 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 14, 15, 16, 17, 18, 19, and 20 customers, and 21 or more customers. Divide by noisy and into residential and non-residential if available.
cus	ease provide all studies which HONI has conducted regarding the diversity of stomer loads at the line transformer for (a) single-family residential; (b) multi- nily residential; and (c) small commercial customers.
<u>Respor</u>	<u>180</u>
tra	e following is an excerpt from the procedure Hydro One follows in the sizing of nsformers, which takes into account the diversified peak demands of various types customers.
"Step	1: For each customer to be served by the transformer, determine the following: type of house, size (i.e. floor area), type of heating (If the heating is non-electric, is there a large electrical load such as: central air or heat pump).
Step 2	2: With the information from Step 1 on house size and type of heating, a unit value is determined for each customer.
Step .	3: For the type of house, multiply the unit value determined in Step 2 by the appropriate factor:

1 2 3

4

5

7

10

- detached use 1.0 - semi-detached use 0.9
 - town or row house use 0.8
- Step 4: Add the unit values of each customer to get the total unit value for the transformer. 6

Step 5: Determine the correct transformer size for the total unit value of the customers to 8 be served, using the diversity table." 9

Total Unit Value	Transformer (kVA)	Size
1 - 3	10	
4 - 9	25	
10 - 24	50	
25 - 36	75	
37 - 50	100	
51 - 88	167	

11

b. The average number of residential and small commercial customers per transformer 12 is: 13

Customer type	Average number per transformer
Residential	2.49
GS<50	1.31

14

For the residential customers, the average number of customers per transformer by 15

density zone and house type (single-family / multi-family) is: 16

Rate class	Single-Family	Multi-family
R1	4.16	4.21
R2	1.44	1.65
Seasonal	2.27	3.40
UR	8.73	6.02

17

For the GS<50 customers, the average number of customers per transformer by 18 density zone and phase type (single/three) is: 19

Rate Class	Single Phase	Three Phase
GSE	1.15	1.53
UGE	1.85	3.01

- c. Based on the information available, the following tables identify the line transformers 20 (polemount and padmount) used by Hydro One. 21
- 22 23

3

4

5

6

e. After Hydro One began the smart meter program, smart meter data from roughly 17,000 residential customer meters was obtained in order to review Hydro One's historical diversity curves. The data showed that the curve shape has essentially remained unchanged, however it had shifted slightly more conservative. Although this data was intended mainly for service conductor sizing, it also confirmed Hydro One's current transformer sizing process.

7 8

Hydro One Distribution has not performed any such analysis on "multi-family 9 residential" or small commercial customers. For multi-family residential, Hydro One 10 typically applies the same transformer selection processes as with single family (since 11 the nature of the load is similar). For a commercial customer, Hydro One requires 12 that the customer complete a form, indicating the ultimate size and type of all of their 13 electrical loads. This is used to determine their total demand, and the transformer 14 size. In the absence of a completed form, Hydro One uses the size of the service 15 entrance panel to determine the required transformer size. There is not really any 16 diversity applied in this scenario. Also it is not cost effective to design, approve, 17 manufacture, and stock an unlimited range of transformer sizes. So Hydro One only 18 stocks a handful of sizes of polemount and padmount transformers, as noted in the 19 response to part b. 20

	Green Energy Coalition (GEC) INTERROGATORY #17
Issu	ue 7.7 Is an increase in the fixed charges revenue appropriate?
Int	errogatory
Rel	ated to transformer and capacitor cost allocation and fixed charges:
a.	Please provide excerpts from design manuals, other engineering specifications, purchasing manuals, or other documentation explaining how HONI trades off capital costs and no-load and load-varying losses when purchasing transformers.
b.	Please state the value of energy and capacity used when making economic comparisons among bidders when purchasing transformers; provide the source of those figures; and provide the date when the figures were developed.
с.	Please estimate the average price premium that HONI currently pays over the transformer with the lowest capital costs in each size range in order to avoid losses.
d.	Please identify gross and net plant for capacitors and indicate in which account costs are included.
Res	ponse
a.	Please see Exhibit I, Tab 7.7, Schedule 13-GEC-17, Attachment 1 for the RFP for
	Transformers. The RFP contains the specifications. Please see Exhibit I, Tab 7.7, Schedule 13-GEC-17, Attachment 1 for the RFP for Transformers.
с.	Hydro One follows the Management Board of Cabinet (MBC) Procurement Directive from the Government of Ontario.
	Please see Exhibit I, Tab 7.7, Schedule 13-GEC-17, Attachment 1 for the RFP for Transformers.

Hydro One Networks Inc.

Request for Proposal Number 1000044715

Design, Manufacture and Supply Power Transformers

Part 1A: Instructions to Proponents

Part 1B: Purchaser's Insurance Requirements

Part 1C: Standard Commercial Terms and Conditions for Power Transformers

Part 2: Technical Specifications

Part 3: Format of Submission

Part 4: Attachments

PART 1A - INSTRUCTIONS TO PROPONENTS

Introduction:

This Part 1A provides instructions to the Proponents as related to this request for proposal ("RFP") and defines the terms governing the RFP process.

This RFP contains the following documents:

- (1) Letter of Invitation to submit Proposals
- (2) Part 1:
 - (a) Part 1A Instructions to Proponents
 - (b) Part 1B Insurance Requirements
 - (c) Part 1C Standard Commercial Conditions for Power Transformers
- (3) Part 2:
 - (a) Technical Specifications for Power Transformers C-5201-ES08 (Separate Word Document), including the following appendices of drawings and other technical documentation, all of which are separate documents:
 - (i) Drawing No. SPS-D5S-54410-0001-03
 - (ii) Drawing No. SPS-D1S-54310-0005-05
 - (iii) Drawing No. SPS-D1S-54310-0006-03
 - (iv) Drawing No. SPS-D1S-54310-0009-02
 - (v) Drawing No. SPS-D1S-54310-0010-01
 - (vi) Drawing No. SPS-D1S-54310-0011
 - (vii)Drawing No. SPS-D1S-54310-0012
 - (viii) Transformer Overload Profile "J1"
 - (ix) Excitation Curve for CT's (Sample copy)
 - (x) Fire Detection for Transformer Drawing No. SIU-DCS-78710-010-03
 - (xi) Safety Arrest Technical Directive HO 378
 - (xii)ETM Requirements
 - (xiii) Requirement- Unique Concepts Limited (UCL) Fall Protection System.
 - (b) Technical Specifications for Autotransformers C-5202-ES08 (Separate Word Document), including the following appendices of drawings and other technical documentation, all of which are separate documents:
 - (i) Over Load Profile H-90
 - (ii) Over Load Profile G-89
 - (iii) CT Excitation Curves Sample Copy
 - (iv) DWG# SPS-DFS-54310-0002 Limiting Dimensions for 250 MVA 230/115 kV autotransformer
 - (v) Fire Detection for Transformer Drawings No. SIU-DCS-78710-101-03
 - (vi) Safety Arrest Technical Directive HO 378
 - (vii)ETM Requirements
 - (viii) Requirement- Unique Concepts Limited (UCL) Fall Protection System.
 - (c) Purchaser's Standard Specification M-125-89 (Separate Document PDF)
 (i) M-125 Attachments (Separate PDF document)
- (4) Part 3:
 - (a) Format of Submission:
 - (b) Price Schedule Section 9 (Separate Excel file)

RFP 1-44715 PTR-Final Part 1 20081212

- (5) Part 4: Attachments
 - (a) Intent to Submit Proposal Form
 - (b) Standard Insurance Certificate Form
 - (c) Equipment Data Sheet and Design Basis Sheet (Separate Excel File)
 - (d) Factory Test Failure Rate Form
 - (e) Field Failure Rate Form
 - (f) Customer Reference List

All of the above documents are collectively referred to as "request for proposal", "RFP", "RFP documents" or "tendering documents" hence forward.

The Purchaser's Instructions to the Proponents and the Standard Commercial Conditions contained in this RFP are significantly different from previous requests for tenders and requests for proposals.

The terms defined in Part 1C Standard Commercial Conditions, are used in all the RFP documents and Contract Documents and shall have the same meaning that is ascribed to them in the aforesaid documents. The following additional terms may be used in the RFP documents:

- (1) "Proponent" the company making a submission in response to the Purchaser's RFP documents. The Proponent may also be referred to in the Contract Documents as the Company, tenderer, or vendor; and
- (2) "Proposal" offers, quotes and submissions made by Proponents in response to the Purchaser's RFP. Proposal is also referred to as "tender" or "Tender" in the Contract Documents.

1.0 Proposal Submissions:

Proponents must submit **FIVE** paper copies (four priced, one of which must be a signed original: and one unpriced) and two electronic copies of your Proposals. The electronic copies must be on two separate CD-ROM (disks), in a sealed package properly identified and addressed as follows:

Inergi LP, Agent for the Purchaser

Reference number:	<u>RFP Number 1000044715</u>
Proposal due date and time:	4.00 p.m. Eastern Time Canada on Monday, March 2, 2009
Primary Contact Person:	Peter Wang; Email: <u>peter.wang@inergi.ca;</u> Phone: 416-345-5883
Alternate Contact Person:	(In absence of the Primary Contact) Rajesh Mehta; Email: <u>rajesh.mehta@inergi.ca;</u> Phone: 416-345-6070
Submit Proposals at:	20 Dundas Street West, 8th Floor Reception, Toronto, ON M5G 2C2, Canada

All Proposals must be clearly marked on the outside, on the mailing envelope, with the above information, together with your company name and address and the correct return address of the Purchaser.

Proponents' submission of the electronic copies of their Proposals on CD-ROM (disks) must include unprotected copies of the entire Part 3 and the attachments in Part 4, including all Price Schedules and Equipment Data Sheets in the original Microsoft (PC) program applications as issued with the RFP. In

RFP 1-44715 PTR-Final Part 1 20081212

addition, the Proponents' priced Proposal submissions in paper form must include printed copies of these Price Schedules and Equipment Data Sheets.

The date referenced above, or any subsequent revision thereto by the Purchaser, is to be indicated on the Proposal.

Proposals, and revisions to Proposals, received orally, by telephone or facsimile, or after the specified closing time, will not be considered. Proposals are to be submitted on the Purchaser's Format of Submission if such form is supplied with the RFP documents.

1.01 Submissions:

Proposals must be mailed or hand-delivered. Please note that Proposals and revisions to Proposals that are delivered orally, by telephone or by fax will not be considered. Proposals must be received at the address given, and by the **date and time (Closing Time) stated** in the Letter of Invitation, if the Proponent wants to be certain that the Proposal will be considered by the Purchaser. Proposals may not be considered by the Purchaser if they are received at any time after the Closing Time. The Purchaser accepts no responsibility for the timely delivery or receipt of Proposals, or of Proposals submitted at any location(s) other than the one mentioned above, in this Clause.

The included Part 3 - Format of Submission, including all attachments in Part 4, of the Purchaser's RFP is to be used by the Proponent when submitting its Proposal. It must be complete in every respect when submitted, including a properly signed signature page. All questions asked in the RFP are to be addressed and answers are to be clear, concise, legible, typed or written in ink. Your Proposal must be signed, in ink, by a person or persons authorized to do so. Erasures, overwriting or strikeouts must be initialled by the person signing on behalf of the Proponent submitting the Proposal. Failure to comply with any of the foregoing requirements in this paragraph may, at the sole discretion of the Purchaser, cause rejection of the Proposal or an evaluation penalty.

1.02 Agent or Sales Representative:

If the Proponent is acting as an agent or sales representative, a detailed statement shall be included in the Proposal, details of the activities to be performed by the agent or sales representative and those to be performed by the principal company or companies, including the actual manufacturers. The Proposal shall also include a letter from the principal declaring its knowledge of the Purchaser's commercial conditions and technical specifications and committing the principal to fulfilling the terms of the offer and Contract so as to enable the agent or sales representative to supply the Equipment in accordance with the Contract requirements and by the specified delivery date; and, in the event of any act of insolvency or other default by the agent or sales representative, to assume directly all obligations of the agent or sales representative for performance of the Contract.

1.03 Performance Security

The Proponent shall include, in its Proposal, the name of its proposed surety who will provide the performance security under the Contract, if applicable.

Please refer to Clause 25.0 in Part 1C, Standard Commercial Conditions for Power Transformers, for requirements of performance security under the Contract.

2.0 The Opportunity:

The Purchaser has regular, ongoing requirements of power transformers rated between 41.7 MVA and 125 MVA and autotransformers rated 250 MVA, 115 kV and 230 kV voltage class, all in accordance with the

specifications contained in Part 2 of this RFP (the "Transformers"). A forecast has been included in Part 3, Section 9.0 (the "Forecast"):

- (1) As noted in the Forecast, the Purchaser has a firm requirement of a total quantity of 65 units, of Transformers of different MVA sizes and delivery requirement, all as stated in the Forecast. The 65 Transformers are required to be delivered at different times between the years 2011 and 2013.
- (2) An additional forecasted future requirement of Transformers totalling up to 3400 MVA, to be delivered between the years 2012 and 2015.

Unless otherwise noted, all stated MVA ratings in the RFP are top ratings.

Utilizing the RFP process, and in accordance with the evaluation criteria specified herein, the Purchaser expects to:

- (a) Award contracts to supply the firm requirement of 65 Transformers; and
- (b) Pre-qualify Proponents who will receive future requests for quotes, proposals or tenders ("RFX") for the supply of the future requirement of Transformers.

The pre-qualification shall be valid for a period of five (5) years, during which period the Purchaser expects to issue RFXs to obtain prices and release order(s) on one or more of the prequalified Proponents for power transformers as described above. The Purchaser may, in its sole discretion, extend the pre-qualification period by up to two (2) years to a total of up to seven (7) years.

The future requirement of Transformers is not firm and can increase or decrease or become zero.

The Purchaser's intention is to establish healthy business relationships with the most qualified manufacturers. As stated elsewhere in the RFP, the Purchaser does not commit to award business to the lowest price Proponents. The Purchaser, utilizing the evaluation criteria mentioned in the RFP, will award business and pre-qualify those Proponents who have a proven track record of being competitive in a wide range of attributes, including, but not limited to, excellent and consistent product and service quality, ability to successfully reach all milestones of power transformer orders consistently on time, professional business conduct and consistently competitive total cost of ownership. These attributes contribute to long-term, mutually beneficial, healthy relationships.

S. #	Event	Target Schedule Date
1.	Issue RFP	December 11, 2008
2.	Mandatory All Proponents' Meeting	January 20, 2009
2.	Closing Date of RFP	March 2, 2009
3.	Release award for firm requirement of Transformers	June 15, 2009
4.	Announce pre-qualified Proponents	July 15, 2009

The Purchaser's target schedule for the RFP process is as below:

Proponents who confirm their intent to submit a Proposal, will be invited to the mandatory all Proponents' meeting. The agenda for the mandatory Proponents' meeting will be related to commercial, delivery requirements and RFP process issues. Any questions or clarifications to the technical specification of the RFP shall be addressed through issuing Addenda to the RFP.

Proponents should note that the Purchaser intends to make efforts to follow the above schedule. However, the target schedule above does not constitute a commitment by the Purchaser to release business and/or announce the outcome of pre-qualification on the given dates.

2.01 Award and Pre-qualification Strategy

The Purchaser is seeking strategic partnership(s) with manufacturers to cover its immediate, firm requirement of Transformers. The selected manufacturer(s) will also be automatically considered as pre-qualified to receive future RFX.

While the Purchaser reserves the right to pre-qualify additional manufacturers to receive RFX for the supply of Transformers during the pre-qualification period, which commences from the date of announcement of the pre-qualified Proponents of the RFP, it does not guarantee that manufacturers not responding to the RFP will be included for future RFX for Transformers.

2.02 Pricing Requirements

(1) Prices for the firm requirement of Transformers:

Proponents are requested to submit pricing for the firm requirement of Transformers in the following manner:

- (a) a unit price (for each rating in the Forecast) on the basis of a blanket contract for a period of five years, with no firm commitment to release any business; and
- (b) a unit price (for each rating in the Forecast), based on a firm commitment of award of the Transformer unit totals included in the Forecast, to be delivered at site at various times in the years 2011, 2012 and 2013, as more detailed in the Forecast.

For this option 2.02(1) (b), Proponents should quote a unit price based on quantity of one unit and include a discount schedule for firm orders of multiple units up to the quantities detailed in the Forecast. A discount table has been included in Part 3 for this purpose.

The Purchaser expects Proponents to capture in its price offer all opportunities of economies of scale and consolidation, associated with orders for multiple quantities of Transformers including, but not limited to, identical Transformer designs; Transformers of similar ratings with differences in either voltage or MVA that use common materials and labour; time range of delivery (i.e. delivery around the same time; or within a defined range) and transportation savings.

Proponents are encouraged to incorporate any innovative methods that provide demonstrable benefits of savings and market-competitive price levels to the Purchaser. Each Proponent is asked to detail how and in what manner the formation of a strategic partnership with that Proponent would benefit the Purchaser. Details should include but not be limited to price considerations, technical information exchange, contract administration improvements and any relevant aspect of the Proposal that improves the overall lead-times.

While it is not mandatory that Proponents must offer a price and design for all Transformer sizes and ratings in the RFP, the Purchaser expects that those Proponents who have established and proven technical and engineering capability and experience in manufacturing the Transformer sizes and ratings in the RFP, include an offer for such Transformer sizes and ratings in their Proposals.

Proponents are notified that the Purchaser shall make a comparison and take into consideration, as part of the evaluated information, the following: (i) the extent to which each Proponent's capability exists to provide the entire immediate, firm requirements in the Forecast; and (ii) the number of Transformer sizes and ratings from the Forecast for which an offer is included in that Proponent's Proposal.

(2) Price Adjustments:

For pricing options in Clause 2.02(1) (a) and (b) above, Proponents can submit a base price for each rating in the Forecast, which could be subject to adjustments due to changes in the cost of raw materials, labor and if applicable, foreign currency exchange rate fluctuations.

Such price adjustments shall be based on the following:

- (a) Adjustment can result in an increase or decrease of the base price;
- (b) Such price adjustments shall be based on: (i) Company's actual changes in the cost of labour and materials used in the manufacture of Transformers and corresponding weightings, all of which shall be in accordance with the Company's disclosure in the Source of Supply Section of its Proposal; (ii) Such changes must be evidenced by published and publicly accessible price indices of materials, such as such as Statistics Canada or Industry Canada, or any recognized International institute such as COMEX or LME for copper; and (iii) Foreign exchange fluctuations, wherever applicable, in accordance with the terms of Section 14.0, Part 1D of the RFP; (iii) For materials such as core-steel, insulation material and other such materials, which do not have published price indices, the price change shall be Company's actual change in cost as evidenced by copies of invoices from the Company's sub-suppliers or copies of Company's contracts and/ or purchase orders placed on its sub-suppliers.
- (c) The base price for all adjustments in 2.02(2)(b) above shall be the Company's offered price in its Proposal;
- (d) Only the price ex-works shall be subject to any adjustment.
- (e) Proponents should provide a separate mechanism for freight cost adjustments, if any.

Proponents must submit a formula for price adjustments and include, without limitation, the following information in their Proposal:

- (a) The name of the published price index and source to obtain the information (for e.g., the website link), for each material.
- (b) The base period used to determine the cost of the materials and labour, on which the Transformer prices offered in the Proposal are based;
- (c) Weighting of each material and labor, as a percentage of the proposed price exworks of the Transformer. If required, Proponents can submit material and labour weightings for each Transformer size separately.
- (d) The time at which the price adjustment is to be made, for e.g. whether at the time of the award of the contract or at the time of shipping or invoicing.
- (e) At the agreed time of price adjustment, the time period over which the new raw material price indices would be measured to calculate the price adjustment. For e.g. for copper, LME price index for copper averaged over a period threemonths immediately prior to the date of shipping.
- (f) A positive confirmation that the Proponents' would provide copies of its subsuppliers invoices or contracts or Proponents' purchase orders on its subsuppliers as evidence to support the price adjustment.

A mutually agreed price adjustment formula based on the above shall also be used for determining prices of the firm requirement detailed in the Forecast, in the event that some of the firm requirement is deferred for delivery beyond 2013, up to the year 2015.

Proponents are also encouraged to submit a proposal to establish a mechanism by which the Purchaser is periodically ensured that the contract prices are market competitive, during the term of the Contract.

(3) Spare Part Pricing:

RFP 1-44715 PTR-Final Part 1 20081212

The Proponent shall include, in its Proposal, unit prices together with delivery times for recommended spare parts for the Equipment. Such prices shall remain valid for acceptance by the Purchaser for a period of 12 months from the date of Proposal. Spare parts shall be identical to corresponding parts in the Equipment. The successful Proponent shall provide, upon request by the Purchaser, a complete list of spare parts which the Company would normally purchase from outside sources, showing the Company's part number and the manufacturer's name and part number for each item.

2.03 **Progress Payments**

The terms of payment shall be in accordance with Clause 8.04, Terms of Payment, in Part 1C of the RFP.

At the Purchaser's sole discretion, it may consider Proposals submitted on the basis of progress payments with the following terms:

- (a) 60% of the Contract Price may be invoiced in the installments defined below:
 - (i) First installment of 10% may be invoiced upon approval (or "approved as marked") by the Purchaser of all contractual drawings.
 - (ii) Second installment of 20% may be invoiced upon receipt of major raw material and components of the Equipment by the Company at its manufacturing plant or factory. The Purchaser reserves the right to ask the Company to submit support documents demonstrating such receipt.
 - (iii) Third installment of 30% may be invoiced after the Equipment successfully passes all factory tests as per the Contract Documents.
- (b) The balance 40% of the Contract Price may be invoiced in accordance with the following:
 - (i) Fourth installment of 30% plus/minus any outstanding adjustment may be invoiced upon delivery of the complete Equipment at project site.
 - (ii) Final payment of 10% may be invoiced after successful completion of installation of the Equipment at site, or final incoming Equipment inspection by the Purchaser, not exceeding 90 days from date of delivery of the Equipment at project site.

In the event that the Purchaser accepts progress payment terms, all other provisions of Clause 8.04, Terms of Payment, in Part 1C shall apply.

3.0 Evaluation of Proposals:

3.01 General:

All Proposals will be evaluated to bring the time effect of all financial terms and conditions to present worth values. In addition to the proposed price, administrative costs, the projected effect of escalation (if applicable), lifecycle maintenance costs (if applicable), the financial impacts, if any, of the terms of payment offered and of technical parameters, will be considered in the evaluation of Proposals.

Departures from the Purchaser's specified commercial conditions may, at the Purchaser's sole discretion, result in an evaluation penalty or be grounds for rejection of the offer in which they appear.

3.02 Evaluation Criteria:

It is very important that the Proponents submit their Proposal in the Format of Submission, Part 3 of

RFP 1-44715 PTR-Final Part 1 20081212

the RFP and provide all of the requested information. Where provided, the Proponents should use the space, tables, fields and forms included in Part 3 of the RFP to submit the information required in the RFP documents. This will help the Purchaser to properly evaluate the Proposals received. After the Proposal closes, while the Purchaser reserves the right to do so, the Purchaser makes no commitments that it will seek clarification on any aspect of the Proponents' Proposal submission or seek any missing information that was already requested in the RFP.

The criteria to evaluate and select Proponent(s) responding to this RFP, both for award and prequalification, include, however are not limited to the following:

(1) Proof / Evidence of Proponents' Corporate Values:

Hydro One takes its commitments seriously to social, environmental, and health and safety responsibilities, and adherence to ethical business practices ensuring that the decisions we make today also represent the right decisions for our future. These commitments reflect how we do business. Hydro One expects our suppliers of goods and services to adhere to these fundamental values and apply them to how they do business with Hydro One and other clients around the world. Proponents are requested to provide sufficient information to assess the supplier's values relevant to each of the following areas of corporate responsibility:

(a) Corporate Safety Responsibility:

Safety is always our first consideration at Hydro One and is not optional. Consistent with our values, suppliers must apply safe work-practices to all activities and exercise good judgment in work decisions.

Proponent should provide sufficient information to demonstrate that they conduct business and, if awarded the Contract, will perform the work in a safe responsible manner. Such information should include, without limitation, the following:

- Information that demonstrates a good record of safety responsibility and compliance with applicable safety regulations.
- Any data or information showing how Proponent intends to comply with applicable safety requirements that may be imposed by law or the Request for Proposals Documents.
- A signed letter of authorization and direction to the appropriate Workers' Compensation Board or other appropriate provider of workers' compensation coverage for the workers of the Proponent sufficient to allow Hydro One to access the Proponent's appropriate Workers' Compensation Board, or equivalent, incident history.
- The Proponent's occupational health and safety program which meets all the requirements of the law respecting the safe performance of the work.

(b) <u>Corporate Environmental Responsibility:</u>

The Purchaser is committed to meet or surpass all applicable regulatory requirements and adopt ways to enhance the communities we serve. Consistent with our values, suppliers to the Purchaser must comply with all applicable environmental laws and regulations and conduct their operations in an environmentally responsible manner.

Proponent should provide sufficient information to demonstrate that the Proponent has conducted its business and, if awarded the Contract, will perform the work, in an environmentally responsible manner and in compliance with environmental good practice and regulations. Such information should include, without limitation, the following:

 A statement certifying compliance with environmental laws in force at the proposed place of manufacture

- Any data or information showing how the Proponent intends to comply with applicable environmental protection requirements that may be imposed by law or the Request for Proposals Documents. Proponents should provide details of the systems or processes they will use for management of environmental issues.
- Details of the Proponent's business practices that demonstrate a commitment to environmental stewardship including: product design elements, material selection, energy efficiency, resource conservation, product life cycle management, waste management processes, packing and shipping methods and any other information that would indicate the extent of the Proponent's commitment to environmental stewardship.
- Information showing how the Proponent ensures and will, if awarded the Contract, ensure that its contractors and suppliers conduct their business in an environmentally responsible manner and in compliance with environmental good practice and regulations.

(c) Corporate Social Responsibility:

The Purchaser takes is social and community responsibilities seriously and is always concerned about the impact we have on our customers, our employees, and their overall quality of life. Consistent with these values, the Purchaser's suppliers are expected to conduct their operations in a socially responsible manner.

Proponent should also provide sufficient information to demonstrate that they conduct business and, if awarded the Contract, will perform the work in a socially responsible manner. Such information should include, without limitation, the following:

- Details of the Proponent's current social responsibility policy and practices regarding issues such as community relations and involvement, protection of human rights, employment equity, ethical practices (i.e. child labour, fair compensation, working hours, working conditions, timely payment of bills, etc.)
- Information outlining how the Proponent takes into consideration the interests of society by taking responsibility for the impact of their activities on customers, employees, communities, as well as the environment insofar as how the Proponent voluntarily takes further steps beyond mandatory compliance with obligatory legislation.
- Information showing how the Proponent ensures and will, if awarded the Contract, ensure that its contractors and suppliers conduct their business in a socially responsible manner.

Proponents are specifically requested to respond to questions and provide information requested, related to this subject, in Part 3 of the RFP.

(2) Proof of Ability

The Proposal shall be complete in every respect and contain sufficient engineering and other pertinent information about the work, including all information requested in the RFP documents, to permit a detailed comparison of Proposals. This shall include evidence of the Proponent's financial, managerial and technical ability, experience, and facilities, as well as those of any proposed subcontractors, to perform the work by the dates specified. Such capabilities shall be subject to verification by the Purchaser.

(3) Cost

The Purchaser will consider total evaluated cost impact of the Proposal, as indicated in Clause 3.01 above, and overall value to the Purchaser.

(4) Source of Supply

The Proponent should include, in its Proposal in Part 3, the following information:

- (a) the percentage of the price ex-works attributable to work in (1) Canada, by province and (2) in other countries (to be specified) expressed in each case in terms of engineering, materials (with breakdown as requested in Part 3), and manufacturing labour;
- (b) the name and address of, together with a list of the items to be supplied or work to be performed by, each proposed major supplier or subcontractor; and
- (c) the location(s) where the Equipment indicated in the Proposal will be manufactured.

(5) Compliance

The level of compliance to technical specification in Part 2 and the commercial terms and conditions in Parts 1B, 1C and 1D shall be evaluated.

A condition of pre-qualification to receive future RFX is that a Proponent is able to arrive at an agreement with the Purchaser on the commercial terms and conditions of the contract substantially based on those contained in this RFP.

The Purchaser will neither evaluate nor accept any general or standard commercial terms and conditions of the Proponents in place of the terms contained in this RFP.

(6) Proponents' capability:

The Proponent should have a proven capability to design, manufacture and build equipment similar to the Equipment of this RFP (for the purpose of this RFP "similar" means similarity in principal electrical ratings; i.e.; voltage class, BIL, continuous current, short-circuit current, MVA rating and/or number of windings as applicable). To enable Purchaser to evaluate such capability, the Proponent should provide a detailed list of customers of the Proponent's source manufacturing plant as disclosed in its Proposal in Part 3, (hereinafter, the "Plant"), for whom it has designed, manufactured and delivered such similar equipment. The information on the list should include, but not be limited to, the detailed rating of the equipment, date of in-service, location of installation and complete contact details (name, title or position, email address, telephone and fax number) of the concerned person, for each listed customer. When provided, please use the forms in Part 4 - Attachments.

Please note that the above information should be specific for the Plant and for similar equipment. If general information on Proponent's plants in other locations is provided in the Proposal, such information will be discarded and the Proposal may be deemed incomplete.

The Purchaser also reserves the right, in its sole discretion and as a part of its evaluation of Proponent's Proposal submission, to perform a comprehensive quality due-diligence, which shall include, but not be limited to, a quality and manufacturing audit, of the Proponents' Plant.

(7) Equipment Reliability and Maintainability:

The Proponent should provide the following information in the forms provided in Part 4, Attachments:

- (a) Factory test failure rate in the form provided, by each year, for the last ten (10) years, of similar equipment designed and manufactured at the Plant. The Proponent should provide the nature and reason for the failure and remedial action taken by the Proponent. The information should include details of the failed component/part/sub-assembly.
- (b) Field failure rate in the form provided, by each year, for the last ten (10) years, of similar equipment designed and manufactured at the Plant. The Proponent should provide the nature and reason for the failure and action taken by the Proponent. The

information should include details of the failed component/part/sub-assembly. The Proponent should also provide the location of the failed similar equipment, corresponding date of in-service and full contact details of the person involved at the Proponent's customer where the equipment failed.

The Proponents must provide failure data only <u>specific to the Plant</u> and to equipment that is similar or higher in size and rating to the Equipment, as described above, and not provide failure data for different plants and different size of equipment.

The Proponent is also encouraged to provide any additional information on reliability and maintainability of its equipment in Part 3, Format of Submission.

(8) Equipment Data Sheet and Additional Technical Information:

The Proponents must complete the Design Basis and Equipment Data Sheets.

(9) Financial viability:

Proponents must provide the information requested in Part 4. If the Proponents have provided the requested information in response to Purchaser's previous requests for tenders or requests for proposals issued in the six months previous to the Closing Time, then they need not provide it again. The Proponents must identify Purchaser's RFT number and their submission reference.

(10) Representation in Canada / USA:

For Proponents whose Plants are located outside Canada, the following criteria will be evaluated:

- (a) Such Proponents must have adequate technical and commercial support resources located preferably in Canada, or in the USA.
- (b) Such Proponents' local technical support resources shall include, but not be limited to, erection or installation consultants or supervisors and be well versed with the Proponent's equipment and products.
- (c) Such Proponents' local commercial support resources shall include but not be limited to logistics support for rail and road transportation issues when the Equipment is being moved in Canada.
- (d) A preference for such Proponents to have an arrangement with a company or firm with a factory or facility located in Canada or the US, for providing repair and other services for the Company's transformers. At the minimum, such company's or firm's facility/ factory must have the following capabilities:
 - (i) The facility is ISO 9000 certified.
 - (ii) Employs adequately qualified engineers, technicians and shop-floor labor, who are knowledgeable of design and manufacturing aspects of power transformers.
 - (iii) The facility has in-house expertise to assess, diagnose and repair transformer defects, cause of electrical failures, etc.
 - (iv) The facility has capability to dismantle, repair and re-assemble power transformers rated up to 300 MVA top rating, including its windings; and manufacture new replacement windings for power transformers;
 - (v) The facility has capability to perform all routine production tests in accordance with the RFP specification

Purchaser's intent is to evaluate the above information for it impact on total evaluated cost of ownership, accessibility to quick service, including warranty-related service when needed, and delivery and total turn-around times for failed transformers.

RFP 1-44715 PTR-Final Part 1 20081212

(11) Delivery schedule/lead time:

- (a) Proponents should include in their Proposals a manufacturing critical path schedule, including, but not necessarily being limited thereto, dates for material procurement and award of subcontracts, dates for receipt of raw materials or sub-assemblies, the scheduled commencement times of production, and times and duration of manufacturing stages of the major components, (including shop testing of major subcontract items).
- (b) The Plant's historical on-time-delivery performance on supply of similar equipment, including supply to the Purchaser on previous contracts.

(12) Other information:

Proponents should provide all other information as requested in the RFP documents, including Part 3.

(13) Completeness of Part 3 - Format of Submission

Proposals contains answers to all questions and includes all documentation requested in the RFP.

(14) Additional Information not requested in the RFP:

Purchaser reserves the right to request additional information from the Proponent on any aspect that it determines to be a potential risk to the Proponent's ability to meet delivery schedules, meet performance thresholds or any additional factors found to be critical to the selection and pre-qualification process.

(15) Proposal submission:

Submit the required number of electronic and paper copies of Proposals.

(16) Exceptions to the RFP:

- Please note the following:
- (a) Purchaser will not consider and/or accept any standard or general (printed) conditions of sale from any Proponent.
- (b) If a Proponent has any exceptions to the commercial terms and conditions and technical specifications of this RFP, that Proponent must unequivocally state all such exceptions, in sufficient detail and with reference to the corresponding RFP Part, Clause and paragraph number, in the Format for Submission, notwithstanding the appearance of such exceptions in any other part of the Proposal.

If a Proponent has no exceptions to the terms and conditions and technical specifications of this RFP, then it shall state the following in the Format of Submission: "We accept all of the terms and conditions and the technical specification of this RFP, without any exception."

A Proponent shall be deemed to have accepted all the terms and conditions of this RFP, including the technical specifications, unless it explicitly states its exceptions as required in this Clause.

All exceptions are subject to evaluation by the Purchaser, who may render any exception(s), and as a result all or part of the Proposal, to be unacceptable after evaluation.

4.0 Clarification of RFP Documents

Any Proponent who wants clarification of this RFP package or who finds discrepancies or omissions from this RFP package may contact the designated contact person only prior to the due date for submission of Proposals, and only in writing, (via email) as soon as possible, however no later than five (5) business days

before the due date of submission of Proposals, so that a written instruction or an addendum may be issued to all Proponents, if the Purchaser determines to issue such written instruction or addendum.

Prior to award of the Contract, any correspondence that may be required shall carry the Purchaser's RFP number and requisition number/request for bid number.

No officer, agent, or employee of the Purchaser is authorized to alter orally, any portion of these documents, and all such oral alterations shall be void. Any alterations required will be issued to all Proponents as written addenda. Proponents shall list in their Proposals all addenda that were considered when their Proposal was prepared.

During the entire Proposal period prior to award, all communication (verbal or written) by the Proponents must be forwarded through designated contact person(s). You are cautioned that failure to comply with this requirement may result in assessing a penalty to your Proposal or outright rejection of your Proposal.

Any clarification of the RFP documents required by, or communication from, the Proponent prior to submission of its Proposal shall be requested and communicated through the representative identified in the invitation to submit Proposals.

During the period prior to the due date for submission of Proposals, any addenda will be issued only to those Proponents who, within the prescribed time-period, confirm their intent to submit a Proposal.

5.0 The RFP process:

- (a) Purchaser reserves the right, in its sole discretion, to :
 - (i) award to more than one Proponent;
 - (ii) make a partial award;
 - (iii) modify, cancel or withdraw this RFP at any time and for any reason whatsoever without any obligation or reimbursement to the Proponents, whether or not the Proponents' Proposals contain all required information and whether or not the Proposals are properly completed and submitted; and
 - (iv) waive procedural/technical defects, irregularities, exceptions, and omissions in the Proposal if, in so doing the best interests of the Purchaser will be served.

No liability shall accrue to the Purchaser for any decision in this regard.

- (b) Purchaser does not make any claims or promises whatsoever with respect to whether or not it will actually issue a contract.
- (c) Furthermore, Purchaser does not guarantee that any eventual contract will include the identical scope of work description as those defined in this Request for Proposal.

All requirements and conditions imposed by the RFP documents are for the benefit of the Purchaser. They are not to be construed as undertakings or obligations on the part of the Purchaser with respect to their enforcement.

- (d) Purchaser does not represent that it will accept any Proposal, accept the lowest Proposal, or be precluded from accepting any Proposal or other offer.
- (e) Purchaser reserves the right to negotiate any Proposal with the Proponent without references to other Proponents or Proposals.

- (f) Purchaser shall in no way be committed to accept any Proposal and shall not be required to give any reason for its decision. Proponents agree that the exercise of any right or privilege described in this RFP shall be without liability on the part of Purchaser for any damage or claim brought by a Proponent because of same, nor shall any Proponent seek any recourse of any kind against Purchaser because of same.
- (g) The costs and expenses for the preparation and submission of a Proposal and all other cost and expenses relating to this RFP incurred by any Proponent shall be borne by that Proponent. Purchaser shall not be liable to pay for such costs and expenses or to reimburse or compensate a Proponent in any manner whatsoever or under any circumstances including, without limitation, in the event of rejection of any or all Proposals.
- (h) All requirements and conditions imposed by the RFP documents are for the benefit of the Purchaser. They are not to be construed as undertakings or obligations on the part of the Purchaser with respect to their enforcement. The Purchaser will not be liable for any verbal information or advice or any errors or omissions which may be contained in this RFP. The Purchaser makes no representations or warranties either express or implied, with respect to the accuracy or completeness of this RFP and the Purchaser shall not be responsible for any action, cost, loss or liability arising from the Proponent's reliance or use of this RFP.
- (i) The Proposals solicited are solely for the benefit of the Purchaser, and the Purchaser does not make any claims or promises whatsoever that the final award will be based on any perceived, assumed or stated criteria.
- (j) The Purchaser will notify Proponents of the final result or outcome after evaluation of their Proposal submission. Further information will be presented only at the Purchaser's discretion.
- (k) All requirements, documentation and information obtained by the Proponents in connection with the RFP are the Purchaser's property and must be maintained in confidence and shall not be used for any purpose other than for replying to the RFP, and for fulfilment of any subsequent contract(s) if awarded.
- (I) No assurances are given that a Proposal submission will remain confidential. The Purchaser reserves the right, in its sole discretion, to release the details of or make available, copies of any or all Proposal submissions to the general public. All Proposal submissions submitted to the Purchaser in response to the RFP shall become the Purchaser's property.
- (m) Without limiting the generality of the provisions of all Clauses of this Part 1, the Purchaser reserves the right to disqualify from bidding: (i) an individual or partnership who has, or (ii) an individual or partnership who was a shareholder or officer of a corporation that has, or (iii) a corporation that has, or (iv) a corporation with a shareholder or officer who has, or (v) a corporation that is, or was, a shareholder of a corporation that has, or (vi) a corporation that has a shareholder or officer who is also a shareholder or officer of another corporation that has: had a bid bond retained, or had all or part of a performance bond retained, or breached a contract with the Purchaser or one of its affiliates or failed to complete its obligations under any prior contract with the Purchaser or one of its affiliates, or has an unresolved dispute with the Purchaser or any one of its affiliates. The definition of "affiliate" or "affiliates" is as stated under the Ontario Business Corporations Act.
- (n) The Purchaser may, in its sole discretion, choose to meet with some or all of the Proponents to discuss aspects of their Proposal. The Purchaser may require one or more Proponents to submit supplementary documentation to clarify any matters contained in their Proposal, and the

supplementary documentation accepted by the Purchaser shall form part of the Proposals of such Proponents.

- (o) By submitting a Proposal to the Purchaser, the Proponent acknowledges, agrees with and accepts the terms and conditions of all Clauses in this Part 1A of the RFP, and agrees to the adequacy of the RFP and the process described herein for the intended purpose. The acknowledgement, agreement and acceptance of the terms and conditions within this Part 1A is mandatory and no revision to any of the Clauses found within this Part 1A will be accepted, nor will any alternate terms and conditions submitted by the Proponent be accepted.
- (p) This document is the sole property of the Purchaser and shall not be reproduced or distributed in whole or in part for any other purpose other than that for which it is intended, i.e. submission of Proposals and performance of work. All other use of this document or portion thereof shall require the prior written approval of the Purchaser.
- (q) The Proponents submitting Proposals agrees that all rights, title and interests, including copyright ownership, to all information and material that may be provided to the Proponent by the Purchaser or otherwise obtained by the Proponent relating to the RFP or in the Proponent's performance of the service if it is the successful Proponent, shall remain the property of the Purchaser. All such information and material and any copies thereof shall be returned to the Purchaser upon request. The Proponent further agrees to maintain all information and material that may be provided to the Proponent by the Purchaser or otherwise obtained by the Proponent in relation to the RFP or in the course of performing the service if the Proponent is the successful Proponent, in strict confidence and to disclose the said information and material only to those of its employees having a need to know same and who have undertaken a like obligation to maintain its confidentiality. The Proponent agrees neither to reproduce or disclose or distribute the said information and material to any other third party nor to use the said information and material for any purpose other than as specifically contemplated herein without the Purchaser's prior written consent.

Design, Manufacture and Supply Power Transformers

Part 1A: Instructions to Proponents

Part 1B: Purchaser's Insurance Requirements

Part 1C: Standard Commercial Terms and Conditions for Power Transformers

Part 2: Technical Specifications

Part 3: Format of Submission

Part 4: Attachments

PART 1B - INSURANCE REQUIREMENTS

Terms not defined under the Insurance Requirements shall have the same meaning ascribed to them under Part 1C - Standard Commercial Conditions, unless otherwise expressly stipulated.

The following Insurance Requirements shall apply:

The work shall remain at the sole risk of the Company up to and including takeover day. In the event of loss or damage to the work during such period, the Company shall make good the same at its expense or pay all costs incurred by others in making good such loss or damage.

1.0 Required Insurance(s)

The Company agrees to provide and/or cause its subcontractors to provide and maintain in full force and effect with financially responsible insurance carriers, the following insurance which shall take effect as of the date of this agreement and shall remain in effect during the term hereof or any extension thereof or as otherwise specified herein:

- 1.1 Commercial General Liability Insurance, with limits of \$5,000,000 inclusive for bodily injury, including death, personal injury and damage to property, including loss of use thereof, for each occurrence. To achieve the desired limits, Excess or Umbrella coverage's may be used. Coverage shall specifically include but not be limited to the following:
 - (a) Blanket Contractual Liability;
 - (b) Damage to property of the Purchaser including loss of use thereof;
 - (c) Liability arising out of unlicensed equipment;
 - (d) Pollution Liability coverage on at least a Sudden and Accidental basis;
 - (e) Products & Completed Operations to be continuously maintained through the operational liability insurance;
 - (f) transit, including both inland and marine cargo insurance in the amount of the Contract Price of the Equipment;
 - (g) Employer's Liability;
 - (h) Non-Owned Automobile Liability (not applicable for U.S. based companies);
 - (i) Broad Form Property Damage;
 - (j) XCU endorsement (if applicable to the services being provided under the Contract Price); and
 - (k) Blasting (if applicable to the services being provided under the Contract Price).

The following applicable to On Site Erection Consulting Services, when purchased by the Purchaser (if required):

- 1.3 Automobile Liability Insurance, covering all licensed vehicles owned, (non-owned auto for U.S. based companies), rented or leased and used in connection with the work to be performed under this agreement. Coverage shall include Bodily Injury and Property Damage Liability, mandatory Accident Benefits and if applicable attached machinery, to a combined inclusive minimum limit of \$5,000,000.
- 1.4 Workers' Compensation: The Contractor and its subcontractors shall qualify under and shall satisfy all the workers' compensation laws of all jurisdictions in which the work and any portion of the work is to be performed and any other applicable provisions of said laws. (Note: For U.S. employees, appropriate State Workers Compensation must be carded including Employees Liability for a minimum limit of \$1,000,000 U.S., with a Foreign Coverage Endorsement and, to the extent applicable, Jones Act and U.S. Longshoreman's and Harbor Workers coverage and FELA). The Contractor, upon commencement of any work at the site, shall submit a list of all employees who will be employed at the site.

2.0 Certificates of Insurance

2.1 Before starting work, the Company will supply and cause its subcontractors to supply to the Purchaser a certificate of insurance completed by a duly authorized representative of their respective insurers certifying that at least the minimum coverage's required here are in effect and that the coverage's will not be cancelled, non-renewed, restricted or reduced without 30 days' advance written notice by registered mail, receipt required, to:

Hydro One Networks Inc. C/o Inergi LP, Attn: Rajesh Mehta 20 Dundas Street West, 8th Floor, Toronto, Ontario M5C 2C2

(With copy to Hydro One Networks Inc., Risk & Insurance Department, 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario M5G 2P5)

- 2.1(a) Failure of the Purchaser to demand such certificate or other evidence of full compliance with these insurance requirements or failure of the Purchaser to identify a deficiency from evidence provided will not be construed as a waiver of the Company's obligation to maintain such insurance.
 - (b) The acceptance of delivery by the Purchaser of any certificate of insurance evidencing the required coverage's and limits does not constitute approval or agreement by the Purchaser that the insurance requirements have been met or that the insurance policies shown in the certificates of insurance are in compliance with the requirements.
 - (c) If the Company fails to maintain the insurance as set forth here, the Purchaser will have the right, but not the obligation, to purchase said insurance at the Company's expense. Alternatively, the Company's failure to maintain the required insurance may result in termination of this Contract Price at the Purchaser's option.
 - (d) If any of the coverage's are required to remain in force after final payment, an additional certificate evidencing continuation of such coverage will be submitted with the Company's final invoice.
 - (e) Certificates of insurance will be provided within 14 days after award of the Contract Price.
- 2.2 All deductibles shall be to the account of the Company and/or its subcontractors.
- 2.3 With the exception of clause 1.3 (Automobile Liability), all insurance noted below shall specify that it is primary coverage and not contributory with or in excess of any other insurance that may be maintained by the Purchaser.
- 2.4 All limits and deductibles are expressed in Canadian dollars.
- 2.5 The Purchaser shall be included as an Additional Insured under coverage's noted in Commercial General Liability and Excess/Umbrella Liability but only with respect to their rights and interest in the operations of the Companies and shall be added a Loss Payee as the Purchaser's interest may appear, under-coverage All Risks Installation Floater.
- 2.6 Coverage's noted in Commercial General Liability and Excess/Umbrella Liability shall contain a Cross Liability clause and a Severability of Interests clause.
- 2.7 Coverage provided for the Purchaser shall not be invalidated or vitiated by actions or inactions of others.

3.0 Other Conditions

The above-mentioned insurance requirements of Clause 1.0 shall be in force prior to the commencement of services under the Contract and shall remain in force during the entire term of the Contract. Notwithstanding anything else in the Contract, (a) the Company shall not commence providing the said services prior to the Purchaser's receipt of a valid Standard Insurance Certificate evidencing compliance with all terms of this clause; and (b) if the required insurance coverage expires during the term of the Contract Price, the Company shall not continue providing the said services prior to the Purchaser's receipt of a valid Standard Insurance coverage expires during the term of the Contract Price, the Company shall not continue providing the said services prior to the Purchaser's receipt of a valid Standard Insurance Certificate evidencing compliance with all terms of this clause.

3.1 In addition to any other remedy that the Purchaser may have against the Company as a result of the Company's failure to comply with all the terms of this clause, the Company shall, to the extent that delay in providing the said services occurs as a result of the non-delivery of Standard Insurance Certificates as required by Clause 2.1, be liable to the Purchaser for all damages arising out of the said delay.

