1 LOAD AND REVENUE FORECAST

2 This Exhibit provides the details of North Bay Hydro Distribution Ltd's ("NBHDL") operating revenue for 2010 Board

- Approved, 2010 Actual, 2011 Actual, 2012 Actual, 2013 Actual, the 2014 Bridge Year ("Bridge Year") and the 2015
- 4 Test Year ("Test Year"). This Exhibit also provides a detailed variance analysis by rate classification of the
- 5 operating revenue components. Distribution revenue excludes revenue from commodity sales.

6 NBHDL is proposing a total Service Revenue Requirement of \$13,848,941 for the 2015 Test Year. This amount

- 7 includes a Base Revenue Requirement of \$12,695,006 plus revenue offsets of \$1,153,934 to be recovered through
- 8 Other Revenue.
- 9 Other Revenue include Late Payment charges, Specific Service charges, Rent from Electric Property,

10 Miscellaneous Service revenues, Standard Supply Service ("SSS") Administrative charges and Interest. A

summary of these operating revenues together is presented with a materiality analysis of variances is presented in

12 Table 3-36.

The following Table 3-1 summarizes NBHDL's total operating revenue. Revenue for each of the actual years is from NBHDL's audited Financial Statements which reconcile to the annual filings with the OEB. The Bridge Year is comprised of actual revenue from January to June, 2014. The remainder of the year is based on a six month projection of distribution revenue from existing distribution rates and other distribution revenue. The Test Year distribution revenue is provided on the basis of both existing and proposed distribution rates. Revenue for the GS>50 kW and Intermediate rate classes is net of transformer allowance credits to eligible customers within these rate classes.

Table 3-1 Summary of Operating Revenue

| Description | 2010 Board Approved | 2010 Acutal | 2011 Actual | 2012 Actual | 2013 Actual | 2014 Bridge | 2015 Test - Existing Rates | 2015 Test - Proposed Rates |
|---------------------------------|------------------------|----------------|----------------|----------------|----------------|----------------|----------------------------------|----------------------------------|

1 SUMMARY OF LOAD AND CUSTOMER/CONNECTION FORECAST

The purpose of this evidence is to present the process used by NBHDL to prepare the weather normalized load and customer/connection forecast used to design the proposed 2015 distribution rates.

4 In summary, as a starting point NBHDL used the same regression analysis methodology approved by the Ontario 5 Energy Board (the "Board") in its 2010 Cost of Service ("COS") application (EB-2009-0270) and updated the analysis for actual power purchases to the end of the 2013. As described below, the updated regression analysis 6 7 excluded some variables used in the 2010 COS application and included a new variable to reflect the local 8 economic conditions of North Bay. The regression analysis used in this application has also been used by a 9 number of distributors in more recent cost of service rate applications to determine a prediction model. With regard 10 to the overall process of load forecasting, NBHDL believes that conducting a regression analysis on historical 11 electricity purchases to produce an equation that will predict purchases is appropriate. NBHDL has the data for the 12 amount of electricity (in kWh) purchased from the IESO for use by NBHDL's customers. With a regression analysis, these purchases can be related to other monthly explanatory variables such as heating degree days and cooling 13 14 degree days which occur in the same month. The results of the regression analysis produce an equation that predicts the purchases based on the explanatory variables. This prediction model is then used as the basis to 15 forecast the total level of weather normalized purchases for the Bridge Year and the Test Year which is converted 16 17 to billed kWh by rate class. A detailed explanation of the process is provided later in this evidence.

18 During the review process of previous COS applications, for other applicants, Intervenors expressed concerns with 19 the load forecasting weather process being used in this application. Intervenors suggested the weather 20 normalization should be conducted on an individual rate class basis and the regression analysis would be based 21 on monthly consumed kWh by rate class. NBHDL reviewed the data required to conduct the regression analysis on 22 an individual rate class basis and determined that it currently does not have a method to properly convert historical 23 billing data to monthly consumed values by rate class. With the installation of smart meters it is possible to 24 determine the amount consumed in a month but this would only provide historical data from 2011 onwards. Since 25 NBHDL has monthly purchase data from 1999 onward, NBHDL believes conducting the regression analysis on purchases provides better results since a higher level of historical data increases the accuracy of the regression 26 27 analysis.

In addition, Board staff and Intervenors expressed concern that the regression analysis assigned coefficients to some variables that were counter intuitive. For example, the customer variable would have a negative coefficient assigned to it which meant as the number of customers increased the energy forecast would decreased. Further, the regression analysis indicated that some of the variables used in the load forecasting formula were not statistically significant and should not have been included in the equation. As mentioned above, NBHDL used the regression analysis used to support the load forecast in the 2010 COS application as a starting point and addressed these concerns in the load forecast used in this Application. As a result, variables such as Ontario Monthly Real GDP, Population and Number of Peak Hours were tested but not used. Ontario Monthly Real GDP was not statistically significant. Population had a counter intuitive coefficient and was not statistically significant. Number of Peak Hours had an intuitive coefficient and was statistically significant however including this variable caused an immaterial difference in the 2014 load forecast of less than 0.04%. In addition, the R-square and the Adjusted R-square remained at around 98% with and without the Number of Peak Hours variable. As a result, NBHDL eliminated this variable since it had very minimal impact on the overall 2014 load forecast and it did not improve the accuracy of the prediction model.

Based on the Board's approval of this methodology in a number of previous cost of service applications as well as
 the discussion that follows, NBHDL submits the load forecasting methodology is reasonable at this time for the
 purposes of this Application.

11 The following provides the material to support the weather normalized load forecast used by NBHDL in this 12 Application.

- 1 Table 3-2, Table 3-3 and Table 3-4 below provide a summary of the weather normalized load and
- 2 customer/connection forecast used in this Application.

4

In the above Table 3-2, 1999 to 2013 are reflecting actual weather conditions in the year. The years 2014 and 2015 are weather normalized. It is NBHDL's understanding that there is not a Board approved method to weather normalize actual data. Consequently, NBHDL does not have a process to adjust weather actual data to a weather normal basis. However, based on the process outlined in this Exhibit 3, a process to forecast energy on a weather normalized basis has been developed and used in this application.

10 Customer/Connection values are on a 12 month average basis and street lights, sentinel lights and unmetered

11 loads are measured as connections.

12 On a rate class basis, the actual and forecasted billed amounts as well as the actual and forecasted number of

13 customers/connections are shown in Table 3-3 and customer/connection usage is shown in Table 3-4.

| Year | Residential | General Service < 50 | General Service 50 | General Service 3000 | Street | Sentinel | Unmetered Scattered | Total |

1 FORECAST METHODOLOGY – MULTIVARIATE REGRESSION MODEL

3 NBHDL's weather normalized load forecast is developed in a three-step process. First, a total system weather 4 normalized purchased energy forecast is developed based on multivariate regression model that incorporates 5 historical load, weather, and economic data. Second, the weather normalized purchased energy forecast is 6 adjusted by a historical loss factor to produce a weather normalized billed energy forecast. Finally, the forecast of 7 billed energy by rate class is developed based on a forecast of customer numbers and historical usage patterns 8 per customer. For the rate classes that have weather sensitive load their forecasted billed energy is adjusted to 9 ensure that the total billed energy forecast by rate class is equivalent to the total weather normalized billed energy 10 forecast that has been determined from the regression model. The forecast of customers by rate class is 11 determined using a geometric mean analysis. The forecast is also adjusted for expected Conservation and Demand Management ("CDM") results for 2014 and 2015 as well as the loss of a General Service > 3,000 to 4,999 12 kW as of June 2014. For those rate classes that use kW for the distribution volumetric billing determinant an 13 14 adjustment factor is applied to the class energy forecast based on the historical relationship between kW and kWh. The following will explain the forecasting process in more detail. 15

16

2

17 Purchased KWh Load Forecast

18

An equation to predict total system purchased energy is developed using a multivariate regression model with the following independent variables: weather (heating and cooling degree days), calendar variables (days in month, seasonal) and local North Bay economic conditions. The regression model uses monthly kWh and monthly values of independent variables from January 1999 to December 2013 to determine the monthly regression coefficients.

23

24 Data for NBHDL's total system load is available as far back as January 1999. This provides 180 monthly data 25 points which are a reasonable data set for use in a multiple regression analysis. However, with regards to weather 26 normalization, NBHDL submits that it is appropriate to review the impact of weather over the past ten years 27 January 2004 to December 2013 since it is consistent with a time period outlined in the filing requirements and it is reflective of more recent weather conditions. The average weather conditions over this period are applied in the 28 29 prediction formula to determine a weather normalized forecast. In accordance with the filing requirement, NBHDL 30 has also provided sensitivity analysis showing the impact on the 2015 forecast of purchases. This analysis 31 assumes weather normal conditions are based on a 20 year trend of weather data.

32

The multivariate regression model has determined drivers of year-over-year changes in NBHDL's load growth are weather, "calendar" factors and local economic conditions. These factors are captured within the multivariate regression model.

- Weather impacts on load are apparent in both the winter heating season, and in the summer cooling season. For that reason, both Heating Degree Days (i.e. a measure of coldness in winter) and Cooling Degree Days (i.e. a measure of summer heat) are modeled.
- 4

5 The second main factor determining energy use in the monthly model can be classified as "calendar factors". For 6 example, the number of days in a particular month will impact energy use. The modeling of purchased energy uses 7 number of days in the month and a "flag" variable to capture the typically lower usage in the spring and fall months.

8

A "North Bay Economy" variable is used to address the slowing economic conditions that occurred in North Bay in 2012 and 2013 and are expected to continue in 2014 and 2015. The economies of many municipalities in Northern Ontario were founded on forestry, mining and tourism. With the significant decline in the forestry sector and the globalization of the mining sector the City of North Bay has had to transition its economy to maintain economic prosperity and its population base. According to the City of North Bay (as posted on its official website under Economic Sectors):

15

"North Bay has a very diversified Industrial Manufacturing/Service base that is characterized as follows: The
 firms focus on small volume, high margin, highly engineered, global markets and serve a customer base in a
 variety of sectors such as Resource, I.T., Telecom, Transportation and Construction. They tend to be a mix of
 both Multi-Nationals and local entrepreneurs with operations ranging in size from 10-350 employees.

