Please have an oral hearing on Amherst Island, you really need to see the impact it will make to this Historic Island.

The incredibly high proposed turbines make no sense here.

80 foot high hydro poles, transmission lines, cable lines and hydro substations are proposed to be placed. In order to understand our concerns you need to see the island, and the villages of Stella and Emerald and how this project is a bad idea for such a small quiet place. The proposal run along side the school and homes which introduce risk to the residents, community and virtually make the island an industrial park. Which is what we left, to come here for.

I am very concerned for the safety of all islanders, especially the risk that any construction will put our children in harms way.

Also this project is not cost-effective, and was pointed out in Dr. John Harrison's economic and risk analysis. As Ontario Taxpayers and Voters we need to check the Expenditures. We seem to be spending more on the wind and solar power, near residents that don't want them, than it is giving back. We should not be afraid to say it is time to regroup and make sure we are doing these projects for the right reasons.

Please provide me with the ongoing information for monitoring purposes on this file.

Thank you