Design, Manufacture and Supply Power Transformers

Part 1A: Instructions to Proponents

Part 1B: Purchaser's Insurance Requirements

Part 1C: Standard Commercial Terms and Conditions for Power Transformers

Part 2: Technical Specifications

Part 3: Format of Submission

Part 4: Attachments

PART 1C - STANDARD COMMERCIAL CONDITIONS FOR POWER TRANSFORMERS

1.0 Definition of Terms

The following terms, wherever used in any Contract Document, shall mean:

- "Company" or "Contractor" the person, firm or corporation to whom the Purchaser has awarded the Contract, also sometimes referred to as the "vendor" or "successful tenderer" or "successful Proponent" in the Contract Documents;
- (2) "Contract Price" the total, without duplication, of: any stipulated sum(s) for the work (or any portion(s) thereof) set forth in the purchase order, as amended by any instruction notice;
- (3) "Engineer" the person designated from time to time by the Purchaser to exercise such power, authority, or discretion as is required of him/her under the Contract;
- (4) "Equipment" the materials, machinery, assemblies, instruments, devices or articles, as the case may be, or components thereof, which form part of the work;
- (5) "erection consultant" an employee of the Company or of subcontractor who furnishes technical direction for installation when required under the Contract;
- (6) "in-service date" the day on which the Equipment purchased is declared in service by the Purchaser;
- (7) "Inspector" the representative of the Purchaser authorized to monitor the application of the quality program, examine the Equipment, and expedite delivery of the work;
- (8) "project site" the land or actual place designated by the Purchaser for the performance of the work;
- "subcontractor" a person, firm or corporation having a contract with the Company for the supply and/or performance of any part of the work;
- (10) "tendering document(s)" the documents issued by the Purchaser in response to which tenders are invited for the supply and/or performance of the work and may also be sometimes referred to as "Request for Tender" or "RFT";
- (11) "work" all labour, material, Equipment, structures, services, supplies and acts required to be done, furnished or performed by the Company under the Contract;
- (12) "Purchaser" unless specified otherwise in the Contract Documents, the Purchaser is Hydro One Networks Inc., also sometimes referred to as "Hydro One" in the Contract Documents.

Words in the singular include the plural and vice versa.

2.0 Contract Documents and Order of Precedence

The contract (the "Contract") shall consist of the following documents (the "Contract Documents") listed in the order of priority from highest to lowest in case of any inconsistency or conflict:

- Change orders or revisions to the purchase order;
- the purchase order (the "PO");
- the following documents, including those contained in the tendering documents, listed in the order of priority from highest to lowest in case of any inconsistency or conflict:
 - o Special Commercial Conditions (if any),

- o Standard Commercial Conditions for Power Transformers,
- o Purchaser's Technical Specifications, Drawings and Data,
- o Purchaser's Invitation, Instructions to Proponents, and Format of Submission.
- the Company's response to the RFP, including Company's drawings and data (the "Proposal").

These documents take precedence in the order in which they are named above. Appendices and addenda to any Contract Document shall be considered part of such document.

Subsequent amendments to the Contract shall be in the form of change orders or revisions to the purchase order, which shall take precedence over the documents amended thereby.

No agent, employee or other representative of the Purchaser has authority to make any promise, agreement or representation not incorporated by writing into the Contract Documents, and no promise, agreement or representation shall bind the Purchaser unless so incorporated.

The Contract and the work required thereby shall be interpreted to include all work reasonably required to provide a project result that is fit for the Purchaser's purposes in accordance with the Contract Documents. Where the Company's tender sets forth design or performance descriptions or criteria, such descriptions and criteria shall be considered part of the Purchaser's specifications to the extent that they enhance the requirements of such specifications.

3.0 Communications

After award of the Contract, all communications shall reference the Purchaser's purchase order number, requisition number, project name and equipment description.

In addition to telephone communication, the Company must have a dedicated fax line number and e-mail address for communication with the Purchaser.

4.0 Language and Measurement

All communication between the Company or subcontractors and the Purchaser, including all documents, notes on drawings, and submissions required under the Contract, shall be in the English language. Unless specified in the tendering document, either the Imperial system of weights and measures or the International System of Units (SI) may be used for quantity measurement. When the Imperial system is used, either Imperial or US Gallons may be quoted, provided that the unit is clearly defined, and any weight expressed in tons shall be the short ton of 2 000 pounds. Technical abbreviations for the Imperial system shall be in accordance with CSA Standard Z85 - Abbreviations for Scientific and Engineering Terms. Preferred units in SI are those shown in the Purchaser's Standard MCD-1 - Preferred Units of Measurement (SI). All instrumentation shall be calibrated in SI.

5.0 Public Relations/Code of Conduct

The Company and its employees shall conduct themselves in a manner conducive to the maintenance of good public relations for the Purchaser.

The Company, although not an employee of the Purchaser, is, by virtue of its work on the Purchaser's tasks and on the Purchaser's premises, in a position to affect the Purchaser's image and, in some cases, the Purchaser's legal position. The Company will, therefore, while it is on the Purchaser's premises or while its actions may reflect upon the Purchaser's status or reputation, conduct themselves in such a manner as not to cause embarrassment, legal problems or the threat of legal problems to the Purchaser. This includes, without limiting the generality of the principle:

- Refraining from any illegal or improper activity that will be attributed to or reflect upon the Purchaser;
- Conducting itself in a proper manner when on the Purchaser's premises and complying with all rules established for those premises; and
- Respecting the property of the Purchaser and of others situate on the premises.
- Conducting itself in a manner consistent with the Purchaser's Code of Business Conduct, available at http://www.hydroone.com/en/about/code_of_business/buscode.pdf.

It is expected and required that the Company will recognize and support the Purchaser's effort in conducting its affairs in the best interest of the electricity consumers of Ontario and with the highest standards of business ethics.

If during the performance of the work, the Company receives a complaint or enquiry to which the Company is not qualified to respond, then the Company shall record the name of the complainant or the person making the enquiry, along with his or her address and telephone number. The Company shall make a written report of the incident to the Purchaser.

6.0 Proprietary Rights, Confidentiality

During and after the term under the Contract, the Company must treat as confidential, and ensure that its employees and agents treat as confidential and secure, all confidential information that may arise or in any way is a part of the Contract, to which they may become privy. The Company agrees that it shall not directly or indirectly disclose, use, either during or following the term of the Contract, any material or information belonging to or relating to the business operations of the Purchaser. The Company is responsible for all information disseminated to subcontractors; therefore, viewing of any drawings or specifications will be arranged through the Company submitting the proposal. If requested, the Company agrees that it shall sign a Confidentiality Agreement and shall obtain for the Purchaser the written agreement of the Company's employees, subcontractors and agents to keep confidential all such information.

7.0 Representations and Warranties of the Company

The Company represents and warrants that:

- (1) it shall perform the work in a diligent and professional manner and otherwise in accordance with the Contract;
- (2) the work provided shall be of good quality, fit for the Purchaser's purpose as defined in the Purchaser's specification;
- (3) all personnel employed in the performance of the work shall have the requisite qualifications, expertise and experience to perform the work;
- (4) it has the necessary corporate power, authority and capacity and good and sufficient right to enter into the Contract on the terms and conditions herein set forth, and has the financial and other ability and authority to fulfill its obligations hereunder and to carry out the terms of the Contract; and
- (5) if the Company is not a non-resident of Canada, the Company is a "GST Registrant" in good standing and its GST registration number is as specified in its Tender.

8.0 Pricing, Terms of Payment and delays in delivery

8.01 Pricing Requirements:

Prices shall be in Canadian funds payable at Toronto unless otherwise specified by the Purchaser.

Price terms shall be Delivered Duty Paid (in accordance with INCOTERMS 2000) to Purchaser's project site or the nearest rail-siding to Purchaser's project site, if applicable, and shall include

applicable customs duties, excise taxes, freight (if applicable), insurance, workers' compensation and all other charges of every kind attributable to the work. Ontario Retail Sales Tax or Provincial Sales Tax (ORST or PST) and Goods and Services Tax (GST) shall be shown as extra.

The applicable amounts included in the prices tendered for freight and sales taxes shall be stated separately.

The successful tenderer shall, upon request, furnish the Purchaser with a breakdown of the prices tendered for purposes of accounting and payment in a form and manner acceptable to the Purchaser.

Except as provided for in the tendering documents, the price tendered shall be considered not subject to adjustment for any changes in the cost of the work to the Company.

8.02 Ship-to locations:

Purchaser has a total of 247 transformer stations ("TS") in the province of Ontario, Canada. All Transformers specified in the RFP shall be shipped to one of the 247 TS or to the Purchaser's Central Maintenance Shop ("CMS") located in Pickering (Greater Toronto Area, east of Toronto) in Ontario.

As requested in the Price Schedule in Part 3, Proponents must include DDP site or nearest rail-siding to site for two ship-to locations as detailed below:

- (i) <u>Southern Ontario</u>, including CMS and other TS located in Southern Ontario. Nearly 84% of the total number of TS are located in Southern Ontario:
 - (a) 92 TS in South-western Ontario (West of Toronto)
 - (b) 69 TS in GTA-central Ontario
 - (c) 46 TS in South-eastern (East of Toronto)
- (ii) Northern Ontario, i.e. the area North of Barrie. There are 40 TS in Northern Ontario.

The Forecast included in Section 9.1 of Part 3, Format of Submission, provides an projected, estimated distribution of the forecasted quantities of Transformers across the various ship-to locations in Southern and Northern Ontario. However, the Purchaser reserves the right to specify the final ship-to location anywhere within Northern and Southern Ontario under the Contract.

8.03 Terms of payment:

Unless progress payments are specified in the Contract, the Contract Price may be invoiced upon delivery of the Equipment to the stipulated destination. The Purchaser shall not be obligated to accept deliveries made more than one month ahead of the Contract delivery dates.

Unless the Purchaser and Company agree otherwise, where the Contract Price exceeds \$1,000,000 and delivery extends beyond 18 months from the date of award of the Contract, the Purchaser will make payments on the basis of progress of work, under the following terms:

- (i) 60 percent of the price will be invoiced in equal instalments at equal intervals (not less than three months), with the first invoice at the start of manufacture and the last invoice on completion of manufacture and factory tests (if any); and
- (ii) 40 percent of the price will be invoiced upon delivery of the Equipment to the stipulated destination.

The Company shall submit separate invoices for all payments and such invoices will be paid 30 days after receipt thereof. Payment of all other invoices, including adjustments whenever applicable, will be made 60 days after receipt of said invoices and, in the case of adjustment invoices, receipt of data substantiating the amounts invoiced. Goods and Services Tax (GST) and Ontario Retail Sales Tax (ORST), if applicable, shall each be shown separately on all invoices.

Progress payments are conditional upon the Company carrying out its obligations and making satisfactory progress in the performance of the work. The Purchaser shall have the right to determine whether or not progress is satisfactory. The withholding of any progress payment under this clause shall not be cause for delay in delivery of in lieu or diminution of any other right of the Purchaser under the Contract. The Purchaser shall have a lien or first charge upon the work in the amount of all payments made in respect thereof to the Company. As a condition precedent to becoming entitled to progress payments, the Company may be required to execute security documentation and obtain postponements of other securities as may be reasonably necessary to effect such lien or first charge in the Purchaser's favour.

The Purchaser shall have the right to withhold from any sum otherwise payable to the Company such amount as may be sufficient in the Engineer's opinion to remedy any defect or deficiency in delivered Equipment pending correction of the same.

8.04 Liquidated Damages

If the Company fails to deliver the work on the agreed contracted delivery date mentioned in the purchase order, then the Company acknowledges and agrees that the Purchaser shall suffer damages. For each week or part thereof, beyond the contracted delivery date that the work has not been delivered to the project site, the Company shall pay, as liquidated damages and not as a penalty, to the Purchaser 0.5% of the Contract Price of the delayed work. The parties agree that the liquidated damages are a genuine pre-estimate of the loss and/or damage which will be suffered on account of any such delay and the said amount will be payable on demand without there being any proof of the actual loss or damages caused by such delay. The Company's total cumulative liability for delayed delivery under this Contract shall be limited to an amount equal to 10% of the Contract Price of the delayed work.

9.0 Spare Parts

The Company shall make available spare parts for the Equipment supplied under the Contract throughout the Equipment's normal life expectancy, which shall be no less than the life expectancy contemplated in the specifications. The Purchaser requires a very quick turn-around time for all major parts, and the Company agrees to provide the parts so as to satisfy that requirement.

In the event that the Company makes a decision to:

- discontinue or otherwise take out of production the Equipment and/or replacement spare parts thereof; or
- sell or completely and permanently shut down its plant or take any other action of divestment,

then the Purchaser shall be advised in writing at least three (3) months in advance of such event as described above.

Further, the Company shall make available spare parts of such discontinued Equipment for the expected remaining life of the Equipment.

As well, the Company, at the time of notifying the Purchaser, subject to third part rights, shall make available to the Purchaser all design, testing, manufacturing and shop drawing information relating to the Product, and shall further assign or license all relevant manufacturing rights for the Purchaser's own operations.

10.0 Taxes

The price of any deliverable item and taxes applicable thereto shall be subject to adjustment for any new Canadian federal or provincial sales, use, or excise taxes, or for any changes in the rates of such taxes, applicable to the sale of the Equipment, which becomes effective subsequent to the date of tender and prior to the earlier of the scheduled delivery date or actual delivery date for that item.

11.0 Duty

The Contract Price shall be subject to adjustment for any new Canadian customs duties or for any changes in the rate of any applicable Canadian customs duty. Adjustments shall be based upon the difference between the rate of the customs duties at the date of tender and the rate in effect at the date of importation. The Purchaser shall have the right to effect an adjustment to the Contract Price for any decrease in any applicable customs duties based on its estimate of the value of foreign content if factual data is not provided by the Company on request. Any additional duties or sales taxes imposed by Canada which are attributable to either dumping duties or change in the value for duty shall in all events be to the Company's account.

The Company shall co-operate with the Purchaser in applying for and obtaining remission and/or refund of any duties or taxes paid by the Company or subcontractors on any portion of the work. The Company shall require similar co-operation from subcontractors. All amounts received by the Company or subcontractors by way of such remission or refund shall constitute trust monies to which the Purchaser is exclusively entitled and shall be forwarded to the Purchaser forthwith. Upon request by the Purchaser, the Company shall execute all required documentation so as to allow the Purchaser to act in the name of the Company to apply for and receive any such remission or refund.

12.0 Importer of Record

For Equipment purchased F.O.B. vendor's plant outside Canada, the Purchaser shall be the Importer of Record for customs purposes. In this regard, the Company shall provide all information that the Purchaser may reasonably request or require for importation of the Equipment into Canada.

13.0 North American Free Trade Agreement (NAFTA)

Where the origin of the goods is United States or Mexico, the company's offer will be evaluated base on the company's statement of source of supply.

A valid certificate of origin must be provided with each shipment where the goods offered qualify under NAFTA.

Any additional duties or taxes resulting from an invalid certificate of origin or changes in the source or supply shall be to the company's account.

14.0 Foreign Exchange

If the tenderer desires that the Contract Price be subject to adjustment for variation in foreign exchange rates, it must include the following information in its tender:

- (1) a positive statement that the price is subject to adjustment and identifying the portion of the price to be adjusted, expressed in Canadian dollars;
- (2) the currency against which the price is subject to adjustment, and, if more than one, the portion of the dollar amount identified above pertaining to each;
- (3) the base rate(s) to be applied (if none specified, the noon spot rate(s) quoted by the Bank of Canada on the date of tender shall apply);
- (4) the date(s) on which the amount of the adjustment is to be calculated. This can be a single specified date or proportional adjustments on the dates of progress payment invoices.

The base rates quoted for each currency and the rates used to calculate the adjustment shall be the Bank of Canada noon spot rate on the appropriate dates. The amount of adjustment for each currency shall be determined by applying the percentage difference between the base rate and the rate on the appropriate adjustment date to the Canadian dollar amount that is subject to adjustment for that currency.

Where an adjustment is based on a date of delivery, the date used in calculating the adjustment shall be the actual date of delivery or the scheduled date of delivery, whichever is earlier. Where the date of an invoice is to be used in calculating the adjustment, the date used shall be the actual date of invoice or seven days after the milestone on which the invoice is based, whichever is earlier. The amount of any foreign exchange adjustment shall not be increased by virtue of delays not caused by the Purchaser, but may be decreased by such delays.

The above conditions, including the need for a specific statement, shall apply to the prices for changes to the Contract. Decreases in price due to changes shall have the same base rate for the work removed as was originally quoted. If the Contract Price is to be adjusted for the effect of variation in the rates of foreign exchange on customs duties, a specific statement to that effect plus a statement that duties have not been included in the Canadian dollar amount subject to foreign exchange adjustment, must be included in the tender, along with the amount of duty subject to adjustment, the currencies involved, and the proportions pertaining to each.

15.0 SECTION INTENTIONALLY DELETED

16.0 Assignment

The Company shall not assign the Contract or any portion thereof without prior written consent from the Purchaser, which consent may not be unreasonably withheld. The Purchaser may assign the Contract or any portion thereof upon obtaining the Company's consent, which consent may not be unreasonably withheld or delayed. Upon such assignment, the Company shall be deemed to have released the Purchaser from all liability under the Contract. Notwithstanding the foregoing, the Purchaser may, without the Company's consent, assign the Contract or any portion thereof to an affiliate.

17.0 Right to Review

The Purchaser or its authorized representative shall have the right to review, at any time, the Company's total plant schedule to verify how the Equipment's manufacturing schedule fits into the overall plant schedule.

18.0 Schedules

The Company shall submit the following to the Purchaser for approval within the times shown, or as otherwise stated in the Contract Documents:

- (1) Within 30 calendar days after notification of award of the Contract a schedule showing dates for commencement and completion of drawing production, material procurement, manufacturing activities, assembly, testing, shipment, and date of submission of its Inspection Plan/Quality Plan, including related procedures.
- (2) Within 30 calendar days after notification of award of the Contract a schedule for the preparation and completion of: the Company's design drawings, shop drawings or drawings of pre-designed Equipment showing a list of all such drawings with titles and drawing number; manufacturing and test procedures (including those from major subcontractors), and the operating instructions, parts and service manuals (if applicable), and the dates each relevant document will be submitted to the Engineer for comment.

(3) Not later than 90 calendar days prior to commencement of manufacturing - a detailed manufacturing critical path network schedule for the Equipment. The schedule shall include, as a minimum, dates for material procurement and award of subcontracts, dates for receipt of raw materials or subassemblies, the scheduled commencement dates of production, and dates and duration of manufacturing stages of the major components, including shop testing (including the scheduled commencement dates of production, dates and duration of manufacturing stages of the major components, including shop testing of the major components, including shop testing of the major components, including shop testing of major subcontract items). The Company, when requested by the Inspector, shall also furnish Company-approved copies of subcontractors' detailed production schedules containing at least the same information as set out above.

The schedules shall be monitored by the Company. Unless otherwise agreed, the Company shall submit to the Inspector by the tenth day of each month a work progress report, in writing. The report shall record the progress of the work up to the end of the preceding month, and confirm that the rate of progress satisfies the Contract requirements. For items which are behind schedule, the Company shall, in its work progress report, indicate the reasons for the delay and the corrective action proposed to recover the lost time.

It should be noted that the award of the Contract is based on the understanding that delivery of the Company's drawings and data will be as required by this Clause or as needed in order to meet Contract delivery dates, whichever is earlier.

19.0 Drawings and Data

Unless otherwise authorized in writing by the Engineer, any part of the work to be performed in accordance with any drawings and data, whether prepared by the Company or the Purchaser, shall not be commenced until the Engineer has approved the use of such drawings and data (including schedules, procedures and other pertinent information). Approval or acceptance by the Engineer of the Company's drawings and data shall in no way construe or imply relief of the Company from its responsibility for any error or omission therein or from any obligation under the Contract or implied by law.

The Purchaser's drawings and specifications shall be deemed to be complementary so that if anything is shown on the drawing but not mentioned in the specifications, or vice versa, it shall be furnished and built as though specifically set forth in both. In case of conflict between the specifications and the drawings, the specifications shall govern.

All of the drawings and data prepared by the Company under the Contract shall be prepared in accordance with the Purchaser's drawing standards, copies of which are available upon request.

Within such time as stated elsewhere in the tendering document, the Company shall supply all drawings and data necessary for a thorough understanding of the Equipment, including the following:

- (1) Design Drawings all shop detail and general arrangement drawings.
- (2) Additional Drawings where Equipment is supplied to a performance specification, detail and general arrangement drawings shall be provided by the Company. If catalogue pages or data sheets are available in printed form giving the required information, such may be submitted in lieu of the foregoing drawings, subject to the prior approval or acceptance of the Engineer.
- (3) Installation Details drawings showing overall dimensions, support requirements, details of terminal points, and other data pertinent to installation.

A space of 200 mm vertically by 110 mm horizontally, in the lower right hand corner above the Company's title block, shall be reserved for the Purchaser's title block and revisions.

All drawings produced for the Purchaser shall be in electronic format and be compatible with AUTO-CADD latest version.

For the purposes of ready identification, each drawing and item of data shall show the name of the project, Units involved over-all title of the work, requisition number, and the title of the drawing or item.

One copy of each drawing and data item will be returned to the Company with the Engineer's comments and/or approval for use. When requested, drawings and data requiring revision shall be promptly dealt with by the Company and the specified copies resubmitted.

The Company shall allow a reasonable period of time for the review process in its schedule for the work. The onus shall be on the Company to recover any time lost in the review process by reason of errors or deficiencies in the Company's drawings or data and, in any event, to maintain the Contract delivery dates.

The Company grants to the Purchaser a perpetual, non-transferable, irrevocable license to use, modify, or amend the said drawings and data, including plans, sketches, drawings, graphic representations, specifications, and computer generated designs, in relation to its operational, or maintenance, or refurbishment purposes. They may not be copied nor reproduced nor communicated to third party in any way whatever (unless such third party has entered into an undertaking protecting the confidentiality thereof). For the avoidance of doubt, any refurbishment shall be at Purchaser's risk.

20.0 Quality Program

The Company shall maintain a quality program that will assure the Purchaser that the design, material and workmanship used in the work fully meet the Contract requirements. The program shall conform to the ISO or CSA Quality Program Standard specified in the tendering documents. Any proposed alternative to the ISO or CSA Quality Program shall be subject to evaluation by the Purchaser for its equivalency to specified requirements.

Notwithstanding the provisions of any standard or code applicable to the work, the Company shall be responsible for and shall perform all inspection, testing and surveillance of subcontractors necessary to ensure that the work meets the requirements of the Contract. The Purchaser may perform surveillance at any time(s) for compliance with the quality program and examine the work for conformance to product quality requirements.

21.0 Inspection

The Purchaser or its authorized representative shall have the right to inspect the work at all times.

The Company shall make the necessary arrangements to facilitate surveillance and examination at the Company's premises as well as at the premises of subcontractors. At least 48 hours notice shall be given to enable the Inspector to be present at any Inspection Plan/Quality Plan hold points. The Inspector shall have free access, at all reasonable times, to the premises of both the Company and subcontractors. To facilitate surveillance at subcontractors' premises, subcontracts (1) specific to the work; (2) requiring a Quality Program; or (3) having "hold" points, shall reference the Purchaser's purchase order number. When requested, the Company shall provide the Inspector with a copy (unpriced) of all subcontract documents.

The Inspection and Test Plan required by the quality program may be permitted to follow a format to suit the Company's system. This plan shall be submitted to the Purchaser prior to the placement of any orders for material by the Company, and this plan shall be subject to the Purchaser's approval. Inspection and test procedures referenced in such plan shall also be subject to approval by the Purchaser.

The Company shall promptly correct all instances of non-conformance (as the term is defined in ISO/CSA Standard Z299) and report its corrective action to the Inspector in writing.

The Inspector may reject the work or any and may reject any part thereof, which is found not conforming to the Contract. Any of the work so rejected shall forthwith be re-executed or corrected by the Company, at its sole expense.

Any nonconforming item which the Company proposes a disposition to "repair" or "use as is" shall be brought to the attention of the Inspector, in writing, highlighting any affects on safety, interchangeability, performance, reliability, maintainability, or shelf life. The Engineer's approval of such dispositions is required before proceeding.

Any work for which a unique specification does not appear in the Contract shall be of a quality which meets the requirement as agreed by the Engineer.

Notwithstanding the schedules provided for in the Contract, shipment must not take place until the item is released by the Inspector. Surveillance, release or approval by the Inspector, the Engineer or any other the Purchaser representative shall not relieve the Company of any of its obligations.

The Company shall retain the records required in the relevant quality program standard for a minimum period of three years after delivery of the Equipment.

22.0 Operating Instructions, Parts and Service Manuals

The Company shall supply, for all Equipment, Operating Instructions and Parts and Service Manuals in loose-leaf and/or electronic form, of manuals containing complete operating instructions, maintenance and service instructions (including the names of recommended lubricants and routine lubrication procedures), and parts catalogue(s), together with any drawings in reduced size which are necessary to aid in the understanding of the instructions. The number of copies will be stipulated in the tendering document.

Two copies, in draft form, of the manual(s) in the format stipulated, shall be submitted to the Engineer for approval for use not later than 6 months (or such lesser period as may be approved by the Engineer in writing) prior to the scheduled date of first delivery of the Equipment. The required number of copies of the manual(s), as approved for use, shall be delivered with the first delivery of the Equipment.

Manuals for work containing instrumentation and controls (I&C) shall have documentation pertaining to the I&C bound separately for ease of removal.

The Company shall provide, within four weeks of take-over day or in-service date, as applicable, updates to the manuals previously provided incorporating information transmitted to the Company by the Purchaser regarding operating experience through said take-over day or in-service date.

All documents required under this clause shall be furnished by the Company at no additional cost to the Purchaser. Failure to deliver or update the manuals as required shall entitle the Purchaser to withhold payments.

23.0 Shipping and Packaging Instructions

Insofar as transportation conditions will allow, the Equipment shall be shipped complete and ready for installation or erection. Should the size of the Equipment prevent it from being shipped fully assembled, the Company shall segregate the Equipment into components to allow safe and convenient transportation.

The receipt or taking delivery by the Engineer of any Equipment or component parts and materials shall not be deemed a waiver of any right, claim, or remedy of the Purchaser under the Contract or otherwise.

Welding rods shall be shipped in sealed metal containers.

All Equipment shall be packed, braced and loaded in such a manner as to prevent physical damage and damage from marine and climatic conditions. Equipment requiring special precautions during shipping and storage shall be clearly marked on the outside of the shipping container with specific instructions included in a durable envelope attached to the container and suitably labelled. All openings in Equipment such as vessels, valves and pumps shall be sealed. Where necessary, skids, hauling eyes, jacking plates and sling-hooks, shall be provided for unloading and field assembly.

All high voltage Equipment shall be shipped under a positive pressure of dry air, nitrogen or SF₆. All control cabinets are to be adequately packed to prevent the ingress of water and shall be shipped with a drying agent.

When specified, impact recorders, with an escapement appropriate to the duration of the journey, shall be used on all Equipment shipped by rail or sea. A calibration and clear instructions on how to read the impact recorder chart shall be provided with each shipment. The Company shall attach a label stating: "This impact recorder is to be opened and examined by Hydro One Networks Inc.'s General Site Foreman, in the presence of a representative of the Company or Carrier." The chart must be identified with the purchase order number, freight car number and signed by the Company or Carrier representative.

The chart, together with the calibration and instructions for reading the chart, must be forwarded to:

Hydro One Networks Inc., Manager, Line & Stations Engineering, 483 Bay Street, 13th Floor North Tower, Toronto, Ontario M5G 2P5, Tel. #: 416 345 6763 Fax #: 416 345 6322, Email: donna.jablonsky@HydroOne.com

All packages, boxes, crates, bundles, material, unpackaged components and bills of lading shall be clearly and indelibly marked to show necessary shipping information. Markings shall be applied by a method suitable to the type of product and packaging involved, and shall also provide the following information:

- project site address together with the title of the tendering document, the Purchaser's requisition number and purchase order number, and the name of the Company (if the Company is installing the Equipment, the name of its field supervisor shall also be identified);
- (2) material code numbers and other identifications specified in the purchase order;
- (3) the Company's shipment identification number, numbering of packages, boxes, crates, components, or assemblies of the shipment;
- (4) the mass and sizes of each major component or assembly (if the lifting points are critical, they shall be clearly marked and identified).

A detailed packing slip, listing each separate item, shall be enclosed in a waterproof envelope and firmly attached to each shipping container. When conformance to an ISO or CSA Z299 Quality Program Standard (or equivalent accepted by the Purchaser) is required, each packing slip shall include the following certification: "The Equipment listed herein has been inspected by the Company and is in conformance with the requirements of the Contract and approved for shipment." Such certification shall be endorsed with the signature, and include the title, of an authorized representative of the Company's Quality Authority. For instruments, a list showing the Purchaser's mark numbers shall also be enclosed.

As soon as a shipment is ready for dispatch, a duplicate copy of the packing slip shall be mailed to the Packing Slip Mailing Address specified elsewhere in the Contract Documents.

Where applicable, the Company shall be responsible for obtaining any permits required for transportation to the project site.

RFP 1-44715 PTR-Final Part 1 20081212

24.0 Hazardous Materials

The Company, and each subcontractor, when shipping to, or planning to use at, any the Purchaser site, any product which is categorized as a hazardous material (i.e., compressed gas, flammable or combustible material, oxidizing material, poisonous and infectious material, corrosive material or dangerously reactive material), shall conform with relevant federal and provincial legislation and regulations pertaining to such materials. The Workplace Hazardous Material Information System (WHMIS) shall apply and all such materials shall be properly identified with WHMIS type warning labels. All shipments of such material to the Purchaser sites shall include a Material Safety Data Sheet (MSDS). The Company shall provide to the Purchaser with updated MSDS for products supplied, whenever MSDS data changes.

25.0 Performance Security

(1) <u>Performance Bond:</u>

The Company may be required to furnish a performance bond in the form supplied by the Purchaser in amount up to 100 per cent of the Contract Price. The proposed surety shall be acceptable to the Purchaser and licensed to issue such bonds in the Province of Ontario. Following the issuance of the bond, the Company will be reimbursed for the cost thereof at prevailing industry rates 30 days following receipt of invoice accompanied by evidence of payment to the surety. After payment of the initial premium, the Company shall maintain the performance bond in good standing until the fulfilment of the Contract.

If work has commenced under an interim Contract award and the Company is subsequently unsuccessful in obtaining a performance bond through no fault or neglect of the Company or its principals, the award shall be subject to withdrawal by the Purchaser. If the award is cancelled the Company will be reimbursed at cost for all efforts and expenses incurred in commencing work under the authority of an interim Contract award, subject to audit by the Purchaser and to any time and monetary limitations set forth in the notice of award.

(2) Other:

The successful tenderer may be required to furnish other security for Contract performance, in form and amount satisfactory to the Purchaser, such as a guarantee by a parent company (if applicable), a bank letter of credit, a monetary deposit, or personal property security documentation.

(3) Failure to provide performance security within the period stated in the notice of award of Contract shall make any award of Contract subject to withdrawal.

26.0 Work at Purchaser's Project Site

26.01 Escorted Access

If any of the work or services provided pursuant to the Contract necessitate entry to one or more of the Purchaser's transmission stations, switching stations, distribution stations or control centres by the Company or subcontractors or any person providing services to, or acting on behalf of, the Company or subcontractors (collectively, the "Entrants"), no Entrant shall be permitted entry to any of the said premises unless accompanied at all times by an employee of the Purchaser or another person appointed by the Purchaser to provide such accompaniment. It shall be the responsibility of the Company to arrange such accompaniment, and the Company shall ensure that no Entrant shall enter or attempt to enter the said premises without such accompaniment.

26.02 Erection Consultant

Upon request by the Purchaser, the Company shall provide the services of an erection consultant at the Purchaser's expense. The erection consultant shall be responsible for furnishing technical direction to the Purchaser's supervisor for the purposes of ensuring that the work is correctly assembled and properly installed to permit commencement of service.

The erection consultant must be fully instructed in the assembly operation at the manufacturing plant prior to his or her arrival at site.

When the Purchaser requires the services of an erection consultant to assist the Purchaser during field tests, the Company shall make such consultant available, at the Company's expense, to assist in the resolution of any corrective actions required pursuant to the correction of defects provision.

The erection consultant shall furnish technical direction under the general supervision of the Purchaser, but such supervision shall not relieve the Company of any of its obligations under the Contract.

The erection consultant shall at all times continue to be employed solely by the Company and not by The Purchaser. The Company shall arrange, at its expense, for workplace safety and insurance coverage for its erection consultant.

The regular working hours of the erection consultant shall be those established for the project by the Engineer, but the erection consultant shall be prepared to work additional hours, including weekends and statutory holidays, when required by the Engineer.

During the performance of the work at site, the erection consultant shall comply with relevant federal, provincial and municipal statutes, regulations, bylaws and codes, as well as the Purchaser's safety requirements pertaining to the work, and without limiting the generality of the foregoing, shall comply with all regulations made under Ontario's Occupational Health and Safety Act. The erection consultant shall cooperate with safety associations operating under the authority of Ontario's Workplace Safety and Insurance Act and ensure that he or she is equipped with all safeguards and personal protective Equipment necessary for the performance of the work.

27.0 Changes in the Work

- (1) Should the Company wish to change the agreed-to design, then the change, together with the reasons for wishing to make the change, must be promptly communicated in writing to the Purchaser's Engineer. Any such change will be subject to approval by the Purchaser.
- (2) Where the Company wishes to change the previously identified supplier, or type of major or critical materials or components, this similarly shall be communicated in writing to the Purchaser's Engineer and will be subject to approval by the Purchaser.
- (3) The Purchaser may, without invalidating the Contract, direct the Company to make changes in the work. Changes in the work shall not be initiated without prior written authorization by the Engineer.

Particulars of any changes will be embodied in an Instruction Notice prepared by the Purchaser and forwarded to the Company whereupon the Contract shall be deemed to be so amended.

When a change causes an increase or decrease in the work, the Contract Price shall be increased or decreased by the application of unit prices to the quantum of such increase or decrease or, in the absence of applicable unit prices, by an amount to be agreed upon between the Company and the Engineer.

Failure to agree upon changes to be made in the price or changes to schedules arising from the directed change, shall not be grounds for delay or interruption in the work.

28.0 Unavoidable Loss, Damage or Delay; Time

Time shall be material and of the essence of the Contract.

Neither the Company nor the Purchaser shall be liable to the other for loss, damage, delay in the work or nonperformance of any contractual obligation caused by war, riot, the act or order of any competent civil or military authority, fire, flood, strike, lockout, or other labour dispute or by any other cause which is unavoidable and beyond the party's reasonable control. Both parties shall be prompt in restoring normal conditions, re-establishing schedules, and resuming operations as soon as the interruptions have ceased.

29.0 Correction of Defects

If, at any time prior to twenty-four (24) months after the in-service date or sixty (60) months after delivery of the work at the Purchaser's project site, whichever is earlier, provided however, the Purchaser follows maintenance procedures that are mutually agreed upon between the Company and the Purchaser, any part of the work becomes defective or fails due to defects in design, material, or workmanship, installation or erection (if required), or otherwise fails to meet the requirements of the Contract, then the Company, upon receipt of notification from the Engineer, shall make good every such defect or failure within the period of time specified by the Engineer and without cost to the Purchaser. The Company shall pay all transportation charges both ways between the Company's factory or repair depot and the project site.

The decision on whether these defects or deficiencies are to be corrected on site or elsewhere shall be subject to mutual agreement between the Purchaser and the Company.

(1) Repairs at Company's factory or repair-depot:

When the defective Equipment (main assembly) is returned to the Company's factory, or repair-depot, the Company shall be responsible for expenses to disconnect, dismantle, disassemble and remove the Equipment, prepare it for shipment and re-install it upon return. The Company shall also provide technical direction at no charge to the Purchaser.

(2) Repairs on project site:

When the defects or deficiencies are corrected on site, the Purchaser will use its labour unless the Company can prove, to the satisfaction of the Purchaser, that specialized skills not available with the Purchaser, are needed to perform the work.

The Company shall supply all the material needed for correcting the defect/deficiencies at no cost to the Purchaser.

All labour, materials and equipment provided by the Purchaser, including any required oil or gas handling or processing materials and equipment used by the Purchaser for the purposes of correcting defects on site and for dismantling and reinstallation of the Equipment (e.g.: CTs, bushings, etc.) shall be to the Company's account. Such cost will not include costs to remove equipment or installations not supplied by the Company under the Contract, such as walls and overhead structures, etc.; delays brought about by inclement weather or the Purchaser, but will include applicable overheads.

Notwithstanding the above, the Company shall only be responsible for the costs to dismantle, and re-install Equipment at project site up to a maximum cost equal to thirty percent (30%) of the work's unit purchase price DDP project site, in the aggregate.

For its cost incurred to perform work under (1) and (2) above, the Purchaser will upon request, provide a written estimate and establish an agreed program. The Company will be invoiced for the agreed upon charges plus appropriate overheads.

The Purchaser reserves the right to proceed with the site work when necessary before an agreement on the charges has been reached.

If the Company, after notification of a defect or deficiency should delay or default in proceeding, then the Engineer may arrange to remedy the defect or deficiency and the Company shall be liable for all costs, charges and expenses incurred in connection therewith.

Any part of the work made good under this clause shall be subject to the provisions hereof for a period of one year from the date when the same has been made good, or until the end of the period set forth in the first paragraph of this clause, whichever is the longer.

Any certificate, acceptance, approval, payment or any other act, matter, or thing done or omitted by the Purchaser shall not bar or prejudice the rights of the Purchaser under the Contract or otherwise.

In the event repair work is performed on the project site in accordance with arrangements reached between the Engineer and the Company, the Company shall comply with labour and working conditions prevailing on the project site.

In addition to all the provisions of this Clause 29.0, the Company shall promptly notify the Purchaser in writing if, during the 15-year period commencing on the in-service date or the date that is six (6) months after the date of delivery of the work at project site, whichever is earlier, the Company: (a) discovers any latent defect in the work that could reasonably lead to a failure of the work; or (b) makes any change in the design or manufacture, including upgrades of any software used in the work that if made to the work, could reasonably prevent a failure of the work. If the circumstances described in (a) or (b) occur during the said 15-year period, then, notwithstanding any other covenant or warranty in the Contract, the Company shall modify the work at its own cost to repair the latent defect or change the design or manufacture, as the case may be, with the goal of avoiding a failure of the work.

The express warranties set forth in the Contract Documents are exclusive and no other warranties of any kind, whether statutory, oral, written, express or implied, including any implied warranty of merchantability or fitness for a particular purpose, shall apply.

30.0 Title

The Company shall indemnify and save harmless the Purchaser from any defects in the title to the work, from any liens or encumbrances thereon and from all claims in respect thereto.

31.0 Patents

The Company shall pay all royalties and patent license fees required for the work.

The Company shall, at its expense, defend all claims, actions or proceedings against the Purchaser based on any allegation that the work or any part of the work constitutes an infringement of any patent, and shall pay to the Purchaser all costs, damages, charges and expenses occasioned to the Purchaser by reason thereof. The Purchaser will give the Company written notice of any such claim, action or proceeding and, at the request and expense of the Company, the Purchaser will provide the Company with available information, assistance and authority for the defense.

If the work or any part thereof is in any action or proceeding held to constitute an infringement, the Company shall forthwith either secure for the Purchaser the right to continue using the work or shall, at the Company's expense, replace the infringing items with non-infringing work or modify them so that the work no longer infringes.

32.0 Laws, Regulations, Permits

The Company shall comply with relevant federal, provincial and municipal statutes, regulations, codes, and bylaws pertaining to the work and its performance and shall obtain and pay for all work permits and consents that may be required. The Company shall be responsible for ensuring similar compliance by its suppliers and subcontractors.

33.0 Claims by the Company; Arbitration

Notwithstanding any arbitration provision in any Contract Document, the party's attorn to the exclusive jurisdiction of the courts of Ontario to determine all disputes arising out of the Contract or the interpretation thereof, and any court action(s) commenced shall be commenced and heard at Toronto.

34.0 Rights and Remedies

All rights and remedies of the Purchaser under the Contract are in addition to those available at law. No act, or failure to act, of the Purchaser or the Engineer shall prejudice such rights and remedies.

35.0 Interpretation of Contract

The Contract shall be governed by and interpreted in accordance with the laws of the Province of Ontario and the federal laws of Canada applicable therein.

36.0 Default by Company

Without limitation, the following actions by or circumstances relating to the Company shall constitute default on the part of the Company:

- (1) committing any act of insolvency or bankruptcy, voluntary or otherwise;
- (2) having a receiver appointed on account of insolvency or in respect of any property;
- (3) making a general assignment for the benefit of creditors;
- failing to comply with or persistently disregarding statutes, regulations, bylaws or directives of competent authorities relating to the work;
- (5) failing to prosecute the work with skill and diligence;
- (6) assigning or subletting the Contract or any portion thereof without the required consent;
- (7) failing or refusing to correct defective or deficient work;
- (8) being otherwise in default in carrying out any of its obligations under the Contract, whether such default is similar or dissimilar in nature to the causes listed previously.

Notice that the Company is in default shall not be required if the default relates to the bankruptcy, insolvency or financial instability of the Company. The Company shall be given ten days' written notice to undertake to cure the default and to continue to diligently pursue a remedy for the default, in the event of other defaults.

If, in the Purchaser's opinion, the Company fails to undertake to cure the default as aforesaid, then the Purchaser shall be entitled to:

- (1) eject and exclude from the installation site all personnel of the Company and any of subcontractor;
- (2) terminate the Purchaser's utilization of the Company to perform the work;
- (3) cancel the Contract, however, the rights of the Purchaser accrued up to the date of the cancellation remain unaffected;
- (4) disqualify the Company from performing future work;
- (5) finish the work by whatever means it may deem appropriate under the circumstances;
- (6) withhold any further payments to the Company until its liability to the Purchaser is ascertained.

The Company shall be liable to the Purchaser for:

- (1) the extra expense of finishing the work; including compensation to the Purchaser for additional engineering, managerial and administrative services;
- (2) the cost of correcting defects (if any) in that portion of the work performed by the Company; and
- (3) all other loss, damage and expense occasioned to the Purchaser by reason of the Company's default.

Any action by the Purchaser under this clause shall be without prejudice to the Purchaser's other rights or remedies under any security held by the Purchaser for performance of the Contract by the Company.

37.0 Cancellation of Uncompleted or Unperformed Work

- (1) The Purchaser shall have the right, which may be exercised from time to time, to cancel any uncompleted or unperformed portion of the work or part thereof, however, the rights of the Purchaser accrued up to the date of the cancellation remain unaffected. In the event of such cancellation, the Purchaser's liability under this Contract shall be limited to the payment of only the following amounts to the Company, supported by audit if required by the Purchaser, carried out by auditors acceptable to the Purchaser,
- (2) reimbursement at the Contract rate for all items completed and delivered;
- (3) reimbursement for the costs to the Company for work in progress and expenses incurred in the course of the work (there shall be no charge for items which are not custom-manufactured for this Contract); and
- (4) reimbursement for costs and expenses for orders of materials that are directly caused by the cancellation and such costs and expenses cannot be avoided (there shall be no charge for costs and expenses for orders of materials that are not custom-manufactured for this Contract).

The total of the amounts in paragraphs (2), and (3) in this Clause 37.0 shall not exceed the price attributable to the uncompleted or unperformed work.

Title to all work for which reimbursement is made shall vest in the Purchaser. The above payment procedure shall not apply to situations in which the Purchaser is entitled to terminate the Contract by reason of default by the Company.

The Purchaser shall not be liable to the Company for loss of anticipated profit on the cancelled portion or portions of the work. In the event of failure to agree on a settlement, the Purchaser shall pay to the Company the amount agreed to by both parties and the liability for the balance shall be treated as a claim under Clause 33, the Claims by the Company; Arbitration.

37.1 Cancellation of Contract

The Purchaser may cancel the Contract at any time upon at least ten (10) days prior written notice and, in doing so, the Purchaser will not incur any liability. Such cancellation will not automatically cancel or terminate any uncompleted or unperformed portion of the work or part thereof under any purchase orders in effect at the time of such cancellation; such purchase orders will remain bound by the terms of the Contract. Where, at Purchaser's sole discretion, the Purchaser also wishes to cancel any uncompleted or unperformed portion of the work or part thereof under any purchase orders in effect at the time of the cancellation, then Section 37.0 shall also apply.

38.0 Indemnification

The Company shall indemnify and hold harmless the Purchaser and its agents, employees, directors, officers, shareholders, partners and affiliates, from and against all claims, demands, losses, costs, expenses (including, but not limited to court costs, legal fees and disbursements) damages, actions, suits, proceedings or fines by third parties, including, without limitation, the provincial or federal governments or the courts thereof or any governmental agencies, that arise out of or result from or are attributable to the Company's performance (or lack of performance) of the Contract (hereinafter called "claims") or relating to environmental, health or safety hazard(s) or condition(s) to the extent that such claims are caused by breach of Contract or negligent or wilful acts or omissions of the Company, any subcontractor and anyone directly or indirectly employed by any of them or anyone for whose acts any of them may be liable.

39.0 Liability

- (1) In no event shall the Purchaser or the Company be responsible for any losses or damages for economic loss, loss of use, loss of goodwill, loss of revenues, loss of profits, or for any indirect, consequential, incidental, or punitive damages or losses, whether such damages are in Contract or in tort.
- (2) Save for the Purchaser's obligations to pay the Contract Price in accordance with the terms of the Contract, notwithstanding anything else in the Contract Documents, but subject to all other exclusions, limitations, or other restrictions in the Contract that limit the Purchaser's liability, the Purchaser's maximum aggregate liability to the Company in connection with this Contract shall not exceed an amount equal to one hundred thousand dollars (\$100,000.00); subject to the foregoing, Purchaser shall only be liable to the extent that it has caused a loss or damage as a result of its breach of Contract or negligent or wilful acts or omissions.
- (3) Save and except for any of Company's obligations under Clause 31.0 Patents and Clause 29.0 Correction of Defects, or for any claims for personal injury (including death), notwithstanding anything else in the Contract Documents, but subject to all other exclusions, limitations, or other restrictions in the Contract that limit the Company's liability, the Company's maximum aggregate liability to the Purchaser shall not exceed an amount equal to the Contract Documents ("Insured Liabilities"). In respect of Insured Liabilities, the Company's limit of liability for any occurrence shall be the greater of (a) the minimum dollar limits prescribed by the insurance requirements under the Contract Documents, or (b) an amount equal to the Contract Price. Company shall only be liable to the extent that it has caused a loss or damage as a result of its breach of Contract or negligent or wilful acts or omissions.

The Company's liability for personal injury (including death) and property damage shall survive acceptance, approval or use of the work, or any part thereof, by the Purchaser.

40.0 Publicity

The Company and subcontractors shall not erect or permit the erection of any sign or advertising on the property of the Purchaser without the approval of the Engineer.

The Company or subcontractors shall not release for publication any information in connection with the Contract without the prior written permission of the Purchaser.

41.0 Notices

Notices to the Purchaser shall be addressed to the General Counsel, Hydro One Networks Inc., 483 Bay Street, 15th Floor, North Tower, Toronto, Ontario M5G 2P5, Canada. Such notices shall be effective upon receipt.

Notices to the Company shall be effective upon delivery to the Company or the sending of same by registered post to the Company's last address recorded with the Purchaser.

43.0 Re-employment of Former Employees

The Purchaser has a policy restricting the involvement, in the Purchaser's contracts, of former employees of Ontario Hydro or Hydro One Inc. or its subsidiaries who left any of those corporations under various staff reduction programs from 1992 onward. These restrictions apply when (a) such former employee(s) own 10% or more of the shares of a company, or (b) such former employee(s) perform the contracted service, regardless of the manner of contracting (whether as an employee, consultant, contractor or otherwise).

Accordingly, where 10% or more of the Company is owned by such former employee(s), or where it is anticipated that such former employee(s) will be utilized in the performance of the Contract, the Company shall identify the individual(s) involved and the details of their ownership or employment with the Company. This disclosure shall be made in the Company's offer.

44.0 Company's subcontractors:

It is the responsibility of the Company to keep all its major suppliers and/or subcontractors fully informed of all relevant contractual and technical requirements.

4 5	Int	terrogatory
6 7	Re	ference: Trial Balance Tab I13
8 9 10 11 12	a.	Please identify all costs of "Major Account Representatives" (defined as company employees assigned specifically to serve large customers) in 2012 and 2013 by Account. Include non-labor expenses of these staffers. Identify forecast costs by account in 2015-2019.
13 14 15	b.	Please identify the customer classes that are served by "Major Account Representatives" and estimate the approximate percentage of time spent on each class.
16 17	c.	Please identify all costs of "Economic Development" or similar programs in the test year by Account.
18 19 20 21 22	d.	Please identify all advertising expenses by account charged to ratepayers in 2012 and 2013 and forecast in each year from 2015-2019. Identify and provide the cost and a brief description of any individual advertising programs costing in excess of \$25,000. For any individual programs in excess of \$100,000, please provide samples of print advertisements and/or transcripts of radio or TV advertisements.
23 24 25	e.	Are the energy efficiency costs shown on Tab I13 included as customer-related costs in HONI's cost of service study.
26 27 28	<u>Re</u> :	<u>sponse</u>

a. Hydro One assigns employees to specifically serve the embedded Local Distribution 29 Companies, Distribution Connected Large Accounts (>2MW) and large Distributed 30 Generators (>10 kW generating capacity). These costs for embedded Local 31 Distribution Companies and Large Distribution Accounts are provided in the row for 32 Customer Business Relations in Table 2 in Exhibit C1, Tab 2, Schedule 5. The costs 33 for large Distributed Generators are approximately 90% of the row for Customer Care 34 Management in Table 3 of Exhibit C1, Tab 2, Schedule 5. The costs noted in Table 3 35 reflect customer services required to facilitate the connection process and reporting 36 required for these generators as well as contract development and administration for 37 both pre and post-connection timeframes. The costs in both Table 2 and Table 3 38 include non-labour expenses however they are not recorded by account. 39

Filed: 2014-07-04 EB-2013-0416 Exhibit I Tab 7.07 Schedule 13 GEC 19 Page 2 of 2

b. Embedded Local Distribution Companies and Distribution Connected Large
Accounts are a subset of the ST rate class. The costs noted in Table 2 referenced in
part a. are the result of a time allocation study and thus it is not possible to factually
estimate the percentage of time spent on each of these classes. Distributed Generators
greater than 10 kW generating capacity comprise the DGen rate class. The costs
referenced in part a. for large Distributed Generators are all associated with the Dgen
rate class.