20

The Commercial base is well established in five primary nodes with a number of secondary nodes that has experienced strong but balanced growth. The professional service sector has the depth needed to support the business community in areas such as health and security, engineering, finance, education including post secondary, and legal."

25

26 A service based economy is not energy intensive, therefore with the virtual disappearance of the forestry sector 27 and the decline in values of many minerals mined in Northern Ontario, NBHDL has experienced a consistent 28 decline in electricity sales since the end of 2011. To address this situation, NBHDL has utilized the "North Bay 29 Economy" variable as a value of '0' or '1'. A value of '0' represents normal economic conditions and a value of '1' 30 reflects slower economic conditions. All months from January 1999 to December 2011 were set to '0'. From 31 January 2012 to December 2013 the "North Bay Economy" variable was set to '1' reflecting the economic 32 conditions in those years. In addition, from January 2014 to December 2015 the slower economic conditions are expected to continue resulting in value of '1' for the "North Bay Economy" variable over the forecast period. 33

34

The following outlines the predication model used by NBHDL to predict weather normal purchases for 2014 and 2015.

| 1 | NBHDL N | Monthly Predicted kWh Purchases |
|----|-----------|--|
| 2 | | = Heating Degree Days * 24,866 |
| 3 | | + Cooling Degree Days * 82,485 |
| 4 | | + Number of Days in the Month * 1,154,460 |
| 5 | | + Spring Fall Flag * (1,825,901) |
| 6 | | + North Bay Economy * (1,665,589) |
| 7 | | + Constant of 3,792,126. |
| 8 | | |
| 9 | The mon | thly data used in the regression model and the resulting monthly prediction for the actual and forecasted |
| 10 | years are | e provided in Appendix 3-A. |
| 11 | | |
| 12 | The sour | ces of data for the various data points are: |
| 13 | | |
| 14 | a) E | Environment Canada website for monthly heating degree days and cooling degree days. Data for the North |
| 15 | E | Bay Airport weather station was used. 18° C is the base numbers from which heating degree days and |
| 16 | c | cooling degree days are measured. |
| 17 | b) T | The calendar provided information related to number of days in the month and the spring/fall flag. |
| 18 | | |
| 19 | The pred | liction formula has the following statistical results (Table 3-5) which generally indicate the formula has a |
| 20 | very good | d fit to the actual data set. |
| 21 | | |
| 22 | | Table 3-5 Statistical Results |

| Statistic | Value |
|-------------------------|--------|
| R Square | 97.8% |
| Adjusted R Square | 97.7% |
| F Test | 1522.5 |
| MAPE (Monthly) | 1.8% |
| T-stats by Coefficient | |
| Heating Degree Days | 62.0 |
| Cooling Degree Days | 13.3 |
| Number of Days in Month | 11.2 |
| Spring Fall Flag | (8.5) |
| North Bay Economy | (7.1) |
| Constant | 1.2 |

23

24 The annual results of the above prediction formula compared to the actual annual purchases from 1999 to 2013

are shown in Figure 3-1 below.

2

3 Table 3-6 below outlines the data that supports the above chart. In addition, the predicted total system purchases

4 for NBHDL are provided for 2014 and 2015 on a weather normal basis. In addition, values for 2015 are provided on

5 a 20 year trend assumption for weather normalization.

| Year | Actual | Predicted | % Difference |
|--|--------|-----------|--------------|
| Purchased Energy (GWh) | | | |
| 1999 | 586.8 | 590.5 | 0.6% |
| 2000 | 590.8 | 592.7 | 0.3% |
| 2001 | 587.8 | 588.8 | 0.2% |
| 2002 | 593.8 | 600.2 | 1.1% |
| 2003 | 594.6 | 597.0 | 0.4% |
| 2004 | 601.8 | 597.3 | (0.7%) |
| 2005 | 606.4 | 600.4 | (1.0%) |
| 2006 | 585.8 | 584.5 | (0.2%) |
| 2007 | 598.6 | 595.8 | (0.5%) |
| 2008 | 594.9 | 591.0 | (0.6%) |
| 2009 | 580.3 | 591.9 | 2.0% |
| 2010 | 592.1 | 587.5 | (0.8%) |
| 2011 | 593.7 | 591.5 | (0.4%) |
| 2012 | 572.6 | 566.4 | (1.1%) |
| 2013 | 573.2 | 577.7 | 0.8% |
| 2014 Bridge - Normalized | | 572.1 | |
| 2015 Test - Normalized | | 572.1 | |
| 2015 Test - Normalized - 20 Year Trend | | 569.7 | |

Table 3-6 Total System Purchase

2

1

3

The weather normalized amount for 2015 is determined by using 2015 dependent variables in the prediction formula on a monthly basis along with the average monthly heating degree days and cooling degree days which have occurred from January 2004 to December 2013 (i.e. 10 years). The 2015 weather normal 20 year trend value reflects the trend in monthly heating degree days and cooling degree days which have occurred from January 1994 to December 2013.

9

10 Billed KWh Load Forecast

11

To determine the total weather normalized energy billed forecast, the total system weather normalized purchases forecast is adjusted by a historical loss factor. The historical loss factor used is 4.49% which represents the average loss factor for 2012 and 2013. With the downturn in the North Bay economy impacting the energy used in these two years, NBHDL has used the average loss factor for these two years since it is more reflective of what should occur in 2014 and 2015 when the same economic conditions are expected to continue. With this average loss factor the total weather normalized billed energy before adjustment discussed below will be 547.5 (GWh) for 2014 and 2015 (i.e. 572.1/1.0449).

1 Billed KWh Load Forecast and Customer/Connection Forecast by Rate Class

2

3 Since the total weather normalized billed energy amount is known this amount needs to be distributed by rate class

- 4 for rate design purposes taking into consideration the customer/connection forecast and expected usage per
- 5 customer by rate class.
- 6

7 The next step in the forecasting process is to determine a customer/connection forecast. The customer/connection

8 forecast is based on reviewing historical customer/connection data that is available as shown in the following Table

- 9 3-7.
- 10
- 11

Table 3-7 Historical Customer/Connection Data

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load | Total |
|---------------------------------|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|--------|
| Number of Customers/Connections | ; | | | | | | | |
| 1999 | 19,386 | 2,489 | 219 | 3 | 5,000 | 579 | 21 | 27,697 |
| 2000 | 19,468 | 2,499 | 229 | 3 | 5,139 | 579 | 21 | 27,938 |
| 2001 | 19,645 | 2,555 | 244 | 3 | 5,139 | 579 | 21 | 28,186 |
| 2002 | 19,973 | 2,562 | 255 | 3 | 5,287 | 579 | 21 | 28,680 |
| 2003 | 19,862 | 2,568 | 253 | 2 | 5,277 | 641 | 21 | 28,624 |
| 2004 | 19,966 | 2,598 | 253 | 2 | 5,508 | 574 | 21 | 28,922 |
| 2005 | 20,125 | 2,595 | 255 | 2 | 5,534 | 555 | 21 | 29,087 |
| 2006 | 20,555 | 2,678 | 258 | 2 | 5,510 | 606 | 21 | 29,630 |
| 2007 | 20,726 | 2,626 | 267 | 2 | 5,534 | 577 | 21 | 29,753 |
| 2008 | 20,757 | 2,616 | 273 | 2 | 5,550 | 521 | 21 | 29,740 |
| 2009 | 20,850 | 2,629 | 274 | 2 | 5,571 | 518 | 21 | 29,865 |
| 2010 | 20,952 | 2,633 | 269 | 2 | 5,572 | 509 | 19 | 29,956 |
| 2011 | 21,096 | 2,623 | 268 | 2 | 5,574 | 474 | 18 | 30,055 |
| 2012 | 21,074 | 2,645 | 254 | 2 | 5,574 | 447 | 17 | 30,013 |
| 2013 | 21,108 | 2,649 | 255 | 2 | 5,574 | 427 | 15 | 30,030 |

12 13

14 From the historical customer/connection data the growth rate in customer/connection can be evaluated which is

15 provided on the following Table 3-8.

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load |
|----------------------------------|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|
| Growth Rate in Customers/Connect | tions | | | | | | |
| 1999 | | | | | | | |
| 2000 | 0.4% | 0.4% | 4.6% | 0.0% | 2.8% | 0.0% | 0.0% |
| 2001 | 0.9% | 2.2% | 6.6% | 0.0% | 0.0% | 0.0% | 0.0% |
| 2002 | 1.7% | 0.3% | 4.5% | 0.0% | 2.9% | 0.0% | 0.0% |
| 2003 | (0.6%) | 0.2% | (0.8%) | (33.3%) | (0.2%) | 10.7% | 0.0% |
| 2004 | 0.5% | 1.2% | 0.0% | 0.0% | 4.4% | (10.5%) | 0.0% |
| 2005 | 0.8% | (0.1%) | 0.8% | 0.0% | 0.5% | (3.3%) | 0.0% |
| 2006 | 2.1% | 3.2% | 1.2% | 0.0% | (0.4%) | 9.2% | 0.0% |
| 2007 | 0.8% | (1.9%) | 3.5% | 0.0% | 0.4% | (4.8%) | 0.0% |
| 2008 | 0.1% | (0.4%) | 2.2% | 0.0% | 0.3% | (9.7%) | 0.0% |
| 2009 | 0.4% | 0.5% | 0.4% | 0.0% | 0.4% | (0.6%) | 0.0% |
| 2010 | 0.5% | 0.2% | (1.8%) | 0.0% | 0.0% | (1.7%) | (9.5%) |
| 2011 | 0.7% | (0.4%) | (0.4%) | 0.0% | 0.0% | (6.9%) | (5.3%) |
| 2012 | (0.1%) | 0.8% | (5.2%) | 0.0% | 0.0% | (5.7%) | (5.6%) |
| 2013 | 0.2% | 0.2% | 0.4% | 0.0% | 0.0% | (4.5%) | (11.8%) |
| Geo Mean - 2012 & 2013 | 0.03% | 0.5% | (2.5%) | 0.0% | 0.0% | (5.1%) | (8.7%) |

Table 3-8 Growth Rate in Customer/Connections

3 For all classes, except the Street Lighting and Unmetered Scattered Load ("UMSL") classes, the factor resulting 4 from the geometric mean analysis for 2012 and 2013 is applied to the 2013 customer/connection numbers to 5 determine the forecast of customer/connections in 2014. Except for the General Service 3,000 to 4,999 kW class, 6 the geometric mean factor is applied once again to the 2014 value to determine the 2015 forecast. Similar to 7 calculation of the average loss factor discussed above, NBHDL has used the factor resulting from the geometric 8 mean analysis for 2012 and 2013 which should be more reflective of what is expected to occur in 2014 and 2015 9 since the slower economic conditions are expected to continue in these years. For the Street Lighting class, the 10 number of connections for 2014 and 2015 has been set at 5,419 reflecting a reduction in the number of street light connections resulting from a Retrofit Program that the City of North Bay undertook from November 2011 through 11 12 January 2014. The transition to more energy efficient light emitting diode (LED) technology and an upgrade to the 13 entire City street lighting system resulted in better light quality for all roadways with slightly fewer fixtures because 14 of the engineered approach to the retrofit. For the UMSL the number of connections for 2014 and 2015 has been 15 set at 7 representing the actual number of remaining customers in this class. In 2010, one account representing approximately 75% of the UMSL connections was closed. For the General Service 3,000 to 4,999 kW class, the 16 17 2015 customer number has been set to 1 reflecting the loss of a customer in this class during 2014. Table 3-9 18 outlines the forecast of customers by rate class for 2014 and 2015.

