7.1 OVERVIEW

2 On September 29, 2006, the Ontario Energy Board ("the "Board") issued its directions on Cost Allocation 3 Methodology for Electricity Distributors (the "Directions"). On November 15, 2006, the Board issued the 4 Cost Allocation Information Filing Guidelines for Electricity Distributors (the "Guidelines"), the Cost 5 Allocation Model (the "Model") and the User Instructions (the "Instructions") for the Model. Thunder Bay Hydro has prepared this Application to be consistent with Thunder Bay Hydro's understanding of the 6 7 Directions, the Guidelines, the Model and the Instructions. 8 9 On March 31, 2011, the Board issued additional guidance, entitled Review of Electricity Distribution Cost 10 Allocation Policy (EB-2009-0261). For the purposes of this Application, Thunder Bay Hydro has followed 11 the cost allocation policies outlined in the Board's March 31, 2011 Cost Allocation Report, the Board's 12 letter dated June 12, 2015 with regard to the treatment of Street Lighting connections, and the 2016 Cost 13 Allocation Model version 3.4 ("CA Model") issued on July 21, 2016. This was modified for the board 14 update in version 3.4A.

RATE CLASSES 7.2

3

9

1

7.2.1 New Customer Class - Large Use

- 4 Thunder Bay Hydro proposes to establish a Large Use class for a customer who is currently in the
- 5 General Service > 1000 kW class. The rationale for the establishment of the new Large Use class is that
- this customer has had a consecutive twelve month kW reading greater than 5,000 kW. 6

7 7.2.2 Elimination of Customer Class

8 Thunder Bay Hydro does not propose to eliminate any customer class.

7.2.3 UNMETERED LOADS

- Thunder Bay Hydro plans to communicate with unmetered load customers, including Street Lighting 10
- customers, to assist them in understanding the regulatory context in which distributors operate and how it 11
- 12 affects unmetered load customers, with the filing of this application. The rationale for the timing of the
- 13 communication is to provide the customers with as accurate results as possible while still providing them
- 14 with the ability to become involved in the review process of the application should they so choose.
- 15 With regards to the Street Lighting customers, the distribution rates for these customers are proposed to
- 16 be reduced below the current level. As a result, Thunder Bay Hydro expects these customers not to be
- involved in the review process of the application. 17

18 7.2.4 STAND BY RATES

- 19 Thunder Bay Hydro currently does not have stand by rates and it not proposing to establish stand by
- rates in this Application. 20

7.2.5 MICRO FIT 21

- Thunder Bay Hydro is not proposing to include microFIT as a separate class in the cost allocation model 22
- 23 in 2017. Thunder Bay Hydro understands that the cost allocation model will produce a calculation of unit
- 24 costs which the Board will use to update the uniform microFIT rate at a future date.

7.2.6 EMBEDDED DISTRIBUTOR CLASS 25

- Thunder Bay Hydro confirms that it is not a host utility or an embedded distributor and no partially 26
- embedded distributor status exists. Accordingly, Thunder Bay Hydro is not required to complete Board 27
- 28 Appendix 2-Q.

7.3.1 OVERVIEW

- 4 In this application, Thunder Bay Hydro has used the 2017 Cost Allocation Model version 3.4 released by
- 5 the Board on July 21, 2016. This was modified for the board update in version 3.4A. A live copy of this
- 6 model has been filed with this Application. The model reflects 2017 test year costs, customer numbers
- 7 and demand values. The 2017 demand values were based on the weather normalized load forecast used
- 8 to design rates.
- 9 On September 2, 2010, the Board began a proceeding, EB-2010-0219, with the mandate to review and
- 10 revise the existing Cost Allocation policy as needed. On March 31, 2011, a Board report was released in
- 11 relation to EB-2010-0219. In the letter accompanying report, the Board indicated that a Working Group
- 12 would be formed to revise the original Cost Allocation Model to the March 31, 2011 report, the Board
- 13 stated that "default weighting factors should now be utilized only in exceptional circumstances".
- 14 Distributors are therefore now expected to develop their own weighting factors.