- c. Hydro One has no costs of "Economic Development" or similar programs in the test
 years.
- d. Hydro One does not do any brand advertising, only functional and operational advertising such as commodity and service tendering (i.e. RFPs, RFQs, etc.), project related notices (i.e. service interruption, Notice of Project, etc.), safety-related (i.e.
 EDA Safety program support) and to satisfy Regulatory requirements. No program costs exceed \$25,000.

e. See responses to Exhibit I, Tab 3.1, Schedule 2-SIA-25, Exhibit I, Tab 3.1, Schedule
 2-SIA-26 and Exhibit I, Tab 3.1, Schedule 2-SIA-27.

BY COURIER

May 13, 2008

Ms. Kirsten Walli Secretary Ontario Energy Board Suite 2700, 2300 Yonge Street P.O. Box 2319 Toronto, ON. M4P 1E4

Dear Ms. Walli:

EB-2007-0086 - Hydro One Networks' Time-of-Use Pilot Project Results

In accordance with the Ontario Energy Board's approval, Hydro One Networks' Regulated Price Plan Time-of-Use Pilot Project, EB-2007-0086, I am pleased to submit the report for the Time-of-Use Pricing Pilot Project Results.

I trust that the report will satisfy the Board's requirements for information sharing and should you have any questions, please do not hesitate to contact Stan But at 416-345-5859 or myself.

Sincerely,

ORIGINAL SIGNED BY SUSAN FRANK

Susan Frank

Acknowledgments

The TOU Pilot Team would like to thank Dr. Dean Mountain of McMaster University who provided advice on sample design and Chris Cincar of the Ontario Energy Board (OEB) who provided guidance on the pilot project.

Pilot results were presented to Hydro One's Customer Advisory Board (CAB). Comments received from the CAB members were reflected in the report.

Executive Summary

In March 2007, Hydro One Networks Inc. ("Hydro One") received approval from the Ontario Energy Board ("OEB") to undertake a pilot project using funding from the 3rd tranche CDM budget involving 500 residential, farm and small general service (under 50 kW) Distribution customers for 5 months (May to September 2007) to assess their response to time-of-use ("TOU") pricing. Instead of paying the Regulated Price Plan ("RPP") commodity prices, pilot participants were asked to pay the OEB-approved RPP TOU rates during the pilot period.

This study was required because results from other TOU pilot projects undertaken by the OEB or other LDCs in the Province may not be directly applicable to Hydro One's customers since most of our customers are rural-based and have higher electricity usage due to great reliance on electric equipment such as electric space and water heating. The main objectives of the pilot were:

- To assess the customer responses to the RPP TOU rates versus the two-tiered threshold RPP;
- To assess the effectiveness of the real-time in-home display monitors ("RTM") in conjunction with RPP TOU rates;
- To assess the communication and settlement support required for implementing RPP TOU rates.

Major findings

- Pilot participants were responsive to the RPP TOU rates and were able to shift and conserve part of their load. For a typical customer on RPP TOU rates, the load-shifting impact averaged 3.7% in the summer months and the conservation impact averaged 3.3%.
- Providing RTMs to customers on RPP TOU rates helped them respond even more. On a normal summer day, the load-shifting impact averaged 5.5%, while the conservation impact averaged 7.6%. On a hot summer day (over 30°C), the load-shifting impact was even more pronounced at 8.5%.
- Extrapolating the load-shifting impact (8.5%) on a hot summer day to all Hydro One residential customers would yield a summer peak load-shifting impact of about 150 MW. Extrapolating the load-shifting impact to all residential customers in the Province would result in a much higher impact.
- 76% of pilot participants under the RPP TOU rates paid a lower electricity bill as a result of load-shifting, compared to the regular RPP rates. Savings attributable to conservation would be incremental. Customers who were better off gained on average about \$23 during the pilot (about \$6 per month), while customers who were worse off on average lost about \$7 (less than \$2 per month).
- 72% of participants indicated that they would like to remain on the RPP TOU rates, and 87% claimed they changed their behaviour during the pilot. Only 4% found the changes in their daily activities in response to the RPP TOU rates to be inconvenient.

- 63% of participants with an RTM found it useful to help them conserve electricity. On average, customers thought they would save 9% on electricity consumption by using the RTM.
- Of the 200 small general service (under 50 kW) customers contacted, only 2 agreed to participate in the pilot. Analysis of the hourly load profiles for the small general service customers who declined participation in the pilot revealed that these customers on average could be worse off by about \$10 per month in their electricity bill in the summer if they did not shift load and/or conserve. Further analysis using generic load profiles shows that small general service customers could be better or worse off under RPP TOU rates depending on the industry in which they operate, their specific hourly electricity consumption patterns and their ability to shift load and/or undertake conservation initiatives.

Conclusions and Program Implications

- The pilot study shows that the current RPP TOU rates are effective in encouraging load shifting and conservation in Ontario. Other creative TOU pricing options, such as the critical peak pricing, should be considered.
- The use of an in-home real-time display monitor is very useful as it empowers customers to shift and conserve. Other technology options that could help customers better manage their electricity usage should also be tested.
- Depending on individual usage patterns, selected customer groups under the RPP TOU rates could be better off or worse off. Customers groups that would likely be negatively affected by the RPP TOU rates include residential customers with low electricity consumption; customers who stay at home during peak hours; and business customers with one work shift and/or who close on weekends. These customers need to shift and/or conserve more in order to offset the RPP TOU rate impact. If it is envisioned that TOU rates become mandatory for all customers, these negatively affected customer groups may require some mitigation alternatives. A shortened on-peak period and/or other pricing measures, or voluntary TOU below a certain threshold, would help mitigate the negative impact.

1. Introduction

In March 2007, Hydro One Networks Inc. ("Hydro One") received approval from the Ontario Energy Board ("OEB") to undertake a pilot project using funding from the 3rd tranche CDM budget involving 500 residential, farm and small general service (under 50 kW) Distribution customers for 5 months (May to September 2007) to assess their response to time-of-use ("TOU") pricing. Instead of paying the Regulated Price Plan ("RPP") commodity prices as shown in Table 1, pilot participants were asked to pay the OEB-approved RPP TOU rates during the pilot period. TOU rates, consisting of different prices for various time periods, encourage pilot participants to shift electricity consumption from the more expensive on-peak period to the less expensive off-peak period. Appendix A provides more details regarding the pilot proposal submitted to the OEB.

This study was required because results from other TOU pilot projects undertaken by the OEB or other LDCs in the Province may not be directly applicable to Hydro One's customers since most of our customers are rural-based and have higher electricity usage due to great reliance on electric equipment such as electric space and water heating. The main objectives of the pilot were:

- To assess the customer responses to the RPP TOU rates versus the two-tiered threshold RPP. Responsiveness is measured in the following categories:
 - shifting usage away from peak periods
 - conservation impact
 - bill impact
- To assess the effectiveness of the real-time in-home display monitors ("RTM") in conjunction with the RPP TOU rates;
- To assess the communication and settlement support required for implementing the RPP TOU rates.

Type of Rate	Day of the Week	Time	Pricing	Rate (¢ per kWh)
	Weekdays, Weekends & Holidays	All Day	Tier threshold per month in kWh*	5.50¢
RPP Rates*			Additional kWh	6.40¢
	Weekends & Holidays	All Day	Off-Peak	3.4¢
RPP TOU		7:00am-11:00am	Mid-Peak	7.1¢
Rates*		11:00am-5:00pm	On-Peak	9.7¢
	Weekdays	5:00pm-10:00pm	Mid-Peak	7.1¢
		10:00pm-7:00am	Off-Peak	3.4¢

Table 1: RPP and RPP TOU Prices for Pilot Participants (May-September, 2007)

* The threshold for the summer months was set at 600 kWh for residential customers and 750 kWh for non-residential customers.

2. Pilot Study Group Design

Under the guidance of Professor Dean Mountain of McMaster University, the project was designed to reflect a stratified sample of Hydro One Distribution customers in four study groups, two TOU groups and two control groups.

TOU Groups

Two TOU study groups were selected for the pilot, and both groups were billed according to the TOU rates shown in Table 1 for the pilot period. Customers in the first TOU group were given a RTM to view their real-time consumption and cost information. Customers in the second TOU group were given a \$50 bonus at the end of the pilot instead of the RTM as an incentive to participate in the project. Customers in TOU groups had access to weekly tracking reports on the web specially designed for the pilot. They also received 2 status reports by mail that reflected their usage pattern and savings. Appendix D provides a sample of the interim and final reports sent to the customers.

Control Groups

Customers participating in the control groups paid the regular RPP prices. Those RPP prices were designed for conventional meters in two tiers, one price for monthly consumption under a tier threshold and a higher price for consumption over the threshold. The regular RPP tiered rates during the pilot (May to September) are summarized below:

Residential customers

- First 600 kWh per month at the commodity rate of 5.3 e/kWh
- Incremental load above 600 kWh per month at 6.2 ¢/kWh.

Small Business customers

- First 750 kWh per month at the commodity rate of 5.3 ϕ /kWh
- Incremental load above 750 kWh per month at 6.2 ¢/kWh.

Similar to the TOU groups, customers in the first control group received an RTM to view their hourly consumption and usage. Customers in the second control group did not get an incentive or receive any further information. Customers in the latter group were not aware their load was used for analysis in the pilot, as it is very important customers in the control group behave normally in terms of their electricity usage.

3. Pilot Participant Recruitment

A stratified sample was randomly selected from about 23,000 customers who already had smart meters installed and data communication system set up. Customers were screened to remove those that were: (1) not suitable for the pilot project (such as seasonal customers, customers planning to move out, and customers with incomplete data due to weak communication) or (2) not suitable for the special manual billing process used during the pilot (such as retailer-enrolled customers and customers on a pre-arranged bill payment method).

About 3,100 invitation letters (see Appendix B for sample invitation letter) were sent out. During the telephone recruitment process, about 2,700 customers were contacted by telephone during the participant enrolment process. In total, 411 customers agreed to participate in the

pilot, reflecting an overall response rate of about 13%. Customers who were called did have the right to say no, or to opt out. Customers who agreed to participate in the RPP TOU were required to sign an agreement with Hydro One (see Appendix C for sample customer agreement). As guided by Dr. Dean Mountain, 75 customers were also included in the study as a special control group without an RTM or cash incentives. Therefore, the final sample of the pilot consisted of 486 customers with the following groupings:

- 153 customers on RPP TOU rates with RTM
- 177 customers on RPP TOU rates with a \$50 incentive at the end of the pilot
- 81 customers on regular RPP rates with RTM
- 75 customers on regular RPP rates as the control group without RTM or incentives.

Table 2 presents the pilot participants by rate class and study group. About 200 small general services (under 50 kW) customers were contacted, only 2 general service (under 50 kW) customers agreed to participate in the pilot project. The most common reason used by these customers to refuse participation was the fear of being worse off on the TOU rates. Additional hourly load profile analysis was prepared for the small general service (under 50 kW) customers, and the results are presented in Section 4.5 of this report.

Number of Customers	TOU With RTM	TOU without RTM	RPP with RTM	RPP without RTM
Total	153	177	81	75
Residential – High density	88	80	48	48
Residential – Low density	44	66	14	17
Urban Residential	10	15	7	8
Farm – Phase 1	9	16	12	2
General service (under 50 kW)	2	0	0	0

Table 2: Number of Customers in the Pilot by Rate Class and Study Group

4. Analysis of Results

To facilitate a comparison of the results with other TOU pricing pilot projects in Ontario, Hydro One followed the same analytical approach as guided by the OEB staff. Impacts on pilot participants were measured for the following categories:

- Load-shifting impact: the demand response of customers shifting some electricity load usage away from peak hours to the mid-peak and off-peak periods.
- Conservation effect: the reduction in total electricity consumption, regardless of time periods.

- Bill impact: comparison of what customers paid on the RPP TOU rates versus the conventional RPP (non-TOU) rates.

To correct for the differences in customer representation between the pilot sample and total utility, the study results for load-shifting and conservation impacts were extrapolated to the total utility level, using appropriate weights by rate class.

4.1 Load-Shifting Impact

A non-parametric econometric model was used to measure the load-shifting away from on-peak hours. Factors taken into account by the model include the different TOU pricing periods, treatment or control groups and type of day. Further details regarding the model can be found in "Ontario Energy Board Smart Price Pilot Final Report", Appendix E, Load Impact and Conservation Effect Analytical Model, prepared for the OEB, July 2007. Additional econometric analysis was applied to each rate class considered in this pilot to test whether there was a statistically significant difference between energy consumption of the various study groups at different TOU intervals. The tests revealed the load-shifting impacts were statistically significant at 1% probability level (i.e. one chance in a hundred that the results could have happened by coincidence).

As presented in Table 3, the load-shifting impact (away from on-peak periods) averaged 3.7% for customers on the RPP TOU rates and 5.5% for customers on the RPP TOU rates with an RTM in the summer months. For very hot days (over 30 degree Celsius), the load-shifting impact was 8.5% for customers on the RPP TOU rates with an RTM. The higher load-shifting impact during very hot days was attributed to higher air conditioning load compared to normal summer days.

Extrapolating the load-shifting impact on a hot summer day (8.5%) to all Hydro One residential customers would yield a summer peak load-shifting of about 150 MW during the summer system peak period. Extrapolating the load-shifting impact to all residential customers in the Province would yield a much higher result.

Load-shifting Source	% of shifting
All Days	
TOU and RTM effect	-5.5%
TOU effect	-3.7%
Incremental RTM impact on load-shifting	-1.8%
Very hot days (>30 degree C)	
TOU and RTM effect	-8.5%
TOU effect	-2.9%
Incremental RTM impact on load-shifting	-5.6%

 Table 3: Load-shifting Away from On-Peak Periods under RPP TOU rates

4.2 Conservation Impact

Conservation impact was estimated by comparing the electricity consumption of each pilot participant during the pilot period to the same period in 2006. The consumption figures were corrected to remove abnormal weather effects so that differences in weather conditions would not affect the estimate of conservation. The 2007 figures were calculated using hourly meter reads and the 2006 data were collected using Hydro One's customer billing system. As shown in Table 4, pilot participants on average reduced their energy consumption by 3.3% compared to the same period last year. Customers with an RTM conserved even more, averaging 7.6%. Due to data limitations, the results for very hot days could not be measured separately.

Conservation Source, All days	% of change
TOU and RTM effect	-7.6%
TOU effect	-3.3%
Incremental RTM impact on conservation	-4.3%

 Table 4: Conservation Impact during the Pilot under RPP TOU rates

To measure the impact of customers having access to an RTM under conventional RPP (non-TOU) rates, additional analysis was undertaken to compare the electricity consumption of customers on the regular RPP (non-TOU) rates with and without an RTM. This comparison revealed that the average customer on the RPP (non-TOU) rates with access to an RTM conserved 6.7% during the pilot period.

Table 5: Conservation Impact of RTM under RPP rates

Conservation Source, All days	% of change
RTM effect	-6.7%

4.3 Customer Bill Impact

To calculate the bill impact of the RPP TOU rates, customer bills were compared using the RPP TOU rates and the regular RPP rates. As the hourly data was available only for 2007, this comparison captured the load-shifting impact but not the conservation impact. As shown in Figure 1, most pilot participants (76%) were better off with the RPP TOU rates during the pilot period. Customers who were better off on average gained about \$23 during the pilot (about \$6 per month), while customers who were worse off on average lost about \$7 (less than \$2 per month).

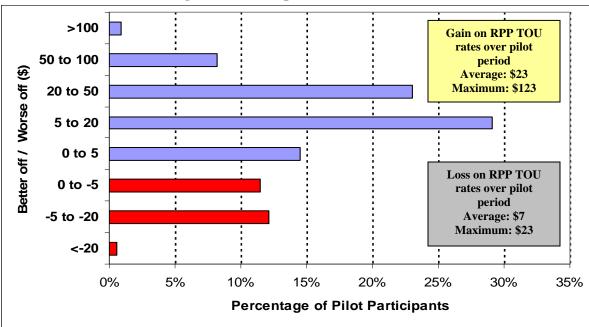

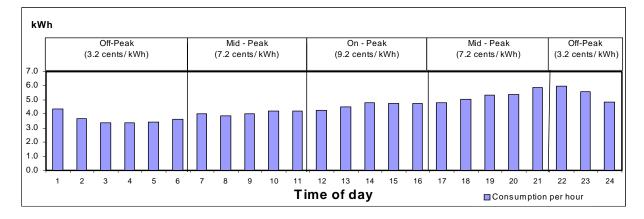

Figure 1: Bill Impact of RPP TOU Rates

* Figure 1 presents the bill impact over the entire pilot period.

Further analysis revealed that whether customers benefit from the RPP TOU rates would depend on their consumption level and hourly load profile. It is noteworthy that 32% of pilot participants were better off on the RPP TOU rates without conservation. As illustrated in Figure 2, the consumption patterns for these customers are likely to be more evenly spread out during the day with a greater percentage of usage during the mid-peak and off-peak periods. As a result, these customers will likely benefit from the RPP TOU rates.

In the pilot, about 14% of customers were worse off under the RPP TOU rates, despite making an effort to reduce their electricity consumption relative to the previous year. As illustrated in Figure 3, the consumption patterns for these customers are likely to have a greater percentage during on-peak and mid-peak periods where the electricity rates are relatively higher than the off-peak period. Customers who stay at home will likely be negatively affected by the RPP TOU rates. These customers will need to shift and/or conserve more in order to offset the RPP TOU rate impact. Similarly, customers with low electricity usage are likely to be negatively impacted, as there is only a limited amount of load above the base load that they are able to shift or conserve.

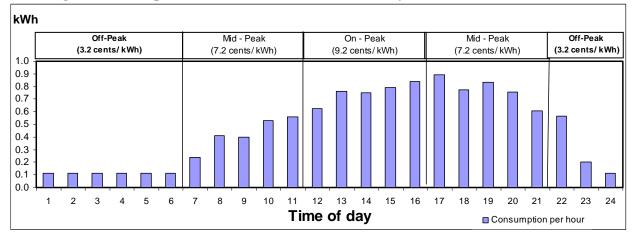

Figure 3: Load profiles for customers who will likely be worse off on TOU rates

4.4 Customer Feedback

Customer feedback was obtained from the recruitment process and from the two survey questionnaires completed by the pilot participants (see Appendix E for sample of survey questionnaires used). The following summarizes the feedback received from the customers during the pilot:

Feedback received during the recruitment process

The most frequently used reasons for refusal are provided below:

- "I do not like being told by Hydro One when and how to use electricity"
- "I am already conserving as much as I can"
- "I will deal with the new rates when necessary"
- "I am a stay-at-home mother/retired, and these rates will increase my expenses".

Feedback on RPP TOU rates

- 72% would like to remain on the RPP TOU rates
- 87% claimed they changed their behaviour in response to the RPP TOU rates
- 68% felt the current RPP TOU rate differentials provided enough incentive for loadshifting
- 53% did not mind the RPP TOU rates affecting their daily activities
- Only 4% found the change to RPP TOU rates inconvenient.

Feedback on RTM

- 63% found the RTM useful to help conserve electricity
- 45% found it difficult to install the RTM. Pilot participants reported difficulty in fitting the RTM around the meter and in programming the TOU rates on the RTM. These comments are useful for future RTM program implementation.
- Customers thought on average they would save 9% on electricity consumption by using the RTM.

Feedback on communication

- 76% preferred to receive communications by mail; 16% preferred emails;
- 82% found the interim report very useful.

Feedback on TOU website:

When TOU rates are offered, customers will be able to view their hourly usage by 9 A.M. the following day. To test customer response to this service, all pilot customers in the TOU group were given access to a special website set up to their usage by the RPP TOU periods. Customer feedback on this information is summarized below:

- 40% used the TOU pilot website to view their usage; 5% logged on every week
- 53% found the information on the website useful
- Extrapolating this to the provincial level, over 200,000 households would view their consumption on a weekly basis when RPP TOU rates are fully implemented.

4.5 Analysis of General Service Customers

During the recruitment process, nearly 200 small general service (under 50 kW) customers were contacted to participate in the RPP TOU rates. Only 2 customers agreed to join the pilot. The most common reason used by customers for refusal was the fear of being worse off under the RPP TOU rates. Given that smart meters were installed, a data only analysis using 348 small general service (under 50 kW) customers with complete hourly data revealed that 55% of these customers would be worse off on the RPP TOU rates if they did not change their electricity consumption patterns. Assuming these customers would not shift and/or conserve in response to the RPP TOU pricing, these customers on average could be worse off by about 14% (about \$10 per month on average) in their electricity usage during the off-peak period; consequently the savings in the off-peak period were not sufficient to offset the relatively higher rates during on-peak and mid-peak periods.

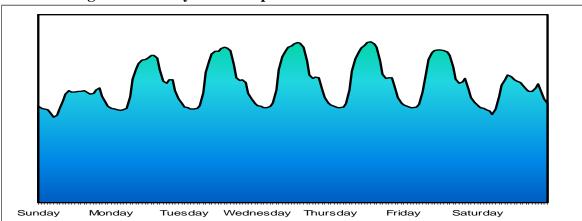

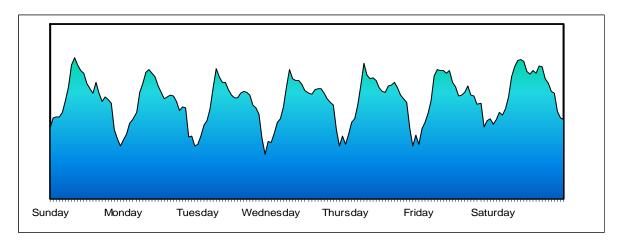

Figure 4: Weekly Load Shape of 348 General Service Customers

However, this impact should not be generalized, because the results of these 348 customers are not representative of the small general service (under 50kW) customers within Hydro One. Analysis using the generic load shapes for Hydro One's small general service (under 50kW) customers revealed that the impact of the RPP TOU rates on small business customers will depend on the industry they operate in and their specific usage profile. Businesses with one work shift and/or who are closed on weekends will likely need to shift and/or conserve more in order to offset the RPP TOU rate impact. However, the impact for businesses whose load is more evenly distributed between off-peak and other periods will likely be more neutral even without load-shifting and conservation (see Figure 5).

5. Summary of Major Findings

Major findings of this pilot are summarized below:

- Pilot participants were responsive to the RPP TOU rates and were able to shift and conserve part of their load. For a typical customer on RPP TOU rates, the load-shifting impact averaged 3.7% in the summer months, and the conservation impact averaged 3.3%.
- Providing RTMs to customers on RPP TOU rates helped them respond even more. On a normal summer day, the load-shifting impact averaged 5.5%, while the conservation impact averaged 7.6%. On a hot summer day (over 30°C), the load-shifting impact was even more pronounced at 8.5%.
- Extrapolating the load-shifting impact (8.5%) on a hot summer day to all Hydro One residential customers would yield a summer peak load-shifting impact of about 150 MW. Extrapolating the load-shifting impact to all residential customers in the Province would result in a much higher impact.
- 76% of pilot participants under the RPP TOU rates paid a lower electricity bill as a result of load-shifting compared to the regular RPP rates. Savings attributable to conservation would be incremental. Customers who were better off gained on average about \$23 during the pilot (about \$6 per month), while customers who were worse off on average lost about \$7 (less than \$2 per month).
- 72% of participants indicated that they would like to remain on the RPP TOU rates and 87% claimed they changed their behaviour during the pilot. Only 4% found the changes in their daily activities in response to the RPP TOU rates to be inconvenient.
- 63% of participants with an RTM found it useful to help them conserve electricity. On average, customers thought they would save 9% on electricity consumption using the RTM.
- Of the 200 small general service (under 50 kW) customers contacted, only 2 agreed to participate in the pilot. The most common reason used for refusal was the fear of being worse off on the RPP TOU rates.
- Analysis of the hourly load profiles for the small general service customers who declined participation in the pilot revealed that these customers on average could be worse off by about \$10 per month in their electricity bill in the summer if they did not shift load and/or conserve. However, this impact should not be generalized because these customers are not representative of all small general service customers within Hydro One.
- Further analysis using generic load profiles shows that small general service customers could be better or worse off under the RPP TOU rates depending on the industry in which they operate, their specific hourly electricity consumption patterns and their ability to shift load and/or undertake conservation initiatives.

Conclusions and Program Implications

- The pilot study shows that the current RPP TOU rates are effective in encouraging load shifting and conservation in Ontario. Other creative TOU pricing options, such as the critical peak pricing, should be considered.
- The use of an in-home real-time display monitor unit is very useful as it empowers customers to shift and conserve. Other technology options that could help customers better manage their electricity usage should also be tested.
- Depending on individual usage patterns, selected customer groups under the RPP TOU rates could be better off or worse off. Customers groups that would likely be negatively affected by the RPP TOU rates include residential customers with low electricity consumption; customers who stay at home during peak hours; and business customers with one work shift and/or who close on weekends. These customers need to shift and/or conserve more in order to offset the RPP TOU rate impact. If it is envisioned that TOU rates become mandatory, these negatively affected customer groups may require some migration alternatives. A shortened on-peak period and/or other pricing measures, or voluntary TOU below a certain threshold, would help mitigate the negative impact.

BY EMAIL AND COURIER

March 9, 2007

Ms. Kirsten Walli Secretary Ontario Energy Board Suite 2700, 2300 Yonge Street P.O. Box 2319 Toronto, ON M4P 1E4

Dear Ms. Walli:

Request for Approval for Hydro One Networks' Regulated Price Plan Time-of-Use Pilot Project

In accordance with the Board's Standard Supply Service Code, Hydro One Distribution Networks Inc. (Networks) applies for approval to proceed with a Regulated Price Plan (RPP) Time-of-Use (TOU) pilot project as described in the attached proposal.

Networks believes the pilot project will provide very useful information with respect to load research and program implementation information related to RPP TOU rates. In order for Networks to start the pilot project on time in May 2007, we respectfully request the Board process this request as expeditiously as possible.

Yours truly,

Susan Frank

Proposal for RPP TOU Pilot Project

Hydro One Distribution Networks Inc. (Networks) plans to undertake a pilot project involving 500 customers for 5 months (May to September 2007) to assess the response of its residential, farm and small general service customers to use of Regulated Price Plan (RPP) Time-of-Use (TOU) commodity rates. This study is required because results from TOU pilot projects currently undertaken by other LDCs in the province may not be directly applicable to Networks since most of our customers are primarily rural based and have higher usage of electric equipment such as electric space and water heating. In addition, Networks' proposed pilot offers the following special features:

- Farm and small general service customers are included in the study;
- Effectiveness of real time in-home display monitors and smart thermostats will be tested with RPP TOU rates;
- Pilot participants will be paying RPP TOU rates, getting a RPP TOU bill and seeing their consumption profiles through a special web site set up for the project.

The RPP TOU pilot will be fully funded by Networks' 3rd tranche CDM budget under Program Management and Research which was already approved by the Board in RP-2004-0203/EB-2005-0198. Networks has an approved budget allocation of \$2.6 million for Program Management and Research and as of Q4, 2006 has spent about \$1.6 million under this category. There will be sufficient funding in the allocated budget to cover the incremental cost for this pilot.

In order to minimize time delays as well as costs, pilot participants will be randomly selected from customers who already had smart meters installed as part of the provincial smart meter initiative. The primary purpose of this pilot is to examine the impact of RPP TOU rates and whether that affects conservation behaviour. In addition, Networks intends to use this opportunity to assess the extent to which real time in-home display monitors will help our customers on RPP TOU rates shift load and/or reduce energy consumption more effectively. Also, some selected customers with central air conditioning who are willing to participate in Networks' load control program will be offered a smart thermostat from which customers could remotely control their air conditioning setting. Professor Dean Mountain of McMaster University will be retained to provide general guidance for the pilot project, while detailed load shape analysis will be undertaken in-house by the Hydro One Load Research Team.

Networks intends to share the pilot project results with the Board. If deemed useful and assuming results from other LDC RPP TOU pilot projects are available, province-wide RPP TOU impact analysis can be performed using the LDC-specific load profiles prepared recently for 80 LDCs for cost allocation informational filings as required by EB-2005-0317.

Pilot Project Objectives

- Assess how RPP TOU commodity rates affect the hourly electricity consumption patterns of Networks' residential, farm and small general service customers. Since Networks' customers are mostly rural based, it will be useful to compare the Networks' pilot results with other LDC RPP TOU pilot projects undertaken for urban customers in the province.
- Assess the impact and effectiveness of real time in-home display monitors helping customers on RPP TOU rates shift and/or reduce load.
- Assess the impact and effectiveness of smart thermostats helping customers remotely manage their air conditioning load in the summer months.

• Assess the communication and settlement support required to implement the RPP TOU rates for all Networks' customers with smart meters in the future.

Study Approach

- Professor Dean Mountain of McMaster University, a recognized expert in load research in the province, will be retained to provide general guidance for the pilot study and particularly in the areas of sample design, customer selection and the methodology used by the Hydro One Load Research Team for assessing the load impacts. Based on preliminary analysis, a sample size of about 500 customers should be sufficient to construct a representative sample for the RPP TOU pilot study.
- In order to minimize time delays and costs, residential, farm and small general service customer that already had interval meters installed as part of the provincial smart meter initiative will be stratified and randomly selected to ensure a representative sample is chosen for the pilot project.
- After receiving approval from the Board for this pilot project, selected customers will be contacted in April 2007 to determine whether they are willing to participate in the pilot project and pay the RPP TOU rates for 5 months (May to September 2007). Participation in the pilot is entirely voluntary. Customers agreeing to participate in the pilot project will be asked to sign a contract agreeing to participate and pay the RPP TOU prices during the pilot study.
- For the study period, pilot participants will get a monthly bill clearly showing their electricity consumption differentiated by RPP TOU rates. In order to avoid making costly changes to the existing customer billing system that affect all Networks' customers, RPP TOU rate calculation and special billing for the 500 pilot participants will be processed separately and the information will be fed back to the normal billing engine for issuance of bills. After September 2007, pilot participants will return to the regular RPP (non-TOU) rates and get the usual billing arrangements.
- A special RPP TOU pilot project web site will be set up for pilot participants to sign in and view their own energy consumption profile by RPP TOU prices for the previous week. The energy profile information will be updated on a weekly basis. Information is not updated on a more frequent basis (such as daily) in order to keep the pilot project cost to a minimum. According to Professor Dean Mountain, providing weekly feed back to pilot participants is reasonable.
- About half of the pilot participants will get the real time in-home display monitors to help them manage their electricity consumption with RPP TOU rates. The in-home display monitors will be able to display the RPP TOU rates. Pilot participants will be allowed to keep the in-home display monitor after expiry of the pilot study. The real time in-home display monitors used in the pilot will be compatible with smart meters as well as RPP TOU rates.
- About half of the pilot participants will not get the in-home display monitors. To encourage customer participation for the pilot, a sign-up bonus will be considered for these customers.
- Selected pilot participants with central air conditioning will also be asked whether they are willing to participate in the Networks' SmartStat Program¹. Participants in the load control program will get a smart thermostat for which they can remotely manage their thermostat settings.
- A special 1-800 phone line will be set up for the pilot project. Networks' staff from the pilot project team will handle questions from pilot participants pertaining to their consumption profiles and RPP TOU bills.

¹ Networks introduced the SmartStat residential load control program in July 2006. This program is designed to achieve summer peak demand reduction by controlling central air-conditioning temperature set-points using web-enabled programmable thermostats.

- Pilot participants will be asked to fill out 2 questionnaires during the study period, one questionnaire at the beginning of the pilot and the other questionnaire at the end of the project to provide further information (such as appliance and equipment usage, actions taken to change the consumption patterns during the pilot) to help the project team better understand the reasons for potential changes in the hourly electricity consumption patterns.
- After the completion of the pilot study, detailed load shape analysis will be undertaken by the Hydro One Load Research Team applying similar methodology used to derive load profiles in the cost allocation informational filings for EB-2005-0317. Hourly interval data will be normalized using weather normalization methodology approved by the Board in RP-2205-0020/EB-2005-0378. Professor Dean Mountain of McMaster University will review the methodology used for the impact analysis and the results of the final report.

Benefits of the Pilot Project

- Results from this RPP TOU pilot study will be useful for load research, load forecasting, CDM program planning and for identifying any potential issues pertaining to future RPP TOU program implementation.
- Networks intends to share the pilot results with the Board. If deemed useful and assuming results from other LDC RPP TOU projects are available, province-wide RPP TOU impact analysis can be performed using LDC-specific load shapes recently prepared for 80 LDCs in their cost allocation informational filings for EB-2005-0317.

Budget for the Pilot

- The pilot project will be fully funded by Networks' 3rd tranche CDM budget which was already approved by the Board in its decisions for RP-2004-0203/EB-2005-0198. The incremental cost for the pilot project is estimated to be about \$120,000, which include spending for the following items:
 - Incremental cost of bill preparation for 500 customers for 5 months;
 - Remuneration for Professor Dean Mountain of McMaster University to provide general project guidance;
 - Setting up and maintaining a special RPP TOU web site for customers to review their electricity consumption profiles;
 - Handling charges for shipping real time in-home display monitors to selected customers;
 - Cost for undertaking 2 customer surveys;
 - o 1-800 telephone line handling calls from pilot participants;
 - o Project communication materials with customers;
 - Financial incentives for customer to participate in the pilot project
- Cost for the real time in-house display monitors and smart thermostats are already covered by existing Hydro One's CDM programs using the 3rd tranche funding.

Subject: Time-of-Use Pilot Project

Dear

As electricity conservation becomes more vital to sustaining a reliable supply of electricity in Ontario, Hydro One Networks Inc. ("Hydro One") is committed to working with you to develop effective conservation and demand management programs. We applied to the Ontario Energy Board (OEB) and received their approval to undertake a time-of-use (TOU) pricing pilot for about 500 customers from May 1 to September 30, 2007, to study how TOU rates affect the way people use electricity.

As one of Hydro One's first customers to have a smart meter installed, we are pleased to invite you to participate in this pilot project. If you are eligible to participate in this project, you will have the opportunity to see how much energy you can shift and save under the TOU rates.

How does the pilot project work?

:

Pilot participants will pay the OEB-approved TOU energy rates for five months (May through September, 2007) instead of the current Regulated Price Plan (RPP) energy rates (see the table below for comparison). Please note that the TOU rates pertain only to the electricity commodity prices and will not affect other charges on your electricity bill. During the pilot period, participants will receive a monthly bill clearly showing their electricity consumption differentiated by the TOU rate calculation. After September 30, 2007, participants will return to the regular RPP rates that they are now paying and to their usual billing arrangements. TOU rates during the pilot period will encourage participants to shift electricity consumption from the more expensive on-peak period to the less expensive off-peak period, resulting in lower electricity payments for the same consumption.

Type of Rate	Day of the Week	Time	Pricing	Rate (¢ per kWh)
	Weekdays,		First 600 kWh per month	5.3¢
RPP Rates*	Weekends & Holidays	All Day	Additional kWh	6.2¢
	Weekends & Holidays	All Day	Off-Peak	3.2¢
RPP		7:00am-11:00am	Mid-Peak	7.2¢
TOU Rates*		11:00am-5:00pm	On-Peak	9.2¢
Weekdays	5:00pm-10:00pm	Mid-Peak	7.2¢	
		10:00pm-7:00am	Off-Peak	3.2¢

* These rates have recently been changed by the OEB and will be effective on May 1, 2007

How will the TOU pilot benefit participants?

Participants in the pilot will be able to take advantage of the lower off-peak electricity rates by switching their use from peak hours to off-peak hours. For instance, they will be able to save money by running the dishwasher during off-peak hours and by doing laundry on the weekends. Some participants who do not shift enough of their usage to off-peak hours may actually see an increase in their energy bill during the pilot.

To help participants better manage their electricity consumption, we will be offering a number of the pilot participants a **free Power Cost monitor valued at \$150**. If you are selected to participate in the pilot and then become one of the participants selected to receive the monitor, you will be able to see your electricity consumption on a real-time basis. The monitor also makes it possible to track electricity consumption during the month. Since quantities are limited, the Power Cost monitors will be offered on a first-come-first-serve basis to customers who are selected to participate in the pilot.

Pilot participants will also receive an energy efficiency kit with two compact fluorescent lights, a timer and energy saving tips. To help pilot participants better understand their electricity consumption patterns during the pilot, they will have access to a website showing their daily consumption profiles, which will be updated on a weekly basis.

How can you apply to participate?

Over the next two weeks, you may be contacted by Hydro One staff to determine your eligibility to participate in the TOU pilot. Please note that participation in the pilot is completely voluntary. If you are interested in participating or have any questions regarding this pilot, please call us at 1-866-258-8333 during office hours. This is a toll-free phone number specifically set up for the pilot. Alternatively, you can send an email to LoadResearch@HydroOne.com.

If you are selected to participate in the pilot, you will need to sign an agreement with Hydro One Networks Inc., agreeing to participate and to pay the TOU rates during the pilot period. You will also be asked to fill out two questionnaires, one at the beginning and of the pilot and the other at the end of the pilot, to provide further information to help the project team better understand the reasons for potential changes in your consumption patterns.

Thanks in advance for your interest.

Hydro One TOU Pilot Team

Appendix C: Sample of TOU Pilot Agreement

CUSTOMER AGREEMENT FOR TIME-OF-USE PILOT PROJECT

The undersigned customer ("the Customer") and Hydro One Networks Inc. ("Hydro One") agree as follows:

1. The Customer wishes to participate in Hydro One's time-of-use pilot project ("the Project") that will be in effect from May through September, 2007, and the Customer hereby enrols in the Project in accordance with the terms and conditions in this Agreement. The Term of this Agreement shall commence on the Customer's normal billing date in May, 2007, and shall end on the Customer's normal billing date in September, 2007.

2. During the Term, the Customer will be charged and will pay for the electricity component of the monthly bill in accordance with the "Pilot Project TOU Rates" that appear in the chart below; and after the Term, the rates for the electricity component of the monthly bill will be the "RPP Rates" that appear in the chart below. The rates for the electricity component of the monthly bill will also be the said "RPP Rates" if and when the Customer ceases residing in the premises before the end of the Term. During the Term, all the other terms and conditions of the Customer's existing electricity distribution contract with Hydro One will remain unchanged.

Type of Rate	Day of the Week Time		Pricing	Rate (¢ per kWh)
RPP Rates Effective May 1, 2007	Weekdays, Weekends & Holidays	All Day	First 600 kWh per month Additional kWh	5.3¢ 6.2¢
Pilot Project	Weekends & Holidays	All Day	Off-Peak	3.2¢
TOU Rates		7:00am-11:00am	Mid-Peak	7.2¢
Effective May 1, 2007	Weekdays	11:00am-5:00pm	On-Peak	9.2¢
Way 1, 2007	Weekdays	5:00pm-10:00pm	Mid-Peak	7.2¢
		10:00pm-7:00am	Off-Peak	3.2¢

3. Depending on the day and time of day that the Customer uses electricity during the Term, the Pilot Project TOU Rates may result in the Customer's charges for the electricity component of the monthly bill being higher or lower than the amount that the Customer would have paid effective May 1, 2007, had the Customer not participated in the Project, even if the amount of electricity used remains the same as it was before the Term began.

4. After the Term begins, Hydro One will give the Customer an energy efficiency kit containing two compact fluorescent light bulbs, a timer, and energy saving tips. [After the signed original of this Agreement is received by Hydro One from the Customer, Hydro One will send the Customer a thank-you bonus cheque of \$50, subject to the following: the thank-you bonus will not be paid unless the Customer continues to reside in the same premises for the entire Term and unless the Customer completes and returns to Hydro One the two questionnaires referred to below.] [After the signed original of this Agreement is received by Hydro One from the Customer, Hydro One may, in its discretion, provide the Customer with a Power Cost Monitor valued at \$150, which monitor will enable recipients to view electricity consumption on a real-time basis.]

5. During the Term, the Customer will have access to a website showing the Customer's daily consumption profiles, which will be updated on a weekly basis.

6. As a condition of being permitted to participate in the Project, the Customer will complete and return to Hydro One two questionnaires provided by Hydro One, one at the beginning of the Project and one at the end, in order to provide further information concerning the reasons for any changes in the Customer's consumption patterns.

7. No benefit of this Agreement may be assigned by the Customer to any other person.

8. Notwithstanding anything else in this Agreement except clause 9 below, Hydro One may terminate this Agreement at any time during the Term or prior to the commencement of the Term by giving written notice to the Customer. If such notice is provided, the Customer shall begin paying the RPP Rates shown in the chart above, effective on the Customer's first billing date after receipt of the notice. Hydro One shall not have any liability to the other party arising out of the termination.

9. References in this Agreement to "RPP Rates" or "RPP Rates that appear in the chart below" shall be deemed to be the RPP rates in effect at the time of the Customer's return to RPP rates. The RPP rates in effect at the time of the Customer's return to RPP rates may be higher or lower than the RPP rates shown in the chart shown in clause 2 of this Agreement.

Signed by the Customer on April _____, 2007.

Time- of- Use Pilot Interim Report

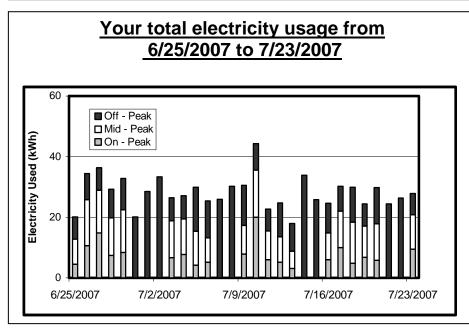

Customer Name:

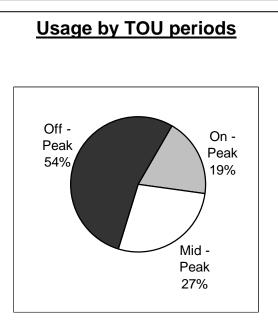

Account Number:

This interim report shows your electricity usage on the Time-of-Use (TOU) pilot from 6/25/2007 to 7/23/2007.

For easy reference, the current TOU rates set by the Ontario Energy Board are summarized below.

Type of Rate	Day of the Week	Time	Pricing	Rate (¢ per kWh)
	Weekends & Holidays	All Day	Off-Peak	3.2¢
		7:00am – 11:00am	Mid-Peak	7.2¢
TOU Rates	Maakdaya	11:00am – 5:00pm	On-Peak	9.2¢
	Weekdays	5:00pm – 10:00pm	Mid-Peak	7.2¢
		10:00pm – 7:00am	Off-Peak	3.2¢

Comparison – TOU rates versus RPP rates

Your current bill on the TOU rates											
kWh Rates (¢ / kWh) Total											
On - Peak	169	9.2	\$ 15.55								
Mid - Peak	244	7.2	\$ 17.57								
Off - Peak	479	3.2	\$ 15.33								
Total	892		\$ 48.44								

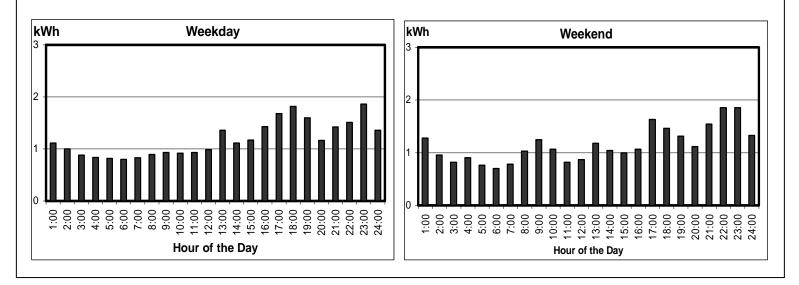

What you would pay if you were on RPP rates											
	kWh	Rates (¢ / kWh)	Total								
First 600 kWh per month	600	5.3	\$ 31.80								
Additional kWh	292	6.2	\$ 18.11								
Total	892		\$ 49.91								

For the month of June, 76% of the pilot participants were better off under the TOU rates.

To help you take advantage of the TOU rates, please see the energy tips provided at the back of this report.

You may also want to visit our website at <u>www.HydroOneNetWorks.com</u> for further energy saving tips.

Average weekday and weekend profile

Tips for customers on TOU rates

- ➢ Cooling Down the Heat... [™]
 - Pre-cool your house early in the morning and increase the temperature setting during on-peak hours.
 - Use a fan to improve air circulation during on-peak hours.
- > Saving the Laundry Dollars ...
 - Do your laundry during the weekends to take advantage of the lower off-peak rates on Saturdays and Sundays.
 - Try to schedule ironing during off-peak hours.
- ➢ Kitchen Savers ...

 \geq

- Use the oven during off-peak hours. Try the microwave oven or gas barbeque during on-peak hours.
- Run your dishwasher during off-peak hours.

- Cooling Down in Your Pool...
 Use the timer on your pool pump and let it run during off-peak hours.
 - Use a solar blanket5 to keep the water warm overnight and reduce your heater use.

- Use other major appliances, such as vacuum or sauna, during off-peak hours.
- Turn monitor off instead of using a screen saver while you are not using a computer.

Don't forget to logon at www.HydroOneNetworks.com\TOU to view your weekly consumption on the TOU pilot.

If you have any questions about the pilot or would like to provide any feedback, please contact the TOU pilot team at 1-866-285-8333 or by email at LoadResearch@HydroOne.com.

Time-of-Use Pilot Project Final Report

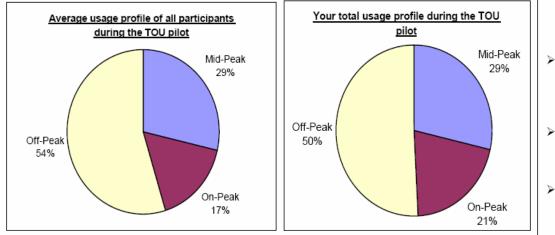

Customer Name:

Account Number:

This report shows the electricity usage information for all Time-of-Use (TOU) pilot participants and your usage profile from 25-May-07 to 25-Sep-07.

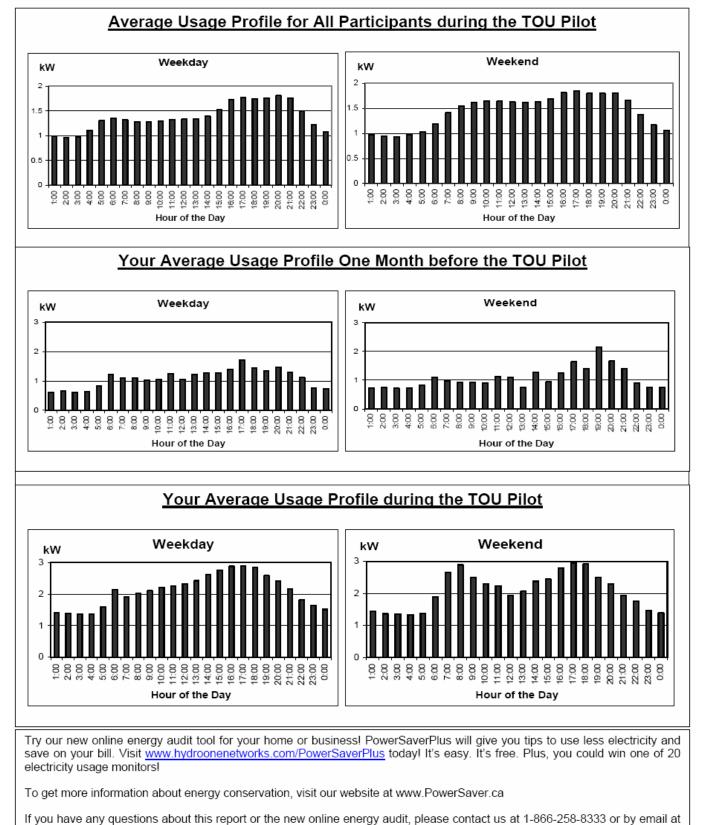

Your Bill Comparison-TOU Versus RPP Rates											
Bill Period	kWh	Bill on TOU Rates	Bill on RPP Rates	Difference							
Мау	1775	\$98.72	\$104.65	\$5.93							
June	1667	\$94.78	\$97.95	\$3.17							
July	1949	\$111.07	\$115.44	\$4.37							
August	1398	\$74.26	\$81.28	\$7.02							
Total	6789	\$378.83	\$399.32	\$20.49							

Key findings:

- 76% of all pilot participants save on their bills under TOU rates;
- On average, pilot participants shift 3.7% of their usage away from on-peak periods;
- Also, customers on the pilot reduce 3.3% of their usage compared to last year;
- 72% of all pilot participants would like to remain on the project;
- ≽87% said they have changed their behavior.