1

Table 3-9 Customer/Connection Forecast

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load | Total |
|--|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|--------|
| Forecast number of Customers/Connections | | | | | | | | |
| 2014 | 21,114 | 2,662 | 249 | 2 | 5,419 | 405 | 7 | 29,858 |
| 2015 | 21,120 | 2,675 | 243 | 1 | 5,419 | 384 | 7 | 29,849 |

2 3

1

The next step in the process is to review the historical customer/connection usage and to reflect this usage per customer in the forecast. Table 3-10 below provides the average annual usage per customer by rate class from

6 1999 to 2013.

7

8

Table 3-10 Historical Annual Usage per Customer

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load |
|---------------------------------|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|
| Annual kWh Usage Per Customer/C | onnection | | | | | | |
| 1999 | 10,454 | 37,367 | 824,067 | 23,610,566 | 770 | 1,647 | 20,080 |
| 2000 | 10,278 | 37,424 | 828,565 | 24,339,658 | 624 | 1,455 | 18,535 |
| 2001 | 10,102 | 36,090 | 793,622 | 23,335,059 | 614 | 1,325 | 18,635 |
| 2002 | 10,398 | 35,050 | 788,257 | 19,646,519 | 597 | 1,194 | 18,585 |
| 2003 | 10,618 | 34,739 | 796,830 | 28,283,549 | 624 | 927 | 17,539 |
| 2004 | 10,558 | 34,638 | 803,426 | 29,191,410 | 626 | 1,099 | 18,469 |
| 2005 | 10,624 | 35,177 | 825,993 | 28,528,368 | 594 | 1,111 | 17,690 |
| 2006 | 10,080 | 33,673 | 802,781 | 25,801,506 | 595 | 954 | 17,606 |
| 2007 | 10,283 | 34,151 | 799,463 | 24,963,354 | 597 | 985 | 17,601 |
| 2008 | 10,301 | 33,916 | 790,147 | 22,264,052 | 600 | 1,090 | 16,727 |
| 2009 | 10,236 | 33,246 | 766,620 | 18,908,696 | 596 | 1,077 | 14,851 |
| 2010 | 9,858 | 32,299 | 855,159 | 20,514,052 | 597 | 1,119 | 8,691 |
| 2011 | 9,829 | 32,414 | 864,430 | 18,543,426 | 575 | 1,016 | 4,671 |
| 2012 | 9,520 | 32,117 | 880,663 | 17,861,386 | 501 | 1,091 | 5,222 |
| 2013 | 9,845 | 32,133 | 849,468 | 17,887,518 | 421 | 1,040 | 5,939 |

9

10

As can been seen from the above table, usage per customer/connection generally declines after 2005. It is 11 12 NBHDL's view that this decline is partially due to the CDM programs initiated in 2005 and onwards and changing individual usage caused by a variety of factors including weather and the economy. NBHDL's customer base is 13 14 also very sensitive to weather, especially during the winter months, with a substantial amount of primary or 15 supplemental electric heating in commercial and industrial facilities throughout the City of North Bay. The increase 16 seen in 2010 in the GS>50 class is due to the new North Bay Regional Health Centre being opened which 17 replaced three older facilities which were closed in following years. The reduction in the GS 3,000 to 4,999 kW is 18 reflective of a downturn two large industrial customers have experienced, along with partial savings resulting from a

real time monitoring program. The street light Retrofit Program was undertaken from November 2011 through January 2014 and the LED technology has resulted in more energy efficient lighting which has resulted in decreased usage per connection. NBHDL worked with the City of North Bay to adjust the load profile as the project

- 4 was in progress.
- 5

10

From the historical usage per customer/connection data the growth rate in usage per customer/connection can be reviewed which is provided on the following table. The geometric mean growth rate from 2012 and 2013 has also been shown. The 2012 and 2013 period has been used based on the local economic conditions discussed

9 previously.

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load |
|----------------------------|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|
| Growth Rate in Customer/Co | nnection | | • | | | | |
| 1999 | | | | | | | |
| 2000 | (1.7%) | 0.2% | 0.5% | 3.1% | (18.9%) | (11.7%) | (7.7%) |
| 2001 | (1.7%) | (3.6%) | (4.2%) | (4.1%) | (1.5%) | (9.0%) | 0.5% |
| 2002 | 2.9% | (2.9%) | (0.7%) | (15.8%) | (2.8%) | (9.9%) | (0.3%) |
| 2003 | 2.1% | (0.9%) | 1.1% | 44.0% | 4.4% | (22.4%) | (5.6%) |
| 2004 | (0.6%) | (0.3%) | 0.8% | 3.2% | 0.4% | 18.7% | 5.3% |
| 2005 | 0.6% | 1.6% | 2.8% | (2.3%) | (5.1%) | 1.1% | (4.2%) |
| 2006 | (5.1%) | (4.3%) | (2.8%) | (9.6%) | 0.1% | (14.2%) | (0.5%) |
| 2007 | 2.0% | 1.4% | (0.4%) | (3.2%) | 0.4% | 3.3% | (0.0%) |
| 2008 | 0.2% | (0.7%) | (1.2%) | (10.8%) | 0.4% | 10.6% | (5.0%) |
| 2009 | (0.6%) | (2.0%) | (3.0%) | (15.1%) | (0.5%) | (1.1%) | (11.2%) |
| 2010 | (3.7%) | (2.9%) | 11.5% | 8.5% | 0.0% | 3.9% | (41.5%) |

| 2012 | (3.2%) | (0.9%) | 1.9% | (3.7%) | (12.9%) | 7.4% | 11.8% |
| 2013 | 3.4% | 0.0% | (3.5%) | 0.1% | (15.8%) | (4.7%) | 13.7% |
| Geo Mean - 2012 & 2013 | 0.1% | (0.4%) | (0.9%) | (1.8%) | (14.4%) | 1.2% | 12.8% |

Table 3-11 Growth Rate in Usage per Customer/Connection

11

12

Except for the Street Lighting class, the 2014 forecast of usage per customer/connection was determined by applying the historical geometric mean value for 2012 and 2013 to the actual 2013 usage per customer/connection. Once again the historical geometric mean value for 2012 and 2013 is applied to the 2014 forecast to determine the 2015 forecast. For the Street Lighting class the usage per connection has been set a 373 kWh/connection for 2014 and 2015. Upon completion of the Retrofit Program, NBHDL worked with the City of North Bay to determine the new load profile of the Street Light class that accurately reflected the number of connections and the reduction to demand based on the use of more efficient lighting. The usage per connection reflects the actual billing of the

- 1 Street Lighting class upon completion of the project. The Retrofit Program was part of an approved Ontario Power
- 2 Authority ("OPA") saveONenergy CDM program. The resulting usage forecast is as follows in Table 3-12:
- 3

Table 3-12 Forecast Annual kWh Usage per Customer/Connection

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load | | |
|--|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|--|--|
| Forecast Annual kWh Usage per Customers/Connection | | | | | | | | | |
| 2014 | 9,853 | 31,993 | 842,085 | 17,568,316 | 373 | 1,052 | 6,697 | | |
| 2015 | 9,861 | 31,853 | 834,765 | 17,254,810 | 373 | 1,064 | 7,551 | | |

4 5

Except for the General Service 3,000 to 4,999 kW class, the preceding information is used to determine the nonnormalized weather billed energy forecast by applying the forecast number of customer/connection from Table 3-9 by the forecast of annual usage per customer/connection from Table 3-12. At this point in the process, it is assumed the number of customers for the General Service 3,000 to 4,999 kW class is 2 for the adjustment in kWh and for the loss of a customer in this class is addressed later on in the process. The resulting non-normalized

11 weather billed energy forecast is shown in the following Table 3-13.

- 12
- 13

Table 3-13 Non-normalized Weather Billed Energy Forecast

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load | TOTAL |
|---|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|-------|
| NON-normalized Weather Billed Energy Forecast (GWh) | | | | | | | | |
| 2014 (Not Normalized) | 208.0 | 85.2 | 209.7 | 35.1 | 2.0 | 0.4 | 0.0 | 540.5 |
| 2015 (Not Normalized) | 208.3 | 85.2 | 202.8 | 34.5 | 2.0 | 0.4 | 0.1 | 533.3 |

The non-normalized weather billed energy forecast has been determined but this needs to be adjusted in order to be aligned with the total weather normalized billed energy forecast. As previously determined, the total weather normalized billed energy forecast is 547.5 (GWh) for 2014 and 2015.

