OEB Staff

May 28, 2008

1. Union's pre-filed evidence states that the 2008 Storage Enhancement Project will increase the working capacity of the 4 involved pools by 56,700 10^3m^3 . How does this increase affect the position of Union in the competitive market for storage? What is the amount of this increase relative to the total current storage capacity held by Union?
2. In the pre-filed evidence Union stated that for the Oil Springs Pool, Enniskillen 28 and Dow A Pool a review of well casings, wellheads, and surface facilities was completed and, as a result, additional work would be completed prior to delta pressuring. Please confirm that Union will provide to the MNR the reports on the work to be done. Please confirm that Union will notify the Board when the work has been completed in accordance with the current CSA Z341 and to the satisfaction of the MNR.
3. In the pre-filed evidence, Union stated, that for the Payne Pool "all wells in the Payne Pool have received new wellheads and master valves, six wells have been relined with a smaller diameter casing and three wells were abandoned. This work was completed in 2007." Please confirm that all of this work has been done in accordance with the requirements of the current CSA Z341 and to the satisfaction of the MNR.
4. To facilitate the increase of storage capacity proposed by this application will Union have to complete any additional system upgrades, including compression and pipeline capacity? If so, please provide information on the location, timing and scope of upgrades.