Residential Appliance Survey

Hydro One is working with the Ontario government to build a conservation culture. By completing this survey, you are helping us understand your electricity needs and how you use electricity. Your participation in this survey is voluntary and all information collected will be kept strictly confidential and used for research purposes only by Hydro One.

SECTION 1 - YOUR HOME

- 1. In what type of building do you live? O Single detached O Semi-detached house
 - O Single detached O Townhouse or Row house O Other
- 2. When was your home built? O Before 1956 O 1987-1996 O 1957-1976 O 1997 or later O 1977-1986 O Don't Know
- 3. What is the size of the living space of your home in square feet? Do NOT include your garage, attic or basement. O Less than 1,000 O 2,500 - 2,999

O 1,000 –1,499	O 3,000 – 3,999
O 1,500 – 1,999	O 4,000 or more
O 2,000 – 2,499	O Don't Know

- 4. Is natural gas available on your street? O Yes O No O Don't Know
- What type of primary space heating system do you have? ONLY ONE ANSWER O Electric baseboard
 - O Electric furnace
 - O Natural gas
 - O Oil
 - O Heat pump
 - O Propane
 - O Wood
 - O Other
- What type of supplementary space heating system(s) do you have, if any? ONLY ONE ANSWER O Electric baseboard
 - O Electric furnace
 - O Natural gas
 - O Oil
 - O Heat pump
 - O Propane
 - O Wood
 - O Other
 - O None

7. Please indicate how much of your home is heated by the supplementary system.

Space Heating	(square footage of house heated by the supplementary system)							
Systems	Less than 20%	21% to 35%	36% to 50%					
Electric baseboard	0	0	0					
Electric furnace	0	0	0					
Heat pump	0	0	0					
Other	0	0	0					

- What type of water heater do you have? ONLY ONE ANSWER O Electric
 - O Natural gas
 - O Propane
 - O Oil
 - O Other
 - O None
- 9. What type of air conditioning equipment do you have and how old is it?

	Age (years)								
Air - conditioning equipment	Less Than 5	5 to 10	10 to 15	More than 15	Do Not Have				
Central air - conditioner	0	0	0	0	0				
Heat pump (Ground Source)	0	0	0	0	0				
Heat pump (Air source)	0	0	о	0	0

SECTION 2 - ENERGY CONSERVATION

- 16. Would you be interested in a program that allows Hydro One to increase the central air conditioning setting by 2°C during peak periods?
 - O Yes O No O Participated in the program
- 17. Would you be interested in a program that allows Hydro One to shut off the electric water heater during peak periods? O Yes O No O Participated in the program
- 18. Would you be interested in an in-home device that tracks and displays ongoing electricity consumption? O Yes O No O Participated in the program
- 19. Would you be interested in a program that collects and recycles old appliances from your house?

Fridge	O Yes	O No	O Not applicable
Freezer	O Yes	O No	O Not applicable
Room air - conditioner	O Yes	O No	O Not applicable

- 20. Would you be interested in installing an energy-saving device on the water heater? O Yes
 - O No O Already installed
- 21. If you were to participate in a conservation program, how do you plan to save energy?

Program	Already achieved as part of Hydro One /	Already achieved - personal	Interested for future	Not interested for the future
More efficient air cooling system	0	0	0	0
More efficient space heating system	0	0	0	0
More efficient water heating system	0	0	0	0
Programmable thermostat	0	0	0	0
Purchase energy saving appliances	0	0	0	0
Increase insulation of doors, windows and roof	0	0	0	0
Participate in a "Do-it- Yourself" online energy audit	0	0	0	0
Participate in professional energy audit	0	0	0	0

22. Please indicate if you would be interested in using coupons/ rebates to purchase the following energy - saving products.

Program	Interested	Not Interested
Compact fluorescent light bulbs	0	0
LED holiday lights	0	0
ENERGY STAR appliance	0	0
Heating system / furnace	0	0
Programmable thermostat	0	0
ENERGY STAR air conditioner	0	0

23. How would you like to receive energy conservation information from Hydro One?
O Information in my bills
O Regular mail
O Media advertising
O Hydro One website
O Hydro One e-mail

(Please provide email address) O Not interested

24. What type of Internet connection do you have?

O High speed at home

O High speed at work

O Dial - up at home

O Dial - up at work

O None

25. Would you be interested in receiving, viewing and paying Hydro One bills online?O YesO No

O Already registered

O Do not have facilities to do so.

26. If you are interested in joining a Hydro One Customer Survey Panel to provide Hydro One with ongoing input about services, programs and communications, via short Internet surveys, please enter your email address below.

SECTION 3 – HOUSEHOLD DEMOGRAPHICS

Your answers to the following questions will help assist Hydro One in using your survey responses to represent other households with similar demographics. Please note that all responses will be kept strictly confidential and will be used for research purposes only.

27. How many people currently live in your home:							
O 0	O 2		O 4	O 6			
O 1	O 3		O 5	O More than 6			
28. Do you ou	vn or rent yo	ur home?					
O Own		O Rent		O Other			
29. What is ye	our TOTAL l	nousehold	income t	efore tax for 2006?			
O Less th	an \$20,000		O \$80,0	00 – \$99,999			
O \$20,00	0 – \$39,999		O Over	\$100,000			
O \$40,00	0 – \$59,999		O Decli	ne to provide			
O \$60.00	0 - \$79.999			-			

THANK YOU FOR YOUR TIME AND COOPERATION.

To be eligible to win our contest, you must correctly answer this skill testing question...

50 multiplied by 5, divide by 10, add 15 & subtract 10.

Time-of-Use Pilot Project – 2nd Questionnaire

This is the second and final questionnaire for the Hydro One Time-of-Use (TOU) Pilot. Please respond by September 30th, 2007.

SECTION 1 - YOUR ACTIONS DURING THE TOU PILOT

(a) During the pilot, did you and your household members (hereafter referred to as "you") change the way you
use electricity to take advantage of the TOU rates?

Yes No

(b) If yes, in the table below, please indicate the time periods during which you made changes to your electricity usage and to what extent. *If no, please go to question 2.*

	Overall	Mid - peak (7am-11am)	On - peak (11am-5pm)	Mid - peak (5pm-10pm)	Off - peak (10pm-7am)	Off - peak (Weekends)
No changes made			5	5		2
A few changes made						
Some changes made						
Significant changes made						

 Please identify the actions that you took during the pilot to take advantage of the TOU rates. Please select all that apply to you.

(i) Cooling

- Set back your thermostat in the evening? If yes, by how many degrees? _____°C or ____°F
- Set back your thermostat during the day? If yes, by how many degrees? _____°C or _____°F
- Pre-cool the house during off-peak hours and increase the temperature setting during on-peak hours.
- Use a fan and turn off the air conditioner.
- Use a fan in addition to the air conditioner to improve air circulation.
- Other, please specify
- (ii) <u>Electric Water Heating</u> (Please answer this question only if you have electric water heating and select all that apply to you. If not, please go to the next question)
- Schedule hot water use during off-peak hours (i.e. showers and washing)
- Install water heater blanket to reduce heat loss
- Other, please specify

 (iii) Pool Use a timer on the pool pump and let it run during off-peak hours Use a timer on the pool heater and let it run during off-peak hours Use a solar blanket to keep the pool water warm overnight to reduce the heater use Other, please specify
 (iv) Laundry and dishwashing Schedule the laundry during off-peak hours instead of mid-peak or on-peak hours Run the dishwasher during off-peak hours Hang clothes to dry outside Wash dishes by hand Other, please specify
 (v) <u>Insulation and windows</u> Air sealing retrofit (e.g. apply caulking around window frame to prevent air leakage) Other, please specify
(vi) <u>Other appliances</u> Have you shifted your usage of other appliances to off-peak periods (after 10 p.m. or during weekends)? If yes, please provide details
Have you reduced your use of appliances? If yes, please provide details
Control any of your household equipment and/or appliances with timers? If yes, please specify
 Switch to more energy efficient or low wattage light bulbs such as compact fluorescent light bulbs? Purchase an appliance that displays the ENERGY STAR® label? If yes, please check-off all that apply to you from the following list: Washing Machine Dishwasher Hot Water Tank
Dryer Air Conditioner Heating System/Furnace
Fridge Freezer Other, please describe
(vi) <u>Other Actions</u> Other actions not listed? If yes, what are they?

I have not undertaken any actions since May 2007.

3) (a) Please indicate when you use the following appliances during the TOU pilot.

		Week	days		Weekends
	7 am - 11 am	11am - 5pm	5pm - 10pm	10pm - 7am	All day
Television					
Computer					
Printer, Scanner, Copier					
Dehumidifier					
Fan					
Spa / Hot Tub					
Pool Pump					
Washing Machine					
Clothes Dryer					
Oven					
Dishwasher					
Microwave					

(b) Please indicate how often you use these appliances on weekdays between 11 am and 8 pm.

	Never	1 day a week	2-3 days a week	4 or more days a week
Television				
Computer				
Printer, Scanner, Copier				
Dehumidifier				
Fan				
Spa / Hot Tub				
Pool Pump				
Washing Machine				
Clothes Dryer				
Oven				
Dishwasher				
Microwave				

SECTION 2 - YOUR VIEWS ABOUT THE TOU PILOT

4) (a) Would you recommend the TOU rates to your friends if the pilot was expanded?

Yes	No No
-----	-------

- (b) Why or why not?
- 5) Do you feel the current difference between "off-peak" and "on-peak" rates is large enough to provide you with the necessary incentive to shift your electricity consumption to "off-peak" periods?

Yes	No No
-----	-------

6)	(a) How do you feel about the TOU rates affecting your daily activities?
	Do not mind Slightly bothersome Bothersome Very bothersome
	(b) Please indicate why
7)	What have fits do you fast the TOLL rates offer to consumers? Plages aslest all that apply to you
7)	What benefits do you feel the TOU rates offer to consumers? Please select all that apply to you.
	Allows participants to become more aware of "when" they use electricity during the day or week
	Allows participants to become more aware of their "total electricity consumption" regardless of the time of
	day or week you use it
	Makes participants more conscious about what they can do to reduce their electricity bill (e.g., turning off
	lights or other devices when not in use, shifting usage to cheaper periods) Makes participants more conscious about "peak" usage
	Gives participants greater control over their electricity costs
	Benefits to the environment
	Other benefits, please specify
	No benefits (Please go to question 8)
8)	What is the main benefit of the TOU rates to electricity consumers? <i>Please select one only</i> .
	Allows participants to become more aware of "when" they use electricity during the day or week
	Allows participants to become more aware of their "total electricity consumption" regardless of the time of
	day or week you use it
	Makes participants more conscious about what they can do to reduce their electricity bill (e.g., turning off lights or other devices when not in use, shifting usage to cheaper periods)
	Makes participants more conscious about "peak" usage
	Gives participants greater control over their electricity costs
	Benefits to the environment
	Other benefits, please specify
9)	(a) If given the option, would you like to remain on the TOU rates?
	Yes No
	(b) Please specify why or why not?

4

10) As a result of receiving your TOU bills, interim report and using the in-home display device (PowerCost Monitor), how likely are you to change your electricity usage in the **future** and during which time periods.

	Overall	Mid - peak (7am-11am)	On - peak (11am - 5pm)	Mid - peak (5pm-10pm)	Off - peak (10pm-7am)	Off - peak (Weekends)
Not at all likely						
Not very likely						
Likely						
Very Likely						

11) Please check off any of the following that apply to you regarding your monthly TOU electricity bills.

Information was easy to understand

Information was helpful in understanding how much electricity was used during different periods

Information was helpful for shifting electricity usage to off-peak and mid-peak periods

Information was helpful in understanding how to save on electricity bill

Information was useful in reducing total electricity usage

12) (a) How often did you access information on your electricity usage on the website?

Daily	Weekly	2-3 times a month	Monthly

- Often Once or twice during the pilot Never
- (b) Did you find the information on the website useful in helping you to understand the usage profiles and lower your electricity bills?
- Yes No

(c)What other information would you like to see on the website?

13) (a) Did you find the information in the interim report useful in helping you to understand the usage profiles and lower your electricity bills?

Yes	No No
-----	-------

(b) What other information would you like to see on the report?

14) Thinking about the different communication you received as part of the TOU pilot program, please indicate your preferred method of receiving this information.

	Mail	Fax	E-mail	Telephone	Online
General communications about the Pilot					
TOU bills					
Interim reports					

15) Thinking about information that would help you to manage your electricity bill under TOU rates, please check off all the information that would be helpful:

 A booklet with tips to help you manage your electricity bill under TOU rates. A fridge magnet defining the TOU periods Bill messages providing tips on TOU rates appropriate for the season Bill inserts providing helpful tips on managing your bill under TOU rates appropriate for the season A portion of Hydro One's web site dedicated to managing your electricity use under TOU rates. A DVD providing you with tips on managing your electricity bill under TOU rates Other, please specify
16) Thinking about the different communication you received as part of the TOU pilot, is there any additional information you think would help you to benefit more from the TOU prices?
 (a) Please indicate whether the PowerCost Monitor, valued at \$150, influenced your decision to participate in the pilot.
Yes No
(b) Please indicate how you felt about the incentive offered to you to participate in the pilot.
Not necessary Too little Adequate Too much
17) (a) Have you found the PowerCost Monitor to be useful in helping you conserve energy in your home?
Yes No
18) (a) Was the PowerCost Monitor easy to install and program?
Yes No
(b) If no, please provide details of any difficulties that you encountered.
6

19) Which features have you found useful on the PowerCost Monitor?

	 \$Dollars/Hr \$Dollars Predicted \$Dollars 	KW KWHrs Predicted KWHrs	External temperature
20	of importance to you, with one (1)	being the most important benefit	itor? Please rank the listed benefits in order t and eight (8) being the least important evel of importance applies to more than one
	The instantaneous feedback is a We can keep the monitor at the We like the information feature Ability to reduce my electricity	e end of the pilot program es on the monitor 7 consumption to help minimize t 7 consumption to assist with envi	the cost of my electricity bill

21) (a) In your opinion, how could the PowerCost Monitor be improved?

\$_____

 Eliminate the need to install the sensor unit on the meter Equip the monitor with the ability to display different colors (green/red) to alert you of different TOU periods Equip the monitor with more graphs and charts Equip the monitor with the ability to communicate two ways to inform you of periods of high provincial electricity demand or helpful tips for the time of day/day of week/season
(b) Given your experience with TOU rates, would you be interested in the ability to control electricity use (air conditioner, thermostat, pool/spa pumps, hot water heater) remotely through the internet or telephone?
Yes No
(c) Given your experience with TOU rates, would you be interested in Hydro One programs to automatically control selected appliances (such as air conditioner and electric water heater) during high demand periods?
Yes No
22) Based on your experience with the PowerCost Monitor to date, how much do you hope to save on your energy consumption each month?
□ 0-5% □ 5-10% □ 10-15% □ 15-20% □ Greater than 20%
23) How much do you think customers would like to pay for the PowerCost Monitor by themselves?

SECTION 3 - YOUR HOME AND DEMOGRAPHICS

24) (a) How many people are currently living in your household?

(b) Please indicate the number of people that are home USUALLY (more than 50% of the time) during the week

	Indicate Nur	nber of People at Home	
7 AM to 11 AM	11 AM to 5 PM	5 PM to 10 PM	Weekends
Have you change	d any appliances or heating	g and cooling devices since	May 2007?
Yes [No		
b) If yes, please indi	cate the date the change w	as made and provide details	s of the change.
Month:	Year:	_	
a) Has your home u	ndergone any renovations s	since May 2007?

Attachment 8:

2008 Power Cost Monitor Survey Result

Installing and Using the PowerCost Monitor

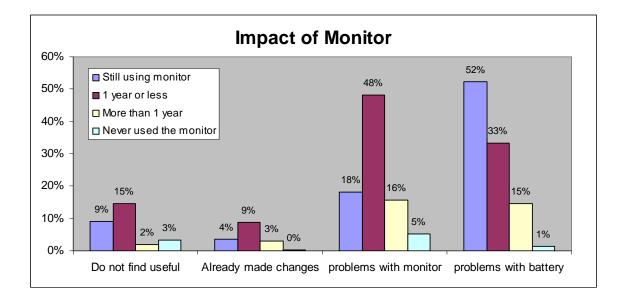

- 80.4% installed their monitor within the first month
- 11-12% never installed or programmed their monitor
- 25.8% are still using their monitor

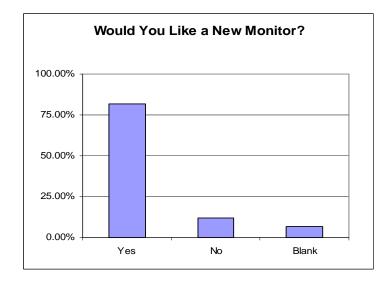

Impact of the Monitor

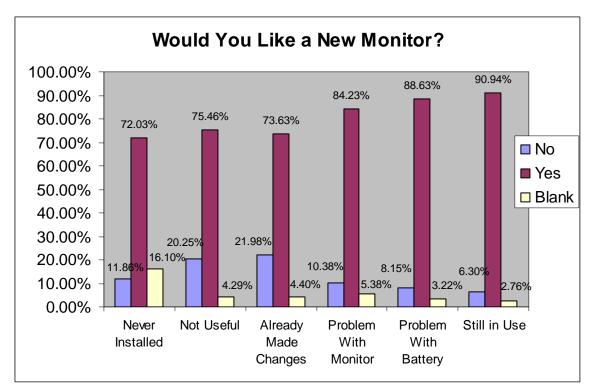

- 9% of people still using do not find it useful and 4% have already made changes
- Only 2% of people using more than 1 year do not find it useful
- 48% of people using more than 1 year had problems with monitor and 33% had problems with battery
- 18% of people still using had problems with monitor and 52% had problems with battery
- 3% of people who never used did not find it useful and 5% had problems with monitor

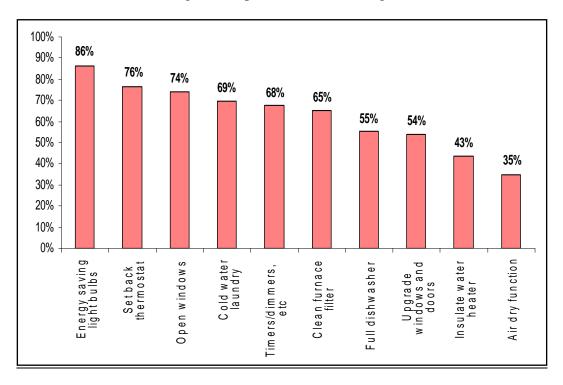

Would You Like to Receive a New Monitor?

- 81.5% of respondents would like a new monitor, including:
 - 72% of people who never installed the monitor
 - 0 75.5% of people who did not find it useful
 - 0 73.6% of people who already made changes
 - 0 84.23% of people who had a problem with the monitor
 - 0 88.6% of people who had a problem with the battery
 - 0 90.9% of people still using the monitor

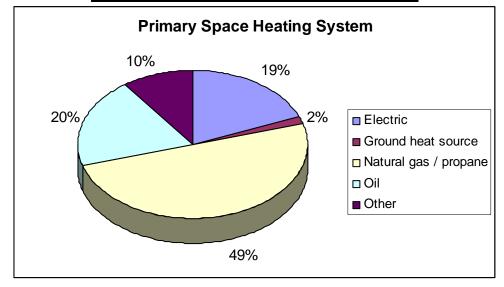

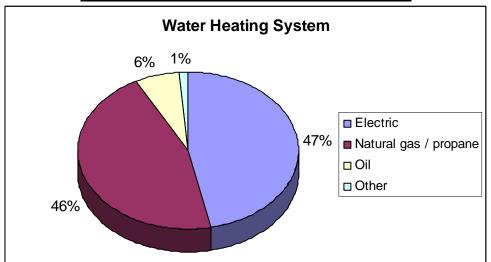

Please identify any conservation actions you have taken?

Percentage of Respondents Undertaking Action

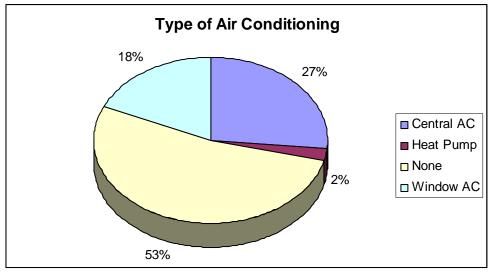

What type of primary heat system do you have?

What type of water heating system do you have?

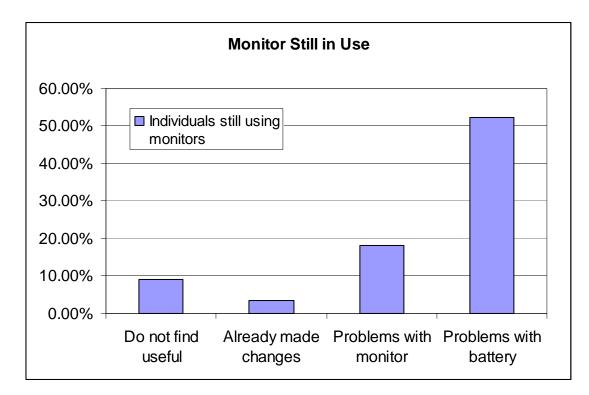

Appendix

1. Still Using the Monitors

Of the individuals still using the monitors:

- 9.1% do not find it useful
- 3.5% have already made changes
- 18.11% had problems with the monitor
- 52.4% had problems with the battery

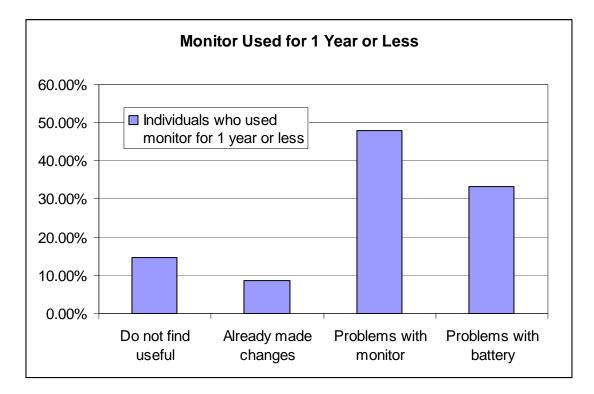

- Monitor does not always work or is unreliable
- Battery is expensive, hard to find replacements, and does not work in cold weather
- Readings are not accurate
- Problems reprogramming

2. Used the Monitor for 1 Year or Less

Of the individuals who used the monitor for one year or less:

- 14.7% did not find it useful
- 8.71% already made changes
- 48.1% had problems with the monitor
- 33.2% had problems with the battery

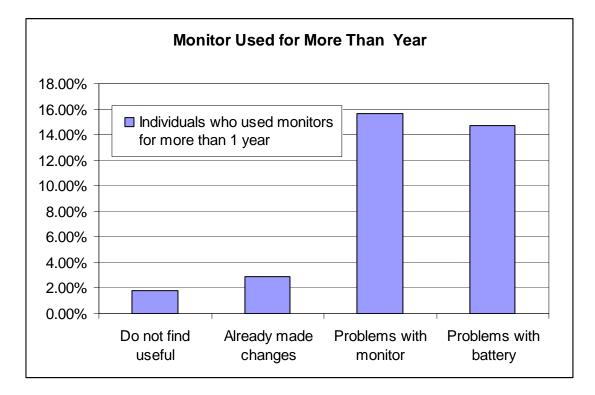

- Monitor did not work properly after a few months
- Battery is expensive, does not last long enough, is hard to find replacements for, and does not work in cold weather
- Monitor confusing
- Not receiving signal from outside unit
- Not compatible with new Smart Meter

3. Used the Monitor for More Than 1 Year

Of the individuals who used the monitor for more than 1 year:

- 1.8% did not find it useful
- 2.9% already made changes
- 15.7% had problems with the monitor
- 14.7% had problems with the battery

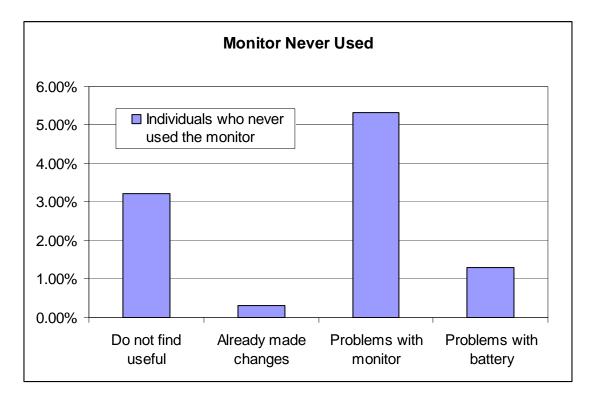

- Monitor stopped working
- Battery is expensive, does not last long enough, is hard to find replacements for, and does not work in cold weather
- Not receiving signal from outside unit
- Not compatible with new Smart Meter
- Battery died and did not replace

4. Never Used the Monitor

Of the individuals who never used the monitor:

- 3.2% did not find it useful
- 0.3% already made changes
- 5.3% had problems with the monitor
- 1.3% had problems with the battery

- Did not know how to install and/or use
- Forgot to install
- Meter too far away for monitor to work
- Monitor never worked
- Already conserve as much energy as possible

Filed: 2014-07-04 EB-2013-0416 Exhibit I-7.7-13 GEC 23 Attachment 7 Page 1 of 15

Attachment 9:

2009 Nipissing Time-of-Use Pilot Household Profile Survey Result

Nipissing Time-of-Use Pilot Project Household Profile Survey Summary

- Surveys were sent to pilot participants in August 2009
- 248 responses were received (16 were completed online)
- 227 surveys were matched to version 10 of the master list (571 customers) without duplication for a response rate of 40%
- Comparison with Northern Ontario results are taken from the Survey of Household Spending in 2004

Overview

- Most respondents live in single detached houses which were built fairly recently, the majority built after 1980
- The average number of people per household is slightly higher than that in Northern Ontario
- Annual household income is lower than the average in Northern Ontario with an estimated 70% of respondents below average
- More than half (58%) of households have at least one person home all day during weekdays
- There is a very high incidence of electric space heating (49%) and electric water heating (84%), versus 23% and 46% respectively in Northern Ontario
- The number of households with air conditioning is very low at 32% (though only slightly lower than Northern Ontario as a whole)
- The appliance profile is roughly similar to that of Northern Ontario except respondents are more likely to own a personal computer, washer machine and clothes dryer and are less likely to own a dishwasher
- Most appliances are fairly new, usually less than 10 years old
- In terms of conservation, most respondents have not taken many conservation actions and do not have future plans to do so
- Most respondents are still using incandescent bulbs; only 18% have none
- The majority of respondents are energy conscious in their day to day activities; most (always or sometimes) turn down their thermostat at night or when away from home, turn off lights, use cold water for laundry, run the dishwasher only when full, and use natural cooling
- Three quarters of respondents have internet access at home, mostly high-speed
- One quarter of respondents provided their email address for future communications from Hydro One

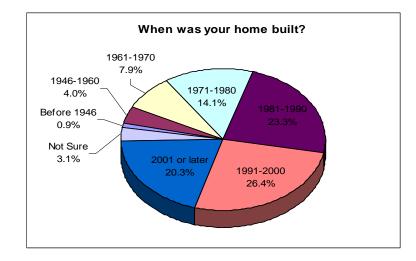

Results

Section 1- Household Information

- The majority of respondents (92%) live in a single detached house, a higher rate than in Northern Ontario as a whole (67.3%)
- 73% own their home
- 97% pay their own electricity bill

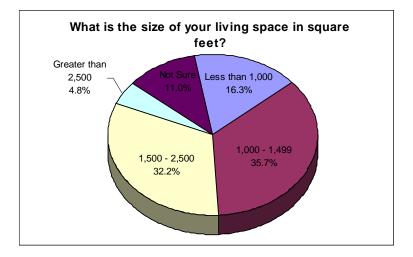

Age of Home

- The majority of homes (70%) were built after 1980
- At least 63% of homes in Northern Ontario were built before 1980

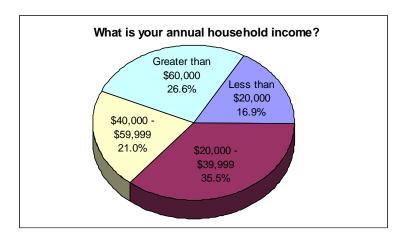

Size of Household

- The average number of people per household is 2.77, higher than the Northern Ontario average of 2.26
- 58% of households indicated that at least one person is home at all times during the weekdays
- Nearly 70% of the households in Nipissing are 1,000 to 2,500 square feet
- 15% are smaller than 1,000 square feet in size
- Less than 5% are greater than 2,500 square feet in size

Annual Income

- Just over half (55%) of respondents chose to disclose their income
- 16.9% said they have an annual income lower than \$20,000
- The average household income in Northern Ontario in 2004 was \$51,161 meaning that at least 26.6% (those with a salary greater than \$60,000) are above average
- In Northern Ontario, average household income divided by the average number of persons in the household is roughly \$22,600
- Looking at household income per person in Nipissing, approximately 15-30% are above the Northern Ontario average

Household Appliance Profile

Appliance Saturation	NFN	N. Ontario (2004)
Electric Space Heating	48.9%	22.5%
Electric Water Heating	83.5%	45.4%
Electric Cook Top/Stove	96.0%	96.6%
AC Window	21.3%	11.6%
AC Central	8.90%	15.3%
Personal Computer	81.5%	57.5%
Television #1	20.3%	37.6%
Television #2	39.6%	31.8%
Television #3	39.2%	30.6%
Microwave	94.7%	93.9%
Dishwasher	36.6%	44.0%
Washer Machine	96.0%	81.3%
Clothes Dryer	93.8%	76.5%

- A very large proportion of households in NFN (48.9%) have electric space heating, versus 22.5% in Northern Ontario
- 83.5% have electric water heating which is also very high compared to 45.4% in Northern Ontario
- The majority of respondents in Nipissing (67.6%) do not have air conditioning
 - 8.9% have central air conditioning which is smaller than the 15.3% with central air conditioning in Northern Ontario
 - 21.3% have window air conditioners which is more than the average in Northern Ontario (11.6%)
- The number of microwaves is the same in NFN as in the rest of Northern Ontario
- NFN residents have a slightly higher incidence of televisions per household, a much higher incidence of person computers and are much more likely to have a washer machine and dryer than the rest of Northern Ontario
- Very few NFN residents have dishwashers (36.6% compared to 44.0% in Northern Ontario)

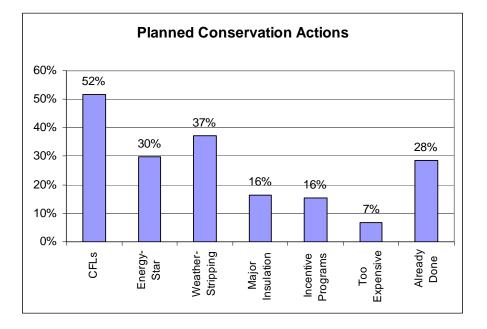

Age of Appliances

- 5% of primary refrigerators and 10% of secondary refrigerators are 15 years of age or older
- 13% of primary freezers and 18% of secondary freezers are 15 years or older
- 4 out of 22 central air conditioners and 9 out of 47 window air conditioners are 10 years of age or older

Section 2- Energy Conservation

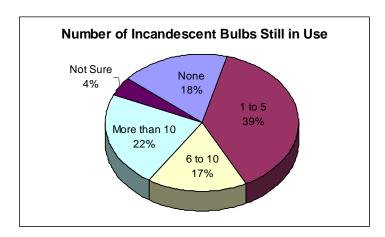

Planned Conservation Actions

- The most commonly planned conservation actions are replacing incandescent bulbs with CFLs (52%) followed by weather-stripping maintenance (37%)
- 28% said they are already conserving as much energy as they can
- 7% said future conservation actions would be too expensive

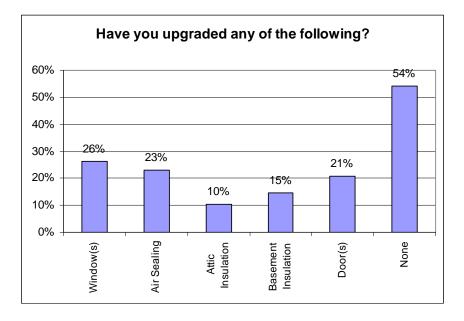

Conservation Actions Already Undertaken

- 14% of respondents used Every Kilowatt Counts coupons in 2008 or 2009, of which half said they also bought other energy-efficient products at the same time for which they did not have a coupon
- 18% have removed all incandescent bulbs from their home, however 22% have more than 10 still in use

- 54% of respondents said they have not made any major upgrades to be more energy efficient
- The most common upgrades are:
 - 26% have upgraded window(s)
 - o 23% have upgraded air sealing or weather-stripping
 - 21% have upgraded door(s)

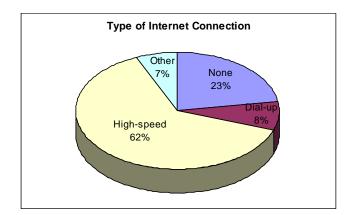

- Respondents from NFN are actively taking part in daily conservation actions:
 - 75% or respondents lower their thermostat at night either always or sometimes
 - o 68% always use cold water for their laundry
 - 84% always turn off lights when not in use (and 16% sometimes do)
 - o 71% of people use a fan or open a window instead of using A/C
 - 94% of people with a dishwasher only run it when full
- There is still room for improvement in a few areas:
 - 24% never turn their thermostat lower at night and 15% never turn it lower when they are not home
 - 37% never hang dry their laundry
 - Only 30% use timers or dimmers

Conservation Action	Always	Sometimes	Never
Temp lower at night	52%	23%	24%
Temp lower not home	60%	25%	15%
Cold water laundry	68%	24%	7%
Hang dry	19%	44%	37%
Timers	12%	18%	70%
Dimmers	10%	20%	70%
Turn off lights	84%	16%	0%
Fan or window	71%	25%	3%
Full dishwasher	94%	4%	3%

Section 3- Communications

Internet Access

- The majority of respondents (77%) have an internet connection which is high compared to 52% in Northern Ontario
- The most common type of internet connection is high-speed at 62%

Future Communications

- 27% of respondents said they would like to receive future communications from Hydro One via email
- 60 email addresses were received for future communications

Appendix: Detailed Survey Responses

Section 1: Your Home

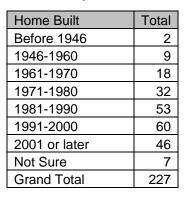

1. In what type of building do you live?

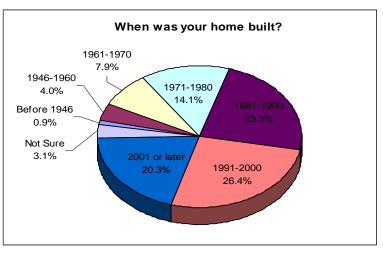

- 91.6% live in a single detached house
- 3.1% live in an apartment
- 5.3% live in a semi-detached house, townhouse/row house, or other

2. Do you rent or own your home?

- 72.5% own their home
- 3. Do you pay for your own electricity bill?
 - 97% say they pay their own bill
 - The remaining 3% say it is included in their rent

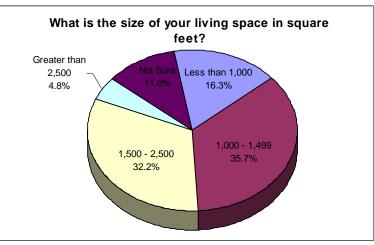

4. When was your home built?

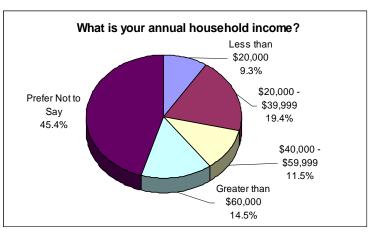

5. What is the size of the living space of your home in square feet (excluding garage, attic or unfinished basement)?

Size of home	
(sq. feet)	Total
Less than 1,000	37
1,000 - 1,499	81
1,500 - 2,500	73
Greater than 2,500	11
Not Sure	25
Grand Total	227

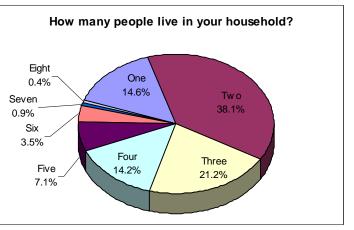

6. What was your annual household income before taxes in 2008?

Annual Income (2008)	Total
Less than \$20,000	21
\$20,000 - \$39,999	44
\$40,000 - \$59,999	26
Greater than \$60,000	33
Prefer Not to Say	103
Grand Total	227

7 a) How many people live in your household?

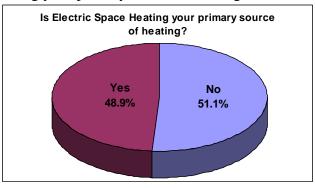

People in home	Total
One	33
Two	86
Three	48
Four	32
Five	16
Six	8
Seven	2
Eight	1
Unanswered	1
Grand Total	227

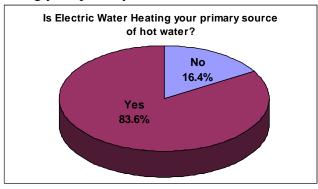

7 b) Please indicate the number of people that are usually home (more than 50% of the time) during the following times.

• 58% of households have at least one person home all day on weekdays

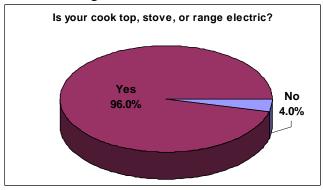

8. Is electric space heating your primary source of heating?

9. Is electric water heating your primary source of hot water?

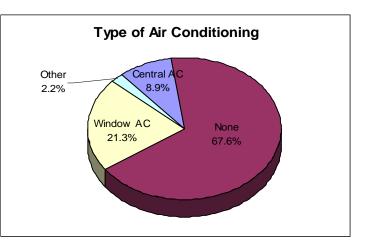

10. Is your cook top, stove, or range electric?

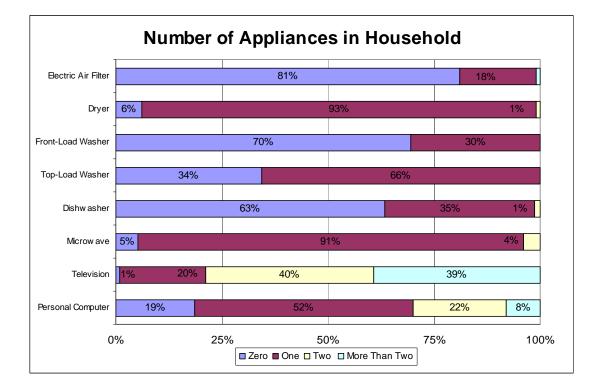

11. What type of air conditioning do you have?

Total

2010 Nipissing Time-of-Use Pilot Electricity Usage Profile Survey Result

Nipissing Electricity Usage Survey Results

- Surveys were sent to pilot participants in May 2010
- 231 surveys were received for a response rate of 43%

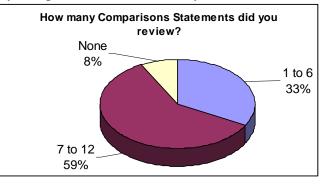

Appendix: Detailed Survey Responses

Section 1: Your Home

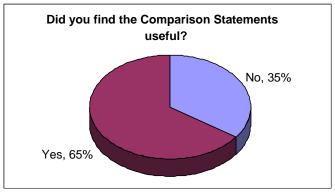

Please see results based on all both surveys

Section 2: Comparison Statements

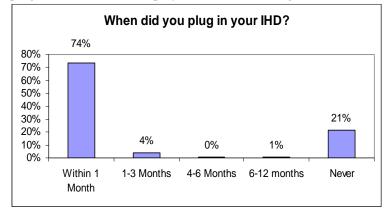

4. How many monthly comparison statements did you review?

5. Did you find the information in the Comparison Statements useful in helping you manage your electricity usage?

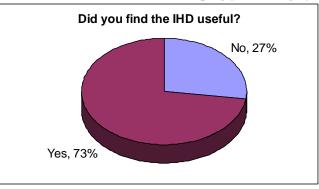

Section 3: In-Home Display (IHD)

6. When did you plug in the In-Home Display unit after receiving it?

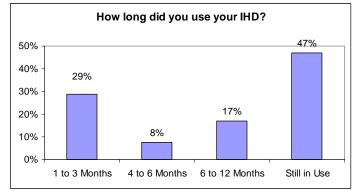

7. Did you find the information on the IHD useful in helping you manage your electricity usage?

8. Which features did you find useful on your display unit? (Please mark any feature you found useful)

The most popular features were: Current usage and dollars per hour Coloured TOU rate indicator bar Total usage and estimated cost of next bill

9. How long did you use the In-Home Display?

10. If you are no longer using the IHD please indicate why you stopped using it.

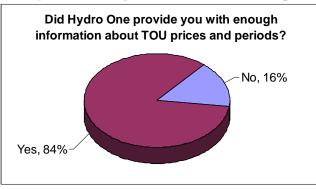

For those who used the IHD, the most common reasons for no longer using the IHD included: We have already made the changes to our electricity and no longer need it; in order to save electricity; and we did not have time. A smaller proportion said they did not find it useful.

Section 4: Overall Pilot Experience

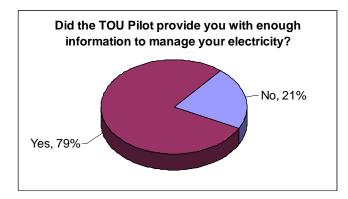

11. Did you visit the TOU pilot website to view your weekly electricity consumption?

Only a very small number of customers visited the website. Those who did not visit the website said the main reasons were because they forgot, were not aware of it, or did not have access to a computer and/or internet.

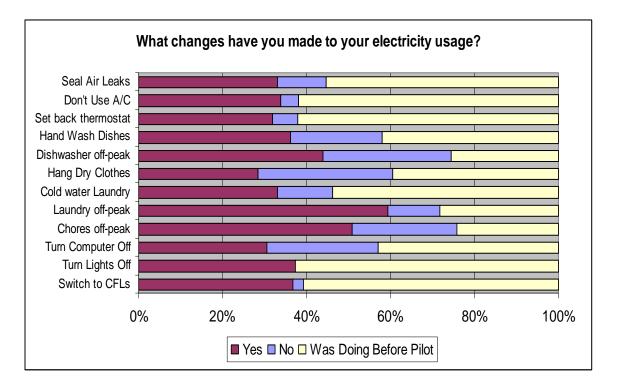

12. Did Hydro One provide you with enough information about TOU prices and periods?

13. Did the Nipissing Time-of-Use Pilot provide you with the necessary information to better manage your electricity bill under TOU rates?

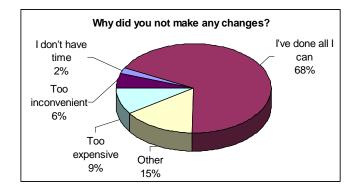

14. Please tell us any of the changes you have made to your electricity usage as a result of this Pilot.

Other changes reported included being generally more aware of electricity usage, unplugging appliances not in use, replacing insulation/windows/doors, buying energy efficient appliances, and reducing the temperature on water heaters.

15. If you have not made any changes to your electricity usage as a result of this pilot please tell us why not?

2010 Customer Equipment and Conservation Survey Preliminary Result

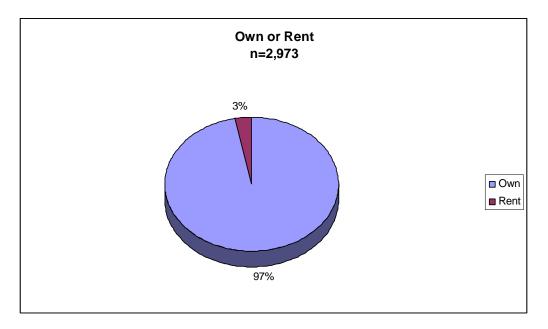

Hydro One Customer Equipment and Conservation Survey 2010 Preliminary Analysis

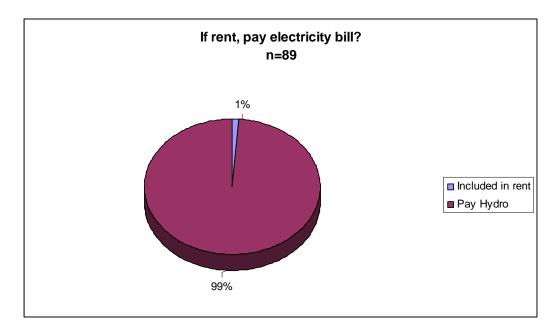

Total number of surveys sent out: ~8,000 Total number of responses: ~3,000 Response rate: 37.5%

Question 1: In what type of building do you live?

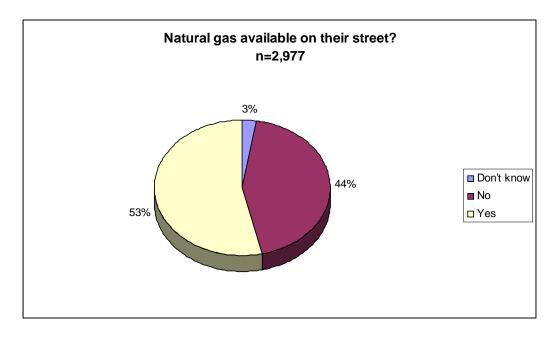

Question 2(a): Do you rent or own your home?

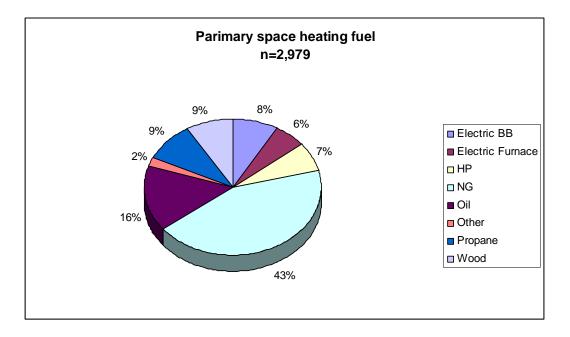

Question 2(b): If you rent, do you pay your own electricity bill?

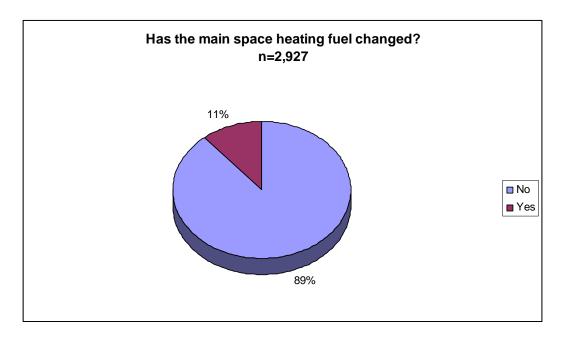

Question 3: Is natural gas available on your street?

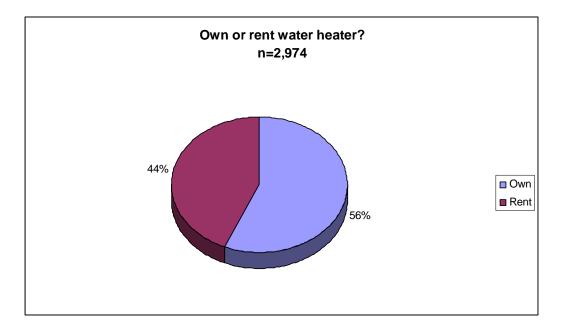

Question 4(a): What is your primary source for space heating?

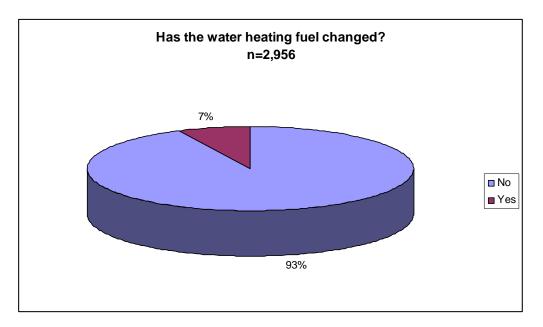

Question 4(b): In your current home, has your main space heating fuel source changed during the last five years?