18

14

The difference between the non-normalized and normalized forecast adjustments is 7.0 GWh in 2014 (i.e. 547.5 – 540.5) and 14.2 GWh in 2015 (i.e. 547.5 – 533.3). The difference is assumed to be the adjustment needed to move the forecast to a weather normal basis and this amount will be assigned to those rate classes that are weather sensitive. Based on the weather normalization work completed by Hydro One for NBHDL for the cost allocation study, which has been used to support this Application, it was determined that the weather sensitivity by rate classes is as follows in Table 3-14:

12

Table 3-14 Weather Sensitivity by Rate Class

| Residential | General Service < 50 kW | General Service 50 to 2999 kW | GeneralGeneralervice 50Service 30002999 kWto 4999 kW | | Sentinel Lighting | Unmetered Scattered Load |
|---------------------|-------------------------------|-------------------------------------|--|----|----------------------|--------------------------------|
| Weather Sensitivity | | | | | | |
| 91% | 91% | 82% | 0% | 0% | 0% | 0% |

3 4

5 For the General Service 50 to 2,999 kW and the General Service 3,000 to 4,999 kW rate classes, weather sensitivity amount of 82% and 0%, respectively, were provided in the weather normalization work completed by 6 7 Hydro One. For the Residential and General Service < 50 kW classes, it was assumed in NBHDL 2010 COS 8 application that these two classes were 100% weather sensitive. Intervenors expressed concern with this 9 assumption and have suggested that 100% weather sensitivity is not appropriate. NBHDL agrees with this position 10 but also submits that the weather sensitivity for the Residential and General Service < 50 kW classes should be higher than the General Service 50 to 2.999 kW class. As a result, NBHDL has assumed the weather sensitivity 11 12 for the Residential and General Service < 50 kW classes to be mid-way between 100% and 82%, or 91%.

13

14 The difference between the non-normalized and normalized forecast of 7.0 GWh in 2014 and 14.2 GWh in 2015 15 has been assigned on a pro rata basis to each rate class based on the above level of weather sensitivity.

16

17 CDM Adjustment and LRAMVA

18

19 A manual adjustment has been made to reflect the impact of 2013, 2014 and 2015 CDM programs on the load

20 forecast. NBHDL has made this adjustment to reflect the "net" impact of the CDM programs on the load forecast.

21

22 The following Table 3-15, which is consistent with part of App.2-I LF_CDM_WF, outlines the actual savings from

22 The following rubic of to, which to consistent with part of App.2 The _ODW_WT, outlines the actual savings non

- 23 2011, 2012 and 2013 CDM programs and the expected savings from 2014 CDM programs in order to achieve the
- 24 licensed 4 year CDM target assigned to NBHDL.

Table 3-15 4 Year (2011-2014) Expected kWh Target Results

12

| | 4 Year (2011-2014) kWh Target: | | | | | | | | | |
|-------------------|--------------------------------|------------|-----------|------------|------------|--|--|--|--|--|
| | | 26,100,000 | | | | | | | | |
| | 2011 | 2012 | 2013 | 2014 | Total | | | | | |
| 2011 CDM Programs | 10.08% | 8.94% | 8.93% | 8.51% | 36.45% | | | | | |
| 2012 CDM Programs | | 10.58% | 9.54% | 9.31% | 29.43% | | | | | |
| 2013 CDM Programs | | | 11.68% | 11.68% | 23.36% | | | | | |
| 2014 CDM Programs | | | | 23.45% | 23.45% | | | | | |
| Total in Year | 10.08% | 19.52% | 30.15% | 52.95% | 112.70% | | | | | |
| | | kWh | | | | | | | | |
| 2011 CDM Programs | 2,630,000 | 2,334,000 | 2,330,000 | 2,220,000 | 9,514,000 | | | | | |
| 2012 CDM Programs | | 2,761,536 | 2,490,000 | 2,430,000 | 7,681,536 | | | | | |
| 2013 CDM Programs | | | 3,049,000 | 3,049,000 | 6,098,000 | | | | | |
| 2014 CDM Programs | | | | 6,121,536 | 6,121,536 | | | | | |
| Total in Year | 2,630,000 | 5,095,536 | 7,869,000 | 13,820,536 | 29,415,072 | | | | | |

3 4

5 For 2015, it is assumed the savings achieved in 2014 from 2011 to 2014 programs will persist into 2015. In 6 addition, the savings from 2015 programs are assumed to be 14,353,536 (kWh) which is the forecasted savings in 7 the first year of the 2015-2020 CDM target assigned to NBHDL. The following Table 3-16 summarizes the 8 expected savings in 2015 from 2011 to 2015 programs.

9

10

11

12

Table 3-16 4 Year (2011-2014) Expected kWh Target Results Along with 2015 Expected Results

| kWh | 2011 | 2012 | 2013 | 2014 | 2015 |
|-------------------|-----------|-----------|-----------|------------|------------|
| 2011 CDM Programs | 2,630,000 | 2,334,000 | 2,330,000 | 2,220,000 | 2,220,000 |
| 2012 CDM Programs | | 2,761,536 | 2,490,000 | 2,430,000 | 2,430,000 |
| 2013 CDM Programs | | | 3,049,000 | 3,049,000 | 3,049,000 |
| 2014 CDM Programs | | | | 6,121,536 | 6,121,536 |
| 2015 CDM Programs | | | | | 14,353,536 |
| Total in Year | 2,630,000 | 5,095,536 | 7,869,000 | 13,820,536 | 28,174,072 |

13

14

15 Since the regression analysis is based on actual power purchased data up to and including 2013 actual data, it is

assumed that any savings from programs initiated up to and including 2013 are reflected in the prediction equation

17 resulting from the regression analysis. However, for 2013 it is assumed that for those programs that were initiated

18 in 2013 only one half of the full year results provided by the OPA actually occur since they were initiated throughout

1 the year. This has been classified as the half year rule for CDM purposes. It also suggests that for 2013 only one half of the reported full year results from programs initiated in 2013 are reflected in the actual 2013 power 2 3 purchases. As a result, consistent with approach used in the 2014 COS applications and using the information in 4 Table 3-16, the 2015 manual adjustment for CDM savings will be one half of 2013 programs that persist into 2015 (i.e. ½ of 3.049,000) plus a full year of 2014 programs that persist into 2015 (i.e. 6,125,536) plus one half of 2015 5 6 programs (i.e. ½ of 14,353,536) for a total of 14,822,804 kWh on a net basis. However, as outlined above in the 7 discussion that supports Table 3-12, for the Street Lighting class the usage per connection has been set a 373 8 kWh/connection for 2014 and 2015 which reflects savings from more efficient lighting. This is classified as a CDM 9 program that should result in 1,241,072 kWh of net savings in 2015 for the Street Light class. As a result, the 2015 10 CDM savings to be assigned to the other classes is 14,822,804 kWh minus 1,241,072 kWh or 13,581,732 kWh

11

For 2014, the manual adjustment for CDM savings will be one half of 2013 programs that persist into 2014 (i.e. ½ of 3,049,000) plus one half of 2014 programs (i.e. 6,125,536) for a total of 4,585,268 kWh on a net basis. This amount will be reduced by 1,241,072 kWh to reflect the 2014 CDM savings assigned to the Street Lighting class for more efficient lighting. The resulting 3,344,196 kWh will be assigned to the other classes.

16

In accordance with the Guidelines for Electricity Distributor Conservation and Demand Management (EB-2012-17 18 0003), issued April 26, 2012 ("CDM Guidelines"), it is NBHDL's understanding that as part of this application 19 expected CDM savings in 2015 from 2011, 2012, 2013, 2014 and 2015 programs will need to be established for 20 lost revenue adjustment mechanism ("LRAM") variance accounts purposes. NBHDL also understands that the 21 OPA will measure CDM results on a full year net basis. Consistent with past practices, it is expected the full year 22 net level of savings will be used for LRAM variance calculations. As a result, it is NBHDL's view the units used for 23 the 2015 LRAM variance account should also be on a full year net basis. Based on the information in Table 3-16 24 above, NBHDL expects to achieve 28,174,072 net kWh savings in 2015 from 2011 to 2015 CDM programs. For 25 LRAM variance account purposes, the following Table 3-17 outlines how this expected savings has been allocated 26 to rate class. The expected kW saving has also been provided for those classes billed distribution charges on a kW 27 basis using the average kW/KWh ratios from Table 3-20.

- 28
- 29

Table 3-17 2015 Expected CDM Savings by Rate Class for LRAM Variance Account

30

| Year | Residential | General Service < 50 kW | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | Unmetered Scattered Load | TOTAL |
|-----------------|-------------|-------------------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|--------------------------------|------------|
| 2015 LRAMVA kWh | 1,945,644 | 3,404,877 | 20,154,696 | 1,427,783 | 1,241,072 | 0 | 0 | 28,174,072 |
| 2015 LRAMVA kW | 0 | 0 | 49,275 | 2,754 | 3,465 | 0 | 0 | 55,495 |

| 1 | Loss of | Customer | in General | Service 3,000 | to 4,999 kW Class |
|---|---------|----------|------------|---------------|-------------------|
|---|---------|----------|------------|---------------|-------------------|

2

In June 2014, a General Service 3,000 to 4,999 kW customer shut down and the plant was decommissioned by the end of September. In 2014, as shown in Table 3-12, the annual usage per customer for the General Service 3,000 to 4,999 kW class is 17,568,316 kWh on an annual basis and 1,464,026 kWh on a monthly basis. For the months between shut down and decommissioning it is assumed the monthly kWh is reduced by 75% and by 100% thereafter. This means the kWh reduction in 2014 is 75% of 1,464,026 kWh times 3 (i.e. July to September) plus 100% of 1,464,026 kWh times 3 (i.e. October to December) or 7,686,138 kWh. The 2014 number of customers for the General Service 3,000 to 4,999 kW class is reduced in proportion to the kWh reduction.

10

For 2015, as shown in Table 3-12 above, the annual usage per customer for the General Service 3,000 to 4,999 kW class is 17,254,810 kWh. Since the General Service 3,000 to 4,999 kW customer is assumed to be decommissioned for the full the year the 2015 kWh reduction is 17,254,810 kWh and the number of customers is reduced by 1.

15

16 The following Table 3-18 outlines how the classes have been adjusted to align the non-normalized forecast with 17 the normalized forecast and reflect the adjustments discussed above.

18

Table 3-18 Alignment of Non-normal to Weather Normal Forecast

1 Billed KW Load Forecast

2

There are four rate classes that charge volumetric distribution on per kW basis. These include General Service 50 to 2,999 kW, General Service 3,000 to 4,999 kW, Street Lighting and Sentinel Lighting. As a result, the energy forecast for these classes needs to be converted to a kW basis for rate setting purposes. The forecast of kW for these classes is based on a review of the historical ratio of kW to kWh and applying the average ratio to the forecasted kWh to produce the required kW.

