Dear Board Secretary

I am requesting an oral hearing be held on Amherst Island relating to the above file in order that your Board and the Applicant become fully aware of the impact to the quality of life and high risks to human and animal welfare. I also request that I be provided with all documents in order to exercise my democratic right to monitor this application as it is ongoing.

I am deeply concerned that Ontario residents are paying one of the highest rates for electrical power in all of North America, much of that cost coming from high rates of return promised to companies that are building wind and solar power installations, which, in turn, provide less than 4% of Ontario's power. These projects are obviously not cost-effective and unreliable sources of power.

Of even greater concern is the probability of "close to home" impacts such as the risks to school children having to come and go while making their way past massive construction vehicles right outside the school and the impact to groundwater sources which all homes depend on for a safe and dependable supply of this essential resource.

Thank you for your consideration of my request and very real concerns.

Respectfully submitted

Beverley Harris, A.I. Resident
