Subject: hydro distribution rates

We have a solar array generating electricity that goes into the grid under a Microfit program.

We were shocked last year when the costs from Hydro were hiked from about \$5 to \$18 monthly.

The sun don't shine more! ; so we cannot generate more to pay for such a hike; and we are seniors on fixed income.

And now I see that Hydro has applied to raise the distribution costs again!

Under this program, we are providing energy TO the grid, NOT receiving electricity FROM the grid.

The paperwork that we receive is beyond confusing and is not designed for electricity going TO the grid.

Can something be done about this problem?

Trying to be green

Sincerely

Jane and Michael Buckley