8

9 The following Table 3-19 outlines the annual demand units by applicable rate class.

- 10
- 11

Table 3-19 Historical Annual kW per Applicable Rate Class

| Year | General Service 50 to 2999 kW | General Service 3000 to 4999 kW | Street Lighting | Sentinel Lighting | TOTAL |
|------------------|-------------------------------------|---------------------------------------|--------------------|----------------------|---------|

Table 3-20 Historical kW/KWh Ratio per Applicable Rate Class

2 3

1

4 For the General Service > 50 to 2,999 kW and the Sentinel Lighting classes, the average ratio for 2012 to 2013 5 was applied to the weather normalized billed energy forecast in Table 3-18 to provide the forecast of kW by rate class. For the General Service > 3,000 to 4,999 kW class the average ratio for 2012 to 2013 was applied to the 6 7 weather normalized billed energy forecast in Table 3-18 but an adjustment of 720 kW in 2014 and 180 kW in 2015 8 was made to address projects that have been implemented to address demand reductions for a customer in this 9 class. The customer embarked on NBHDL's conservation initiatives including the real time pilot and realized 10 energy efficiency and demand reduction from their key energy systems. Some projects include optimizing 11 compressed air system use by repairing leaks and developing a new operating strategy. The customer also 12 modified key process equipment to better utilize water cooling. Lastly, the customer is investigating upgrading 13 block heater timers, enabling better controls on the office-side HVAC system, and implementing peak demand 14 management strategies. For the Street Lighting class, it is assumed the monthly kW for this class is 470.09 kW 15 reflecting the calculated demand based on the load profile of the new lighting. On an annual basis the kW for the Street Lighting class is 470.09 times 12 or 5,641 kW. 16

- 1 The following Table 3-21 outlines the forecast of kW for the applicable rate classes.
- 2

1 ACCURACY OF LOAD FORECAST AND VARIANCE ANALYSIS

2 Variance Analysis of Distribution Revenue and Billing Determinants

The following discussion provides a year over year variance analysis on NBHDL's distribution revenue and billing determinants. The variance analysis will compare 2010 Actual to 2010 Board Approved; 2011 Actual to 2010 Actual; 2012 Actual to 2011 Actual; 2013 Actual to 2012 Actual; 2014 Bridge to 2013 Actual and 2015 Test Year to 2014 Bridge Year. The distribution revenue variance analysis is based on information provided in Table 3-1. The billing determinant variance analysis is based on data outlined in Table 3-23. The overall variance analysis has been provided based on NBHDL's materiality of \$69,245; the materiality calculation being noted earlier in Exhibit 1 of this Application. NBHDL has chosen to use \$65,000 as its basis for variance analysis of distribution revenues.

10 **2010 Actual vs 2010 Board Approved**

11

Table 3-24 Distribution Revenue - 2010 Actual vs 2010 Board Approved

| | | | 2010 Actual vs. |
|---------------------------------|------------|-------------|-----------------|
| | 2010 Board | | 2010 Board |
| Distribution Revenues | Approved | 2010 Acutal | Approved |
| Residential | 6,302,766 | 5,987,720 | (315,046) |
| General Service < 50 kW | 2,114,489 | 2,046,607 | (67,881) |
| General Service 50 to 2999 kW | 2,430,269 | 2,268,244 | (162,025) |
| General Service 3000 to 4999 kW | 114,986 | 78,770 | (36,216) |
| Street Lighting | 284,721 | 222,314 | (62,406) |
| Sentinel Lighting | 35,621 | 32,902 | (2,719) |
| Unmetered Scattered Load | 11,495 | 5,090 | (6,405) |
| Distribution Revenue | 11,294,345 | 10,641,646 | (652,699) |

12

13 There are two significant drivers of the variance between 2010 Board Approved distribution revenue and 2010 14 Actual; volumetric and customer/connection count variances and the assumption of a full year of revenue at the

15 Board Approved rates set in the 2010 COS.

For the Residential class, variable revenue was down (\$151,986) compared to Board Approved as a result of kWh consumption being down 4% and four months of revenue at 2009 volumetric rates, all of which was partially offset by the LRAM/SSM rate rider that began in May 2010. Residential fixed revenue was down (\$163,060) as a result of a (1%) variance of the annual average customer count vs. the 2010 Board Approved count, along with the impact of four months of monthly service charges billed at the 2009 fixed monthly service charge rates.

The GS < 50 kW class variance was primarily a result of volumetric rate differences of (\$65,384) from four months of revenue at 2009 variable rates partially offset by the LRAM/SSM rate rider. Fixed revenue was down by an immaterial (\$2,497).

Variable revenue for the GS > 50 to 2,999 kW class was down (\$101,475) primarily as a result of kW demand being down 8% compared to the 2010 Board Approved kW and the impact of 2009 variable rates for four months of 1 2010 with a partial offset of the LRAM/SSM rate rider added in 2010. Fixed revenue was down (\$60,550) due to a

2 6% variance on customer count in the class which represented approximately 16 customers over a full year.

The majority of the Street Lighting variance was a result of decreased fixed revenue (\$52,637). Although new fixed rates were introduced as a result of the 2010 COS, they did not take effect until May 2010. The first 4 months of 2010 were at the 2009 rate as opposed to a full year at the new rate. Variable revenue was down (\$9,770) as the increase in variable rates was offset by higher kW than the Board Approved forecast as the anticipated Retrofit Program did not begin until 2011 so savings were not realized in 2010 Actual.

8 The variances in the other classes are immaterial.

Table 3-25 Billing Determinants - 2010 Actual vs 2010 Board Approved

| | Cust | omer/Connect | ions | k۷ | Vh | k' | W | |
|---------------------------------|------------------------|--------------|------------|------------------------|-------------|------------------------|-------------|---------------------------|
| Billing Determinants | 2010 Board Approved | 2010 Actual | Difference | 2010 Board Approved | 2010 Actual | 2010 Board Approved | 2010 Actual | Volumeteric Difference |
| Residential | 21,075 | 20,952 | (123) | 214,923,813 | 206,535,118 | | | (8,388,696) |
| General Service < 50 kW | 2,645 | 2,633 | (12) | 85,026,017 | 85,042,099 | | | 16,082 |
| General Service 50 to 2999 kW | 287 | 269 | (18) | | | 638,330 | 588,203 | (50,126) |
| General Service 3000 to 4999 kW | 2 | 2 | 0 | | | 74,106 | 78,060 | 3,954 |
| Street Lighting | 5,680 | 5,572 | (108) | | | 7,658 | 9,285 | 1,626 |
| Sentinel Lighting | 509 | 509 | 0 | | | 1,382 | 1,541 | 159 |
| Unmetered Scattered Load | 21 | 19 | (2) | 337,294 | 165,123 | | | (172,171) |
| Total | 30,219 | 29,956 | (263) | 300,287,125 | 291,742,340 | 721,475 | 677,089 | |

10

In the Residential class the number of customers assumed in the 2010 Board Approved was not achieved until 2011 which contributed to the lower volumetric difference in 2010. In addition, the 2010 actual kWh was lower than the 2010 Board Approved kWh resulting from a 9% overall lower actual heating degree day value in 2010

compared to the weather normal value assumed in the 2010 Board Approved kWh.

15 In the General Service < 50 kW class the variance in both count and kWh is immaterial.

In the General Service 50 to 2,999 kW class the assumed year over year growth rate of 2.48% did not materialize; the change in actual volume from 2009 to 2010 was a 1.82% reduction. Fluctuations in this class year over year result from a number of factors including reclassification of accounts to/from the GS<50 kW class, the loss of existing customers due to businesses closing and the opening of new businesses not necessarily at a one to one ratio.

For the General Service 3,000 to 4,999 kW class, the 2010 actual kW were about 5% higher than the 2010 Board

22 Approved, however, this variance in kW translates to approximately \$3,334 at 2010 approved rates and is deemed

23 immaterial

- 1 For the Street Lighting class even though the actual 2010 number of connections were less than Board Approved
- 2 the kW were higher as the anticipated lighting conversion did not begin until November 2011.

The Sentinel Light class has 12% less kW than the 2010 Board Approved amount; however, this translates to an immaterial variance of \$1,807 in variable revenue at 2010 Board Approved variable rates.

5 In 2010 a review of an account that represented approximately 75% of the UMSL connection resulted in the 6 account being closed and reclassified to a metered rate class as a power supply upgrade had been done with new

7 pad mount pedestals with meters.

8 2011 Actual vs 2010 Actual

9

Table 3-26 Distribution Revenue - 2011 Actual vs 2010 Actual

| | | | 2011 Actual |
|---------------------------------|-------------|-------------|-----------------|
| Distribution Revenues | 2010 Acutal | 2011 Actual | vs. 2010 Actual |
| Residential | 5,987,720 | 6,235,135 | 247,415 |
| General Service < 50 kW | 2,046,607 | 2,121,536 | 74,929 |
| General Service 50 to 2999 kW | 2,268,244 | 2,154,808 | (113,436) |
| General Service 3000 to 4999 kW | 78,770 | 102,855 | 24,086 |
| Street Lighting | 222,314 | 383,351 | 161,037 |
| Sentinel Lighting | 32,902 | 36,752 | 3,850 |
| Unmetered Scattered Load | 5,090 | 2,746 | (2,344) |
| Distribution Revenue | 10,641,646 | 11,037,183 | 395,536 |

10

11

12 For the Residential class 2011 distribution revenue was higher than 2010 due to \$106,607 in increased variable revenue as a result of the full year effect of new variable rates, and the increase in revenue from a full year of the 13 14 LRAM rate rider. Fixed revenue for this class increased \$140.907 in comparison to 2010 Actual as a result of an increase in the number of residential customers and the full year impact of new fixed rates. Fixed revenue 15 increases were partially offset by an adjustment for the deferred incremental IFRS transition costs that were 16 17 incorporated into 2010 distribution rates and amortized over four years. In the 2010 COS decision, NBHDL 18 received approval for \$100,000 in deferred incremental costs related to the transition to IFRS, which was to be 19 amortized over the four year IRM period. From 2011 through 2013, NBHDL recorded a reduction in distribution 20 revenue, apportioned to each class, in the total amount of \$25,000 which was offset in the regulatory asset account 21 1508 as explained in Exhibit 9 – Deferral and Variance Accounts.