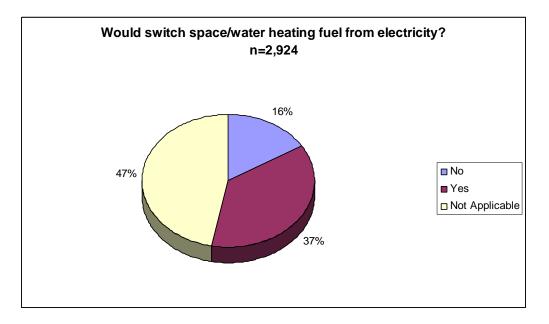

Question 5(a): Do you won or rent your water heater?

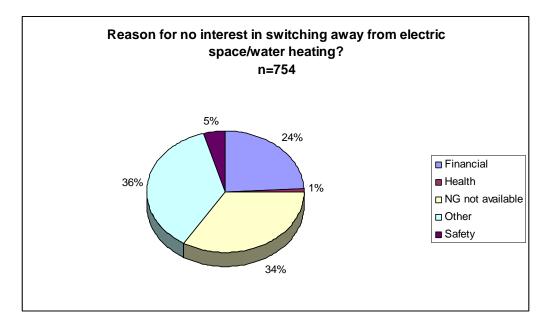

<u>Question 5(c): In your current home, has your water heating fuel source changed</u> <u>during the last five years?</u>

Question 6(a): If you are currently using electricity for space and/or water heating, would you consider switching to other energy sources in future?

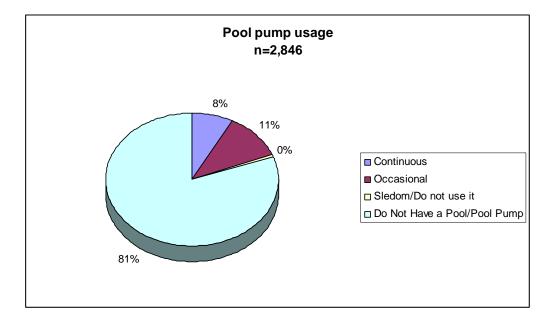

Question 6(b): If "No", please specify the reason.

		Heat	Window	Window
	CAC	Pump	AC1	AC2
< 5 yrs old	533	152	290	86
5-10 yrs old	550	55	122	50
11-15 yrs old	291	38	39	10
>15 yrs old	203	68	22	8
Total	1577	313	473	154

Question 7: What type of air conditioning equipment do you have and how old is it?

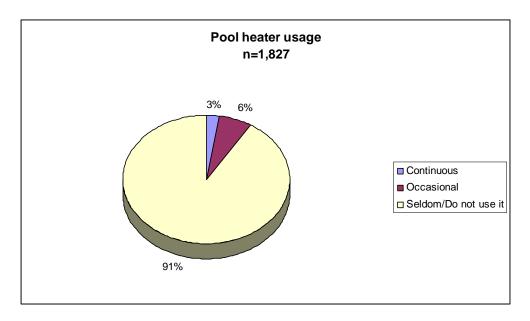

Question 8(a): If you have a swimming pool, how often do you use your pool pump?

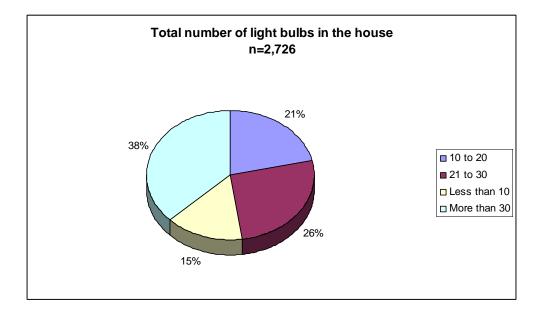

Question 8(b): What fuel source do you use for your pool heater?

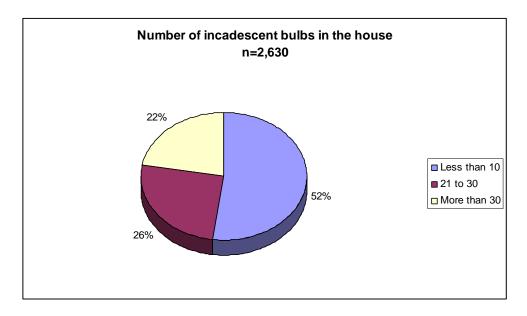

Question 8(c): How often do you use your pool heater?

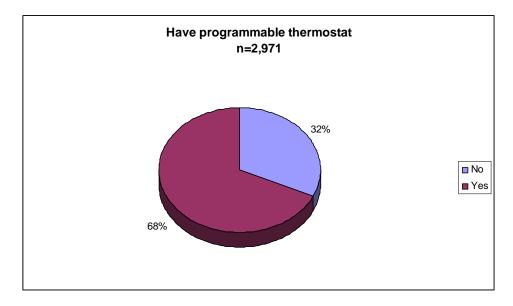

<u>Question 9(a): How many indoor and outdoor light bulbs are currently being used in your home?</u>

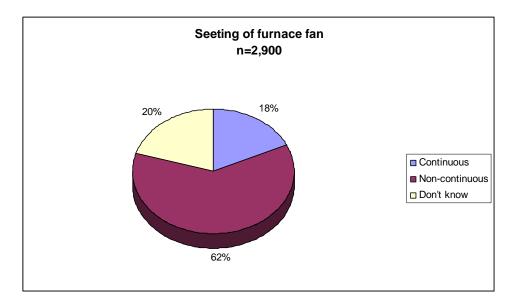

Question 9(b): How many regular (incandescent) light bulbs (indoor and outdoor) are currently in regular use in your home?

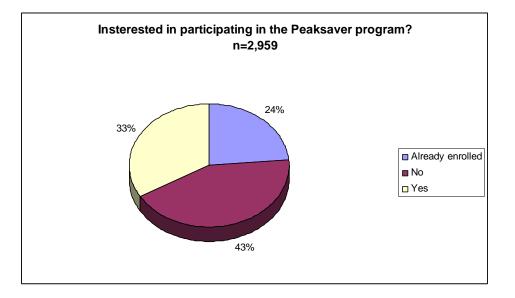

Question 10: Do you have a programmable thermostat?

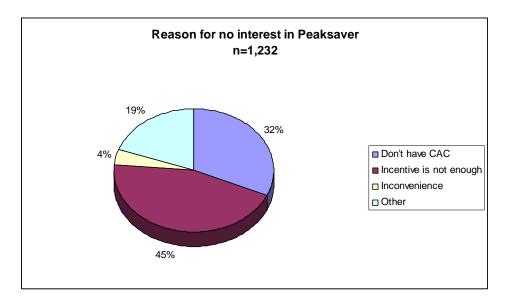

Question 11: What is the setting of your furnace fan?

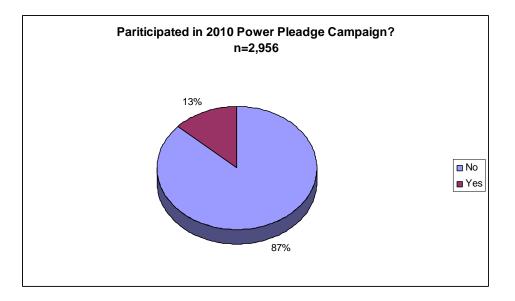

<u>Question 12(a): If you are not currently enrolled in the PeakSaver program, would</u> you be interested in participating?

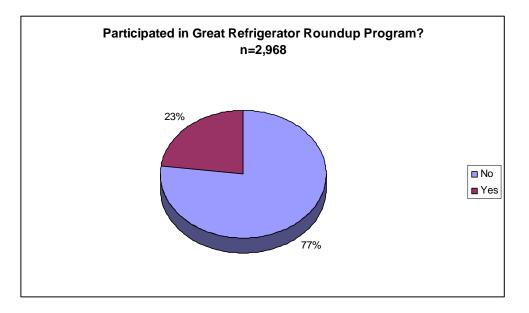

Question 12(b): If "No", please specify the reason.

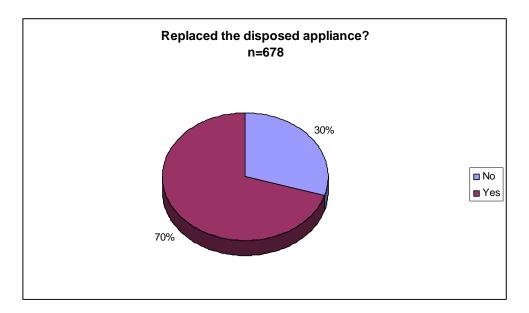

Question 13(a): Did you participate in the 2010 Power Pledge campaign?

<u>Question 14(a): Have you participated in the "Great Refrigerator Round-up"</u> <u>program?</u>

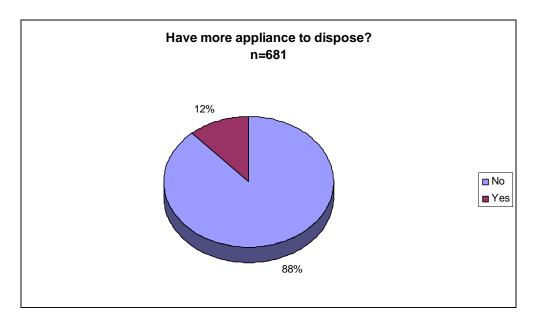

<u>Question 14(b): If you participated in the "Great Refrigerator Round-up" program,</u> which of the following old appliance(s) did you dispose of?

Refrigerator	564
Window AC	19
Freezer	195
Dehumidifier	25

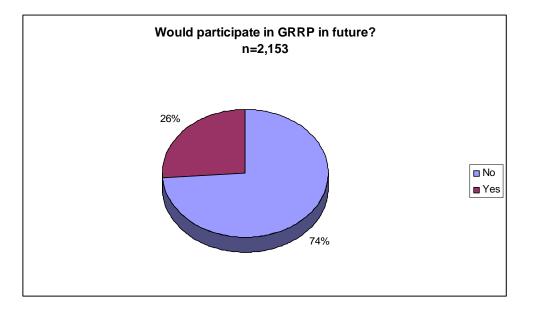

Question 14(c): Did you replace the appliance(s) you disposed of with a new one?

<u>Question 14(d): Do you have additional appliance(s) that you would like to dispose</u> of under the "Great Refrigerator Round-up" program?

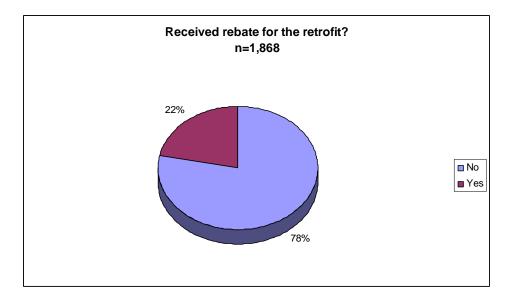

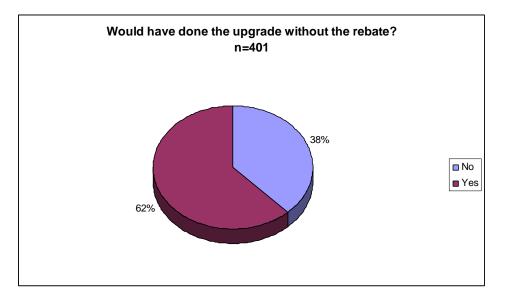

Question 15(a): Please let us know if you have upgraded any of the following to be more energy efficient or are planning to do it in future?

	Windows	Doors	Walls	Attic	Basement
Already done it	1454	1194	623	891	807
Will do in next 2					
years	399	429	220	361	326
Not Applicable or					
Have no plans	1044	1223	1961	1582	1673

Question 15(b): Did you receive any financial rebate?

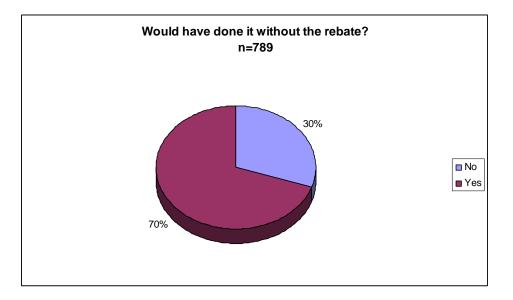

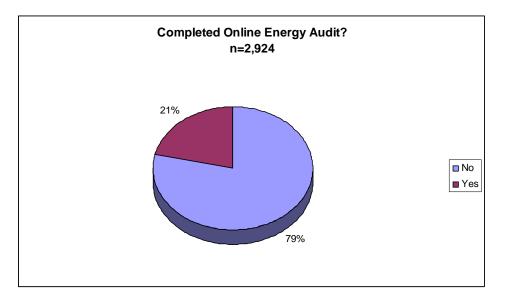

<u>Question 16(a): Have you taken any of the following actions through participation in</u> <u>the "Cool Savings Rebate" program?</u>

Replaced Thermostat	613
Furnace with ECM	355
E* HP or ductless split system	120
CEE Tier 2 CAC	99
No Action Taken	2008

Question 16(b): If "Yes", would you have taken this action in the absence of financial rebate through the "Cool Savings Rebate" program?

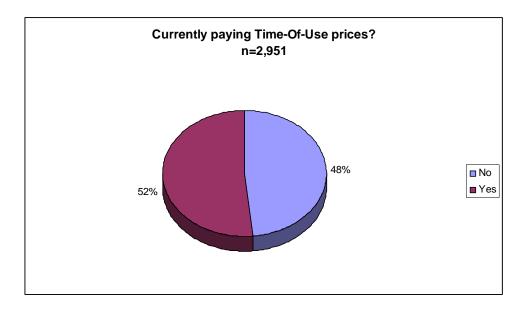

Question 17(a): Have you completed the PowerSaverPlus online energy audit?

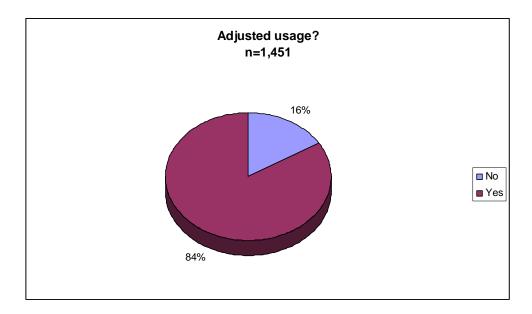

<u>Question 19: What conservation tools can Hydro One provide that will be of value to you?</u>

Conservation tips	1527
In-home audit	1147
Other	233
None	661

Question 20(a): Are you currently paying Time-of-Use electricity prices?

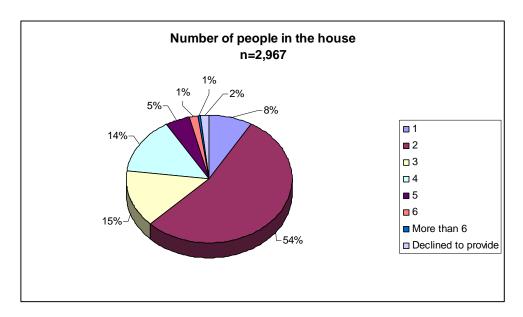

<u>Question 20(b): Have you adjusted your electricity usage as a result of Time-of-Use prices?</u>

				Not
	Always	Sometimes	Never	Applicable
Set thermostat low/high when not at				
home in winter/summer	2296	340	146	163
Set thermostat low/high at night in				
winter/summer	2237	379	111	211
Use cold water for laundry	1797	993	124	40
Hang laundry to dry	827	1481	545	90
Use timers on indoor/outdoor lights	969	804	791	347
Use dimmers on indoor/outdoor lights	590	1027	828	439
Turn off lights when not in use	2530	414	3	5
Use a fan or open windows instead of				
using air-conditioning	1467	1303	112	71
Run dishwasher only when full	2233	107	9	611
Use timer on pool pump	295	50	176	2384
Maintain CAC	1392	276	65	1193
Insulate water heater pipes	1401	515	670	342
Air sealing/weatherization	1204	873	412	426

<u>Question 21: What conservation actions have you undertaken that are NOT</u> <u>specifically related to any program/initiative identified in the previous questions?</u>

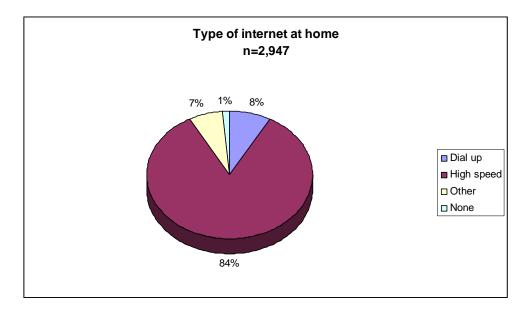

Question 22: How many people live in your household?

Question 24: What type of Internet connection do you have at home?¹

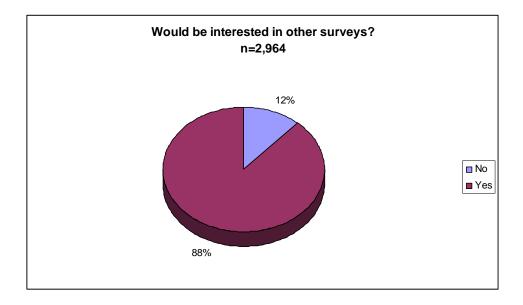

¹ Note that this was an online survey and customers were sent the survey link by an e-mail, therefore the respondents are more likely to have high-speed internet connection in this case.

Question 25(a): Which of the following social media tool(s) do you use?

Facebook	1267
Twitter	103
Linked-In	167
Other	153
None	1553

Question 26: Would you be interested in participating in other conservation surveys in future?

Question 27: How would you like to be contacted for conservation	<u>ı related</u>
information in future?	

Phone	123
E-mail	2611
Facebook	50
Twitter	5
Linked-In	11
Do not contact	281

2011 Customer Equipment & Conservation Survey Results

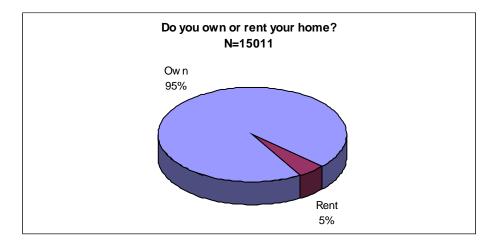

2011 Customer Equipment and Conservation Survey

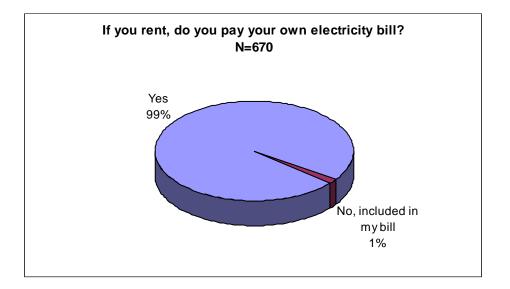

Total number of surveys sent out: ~125,000 Total number of unique responses: 15,180 Response rate: ~12%

Question 1: In what type of building do you live?

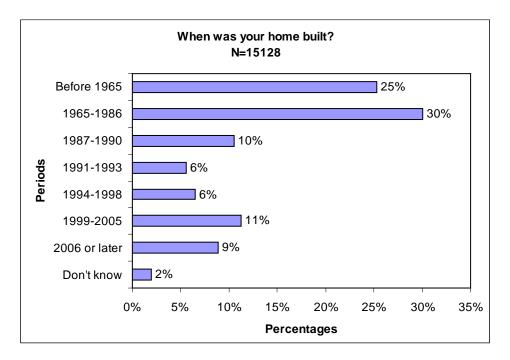

Question 2 (a): Do you own or rent your home?

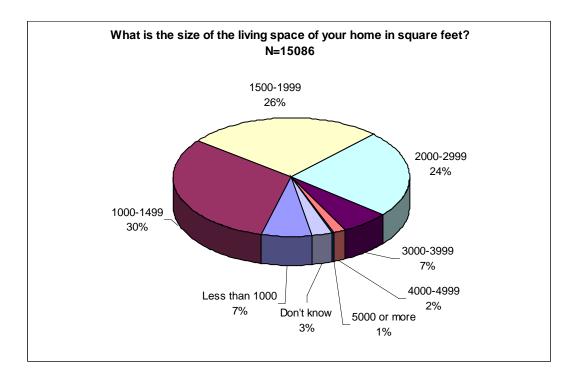

Question 2 (b): If you rent, do you pay your own electricity bill?

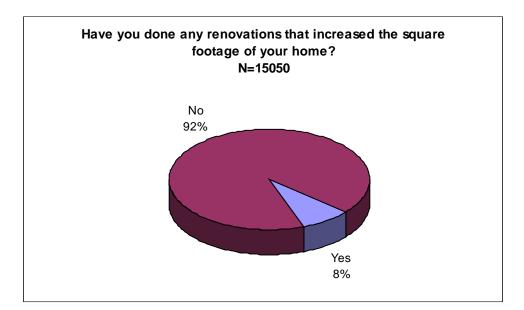

Question 3: When was your home built?

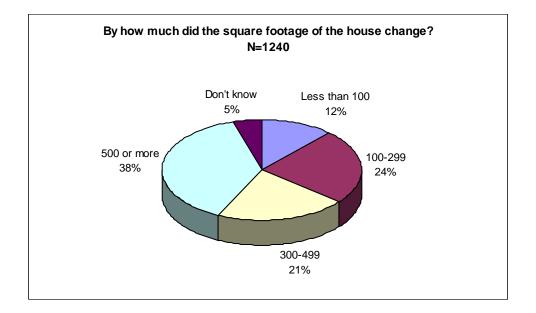

Question 4 (a): What is the size of the living space of your home in square feet? DO NOT include your garage, attic, or unfinished basement.

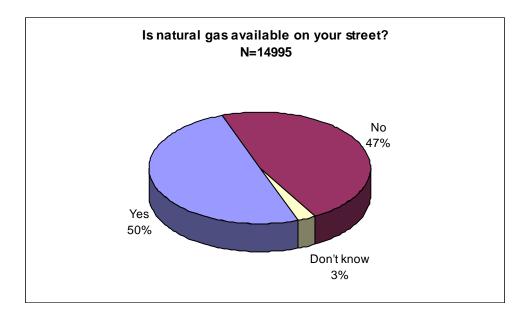

Question 4 (b): Within the last five years, have you completed any renovations that increased the square footage of your home?

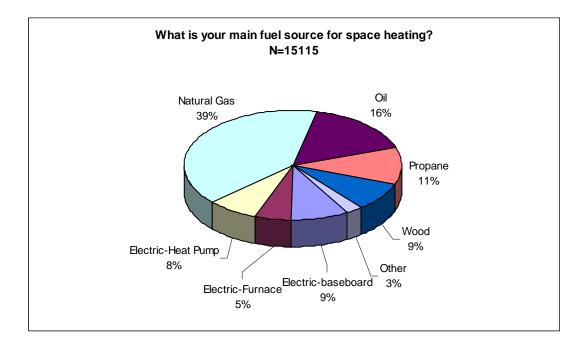

Question 4 (c): If yes, by how much did the square footage of the house change because of the renovation?

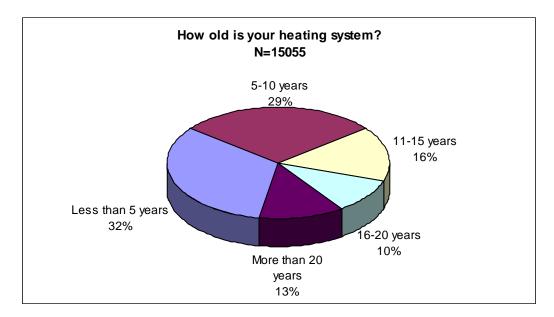

Question 5: Is natural gas available on your street?

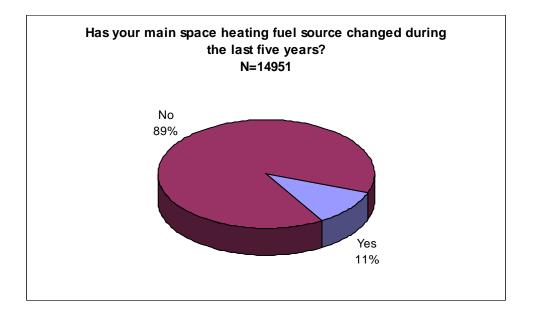

Question 6(a): What is your main fuel source for space heating?

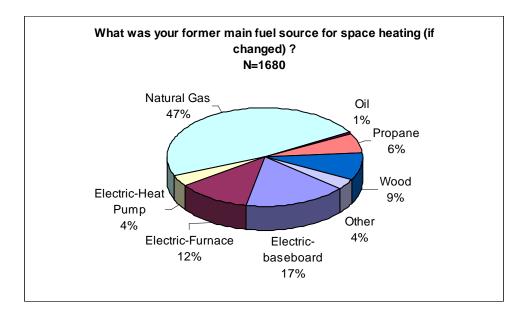

Question 6 (b): How old is your heating system?

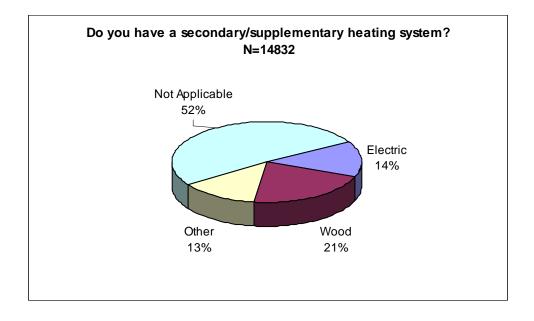

Question 6 (c): In your current home, has your main space heating fuel source changed during the last five years?

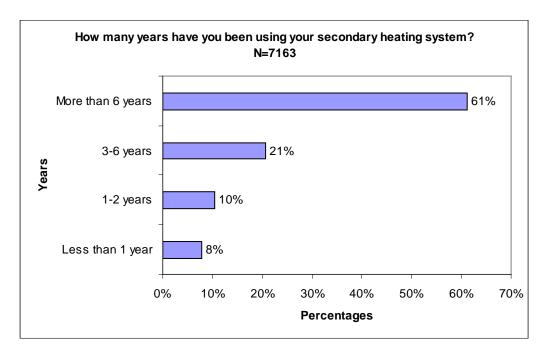

Question 6 (d-ii): If yes, what was your former main fuel source for space heating?

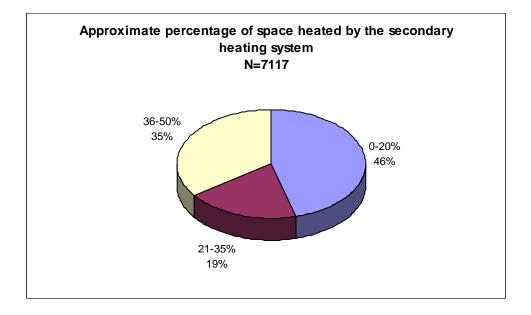

Question 7(a): In addition to you main source of space heating, do you have a secondary/supplementary heating system?

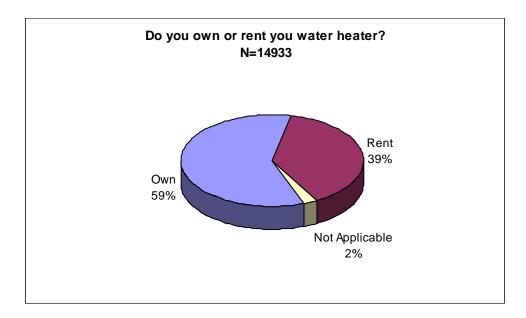

Question 7 (b-i): If yes, how many years have you been using your secondary heating system?

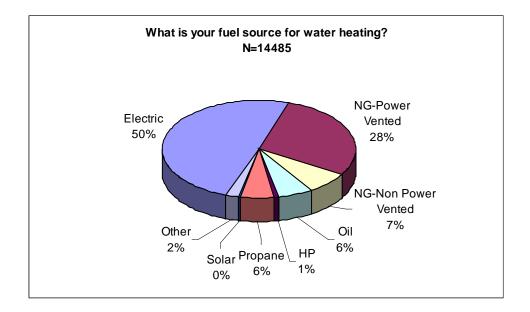

Question 7 (b-ii): Please indicate the approximate percentage of space that is heated by your secondary heating system?

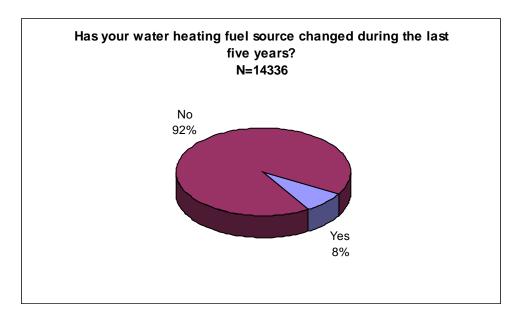

Question 8(a): Do you own or rent your water heater?

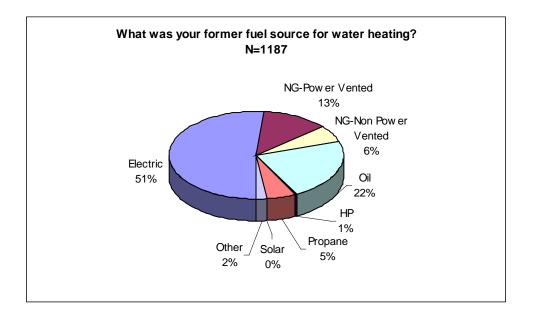

Question 8(b): What is your fuel source for water heating?

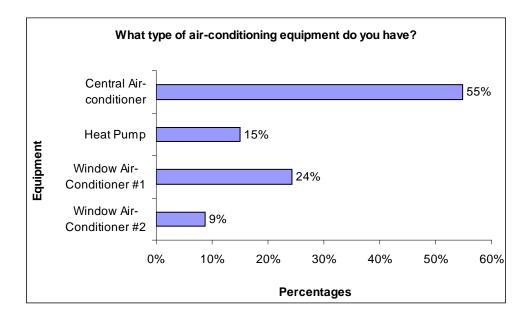

Question 8(c): In your current home, has your water heating fuel source changed during the last five years?

Question 8 (d-ii): If yes, what was your former fuel source for water heating?

Question 9: What type of air-conditioning equipment do you have and how old is it? (Check all that apply)

	Age of Air-Conditioning Equipment (Years)						
Equipment	Less than 5	5 to 10	11 to 15	More than 15	Do not have	Total	
Central Air-conditioner	2344	2575	1380	942	5953	13194

25-26°C (77-79°F)	17%	11%	12%	
More than 26°C (79°F)	15%	5%	4%	
Total Sample Size	11099	11373	11639	

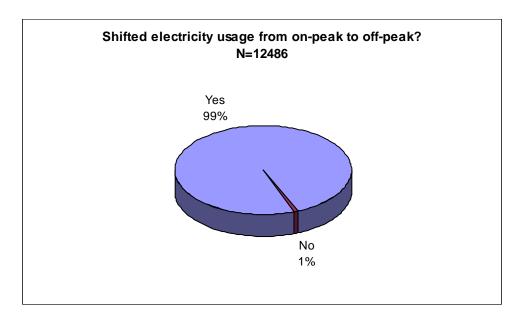

Question 15(a): Please indicate whether someone is usually at home (more than 50% of the time) during the following time periods. N=15180 (Total participants):

		Weekends			
Season	7 am to 11 am	11 am to 5 pm	5 pm to 7 pm	7 pm to 7 am	Any time
Winter	66%	61%	80%	85%	89%
Summer	67%	62%	80%	85%	88%

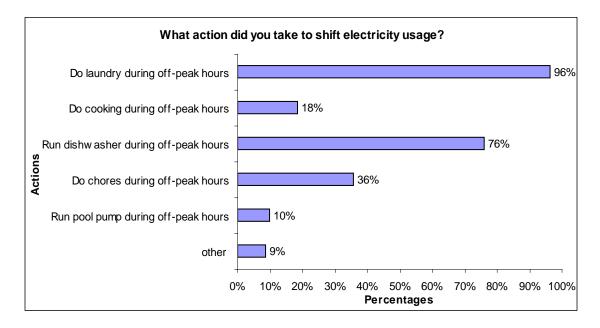

<u>Question 16(a): Have you adjusted your electricity usage as a result of Time-of-Use</u> <u>prices?</u>

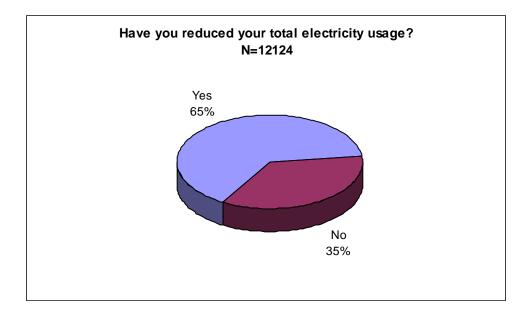

Question 16 (b-i-i): Have you shifted electricity usage from on-peak to off-peak periods?

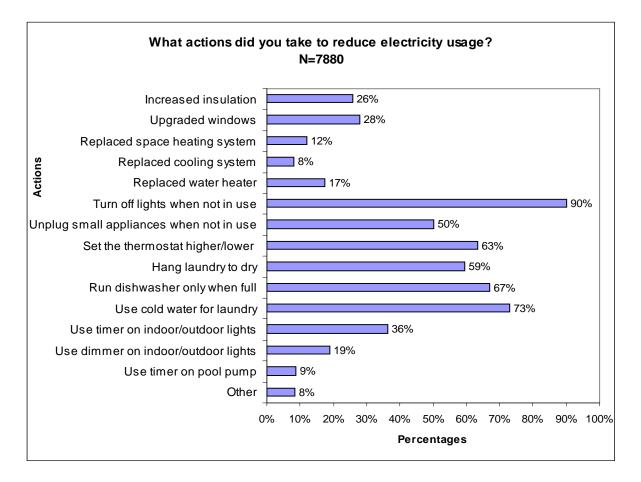

Question 16 (b-i-ii): If yes, what actions did you take to shift electricity usage? (Check all that apply)

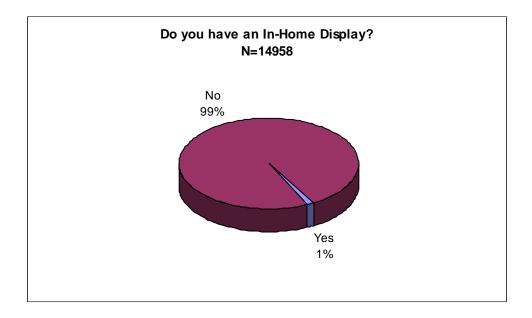

Question 16 (b-ii-i). Have you reduced your total electricity usage?

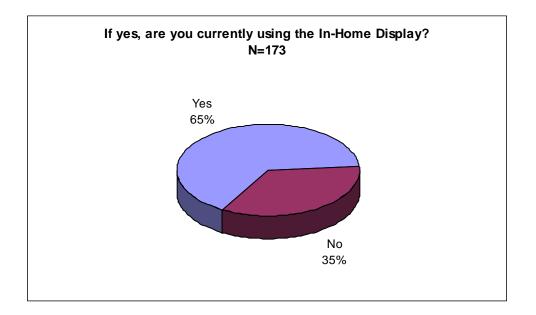

Question 16 (b-ii-ii): If yes, what actions did you take to reduce electricity usage? (Check all that apply).

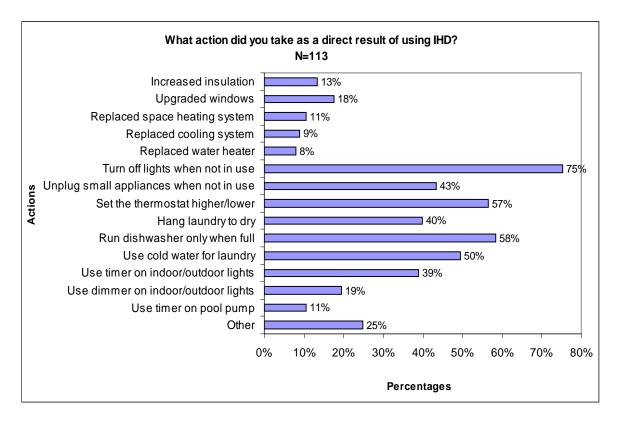

Question 17(a): Do you have an In-Home Display (PowerCost Monitor)?

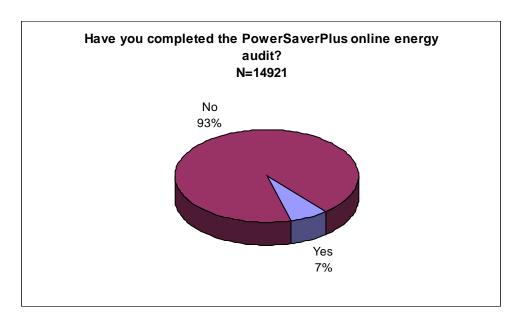

Question 17 (b-ii): If yes, are you currently using the In-Home Display?

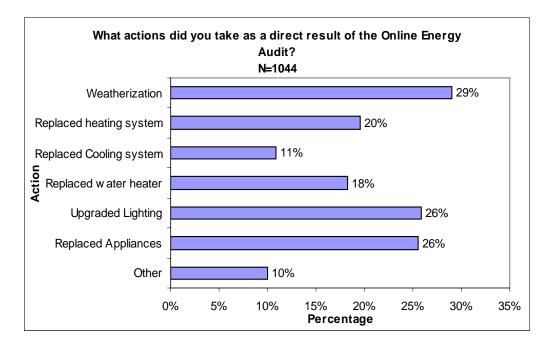

<u>Question 17 (b-iii): Please list any actions you have taken as a direct result of using the In-Home Display. (Check all that apply).</u>

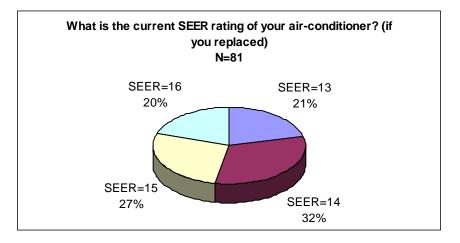

Question 18 (a): Have you completed the PowerSaverPlus online energy audit?

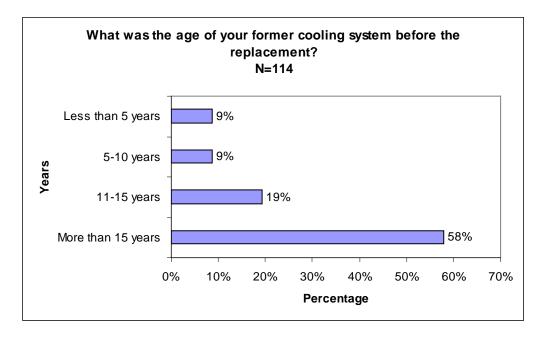

Question 18(b-i): If yes, please indicate what actions you took as a direct result of the Online Energy Audit.

Question 18 (b-ii). If you replaced your cooling system as a result of the Online Energy Audit, what is the current Seasonal Energy Efficiency (SEER) rating?

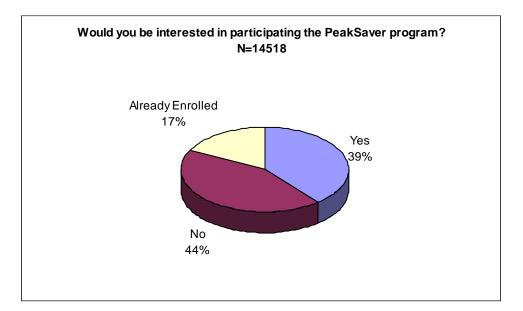

What is the age (in years) of your former cooling system before the replacement?

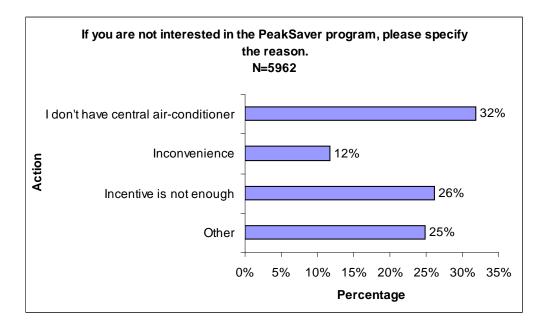

Question 18 (b-iii): Please indicate any appliances you replaced as a result of the Online Energy Audit (Check all that apply).

Appliance	Total Number Replaced
Refrigerator	181
Freezer	91
Clothes Washer	130
Clothes Dryer	122
Dishwasher	86
Range/Oven	120
Other	38

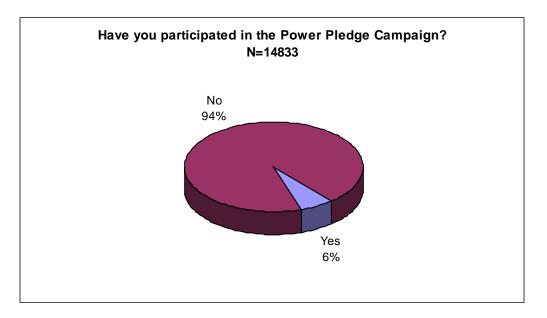

<u>Question 19(a): If you are not currently enrolled in the PeakSaver program, would</u> <u>you be interested in participating?</u>

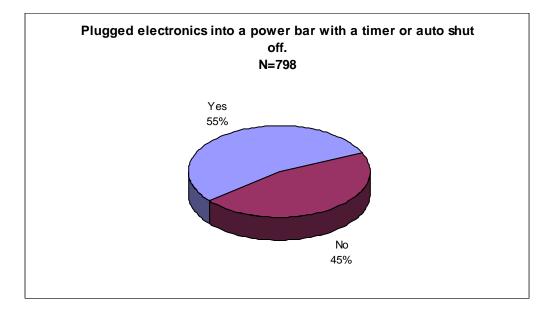

Question 19(b): If you are not interested, please specify the reason

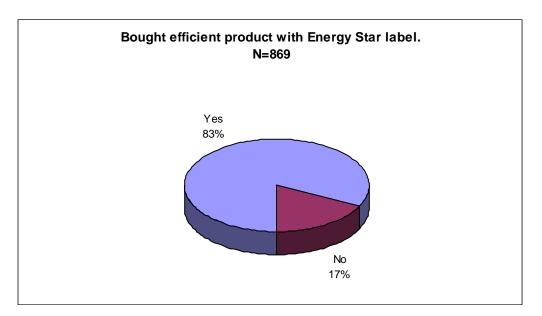

Question 20(a): Have you participated in the Power Pledge Campaign?

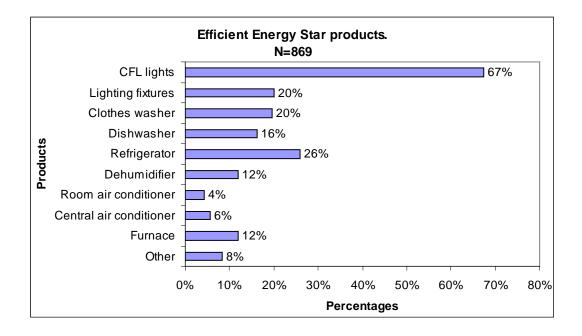

Question 20(b-i): As a result of the Power Pledge Campaign, did you plug electronics into a power bar with a timer or auto shut off?

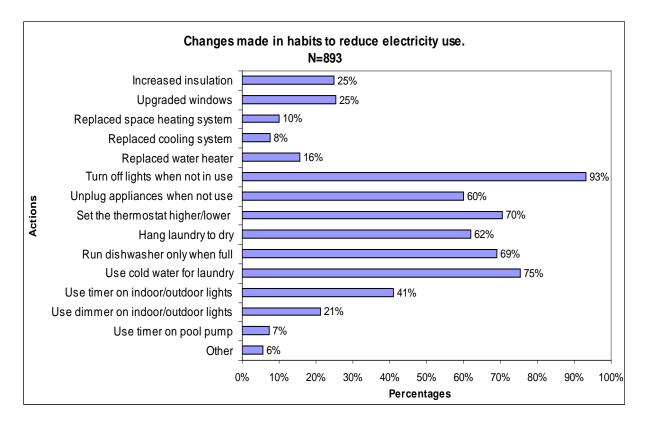

Question 20(b-ii): As a result of the Power Pledge Campaign, did you buy any efficient products with an Energy Star label and what products did you buy?

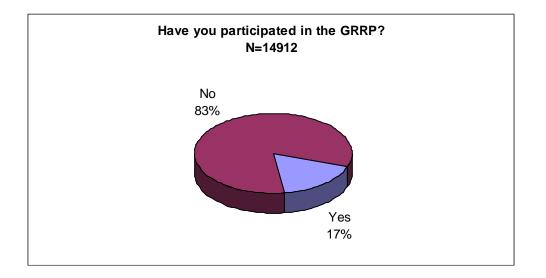

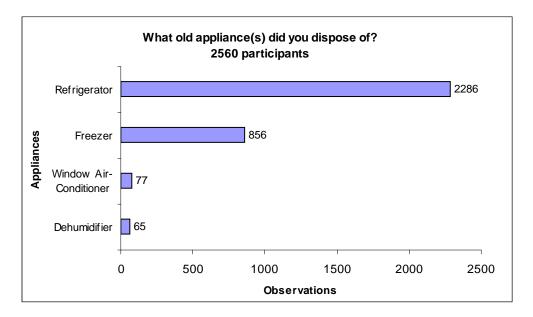

<u>Question 20(b-iii): Please list any changes you made in your habits to reduce your electricity use as a direct result of the Power Pledge Campaign. (Check all that apply)</u>

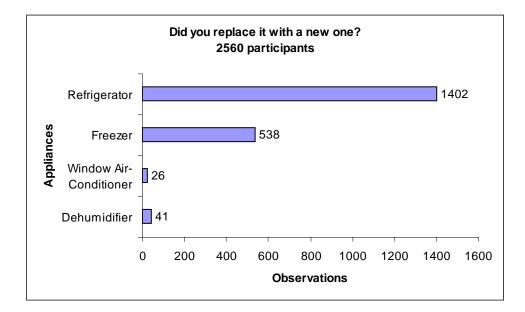

<u>Question 21(a): Have you participated in the Great Refrigerator Round-up</u> <u>Program?</u>

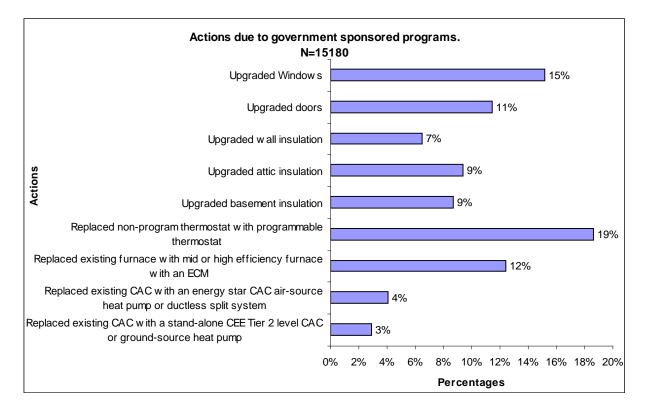

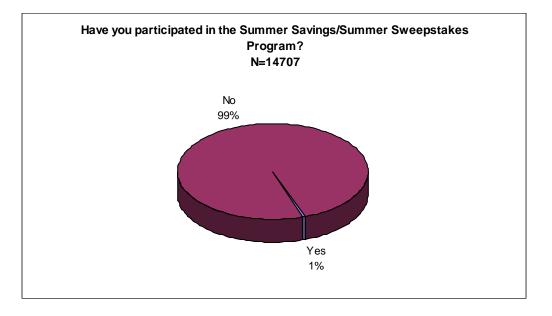

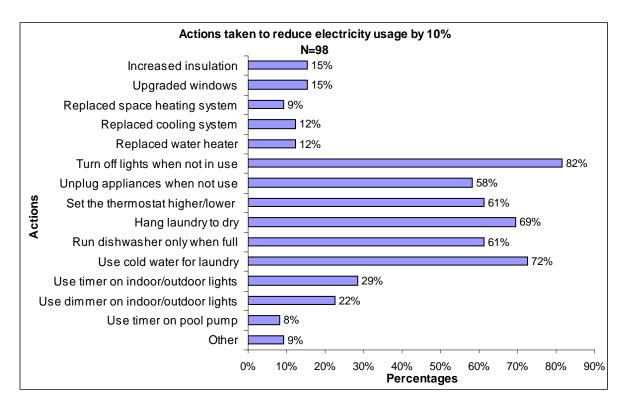

Question 22: Have you taken any of the following actions due to government sponsored programs such as the Cool Savings Rebate, the Eco-Energy Retrofit program, Ontario Home Energy Savings program, or the Home Renovation Tax Credit program?

