**Subject:** Hydro increase.

Like most of ontario hydro rate payers we are at a point that we just cant take other hydro increase. We are paying the highest hydro rates in N.America. People and business are suffering. Things have to change. Ontario still produces surplus hydro and sells it off at a loss to ontario's competition south of the border. We are not helping industry to stay competitive in our own province. Jobs are leaving ontario. One can not ignore these problems. They are real. We can not continue down this road. What kind of future are we looking at where ontario is not a place to work or grow or live. The people of ontario have had enough. We all see how hydro one C.E.O. gets 4.5 million which is not in line with other provinces. Rich contracts of wages and benefits for upper management is a disgrace. Hydro one management must look elsewhere for that increase. For most of us that global adjustment is a farce. Debt retirement never ends. If ontario wants to still produce surplus hydro sell it to the highest bidder, not give it away. We can't compete in a world market. WE HAVE TO PROTECT OUR OWN. Please consider this. Other increase will put a huge burden on the people of ontario. We have spent 1.3 billion at niagara to increase hydro production. Let's bring that production up. Let's get back to ontario where the future is brighter. It can be done.

Thank You  
IAN SIM