22

An increase in variable revenue of \$85,196 is the primary driver of the increase in distribution revenue for the GS < 50 kW class. The increase is a result of increased variable rates compared to those in effect in the 2010 Actuals. A slight decrease in fixed revenue of (\$10,267) was a result of the GS < 50 kW component of the IFRS adjustment to

distribution revenue; there was a minimal increase in fixed rates compared to the rates that form the 2010 Actual.

1 In 2011, revenue to cost ratios were adjusted for the GS 50 to 2,999 kW class resulting in a reduction to the fixed

- 2 and variable rates as part of the 2010 COS proposed adjustments over 2010 through 2012. Variable revenue was
- 3 lower than 2010 by (\$63,558) as a result of the rate reduction and a minor 1% reduction in demand, offset by the
- 4 inclusion of a full year of the LRAM rate rider. Fixed revenue was down (\$49,878) compared to 2010 as a result of
- 5 the rate decrease and the rate class portion of the IFRS adjustment.

The Street Light class experienced significant revenue to cost ratio adjustments in the 2011 IRM proceeding in accordance with the Decision and Order of the 2010 COS. As a result of this adjustment, variable revenue increased \$66,673 in 2011 in comparison to 2010 and fixed revenue increased \$94,365, with an immaterial adjustment for the rate class portion of the IFRS adjustment.

10 The other classes changed by immaterial amounts.

11

Table 3-27 Billing Determinants - 2011 Actual vs 2010 Actual

| | Cust | tomer/Connec | tions | k۷ | Vh | k | w | |
|---------------------------------|-------------|--------------|------------|-------------|-------------|-------------|-------------|---------------------------|
| Billing Determinants | 2010 Actual | 2011 Actual | Difference | 2010 Actual | 2011 Actual | 2010 Actual | 2011 Actual | Volumeteric Difference |
| Residential | 20,952 | 21,096 | 144 | 206,535,118 | 207,358,082 | | | 822,964 |
| General Service < 50 kW | 2,633 | 2,623 | (10) | 85,042,099 | 85,023,144 | | | (18,955) |
| General Service 50 to 2999 kW | 269 | 268 | (1) | | | 588,203 | 582,946 | (5,257) |
| General Service 3000 to 4999 kW | 2 | 2 | 0 | | | 78,060 | 70,473 | (7,586) |
| Street Lighting | 5,572 | 5,574 | 2 | | | 9,285 | 9,042 | (243) |
| Sentinel Lighting | 509 | 474 | (35) | | | 1,541 | 1,287 | (254) |
| Unmetered Scattered Load | 19 | 18 | (1) | 165,123 | 84,073 | | | (81,050) |
| Total | 29,956 | 30,055 | 99 | 291,742,340 | 292,465,300 | 677,089 | 663,748 | |

12

Fluctuations in customer counts are a result of many factors including the averaging of counts over a 12 month period, account reclassifications, businesses closing, the timing of customers opening and closing accounts, moves, etc. The count variance year over year is immaterial. The 10% reduction in kW related to the GS 3,000 to 4,999 kW class is a result of a slow-down experienced by the industrial customers in this class. The change in kWh for the UMSL account is a result of a significant account being closed in May of 2010. All other year over year changes are immaterial.

1 **2012 Actual vs 2011 Actual**

2

Table 3-28 Distribution Revenue - 2012 Actual vs 2011 Actual

| | | | 2012 Actual |
|---------------------------------|-------------|-------------|-----------------|
| Distribution Revenues | 2011 Acutal | 2012 Actual | vs. 2011 Actual |
| Residential | 6,235,135 | 6,198,440 | (36,694 |
| General Service < 50 kW | 2,121,536 | 2,098,393 | (23,143 |
| General Service 50 to 2999 kW | 2,154,808 | 1,937,243 | (217,565 |
| General Service 3000 to 4999 kW | 102,855 | 158,971 | 56,115 |
| Street Lighting | 383,351 | 476,760 | 93,408 |
| Sentinel Lighting | 36,752 | 55,522 | 18,770 |
| Unmetered Scattered Load | 2,746 | 3,011 | 265 |
| Distribution Revenue | 11,037,183 | 10,928,339 | (108,844 |

3 4

In the 2012 IRM the final adjustments to the revenue to cost ratios were made resulting in additional reductions to the GS 50 to 2,999 kW distribution rates. Variable revenue was down (\$140,641) in 2012 Actual compared to 2011 Actual as a result of the reduction in rates and a 7% reduction in demand from customers in this class which included the effects of a slow-down in the mining sector. An adjustment for the portion of the 2012 Shared Tax Savings ("STS") also contributed to the reduction in revenues for the GS 50 to 2,999 kW class over 2011. Fixed revenue in 2012 was down (\$76,923) compared to 2011 Actual as a result of the reduction in the fixed rates and a further reduction in the number of customers in the class.

The final revenue to cost adjustment for the Street Light class took effect in the May 2012 distribution rates with significant rate increases. Fixed revenue increased over 2011 Actual by \$73,578 as a result of the increase in comparison to the rates driving 2011 Actual revenue. Variable revenue increased \$19,830 as the rate increase was offset by a reduction in demand from the progress of the Retrofit Program that was being implemented throughout 2012.

17 The change in year over year distribution revenue in each of the other classes is immaterial.

18

Table 3-29 Billing Determinants - 2012 Actual vs 2011 Actual

| | Cus | Customer/Connections | | | Vh | k | | |
|---------------------------------|-------------|----------------------|------------|-------------|-------------|-------------|-------------|---------------------------|
| Billing Determinants | 2011 Actual | 2012 Actual | Difference | 2011 Actual | 2012 Actual | 2011 Actual | 2012 Actual | Volumeteric Difference |
| Residential | 21,096 | 21,074 | (22) | 207,358,082 | 200,614,424 | | | (6,743,658) |
| General Service < 50 kW | 2,623 | 2,645 | 22 | 85,023,144 | 84,948,671 | | | (74,473) |
| General Service 50 to 2999 kW | 268 | 254 | (14) | | | 582,946 | 540,969 | (41,977) |
| General Service 3000 to 4999 kW | 2 | 2 | 0 | | | 70,473 | 68,480 | (1,993) |
| Street Lighting | 5,574 | 5,574 | 0 | | | 9,042 | 7,788 | (1,254) |
| Sentinel Lighting | 474 | 447 | (27) | | | 1,287 | 1,601 | 314 |
| Unmetered Scattered Load | 18 | 17 | (1) | 84,073 | 88,774 | | | 4,701 |
| Total | 30,055 | 30,013 | (42) | 292,465,300 | 285,651,869 | 663,748 | 618,838 | |

1 The overall reduction in customer and connection count in 2012 compared to 2011 is immaterial overall, however, 2 the GS 50 to 2,999 kW class experienced a 6% reduction which has a large impact on this rate class. NBHDL has 3 experienced a decreasing customer count in this class since 2009 as a result of account reclassifications and 4 accounts being closed. The impact of this reduction in customers is also reflected in lower demand compared to 5 2011, which is further compounded by a slow-down in the mining sector and the impact on many businesses in the 6 community. NBHDL experienced a general reduction in demand across a significant number of customers in the 7 GS 50 to 2.999 kW class. The Residential class consumption was down 4% over 2011 which can be attributed to 8 weather, consumption pattern changes and the impact of conservation as well as the spin-off of the slow-down in 9 the mining sector. The impact of the Retrofit Program on the Street Light class resulted in the beginning of a 10 reduction in demand for the class as NBHDL worked with the City of North Bay to update billing parameters 11 throughout the project. The other volumetric variances were immaterial.

12 **2013 Actual vs 2012 Actual**

13

Table 3-30 Distribution Revenue - 2013 Actual vs 2012 Actual

| | | | 2013 Actual |
|---------------------------------|-------------|-------------|-----------------|
| Distribution Revenues | 2012 Acutal | 2013 Actual | vs. 2012 Actual |
| Residential | 6,198,440 | 6,396,433 | 197,993 |
| General Service < 50 kW | 2,098,393 | 2,163,428 | 65,035 |
| General Service 50 to 2999 kW | 1,937,243 | 1,946,014 | 8,771 |
| General Service 3000 to 4999 kW | 158,971 | 168,826 | 9,855 |
| Street Lighting | 476,760 | 580,924 | 104,164 |
| Sentinel Lighting | 55,522 | 40,859 | (14,663) |
| Unmetered Scattered Load | 3,011 | 2,668 | (343) |
| Distribution Revenue | 10,928,339 | 11,299,150 | 370,811 |

16 Two specific items account for a majority of the overall increase to distribution revenue in 2013. On April 26, 2012, the Board issued the CDM Guidelines and for CDM programs delivered within the 2011 to 2014 period, the Board 17 18 established Account 1568 as the LRAMVA to capture the variance between the Board-approved CDM forecast and 19 the actual results at the customer rate class level. In 2013 and in accordance with the CDM Guidelines, NBHDL 20 recorded the impact of lost revenues from OPA funded programs for the 2011 and 2012 years based on the final 21 reports provided from the OPA and an estimate of the lost revenues for 2013. This adjustment resulted in increase 22 in distribution revenue of \$242,430 over 2012. Distribution revenue also increased in 2013 by \$56,285 as a result 23 of a refund to customers that was accounted for in 2012 for the STS rate rider. NBHDL did not record a similar 24 refund in 2013 which resulted in the increase impact year over year.

25 The Residential class variable revenue increased over 2012 by \$72,171 as a result of an increase in consumption

of 3.6% and a minimal increase in distribution rates through the mechanistic IRM process. Fixed revenue was up

1.7% or \$60,266 and the impact of the LRAMVA and STS adjustments increased revenue over 2012 by \$65,556.