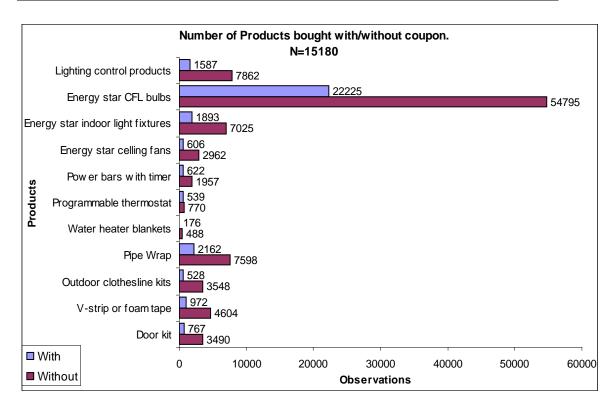

Question 23(a): Have you participated in the Summer Savings/Summer Sweepstakes <u>Program?</u>

Question 23(b): If yes, please list all the actions you took as part of the Summer Savings/Summer Sweepstakes Program in order to reduce you electricity usage by 10%. (Check all that apply)

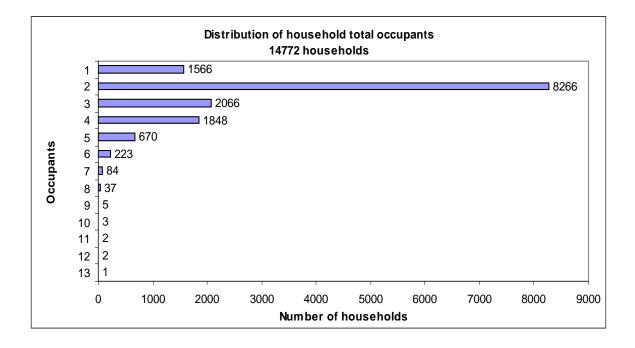

Question 24: Please indicate the number of products you purchased, within the last two years, with and without coupons/rebates (excluding manufacturer rebates).

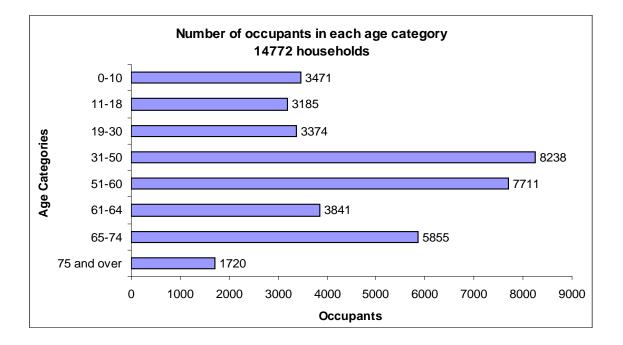

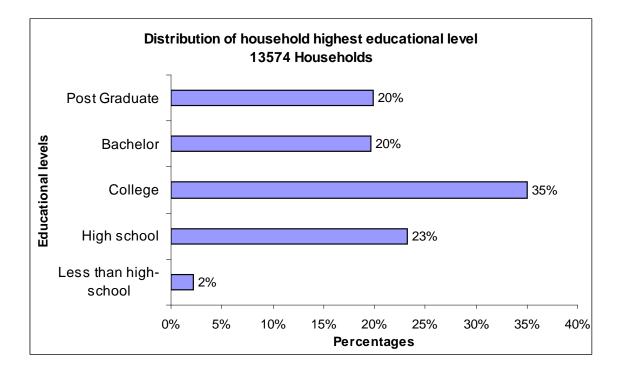

<u>Question 25: What conservation actions have you undertaken that are NOT</u> <u>specifically related to any program/initiative identified in the previous questions?</u>

Actions	Always	Sometimes	Never	N/A	Total Sample
Set thermostat lower/higher at night	66%	14%	8%	8%	14575
Set thermostat lower/higher at home	66%	15%	6%	8%	14543
Use cold water for laundry	57%	31%	6%	3%	14596
Hang laundry outside or on a rack	28%	45%	17%	6%	14459
Use timers on indoor/outdoor lights	28%	22%	24%	18%	14018
Use dimmers on indoor/outdoor lights	16%	27%	25%	22%	13791
Turn off lights when not in use	83%	13%	0%	1%	14684
Use a fan or open windows instead of AC	48%	40%	4%	4%	14572
Run dishwasher only when full	70%	4%	0%	20%	14504
Use timer on pool pump	8%	1%	5%	75%	13587
Maintain Central Air Conditioner	44%	8%	2%	40%	14245

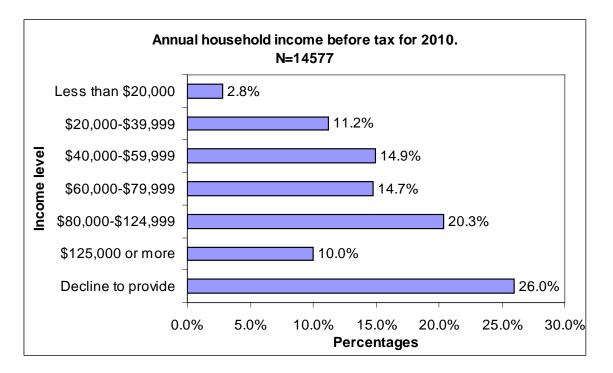

<u>Question 26 (a): Please complete the following table indicating the age distribution</u> and education levels for the residents in your home.

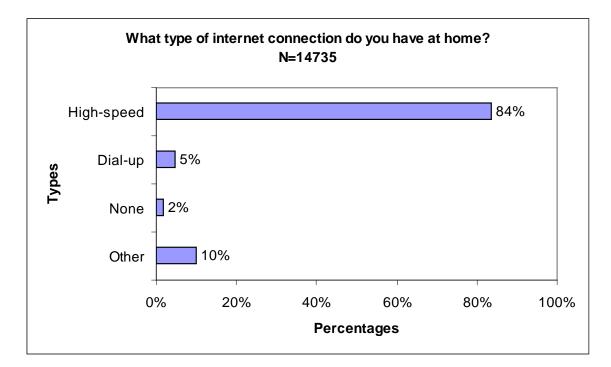

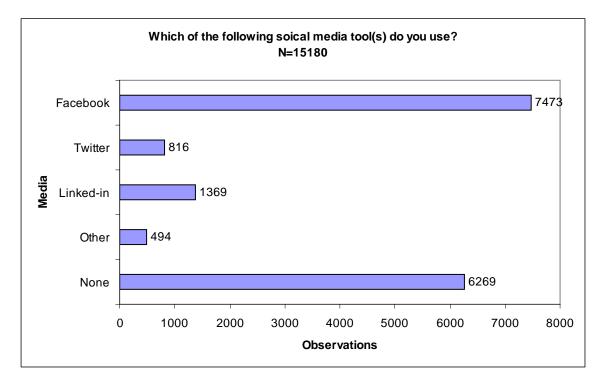

Question 27: What was your annual household income before taxes for 2010?

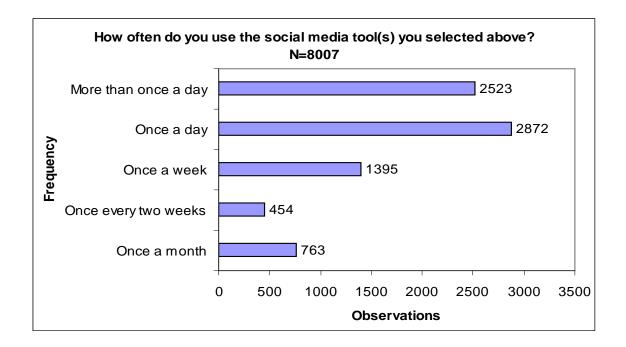

Question 28: What type of internet connection do you have at home?

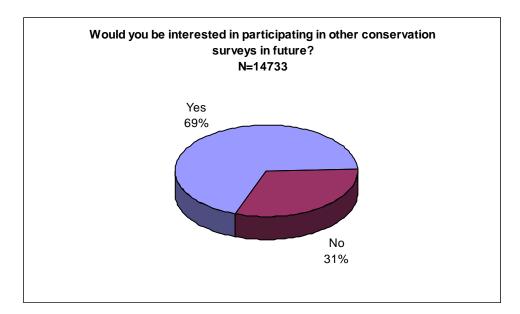

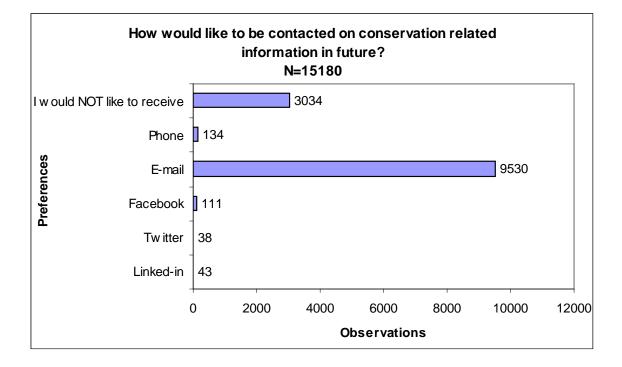

Question 29 (b): How often do you use the social media tool(s) you selected above?

Question 30: Would you be interested in participating in other conservation surveys <u>in future?</u>

Question 31: How would you like to be contacted on conservation related information in future? (Choose all that apply)

Attachment 12:

2012 Customer Equipment & Conservation Survey Results (Long Version)

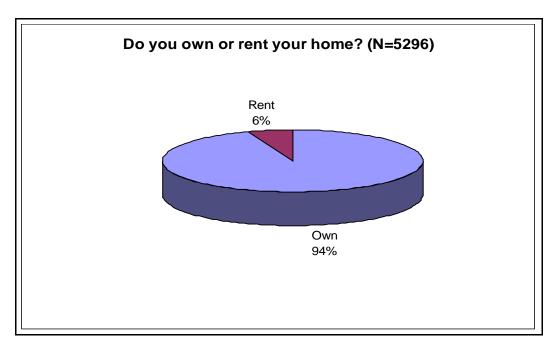

2012 Customer Equipment and Conservation Survey Long Version Survey to New Respondents

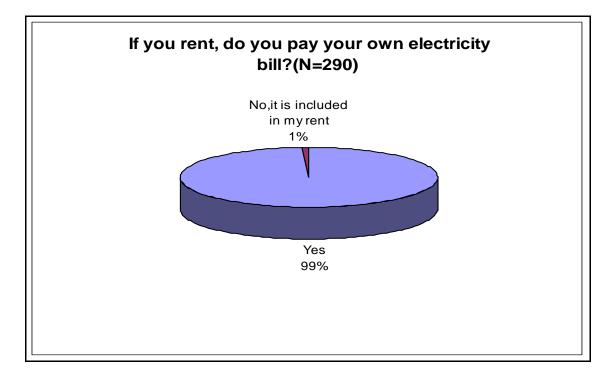

Total number of surveys sent out: *83,500* Total number of unique responses: *5,296* Response rate: *6.4%*

Question 1: In what type of building do you live?

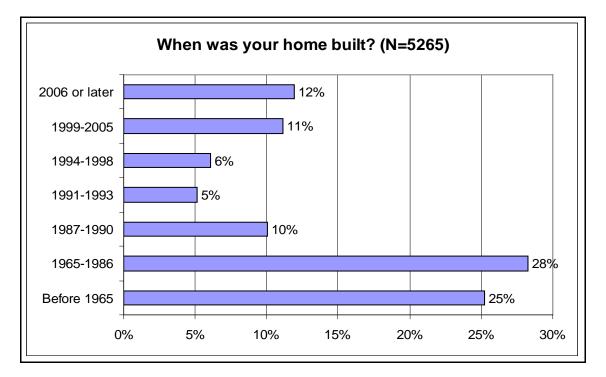

Question 2 (a): Do you own or rent your home?

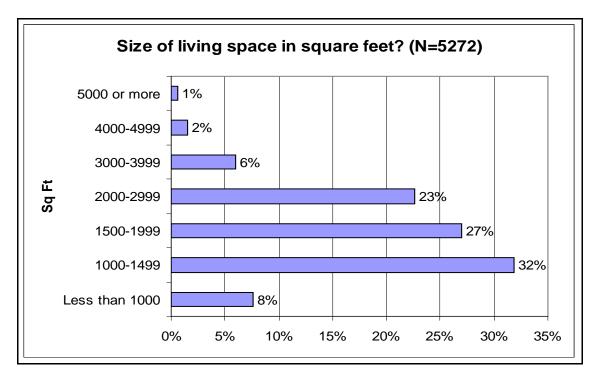

Question 2 (b): If you rent, do you pay your own electricity bill?

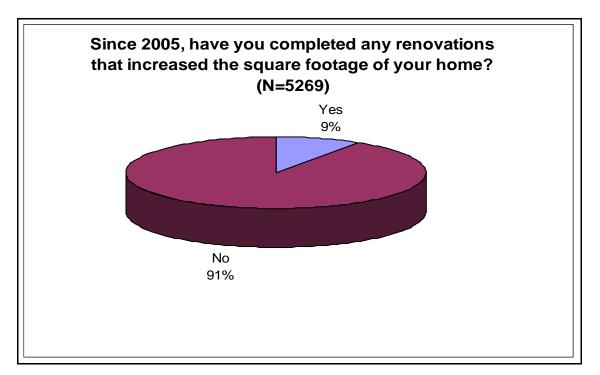

Question 3: When was your home built?

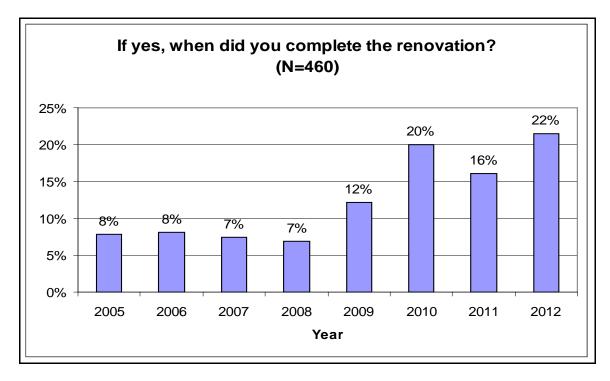

Question 4 (a): what is the size of the living space of your home in square feet without including your garage, attic or unfinished basement?

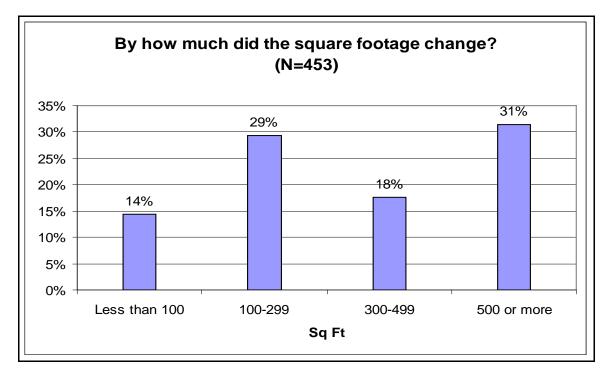

Question 4 (b): Since 2005, have you completed any renovations that increased the square footage of your home?

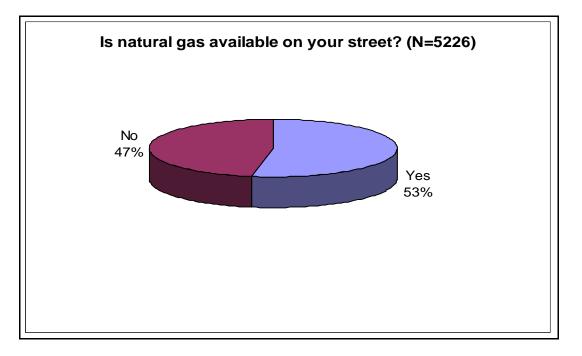

Question 4(c.i): If yes, when did you complete the renovation?

Question 4 (c.ii): If yes, by how much did the square footage of the house change because of the renovation?

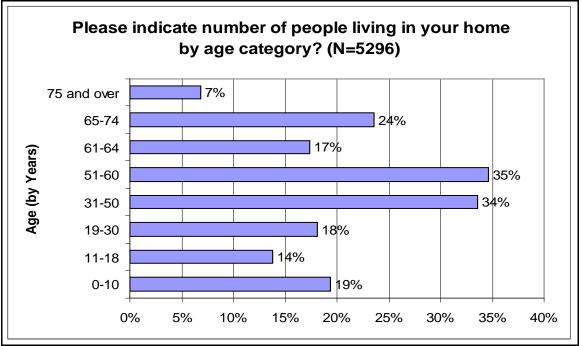

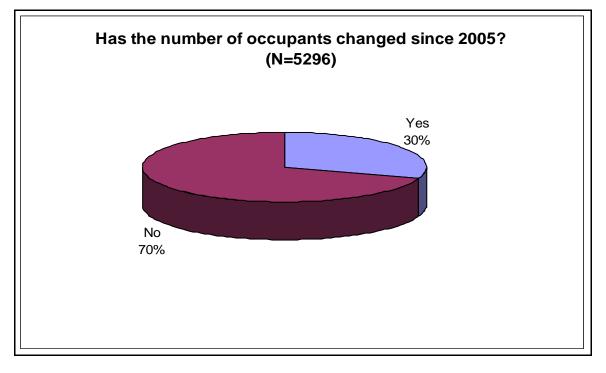

Question 5: Is natural gas available on your street?

Question 6 (a): Please indicate the number of people living in your home by age category?

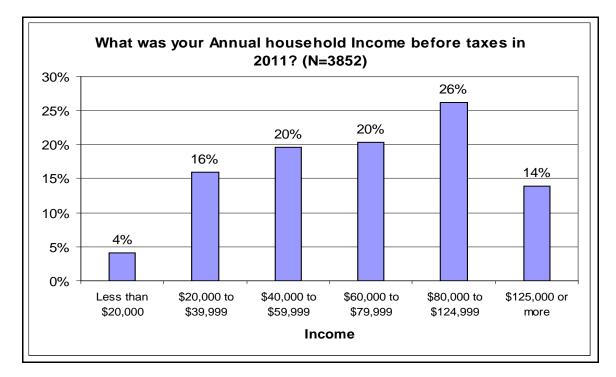

Note: Percentages represent total proportion of households with at least one person in the indicated age category.

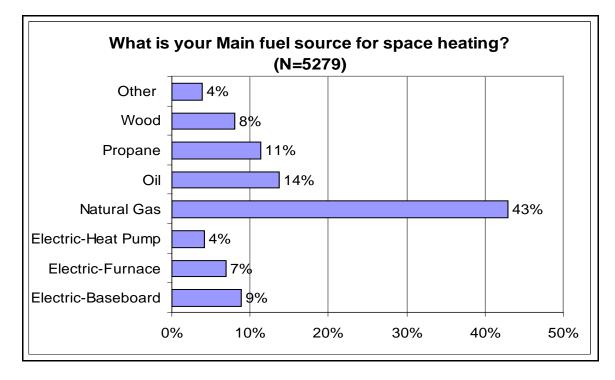

Question 6(b): The number of people living in your home can have a direct impact on your electricity usage. Has the number of occupants living in your home changed since 2005?

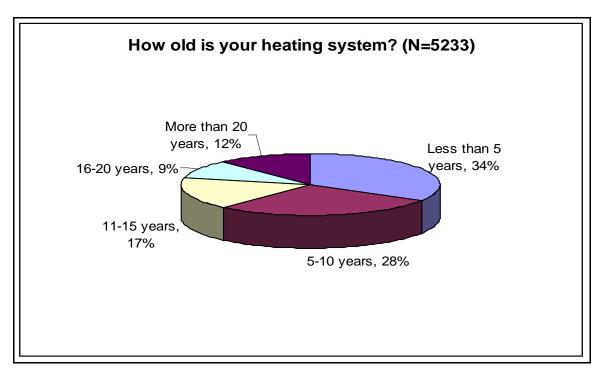

Question 7: What was your annual household Income before taxes for 2011?

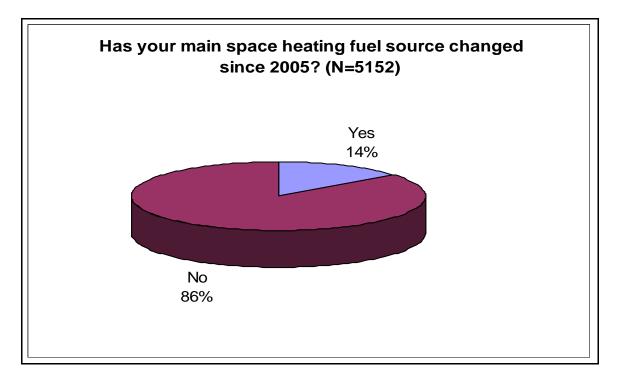

Question 8(a): What is your Main fuel source for space heating?

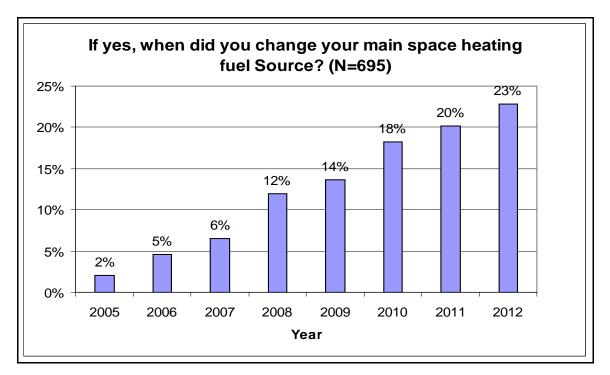

Question 8 (b): How old is your heating system?

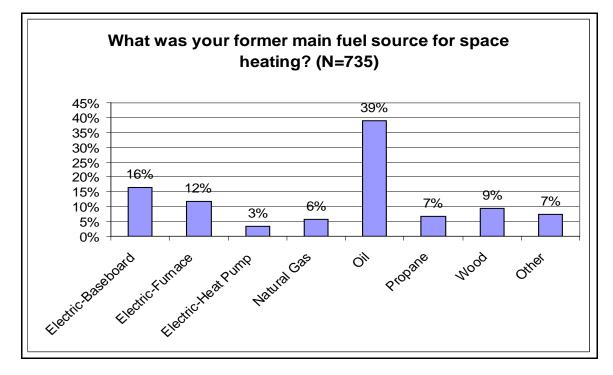

Question 8(c): In your current home, has your main space heating fuel source changed since 2005?

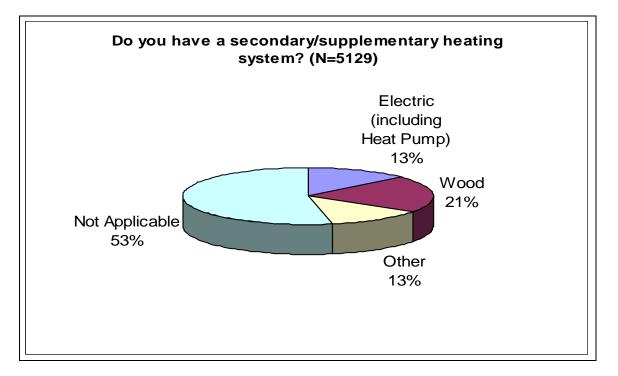

Question 8(d.i): If yes, when did you change your main space heating fuel Source?

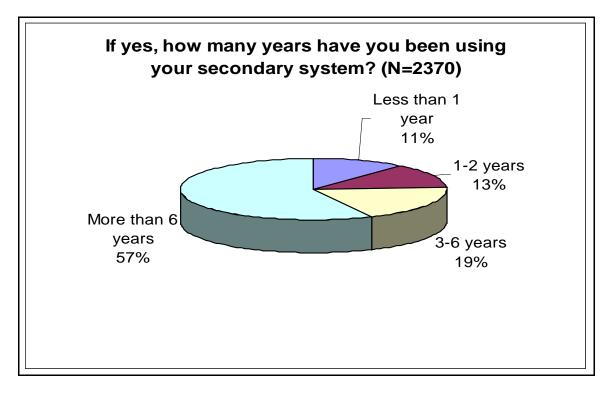

Question 8(d.i): What was your former main fuel source for space heating?

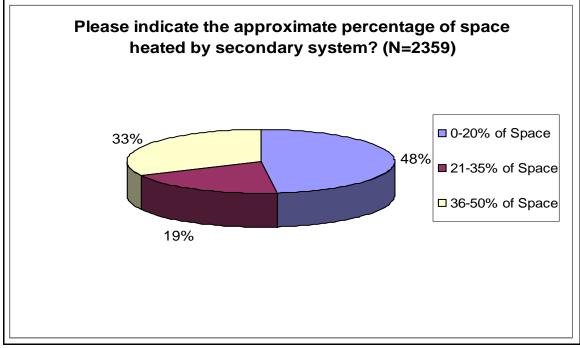

Question 9(a): In addition to your main source of space heating, do you have a secondary/supplementary heating system?

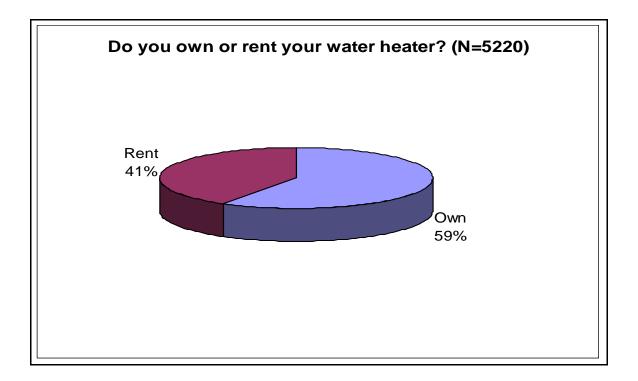

Question 9(b.i): If yes, how many years have you been using your secondary system?

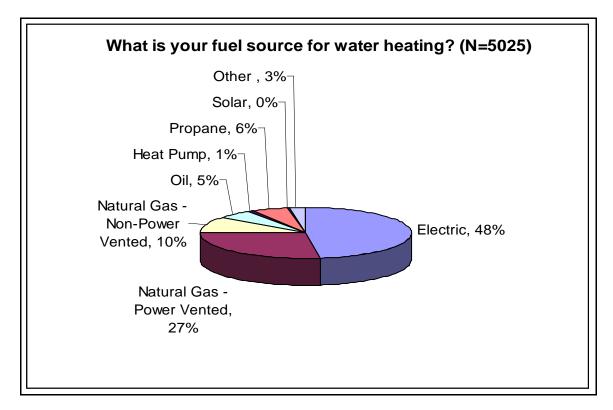

Question 9(b.ii): Please indicate the approximate percentage of space heated by secondary system.

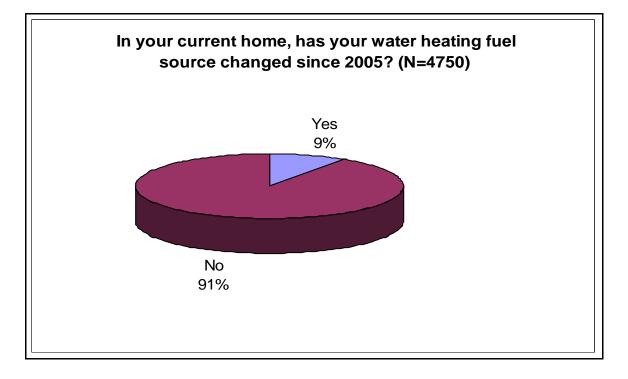

Question 10(a): Do you own or rent your water heater?

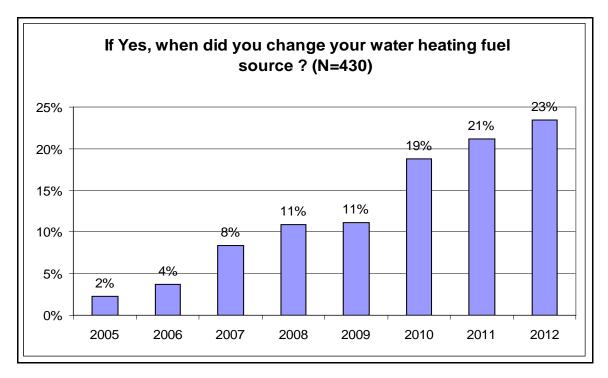

Question 10(b): What is your fuel source for water heating?

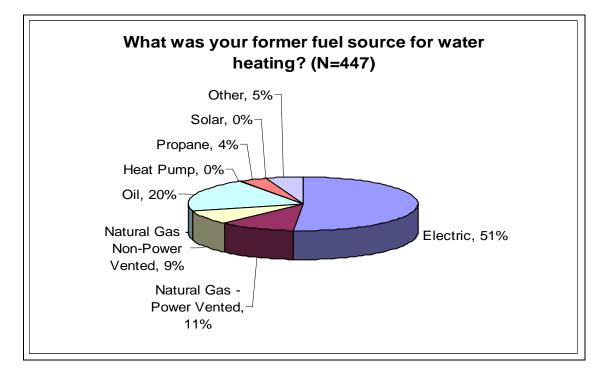

Question 10(c): In your current home, has your water heating fuel source changed since 2005?

Question 10 (d): If yes, when did you make the change?

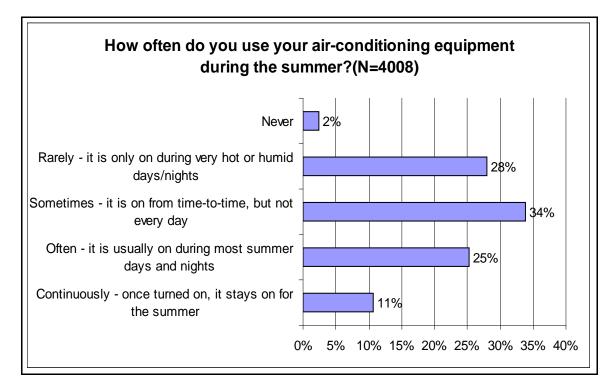

Question 10 (d.ii): What was your former fuel source for water heating?

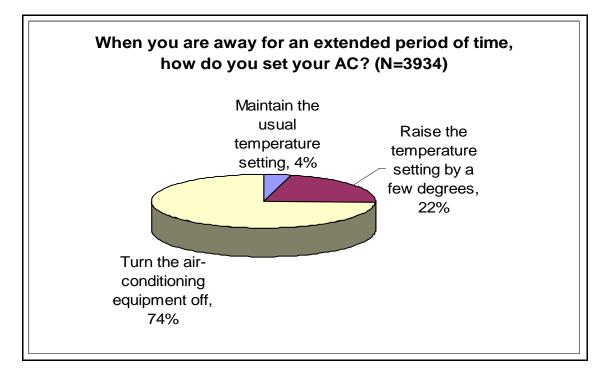

Question 11(a): What type of air-conditioning equipment do you have and how old is it?

	Age (In Years)							
Air-Conditioning Equipment	Less than 5	5 to 10	11 to 15	More than 15	Do not have			
Central Air-Conditioner	23%	19%	11%	9%	38%			
Heat Pump	9%	3%	2%	4%	83%			
Window Air-Conditioner #1	21%	9%	2%	2%	68%			
Window Air-Conditioner #2	9%	3%	1%	0%	87%			

Question 11(b): How often do you use your air-conditioning equipment during the summer?

Question 11(c): When you are away for an extended period of time, how do you set your air conditioner (AC)?

Question 12: How is the circulating fan in your current heating and cooling system normally set to operate?

Season	Automatic	Continuous	Don't know	Not Applicable	Sample Size
Winter	65%	12%	4%	18%	5223
Summer	48%	15%	5%	32%	5161

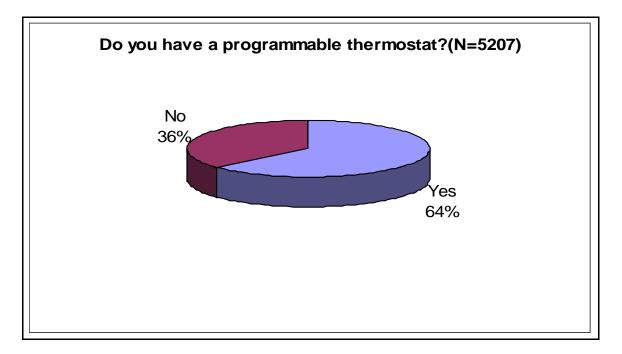

Question 13(a): On a typical summer day, to what temperature do you normally set your thermostat?

Typical Temperature Setting in Summer	When you are at home?	When you are away?	At Night/When you are sleeping?
Not Applicable	29%	40%	30%
Less than 15°C	6%	8%	6%
15-17°C	3%	6%	6%
18-22°C	33%	11%	33%
23-26°C	28%	24%	23%
More than 26°C	1%	11%	2%

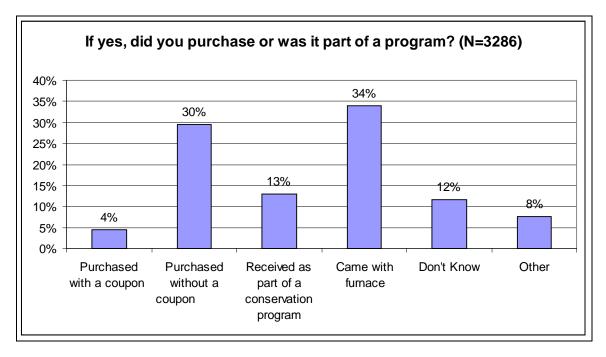

Question 13(b): On a typical winter day, to what temperature do you normally set your thermostat?

Typical Temperature Setting in Winter	When you are at home?	When you are away?	At Night/When you are sleeping?
Not Applicable	3%	5%	4%
Less than 15°C	1%	12%	5%
15-17°C	6%	38%	32%
18-22°C	83%	44%	57%
23-26°C	6%	1%	2%
More than 26°C	0%	0%	0%

Question 14(a): Do you have a programmable thermostat?

Question 15(a): In what year did you purchase each of your major appliances?

Year of Purchase of Major Appliances	Before 1993 (20 Years or Older)	Between 1993 and 1997 (15-19 years old)	Between 1998 and 2004 (8- 14 years old)	Between 2005 and 2010	2011	2012	Came with purchase/rental of home	Don't Know	Do Not Have*	Sample Size
Full Size Refrigerator #1	2%	4%	20%	42%	9%	9%	12%	2%	1%	5296
Full Size Refrigerator #2	2%	3%	8%	11%	2%	1%	2%	1%	69%	5296
Stand-Alone Freezer #1	9%	7%	16%	27%	4%	4%	2%	3%	27%	5296
Stand-Alone Freezer #2	1%	1%	2%	3%	1%	1%	1%	1%	91%	5296
Mini/Bar Fridge #1	1%	1%	5%	12%	3%	2%	1%	1%	75%	5296
Mini/Bar Fridge #2	0%	0%	0%	1%	0%	0%	0%	0%	98%	5296
Top Load Washing Machine	3%	4%	12%	16%	4%	4%	5%	1%	52%	5296
Front Load Washing machine	0%	0%	6%	30%	8%	5%	4%	0%	46%	5296
Dishwasher	2%	3%	14%	32%	7%	8%	11%	1%	22%	5296

*Note: Blank answers were considered to be "Do Not Have".

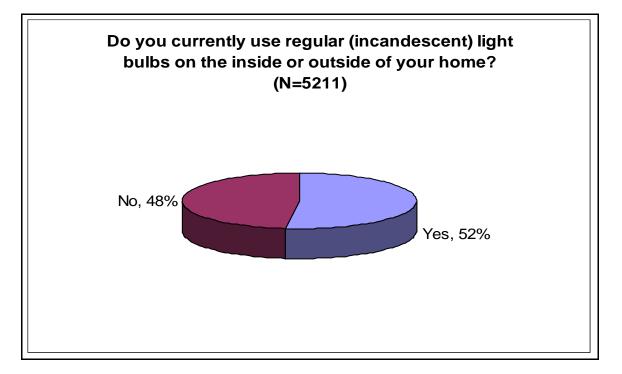

Electrical Equipment	None	1	2	More than 2	Sample Size
Laptop Computer (including tablets)	15%	48%	31%	21%	4387
Desktop Computer	27%	56%	13%	4%	4940
Conventional (CRT) Computer Monitor	85%	13%	1%	1%	4224
Flat Screen Computer Monitor	31%	51%	12%	5%	4779
Printer	42%	47%	8%	2%	5100
Fax Machine	91%	9%	0%	0%	4173
Copier Machine	91%	8%	1%	0%	4055
Printer/Fax/Copier Combo	34%	60%	5%	1%	4613
Conventional (CRT) Television	49%	34%	12%	4%	4306
LED/LCD Television	20%	42%	26%	13%	4908
Plasma Television	71%	24%	4%	1%	4111
Stereo or Home Entertainment System	26%	61%	11%	2%	4792
Game Console	52%	33%	10%	5%	4395
DVD Player/Recorder	10%	62%	21%	7%	4915
Digital Cable box	38%	36%	15%	11%	4581
Microwave Oven	3%	93%	4%	0%	5202
Whirlpool Bathtub	76%	23%	1%	0%	4370
Dehumidifier	42%	53%	5%	1%	4624
Electric Air Filter	81%	17%	1%	0%	4264
Pool Pump	83%	17%	0%	0%	4293
Hot Tub	86%	14%	0%	0%	4266

Question 15(b): How many of the following do you have?

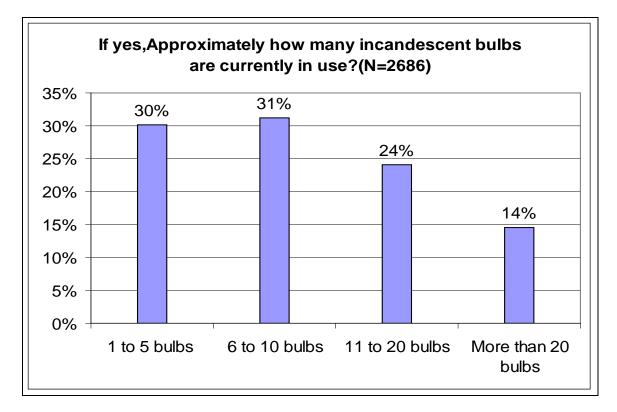

Fuel Source of Appliances	Range/Oven	Clothes Dryer	Pool Heater	Sauna
Natural Gas	12%	8%	2%	0%
Electricity	83%	87%	5%	4%
Propane	4%	2%	1%	0%
Other	0%	0%	2%	1%
Not Applicable	0%	4%	91%	96%

Question 15 (c): Provide information on the Fuel source of appliances?

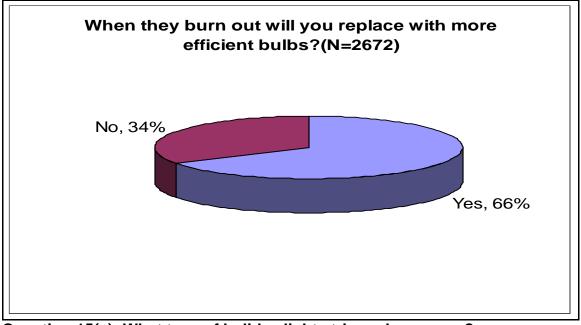

Question 15(d): Do you currently use regular (incandescent) light bulbs on the inside or outside of your home?

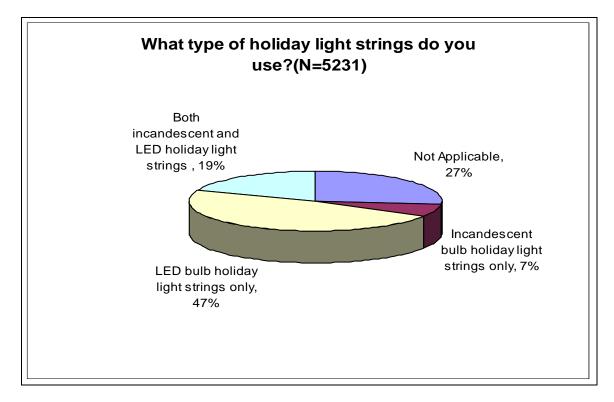

<u>Question 15(d.i): If yes, approximately how many incandescent bulbs are</u> <u>currently in use?</u>

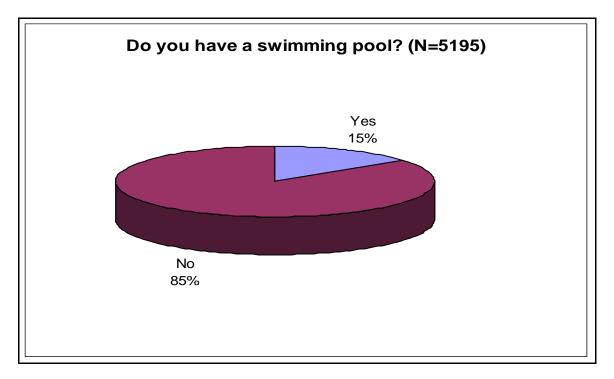

Question15 (d.ii): When these bulbs burn out do you plan on replacing them with more efficient lighting products such as LED Light Bulbs or Halogen Light Bulbs?

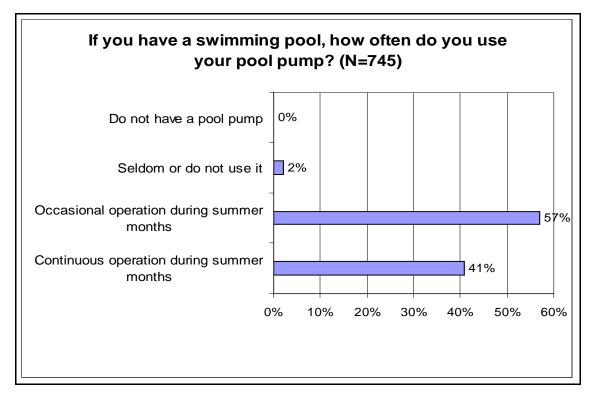

Question 15(e): What type of holiday light strings do you use?

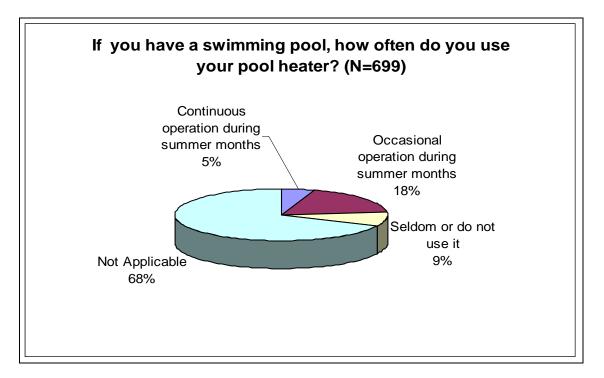

Question 16(a): Do you have a swimming pool?

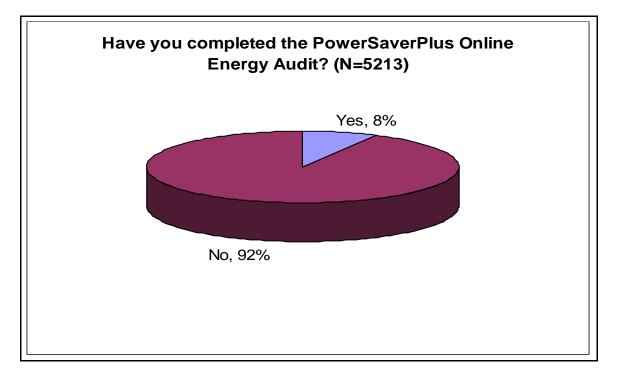

Question 16(b): If yes, how often do you use your pool pump?

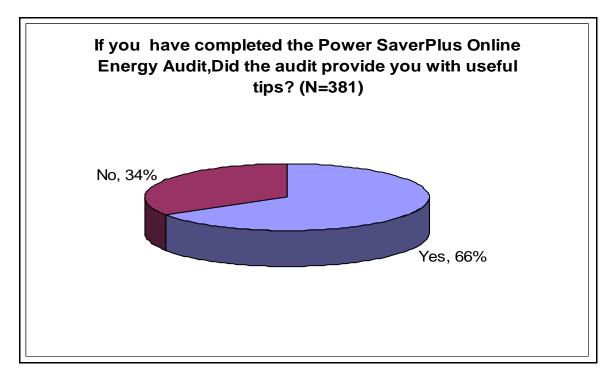

Question 16(c): If you have a pool heater, how often do you use it?

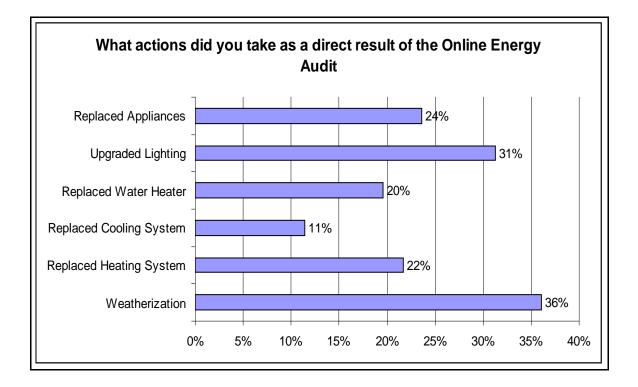

Question 17(a): Have you completed the PowerSaverPlus Online Energy Audit?

Question 17(b.i): If yes, did the audit provide you with useful tips for lowering your energy consumption?

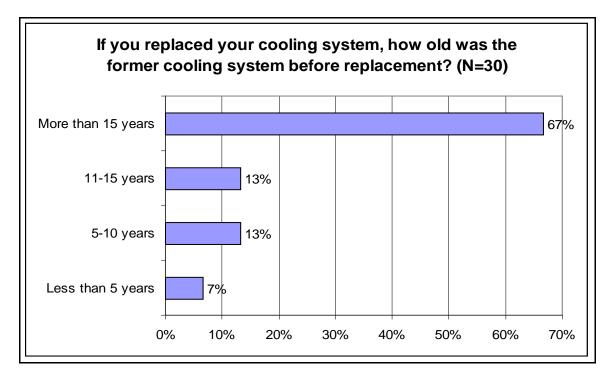

Question 17(b.ii): What actions did you take as a direct result of the Online Energy Audit?

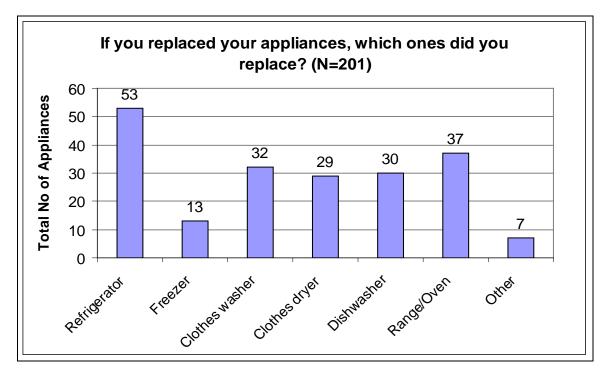

In which year were the actions taken as a result of Online Energy Audit?

Conservation Action	2007-2009	2010	2011	2012
Weatherization	22%	21%	16%	41%
Replaced Heating System	22%	19%	32%	27%
Replaced Cooling System	24%	17%	41%	17%
Replaced Water Heater	13%	15%	44%	27%
Upgraded Lighting	22%	25%	18%	34%
Replaced Appliances	26%	20%	21%	33%

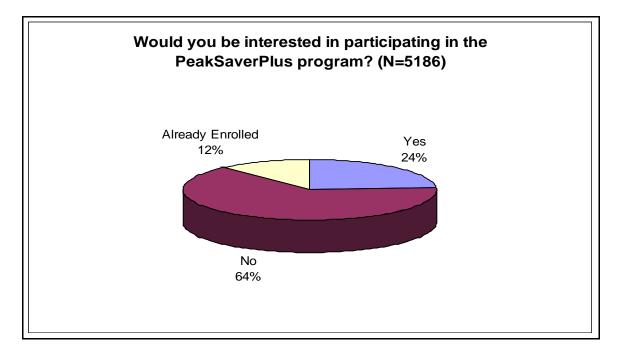

Question 17(b.iii): If you replaced your cooling system, how old was the former cooling system before replacement?

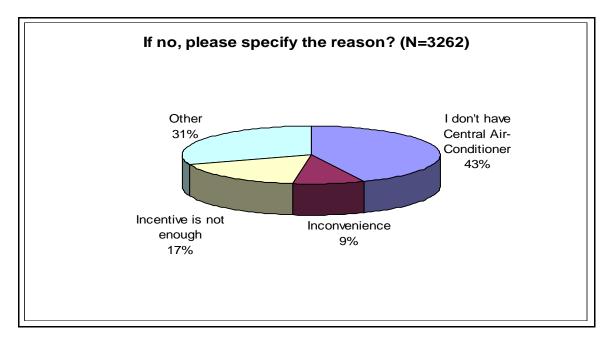

Question 18(a): Would you be interested in participating in the PeakSaverPlus program?

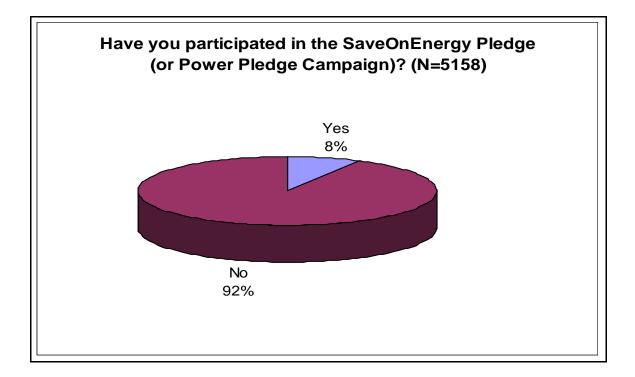

Question 18(b): If no, please specify the reason?

