**Subject:** Amherst Island - Windlectric File EB 2014-0300.

I am writing to you today to request that a hearing concerning Windlectric's application to construct a transmission line including a submarine cable to Amherst Island. your file EB 2014-0300

I think that before a transmission line is constructed there should be an opportunity for community voices to be heard.

A project of this size on a small island cannot help but be very disruptive of both the natural and human environment.

Unfortunately, from what I've seen the economics of this construction just don't make any long term sense. Ontario residents will be asked to pay to subsidize the production of this power at the same time as Ontario is selling power to New York State at a huge cost disadvantage to the economy.

I'd like to be sure that the company is financially viable in the long term, and if satisfactory proof cannot be provided, then is willing to post whatever size bond is necessary to ensure that the line, towers, windmills and environmental destruction inherent in this project can be removed and the island returned to its current state. This project appears to be unnecessary at present and does not make economic sense. Surely there are better places for our descendents to invest their money.

I would like to be given notice and copies of documents relevant to this project so that I can fulfill my duties as a citizen and monitor its progress.