¹⁴ 15

- 1 The Street Lighting class increased \$93,946 in distribution revenue over 2012 as a result of the LRAMVA and STS
- 2 adjustments. Variable revenue decreased (\$15,630) as a result of continuing demand reductions from the Retrofit
- 3 program partially offset by an increase in variable rates over those contributing to 2012 revenue. Fixed revenue
- 4 increased \$25,848 over 2012 due to the increase in the mix of rates that make up the 2013 revenue compared to
- 5 2012.
- 6 All other distribution revenue changes are immaterial by individual class.
- 7

Table 3-31 Billing Determinants - 2013 Actual vs 2012 Actual

| | Cust | Customer/Connections | | | kWh | | kW | | |
|---------------------------------|-------------|----------------------|------------|-------------|-------------|-------------|-------------|---------------------------|--|
| Billing Determinants | 2012 Actual | 2013 Actual | Difference | 2012 Actual | 2013 Actual | 2012 Actual | 2013 Actual | Volumeteric Difference | |
| Residential | 21,074 | 21,108 | 34 | 200,614,424 | 207,806,639 | | | 7,192,215 | |
| General Service < 50 kW | 2,645 | 2,649 | 4 | 84,948,671 | 85,119,331 | | | 170,660 | |
| General Service 50 to 2999 kW | 254 | 255 | 1 | | | 540,969 | 535,313 | (5,656) | |
| General Service 3000 to 4999 kW | 2 | 2 | 0 | | | 68,480 | 69,448 | 968 | |
| Street Lighting | 5,574 | 5,574 | 0 | | | 7,788 | 6,559 | (1,229) | |
| Sentinel Lighting | 447 | 427 | (20) | | | 1,601 | 1,224 | (377) | |
| Unmetered Scattered Load | 17 | 15 | (2) | 88,774 | 89,084 | | | 310 | |
| Total | 30,013 | 30,030 | 17 | 285,651,869 | 293,015,054 | 618,838 | 612,544 | | |

8

9 The changes in customers/connections are immaterial for 2013. Increased kWh consumption for the Residential is 10 a result of varying factors including weather and individual usage patterns. GS 50 to 2,999 kW demand continues 11 to decrease and NBHDL anticipates this decreasing / flat change in demand to be the new 'normal' for NBHDL and 12 the community. Continued focus and education on conservation, changing weather patterns and a slower economy 13 contribute to this anecdotal evidence. The Street Light class saw additional significant demand reductions as the 14 Retrofit Program was substantially complete by the end of 2013. Other changes by class were immaterial.

15 **2014 Bridge vs 2013 Actual**

16

Table 3-32 Distribution Revenue - 2014 Bridge vs 2013 Actual

| Distribution Poyonuos | 2013 Acutal | 2014 Bridge | 2014 Bridge vs. |
|---------------------------------|--------------|-------------|-----------------|
| Distribution Revenues | 2013 Addital | 2014 Druge | 2015 Actual |
| Residential | 6,396,433 | 8,134,791 | 1,738,358 |
| General Service < 50 kW | 2,163,428 | 2,549,242 | 385,814 |
| General Service 50 to 2999 kW | 1,946,014 | 1,979,019 | 33,005 |
| General Service 3000 to 4999 kW | 168,826 | 97,941 | (70,885) |
| Street Lighting | 580,924 | 506,731 | (74,193) |
| Sentinel Lighting | 40,859 | 45,561 | 4,702 |
| Unmetered Scattered Load | 2,668 | 2,187 | (481) |
| Distribution Revenue | 11,299,150 | 13,315,470 | 2,016,320 |

1 In the 2014 IRM proceeding, EB-2013-0157, NBHDL received approval to dispose and recover historical costs 2 related to the implementation of smart meters that were tracked in the Smart Meter Deferral Accounts. As part of 3 the journal entry to record the disposition of these costs NBHDL recorded \$1,526.857 related to the smart meter 4 funding adder in distribution revenue and also forecasted \$686,641 in revenue to be collected in the 2014 Bridge 5 Year in relation to the Smart Meter Disposition of Residual Historical Costs ("SMDR") rate rider and the Smart 6 Meter Incremental Revenue Requirement ("SMIRR") rate rider. In total, distribution revenue increased over 2013 7 by \$2,213,498 in relation to the Smart Meter disposition. The Bridge Year adjustment to distribution revenue for the 8 LRAMVA was (\$112,410) lower than 2013 due to the 2013 entry including three years of lost revenue true-up 9 adjustments. 2014 is a reflection of the estimated impacts of the 2014 OPA programs as well as an adjustment to true-up prior year estimates in accordance with the 2013 Final OPA Report. In 2014, revenues associated with 10 11 prior LRAM rate riders, related to 2008 and 2009 CDM programs, expired resulting in a (\$67,985) reduction in 12 distribution revenue compared to 2013. 2013 was the final year for the adjustment to distribution revenue for the 13 deferred IFRS transition costs that were approved in the 2010 COS application. Prior year adjustments resulted in a reduction to distribution revenue; the elimination of this adjustment in 2014 results in an increase in distribution 14 revenue in the 2014 Bridge Year of \$25,000 over 2013 Actual. Overall net changes to fixed and variable revenue 15 16 components are down (\$41,782) in the Bridge Year vs. 2013 Actual.

17

Table 3-33 Billing Determinants - 2014 Bridge vs 2013 Actual

| | Cust | Customer/Connections | | | Vh | k | | |
|---------------------------------|-------------|----------------------|------------|-------------|-------------|-------------|-------------|---------------------------|
| Billing Determinants | 2013 Actual | 2014 Bridge | Difference | 2013 Actual | 2014 Bridge | 2013 Actual | 2014 Bridge | Volumeteric Difference |
| Residential | 21,108 | 21,114 | 6 | 207,806,639 | 210,667,130 | | | 2,860,491 |
| General Service < 50 kW | 2,649 | 2,662 | 13 | 85,119,331 | 85,732,899 | | | 613,569 |
| General Service 50 to 2999 kW | 255 | 249 | (6) | | | 535,313 | 514,563 | (20,749) |
| General Service 3000 to 4999 kW | 2 | 2 | (0) | | | 69,448 | 51,541 | (17,908) |
| Street Lighting | 5,574 | 5,419 | (155) | | | 6,559 | 5,641 | (918) |
| Sentinel Lighting | 427 | 405 | (22) | | | 1,224 | 1,286 | 62 |
| Unmetered Scattered Load | 15 | 7 | (8) | 89,084 | 46,878 | | | (42,206) |
| Total | 30,030 | 29,858 | (172) | 293,015,054 | 296,446,908 | 612,544 | 573,031 | |

18

19 With the exception of the Street Light class, the year over year differences among the rate classes for 20 customers/connections are immaterial. The decrease in the number of Street Light connections is a result of a final 21 accurate count of connections upon completion of the Retrofit Program. The demand reduction of 17,908 kW in the 22 GS 3,000 to 4,999 kW class is related to the shut-down of one of two Intermediate customers in the NBHDL 23 service territory. The decreased kWh in the UMSL class over 2014 is the result of additional accounts being closed 24 due to a review of all UMSL accounts; for the most part these accounts have been reclassified to metered rate 25 classes. The variances in the other classes are less than 5% year over year and assumptions made in the load forecast are explained in the section above under "Summary of Load and Customer/Connection Forecast". 26

1 2015 Test vs 2014 Bridge

2

Table 3-34 Distribution Revenue - 2015 Test vs 2014 Bridge

| | | | 2015 Test vs. |
|---------------------------------|-------------|------------|---------------|
| Distribution Revenues | 2014 Bridge | 2015 Test | 2014 Bridge |
| Residential | 8,134,791 | 7,488,001 | (646,790) |
| General Service < 50 kW | 2,549,242 | 2,454,539 | (94,703) |
| General Service 50 to 2999 kW | 1,979,019 | 2,103,877 | 124,859 |
| General Service 3000 to 4999 kW | 97,941 | 99,498 | 1,558 |
| Street Lighting | 506,731 | 502,662 | (4,069) |
| Sentinel Lighting | 45,561 | 45,351 | (210) |
| Unmetered Scattered Load | 2,187 | 1,078 | (1,109) |
| Distribution Revenue | 13,315,470 | 12,695,006 | (620,464) |

3

The proposed Test Year distribution revenue is a reflection of the 2015 COS application and the proposed base revenue requirement of NBHDL. The variance in distribution revenue over the Bridge Year is a result of the proposed increases to fixed and variable distribution revenue in the Test Year offset by the reduction in distribution revenue as a result of variances caused by the smart meter adjustments forecast in the Bridge Year along with the final LRAMVA adjustment being recorded.

9

Table 3-35 Billing Determinants - 2015 Test vs 2014 Bridge

| | Cust | Customer/Connections | | | Vh | k' | | |
|---------------------------------|-------------|----------------------|------------|-------------|-------------|-------------|-----------|---------------------------|
| Billing Determinants | 2014 Bridge | 2015 Test | Difference | 2014 Bridge | 2015 Test | 2014 Bridge | 2015 Test | Volumeteric Difference |
| Residential | 21,114 | 21,120 | 6 | 210,667,130 | 213,486,948 | | | 2,819,818 |
| General Service < 50 kW | 2,662 | 2,675 | 13 | 85,732,899 | 86,032,032 | | | 299,133 |
| General Service 50 to 2999 kW | 249 | 243 | (6) | | | 514,563 | 490,350 | (24,213) |
| General Service 3000 to 4999 kW | 2 | 1 | (1) | | | 51,541 | 31,718 | (19,823) |
| Street Lighting | 5,419 | 5,419 | 0 | | | 5,641 | 5,641 | 0 |
| Sentinel Lighting | 405 | 384 | (21) | | | 1,286 | 1,234 | (53) |
| Unmetered Scattered Load | 7 | 7 | 0 | 46,878 | 52,860 | | | 5,982 |
| Total | 29,858 | 29,849 | (9) | 296,446,908 | 299,571,840 | 573,031 | 528,942 | |

10

11 Year over year changes are a result of the inputs of the load forecast model which is explained in detail above.

12 Flat growth rates, minimal increases to kWh, and reduced kW are appropriate on a go forward basis for rate setting

13 purposes.

1 OTHER REVENUE

2 Variance Analysis of Other Revenue:

Table 3-36 below provides details on the other revenue included in NBHDL's operating revenue which is consistent with the other revenue data provided in Table 3-1. The revenues or costs (including interest) associated with

5 deferral accounts, variance accounts and regulatory assets recorded in account 4405 have been excluded as

6 shown in the table below. Each variance that is above the materiality threshold is highlighted in yellow and an

7 explanation for this variance is provided below in Table 3-36.