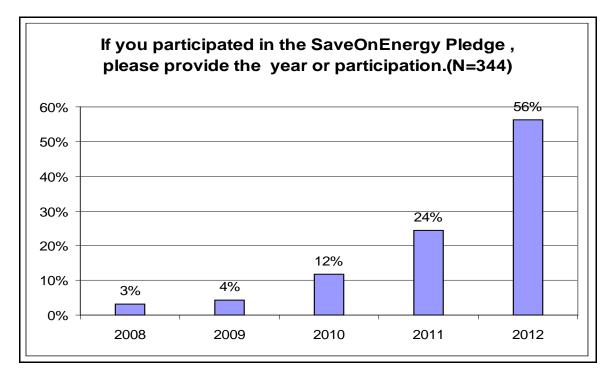

Common responses to "Other":

- Hardly use Air-Conditioning
- Prefer self controlling and do not wish to give up control
- Already have a Programmable thermostat

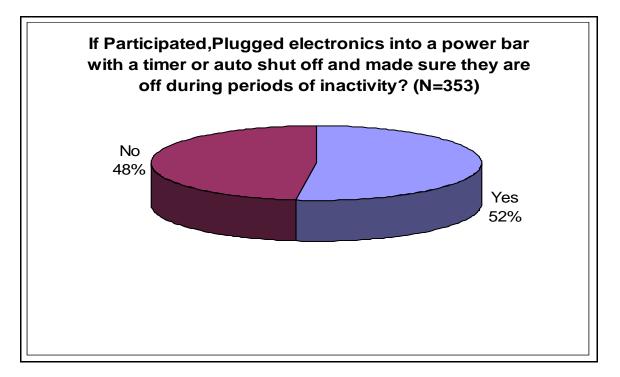

Question 19(a.i): Have you participated in the Save on Energy Pledge (or Power Pledge Campaign)?

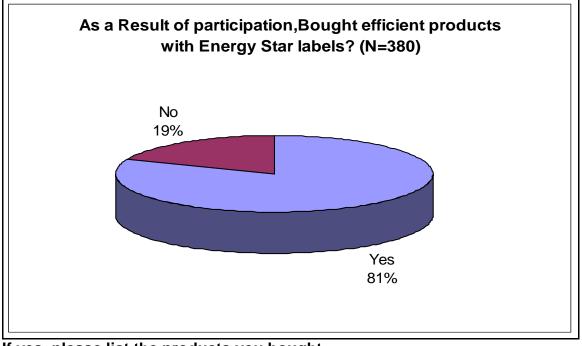

Question 19(a.ii): If yes, please provide the year or participation.

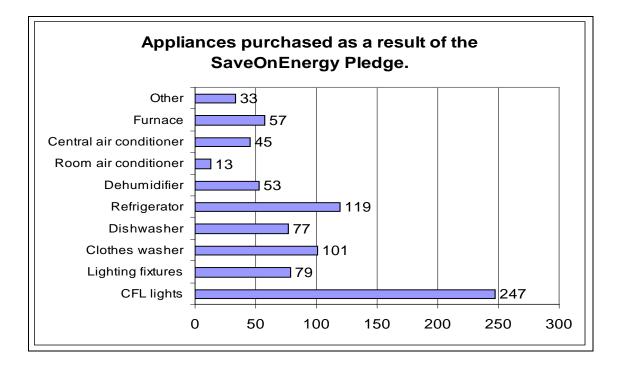

Question 19(b.i): If Participated, did you plug electronics into a power bar with a timer or auto shut off and make sure they are off during periods of inactivity?

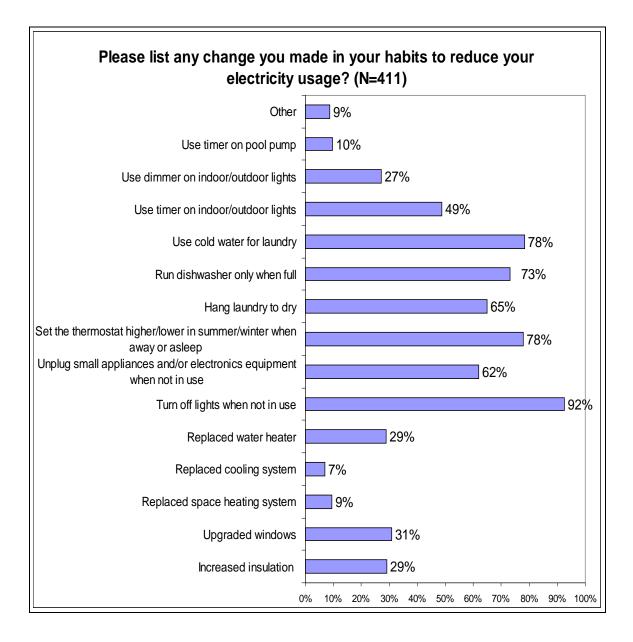

Question 19(b.ii): As a result of participation, did you buy efficient products with Energy Star labels?

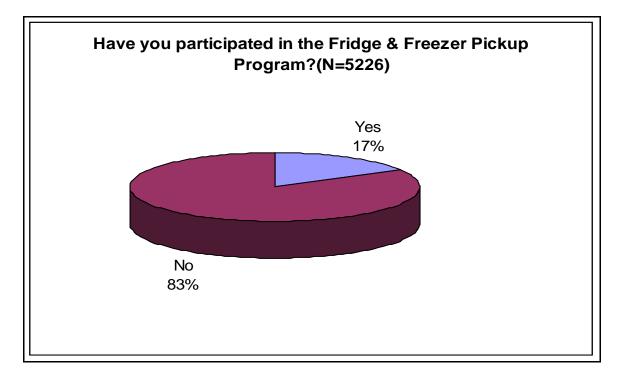

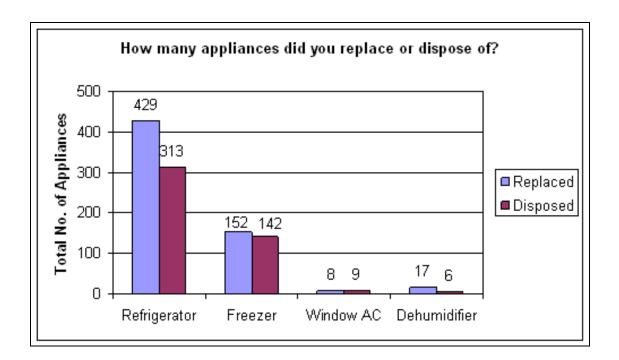

Question 19(b.iii): Please list any change you made in your habits due to the SaveOnEnergy Pledge to reduce your electricity usage.

Question 20(a): Have you participated in the Fridge & Freezer Pickup Program?

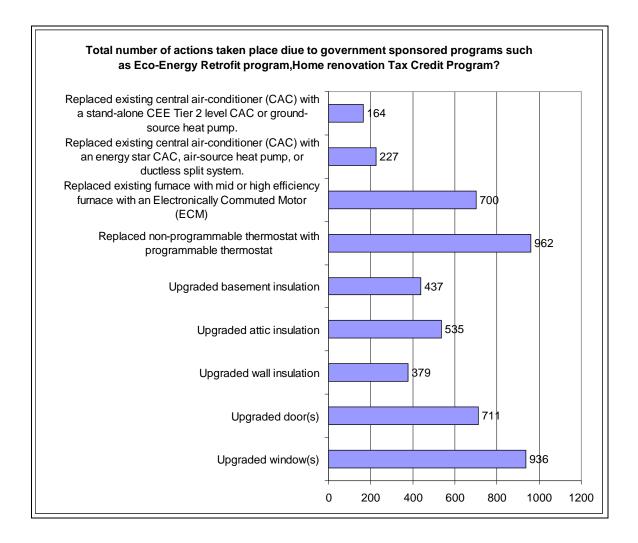

<u>Question 20(b): If yes, please indicate which appliances you disposed of</u> and whether you replaced the old appliances with a new one?

In which year were the actions taken as a result of the Fridge & Freezer Program?

Total Number of Appliances by Year	2006-2009	2010	2011	2012
Refrigerator	392	76	7	4
Freezer	180	30	4	1
Window Air-Conditioner	128	34	8	2
Dehumidifier	92	22	2	1

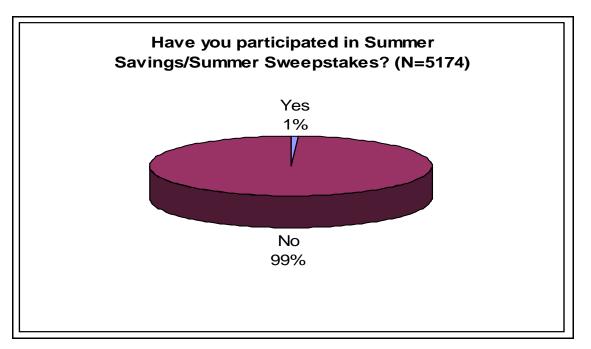

Question 21: Have you taken any actions due to government sponsored programs such as Eco-Energy Retrofit program, Ontario Energy Savings Program or the Home Renovation Tax Credit Program?

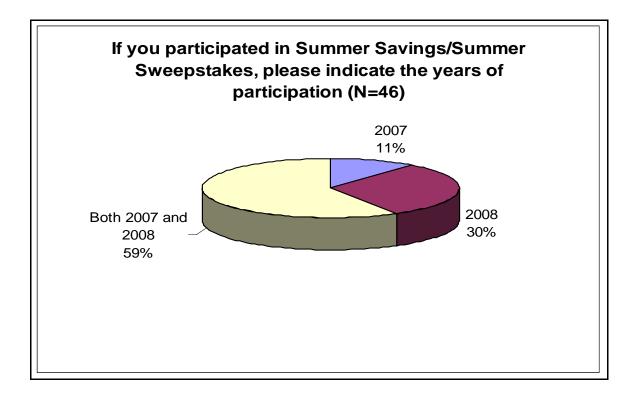

In which year did you take these actions?

Conservation Action	2008-2009	2010	2011	2012
Upgraded window(s)	41%	26%	16%	17%
Upgraded door(s)	39%	26%	17%	18%
Upgraded wall insulation	43%	24%	16%	17%
Upgraded attic insulation	41%	28%	16%	15%
Upgraded basement insulation Replaced non-programmable thermostat with	34%	29%	18%	19%
programmable thermostat Replaced existing furnace with mid or high	40%	21%	16%	23%
efficiency furnace with an Electronically Commuted Motor (ECM)	37%	22%	21%	20%
Replaced existing central air-conditioner (CAC) with an energy star CAC, air-source heat pump, or	0170	2270	2170	2070
ductless split system.	27%	24%	24%	26%
Replaced existing central air-conditioner (CAC) with a stand-alone CEE Tier 2 level CAC or				
ground-source heat pump.	37%	23%	20%	21%

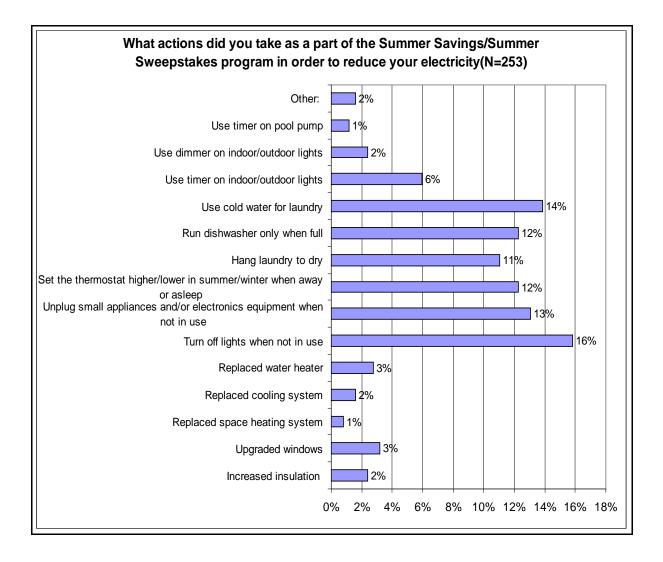

Question 22(a): Have you participated in the Summer Savings/Summer Sweepstakes Program?

Question 22(b.i): If yes, please indicate the year(s) of participation.

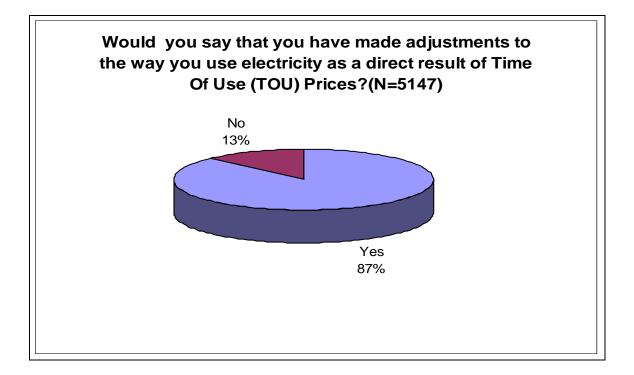

Question 22(b.ii) What actions did you take as a part of the Summer Savings/Summer Sweepstakes program in order to reduce your electricity consumption by 10%

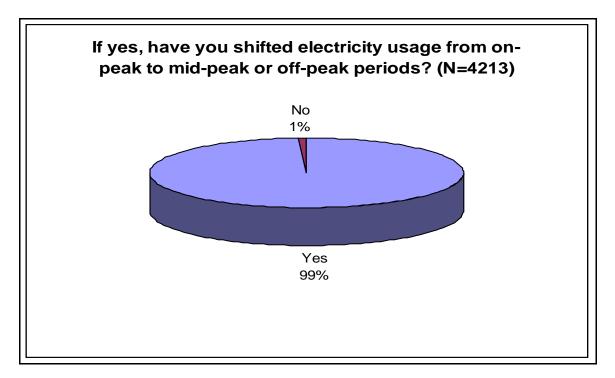

Question 23: Please indicate the number of products you purchased since 2005 WITH and WITHOUT coupons/rebates.

Please indicate how many purchased with and without coupons?	Number Purchased with Coupons or Rebates	Number Purchased without Coupons or Rebates
Lighting control products such as Motion Sensor, Timer and Dimmer Switches	815	4171
Energy Star qualified specialty CFL bulbs	3940	6586
Energy Star qualified standard CFL bulbs	7214	25422
Energy Star qualified LED bulbs	1788	6980
Energy Star qualified indoor light fixtures	550	2390
Energy Star qualified ceiling fans	326	1576
Power bars with integrated timer or automatic shutoff	240	1064
Programmable thermostats for electric baseboards	153	420
Water heater blankets for electric water heaters	61	236
Pipe Wrap for electric water heater	535	3327
Outdoor clothesline kits/Umbrella stands	257	1200
V-strip/foam tape for weather-stripping	379	2317
Door kit for weather-stripping	302	1888

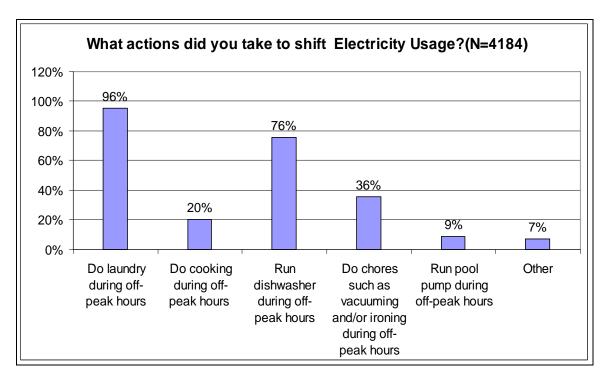

Question 24(a): Would you say that you have made adjustments to the way you use electricity as a direct result of Time of Use (TOU) Prices?

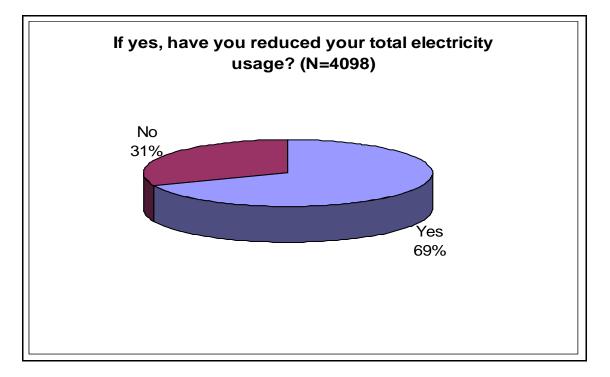

Question 24(b.i): As a result of TOU, have you shifted electricity usage from on-peak to mid-peak or off-peak periods?

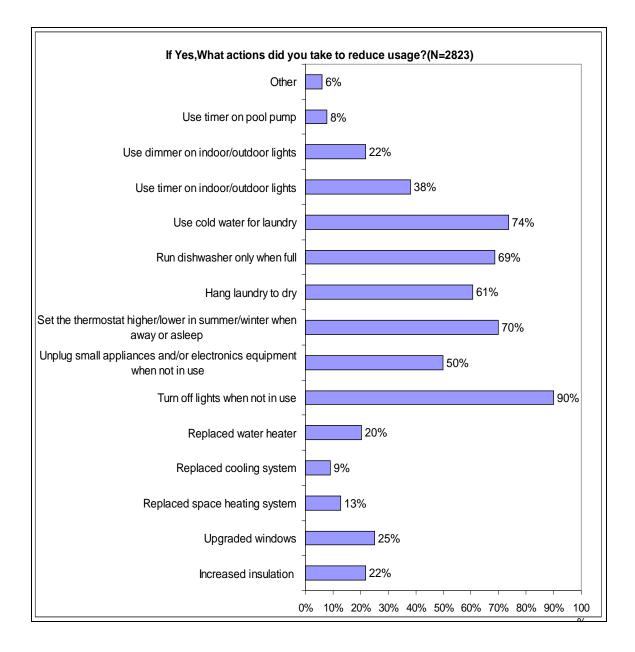

If Yes, What actions did you take to shift electricity usage?

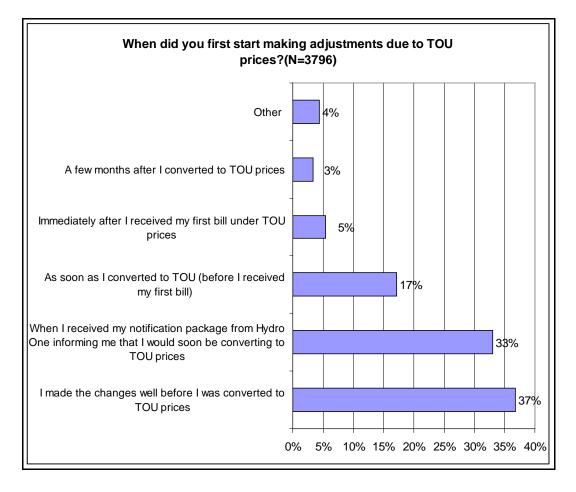

If Yes, What actions did you take to reduce electricity usage?

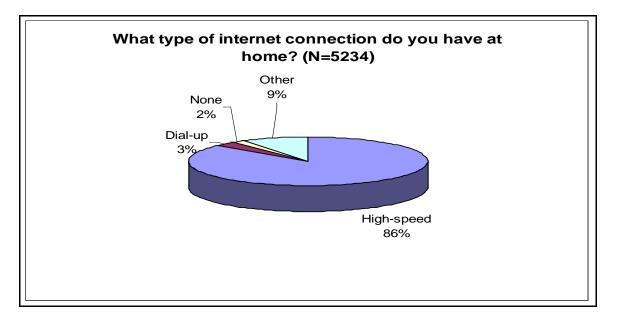

Question 24(c): When did you first start making adjustments due to TOU prices?

Question 25: What Conservation Actions have you undertaken that are not specifically related to any program/Initiative

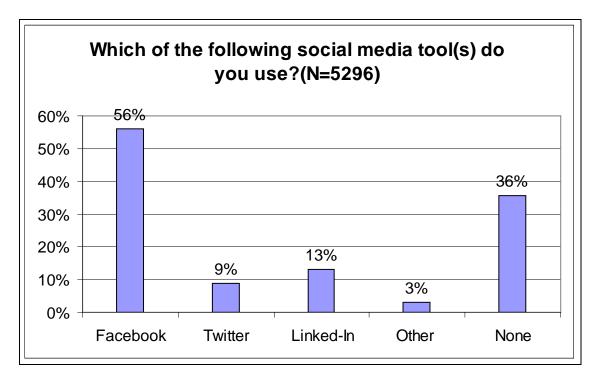

Actions	Always	Often	Sometimes	Never	N/A
Set thermostat lower/higher at night	63%	12%	8%	8%	9%
Set thermostat lower/higher when away from home	66%	13%	8%	5%	8%
Use cold water for laundry	55%	21%	15%	5%	3%
Hang laundry outside or on a rack	26%	28%	22%	17%	7%
Use timers on indoor/outdoor lights	28%	13%	14%	22%	22%
Use dimmers on indoor/outdoor lights	17%	15%	17%	23%	28%
Turn off lights when not in use	75%	22%	2%	0%	1%
Use a fan or open windows instead of AC	44%	30%	17%	4%	5%
Run dishwasher only when full	67%	10%	2%	0%	21%
Use timer on pool pump	9%	1%	1%	5%	84%
Maintain Central Air Conditioner	38%	12%	6%	2%	42%

Question 26: What type of internet connection do you have at home?

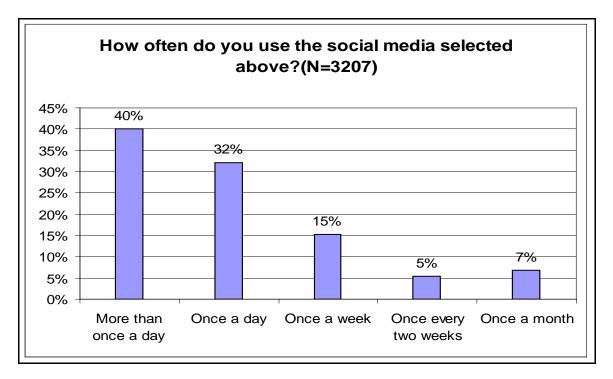

<u>Common responses to "Other":</u> Wi-Fi, satellite, mobile phone, 3G, Rocket stick

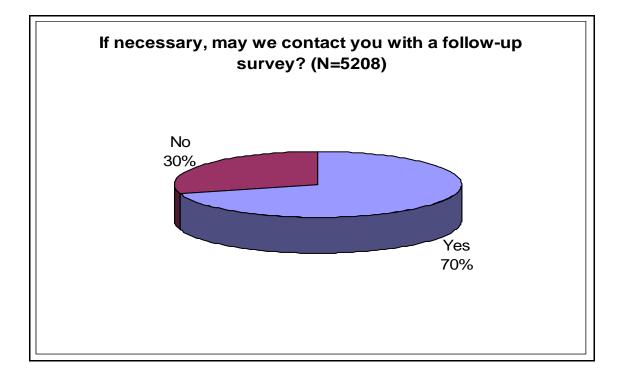

Question 27: Which of the following social media tool(s) do you use?

Question 27 (b) How often do you use the social media selected above?

Question 28: If necessary, may we contact you with a follow-up survey?

Filed: 2014-07-04 EB-2013-0416 Exhibit I-7.7-13 GEC 23 Attachment 13 Page 1 of 27

2012 Customer Equipment & Conservation Survey Results (Follow-Up Version)

2012 Customer Equipment and Conservation Survey Follow-Up Survey to 2011 Respondents

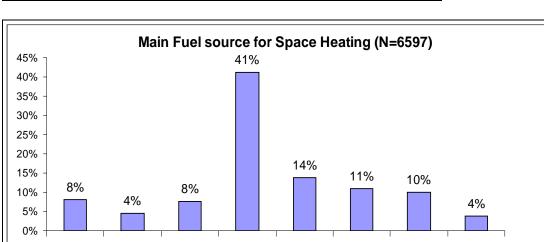

Total number of surveys sent out: *12,383* Total number of unique responses: *6,597* Response rate: *53%*

Electric-

Baseboard

Electric-

Furnace

Question 1 (a): What is your main fuel source for space heating?

Electric-Heat Natural Gas

Pump

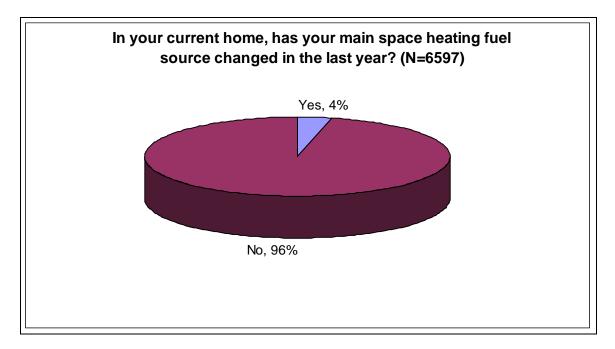

Question 1 (b): In your current home, has your main space heating fuel source changed in the last year?

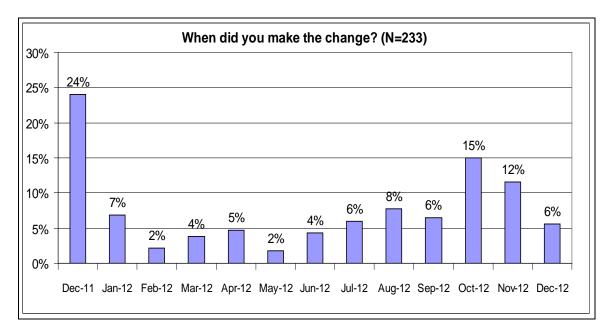

Oil

Propane

Wood

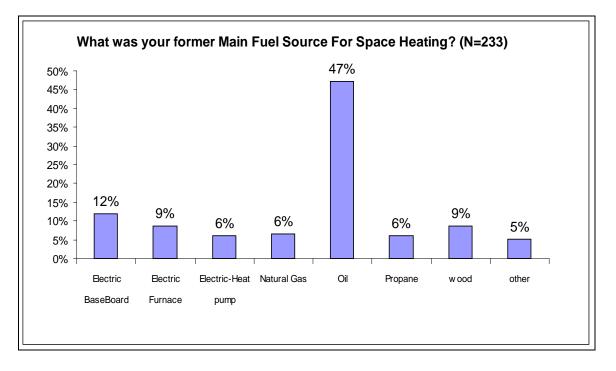

Others

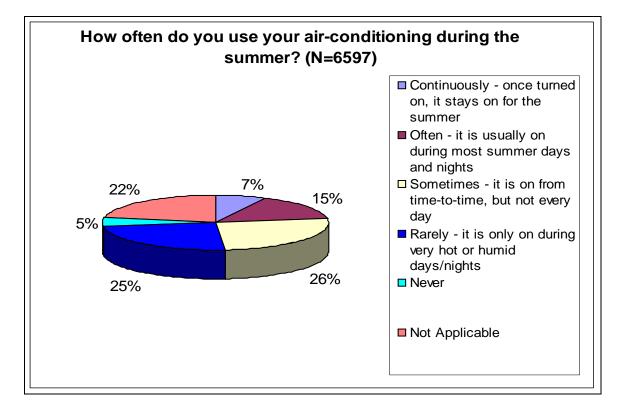

Question 1 (c.i): If yes, when did you make the change?

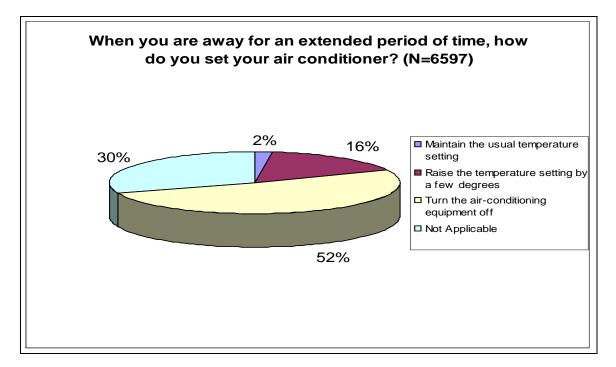

Question 1 (c.ii): What was your former Main Fuel Source For Space Heating?

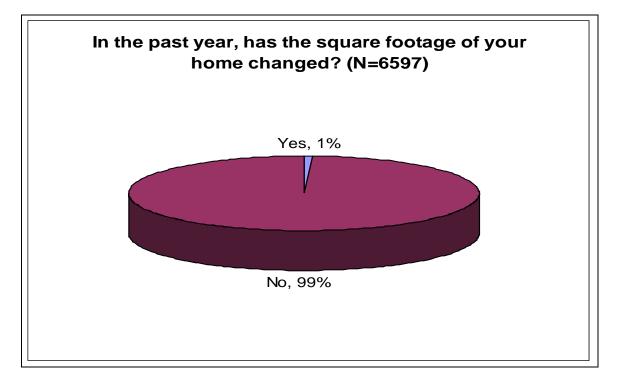

Question 2 (a): How often do you use your air-conditioning equipment during the summer?

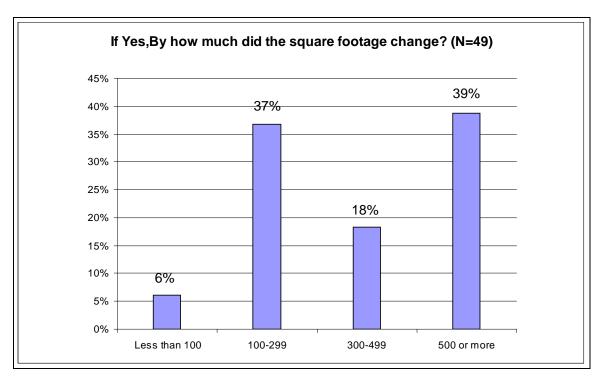

Question 2 (b): When you are away for an extended period of time, how do you set your air conditioner?

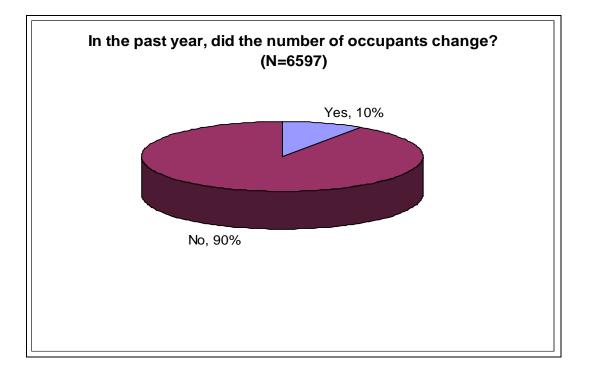

Question 3 (a): In the past year, has the square footage of your home changed?

Question 3 (a.ii): If Yes, by how much did the square footage change?

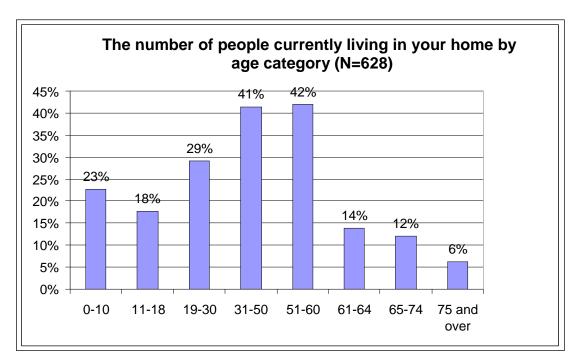

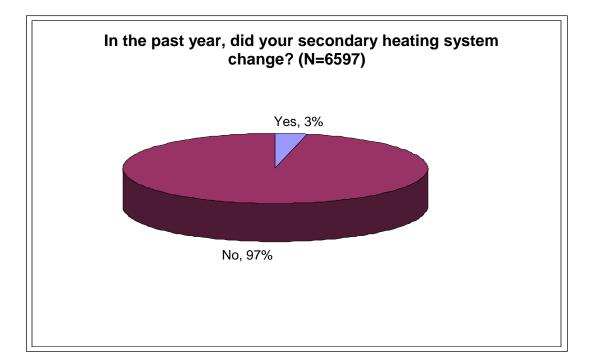

Question 3 (b): In the past year, did the number of occupants living in your home change?

Question 3 (b.i): Please indicate the number of people currently living in your home by age category.

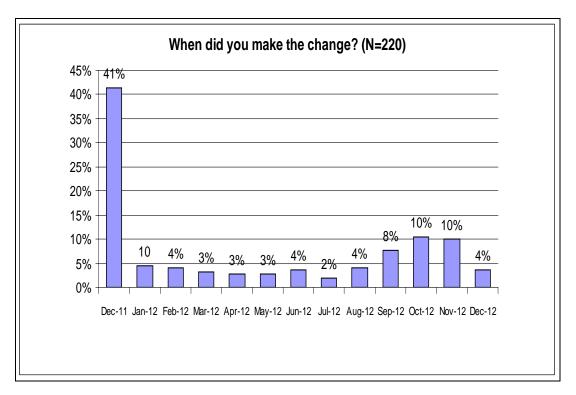

Note: Percentages represent total proportion of households with at least one person in the indicated age category.

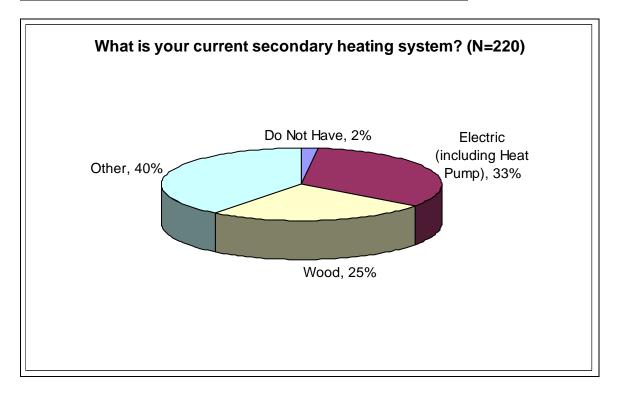

Question 3 (c): In the past year, did your secondary/supplementary heating system change?

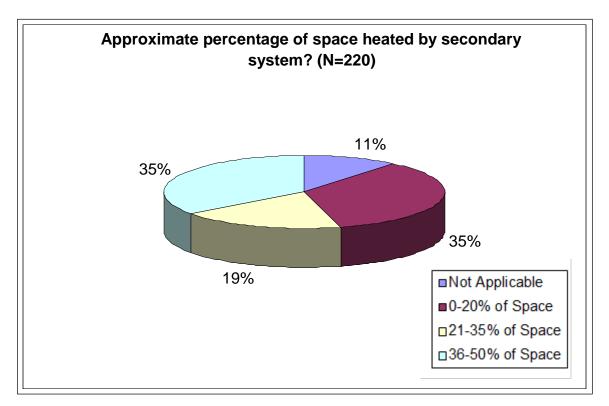

Question 3 (c.i): If yes, when did you make the change?

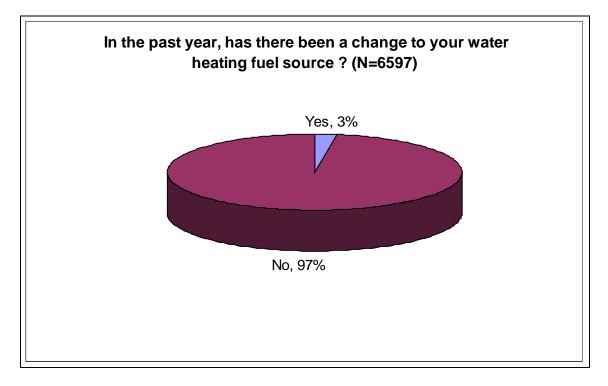

Question 3 (c.ii): What is your current secondary heating system?

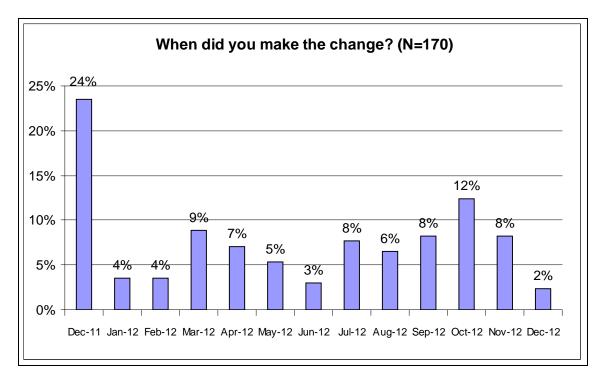

Question 3 (c.iii): Please indicate the approximate percentage of space heated by your secondary system.

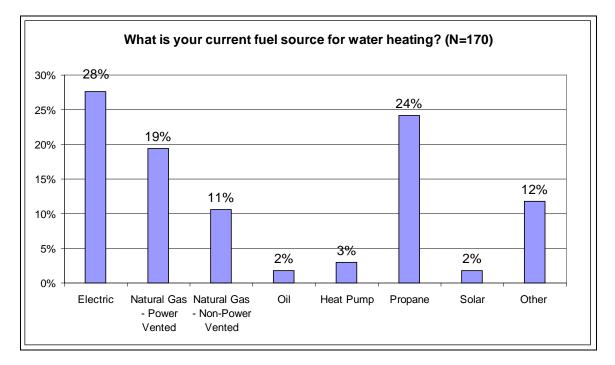

Question 3 (d): In the past year, has there been a change to your water heating fuel source?

Question 3 (d.i): If yes, when did you make the change?

Question 3 (d.ii): What is your current fuel source for water heating?

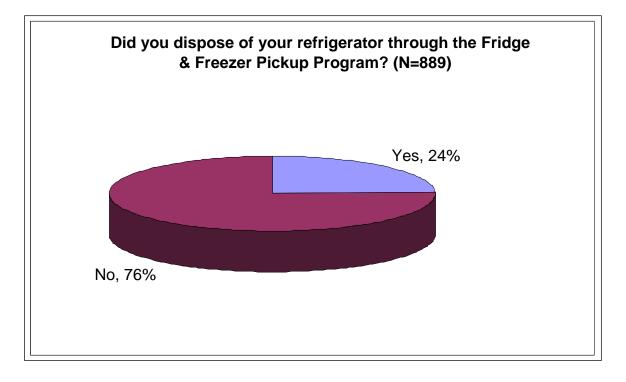

Question 4(a): In what year did you buy each of your major appliances?

Year of Purchase of Major Appliances	Before 1993 (20 years old or older)	Between 1993 and 1997 (15- 19 years old)	Between 1998 and 2004 (8- 14 years old)	Between 2005 and 2010	2011	2012	Came with purchase/ rental of home	Don't Know	Do Not Have	Sample Size
Full Size Refrigerator #1	3%	5%	26%	45%	7%	6%	8%	1%	0%	6597
Full Size Refrigerator #2	4%	4%	9%	12%	2%	1%	2%	1%	65%	6596
Stand-Alone Freezer #1	11%	8%	19%	29%	5%	3%	2%	2%	20%	6597
Stand-Alone Freezer #2	2%	1%	3%	3%	1%	1%	0%	1%	89%	6596
Mini/Bar Fridge #1	1%	2%	5%	13%	2%	2%	1%	1%	73%	6596
Mini/Bar Fridge #2	0%	0%	1%	1%	0%	0%	0%	0%	97%	6596
Top Load Washing Machine	3%	6%	16%	17%	3%	3%	5%	1%	47%	6597
Front Load Washing machine	0%	1%	7%	30%	6%	4%	2%	1%	50%	6596
Dishwasher	3%	4%	17%	35%	7%	5%	9%	1%	19%	6597

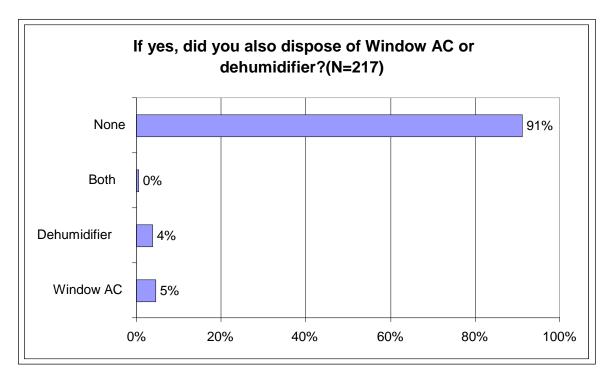

Question 4 (b): In the past year, have you purchased, disposed of and/or replaced any of the following?

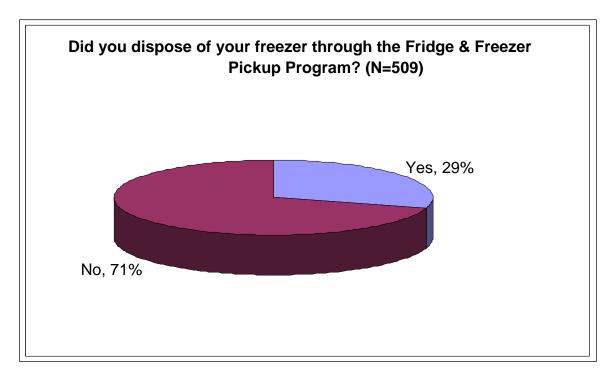

Appliance	Purchased Without Disposing of an Old One	Disposed of and REPLACED with a New One	Disposed of and DID NOT REPLACE with a New One	Not Applicable
Full Size Refrigerator	4%	11%	2%	83%
Stand-Alone Freezer	3%	6%	2%	89%
Mini/Bar Fridge	2%	1%	1%	96%
Top Load Washing Machine	1%	7%	2%	91%
Front Load Washing Machine	2%	5%	1%	92%
Electric Clothes Dryer	2%	10%	1%	88%
Dishwasher	2%	9%	1%	88%
Electric Furnace	0%	1%	0%	98%
Non-Electric Furnace	1%	4%	1%	95%
Central Air-Conditioner	2%	3%	0%	95%
Heat Pump	1%	1%	0%	98%
Window (or Room) Air- Conditioner	2%	1%	1%	96%
Electric Range/Stove	1%	9%	1%	89%
Hot Tub (with Electric Heater)	1%	0%	1%	98%

Question 4 (b.i): Did you dispose of your refrigerator through the Fridge & Freezer <u>Pickup Program?</u>

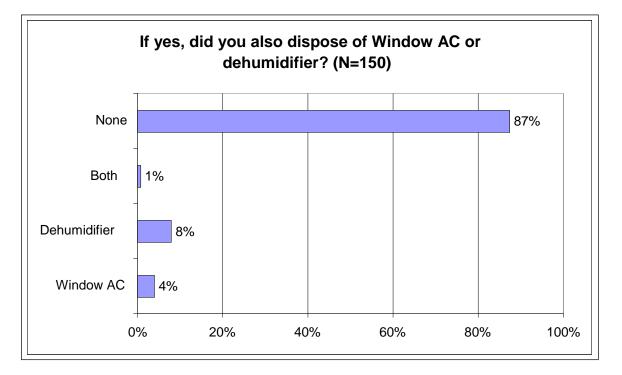

If yes, did you also dispose of Window Air Conditioner and/or dehumidifier?

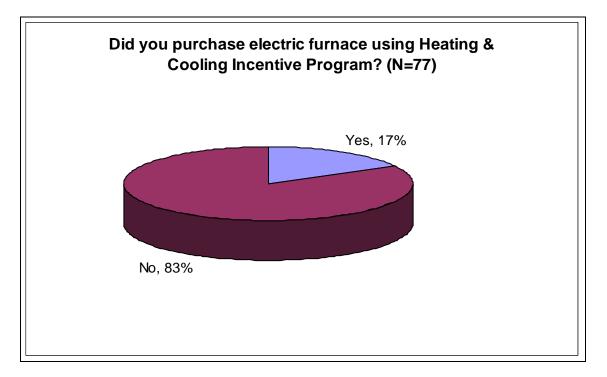

Question 4 (b.ii): Did you dispose of your freezer through the Fridge & Freezer <u>Pickup Program?</u>

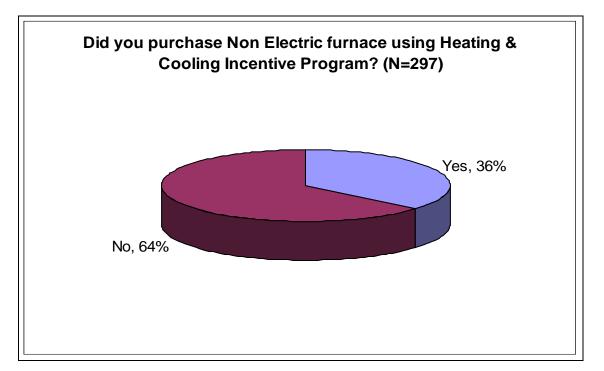

If yes, did you also dispose of a Window Air Conditioner and/or dehumidifier?

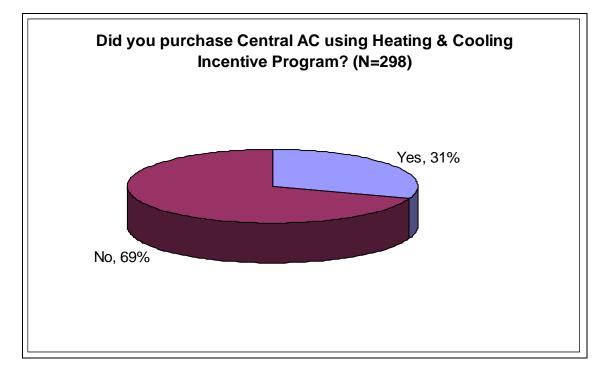

Question 4 (b.iii): Did you purchase your electric furnace as part of the Heating & Cooling Incentive Program?

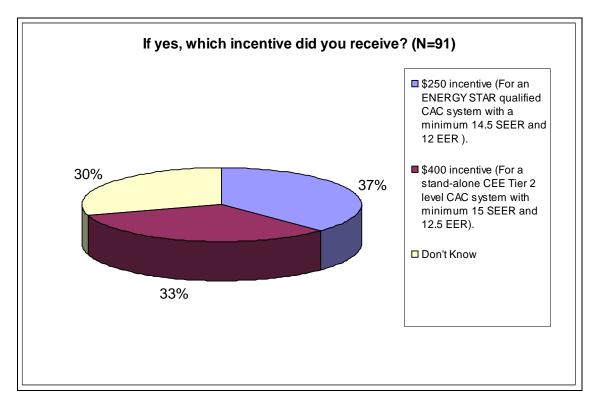

<u>Question 4(b.iv): Did you purchase your Non Electric furnace as part of the Heating & Cooling Incentive Program?</u>

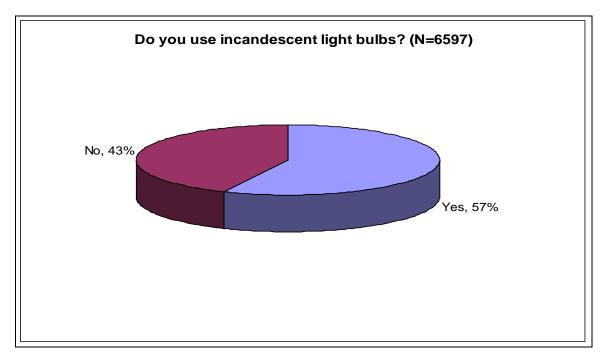

Question 4(b.v): Did you purchase your Central Air Conditioner as part of the Heating & Cooling Incentive Program?

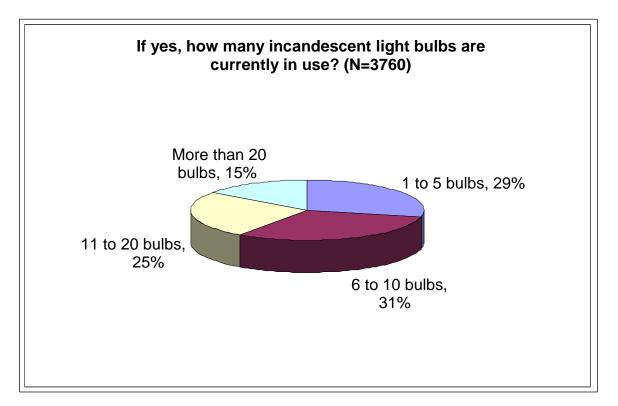

If yes, which incentive did you receive?

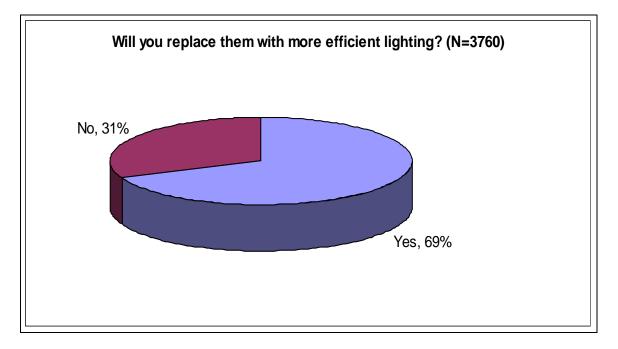

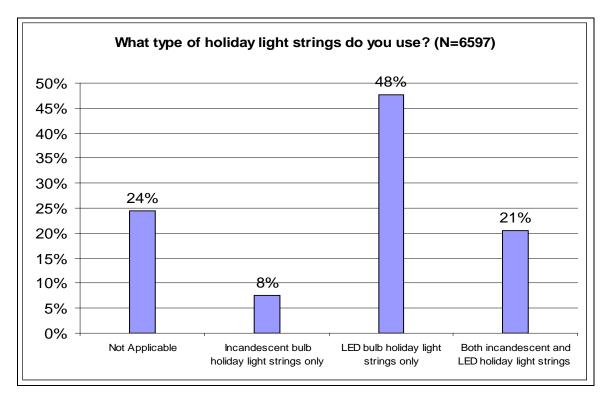

Question 5 (a.i): If yes, approximately how many incandescent bulbs are currently in use?