7.3.2 CLASS REVENUE REQUIREMENTS

- 17 The following discussion outlines the detail associated with determining the class revenue requirements.
- 18 Thunder Bay Hydro has developed weighting factors as outlined below based on discussions with staff
- 19 experienced in the subject area.

7 The data used in the updated cost allocation study is consistent with Thunder Bay Hydro's cost data that

8 supports the proposed 2017 revenue requirement outlined in this Application. Consistent with the

Guidelines, Thunder Bay Hydro's assets were broken out into primary and secondary distribution

10 functions using current information on the distribution system. The breakout of assets, capital

contributions, depreciation, accumulated depreciation, customer data and load data by primary, line

transformer and secondary categories, were developed from the best data available to Thunder Bay

Hydro, its engineering records, and it customer and financial information systems. An Excel version of

the updated cost allocation study has been included with the filed Application. In addition, Appendix 7-A

outlines Input Sheets I-6.1, I-6.2, & I-8 and Output Sheets O-1 & O-2 (first page only).

EB-2016-0105 Exhibit 7: Cost Allocation Filed: September 9, 2016 Page 8 of 10

- 1 Capital contributions, depreciation and accumulated depreciation by USoA are consistent with the
- 2 information provided in the 2017 continuity statement shown in Exhibit 2. The rate class customer data
- 3 used in the updated cost allocation study is consistent with the 2017 customer forecast outlined in Exhibit
- 4 3.
- 5 Except for the Large Use class, the load profiles for all other rate class are the same as those used in the
- 6 original information filing but have been scaled to match the 2017 load forecast. In a letter, dated June 12,
- 7 2015, the Board stated that it expected distributors to be mindful of material changes to load profiles and
- 8 to propose updates in their respective cost of service applications when warranted. Thunder Bay Hydro is
- 9 not aware of any reason for the load profiles to have materially changed between the classes. As a result,
- 10 Thunder Bay Hydro has not updated its load profiles at this time. However, Thunder Bay Hydro confirms
- that it intends to put plans in place to update its load profiles the next time a cost allocation model is filed.
- 12 With regards to the Large Use class, since this is a new rate class the demand data entered in Input
- 13 Sheet I-8 is based on the 2015 actual monthly billed kW for the customer in the this class.
- 14 The following Table 7-5 outlines the scaling factors used by rate class:

7.3.3 REVENUE TO COST RATIOS

The results of a cost allocation study are typically presented in the form of revenue to cost ratios. The ratio is shown by rate classification and is the percentage of distribution revenue collected by rate classification compared to the costs allocated to the classification. The percentage identifies the rate classifications that are being subsidized and those that are over-contributing. A percentage of less than 100% means the rate classification is under-contributing and is being subsidized by other classes of customers. A percentage of greater than 100% indicates the rate classification is over-contributing and is subsidizing other classes of customers.

In the March 31, 2011 Cost Allocation Report, the Board established what it considered to be the appropriate ranges of revenue to cost ratios which are summarized in Table 7-7 below. In addition, Table 7-7 provides Thunder Bay Hydro's revenue to cost ratios from the 2013 Application, the updated 2017 cost allocation study and the proposed 2018 and 2019 ratios.

4 The 2017 cost allocation study indicates the revenue to cost ratios for General Service > 1000 kW and

5 Street Lighting classes are outside the Board's range. For 2017, it is proposed the General Service >

1000 kW and Street Lighting ratios be brought within the Board's range The General Service < 50 to 999

7 kW and Large Use classes are adjusted upward to a common ratio in order to maintain revenue

8 neutrality.

9 The following Table 7-8 provides information on calculated class revenue, which is consistent with RRWF,

Tab 11 Cost Allocation, Calculated Class Revenues. The resulting 2017 proposed base revenue will be

the amount used in Exhibit 8 to design the proposed distribution charges in this application.