Table 3-36 Other Revenue with Variances

2

1

| Table 3-37 2010 Actual vs 2010 Board Appr | roved |
|---|-------|
|---|-------|

| USoA | Other Revenue | 2010 Board Approved | 2010 Acutal | 2010 Actual vs. 2010 Board Approved |
|------|--------------------------------------|------------------------|----------------|---|
| 4235 | Specific Service Charges | 320,753 | 475,396 | 154,643 |
| 4375 | Revenues from Non-Utility Operations | 248,349 | 402,333 | 153,984 |
| 4380 | Expenses of Non-Utility Operations | (209,000) | (409,054) | (200,054) |

2 3

Specific Service Charges increased by \$154,643 between the 2010 Board Approved and 2010 Actual. Collection charges increased by \$130,225 due to NBHLD's focus on delinquent accounts. Implementing consistent collection activities compliant with Board Approved policies has also reduced the overall bad debt expense as outlined in Exhibit 4. Disconnect/Reconnect fees and Service calls also increased by \$6,749 and \$19,553 respectively. All other miscellaneous Specific Service Charges were under the 2010 Board Approved by \$1,884.

9

10 Revenue from Non-Utility Operations increased by \$153,984 and the offsetting Expenses for Non-Utility Operations increased by \$200.054 for a net decrease of \$46,070 in Other Revenue. Revenues from the OPA sanctioned 11 12 programs are recorded in 4375 and account for \$155,285 of the increase. OPA expenses are recorded in 4380 and account for \$200,054 of increased expenses for a net decrease in revenue of \$44,769 in 2010 Actual versus the 13 14 2010 Board Approved. The management fee charged to the affiliate North Bay Hydro Service ("NBHS") is recorded in account 4375 and was \$1,301 less in the 2010 Actual than the 2010 Board Approved due to the level of 15 activities performed. This reduces the increase in revenue in account 4375 of \$155,285 from OPA programs to 16 17 \$153,984

- 19

Table 3-38 2011 Actual vs 2010 Actual

| USoA | Other Revenue | 2010 Acutal | 2011 Actual | 2011 Actual vs. 2010 Actual |
|------|--------------------------------------|----------------|----------------|--------------------------------|
| 4235 | Specific Service Charges | 475,396 | 541,103 | 65,707 |
| 4375 | Revenues from Non-Utility Operations | 402,333 | 812,144 | 409,811 |
| 4380 | Expenses of Non-Utility Operations | (409,054) | (746,164) | (337,110) |

20

Specific Service Charges increased by \$65,707 between the 2011 Actual and 2010 Actual. Collection charges increased by \$28,355 due to consistent and focused collection activities. The recording of the Late Payment Penalty revenue accounts for an increase of \$58,646. Change of occupancy fees were down \$6,360 in 2011, Disconnect/Reconnect fess \$8,071, Service calls \$4,638 and all other miscellaneous charges \$2,233.

25

Revenue from Non-Utility Operations increased by \$409,811 and the offsetting Expenses for Non-Utility Operations increased by \$337,110 for a net increase of \$72,701 in Other Revenue. Revenues and expenses from OPA

sanctioned programs account for \$72,089 of the increase and the NBHS Management fee account for the balance.

1

| | | 2011 | 2012 | 2012 Actual vs. |
|------|--------------------------------------|-----------|-------------|-----------------|
| USoA | Other Revenue | Actual | Actual | 2011 Actual |
| 4235 | Specific Service Charges | 541,103 | 614,482 | 73,379 |
| 4355 | Gain on disposal of property | 4,975 | 347,552 | 342,577 |
| 4375 | Revenues from Non-Utility Operations | 812,144 | 1,364,800 | 552,656 |
| 4380 | Expenses of Non-Utility Operations | (746,164) | (1,242,614) | (496,450) |

Table 3-39 2012 Actual vs 2011 Actual

2 3

Specific Service Charges increased by \$73,379 between the 2012 Actual and 2011 Actual. Collection charges
increased by \$92,900 and Disconnect/Reconnect fees increased \$9,863. The Late Payment Penalty revenue
decreased by \$28,967 and other miscellaneous charges decreased by \$418.

7

Gain on disposal of property in 2012 was \$342,577 higher than the 2011 Actual. In 2012 NBHDL received an insurance settlement of \$440,748 for failed transformers, these proceeds off set the remaining book value of \$69,991 and \$26,355 of disposal costs for a net gain of \$344,402. The remaining decrease of \$1,825 relates to the difference between the proceeds of \$3,150 for a fully depreciated vehicle that was sold in 2012 and \$4,975 for vehicles that were sold in 2011

13

Revenue from Non-Utility Operations increased by \$552,656 and the offsetting Expenses for Non-Utility Operations increased by \$496,450 for a net increase of \$56,206 in Other Revenue. Revenues and expenses from OPA programs account for a decrease of \$33,650 and the NBHS Management fee accounts for an increase of \$10,695. In 2012 NBHDL completed a landfill generation project which accounted for an increase in account 4375 Other Revenue of \$ 593,485 and an offset of expenses in account 4380 Other Expenses of \$514,324 for a net increase in overall Other Revenue of \$79,161.

- 20
- 21

Table 3-40 2013 Actual vs 2012 Actual

| USoA | Other Revenue | 2012 Actual | 2013 Actual | 2013 Actual vs. 2012 Actual |
|------|--------------------------------------|----------------|----------------|--------------------------------|
| 4355 | Gain on disposal of property | 347,552 | 12,300 | (335,252) |
| 4375 | Revenues from Non-Utility Operations | 1,364,800 | 1,798,725 | 433,925 |
| 4380 | Expenses of Non-Utility Operations | (1,242,614) | (1,775,798) | (533,184) |
| 4390 | Miscellaneous Non-Operating Income | 18,851 | 208,417 | 189,566 |

22 23

The decrease of \$335,252 in Account 4355 Gain on disposal of property is related to the gain in 2012 for the failed transformer.

26

27 Revenue from Non-Utility Operations increased by \$433,925 and the offsetting Expenses for Non-Utility Operations

increased by \$533,184 for a net decrease of \$99,259. Revenues and expenses from OPA programs account for an

increase of \$7,406 and the NBHS Management fee accounts for an increase of \$17,641. The landfill generation

- 2 assets recorded a net loss of \$53,209 in 2013 Actual versus a net gain of \$71,097 in 2012 therefore a decrease of
- 3 \$124,306 between the two years. These assets were sold in June 2013 to NBHS.
- 4

Account 4390 recorded a net increase of \$189,566 in 2013 Actual versus 2012 Actual. In 2013 NBHDL performed services for Bell Aliant's Fibre project and recorded \$197,278 of profit related to this activity. The Bell Aliant project is a city wide deployment of fibre to the home, which involves approximately 3,829 new attachments to NBHDL poles. In order to accommodate these attachments, NBHDL engineers the attachments, and then performs construction activities to make the poles ready for receiving the new attachments. This reflects the normal joint use procedure, albeit on a much larger scale.

- 11
- 12 The sale of materials and other miscellaneous non-operating revenue were lower than 2012 Actual by \$7,712.
- 13
- 14

Table 3-41 2014 Bridge vs 2013 Actual

| USoA | Other Revenue | 2013 Actual | 2014 Bridge | 2014 Bridge Year vs. 2013 Actual |
|------|--------------------------------------|----------------|----------------|-------------------------------------|
| 4375 | Revenues from Non-Utility Operations | 1,798,725 | 3,147,368 | 1,348,643 |
| 4380 | Expenses of Non-Utility Operations | (1,775,798) | (3,076,276) | (1,300,478) |
| 4390 | Miscellaneous Non-Operating Income | 208,417 | 319,505 | 111,088 |

15 16

17 Revenue from Non-Utility Operations is forecasted to increase by \$1,348,643 and the offsetting Expenses for Non-18 Utility Operations to increase by \$1,300,478 for a net increase of \$48,165. Revenues and expenses from OPA 19 programs account for an increase of \$9,090 and the NBHS Management fee accounts for a decrease of \$14,134. 20 The landfill generation assets were sold in fiscal 2013 Actual therefore \$0 are included in the Bridge Year and the 21 loss of \$53,209 recorded in 2013 Actual creates a gain of \$53,209 in the Bridge Year.

22

Account 4390 is forecasted to increase by \$111,088 in the Bridge Year versus 2013 Actual. The Bell Fibre project accounts for the total variance since the sale of materials and miscellaneous non-operating revenue has been forecasted equal to the 2013 Actual.

- 26
- 27

Table 3-42 2015 Test vs 2014 Bridge

| USoA | Other Revenue | 2014 Bridge | 2015 Test | 2015 Test Year vs. 2014 Bridge Year |
|------|--------------------------------------|----------------|--------------|--|
| 4375 | Revenues from Non-Utility Operations | 3,147,368 | 2,556,998 | (590,370) |
| 4380 | Expenses of Non-Utility Operations | (3,076,276) | (2,505,068) | 571,208 |
| 4390 | Miscellaneous Non-Operating Income | 319,505 | 11,925 | (307,580) |

- 1 Revenue from Non-Utility Operations is forecasted to decrease by \$590,370 and the offsetting Expenses for Non-
- 2 Utility Operations to decrease by \$571,208 for a net decrease of \$19,162. Revenues and expenses from OPA
- 3 programs account for a decrease of \$18,231 and the NBHS Management fee accounts for a decrease of \$931.
- 4 Account 4390 is forecasted to decrease by \$307,580 in the Test Year versus Bridge Year. The Bell Fibre project is
- 5 scheduled to be completed at the end of the Bridge Year, therefore \$0 have been included in the Test Year this
- 6 accounts for \$308,366 of the decrease. The balance relates to an increase in the sale of materials.
- NBHDL is not requesting approval of any new proposed specific service charges or changes to rates or new rules
 for applying existing specific services charges.
- 9 Revenue from NBHDL affiliate transactions is recorded in account 4210 and 4375 and are identified as "Affiliate" in
- 10 Board Appendix 2-H. In addition details for, revenue for electricity purchases, capital contributions and shared
- services that are recorded as an offset in OM&A are provided in Exhibit 4, Table 4-26.