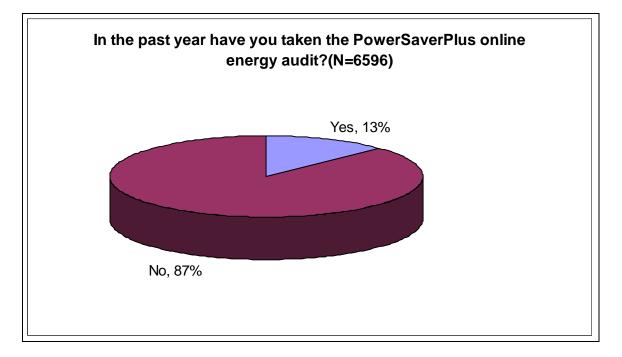

Question 5 (a.ii): When these bulbs burn out, do you plan on replacing them with more efficient lighting products such as Compact Fluorescent Light Bulbs, LED Light Bulbs, or Halogen Light Bulbs?

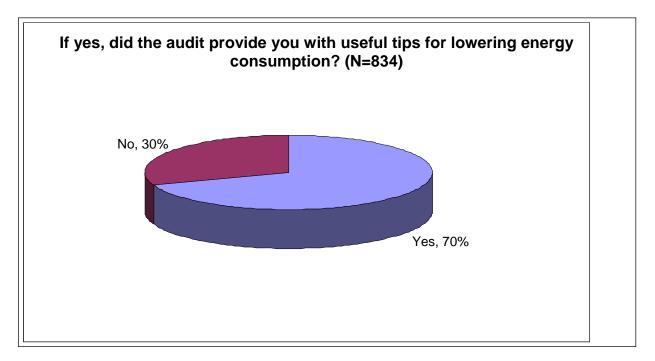

Question 5 (b): What type of holiday light strings do you use?

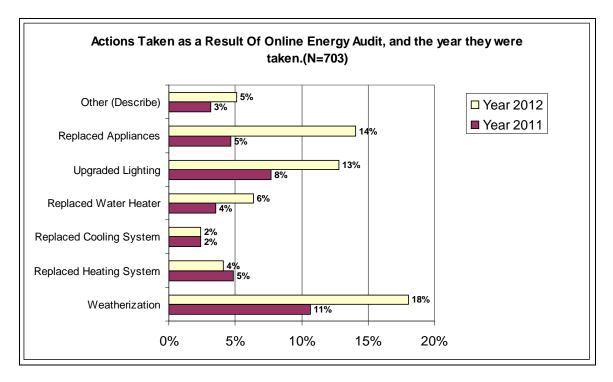

Question 6 (a): In the past year have you taken the PowerSaverPlus online energy audit?

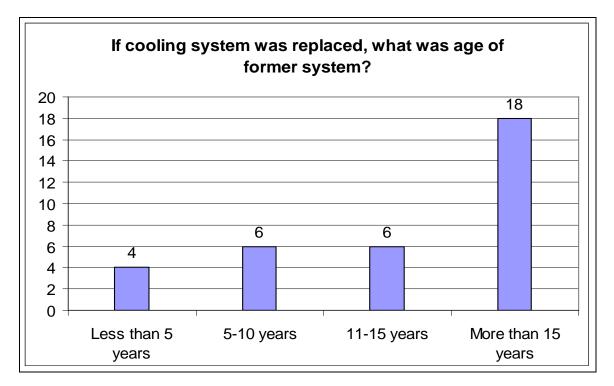

Question 6 (a.i): If yes, did the audit provide you with useful tips for lowering your energy consumption?

Question 6 (a.ii): If yes, what actions were taken as a direct result of the online <u>energy audit?</u>

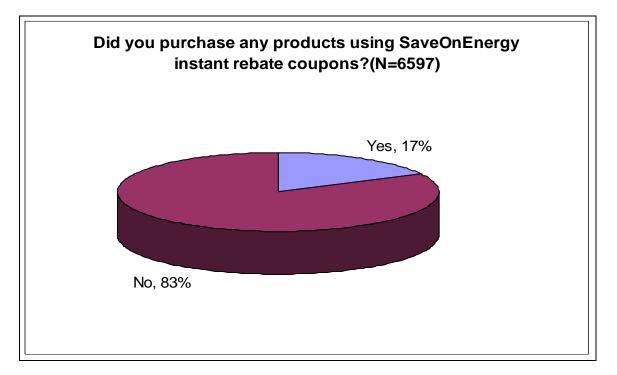

Question 6 (a.iii): If you replaced your cooling system, what was the age of your former system?

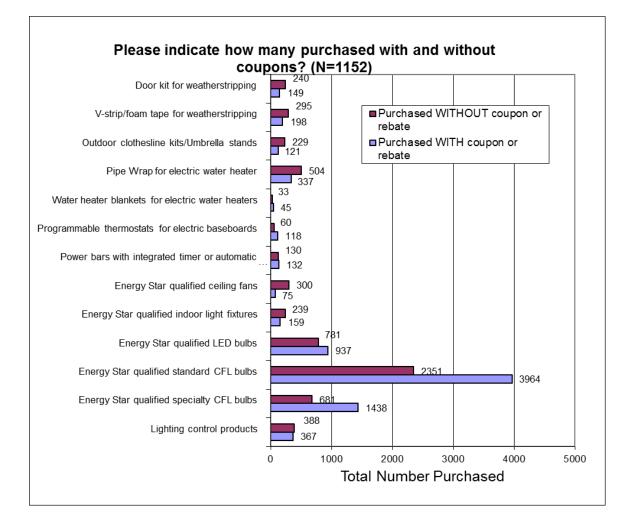

<u>Question 6 (a.iv): If you replaced any of your appliances due to the Online Energy</u> <u>Audit, please indicate which appliances.</u>

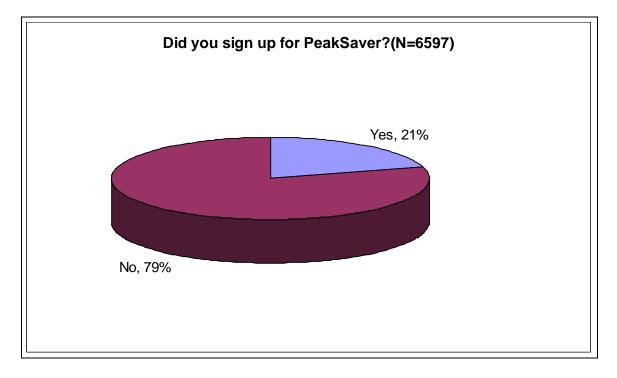

Appliance	Total Number Replaced
Refrigerator	53
Freezer	23
Clothes Washer	46
Clothes Dryer	37
Dishwasher	33
Range/Oven	46
Other	20

Question 6 (b): In the past year, did you purchase any products using SaveOnEnergy instant rebate coupons?

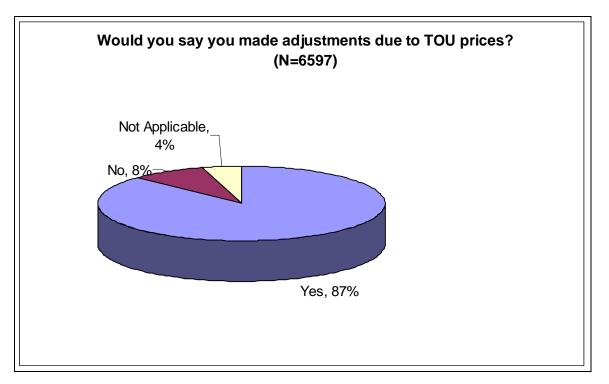

<u>Question 6 (b.ii): Please indicate how many energy saving products you bought with</u> <u>and without coupons?</u>

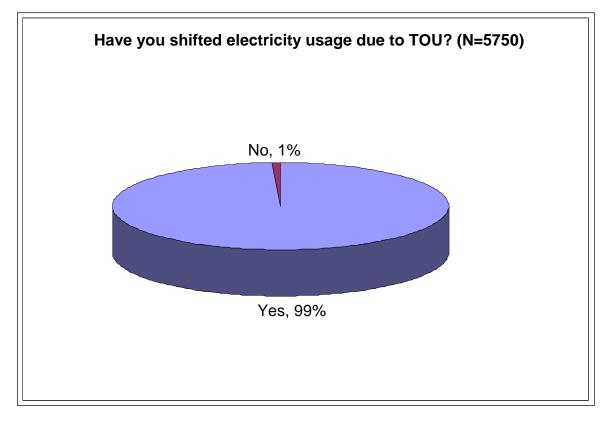

Question 6(c): In the past year, did you sign up for the PeakSaver Program?

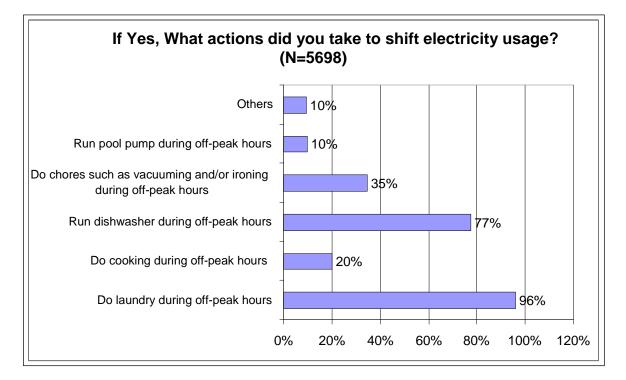

Question 7 (a): Would you say you have made adjustments to the way you use electricity as a direct result of Time-of-Use (TOU) prices?

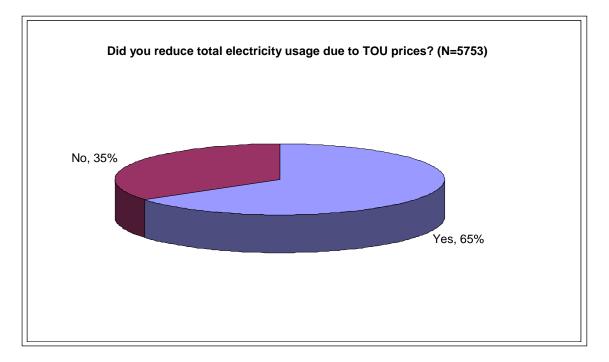

Question 7 (b.i): Have you shifted electricity usage from on-peak to mid-peak or offpeak periods?

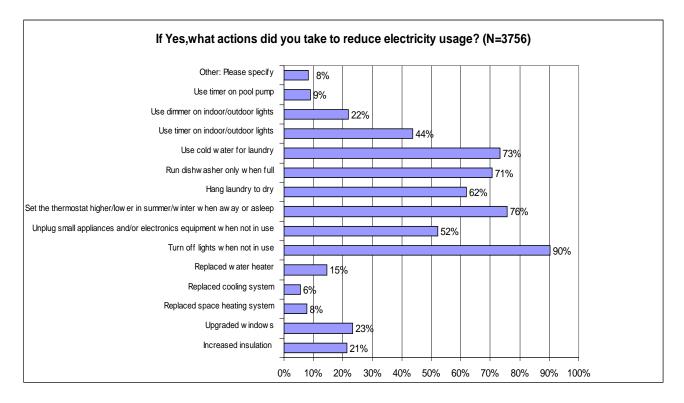

If Yes, What actions did you take to shift electricity usage?

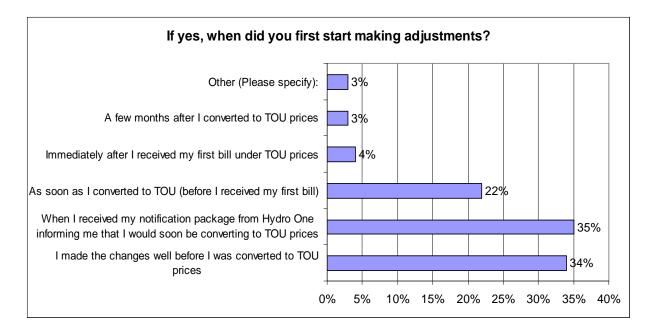

Question 7 (b.ii): As a result of TOU prices, did you reduce your total electricity <u>usage?</u>

If Yes, what actions did you take to reduce electricity usage?

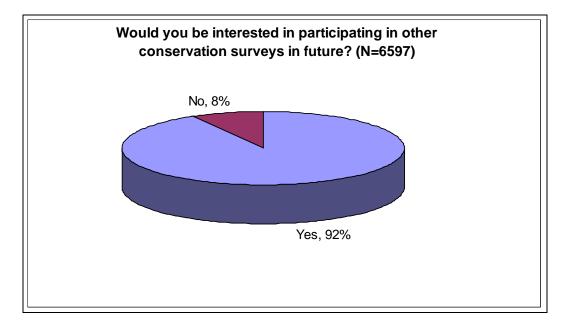

Question 7 (c): When did you first start making adjustments due to TOU prices?

Question 8: What conservation actions have you undertaken that are NOT specifically related to any program/initiative (i.e. actions that you decided to take that are unrelated to your participation in any conservation program and that were not a direct response to TOU prices)?

Actions	Always	Often	Sometimes	Never	N/A
Set thermostat lower/higher at night	64%	10%	7%	8%	8%
Set thermostat lower/higher when away from home	65%	12%	7%	4%	8%
Use cold water for laundry	52%	22%	17%	6%	3%
Hang laundry outside or on a rack	25%	29%	23%	17%	6%
Use timers on indoor/outdoor lights	31%	14%	15%	20%	20%
Use dimmers on indoor/outdoor lights	16%	14%	20%	24%	26%
Turn off lights when not in use	73%	24%	2%	0%	1%
Use a fan or open windows instead of AC	41%	30%	18%	5%	6%
Run dishwasher only when full	66%	11%	2%	0%	21%
Use timer on pool pump	9%	1%	1%	5%	85%
Maintain Central Air Conditioner	41%	12%	5%	2%	41%

<u>Question 9: Would you be interested in participating in other conservation surveys</u> <u>in future?</u>

Filed: 2014-07-04 EB-2013-0416 Exhibit I-7.7-13 GEC 23 Attachment 14 Page 1 of 20

2013 Hydro One Energy Conservation Survey Results

2013 Hydro One Energy Conservation Survey

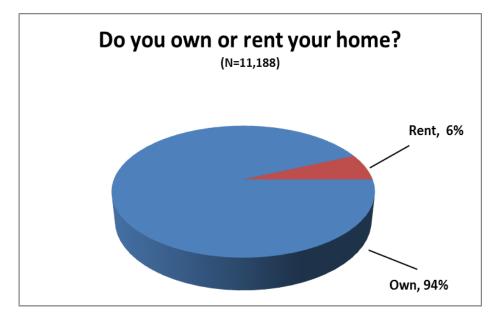

Total number of surveys sent out: 98,000 Total number of unique responses: 11,188 Response rate: 11%

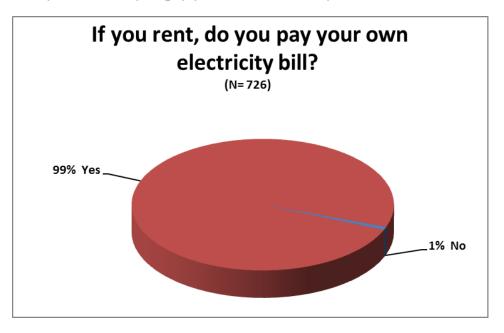

Section 1: Your Home

Question 1: In what type of building do you live?

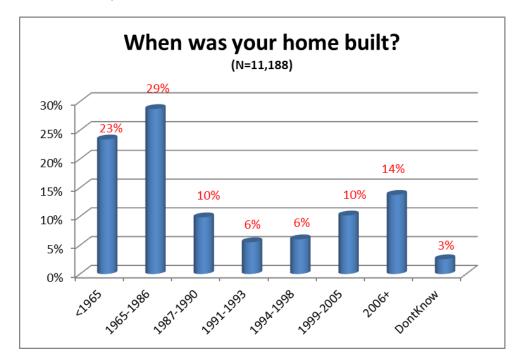

Question 2a: Do you own or rent your home?

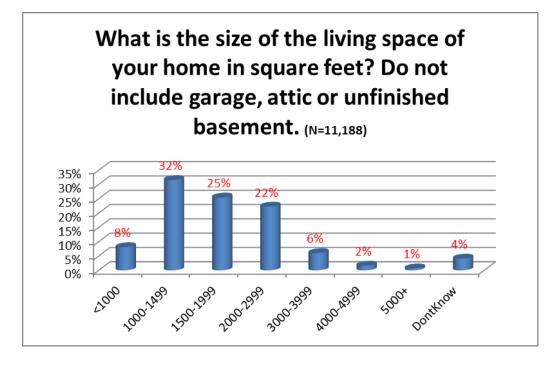

Question 2b: If you rent, do you pay your own electricity bill?

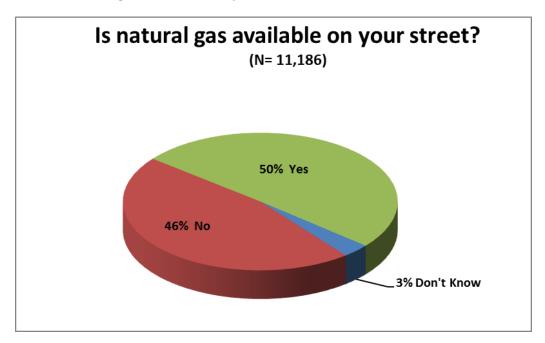

Question 3: When was your home built?

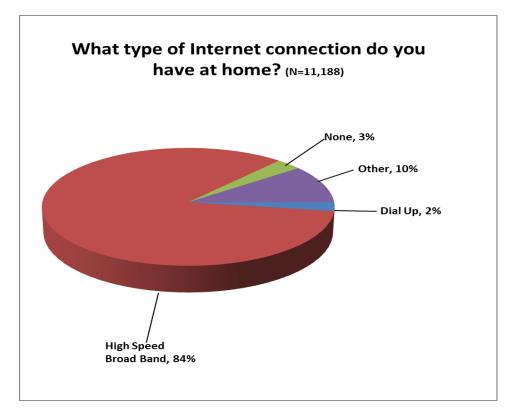

Question 4: What is the size of the living space of your home in *square feet*? DO NOT include garage, attic or unfinished basement.

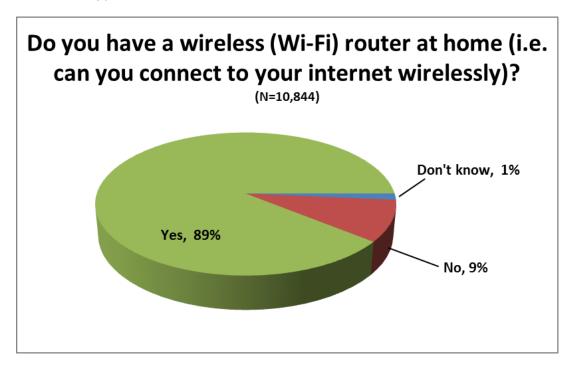

Question 5: Is natural gas available on your street?

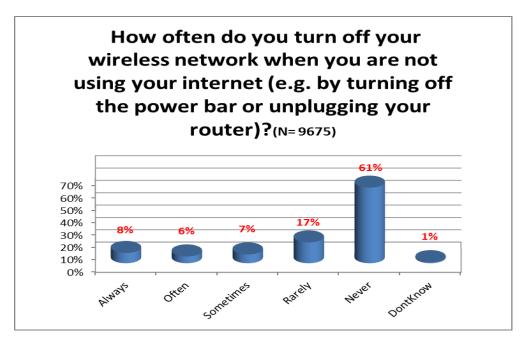

Question 6a: What type of Internet connection do you have at home?

Question 6b: Do you have a wireless (Wi-Fi) router at home (i.e. can you connect to your internet wirelessly)?

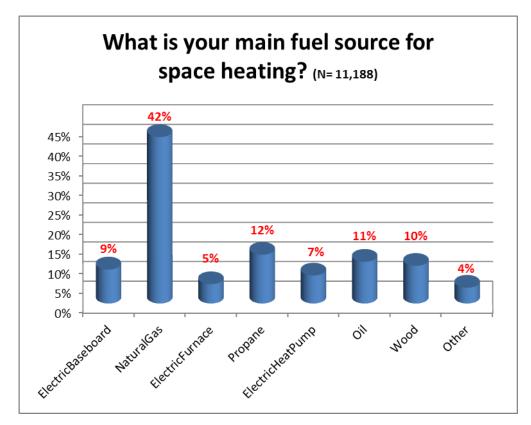

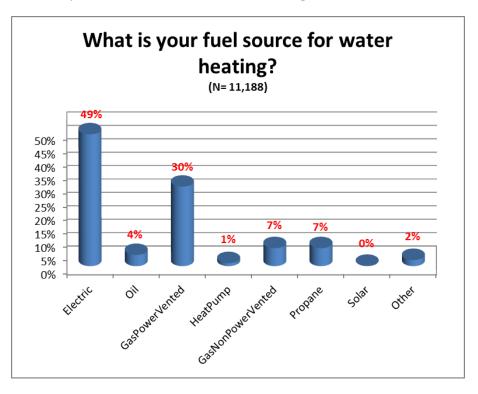

Question 6c: How often do you turn off your wireless network when you are not using your internet (e.g. by turning off the power bar or unplugging your router)?

Section 2: Household Equipment

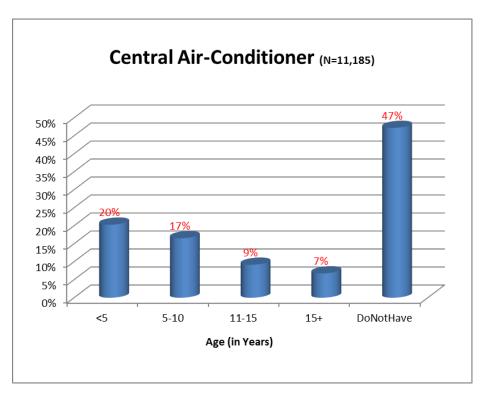

Question 7: What is your main fuel source for space heating?

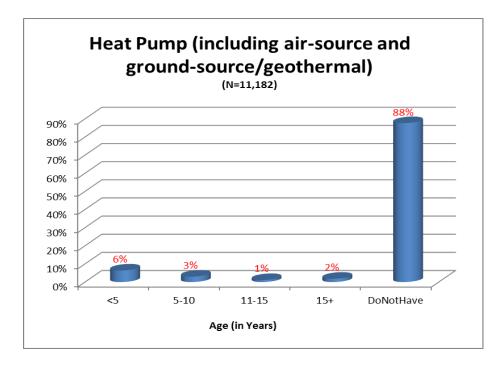

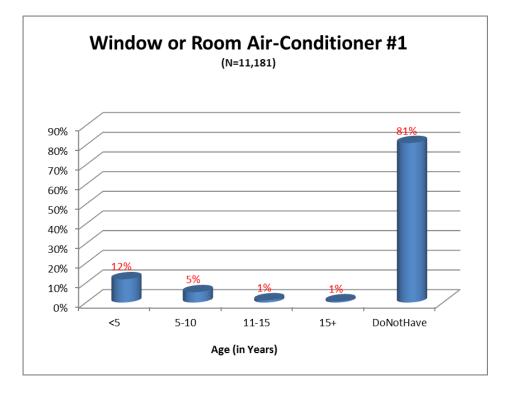

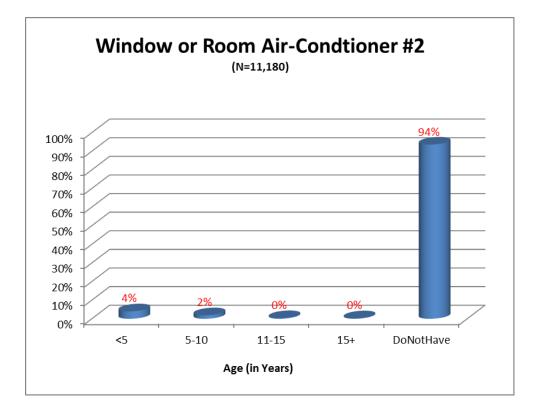

Question 8: What is your fuel source for water heating?

Question 9a: What type of air conditioning equipment do you currently have and how old is it?

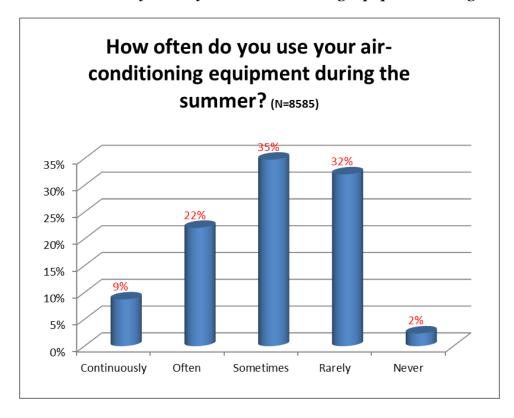

Question 9b: How often do you use your air-conditioning equipment during the summer?

Section 3: Conservation Actions

Question 10: In the table below, please indicate how often you do each of the following actions.

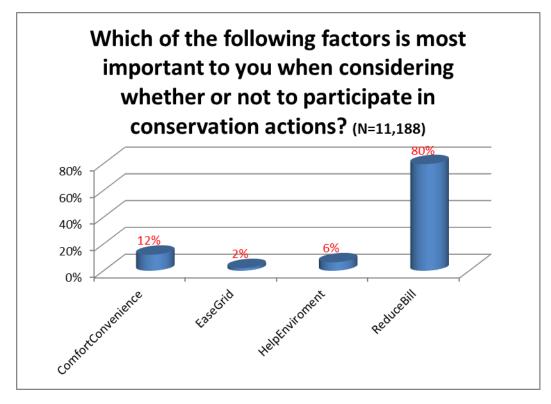

In the table below, please indicate how often you do each of the following actions. (N=11,188)

Action	Always	Often	Sometimes	Never	N/A
Set thermostat temperature higher at					
night in the summer (or lower in the					
winter)	47%	11%	10%	18%	13%
Set thermostat temperature higher					
when not at home in the summer (or					
lower in the winter)	48%	13%	8%	17%	14%
Use cold water for laundry	48%	27%	19%	5%	1%
Hang laundry outside or on a rack to					
dry	16%	29%	28%	24%	3%
Use timers on indoor or outdoor lights	23%	14%	18%	34%	12%
Use dimmers on indoor or outdoor					
lights	14%	18%	22%	33%	13%
Turn off lights when not in use	71%	26%	3%	0%	0%
Use a fan or open a window instead of					
air-conditioning	37%	35%	21%	5%	2%
Run dishwasher only when full	65%	10%	1%	1%	24%
Use Timer on pool pump	9%	2%	1%	5%	84%
Maintain central air-conditioner (clean

Question 11: For each of the following products, please indicate the number you purchased WITH and WITHOUT coupons or rebates within the last year.

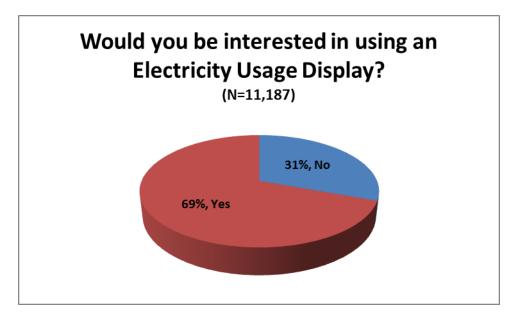

Energy Saving Product	Number Purchased WITH Coupons or Rebates	Number Purchased WITHOUT Coupons or Rebates
Lighting control products such as		
motion sesor, thime and dimmer		
switches	1500	7867
ENERGY STAR qualified specialty		
CFL bulbs	10180	31721
ENERGY STAR qualified LED		
bulbs	5533	15412
ENERGY STAR qualified indoor		
light fixtures	1302	5625
ENERGY STAR qualified ceiling		
fans	476	2788
Power bars with integrated timer or		
automatic shutoff	393	1838
programmable thermostats for		
electric baseboards	366	858
water heater blankets for electric		
water heaters	95	321
pipe wrap for electric water heater	728	4256
outdoor clothesline kits or outdoor		
clothesline umbrella stands	295	2244
V-strip or foam tape for		
weatherstripping	509	3780
Door kit for weatherstripping	484	3391

Q12: Which of the following factors is most important to you when considering whether or not to participate in conservation actions?

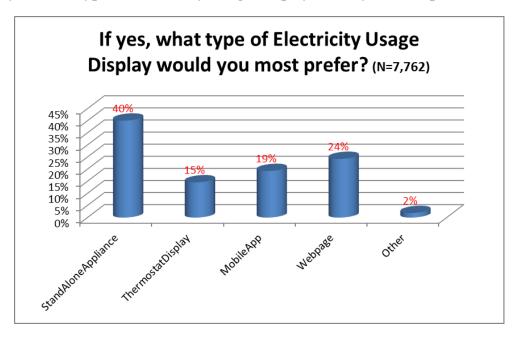

Section 4: Conservation Programs

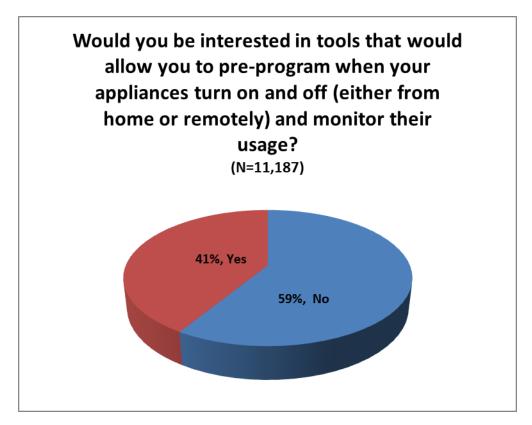

Q13a: An Electricity Usage Display is a device that communicates wirelessly with your smart meter to show you how much electricity you are using in your home in real time, similar to a speedometer.

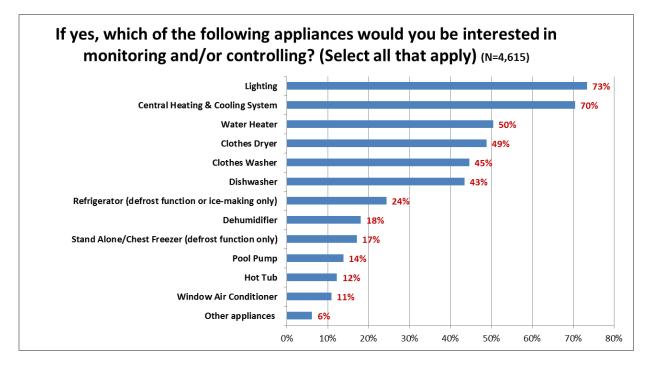

Q13b: If yes, what type of Electricity Usage Display would you most prefer?

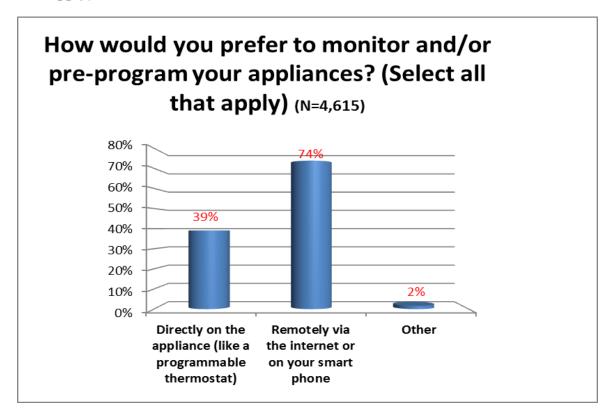

Q14a: New tools that allow you to monitor and control your home's appliances (from your smart phone, for example) are coming on the market to help you manage your electricity usage.

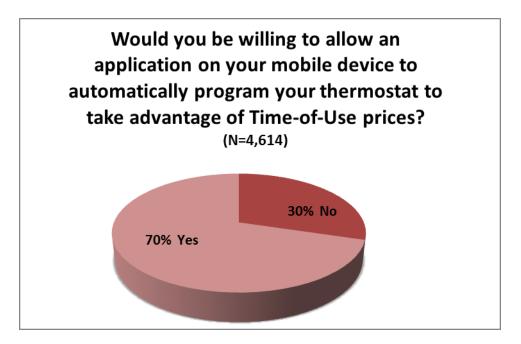

Q14b: If yes, which of the following appliances would you be interested in monitoring and/or controlling? (Select all that apply)

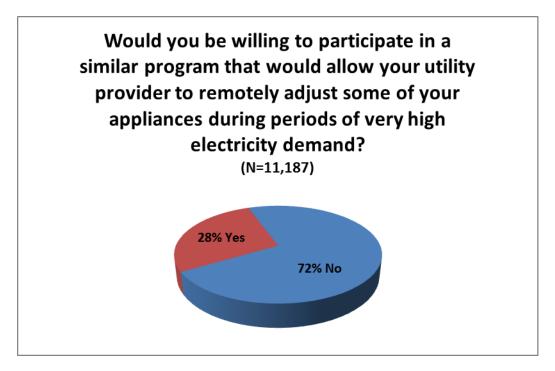

Q14c: How would you prefer to monitor and/or pre-program your appliances? (Select all that apply)

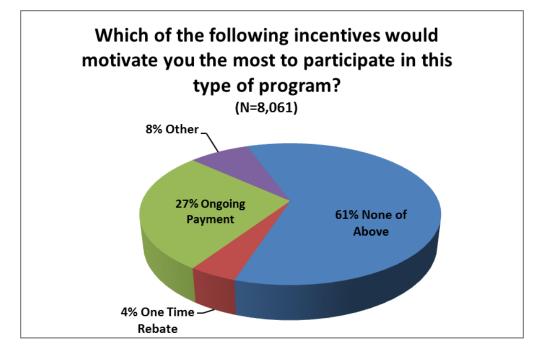

Q14d: Would you be willing to allow an application on your mobile device to automatically program your thermostat to take advantage of Time-of-Use prices?

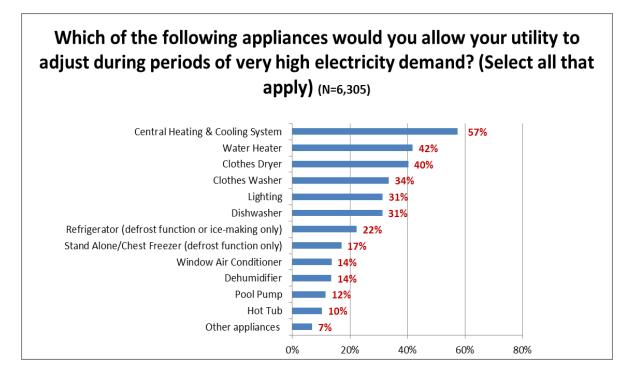

Q15a: Many utilities offer programs in which participants allow their utility to slightly adjust their air conditioners (by 1 to 2 degrees) during periods of very high demand to help ease the strain on the electricity grid.

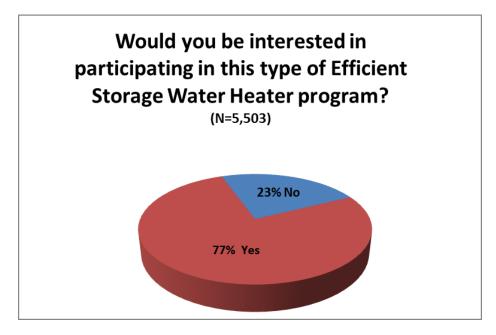

Q15b: Which of the following incentives would motivate you the most to participate in this type of program?

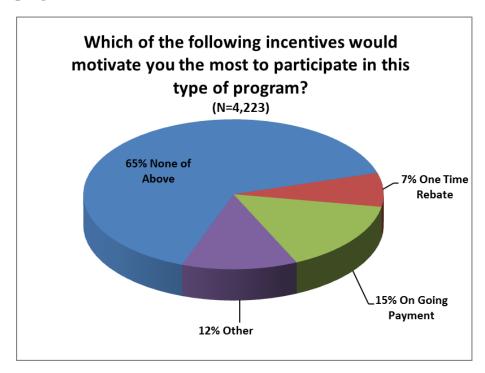

Q15c: Which of the following appliances would you allow your utility to adjust during periods of very high electricity demand? (Select all that apply)

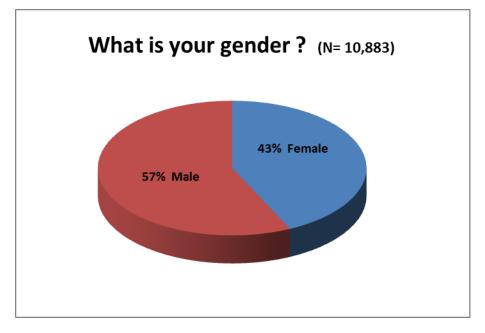

Q16a: Heating water can account for a large proportion of your energy bill. Choosing to heat water during off-peak periods when prices are at their lowest can result in significant cost savings. New water heater technology has made it possible to only heat water during off-peak hours (between 7PM and 7AM on weekdays and all day during weekends), but still let an average household comfortably draw from it for the rest of the day.

Q16b: Which of the following incentives would motivate you the most to participate in this type of program?

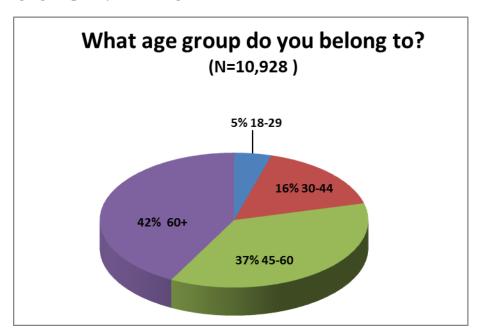

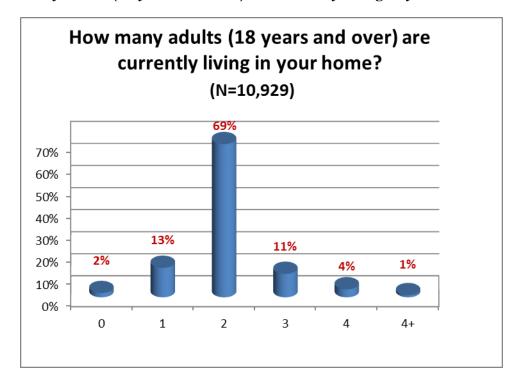

Section 5: Tell us about yourself

Q17: What is your gender?

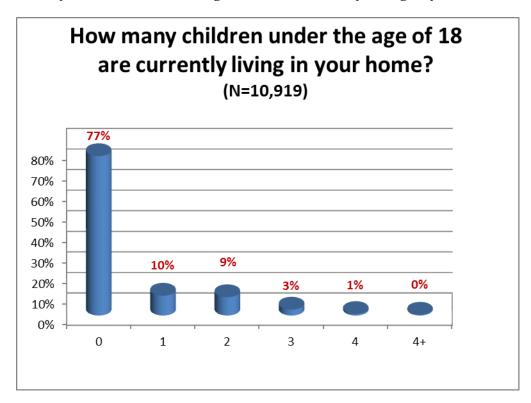

Q18: What age group do you belong to?

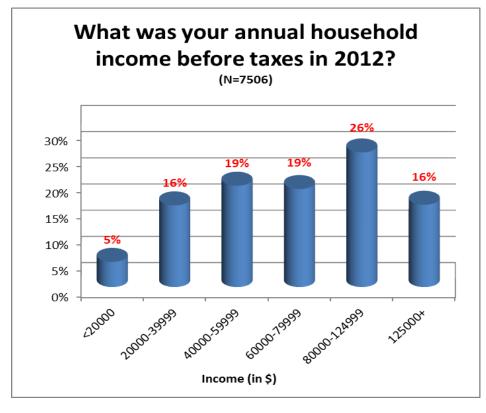

Q19: How many adults (18 years and over) are currently living in your home?

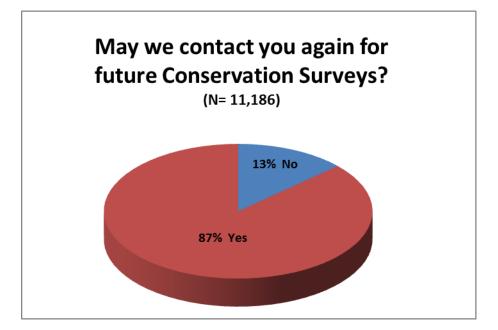

Q20: How many children under the age of 18 are currently living in your home?

Q21: What was your annual household income before taxes in 2012?

Q22: May we contact you again for future Conservation Surveys?

 Green Energy Coalition (GEC) INTERROGATORY #24

 Issue 7.7
 Is an increase in the fixed charges revenue appropriate?

 Interrogatory
 Please provide all studies that HONI has conducted in the last 10 years regarding the relationship of income, housing size and type (e.g., single and multi-family), and/or number of persons per household to residential electric usage, divided by winter heating fuel if available.

 Response

 Hydro One has not conducted any studies into this directly however this information was used as inputs to the Econometric Analysis using Survey Data presented in Exhibit A, Tab 16, Schedule 3, Appendices H and I (pages 118-153).

Green Energy Coalition (GEC) INTERROGATORY #26

Issue 7.7 Is an increase in the fixed charges revenue appropriate?

5 Interrogatory

Please provide load research data from HONI for each available residential customer in its load research sample showing each customer's load by season and time of use, each customer's contribution to the system peak in June-August and December-February, and each customer's contribution to the class NCP demand in June-August and December-February, together with customer weighting factors and an identifier for each customer.

13 **Response**

14

The requested information is provided in the attached XLS file, which has 5 MB of data (available electronically but not in printed form). The tabulation was based on a load research data set of randomly selected customers that Hydro One prepared for the OPA in its TOU impact evaluation. The analysis for this response included hourly data for almost 34,000 residential customers provided by the IESO.

Green Energy Coalition (GEC) INTERROGATORY #33 1 2 Issue 7.7 Is an increase in the fixed charges revenue appropriate? 3 4 **Interrogatory** 5 6 7 **Reference:** Hydro One Annual Report 2012 page 15, which states under the heading "Our Strategy": Protecting and sustaining the environment 8 for future generations. Consistent with our value of stewardship, we 9 play a central role in reducing Ontario's carbon footprint through the 10 delivery of clean and renewable energy and through measures that 11 allow our customers to manage and reduce their energy use. We will 12 engage our customers further regarding how we manage our 13 sustainability obligations and activities on their behalf." 14 15 Please explain in detail how reducing customers' incentives to conserve energy by raising 16 fixed charges is consistent with this environmental element of Hydro One's "strategy." 17 18 Response 19 20 Hydro One responds and participates in all OPA energy conservation programs available 21 to help our customers manage and reduce their energy use. Any changes to the fixed 22 charges will not change that commitment. 23 24 Hydro One's proposal to raise fixed charges in this application is consistent with the 25 principle of cost causality and results in only a small change to the fixed/variable revenue 26 split from 40/60 to 42/58 across all rate classes. Given that the distribution portion of a 27 customer's total bill is typically less than 35% for most customers, the proposed increase 28 in the fixed charge is not expected to have a material impact on customer incentives 29 across Hydro One's entire customer base. 30

- c) The Generator (RP-2010-0228) and LDC (RP-2005-0020/EB-2005-0378 Exhibit G2 Tab 93, Schedule 1, historical escalation rates and new proposed rates to cover the costs underlying these charges are shown above in "Generator Specific Service Charges –Joint Use" and "LDC Specific Service Charges –Joint Use" tables.
- In "Generator Specific Service Charges –Joint Use" (third column from the left), the Maintenance (Lines and Forestry) costs are calculated using the corrected Forestry costs. With that corrected, the average increase in underlying costs has increased by 1.26% per year, over the last five years.
- In "LDC Specific Service Charges –Joint Use", the average increase of the underlying costs has increased by 3.2% per year, over the last ten years.

2 3 4	Issue 7.9 Are the adjustments to reflect the Board-directed line loss study appropriate?	
5 6 7	<u>Interrogatory</u>	
8	Reference: G1/T8/S2, Attachment 1, pg. 29	
9		
10	a) Since the purpose of the study is to determine loss factors which are related to	
11	electricity use, why was number of customers by class used to segment the	
12	feeders into clusters as opposed to the load (i.e. kWh) by class?	
13		
13	Response	
14	<u>Response</u>	
16	The purpose of this element of the study was to try to better understand the extent t	0
10	which line losses vary by customer class. Navigant identified feeders that serve	
18	predominantly urban customers, predominantly rural customers, or a mix of urban an	
19	rural customers. The load served (i.e. kWh) by class would be highly correlated with th	e

number of customers served by class.

1		Vulnerable Energy Consumers Coalition (VECC) INTERROGATORY #115
2 3 4 5	Iss	ue 7.9 Are the adjustments to reflect the Board-directed line loss study appropriate?
6 7	Int	terrogatory
8 9	Re	ference: G1/T8/S2, Attachment 1, pg. 32-35
10	a)	Why did the loss analysis focus on kW as opposed to kWh losses?
11 12	b)	In determining kW losses, what was the "peak" used (i.e. was it the peak of the originating feeder per Figure 21)?
13 14 15	c)	In measuring the "peaks" of the downstream segments and transformers were they all based on the "peaks" coincident with the peak of the originating upstream feeder? If not, how were they determined?
16 17 18 19	d)	Given that the actual peaks for the various downstream segments and transformers may occur at a different time (and be higher) why is this approach appropriate?
20 21	<u>Re</u>	<u>sponse</u>
22 23 24 25 26	a)	The underlying load (or power) flow modelling provides snapshots of the network at a particular point in time. Hence the losses are effectively estimated on an "instantaneous" or kW basis. As discussed in the report on page 36 under the heading "Peak to Average Losses" the kW losses are converted to kWh losses for the purpose of determining a total loss factor.
20	b)	Yes, "peak" is determined based on the peak load on the originating feeder.
28	,	Yes, the load on downstream segments and transformers are estimated based on the
29	,	load coincident with the peak on the upstream feeder.
30	d)	This was a simplifying assumption, given the load flow data that was available for the
31		time of peak loading on the upstream originating feeder. The purpose of this element
32		of the study was to try to better understand the extent to which line losses vary by
33		customer class, it was not used to determine the magnitude of the losses that are
34		incurred on the network. Given the diversity of feeders analyzed in the study and the
35		fact that the losses for a given customer represent the summation of all upstream
36		losses, this assumption does not introduce any material bias for any one particular
37		customer class.

Iss	sue 7.9	Are the adjustments to reflect the Board-directed line loss study appropriate?
Int	<u>terrogatory</u>	2
Re	eference:	G1/T8/S2, Attachment 1, pg. 35-36
Pre	eamble:	The report states (page 35) that where the distribution transformer served customers in different customer classes, the estimated peak load contribution of each type of customer was used as the basis for allocating losses. The equation on page 36 sets out the model used to estimate these values.
	Please con	t timeframe was the model estimated? nfirm that a separate regression analysis done for each feeder, such that e different estimated peak load contributions by customer class for each
c)	-	ovide the resulting estimates of average peak load contribution for each
d)	Why was	class by feeder. it assumed that the UR, R1 and R2 classes would all have the same ontribution per customer?
e)	What was (page 36)	the average load factor as determined for each of the customer classes ? In responding please indicate how the "peak load" value used in tion of the average load factor was determined.
f)	For each	customer class, was the same load factor used for all feeders? If yes, s appropriate given that all feeders do not peak at the same time?
g)		the rationale for the formula (page 36) used to estimate LLF and, in , the basis for the "k" values used?
<u>Re</u>	<u>sponse</u>	
	the ir	s a cross-sectional regression, not a time-series regression. The timeframe instantaneous point in time, coincident with the peak demand on thating feeder.
	b) A sepa	arate regression analysis was conducted for each originating feeder group. elow. All values are in kW.

16	199	103	7	7.2	2.2	n/a

Note: The sample feeders in cluster 7 and 10 only serve ST customers

- d) This was a simplifying assumption. Where predominantly one class of year-round residential customer was served by a particular feeder, it has a negligible impact on the result. Where there was a mix of year-round residential customers from different classes, the relative proximity of customers is such that the dwelling types are likely to be similar, in particular as compared to the non-residential customers served by the feeder.
- e) See below. The load factors were calculated using the hourly data provided to Navigant for the 2012 analysis discussed in Section 2 of Exhibit G1-8-2 Attachment 1. Peak load was based on the average demand in the highest 45 (~0.5%) of hours.

ST	UGD	GSD	UGE	GSE	UR	R 1	R2	SEASONAL
