**RE: Enbridge Gas Distribution Inc. ("Enbridge")  
Ontario Energy Board ("Board") File No: EB-2015-0194  
Canadian Nuclear Laboratories – Leave to Construct Application  
Chalk River Facility Project Notice**

The following will acknowledge the letter from the Ministry of Transportation (MTO) to the Ontario Energy Board, dated September 23, 2015.

Enbridge will be filing an encroachment permit with the MTO and will ensure the permit is acquired before commencement of construction within 45m (150ft) of the Ministry's property limit and/or a radius of 180m (600ft) from the centerline point of any intersecting roads on Highway 17 along the proposed construction route.

A detailed cross-section/working x-section will be provided for MTO review as part of the encroachment permit application. We have noted the required depth of 5m below the MTO right-of-way and will have this reflected in the Highway 17 crossing design.

Please note the proposed material for the natural gas main crossing Highway 17 is NPS 6 extra high pressure steel pipe, not NPS 6 intermediate pressure plastic pipe, as identified in the Ministry's letter.

Sincerely,

Roger Doyon  
Project Manager  
CNL Chalk River Project
